The conflicting goals held for alternatives analysis in major capital investments proposed for urban transit systems and the lack of adequate concern in the evaluation for project worthiness, the relationship between monetary benefits and costs of options are discussed. A conceptual framework for integrating cost-effectiveness and worthiness analysis is developed. Some pragmatic limitations of worthiness analysis are discussed. An integrated approach to the evaluation in Alternatives Analysis is presented and related to an interactive graphics computer software system developed for accomplishing this task. GRA

URBAN DATA FOR COMPARATIVE ANALYSES OF CITIES
25 Mar. 1981 38 p refs
(Grant HUD H-5044RG)
(PB82-125675; HUD-0001996) Avail: NTIS HC A03/MF A01 CSCL 13B

A blueprint of the establishment of a national urban data information system is provided. Findings from a survey conducted in 20 cities on information needed to design a statistically valid approach to obtaining comparative data on cities are presented. These data would help in the urban policy decision-making process. Such comparisons also may be used to analyze the 'quality of life' in the urban environment, to describe urban conditions, and to analyze casual connections among various factors. The survey had four purposes: to determine the extent to which localities generate their own data on items used to determine eligibility and allocations of Federal funds; to contrast local data with the most recent Federal statistics; to determine whether Federal programs use different statistics for the same data items; and to obtain suggestions for improving the system by which local and Federal data are used for policymaking decisions regarding the allocation of Federal funds. FOURTH ANNUAL COMMUNITY PLANNING AND DEVELOPMENT CHALLENGES: ENERGY, ENVIRONMENT, WATER
Columbia, S.C. Mar. 1981 95 p refs Proceedings of Conf. held in Cairo, 6-14 Oct. 1980
(Grant HUD-H-5371RG)
(PB82-125790; HUD-0002055) Avail: NTIS HC A05/MF A01 CSCL 13B

The Egyptian government's commitment to a massive new towns program was noted. Free standing new towns, solely dependent upon employment growth, were discussed. National energy conservation policies were seen as effective only through price mechanisms. Research and development programs on new technologies were considered more effective on smaller rather than larger scales. Governments were seen as not facing up to the political problems of rapid urbanization. The capacity of the infrastructure of existing cities was seen as not keeping up with growing demand in developing countries. GRA

CENTRAL CONTROL SYSTEM SURVEY Final Report, Dec. 1979 - Jun. 1980
Bjorn Conrad, Masami Sakasita, and Marilyn Sanfilippo May 1981 137 p refs Sponsored in part by Bay Area Rapid Transit District
(SRI-Proj. 1529)
(PB82-101981; UMTA-CA-06-0124-81-1) Avail: NTIS HC A08/MF A01 CSCL 13B

The advances in control technology, such as displays, communication systems, control algorithms, and to what extent automation can facilitate rapid transit operations were examined. The survey focused on the central control functions of schedule creation, schedule implementation, schedule maintenance, and failure management. These functions tend to have the most direct impact on system performance. The five properties surveyed were the Chicago Transit Authority (CTA), the Massachusetts Bay Transit Authority (MBTA), the New York City Transit Authority (NYCTA), the Washington Metropolitan Area Transit Authority (WMATA), and the Bay Area Rapid Transit District (BART). DESIGN OPTIMIZATION OF THE CHLORINATION PROCESS. VOLUME 1: COMPARISON OF OPTIMIZED PILOT SYSTEM WITH EXISTING FULL SCALE SYSTEMS Final Report, Feb. 1977 - Sep. 1979
Endel Snepp and Paul Bao Sep. 1981 135 p refs
(Grant EPA-S-803459)
(PB82-100835; EPA-600/2-81-167-Vol-1) Avail: NTIS HC A07/MF A01 CSCL 13B

Parallel wastewater effluent chlorination studies were done on a mobile optimized chlorination pilot system and the full scale system at eight different treatment plants. Disinfection efficiency was measured by total coliform enumeration and chlorine residual tests. Parallel flow through fish bioassays were also conducted at each location. Achievement of adequate disinfection with minimum use of chlorine, reduction of chlorine induced toxicity, and writing of a design manual were emphasized. All seven of the eight plants studied the optimized pilot plant achieved an equivalent level of disinfection with significantly lower chlorine dosage, in some cases more than 50% lower than the full scale plants. The pilot plant chlorine residuals were also lower by the same proportions. GRA

RELATIVISTIC EFFECTS IN THE SOLAR SYSTEM
Erich R. Bagge 1981 47 p refs
(IFKKI-81/2) Avail: NTIS HC A03/MF A01

The relativistic velocity of the planet Mercury and of starlight as it passes the Sun is addressed. The deviation of the refracted light beam and the orbital velocity of the planet are calculated. For individual titles, see N82-19113 through N82-19114.

N82-19113# Kiel Univ. (West Germany). Inst. fuer Reine und Angewandte Kernphysik.
PART 1: RELATIVISTIC PATHWAY MODIFICATION OF THE PLANETS c91
In its Relativistic Effects in the Solar System 1981 26 p (For primary document see N82-19112 09-88)
Avail: NTIS HC A03/MF A01

It is shown that Mercury's perihelion motion around the Sun, which until now is explicable quantitatively only by General Relativity, can be understood within the framework of the dynamics of Special Relativity. The relativistic dependance of the planet's mass on its velocity is taken into account as well the acceleration terms of the equations of motion. The numeric solution of these equations for the planet Mercury gives a motion of its perihelion which is in good conformity with the observations and with the results of General Relativity. J.M.S.

N82-19114# Kiel Univ. (West Germany). Inst. fuer Reine und Angewanndte Kernphysik.
PART 2: THE DEFLEXION OF STARTLIGHT BY THE SUN c92
In its Relativistic Effects in the Solar System 1981 18 p refs (For primary document see N82-19112 09-88)

Avail: NTIS HC A03/MF A01

It is shown that the deviation of starlight in passing the Sun which until now appears to be explicable only by General Relativity, can be understood as a quasi-classical effect of light refraction. It is only necessary to transfer the formulas for the dielectric polarizability of the vacuum proposed in earlier papers in a physically plausible manner to the case of corresponding polarization effect in gravitational fields. The resulting refraction index for light in gravitational field gives for the Sun a deviation in good conformity with the observations and the results of General Relativity. From these considerations it can be deduced also that the velocity of a horizal light beam at 10000 km above ground level on the Earth has a velocity deficit of 5,730 cm/sec if one compared it with the corresponding velocity at ground level. J.M.S.

THE PREDICTION OF SATELLITE EPHEMERIS ERRORS AS THEY RESULT FROM SURVEILLANCE SYSTEM MEASUREMENT ERRORS

Bowen Eugene Simmons Aug. 1981 138 p refs
(Contract F49620-77-C-0025)
(AD-A108477; ANSER-SPDN-80-4) Avail: NTIS HC A07/MF A01 CSCL 22/3

This report derives equations predicting satellite ephemeris error as a function of measurement errors of space-surveillance sensors. These equations lend themselves to rapid computation with modest computer resources. They are applicable over prediction times such that measurement errors, rather than uncertainties of atmospheric drag and of Earth shape, dominate in producing ephemeris error. This report describes the specialization of these equations underlying the ANSER computer program, SEEM (Satellite Ephemeris Error Model). The intent is that this report be of utility to users of SEEM for interpretive purposes, and to computer programmers who may need a mathematical point of departure for limited generalization of SEEM. THEORETICAL STUDIES OF THE RS CANUM VENATICORUM STARS Final Report, 1 Jan. 1980 - 31 Dec. 1981

Dermott J. Mullan 23 Feb. 1982 49 p refs
(Grant NAGw-5)
(NASA-CR-168549) Avail: NTIS HC A03/MF A01 CSCL 03A

The activity in RS Canum Venaticorum (CVn) is investigated. Models for chromospheric structure are developed and the role of magnetic fields both in the photosphere as well as in the chromosphere and upper atmosphere are examined. T Tau stars are also studied from the same points of view. The properties of magnetic field loops are used to help understand the atmospheric structure in RS CVn stars. The concepts developed in the case of these stars appear to be applicable over a much broader region of the HR diagram. The absence of stable magnetic loops in the atmospheres of late type giant stars suggests that the atmospheres of RS CVn active components are qualitatively distinct from the solar atmosphere. S.L.

LOW-BACKGROUND PERFORMANCE OF A MONOLITHIC InSb CCD ARRAY

J. D. Bregman, J. H. Goebel, C. R. McCreight, and T. Matsumoto Jan. 1982 39 p refs
(NASA-TM-84216; A-8831) Avail: NTIS HC A03/MF A01 CSCL 03A

A 20 element monolithic InSb charge coupled device (CCD) detector array was measured under low background conditions to assess its potential for orbital astronomical applications. At a temperature of 64 K, previous results for charge transfer efficiency (CTE) were reproduced, and a sensitivity of about 2 x 10 to the minus 15th power joules was measured. At 27 and 6 K, extended integration times were achieved, but CTE was substantially degraded. The noise was approximately 6000 charges, which was in excess of the level where statistical fluctuations from the illumination could be detected. A telescope demonstration was performed showing that the array sensitivity and difficulty of operation were not substantially different from laboratory levels. Ways in which the device could be improved for astronomical applications were discussed. Author

A PHOTON-COUNTING PHOTODIODE ARRAY DETECTOR FOR FAR ULTRAVIOLET (FUV) ASTRONOMY

G. F. Hartig, H. W. Moos, R. Pembroke, and C. Bowers [1982] 8 p refs
(Contracts NAS5-27000; NAS5-26057; Grant NAGw-16)
(NASA-CR-168551) Avail: NTIS HC A02/MF A01 CSCL 03A

A compact, stable, single-stage intensified photodiode array detector designed for photon-counting, far ultraviolet astronomy applications employs a saturable, 'C'-type MCP (Galileo S. MCP 25-25) to produce high gain pulses with a narrowly peaked pulse height distribution. The P-20 output phosphor exhibits a very short decay time, due to the high current density of the electron pulses. This intensifier is being coupled to a self-scanning linear photodiode array which has a fiber optic input window which allows direct, rigid mechanical coupling with minimal light loss. The array was scanned at a 250 KHz pixel rate. The detector exhibits more than adequate signal-to-noise ratio for pulse counting and event location. A.R.H.

FLOW VELOCITY AND ANGULARITY MEASUREMENTS IN THE FDL TRISONIC GASDYNAMIC FACILITY AND SELF-ADAPTIVE WALL WIND TUNNELS WITH A LASER TRANSIT ANEMOMETER Final Report, Apr. - Nov. 1980

William T. Mayo, Jr., A. E. Smart, R. J. Hermes, and J. D. Trolinger Wright-Patterson AFB, Ohio AFWAL Aug. 1981 143 p refs
(Contract F33615-79-C-3030; AF Proj. 2402)
(AD-A108427; SDL-81-2162-05FR; AFWL-TR-81-3081) Avail: NTIS HC A07/MF A01 CSCL 14/2

The measurement of a backscatter laser transit anemometer was tested in the FDL Trisonic Gasdynamics Facility (TGF) and the nine-inch Self Adapting Wall (SAW) wind tunnel. The tests included flow analysis in the two foot by two foot subsonic, transonic and supersonic test sections as well as the fifteen-inch transonic test section insert all in the TGF. The magnitude and flow angle precisions were as good as 0.3% and 0.3 deg, respectively, as limited by the statistical fluctuations of the data. Calculations indicate that the minimum natural particle size observed in the TGF was approximately 0.2 micron in diameter. Flow speed and angle were mapped about a microfighter flow field in the TGF fifteen-inch transonic test section at Mach number 0.7 and 0.9 to develop a data base for evaluation of the Self Adaptive Wall wind tunnel concept. Measurements were then made to the same model in the FDL nine-inch Self Adaptive Wall wind tunnel. These indicated that the precision of the instrument exceeded the current precision to establish and repeat flow conditions in the tunnel. The SAW results indicated non-uniform particle content of the flow which adversely affected the available angle precision; however, velocity measurements were good. Presentation of the equipment and measurement results of the present project are included. GRA

Joseph A. Nuth, III Dec. 1981 260 p refs
(NASA-TM-83883) Avail: NTIS HC A12/MF A01 CSCL 03B

Steady state vibrational populations of SiO and CO in dilute black body radiation fields were calculated as a function of total pressure, kinetic temperature and chemical composition of the gas. Approximate calculations for polyatomic molecules are presented. Vibrational disequilibrium becomes increasingly significant as total pressure and radiation density decrease. Many regions of postulated grain formation are found to be far from thermal equilibrium before the onset of nucleation. Calculations based upon classical nucleation theory or equilibrium thermodynamics are expected to be of dubious value in such regions. Laboratory measurements of the extinction of small iron and magnetite grains were made from 195 nm to 830 nm and found to be consistent with predictions based upon published optical constants. This implies that small iron particles are not responsible for the 220 nm interstellar extinction features. Additional measurements are discussed. R.J.F.

A WORST CASE SPACECRAFT ENVIRONMENT AS OBSERVED BY SCATHA ON 24 APRIL 1979
E. G. Mullen, M. S. Gussenhoven, and H. B. Garrett 31 Jul. 1981 38 p refs
(AF Proj. 7661)
(AD-A108680; AFGL-TR-81-0231; AFGL-ERP-751) Avail: NTIS HC A03/MF A01 CSCL 03/2

A survey of data from the first year of the P78-2 SCATHA satellite operations showed that a highest level spacecraft frame charging (phi sub f) both in sunlight (-340 V) and in eclipse > -8 kV) occurred on 24 April 1979. Analysis of the data indicates that if the sunlight charging environment had been present during eclipse, the vehicle would have charged in excess of 15 kV which is above any known charging level observed to date for the SCATHA satellite. Therefore, the environment at the peak of the sunlight charging at approx. 0650 UT 24 April 1979 was chosen for this worst case study. The environment at this time is characterized by an injection of high energy (30-335 keV) electron fluxes whose combined current correlates with phi sub f with a correlation coefficient of 0.95. The fluxes were highly anisotropic, maximizing perpendicular to the magnetic field. The low energy (< 4 keV) electron population had a density < 1/cc and the low energy ions were near background. PLANETARY MAGNETOSPHERES
David P. Stern and Norman F. Ness Oct. 1981 45 p refs Submitted for publication
(NASA-TM-83841) Avail: NTIS HC A03/MF A01 CSCL 03B

A concise overview is presented of our understanding of planetary magnetospheres (and in particular, of that of the Earth), as of the end of 1981. Emphasis is placed on processes of astrophysical interest, e.g., on particle acceleration, collision-free shocks, particle motion, parallel electric fields, magnetic merging, substorms, and large scale plasma flows. The general morphology and topology of the Earth's magnetosphere are discussed, and important results are given about the magnetospheres of Jupiter, Saturn and Mercury, including those derived from the Voyager 1 and 2 missions and those related to Jupiter's satellite Io. About 160 references are cited, including many reviews from which additional details can be obtained. Author

LABORATORY MEASUREMENTS OF COMETARY PHOTOCHEMICAL PHENOMENA
William M. Jackson 4 Dec. 1981 23 p refs
(Grant NsG-5071; Contract N00014-80-C-0305)
(NASA-CR-168506; AD-A108614; TR-8) Avail: NTIS HC A02/MF A01 CSCL 07/5

Laboratory experiments are described that provide fundamental information about photochemical processes in comets. The yield of cometary radicals such as CN, OH, etc., can be determined as a function of photolyzing wavelength. Quantum state distributions of the internal energy of the cometary radicals can also be measured as a function of wavelength permitting one to define the recoil velocity of the fragments. This type of information supplies the data needed for more elaborate models to interpret the data being obtained on comets. GRA

Mm- TO cm-WAVELENGTH TIME DELAYS IN SOLAR BURST EMISSION BURST EMISSION AND THE EFFECT OF VARYING MAGNETIC FIELD
J. E. R. Costa and P. Kaufmann Nov. 1981 30 p refs Submitted for publication
(INPE-2278-PRE/056) Avail: NTIS HC A03/MF A01

Certain solar bursts measured in the mm to cm wave range of frequencies present maximum emission not coincident in time. In some cases the emission is delayed towards lower frequencies which is in apparent contradiction with what would be expected in geometries commonly assumed in thermal models. An explanation is given which places the primary source at the top of a magnetic loop, the collisionless fronts formed moving downwards into the solar chromosphere with the addition of time varying magnetic field effects. The explanation predicts observed time delays for wavelengths situated in the optically thin part of the gyrosynchrotron burst emission spectrum. J.M.S.

N82-19125# Instituto de Pesquisas Espaciais, Sao Jose dos Campos (Brazil).
TIME DELAYS IN SOLAR BURSTS MEASURED IN THE mm-cm RANGE OF WAVELENGTHS
P. Kaufmann, J. E. R. Costa, and F. M. Strauss Oct. 1981 36 p refs Submitted for publication Sponsored in part by FINEP and FAPESP

(INPE-2251-PRE/034) Avail: NTIS HC A03/MF A01

Various solar bursts were analysed with high sensitivity (0.03 s.f.u., r.m.s.) and high time resolution (1 ms) at two frequencies in the millimeter wave range (22 GHz and 44 GHz) and with moderate time resolution (100 ms) by a patrol telescope at a frequency in the microwave range (7 GHz). It was found that in most cases burst maximum emission is not coincident in time at those frequencies. Preceding maximum emission can be either at the higher or at the lower frequency. Time delays ranged from about 3 sec to near coincidence, defined within 10 ms. Some complex bursts presented all kinds of delays among different time structures, and sometime nearly uncorrelated time structures. Directional particle accelerations in complex magnetic configurations could be considered, to explain the variety of the dynamic effects. Fastest burst rise times observed of 10ms at 44GHz and 40 ms at 22 GHz, might be associated to limiting formation times of emission sources combined to various absorption mechanisms at the source and surrounding plasma. RESULTS OF SUN MEASUREMENTS AT THE METSAEHOVI RADIO RESEARCH STATION AT 37 GHz (AUTUMN 1978)

Seppo Urpo 1979 46 p refs

(Rept-S-115; ISBN-951-751-906-2) Avail: NTIS HC A03/MF A01

Results of Sun radiation measurements at 8mm (37 GHz), performed with a 13.7m radome covered dish, are presented. Several high resolution maps of the whole Sun were drawn by computer plotter. The development of typical active areas over the course of several days is depicted. Both high temperature and low temperature areas, as compared with the estimated quiet Sun level, were detected. Microwave bursts related with flare activity in the McMath region 15551 were measured. The power spectrum analysis of the large burst reveals quasi-periodic fluctuation. During the 8mm burst, the period of this fluctuation decreased constantly from 2.5 to 2.1 seconds. Maps of the whole Sun, enlargements of active areas and low temperature areas, and plots of spectra are shown. Author (ESA)

SOLAR BURSTS MEASURED AT 8 MM WAVELENGTH

Seppo Urpo and Koistinen Olavi 1980 16 p refs

(Rept-S-122; ISBN-951-752-226-6) Avail: NTIS HC A02/MF A01

About thirty major solar microwave bursts, detected by tracking those active areas expected to produce such bursts, are reported. These were detected using a 14m radio telescope with an 8mm receiver, center frequency 36.8 GHz, and analyzed over a two year period. In order to select promising areas for tracking, maps of solar radiation of 8mm were measured at least once a day by scanning in right ascension and changing the declination between subsequent scans. The center of the selected active region was tracked with the telescope beam (2.4 arc min) to record possible bursts before, during, and after occurrence. Statistics of active region tracking are given and observed microwave bursts are listed. Author (ESA)

V.L.F. IONOSONDE AND LONG-DISTANCE PROPAGATION ANOMALIES PRODUCED BY GALACTIC CEN X-4 X-RAY BURST IN MAY 1979

Lilieus Rizzo Piazza, Pierre Kaufmann, and P. Ramirez Pardo (Inst. de Atividades Espacias, Blumenau SC, Brazil) Oct. 1981 14 p refs Submitted for publication Sponsored in part by FINEP and FAPESD

(INPE-2250-PRE/033) Avail: NTIS HC A02/MF A01

The galactic X-ray source Cen X-4 produced a large outburst in May 1979, measured by Ariel-5 satellite. Low ionosphere group heights measured daily by a V.L.F. ionosonde indicated anomalous lowering of the effective reflection height in good correlation with Cen X-4 burst, as well as an increase in reflection coefficient, larger for larger frequencies. Diurnal V.L.F. phase variations in a long-distance propagation path presented nighttime 3-4 sigma deviations from average in some days during the Cen X-4 bursting period. These results are a suggested confirmation that galactic transient X-ray sources are capable to produce sufficient ionization effects to be detectable as low ionosphere anomalies. Author

TECHNOLOGY DEVELOPMENT OF THE SPACE TRANSPORTATION SYSTEM MISSION AND TERRESTRIAL APPLICATIONS OF SATELLITE TECHNOLOGY Annual Report

1981 18 p refs

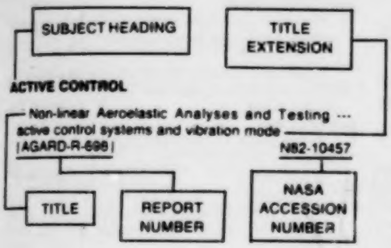
(NASA-TM-84131) Avail: NTIS HC A02/MF A01 CSCL 05A

The Space Transportation System (STS) is discussed, including the launch processing system, the thermal protection subsystem, meteorological research, sound supression water system, rotating service structure, improved hypergol or removal systems, fiber optics research, precision positioning, remote controlled solid rocket booster nozzle plugs, ground operations for Centaur orbital transfer vehicle, parachute drying, STS hazardous waste disposal and recycle, toxic waste technology and control concepts, fast analytical densitometry study, shuttle inventory management system, operational intercommunications system improvement, and protective garment ensemble. Terrestrial applications are also covered, including LANDSAT applications to water resources, satellite freeze forecast system, application of ground penetrating radar to soil survey, turtle tracking, evaluating computer drawn ground cover maps, sparkless load pulser, and coupling a microcomputer and computing integrator with a gas chromatograph. N.W.

SUBJECT INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 9

Typical Subject Index Listing



The subject heading is the key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension has been added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The NASA accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus* (NASA SP-7050).

ABSORPTANCE
Spectral albedos of midlatitude snowpacks
[NASA-TM-83858] N82-18683
ABSORPTION
LIMS Instrument Package (LIP) balloon experiment: Nimbus 7 satellite correlative temperature, ozone, water vapor, and nitric acid measurements
[NASA-TM-83259] N82-18741
ABSORPTION SPECTRA
Optical spectra of nonmetallic inorganic transient species in aqueous solution
[PB82-109141] N82-18359
Methods for interpreting atmospheric spectral observations by Sun sighting through the Earth limb
[ESA-TT-715] N82-18796
ABSORPTIVITY
High temperature in absorption measurements
[AD-A108801] N82-18588
Measurement of the absorption properties of acoustic materials used in the fabrication of cowlings
[CETIM-11-H-285] N82-19002
ABSTRACTS
Patent Abstract Digest, volume 1
[AD-A108672] N82-19100
Patent Abstract Digest, volume 2
[AD-A108673] N82-19101
Patent Abstract Digest, volume 3
[AD-A108674] N82-19102
AC GENERATORS
Numerical simulation of diode rectifier bridges: Application of a new method to the brushless excitation system
[DRIC-T-6478] N82-18504
ACCELERATION (PHYSICS)
Aircrew restraint and mobility test fixture
[AD-A108274] N82-18193
Effects of rectilinear acceleration, optokinetic and caloric stimuli in space N82-18255
ACCELERATION PROTECTION
A disturbance isolation controller for the solar electric propulsion system flight experiment N82-18299
ACCELEROMETERS
Measurement and evaluation methods for an angular accelerometer
[PB82-115973] N82-18572
State-of-the-art for assessing earthquake hazards in the United States. Interpretation of strong ground motion records
[AD-A108615] N82-18793
ACCEPTABILITY
Physiological acceptability tests of the SJU-5/A ejection seat: Second physiological acceptance demonstration
[AD-A108686] N82-18194
ACCESS TIME
Full text information systems: A review and assessment of the technology N82-19092
ACOUSTIC ATTENUATION
Differential sound absorption technique and effect of ion-pairing and pressure on sound absorption in sea water and aqueous mixtures of magnesium sulfate and sodium chloride
[AD-A108569] N82-18997
Theoretical and experimental investigations of the outward propagation of tire noise
[MBB-BB-483-81-O] N82-19001
Zero sound attenuation from order parameter fluctuations in liquid He-3 N82-19049
ACOUSTIC EMISSION
Proceedings of the DARPA/AFWAL review of progress in quantitative nondestructive evaluation
[AD-A108741] N82-18814
ACOUSTIC IMPEDANCE
Measurement of the absorption properties of acoustic materials used in the fabrication of cowlings
[CETIM-11-H-285] N82-19002
ACOUSTIC MICROSCOPES
Acoustic microscopy for nondestructive evaluation of materials --- and integrated circuits
[AD-A108423] N82-18617
ACOUSTICS
Energy contributions associated with combustion instability
[AD-A108137] N82-18348
ACTIVATION ENERGY
The theory and application of temperature programmed desorption in the study of unsupported iron and iron-copper Fischer-Tropsch synthesis catalysts N82-18339
Electronic states of a negative ion donor in semiconductors
[INPE-2092-RPE/322] N82-19061
Effects of electron transference energy in semiconductors --- germanium antimonides and silicon phosphides
[INPE-2129-RPE/353] N82-19062
ACTUATORS
The influence of sensor and actuator characteristics on overall helicopter AFCS design N82-18171
Slotted variable camber flap
[NASA-CASE-LAR-12541-1] N82-18203
A dynamic measure of controllability and observability for the placement of actuators and sensors on large space structures
[NASA-CR-168520] N82-18310
ADAPTIVE CONTROL
Configurational and system requirements for control of large space systems N82-18302
ACOSS eight (Active Control Of Space Structures), phase 2
[AD-A108629] N82-18313
Apparatus for damping operator induced oscillations of a controlled system --- flight control
[NASA-CASE-FRC-11041-1] N82-18493
Time domain vibration testing techniques in stochastic environment: Model reference adaptive system approach N82-18624
Identification of the adaptive feedback of the human motor system using the Response Difference Method (RDM)
[WTHD-134] N82-18669
ADAPTIVE FILTERS
Apparatus for damping operator induced oscillations of a controlled system --- flight control
[NASA-CASE-FRC-11041-1] N82-18493
Performance of fir adaptive filters using recursive algorithms --- speech processing N82-18490
ADDITIVES
Electron and impurity correlations in doped semiconductors
[INPE-2309-PRE/074] N82-19056
ADHESION
Improved graphite fiber adhesion
[AD-A108233] N82-18329
The response of solids to elastic/plastic indentation to adhesion measurements N82-18623
ADHESIVES
Hot rolled asphalt: Effect of binder properties on resistance to deformation
[PB82-122684] N82-18432
ADIABATIC CONDITIONS
Stability analysis of the compressible, adiabatic, similar boundary layer equations (lower branch)
[AD-A108507] N82-18546
ADSORPTION
The surface properties and flotation of rare earth minerals N82-18365
ADSORPTIVITY
Physicochemical properties of diesel particulate matter N82-18335
AERIAL PHOTOGRAPHY
The effect of atmospheric turbulence on air to ground photography
[RAE-TR-81065] N82-18555
Measurement of river sediments
[WMO-561] N82-18670
AERIAL RECONNAISSANCE
Shortrange forecasting of cloudiness and precipitation through extrapolation of GOES imagery
[AD-A108676] N82-18813
AERODYNAMIC BALANCE
A general purpose program for rotor blade dynamics N82-18151
AERODYNAMIC CHARACTERISTICS
Design philosophy of the Hughes model 500 helicopter N82-18140
Multiple ejection effects analysis
[AD-A108277] N82-18192
Theoretical investigations on the influence of different strake, tail unit, and conventional HLW arrangement as well as of CCV on the aerodynamic characteristics of fighter aircraft configurations
[MBB-FE-122/S/PUB/36] N82-18211

AERODYNAMIC COEFFICIENTS

Theoretical investigations on the influence of different strake, tail unit, and conventional HLW arrangement as well as of CCV on the aerodynamic characteristics of fighter aircraft configurations
[MBB-FE-122/S/PUB/36] N82-18211

Status report on the Aeronautical Research Institute of Sweden version of the missile aerodynamics program LARV, for calculation of static aerodynamic properties and longitudinal aerodynamic damping derivatives. Part 1: Theory — Low Aspect Ratio Vehicle (LARV)
[FFA-TN-AU-1661-PT-1] N82-18306

AERODYNAMIC CONFIGURATIONS

Parametric criteria and impact on design trends N82-18139

AERODYNAMIC DRAG

A rapid estimation of near Earth satellite lifetimes with quasi-dynamic atmosphere model with application to a proposed Brazilian satellite
[INPE-2267-PRE/060] N82-18272

AERODYNAMIC FORCES

Rime ice accretion and its effect on airfoil performance N82-18175

An experimental investigation of gapwise periodicity and unsteady aerodynamic response in an oscillating cascade. Volume 2: Data report. Part 1: Text and mode 1 data
[NASA-CR-165457-VOL-2-PT-1] N82-18180

An experimental investigation of gapwise periodicity and unsteady aerodynamic response in an oscillating cascade. Volume 2: Data report. Part 2: Mode 2 data
[NASA-CR-165457-VOL-2-PT-2] N82-18181

AERODYNAMIC INTERFERENCE

Optimum performance and wake geometry of co-axial rotor in hover N82-18156

A numerical approach to co-axial rotor aerodynamics N82-18157

Helicopter rotor downwash: Results of experimental research at the DFVLR-rotor test stand and their comparison with theoretical results N82-18158

Investigations of the separation behavior on airfoils at high angles of attack, using linear lift theory
[MBB-FE-122/S/PUB/37] N82-18169

AERODYNAMIC LOADS

Developments in rotary wing aircraft aerodynamics N82-18120

Some unsteady aerodynamic effects on helicopter rotors N82-18162

A method of predicting fuselage loads in hover N82-18164

Mast mounted visual aids N82-18167

AERODYNAMIC NOISE

Wind tunnel investigation of high speed rotor noise N82-18146

Prediction of blade vortex interaction noise from measured blade pressure N82-18147

AERODYNAMIC STABILITY

Automatic generation of equations for rotor-body systems with dynamic inflow for a priori ordering schemes N82-18152

A control model for maneuvering flight for application to a computer-flight testing program N82-18153

AERODYNAMIC STALLING

Application of the ONER dynamic stall model to a helicopter blade in forward flight N82-18161

Some unsteady aerodynamic effects on helicopter rotors N82-18162

AERODYNAMICS

XFV-12A diagnostic and development programs
[AD-A108354] N82-18206

Tendencies in the development of subsonic transport aircraft with special consideration of aerodynamics
[ESA-TT-705] N82-18214

Some recent developments in aeronautical fluid mechanics — calculation methods
[RAE-TM-AERO-1894] N82-18539

AEROELASTICITY

Dynamic and aeroelastic characteristics of complete windturbine systems N82-18128

Application of the ONER dynamic stall model to a helicopter blade in forward flight N82-18161

AERONAUTICAL ENGINEERING

NASA pocket statistics
[NASA-TM-84134] N82-19064

AERONAUTICS

Aviation and space flight research activities N82-18174

AEROSOLS

Estimating regional losses to agricultural producers from airborne residuals in the Ohio River Basin Energy Study Region, 1976-2000
[PB82-113879] N82-18439

Coagulation and deposition of ultrafine aerosols in turbulent pipe flow N82-18535

HERL biological exposure chamber conceptual design
[PB82-114648] N82-18574

Small size-range extension of an optical particle counter
[PB82-109823] N82-18575

Stratospheric aerosols and precursor gases N82-18777

AEROSPACE ENGINEERING

Aviation and space flight research activities N82-18174

Mobile work station concept for assembly of large space structures (zero gravity simulation tests) N82-18289

AEROSPACE ENVIRONMENTS

Preliminary characterization of persisting circadian rhythms during space flight: Neurospora as a model system N82-18266

Microorganisms and biomolecules in space hard environment N82-18267

AEROSPACE INDUSTRY

The yearly effect of the activities of the European Space Agency: Estimation of tax revenues due to the activities of ESA and of the resulting global short term economic impact. Volume 2: Main report
[ESA-CR(P)-1472] N82-19099

AEROSPACE MEDICINE

Spacelab mission 1 experiment descriptions second edition
[NASA-TM-82448] N82-18234

Effects of rectilinear acceleration, optokinetic and caloric stimuli in space N82-18255

Vestibular experiments N82-18256

Vestibulo-spinal reflex mechanisms N82-18257

The influence of space flight on erythrokinetics in man N82-18258

Measurement of central venous pressure and determination of hormones in blood serum during weightlessness N82-18259

Effects of prolonged weightlessness on the humoral immune response of humans N82-18260

Radiation environment mapping N82-18268

Advanced biostack experiment N82-18269

Aerospace Medicine and Biology: A continuing bibliography with indexes, supplement 227. January 1982
[NASA-SP-7011(227)] N82-18856

AEROSPACE SYSTEMS

Deployable platform systems development N82-18291

Technological needs of advanced Earth-observation spacecraft N82-18292

LSS control technology N82-18293

Control of large space antennas: Wrap-rib-hoop/column N82-18294

Spatial, High-Accuracy, Positioning-Encoding Sensor (SHAPES) for large space system control applications N82-18295

Control technology development N82-18296

LSS reference platform control N82-18297

AEROSPACE TECHNOLOGY TRANSFER

Ground work for project organization in development projects: Experience in space flight
[MBB-UR-476-81-O] N82-19068

AGGREGATES

Ceramic roadway aggregates with improved polish and wear resistance
[PB82-103987] N82-18428

AGING (MATERIALS)

Micromechanisms of fracture and hypothermal aging of fibrous composites
[PB82-121369] N82-18333

AGRICULTURE

Estimating regional losses to agricultural producers from airborne residuals in the Ohio River Basin Energy Study Region, 1976-2000
[PB82-113879] N82-18439

Regression type mathematical models of the interaction of meteorology and agricultural productivity. Objectives, uses and operational problems
[INPE-2117-RPE/341] N82-18881

Examination of the operational prospects for remote sensing — in Europe
[ESA-CR(P)-1476] N82-18

Market assessment of photovoltaic power systems for agricultural applications in Nigeria
[NASA-CR-165511] N82-18

AGROMETEOROLOGY

The evolution of meteorological forecasting
[INPE-2151-RPE/372] N82-18

AIR

Effect of air content on broadband noise measurements in the 1.22-m diameter water tunnel
[AD-A108540] N82-1900

AIR CONDITIONING

Preliminary guidelines for condition assessment of buildings being considered for solar retrofit
[PB82-113259] N82-18437

Experimental investigation of heat and mass transfer rates in regenerating type solar collector
[PB82-112244] N82-1872

AIR COOLING

Performance analysis of vapour cycle cooling systems
[AD-A108254] N82-18418

AIR CURRENTS

Coastal upwelling ecosystems analysis. Atlas of the JOINT 2 1977 aircraft winds for the 500 foot level
[PB82-113929] N82-18643

AIR DEFENSE

Army Lynx: Product development matched to military combat development N82-18143

A light helicopter for night firing N82-18144

Tethered rotorplatforms and their mission potential N82-18145

AIR LAUNCHING

Cavity oscillation in cruise missile carrier aircraft
[AD-A108610] N82-18186

AIR LOCKS

JT9D ceramic outer air seal system refinement program
[NASA-CR-165554] N82-189

AIR NAVIGATION

Integration of inertial sensors in helicopters N82-18173

AIR POLLUTION

Mechanisms of exhaust pollutants and plume formation in continuous combustion
[AD-A109059] N82-18350

Economic losses in the Columbus SMSA due to long-range transport of airborne residuals in the Ohio River Basin Energy Study Region
[PB82-110735] N82-18438

Estimating regional losses to agricultural producers from airborne residuals in the Ohio River Basin Energy Study Region, 1976-2000
[PB82-113879] N82-18439

Emissions and efficiency performance of industrial coal stoker fired boilers
[PB82-115312] N82-18730

Emissions assessment of conventional stationary combustion systems: Summary report
[PB82-109414] N82-18753

Inventory of emissions from marine operations within the California coastal waters
[PB82-105099] N82-18757

Compilation of air pollutant emission factors (including supplements 1-7), Supplement 12
[PB82-101213] N82-18760

Characterization of scrubbed and unscrubbed power plant plumes
[PB82-101346] N82-18761

Evaluation of point source dispersion models
[PB82-121062] N82-18762

EPA utility FGD (Flue Gas Desulfurization) survey
[PB82-115856] N82-18766

Quality assurance audits for SIP and NECRMP emission inventories: New York and New Jersey
[PB82-114273] N82-18767

AIR QUALITY

Evaluation of point source dispersion models
[PB82-121062] N82-18762

Quality assurance audits for SIP and NECRMP emission inventories: New York and New Jersey
[PB82-114273] N82-18767

AIR SAMPLING

Potential atmospheric carcinogens, phase 2/3: Analytical technique and field evaluation
[PB82-103476] N82-18362

Gas-surface interactions in cryogenic whole air sampling
[AD-A108888] N82-18742
Investigation on air samples from the submarine Sjohunden, August 1979
[FOA-C-54036-H1] N82-18744
Investigations on air samples from the submarine Nacken, August 1980
[FOA-C-54038-H1] N82-18745

AIR TRAFFIC
Evaluation of the visual acquisition range of enroute air traffic from cockpit observations --- collision avoidance
[ESA-TT-691] N82-18881

AIR TRAFFIC CONTROL
Distributed intelligence for air fleet control
[AD-A108811] N82-18196
Analytical study of cockpit information requirements
[AD-A108524] N82-18218

AIR WATER INTERACTIONS
Interpretation of equatorial hydrographic, nutrient element and radioisotope data
[DE82-001699] N82-18655
A dynamical model of wind-induced near-inertial motions
[AD-A108887] N82-18646
Models of near inertial vertical shear
[AD-A108886] N82-18647

AIRBORNE EQUIPMENT
Integration of complex systems in current and future aircraft projects for the example of avionics
[MBB-UH-18-80-O] N82-18221
Evaluation of two AN/APS-94 side-looking airborne radar systems in the detection of search and rescue targets
[AD-A108404] N82-18466
Electromagnetic subsurface measurements
[AD-A108192] N82-18469
Modified Ambient Sea Noise Indicator with ambient noise directionality estimator
[AD-A108389] N82-18998

AIRBORNE/SPACEBORNE COMPUTERS
A-7E software module guide
[AD-A108649] N82-18920

AIRCRAFT
Flight characteristics design and development of the MBB/KHI BK117 helicopter N82-18150

AIRCRAFT ANTENNAS
TM/TE polarization ratios in a sample of 30 kHz sferics received at altitudes from 0 to 70 km
[AD-A108182] N82-18464
Volumetric pattern prediction of antennas on aircraft using the geometrical theory of diffraction
[ESA-TT-677] N82-18483

AIRCRAFT BRAKES
Dynamics of aircraft antiskid braking systems --- conducted at the Langley aircraft landing loads and traction facility
[NASA-TP-1959] N82-18204

AIRCRAFT CARRIERS
Review of defense-related vertical and short takeoff and landing (V/STOL) aircraft programs
[GPO-85-278] N82-18205
Investigation of crossdeck pendant catapult slot interaction; proposed corrective measures
[AD-A108149] N82-18232
Shipboard exposure testing
[AD-A108148] N82-18375

AIRCRAFT COMPARTMENTS
Preliminary thoughts on helicopter cabin noise prediction methods N82-18148
The measurement of the mobility of structures at acoustic frequencies N82-18149
Cavity oscillation in cruise missile carrier aircraft
[AD-A108810] N82-18185
Study of cabin noise control for twin engine general aviation aircraft
[NASA-CR-165833] N82-18995

AIRCRAFT CONSTRUCTION MATERIALS
A study of the effects of long-term exposure to fuels and fluids on the behavior of advanced composite materials
[NASA-CR-165763] N82-18327

AIRCRAFT DESIGN
Tendencies in the development of subsonic transport aircraft with special consideration of aerodynamics
[ESA-TT-705] N82-18214

AIRCRAFT DETECTION
Distributed sensor networks
[AD-A108875] N82-18889

AIRCRAFT ENGINES
A digital simulation program describing the motion of an aircraft undergoing engine failure during its takeoff ground roll
[AD-A108430] N82-18210
Further development of the test concept of the ALPHA JET engine LARZAC 04 N82-18223

AIRCRAFT EQUIPMENT
Aircrew restraint and mobility test fixture
[AD-A108274] N82-18193

AIRCRAFT INSTRUMENTS
The multi mode matrix flat panel display: Technology and applications N82-18159
Analytical study of cockpit information requirements
[AD-A108524] N82-18218
Integration of complex systems in current and future aircraft projects for the example of avionics
[MBB-UH-18-80-O] N82-18221

AIRCRAFT MAINTENANCE
Potential reductions in aircraft operation and maintenance costs by using thrust computing support equipment
[AD-A108463] N82-18207

AIRCRAFT MODELS
Prediction of off-design performance of turbo-shaft engines a simplified method N82-18132
Measurement techniques used to assess the installed power of a helicopter engine N82-18133
Parametric criteria and impact on design trends N82-18139
Interpretation and construction of a dynamic similarity model of the A 310 wings
[MBB-FE-17/S/PUB/42] N82-18212

AIRCRAFT NOISE
Incorporation of environmental impact indices into noisemap
[AD-A108616] N82-18743
Study of cabin noise control for twin engine general aviation aircraft
[NASA-CR-165833] N82-18995
Annoyance caused by propeller airplane flyover noise: Preliminary results
[NASA-TM-83244] N82-18996

AIRCRAFT PERFORMANCE
SH-60B test program N82-18141
C-5A austere airfield operational utility evaluation. Phase 2: Operation on unpaved soil surfaces following rainfall
[AD-A108597] N82-18206

AIRCRAFT PRODUCTION COSTS
Impact of technology on avionics cost trends
[AD-A108484] N82-18219

AIRCRAFT RELIABILITY
Point of view of a helicopter manufacturer on airworthiness regulations N82-18137

AIRCRAFT SAFETY
Point of view of a helicopter manufacturer on airworthiness regulations N82-18137
Evaluation of Megastard 2700: A proposed new fire retardant system
[PB82-108515] N82-18380

AIRCRAFT SPECIFICATIONS
Point of view of a helicopter manufacturer on airworthiness regulations N82-18137
Army Lynx: Product development matched to military combat development N82-18143
A light helicopter for night firing N82-18144

AIRCRAFT SPIN
Spin-tunnel investigation of a 1/13-scale model of the NASA AD-1 oblique-wing research aircraft
[NASA-TM-83236] N82-18183

AIRCRAFT STRUCTURES
The effects of slight non-linearities on modal testing of helicopter-like structures N82-18130
Theoretical investigations on the influence of different strake, tail unit, and conventional HLW arrangement as well as of CCV on the aerodynamic characteristics of fighter aircraft configurations
[MBB-FE-122/S/PUB/36] N82-18211
Interpretation and construction of a dynamic similarity model of the A 310 wings
[MBB-FE-17/S/PUB/42] N82-18212
Characterization of the Airbus horizontal stabilizers of CFRP construction and structural analysis with the finite element method
[MBB-UT-13-81-O] N82-18213
A study of the effects of long-term exposure to fuels and fluids on the behavior of advanced composite materials
[NASA-CR-165763] N82-18327
Electroforming of space and aircraft structures
[MBB-SS-491-O] N82-18419

AIRCRAFT SURVIVABILITY
Army Lynx: Product development matched to military combat development N82-18143
A light helicopter for night firing N82-18144

AIRCRAFT TIRES
Dynamics of aircraft antiskid braking systems --- conducted at the Langley aircraft landing loads and traction facility
[NASA-TP-1959] N82-18204

AIRFOIL PROFILES
Investigations of the separation behavior on airfoils at high angles of attack, using linear lift theory
[MBB-FE-122/S/PUB/37] N82-18189
Laminar airfoils for transport aircraft
[ESA-TT-690] N82-18190

AIRFOILS
Rime ice accretion and its effect on airfoil performance N82-18175
An experimental investigation of gapwise periodicity and unsteady aerodynamic response in an oscillating cascade. Volume 2: Data report. Part 1: Text and mode 1 data
[NASA-CR-165457-VOL-2-PT-1] N82-18180
An experimental investigation of gapwise periodicity and unsteady aerodynamic response in an oscillating cascade. Volume 2: Data report. Part 2: Mode 2 data
[NASA-CR-165457-VOL-2-PT-2] N82-18181
Numerical analysis and FORTRAN program for the computation of the turbulent wakes of turbomachinery rotor blades, isolated airfoils and cascade of airfoils
[NASA-CR-3509] N82-18184

AIRFRAME MATERIALS
Replacing milled drawn aluminum pieces by precision forged ones
[V-2158] N82-18381

AIRGLOW
An imaging spectrometric observatory N82-18235
Investigation on Atmospheric H and D through the measurement of their Lyman-alpha emissions N82-18238
Atmospheric emission photometric imaging N82-18243

AIRPORTS
Wind-ceiling-visibility data at selected airports. Volume 1: New England region
[AD-A108155] N82-18816
Wind-ceiling-visibility data at selected airports, volume 2. Part A: Eastern region
[AD-A108156] N82-18817
Wind-ceiling-visibility data at selected airports. Volume 2, part B: Eastern region
[AD-A108157] N82-18818
Wind-ceiling-visibility data at selected airports. Volume 3, part A: Southern region
[AD-A108158] N82-18819
Wind-ceiling-visibility data at selected airports. Volume 3, part B: Southern region
[AD-A108159] N82-18820
Wind-ceiling-visibility data at selected airports. Volume 4, part A: Great Lakes region
[AD-A108160] N82-18821
Wind-ceiling-visibility data at selected airports. Volume 4, part B: Great Lakes region
[AD-A108161] N82-18822
Wind-ceiling-visibility data at selected airports. Volume 5, part A: Central region
[AD-A108162] N82-18823
Wind-ceiling-visibility data at selected airports. Volume 5, part B: Central region
[AD-A108163] N82-18824
Wind-ceiling-visibility data at selected airports. Volume 6, part A: Southwest region
[AD-A108164] N82-18825
Wind-ceiling-visibility data at selected airports. Volume 6, part B: Southwest region
[AD-A108165] N82-18826
Wind-ceiling-visibility data at selected airports. Volume 7, part A: Rocky Mountain region
[AD-A108166] N82-18827
Wind-ceiling-visibility data at selected airports. Volume 7, part B: Rocky Mountain region
[AD-A108167] N82-18828

Wind-ceiling-visibility data at selected airports. Volume 8: Northwest region
[AD-A108168] N82-18829
Wind-ceiling-visibility data at selected airports. Volume 9, part A: Western region
[AD-A108169] N82-18830
Wind-ceiling-visibility data at selected airports. Volume 9, part B: Western region
[AD-A108170] N82-18831
Wind-ceiling-visibility data at selected airports. Volume 10, part A: Alaskan and Pacific regions
[AD-A108171] N82-18832
Wind-ceiling-visibility data at selected airports. Volume 10, part B: Alaskan and Pacific regions
[AD-A108172] N82-18833
Wind-ceiling-visibility data at selected airports. Volume 11: Visibility time series for key stations
[AD-A108177] N82-18834
Development of a clear air radar to detect meteorological hazards at airports
[AD-A108238] N82-18835

AIRSPEED
Evaluation of the helicopter low airspeed system LASSIE N82-18172

ALASKA
United States Coast Pilot 9. Pacific and Arctic Coasts Alaska: Cape Spencer to Beaufort Sea
[PB82-109562] N82-18201

ALBEDO
Spectral albedos of midlatitude snowpacks
[NASA-TM-83868] N82-18863

ALGEBRA
Solution of large sets of linear equations using cellular arrays N82-18846
Research in algebraic manipulation
[AD-A108603] N82-18851
Mathematical techniques for nonlinear system history
[AD-A108370] N82-18953

ALGORITHMS
PMATRIX: An algorithm for transforming n-Dimensional data into plotted curves
[PB82-114463] N82-18424
Three dimensional field computation
[PB82-107160] N82-18491
Structure of a multibeam adaptive space-time processor
[AD-A108362] N82-18524
ICFITG: A program for interactive contouring from an irregular triangular grid
[AD-A108515] N82-18868
A simulation tool for distributed databases
[AD-A108819] N82-18892
Study of high speed complex number algorithms — for determining antenna for field radiation patterns
[NASA-CR-168743] N82-18914
ANALYZE user guide
[DE82-001323] N82-18924
An application of parallel computation to sequential computation: The problem of cost-effective resource allocation
[PB82-108739] N82-18925
Research in algebraic manipulation
[AD-A108603] N82-18951
Algorithm for the inverse of a Hermitian Toeplitz matrix
[AD-A108357] N82-18952
Central control system survey
[PB82-101981] N82-19109

ALIGNMENT
Alignment signals from electrons scattering near an edge for electron beam microfabrication N82-19004

ALKALINE EARTH METALS
Plasmon excitation in alkaline earth metals N82-19045

ALKALINITY
Interpretation of equatorial hydrographic, nutrient element and radioisotope data
[DE82-001897] N82-18855

ALLOYS
On the conditions required for vacancy loop growth in irradiated metals and alloys
[AERE-R-9810] N82-19076

ALTERNATING CURRENT
Single phase permanent magnet synchronous motors N82-18495

ALTERNATIVES
Integrating project worthiness into a cost-effectiveness framework for alternative analysis
[PB82-113895] N82-19108

ALUMINUM
An experimental determination of the effect of cyclic stress on void growth in ultra-high-purity aluminum during simultaneous 800 MeV proton irradiation N82-18364
Texture developments associated with abnormal grain growth in low carbon steel sheet N82-18368
Shrinkage effects in butt welds in 5083 aluminum
[PB82-121136] N82-18609
Shrinkage effects in T-fillet welds in 5083 aluminum
[PB82-114570] N82-18611

ALUMINUM ALLOYS
Mechanical-property data CT 91-T7E89 aluminum, powder metallurgy product
[AD-A108710] N82-18373
Shipboard exposure testing
[AD-A108148] N82-18375
Replacing milled drawn aluminum pieces by precision forged ones
[V-2188] N82-18381

ALUMINUM BORON COMPOSITES
Micromechanical predictions of crack propagation and fracture energy in a single fiber boron/aluminum model composite
[NASA-CR-168550] N82-18328

ALUMINUM COATINGS
Investigation of a galvanic separated aluminum coating as surface layer protection for high strength steel
[NBS-SB-486-O] N82-18360

ALUMINUM COMPOUNDS
The influence of composition on the structure and mechanical properties of the compound NiAl
[ESA-TT-700] N82-18362

ALUMINUM NITRIDES
Investigation of the CNTD mechanism and its effect on microstructural properties of SiC and AlN
[AD-A108581] N82-18371

AMINES
Studies relating to the synthesis of monomethylhydrazine by chloramination and problem relating to the protection of the environment from the vapors of 1, 1-dimethylhydrazine, monomethylhydrazine and hydrazine
[AD-A108369] N82-18323

AMMONIA
Ammonia health effects
[PB82-110047] N82-18865

AMORPHOUS MATERIALS
Radiation effects in amorphous metallic alloys — phosphorus segregation
[DE82-001603] N82-18378
A model for stored energy in amorphous silica
[AERE-TP-877] N82-19073

AMOUNT
Sedimentology and diagenesis of Bryozoan and sponge-rich carbonate buildups Great Bahama Bank N82-18769

AMPHIBIOUS VEHICLES
Mobility bibliography
[AD-A108228] N82-19104

ANALOG CIRCUITS
Analogue SAR signal processing: Breadboard design, implementation, evaluation and component specification — synthetic aperture radar
[ESA-CR(P)-1463] N82-18480
Charge circuits for analog LSI N82-18500

ANALOG COMPUTERS
Dynamic structural analysis by analog simulation
[PB82-110677] N82-18851

ANALOG SIMULATION
Dynamic structural analysis by analog simulation
[PB82-110677] N82-18851

ANALOG TO DIGITAL CONVERTERS
Charge circuits for analog LSI N82-18500

ANALYSIS OF VARIANCE
Radar detection of turbulence in thunderstorms
[AD-A108679] N82-18812

ANCHORS (FASTENERS)
Analysis of post-tensioned girder anchorage zones
[PB82-122268] N82-18436

ANEMOMETERS
Wind tunnel and laboratory calibration of balloon-borne wind sensors
[AD-A108676] N82-18814

ANGLE OF ATTACK
Investigations of the separation behavior on airfoils at high angles of attack, using linear lift theory
[MBB-FE-122/S/PUB/37] N82-18189

ANGULAR DISTRIBUTION
Angular scattering and channeling widths of positive and negative particles at multi-GeV energies
[DE82-002889] N82-19024

ANGULAR VELOCITY
Preliminary design of a hydraulic power supply for a laminar jet angular rate sensor
[AD-A108729] N82-18882
Flow velocity and angularity measurements in the FDL trisonic gasdynamic facility and self-adaptive wall wind tunnels with a laser transit anemometer
[AD-A108427] N82-19119

ANISOTROPY
Random anisotropy in Ising spin glass
[INPE-2277-PRE/055] N82-19078

ANNEALING
Investigation on the functioning of gold-tin superconducting films for the measurement of secondary sonic shock waves in He2 flow
[MPIS-8/1981] N82-18885
Optical investigations of the recombination processes in laser-annealed and thermally-annealed semiconductors
[AD-A108627] N82-19071
Transient capacitance measurements of deep level defects introduced in beta-ray compensated germanium by long-term annealing at room temperature
[AAEC/E-501] N82-19074

ANOMALIES
V.L.F. ionosonde and long-distance propagation anomalies produced by galactic CEN X-4 X-ray burst in May 1979
[INPE-2250-PRE/033] N82-19129

ANTENNA ARRAYS
A survey of the limits on radar imaging
[AD-A108596] N82-18462
Theoretical and experimental investigation of some slot antenna array problems
[AD-A108686] N82-18476

ANTENNA DESIGN
Systems identification technology development for large space systems N82-18301

ANTENNA RADIATION PATTERNS
Computer prediction of dual reflector antenna radiation properties
[NASA-CR-165114] N82-18449
TM/TE polarization ratios in a sample of 30 kHz sferics received at altitudes from 0 to 70 km
[AD-A108182] N82-18484
One class of optimum linear equally spaced antenna arrays with summary of difference radiation patterns
[AD-A108176] N82-18470
Volumetric pattern prediction of antennas on aircraft using the geometrical theory of diffraction
[ESA-TT-677] N82-18483
Study of high speed complex number algorithms — for determining antenna for field radiation patterns
[NASA-CR-168743] N82-18914

ANTENNAS
LSS control technology N82-18293
Control of large space antennas: Wrap-rib-hoop/column N82-18294
Measurements of antenna pulse responses
[AD-A108181] N82-18465

ANTHROPOMETRY
Scatter diagrams based on the anthropometric survey of 2000 Royal Airforce aircrew (1970/1971)
[RAE-TR-81017] N82-18867

ANTIFRICTION BEARINGS
Research in tribology and bearings
[PB82-108923] N82-18606

ANTIMONY
Electron-phonon scattering rates in antimony: Radio-frequency size effect N82-19048

ANTINEUTRINOS
Study of inclusive semi-leptonic neutral current reactions in neutrino and antineutrino interactions between 12 and 200 GeV
[CEA-N-2160] N82-19018

ANTIOXIDANTS
Quantitative chromatographic analyses of N-phenyl-alpha-naphthylamine and N-phenyl-beta-naphthylamine
[AD-A108362] N82-18345

ANTISEPTICS
Study of chlorine dioxide and its metabolites in man
[PB82-108558] N82-18863

ANTISKID DEVICES
Dynamics of aircraft antiskid braking systems — conducted at the Langley aircraft landing loads and traction facility
[NASA-TP-1959] N82-18204
APERTURES
Heat reflecting field stop
[NASA-CASE-LAR-12443-1] N82-19030
APPLICATIONS PROGRAMS (COMPUTERS)
Modal characteristics of rotor blades: Finite element approach and measurement by ground vibration test N82-18127
Nonlinear elastic beams, frames and structural analysis
[CTH-R-31/1979] N82-18645
Automated longwall guidance and control vertical control subsystem, volume 2 — user manuals (computer programs)
[NASA-CR-161970] N82-18659
AQUIFERS
Ground-water resources of the White River Basin, Madison County, Indiana
[PB82-109844] N82-18675
An observation-well network concept as applied to North Carolina
[PB82-108069] N82-18676
ARCHITECTURE
Theory and application of experimental model analysis in earthquake engineering
[PB82-122409] N82-18430
Performance of the Norris Cotton Federal Office Building for the first 3 years of operation
[PB82-105487] N82-18728
FEDSOL: Program user's manual and economic optimization guide for solar Federal building projects
[PB82-107012] N82-18729
ARCHITECTURE (COMPUTERS)
Flex firmware
[RSRE-81009] N82-18879
A quantitative evaluation of the feasibility of, and suitable hardware architecture for, an adaptive parallel finite-element system
[AD-A108492] N82-18887
ARCTIC OCEAN
Subsea trenching in the Arctic
[AD-A108341] N82-18849
ARGON
Charge transfer cross-sections of argon ions colliding on argon atoms
[CEA-CONF-6209] N82-19014
ARIZONA
Wind-ceiling-visibility data at selected airports. Volume 8, part A: Western region
[AD-A108169] N82-18830
ARRAYS
A four-phase modulation system for use with and adaptive array N82-18446
A 16 x 16 element extrinsic silicon detector array
[NASA-CR-166286] N82-18559
Solution of large sets of linear equations using cellular arrays N82-18946
ARRESTING GEAR
Investigation of crossdeck pendant catapult slot interaction; proposed corrective measures
[AD-A108149] N82-18232
ARTIFICIAL INTELLIGENCE
Distributed artificial intelligence
[AD-A108734] N82-18932
Plan synthesis: A logical perspective
[AD-A108720] N82-18933
Computational approaches to image understanding
[AD-A108191] N82-18936
Man/computer communication: From artificial intelligence and behavioral science perspectives
[FOA-C-53005-H2] N82-18942
ASHES
Properties of Portland cement concretes containing pozzolanic admixtures
[PB82-129965] N82-18434
ASPHALT
Hot rolled asphalt: Effect of binder properties on resistance to deformation
[PB82-122664] N82-18432
ASSESSMENTS
Environmental assessment, source test and evaluation report: Lurgi (Kosovo) medium-Btu gasification
[PB82-114075] N82-18751
ASTRONOMICAL OBSERVATORIES
Far ultraviolet astronomy using the FAUST telescope N82-18249
Very wide field camera N82-18250
ASTRONOMICAL SPECTROSCOPY
Spectroscopy in X-ray astronomy N82-18251
ASTRONOMICAL TELESCOPES
Far ultraviolet astronomy using the FAUST telescope N82-18249
ASTROPHYSICS
Active cavity radiometer N82-18252
ASYMPTOTIC METHODS
On asymptotic optimality of Bayes empirical Bayes estimators N82-18972
ATLANTIC OCEAN
The centralian aerogeophysical operation in the region of the Mid-Atlantic ridge. INPE participation
[INPE-2142-RPE/364] N82-18853
Atlantic hurricane wind probability forecasting (WINDPA)
[AD-A108786] N82-18810
ATLAS CENTAUR LAUNCH VEHICLE
Launch mission summary: INTELSAT 5 (F4) ATLAS/CENTAUR-58
[NASA-TM-84132] N82-18274
ATMOSPHERIC ATTENUATION
Effects of atmospheric turbulence on microwave and millimeter wave satellite communications systems N82-18445
The influence of the atmosphere on microwave radiometric measurements in the 10 GHz to 400 GHz frequency range --- and a computer program for determining atmospheric microwave attenuation
[ESA-TT-706] N82-18484
ATMOSPHERIC BOUNDARY LAYER
Analysis of gust structure in the atmospheric boundary layer by using conditional sampling
[FFA-TN-HU-2262-PT-1] N82-18796
ATMOSPHERIC CHEMISTRY
Analysis of UV protection requirements and testing of candidate attenuators for the Haloe optical instrument
[NASA-TM-83247] N82-18652
Chemical kinetics and photochemistry N82-18774
ATMOSPHERIC CIRCULATION
Multidimensional aspects: Ozone, temperature and transport N82-18772
Aircraft measurements and analysis of severe storms: 1976 field experiment
[NASA-CR-168519] N82-18803
Winter and summer simulations with the GLAS climate model
[NASA-TM-83866] N82-18807
ATMOSPHERIC COMPOSITION
Grille spectrometer N82-18236
Interpretation of equatorial hydrographic, nutrient element and radioisotope data
[DE82-001669] N82-18655
The Stratosphere 1981: Theory and measurements
[NASA-TM-84125] N82-18770
Trace species N82-18771
Model predictions and trend analysis N82-18773
Stratospheric instruments and analyses N82-18776
Stratospheric aerosols and precursor gases N82-18777
Methods for interpreting atmospheric spectral observations by Sun sighting through the Earth limb
[ESA-TT-715] N82-18798
ATMOSPHERIC EFFECTS
The effect of atmospheric turbulence on air to ground photography
[RAE-TR-81065] N82-18555
ATMOSPHERIC MODELS
A rapid estimation of near Earth satellite lifetimes with quasi-dynamic atmosphere model with application to a proposed Brazilian satellite
[INPE-2267-PRE/053] N82-18272
Evaluation of point source dispersion models
[PB82-121062] N82-18762
The Stratosphere 1981: Theory and measurements
[NASA-TM-84125] N82-18770
Multidimensional aspects: Ozone, temperature and transport N82-18772
Model predictions and trend analysis N82-18773
Chemical kinetics and photochemistry N82-18774
A reference solar spectral irradiance for use in atmospheric modeling N82-18775
A three-dimensional wind model for complex terrain N82-18802
Winter and summer simulations with the GLAS climate model
[NASA-TM-83866] N82-18807
ATMOSPHERIC PHYSICS
Spacelab mission 1 experiment descriptions second edition
[NASA-TM-82448] N82-18234
High altitude atmospheric physics program
[INPE-2111-RPE/336] N82-18785
ATMOSPHERIC RADIATION
Experiments in regional scale numerical weather prediction including use of SESAME '79 data
[AD-A108372] N82-18837
ATMOSPHERIC SCATTERING
Measurements of lidar backscattering from clouds
[ESA-TT-689] N82-18800
ATMOSPHERIC SOUNDING
Design of sounding rocket payloads
[AD-A108271] N82-18792
ATMOSPHERIC TEMPERATURE
Multidimensional aspects: Ozone, temperature and transport N82-18772
US Navy Marine Climatic Atlas of the World. Volume 9: World-wide means and standard deviations
[AD-A108222] N82-18836
The climate of Denmark. Summaries of observations from light vessels. Part 1: Wind, visibility, air temperature cloud cover, and weather
[DMI-CLIMATOL-PAPERS-8] N82-18838
ATMOSPHERIC TURBULENCE
Effects of atmospheric turbulence on microwave and millimeter wave satellite communications systems N82-18445
The effect of atmospheric turbulence on air to ground photography
[RAE-TR-81065] N82-18555
Radar detection of turbulence in thunderstorms
[AD-A108579] N82-18812
ATMOSPHERICS
TM/TE polarization ratios in a sample of 30 kHz sferics received at altitudes from 0 to 70 km
[AD-A108182] N82-18464
ATOMIC ENERGY LEVELS
Investigations about the internal conversion coefficient for transition energies near the threshold
[CEA-R-5062] N82-19016
ATOMIC EXCITATIONS
Research on atomic, molecular, and nuclear physics
[DE82-001175] N82-19020
ATOMIC STRUCTURE
Theoretical investigation of atomic structure and scattering processes
[AD-A108541] N82-19011
Electronic structure of the D(-) state and excited donor states of grain impurities in doped semiconductors
[INPE-2115-RPE/339] N82-19063
ATTACK AIRCRAFT
Aircrew restraint and mobility test fixture
[AD-A108274] N82-18193
ATTENTION
Modeling human attention allocation strategies with competing criteria
[AD-A108509] N82-18675
ATTENUATORS
Analysis of UV protection requirements and testing of candidate attenuators for the Haloe optical instrument
[NASA-TM-83247] N82-18652
ATTITUDE (INCLINATION)
An inexpensive photoelectric remote tilt meter
[PB82-103649] N82-18567
ATTITUDE CONTROL
Large space systems technology, 1981 — conferences
[NASA-CP-2215-PT-1] N82-18275
Modular attitude control of a large space platform N82-18300
System for stabilization and pointing of a stratospheric balloon-borne telescope
[INPE-2103-RPE/330] N82-18586

AUGER SPECTROSCOPY
Semiconductor measurement technology: The capabilities and limitations of Auger sputter profiling for studies of contamination
[PB82-120122] N82-18075
AURORAS
Ionosphere research
[AD-A108898] N82-18794
AUTOCODERS
A re-usable code generator for PRIME 50-series computers
[AD-A108880] N82-18881
AUTOCORRELATION
Quasi-elastic laser light diffusion
[CISE-1711] N82-18589
AUTOMATIC CONTROL
Three-engine control system for the prototype EH-101 helicopter
[AERO-9/81-1968L] N82-18135
A study of autonomous rendezvous and docking systems N82-18298
Active control of space structures: Proof of concept experiment N82-18304
Automated slope generation using raster technology
[AD-A108700] N82-18867
Solar energy control system — temperature measurement
[NASA-CASE-MFS-25257-1] N82-18696
Study of automatic control system to maintain constant percentage SO2 retention in a pressurized FBC
[PB82-110080] N82-18758
A microcomputer for control of data collection platforms — GOES satellites
[INPE-2104-RPE/331] N82-18881
Central control system survey
[PB82-101981] N82-19109
AUTOMATIC FLIGHT CONTROL
A control model for maneuvering flight for application to a computer-flight testing program N82-18153
AUTOMATION
Central control system survey
[PB82-101981] N82-19109
AUTOMOBILE FUELS
Gasoline equivalent fuel economy determination for alternate automotive fuels
[PB82-120072] N82-18412
AUTOMOBILES
Hydrogen cyanide health effects
[PB82-116039] N82-18864
AUTOMORPHISMS
Feynman path integral and Poisson processes with piecewise classical paths
[CNRS-CPT-80-P-1244] N82-18957
AUTOREGRESSIVE PROCESSES
Synthesis of textures using simultaneous autoregressive models
[AD-A108564] N82-18938
The analysis of repeated measurements through time N82-18967
AUTOROTATION
Dynamic and aeroelastic characteristics of complete windturbine systems N82-18129
AVALANCHE DIODES
Simulation of pulsed IMPATT oscillators and injection-locked amplifiers
[AD-A108483] N82-18522
AVIONICS
The role of simulation in the design process N82-18154
Integration of inertial sensors in helicopters N82-18173
Impact of technology on avionics cost trends
[AD-A108494] N82-18219
Trends in airline avionics
[NLR-MP-80019-U] N82-18220
Integration of complex systems in current and future aircraft projects for the example of avionics
[MBB-UH-16-80-O] N82-18221
Survey of multi-function display and control technology
[NASA-CR-167510] N82-18308
A-7E software module guide
[AD-A108849] N82-18880
System control procedure development for a distributed microcomputer network for avionics utilizing a non-responsive time-division multiplexed bus as the inter-computer communication link N82-18927
AXIAL FLOW
Prediction of laminar-to-turbulent boundary layer transition in axial-flow turbomachinery
[AD-A108842] N82-18545
AXIAL LOADS
Static and dynamic analysis of axially loaded wire ropes N82-18625
AXIAL MODES
Steady state numerical solution of magnetically insulated charge flow in coaxial geometry
[AD-A108883] N82-18991
AXIAL STRAIN
Investigation of compaction criteria for airport pavement subgrade soils
[AD-A108518] N82-18230

B

BACKGROUND NOISE
Background variations in millimeter wave telescopes due to the radome structure
[REPT-S-121] N82-18489
FRAM 2 Single Channel Ambient Noise Statistics
[AD-A108795] N82-18999
BACKSCATTERING
Measurements of lidar backscattering from clouds
[ESA-TT-699] N82-18600
Alignment signals from electrons scattering near an edge for electron beam microfabrication N82-19004
BALLISTOCARDIOGRAPHY
Three-dimensional ballistocardiography in weightlessness N82-18282
BALLOON-BORNE INSTRUMENTS
System for stabilization and pointing of a stratospheric balloon-borne telescope
[INPE-2103-RPE/330] N82-18558
LIMS Instrument Package (LIP) balloon experiment: Nimbus 7 satellite correlative temperature, ozone, water vapor, and nitric acid measurements
[NASA-TM-83858] N82-18741
BAND STRUCTURE OF SOLIDS
Electron energy loss spectroscopy of gallium arsenide and other materials
[AD-A108857] N82-18346
Two dimensional sub-bands in ion implantation — semiconductors
[INPE-2147-RPE/369] N82-19056
Electrical resistivity of P ions implanted on Si
[INPE-2145-RPE/367] N82-19060
Electronic states of a negative ion donor in semiconductors
[INPE-2092-RPE/322] N82-19061
Effects of electron transference energy in semiconductors — germanium antimonides and silicon phosphides
[INPE-2129-RPE/353] N82-19062
Electronic structure of the D(-) state and excited donor states of grain impurities in doped semiconductors
[INPE-2115-RPE/339] N82-19063
Correlation in doped semiconductors
[INPE-2109-RPE/334] N82-19065
BANDPASS FILTERS
Joint Services Electronics Program
[AD-A108347] N82-18526
BANDWIDTH
Theoretical and experimental investigations of the outward propagation of tire noise
[MBB-SB-483-81-O] N82-19001
BASE PRESSURE
A method of predicting fuselage loads in hover N82-18164
Theoretical prediction of base pressure on missile bodies having a turbulent dead-air region at supersonic velocities
[ESA-TT-708] N82-18191
BAUSCHINGER EFFECT
On a proposal for a continuum with microstructure N82-19052
BAYES THEOREM
Bayesian reliability tests made practical
[AD-A108150] N82-18615
On sequential unbiased and Bayes type estimates of parameters in a contingency table N82-18970
On asymptotic optimality of Bayes empirical Bayes estimators N82-18972
BAYS (STRUCTURAL UNITS)
Cavity oscillation in cruise missile carrier aircraft
[AD-A108810] N82-18185
BEADS
Shrinkage effects in bead-on-plate welds in
aluminium
[PB82-114586] N82-1861
BEAM CURRENTS
Simple analysis of light ion beam losses in deuterium plasmas channels
[AD-A108857] N82-1909
BEAM INJECTION
Phenomena induced by charged particle beams — experimental design for Spacelab N82-1834
BEAMS (RADIATION)
Method for shaping and aiming narrow beams — sonar mapping and target identification
[NASA-CASE-NPO-14632-1] N82-1844
BEAMS (SUPPORTS)
Nonlinear elastic beams, frames and structural analysis
[CTH-R-31/1979] N82-18645
Distortional buckling of thin-web beam columns
[PB82-105271] N82-1868
Dynamic structural analysis by analog simulation
[PB82-110677] N82-1868
BEAUFORT SEA (NORTH AMERICA)
United States Coast Pilot 9. Pacific and Arctic Coasts Alaska: Cape Spencer to Beaufort Sea
[PB82-109582] N82-18201
Foundations of structures in polar waters
[AD-A108344] N82-18417
Site investigations and submarine soil mechanics in polar regions
[AD-A108289] N82-18780
BED REST
Physiological responses to prolonged bed rest and fluid immersion in man: A compendium of research (1974 - 1980)
[NASA-TM-81324] N82-18854
BEDS (PROCESS ENGINEERING)
Comparative study of air classifiers
[PB82-108121] N82-18411
BELGIUM
National energy research and development program — bibliography of belgian scientific and technical reports N82-18707
BELLOWS
Elastic stresses in U-shaped bellows
[AECL-6476] N82-18638
BETA PARTICLES
Transient capacitance measurements of deep level defects introduced in beta-ray compensated germanium by long-term annealing at room temperature
[AAEC/E-501] N82-19074
BETATRONS
Dynamics of an intense electron ring in a modified betatron field
[AD-A108359] N82-19010
BIBLIOGRAPHIES
Energy: A continuing bibliography with indexes, issue 31
[NASA-SP-7043(31)] N82-18687
National energy research and development program — bibliography of belgian scientific and technical reports N82-18707
Georges Bank: An annotated bibliography of atlases, inventories and map series
[PB82-107665] N82-18853
Aerospace Medicine and Biology: A continuing bibliography with indexes, supplement 227. January 1982
[NASA-SP-7011(227)] N82-18856
Bibliography on carbohydrate synthesis. Selected works, 1861 - 1981
[NASA-CR-168553] N82-18871
Patent Abstract Digest, volume 1
[AD-A108672] N82-19100
Patent Abstract Digest, volume 2
[AD-A108673] N82-19101
Patent Abstract Digest, volume 3
[AD-A108674] N82-19102
Mobility bibliography
[AD-A108228] N82-19104
BINDERS (MATERIALS)
Hot rolled asphalt: Effect of binder properties on resistance to deformation
[PB82-122564] N82-18432
BIOASSAY
HERL biological exposure chamber conceptual design
[PB82-114646] N82-18574

BIOASTRONAUTICS
Spacelab mission 1 experiment descriptions second edition
[NASA-TM-82448] N82-18234
Effects of rectilinear acceleration, optokinetic and caloric stimuli in space N82-18255
Vestibular experiments N82-18256
Vestibulo-spinal reflex mechanisms N82-18257
The influence of space flight on erythrokinetics in man N82-18258
Measurement of central venous pressure and determination of hormones in blood serum during weightlessness N82-18259
Effects of prolonged weightlessness on the humoral immune response of humans N82-18260
Effect of weightlessness on lymphocyte proliferation N82-18261
Advanced biostack experiment N82-18269

BIOENGINEERING
HERL biological exposure chamber conceptual design
[PB82-114646] N82-18574

BIOLOGICAL EFFECTS
Advanced biostack experiment N82-18269
An investigation of chemistry and toxicity of ozone-produced oxidants and bromate to selected estuarine species
[PB82-116351] N82-18785
Aerospace Medicine and Biology: A continuing bibliography with indexes, supplement 227. January 1982
[NASA-SP-7011(227)] N82-18656

BIOLOGICAL EVOLUTION
Computational modeling of evolutionary learning N82-18911

BIOLOGICAL MODELS (MATHEMATICS)
Computational modeling of evolutionary learning N82-18911

BIOLOGY
Preliminary characterization of persisting circadian rhythms during space flight: Neurospora as a model system N82-18266

BIOMASS
Mesoscale studies of flow regimes and fluxes of particulate matter in coastal waters
[DE82-001740] N82-18850

BIOMASS ENERGY PRODUCTION
Adaptation of the simplex gasification process to the coconversion of municipal solid waste and sewage sludge
[PB82-112418] N82-18406

BIPOLAR TRANSISTORS
Power converter
[NASA-CASE-FRC-11014-1] N82-18494

BIREFRINGENCE
Birefringence and stress in polymer melts under shear and extension N82-18391

BITUMENS
Hot rolled asphalt: Effect of binder properties on resistance to deformation
[PB82-122994] N82-18432

BLACK BODY RADIATION
Filtration of elements of orbital images contaminated by clouds, to obtain improved measurements of the black body temperature for use in oceanography
[INPE-2121-RPE/345] N82-18845
Experimental and theoretical studies of interstellar grains
[NASA-TM-83883] N82-18120

BLADE TIPS
Prediction of blade vortex interaction noise from measured blade pressure N82-18147
The problem of calculation of the flow around helicopter rotor blade tips N82-18160
An analytical investigation of the free-tip rotor for helicopters
[NASA-TM-81345] N82-18179
On the calculation of transonic blade tip flow for helicopter rotors
[MBB-UD-320-81-O] N82-18187

BLADES (CUTTERS)
Precision reciprocating filament chopper
[NASA-CASE-LAR-12584-2] N82-18604

BLOOD PRESSURE
Measurement of central venous pressure and determination of hormones in blood serum during weightlessness N82-18259

BLOOD VOLUME
Measurement of central venous pressure and determination of hormones in blood serum during weightlessness N82-18259

BLUNT BODIES
An integral equation for the velocity field of irrotational flows around blunt bodies
[ESA-TT-702] N82-18551

BODIES OF REVOLUTION
Exact involute bodies of revolution
[AD-A108669] N82-18317
Electromagnetic coupling to a conducting body of revolution with a homogeneous material region
[AD-A108886] N82-18473

BODY CENTERED CUBIC LATTICES
Comparison of two-particle cluster expansions for b.c.c. spin of 1/2 systems N82-19047

BODY FLUIDS
Analysis of volatile metabolites in biological fluids as indicators of prodromal disease condition
[NASA-CR-167513] N82-18659

BODY-WING CONFIGURATIONS
Automatic generation of equations for rotor-body systems with dynamic inflow for a priori ordering schemes N82-18152
Status report on the Aeronautical Research Institute of Sweden version of the missile aerodynamics program LARV, for calculation of static aerodynamic properties and longitudinal aerodynamic damping derivatives. Part 1: Theory — Low Aspect Ratio Vehicle (LARV)
[FFA-TN-AU-1661-PT-1] N82-18306

BOILERS
Report on the experiences with the gas compression heat pump system of the school and sports center at Altenkunstadt
[BMFT-FB-T-81-175] N82-18552
Emissions and efficiency performance of industrial coal stoker fired boilers
[PB82-115312] N82-18730

BOMBS (ORDNANCE)
Bomb crater repair techniques for permanent airfields. Report 1: Series 1 tests
[AD-A106716] N82-18229

BORON
Theoretical considerations of boron combustion in ducted rockets
[ESA-TT-703] N82-18322

BORON FIBERS
Micromechanical predictions of crack propagation and fracture energy in a single fiber boron/aluminum model composite
[NASA-CR-166550] N82-18326

BOUNDARY LAYER CONTROL
Drag reduction and adaptive boundary conditions
[AD-A108809] N82-18544

BOUNDARY LAYER EQUATIONS
The line method for solving partial differential equations encountered in the literature N82-18960

BOUNDARY LAYER FLOW
Some recent developments in aeronautical fluid mechanics — calculation methods
[RAE-TM-AERO-1894] N82-18539
Stability analysis of the compressible, adiabatic, similar boundary layer equations (lower branch)
[AD-A108507] N82-18546

BOUNDARY LAYER SEPARATION
Investigations of the separation behavior on airfoils at high angles of attack, using linear lift theory
[MBB-FE-122/S/PUB/37] N82-18189

BOUNDARY LAYER STABILITY
Stability analysis of the compressible, adiabatic, similar boundary layer equations (lower branch)
[AD-A108507] N82-18546

BOUNDARY LAYER TRANSITION
Prediction of laminar-to-turbulent boundary layer transition in axial-flow turbomachinery
[AD-A108642] N82-18545

BOUNDARY LAYERS
The formation of a ring vortex at a circular jet nozzle and its transformation during takeoff into a liquid layer and at the liquid surface
[MPIS-27/1980] N82-18186
Asymptotic high frequency modes of homogeneous waveguide structures with impedance boundaries
[REPT-S-120] N82-18488
Winter and summer simulations with the GLAS climate model
[NASA-TM-83866] N82-18807

BOUNDARY LUBRICATION
Research in tribology and bearings
[PB82-108883] N82-18506

BOX BEAMS
Analysis of post-tensioned girder anchorage zones
[PB82-122286] N82-18433

BRACKETS
The design, fabrication and installation of cable routing mockups in support of Spacelab 2
[NASA-CR-161975] N82-18312

BRAKES (FOR ARRESTING MOTION)
Moving body velocity arresting line — stainless steel cables with energy absorbing sleeves
[NASA-CASE-LAR-12372-1] N82-18601

BRAKING
Dynamics of aircraft antiskid braking systems — conducted at the Langley aircraft landing loads and traction facility
[NASA-TP-1959] N82-18204

BRAZIL
A rapid estimation of near Earth satellite lifetimes with quasi-dynamic atmosphere model with application to a proposed Brazilian satellite
[INPE-2287-PRE/063] N82-18272
The centralian aerogeophysical operation in the region of the Mid-Atlantic ridge. INPE participation
[INPE-2142-RPE/364] N82-18653
A model for estimating the productivity of corn in the States of Sao Paulo
[INPE-2116-RPE/342] N82-18662
Ionospheric program
[INPE-2113-RPE/337] N82-18778
Convective rainfall estimation in Rio Grande do Sul State, Brazil: Preliminary results
[INPE-2271-RPE/400] N82-18804

BREADBOARD MODELS
Analogue SAR signal processing: Breadboard design, implementation, evaluation and component specification — synthetic aperture radar
[ESA-CR(P)-1463] N82-18460

BREAKING
Spontaneous breakdown of chiral symmetry in semi-classical method. 1: Boundary condition on the path integral
[CNRS-CPT-80-P-1217] N82-18956

BRIDGES (STRUCTURES)
Analysis of thermal stresses in internally sealed concrete bridge decks
[PB82-122666] N82-18435

BRIGHTNESS TEMPERATURE
Active cavity radiometer N82-18252
The influence of the atmosphere on microwave radiometric measurements in the 10 GHz to 400 GHz frequency range — and a computer program for determining atmospheric microwave attenuation
[ESA-TT-706] N82-18484
Observations with an imaging 35 GHz radiometer of terrain in Malmslatt, July 1980
[FOA-C-30240-E1/E3] N82-18672
Filtration of elements of orbital images contaminated by clouds, to obtain improved measurements of the black body temperature for use in oceanography
[INPE-2121-RPE/345] N82-18845

BROADBAND
Effect of air content on broadband noise measurements in the 1.22-m diameter water tunnel
[AD-A108540] N82-19000

BROMATES
An investigation of chemistry and toxicity of ozone-produced oxidants and bromate to selected estuarine species
[PB82-116351] N82-18785

BROMINE
Theoretical studies of solar-pumped lasers
[NASA-CR-168554] N82-18677

BUCKLING
Vibration and buckling studies of pretensioned structures N82-18262
Inelastic beam buckling experiments
[PB82-103292] N82-18648

BURGER EQUATION
Burgers approximation for two-dimensional flow past an ellipse
[NASA-CR-168552] N82-18540

BURNERS
Industrial burner and process efficiency program
[PB82-115486] N82-18731

BURNING RATE

User's manual for Solid Propulsion Optimization Code (SPOC). Volume 1: Technical description
[AD-A108234] N82-18319

User's manual for Solid Propulsion Optimization Code (SPOC). Volume 2: User's guide
[AD-A108235] N82-18320

User's manual for Solid Propulsion Optimization Code (SPOC). Volume 3: Program description
[AD-A108236] N82-18321

Decomposition and interaction of propellant ingredients
[AD-A108135] N82-18404

Laser hole burning spectroscopy: A high resolution probe of molecular environments
[AD-A108648] N82-18560

BUS CONDUCTORS

Fiber optic data bus for the AN/GYQ-21(V)
[AD-A108694] N82-19031

BUSHINGS

SF6 plastic film insulated outdoor bushing for metalclad switchgear operating at system voltages of 420 kV and above
[BMFT-FB-T-81-172] N82-18532

BUTT JOINTS

Shrinkage effects in butt welds in 5083 aluminium
[PB82-121136] N82-18609

C

CABLES (ROPES)

Moving body velocity arresting line — stainless steel cables with energy absorbing sleeves
[NASA-CASE-LAR-12372-1] N82-18601

Static and dynamic analysis of axially loaded wire ropes N82-18625

CALIFORNIA

Water resources data for California. Volume 3: Southern Central Valley Basins and the Great Basin from Walker River to Truckee River
[PB82-117003] N82-18681

Water resources data for California. Volume 1: Colorado River Basin, Southern Great Basin from Mexican Border to mono Lake Basin and Pacific Slope Basins from Tijuana River to Santa Maria River
[PB82-116997] N82-18683

Water resources data for California. Volume 4: Northern Central Valley Basins and the Great Basin from Honey Lake Basin to Oregon state line
[PB82-117011] N82-18684

Wind-ceiling-visibility data at selected airports. Volume 9, part A: Western region
[AD-A108169] N82-18830

CAMERAS

Metric camera experiment N82-18239

CAPACITANCE

Transient capacitance measurements of deep level defects introduced in beta-ray compensated germanium by long-term annealing at room temperature
[AAEC/E-501] N82-19074

CAPACITORS

Jump behavior of circuits and systems
N82-18302

CARBOHYDRATES

Bibliography on carbohydrate synthesis. Selected works, 1861 - 1981
[NASA-CR-168553] N82-18671

CARBON

The effect of hydrogen on the solid solution strengthening and softening of nickel
[AD-A108864] N82-18374

CARBON DIOXIDE

The oxidation of dilute iron-silicon alloys ((Si) or = 1w/o) in carbon dioxide
[AD-A108338] N82-18372

CARBON DIOXIDE CONCENTRATION

Interpretation of equatorial hydrographic, nutrient element and radioisotope data
[DE82-001686] N82-18655

CARBON DIOXIDE LASERS

Competing reaction channels in IR laser induced unimolecular reactions N82-18336

Mode selective vibrational energy transfer in methylfluoride
[MPIQ-6/1981] N82-18356

High temperature in absorption measurements
[AD-A108601] N82-18568

Pulsed heterodyne CO2 laser/scanner system
[AD-A108166] N82-18569

Investigation of cold cathodes for long life CO sub 2 waveguide lasers
[AD-A108682] N82-18595

CARBON FIBER REINFORCED PLASTICS

Characterization of the Airbus horizontal stabilizers of CFRP construction and structural analysis with the finite element method
[MBB-UT-13-81-O] N82-18213

Failure of fibrous composites. Part 1: Stress concentration, cracks and notches. Part 2: Toughness
[PB82-113531] N82-18332

Micromechanisms of fracture and hypothermal aging of fibrous composites
[PB82-121369] N82-18333

Nondestructive testing of CFRP
[MBB-BB-477-81-O] N82-18620

CARBON FIBERS

Mitigation of conductive fiber release by selected coatings
[AD-A108270] N82-18328

Improved graphite fiber adhesion
[AD-A108233] N82-18329

CARBON MONOXIDE LASERS

Investigation of possibilities for solar-powered high-energy lasers in space N82-18581

CARBONATES

Sedimentology and diagenesis of Bryozoan and sponge-rich carbonate buildups Great Bahama Bank
N82-18759

CARBORANE

Carboranylcyclotriphosphazenes and their polymers — thermal insulation
[NASA-CASE-ARC-11176-1] N82-18369

CARCINOGENS

Quantitative chromatographic analyses of N-phenyl-alpha-naphthylamine and N-phenyl-beta-naphthylamine
[AD-A108362] N82-18345

Potential atmospheric carcinogens, phase 2/3: Analytical technique and field evaluation
[PB82-102476] N82-18362

Molecular interactions of high energy fuels and jet fuels with oncogenic viruses and endogenous viruses
[AD-A108377] N82-18655

CARRIER FREQUENCIES

Ultramicrowave communications system, phase 3
[NASA-CR-167519] N82-18444

Measurements of antenna pulse response
[AD-A108181] N82-18465

Radio equipment for propagation experiments at the frequencies 11, 18, and 36 GHz
[FOA-A-30027-E2] N82-18490

CARRIER MOBILITY

Two dimensional sub-bands in ion implantation — semiconductors
[INPE-2147-RPE/389] N82-19058

CARRIER WAVES

Radio equipment for propagation experiments at the frequencies 11, 18, and 36 GHz
[FOA-A-30027-E2] N82-18490

CASCADE FLOW

An experimental investigation of gapwise periodicity and unsteady aerodynamic response in an oscillating cascade. Volume 2: Data report. Part 1: Text and mode 1 data
[NASA-CR-165457-VOL-2-PT-1] N82-18180

An experimental investigation of gapwise periodicity and unsteady aerodynamic response in an oscillating cascade. Volume 2: Data report. Part 2: Mode 2 data
[NASA-CR-165457-VOL-2-PT-2] N82-18181

Numerical analysis and FORTRAN program for the computation of the turbulent wakes of turbomachinery rotor blades, isolated airfoils and cascade of airfoils
[NASA-CR-3509] N82-18184

CASES (CONTAINERS)

Airtight collector casings — and roof mounting frame for solar absorber panels
[BMFT-FB-T-81-164] N82-18716

CATALYSIS

Feasibility of photocatalytic oxidation for wastewater clean-up and reuse
[PB82-108457] N82-18556

CATALYSTS

The theory and application of temperature programmed desorption in the study of unsupported iron and iron-copper Fischer-Tropsch synthesis catalysts N82-18389

Ammoxidation of toluene and xylenes to nitriles
[PB82-105420] N82-18391

Experimental study of an integral catalytic combustor: Heat exchanger for Stirling engines
[NASA-TM-82783] N82-18591

CATAPULTS

Investigation of crossdeck pendant catapult slot interaction; proposed corrective measures
[AD-A108149] N82-18232

CATHODES

Selective jet plating N82-18336

CATIONS

Quantum chemical investigations of the mechanism of cationic polymerization and theoretical prediction of crystal densities and decomposition pathways of energetic molecules
[AD-A108520] N82-18398

CEILINGS (METEOROLOGY)

An automated low cloud prediction system
[AD-A108681] N82-18815

Wind-ceiling-visibility data at selected airports. Volume 1: New England region
[AD-A108155] N82-18816

Wind-ceiling-visibility data at selected airports, volume 2. Part A: Eastern region
[AD-A108156] N82-18817

Wind-ceiling-visibility data at selected airports. Volume 2, part B: Eastern region
[AD-A108157] N82-18818

Wind-ceiling-visibility data at selected airports. Volume 3, part A: Southern region
[AD-A108158] N82-18819

Wind-ceiling-visibility data at selected airports. Volume 3, part B: Southern region
[AD-A108159] N82-18820

Wind-ceiling-visibility data at selected airports. Volume 4, part A: Great Lakes region
[AD-A108160] N82-18821

Wind-ceiling-visibility data at selected airports. Volume 4, part B: Great Lakes region
[AD-A108161] N82-18822

Wind-ceiling-visibility data at selected airports. Volume 5, part A: Central region
[AD-A108162] N82-18823

Wind-ceiling-visibility data at selected airports. Volume 5, part B: Central region
[AD-A108163] N82-18824

Wind-ceiling-visibility data at selected airports. Volume 6, part A: Southwest region
[AD-A108164] N82-18825

Wind-ceiling-visibility data at selected airports. Volume 6, part B: Southwest region
[AD-A108165] N82-18826

Wind-ceiling-visibility data at selected airports. Volume 7, part A: Rocky Mountain region
[AD-A108166] N82-18827

Wind-ceiling-visibility data at selected airports. Volume 7, part B: Rocky Mountain region
[AD-A108167] N82-18828

Wind-ceiling-visibility data at selected airports. Volume 8: Northwest region
[AD-A108168] N82-18829

Wind-ceiling-visibility data at selected airports. Volume 9, part A: Western region
[AD-A108169] N82-18830

Wind-ceiling-visibility data at selected airports. Volume 9, part B: Western region
[AD-A108170] N82-18831

Wind-ceiling-visibility data at selected airports. Volume 10, part A: Alaskan and Pacific regions
[AD-A108171] N82-18832

Wind-ceiling-visibility data at selected airports. Volume 10, part B: Alaskan and Pacific regions
[AD-A108172] N82-18833

Wind-ceiling-visibility data at selected airports. Volume 11: Visibility time series for key stations
[AD-A108177] N82-18834

CELESTIAL BODIES

Far ultraviolet astronomy using the FAUST telescope N82-18249

CEMENTS

Investigation into the utility of some quick setting cements for runway repair
[B-80-157/80.7.0157] N82-18225

Properties of Portland cement concretes containing pozzolanic admixtures
[PB82-120885] N82-18434
CENTRAL PROCESSING UNITS
SQL Front-End functional description
[AD-A108508] N82-18884
Procedure based generalized interactive systems
N82-18828
CENTRIFUGES
Experimental and theoretical studies on gas cyclone separators operating at high efficiency N82-18340
CERAMIC COATINGS
Evaluation of present thermal barrier coatings for potential service in electric utility gas turbines
[NASA-CR-165545] N82-18368
Measurement of the dielectric constant of ceramic ABO3 substrates
[LEC -TR-1980-04] N82-18392
JT9D ceramic outer air seal system refinement program
[NASA-CR-165554] N82-18603
CERAMICS
Hard-on-hard (ceramic) long-life seals and riders for cryogenic coolers
[AD-A108646] N82-18394
Determination of the high temperature strength of ceramic. Discussion of testing techniques: Flexural and tensile tests, creep tests with flexural and tensile load
[ESA-TT-716] N82-18399
High-temperature corrosion resistance of ceramic materials
[PB82-104399] N82-18400
Ceramic roadway aggregates with improved polish and wear resistance
[PB82-103967] N82-18428
CHANNEL CAPACITY
A new external limit to the capacity of interference channels
[INPE-2162-RPE/380] N82-18455
CHANNEL FLOW
Thermal hydraulic stability of flow in parallel channels N82-18538
CHANNELS (DATA TRANSMISSION)
A General Purpose Interface Bus (GPIB)
[RAE-TM-RAD-NAV-168] N82-18505
Wideband HF channel analyzer
[AD-A108694] N82-18886
Fiber optic data bus for the AN/GYQ-21(V)
[AD-A108394] N82-19031
CHARACTERIZATION
I-V characterization of solar cells
[INPE-2141-RPE/363] N82-18699
CHARGE COUPLED DEVICES
Low-background performance of a monolithic InSb CCD array
[NASA-TM-84216] N82-19117
CHARGE DISTRIBUTION
Secondary electron emission from a charged dielectric in the presence of normal and oblique electric fields
[NASA-CR-168558] N82-18507
Solitons in one-dimensional charge density wave systems N82-19051
CHARGE EXCHANGE
Time of flight analysis of charge exchange neutral particles from the TORTUR 2 plasma — toroidal turbulence experiment (TORTUR)
[REPT-81-136] N82-19042
CHARGE FLOW DEVICES
Steady state numerical solution of magnetically insulated charge flow in coaxial geometry
[AD-A108833] N82-18991
CHARGE TRANSFER
Charge transfer cross-sections of argon ions colliding on argon atoms
[CEA-CONF-5209] N82-19014
CHARGE TRANSFER DEVICES
Tests concerning technological problems with charge transfer electron multipliers
[TDI/1.1851/80] N82-18536
A 16 x 16 element extrinsic silicon detector array
[NASA-CR-166285] N82-18559
CHARGED PARTICLES
Mapping of electrical potential distributions with charged particle beams
[NASA-CR-168558] N82-18506
Angular scattering and channeling widths of positive and negative particles at multi-GeV energies
[DE82-002933] N82-19024
CHEMICAL CLEANING
The application of chemical etching to the failure analysis of semiconductor devices (literature survey and preliminary experiments). Volume 1: Phase 1 report
[ESA-CR(P)-1470-VOL-1] N82-18618
The application of chemical etching to the failure analysis of semiconductor devices (experimental). Volume 2: Phase 2 report
[ESA-CR(P)-1470-VOL-2] N82-18619
CHEMICAL COMPOSITION
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 2. Task 2: Equilibria between the carbonate electrolyte and the C-H-O-S gas phase. Task 3: Vapour pressures and the volitisation of the alkali species
[DE82-000889] N82-18705
Trace species N82-18771
CHEMICAL EFFECTS
Quantitative chromatographic analyses of N-phenyl-alpha-naphthylamine and N-phenyl-beta-naphthylamine
[AD-A108362] N82-18345
An investigation of chemistry and toxicity of ozone-produced oxidants and bromate to selected estuarine species
[PB82-116351] N82-18765
Molecular interactions of high energy fuels and jet fuels with oncogenic viruses and endogenous viruses
[AD-A108377] N82-18855
CHEMICAL EQUILIBRIUM
An equilibrium model for the partitioning of synthetic organic compounds: Formulation and calibration
[PB82-116882] N82-18748
CHEMICAL REACTIONS
A general computer program for fluid-flow, heat-transfer and chemical-reaction processes
[HTS/81/10] N82-18549
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 2. Task 2: Equilibria between the carbonate electrolyte and the C-H-O-S gas phase. Task 3: Vapour pressures and the volitisation of the alkali species
[DE82-000889] N82-18705
CHEMILUMINESCENCE
LIMS Instrument Package (LIP) balloon experiment: Nimbus 7 satellite correlative temperature, ozone, water vapor, and nitric acid measurements
[NASA-TM-83259] N82-18741
CHEMISORPTION
An investigation of the kinetics for hydrogen chemisorption on iron metal surfaces
[NASA-CR-168555] N82-18369
CHIRP SIGNALS
Method for shaping and aiming narrow beams — sonar mapping and target identification
[NASA-CASE-NPO-14632-1] N82-18443
CHLORIDES
Multiphoton dissociation and thermal unimolecular reactions induced by infrared lasers N82-18337
CHLORINATION
Design optimization of the chlorination process. Volume 1: Comparison of optimized pilot system with existing full scale systems
[PB82-100835] N82-19110
CHLORINE COMPOUNDS
Study of chlorine dioxide and its metabolites in man
[PB82-109356] N82-18863
CHLORINE OXIDES
Study of chlorine dioxide and its metabolites in man
[PB82-109356] N82-18863
CHROMOSPHERE
Theoretical studies of the RS Canum Venaticorum stars
[NASA-CR-168549] N82-19116
CIRCADIAN RHYTHMS
Preliminary characterization of persisting circadian rhythms during space flight: Neurospora as a model system N82-18266
CIRCUIT BOARDS
A descriptive language for thin film conductors
[IND-FB-107] N82-18526
CIRCUIT BREAKERS
Test setups for the development of high voltage circuit breakers for high short circuit capacities
[BMFT-FB-T-81-194] N82-18514
SF6 plastic film insulated outdoor bushing for metalclad switchgear operating at system voltages of 420 kV and above
[BMFT-FB-T-81-172] N82-18532
CIRCUITS
High voltage power transistor development
[NASA-CR-165547] N82-18508
CIRCULATORY SYSTEM
Three-dimensional ballistocardiography in weightlessness N82-18262
CITIES
* Urban data for comparative analyses of cities
[PB82-125675] N82-19107
Fourth Annual Community Planning and Development Challenges: Energy, Environment, Water
[PB82-125790] N82-19108
CIVIL AVIATION
Impact of technology on avionics cost trends
[AD-A108494] N82-18219
Trends in airline avionics
[NLR-MP-80013-U] N82-18220
CLAMPS
Reusable thermal cycling clamp — holders for directional solidification experiments
[NASA-CASE-LAR-12868-1] N82-18390
CLASSIFICATIONS
On empirical foundations of information science
[PB82-125996] N82-19096
CLASSIFIERS
Comparative study of air classifiers
[PB82-108121] N82-18411
A PRF sorter based on list manipulation techniques
[AD-A108365] N82-18934
CLEANING
Performance testing of four skimming systems
[PB82-101353] N82-18758
CLEAR AIR TURBULENCE
Development of a clear air radar to detect meteorological hazards at airports
[AD-A108236] N82-18835
CLIMATE
Indoor climate, outdoor climate, and energy consumption. An approach to the calculation of the effect of the outdoor and indoor climate on the energy consumption in buildings, based on methods of statistical analysis
[WTHD-137] N82-18709
The climate of Denmark. Summaries of observations from light vessels. Part 1: Wind, visibility, air temperature cloud cover, and weather
[DMI-CLIMATOL-PAPERS-6] N82-18838
CLIMATOLOGY
Winter and summer simulations with the GLAS climate model
[NASA-TM-83866] N82-18807
Climate observing system studies: An element of the NASA Climate Research Program: Workshop report
[NASA-TM-84040] N82-18808
US Navy Marine Climatic Atlas of the World. Volume 9: World-wide means and standard deviations
[AD-A108222] N82-18836
CLOUD COVER
Shortrange forecasting of cloudiness and precipitation through extrapolation of GOES imagery
[AD-A108678] N82-18813
The climate of Denmark. Summaries of observations from light vessels. Part 1: Wind, visibility, air temperature cloud cover, and weather
[DMI-CLIMATOL-PAPERS-6] N82-18838
Filtration of elements of orbital images contaminated by clouds, to obtain improved measurements of the black body temperature for use in oceanography
[INPE-2121-RPE/345] N82-18845
CLOUD SEEDING
Florida Area Cumulus Experiment (FACE), 1980: Operational summary and data inventory
[PB82-113291] N82-18841
CLOUDS
Waves in the OH emissive layer N82-18237
CLOUDS (METEOROLOGY)
Measurements of lidar backscattering from clouds
[ESA-TT-689] N82-18800
Experiments in regional scale numerical weather prediction including use of SESAME '79 data
[AD-A108372] N82-18837

COAGULATION
Coagulation and deposition of ultrafine aerosols in turbulent pipe flow N82-18585
COAL
Adaptation of the simplex gasification process to the cocconversion of municipal solid waste and sewage sludge
[PB82-112416] N82-18408
An economic analysis of coal supply in the Ohio River Basin Energy Study Region
[PB82-112941] N82-18414
A land use analysis of existing and potential coal surface mining areas in the Ohio River Basin Energy Study region
[PB82-105172] N82-18679
Coal mine siting for the Ohio River Basin energy study
[PB82-109119] N82-18680
A baseline assessment of coal industry structure in the Ohio River Basin Energy Study region
[PB82-103815] N82-18737
Emissions assessment of conventional stationary combustion systems: Summary report
[PB82-109414] N82-18753
COAL DERIVED GASES
Comparison of coal based systems: Medium-BTU gas versus SNG for industrial applications
[PB82-117383] N82-18407
Low NO subx heavy fuel combustor concept program. Phase 1A: Coal gas addendum
[NASA-CR-165577] N82-18680
COAL GASIFICATION
Adaptation of the simplex gasification process to the cocconversion of municipal solid waste and sewage sludge
[PB82-112416] N82-18408
Comparison of coal based systems: Medium-BTU gas versus SNG for industrial applications
[PB82-117383] N82-18407
Construction and operation of a one ton per hour pilot plant for the VEW coal conversion process
[BMFT-FB-T-81-177] N82-18712
Environmental assessment, source test and evaluation report: Lurgi (Kosovo) medium-Btu gasification
[PB82-114075] N82-18751
COASTAL CURRENTS
HF radar measurements of surface currents in the German Bight during MARSEN phase 2, part 2
[PB82-124583] N82-18652
COASTAL ECOLOGY
Georges Bank: An annotated bibliography of atlases, inventories and map series
[PB82-107885] N82-18653
COASTAL WATER
Inventory of emissions from marine operations within the California coastal waters
[PB82-105099] N82-18757
Coastal upwelling ecosystems analysis. Atlas of the JOINT 2 1977 aircraft winds for the 500 foot level
[PB82-113829] N82-18643
Mesoscale studies of flow regimes and fluxes of particulate matter in coastal waters
[DE82-001740] N82-18650
The propagation of inertial-internal waves in coastal upwelling regions
[PB82-113275] N82-18651
COASTS
United States Coast Pilot 9. Pacific and Arctic Coasts Alaska: Cape Spencer to Beaufort Sea
[PB82-109582] N82-18201
Examination of the operational prospects for remote sensing — in Europe
[ESA-CR(P)-1476] N82-[illegible]89
COATING
Shipboard exposure testing
[AD-A108146] N82-18375
COATINGS
Characterization of the microstructure of stabilized zirconia used on diesel-engine components
[DE81-029303] N82-18380
The application of chemical etching to the failure analysis of semiconductor devices (literature survey and preliminary experiments). Volume 1: Phase 1 report
[ESA-CR(P)-1470-VOL-1] N82-18818
The application of chemical etching to the failure analysis of semiconductor devices (experimental). Volume 2: Phase 2 report
[ESA-CR(P)-1470-VOL-2] N82-18819
Development of selective solar absorbers on the basis of aluminum roll-bond heat exchangers
[BMFT-FB-T-81-183] N82-18715
Development of selective solar absorbers on the basis of aluminum roll-bond heat exchangers
[BMFT-FB-T-81-186] N82-18717
COBOL
Hewlett Packard company HP-3000 series 3, release A.00.04 indexed 1-0 module
[PB82-108022] N82-18895
Hewlett Packard company HP-3000 series 3, COBOL 2/3000, release A.00.04
[PB82-108030] N82-18896
Datapoint 6600, COBOL 3.4
[PB82-108048] N82-18897
IBM corporation IBM 5280 COBOL, release 3
[PB82-108055] N82-18898
Microsoft, microsoft COBOL V4.40
[PB82-108063] N82-18899
Honeywell information systems, COBOL, version 3.0
[PB82-108071] N82-18900
IBM corporation: IBM 5280 COBOL, release 3, indexed 1-O module, level 1
[PB82-100934] N82-18902
Microsoft: Microsoft COBOL V4.40, indexed I-O module, level 1
[PB82-100959] N82-18904
COCKPIT SIMULATORS
The role of simulation in the design process
N82-18154
COCKPITS
The multi mode matrix flat panel display: Technology and applications N82-18169
New developments in cockpit-human interfaces
[RAE-TM-FS-412] N82-18215
Analytical study of cockpit information requirements
[AD-A108524] N82-18218
CODERS
Automated PCM encoder temperature test
[AD-A108184] N82-18889
COEFFICIENT OF FRICTION
Friction coefficient of flame spread materials — metal coatings
[CETIM-12-DO-71] N82-18366
COEFFICIENTS
Professor M. M. Protodyakonovs strength coefficient f of rocks
[AD-A108209] N82-18791
COGENERATION
Feasibility study on energy recovery and cogeneration from an existing municipal incinerator, phase 1
[DE82-001143] N82-18701
Conceptual design of a solar cogeneration facility industrial process heat. Volume 2: Appendices
[DE82-001578] N82-18702
CYCLE: A general computer code for thermodynamic cycle computations. Studies of cogeneration in district heating systems
[WTHD-135] N82-18708
COGNITIVE PSYCHOLOGY
Man/computer communication: From artificial intelligence and behavioral science perspectives
[FOA-C-53005-H2] N82-18942
COLD CATHODE TUBES
Investigation of cold cathodes for long life CO sub 2 waveguide lasers
[AD-A108692] N82-18595
COLLAPSE
Collapse limit states of reinforced earth retaining walls
[PB82-113515] N82-18423
COLLIMATION
Method for shaping and aiming narrow beams — sonar mapping and target identification
[NASA-CASE-NPO-14632-1] N82-18443
COLLIMATORS
Method for shaping and aiming narrow beams — sonar mapping and target identification
[NASA-CASE-NPO-14632-1] N82-18443
Secondary electron emission from a charged dielectric in the presence of normal and oblique electric fields
[NASA-CR-168658] N82-18507
Applications of multi-pinhole gamma camera collimation to tomography and image enhancement
N82-18554
COLLISION AVOIDANCE
Midair and near midair collisions on two- and three-dimensional curvilinear flight paths
[ESA-TT-695] N82-1
COLLISION PARAMETERS
A study of the collisional dynamics for collisions of UF6(-) atoms and molecules
[AD-A108419] N82-1901
COLLISIONLESS PLASMAS
Physical mechanism of wave-particle resonances in a curved magnetic field
[AD-A108380] N82-190
COLOR CODING
Matrix data analysis: Color/B and W coding is not always enough
[AD-A108408] N82-18
COLOR INFRARED PHOTOGRAPHY
Measurement of river sediments
[WMO-561] N82-1867
COLORADO RIVER (NORTH AMERICA)
Water resources data for California. Volume 1: Colorado River Basin, Southern Great Basin from Mexican Border to mono Lake Basin and Pacific Slope Basins from Tijuana River to Santa Maria River
[PB82-116997] N82-188
COLUMNS (PROCESS ENGINEERING)
Frequency response analysis of distillation column interaction N82-18341
COLUMNS (SUPPORTS)
General description of nestable column structural and assembly technology — large space structures
[NASA-TM-83255] N82-18
Distortional buckling of thin-web beam columns
[PB82-105271] N82-18
COMBINED CYCLE POWER GENERATION
Assessment of steam-injected gas turbine systems and their potential application
[NASA-TM-82735] N82-18694
COMBUSTION CHAMBERS
Fuel-rich plume combustion
[AD-A108136] N82-18349
Low NO subx heavy fuel combustor concept program. Phase 1A: Coal gas addendum
[NASA-CR-165577] N82-18680
COMBUSTION EFFICIENCY
Theoretical considerations of boron combustion in ducted rockets
[ESA-TT-703] N82-18322
Decomposition and interaction of propellant ingredients
[AD-A108135] N82-18404
Experimental study of an integral catalytic combustor: Heat exchanger for Stirling engines
[NASA-TM-82783] N82-18691
Industrial burner and process efficiency program
[PB82-115486] N82-18731
COMBUSTION PRODUCTS
Mechanisms of exhaust pollutants and plume formation in continuous combustion
[AD-A109059] N82-18350
Low NO subx heavy fuel combustor concept program. Phase 1A: Coal gas addendum
[NASA-CR-165577] N82-18680
Emissions assessment of conventional stationary combustion systems: Summary report
[PB82-109414] N82-18753
COMBUSTION STABILITY
Energy contributions associated with combustion instability
[AD-A108137] N82-18348
Emissions and efficiency performance of industrial coal stoker fired boilers
[PB82-115312] N82-18730
COMETS
Laboratory measurements of cometary photochemical phenomena
[NASA-CR-168506] N82-19123
COMFORT
Effect of tactile vibration on annoyance to synthesized propfan noise
[NASA-TM-83258] N82-18886
COMMAND AND CONTROL
A redundancy concept for a digital CSAS
N82-18170
An assessment of the magnitude of electromechanical failures occuring within Air Force Command, Control, Communications and Intelligence (C3I) systems
[AD-A108203] N82-18461

The world wide military command and control information system: Problems in information resource management
[AD-A108454] N82-18862

COMMAND MODULES
Modular attitude control of a large space platform N82-18300

COMMERCIAL AIRCRAFT
Naval versions of the Dauphin and the AS 15 TT weapon system N82-18142
Impact of technology on avionics cost trends
[AD-A108494] N82-18219

COMMERCIAL ENERGY
Evaluation of residential and commercial solar/gas heating and cooling technologies. Volume 1: Program overview
[PB82-103847] N82-18725
Evaluation of residential and commercial solar/gas heating and cooling technologies, volume 2
[PB82-103854] N82-18726
Energy consumption patterns: Illinois, Indiana, Kentucky, Ohio, Pennsylvania, and West Virginia (1975)
[PB82-101478] N82-18734

COMMUNICATION
Control of large space antennas: Wrap-rib-hoop/column N82-18294

COMMUNICATION EQUIPMENT
An assessment of the magnitude of electromechanical failures occuring within Air Force Command, Control, Communications and Intelligence (C3I) systems
[AD-A108203] N82-18481

COMMUNICATION NETWORKS
A new external limit to the capacity of interference channels
[INPE-2162-RPE/380] N82-18455
The world wide military command and control information system: Problems in information resource management
[AD-A108454] N82-18862
Fiber optic data bus for the AN/GYQ-21(V)
[AD-A108394] N82-19031

COMMUNICATION SATELLITES
NASA space communications program
[GPO-85-553] N82-18450
Link availability in satellite telecommunication subject to correlated rain attenuation at the ground terrain
[INPE-2280-PRE/058] N82-18451

COMPACTING
Investigation of compaction criteria for airport pavement subgrade soils
[AD-A108518] N82-18230
Bond strength of galvanic coatings under thermal stress from the example of galvanic forming
[MBB-BB-486-O] N82-18842

COMPARISON
Energy consumption in the Ohio River Basin Energy Study region, 1974, by end user and fuel type
[PB82-104811] N82-18739
Hewlett Packard company HP-3000 series 3, release A.00.04 indexed 1-0 module
[PB82-108022] N82-18895
Honeywell information systems, COBOL, version 3.0
[PB82-108071] N82-18900
IBM corporation: IBM 5280 COBOL, release 3, indexed 1-O module, level 1
[PB82-108934] N82-18902
IBM corporation: IBM vs FORTRAN release 1 (5748-FO3)
[PB82-108942] N82-18903
Microsoft: Microsoft COBOL V4.40, indexed I-O module, level 1
[PB82-108959] N82-18904

COMPILERS
A re-usable code generator for PRIME 50-series computers
[AD-A108820] N82-18881
Honeywell information systems, advanced FORTRAN release 1.1
[PB82-108014] N82-18894
Hewlett Packard company HP-3000 series 3, release A.00.04 indexed 1-0 module
[PB82-108022] N82-18895
Datapoint 6600, COBOL 3.4
[PB82-108048] N82-18897
IBM corporation IBM 5280 COBOL, release 3
[PB82-108055] N82-18898
Microsoft, microsoft COBOL V4.40
[PB82-108063] N82-18899
Honeywell information systems. COBOL, version 3.0
[PB82-108071] N82-18900
IBM corporation: IBM 5280 COBOL, release 3, indexed 1-O module, level 1
[PB82-108934] N82-18902
IBM corporation: IBM vs FORTRAN release 1 (5748-FO3)
[PB82-108942] N82-18903
Microsoft: Microsoft COBOL V4.40, indexed I-O module, level 1
[PB82-108959] N82-18904
The JOVIAL (J73) workbook, volumes 10 through 12
[AD-A108528] N82-18917
The JOVIAL (J73) workbook, volumes 13 through 15
[AD-A108529] N82-18918

COMPLEX NUMBERS
Study of high speed complex number algorithms — for determining antenna for field radiation patterns
[NASA-CR-166743] N82-18914

COMPLEX SYSTEMS
Topics in computational geometry N82-18913

COMPONENT RELIABILITY
An assessment of the magnitude of electromechanical failures occuring within Air Force Command, Control, Communications and Intelligence (C3I) systems
[AD-A108203] N82-18481
Suggested module for analyzing and forecasting demand for components of army vehicles
[PHL-1979-35] N82-18963

COMPOSITE MATERIALS
Improved graphite fiber adhesion
[AD-A108233] N82-18329
A digital algorithm for composite laminate analysis, FORTRAN
[AD-A108201] N82-18330
The construction and use of toughness maps in a fracture analysis of the micromechanics of a composite failure
[PB82-113523] N82-18331
Description of hot spots associated with localized shear zones in impact tests
[AD-A108542] N82-18403
Nondestructive testing of CFRP
[MBB-BB-477-81-O] N82-18620

COMPRESSIBLE FLOW
Stability analysis of the compressible, adiabatic, similar boundary layer equations (lower branch)
[AD-A108507] N82-18546

COMPRESSION LOADS
Bond strength of galvanic coatings under thermal stress from the example of galvanic forming
[MBB-BB-486-O] N82-18842

COMPRESSORS
Open-cycle vapor compression heat pump
[PB82-110503] N82-18553

COMPUTATION
A complete method for computation of blade mode characteristics and responses in forward flight
N82-18126
Performance evaluation of a multiple processor system with shared busses N82-18877
A quantitative evaluation of the feasibility of, and suitable hardware architecture for, an adaptive parallel finite-element system
[AD-A108492] N82-18867
Computational modeling of evolutionary learning
N82-18911
Topics in computational geometry N82-18913
An application of parallel computation to sequential computation: The problem of cost-effective resource allocation
[PB82-108739] N82-18925
Solution of large sets of linear equations using cellular arrays N82-18945
The computation of Laplacian smoothing splines with examples
[AD-A108746] N82-18976

COMPUTATIONAL FLUID DYNAMICS
Numerical analysis and FORTRAN program for the computation of the turbulent wakes of turbomachinery rotor blades, isolated airfoils and cascade of airfoils
[NASA-CR-3509] N82-18184
Some recent developments in aeronautical fluid mechanics — calculation methods
[RAE-TM-AERO-1894] N82-18539

COMPUTER COMPONENTS
A General Purpose Interface Bus (GPIB)
[RAE-TM-RAD-NAV-168] N82-18605
Non-Federal computer acquisition practices provide useful information for streamlining Federal methods
[PB82-120894] N82-19091

COMPUTER DESIGN
Programmable multiple digital cassette memory
[INPE-2089-RPE/329] N82-18660
SQL Front-End functional description
[AD-A108508] N82-18864

COMPUTER GRAPHICS
Integrated control design techniques
[AD-A108223] N82-18224
Defense mapping agency digital data base evolution
[AD-A108327] N82-18865
ICFITG: A program for interactive contouring from an irregular triangular grid
[AD-A108515] N82-18866

COMPUTER NETWORKS
Coordination of computation in a binary tree of processors: An architectural proposal N82-18876
Two approaches to deadlock in distributed systems N82-18909
Distributed artificial intelligence
[AD-A108734] N82-18932
Man/computer communication: From artificial intelligence and behavioral science perspectives
[FOA-C-53005-H2] N82-18942
Full text information systems: A review and assessment of the technology N82-19092
Directory of the NOAA Library and Information network
[PB82-114659] N82-19097

COMPUTER PROGRAM INTEGRITY
Self-checking programs: An axiomatic approach to the validation of programs by the use of assertions
N82-18912

COMPUTER PROGRAMMING
Implementation of an overlaid version of P2 simulation
[AD-A108592] N82-18307
The design of an interface to a programming system and MENUNIX: A menu based interface to UNIX (user manual)
[AD-A108829] N82-18890
Syntax oriented analysis of the run time performance of programs N82-18906
The JOVIAL (J73) workbook, volumes 1 through 6
[AD-A108527] N82-18916
The JOVIAL (J73) workbook, volumes 10 through 12
[AD-A108528] N82-18917
The JOVIAL (J73) workbook, volumes 13 through 15
[AD-A108529] N82-18918
A heuristic for deriving loop functions
[AD-A108660] N82-18921
A program testing assistant
[AD-A109147] N82-18922
Procedure based generalized interactive systems
N82-18926
Generalizing specifications for uniformly implemented loops
[AD-A108585] N82-18949

COMPUTER PROGRAMS
Modal characteristics of rotor blades: Finite element approach and measurement by ground vibration test
N82-18127
Numerical analysis and FORTRAN program for the computation of the turbulent wakes of turbomachinery rotor blades, isolated airfoils and cascade of airfoils
[NASA-CR-3509] N82-18184
Advanced air launched missile motor designed methods
[AD-A108634] N82-18318
PMATRX: An algorithm for transforming n-Dimensional data into plotted curves
[PB82-114463] N82-18424
CANDE-1980: Box culverts and soil models
[PB82-102393] N82-18427
Electromagnetic coupling to a conducting body of revolution with a homogeneous material region
[AD-A108396] N82-18473
Kinematic analysis of mechanical systems
[AD-A108682] N82-18632

Modeling techniques for analysis of stiffened shell structures, using computer program ADINA
[AD-A108728] N82-18634
Response of a structure solicited by displacements imposed on a part of its edge -- computer program
[CETIM-11-L-182] N82-18644
Nonlinear elastic beams, frames and structural analysis
[CTH-R-81/1979] N82-18645
Automated longwall guidance and control vertical control subsystem, volume 2 -- user manuals (computer programs)
[NASA-CR-161970] N82-18659
Flex firmware
[RSRE-81009] N82-18679
BOL Front-End functional description
[AD-A108508] N82-18884
A simulation tool for distributed databases
[AD-A108819] N82-18892
Honeywell information systems, COBOL, version 3.0
[PB82-108071] N82-18900
IBM corporation: IBM 5280 COBOL, release 3, indexed 1-O module, level 1
[PB82-100834] N82-18902
IBM corporation: IBM vs FORTRAN release 1 (5748-FO3)
[PB82-100842] N82-18903
Microsoft: Microsoft COBOL V4.40, indexed I-O module, level 1
[PB82-100859] N82-18904
Selecting sufficient sets of test paths for program testing N82-18905
Syntax oriented analysis of the run time performance of programs N82-18906
Self-checking programs: An axiomatic approach to the validation of programs by the use of assertions N82-18912
Effect of automatic processing on specification of problem solutions for computer programs
[AD-A108570] N82-18919
A-7E software module guide
[AD-A108649] N82-18920
ANALYZE user guide
[DE82-001323] N82-18924
Proceedings of the NBS/IEEE/ACM Software Tool Fair
[PB82-112392] N82-18926
A PRF sorter based on list manipulation techniques
[AD-A108365] N82-18934
Standard test case runs for the EMPULSE monopole fieldsolver and conductivity generation model
[AD-A108739] N82-18990
Steady state numerical solution of magnetically insulated charge flow in coaxial geometry
[AD-A108833] N82-18991
The prediction of satellite ephemeris errors as they result from surveillance system measurement errors
[AD-A108477] N82-19115

COMPUTER STORAGE DEVICES
Investigation of large capacity optical memories for correlator applications
[AD-A108555] N82-18883
Efficient facsimile communication with computer controlled memory switching
[MBB-SB-498-81-O] N82-18893

COMPUTER SYSTEMS DESIGN
Coordination of computation in a binary tree of processors: An architectural proposal N82-18878
Robustness in multivariable control system design
[PB82-121401] N82-18943

COMPUTER SYSTEMS PERFORMANCE
Performance evaluation of a multiple processor system with shared busses N82-18877
A methodology for the evaluation of languages for the development of information system performance models N82-18907
The human as a constrained optimal text editor N82-18910

COMPUTER SYSTEMS PROGRAMS
A general computer program for fluid-flow, heat-transfer and chemical-reaction processes
[HTS/81/10] N82-18549
Honeywell information systems, advanced FORTRAN release 1.1
[PB82-108014] N82-18894
Hewlett Packard company HP-3000 series 3, COBOL 2/3000, release A.00.04
[PB82-108030] N82-18896
Datapoint 6600, COBOL 2.4
[PB82-108048] N82-18897
IBM corporation IBM 5280 COBOL, release 3
[PB82-108055] N82-18898
Proceedings of the NBS/IEEE/ACM Software Tool Fair
[PB82-112392] N82-18926

COMPUTER SYSTEMS SIMULATION
A simulation tool for distributed databases
[AD-A108819] N82-18892

COMPUTER TECHNIQUES
Automated longwall guidance and control vertical control subsystem, volume 2 -- user manuals (computer programs)
[NASA-CR-161970] N82-18659
Statistical tools for determining fitness to fly
[AD-A108589] N82-18860
Flexible parsing
[AD-A108076] N82-18940
Non-Federal computer acquisition practices provide useful information for streamlining Federal methods
[PB82-120924] N82-19091

COMPUTERIZED DESIGN
Integrated control design techniques
[AD-A108223] N82-18224
Large Advanced Space Systems (LASS) computer-aided design program additions N82-18287
A descriptive language for thin film conductors
[IND-FB-107] N82-18528

COMPUTERIZED SIMULATION
Developments in rotary wing aircraft aerodynamics N82-18120
A study of the techniques of dynamic analysis of helicopter type structures N82-18129
A method of predicting fuselage loads in hover N82-18164
Rotorcraft flight simulation computer program C81 with DATAMAP interface. Volume 2: Programmer's manual
[AD-A108294] N82-18231
IAC control system analysis development N82-18286
A digital algorithm for composite laminate analysis, FORTRAN
[AD-A108201] N82-18330
Computer prediction of dual reflector antenna radiation properties
[NASA-CR-165114] N82-18449
LOS selective fading and AN/FRC-170(V) radio hybrid computer simulation phase A report
[AD-A108747] N82-18457
Mapping of electrical potential distributions with charged particle beams
[NASA-CR-168556] N82-18506
A general computer program for fluid-flow, heat-transfer and chemical-reaction processes
[HTS/81/10] N82-18549
Areawide stormwater pollution analysis with the macroscopic planning (ABMAC) model. Part 1: Documentation and application. Part 2: User's manual
[PB82-107947] N82-18677
Model of seasonal heat storage -- reservoirs
[BMFT-FB-T-81-176] N82-18711
Performance limits of integrated circuit simulation on a dedicated minicomputer system N82-18876
A simulation tool for distributed databases
[AD-A108819] N82-18892
Computational modeling of evolutionary learning N82-18911

COMPUTERS
A re-usable code generator for PRIME 50-series computers
[AD-A108820] N82-18891

CONCENTRATION (COMPOSITION)
Model predictions and trend analysis N82-18773
Stratospheric aerosols and precursor gases N82-18777

CONCRETE STRUCTURES
CANDE-1980: Box culverts and soil models
[PB82-102393] N82-18427

CONCRETES
Investigation into the utility of some quick setting cements for runway repair
[B-80-157/80.7.0157] N82-18225
Properties of Portland cement concretes containing pozzolanic admixtures
[PB82-120965] N82-18434
Analysis of thermal stresses in internally sealed concrete bridge decks
[PB82-122698] N82-18435
Response of reinforced concrete plate-column connections to dynamic and static horizontal loads. Appendices E to H
[PB82-101544] N82-18646

CONDUCTIVE HEAT TRANSFER
Thermal resistance of a convection cooled flat plate with a nonuniform applied heat flux and internal generation of constant heat
[INPE-2131-RPE/355] N82-18542

CONES
Exact involute bodies of revolution
[AD-A108659] N82-18317

CONFERENCES
Seventh European Rotorcraft and Powered Lift Aircraft Forum N82-18119
Large space systems technology, 1981 -- conferences
[NASA-CP-2215-PT-1] N82-18275
The 2nd Seminar on Efficient Metal Forming and Machining
[PB82-109745] N82-18431
The Conference on High Temperature Electronics
[NASA-CR-168505] N82-18534
Space Laser Power Transmission System Studies -- conferences
[NASA-CP-2214] N82-18578
Proceedings of the DARPA/AFWAL review of progress in quantitative nondestructive evaluation
[AD-A108741] N82-18814
Proceedings of the NBS/IEEE/ACM Software Tool Fair
[PB82-112392] N82-18926
Fourth Annual Community Planning and Development Challenges: Energy, Environment, Water
[PB82-125790] N82-19106

CONFIDENCE LIMITS
Changing the fuzzy rule of detachment
[INPE-2266-PRE/047] N82-18948

CONGRESSIONAL REPORTS
Review of defense-related vertical and short takeoff and landing (V/STOL) aircraft programs
[GPO-55-276] N82-18205
Solar power satellites, summary
[OTA-E-145] N82-18305
NASA space communications program
[GPO-85-553] N82-18450
Technology and oceanography: An assessment of Federal technologies for oceanographic research and monitoring
[OTA-O-142] N82-18844

CONICAL BODIES
Exact involute bodies of revolution
[AD-A108659] N82-18317

CONNECTORS
NITINOL interconnect device for optical fiber waveguides
[AD-A108278] N82-19033

CONSOLES
Task analytic techniques: Application to the design of a flight simulator instructor/operator console
[AD-A108724] N82-18227

CONSTRAINTS
Aircrew restraint and mobility test fixture
[AD-A108274] N82-18193
A survey of the limits on radar imaging
[AD-A108598] N82-18462

CONSTRUCTION
Construction and operation of a one ton per hour pilot plant for the VEW coal conversion process
[BMFT-FB-T-81-177] N82-18712
Construction and testing of a test stand for solar cells and concentrating collectors
[BMFT-FB-T-81-179] N82-18714
Performance of the Norris Cotton Federal Office Building for the first 3 years of operation
[PB82-105487] N82-18726

CONSTRUCTION INDUSTRY
Finite-element formulation for the analysis of interfaces, nonlinear and large displacement problems in geotechnical engineering N82-18415
Manual on physico-chemical strengthening of freezing and thawing soils
[NRC/CNR-TT-1976] N82-18416
Theory and application of experimental model analysis in earthquake engineering
[PB82-122409] N82-18430

Preliminary guidelines for condition assessment of buildings being considered for solar retrofit
[PB82-113869] N82-18437
Modern management in construction industry offices
[MBB-UR-493-81-O] N82-19085
NASA Technology Utilization House technical support package Summary of results and house description
[NASA-TM-X-74086] N82-19103
CONTAMINANTS
An equilibrium model for the partitioning of synthetic organic compounds: Formulation and calibration
[PB82-116582] N82-18748
Emissions assessment of conventional stationary combustion systems: Summary report
[PB82-108414] N82-18753
Compilation of air pollutant emission factors (including supplements 1-7), Supplement 12
[PB82-101213] N82-18760
CONTINENTAL DRIFT
Reports on crustal movements and deformations
[NASA-TM-83872] N82-18786
CONTINENTAL SHELVES
Environmental geologic studies on the southeastern Atlantic Outer Continental Shelf, 1977-1978
[PB82-108285] N82-18800
Subsea trenching in the Arctic
[AD-A108341] N82-18849
CONTINGENCY
On sequential unbiased and Bayes type estimates of parameters in a contingency table N82-18870
CONTINUITY EQUATION
A three-dimensional wind model for complex terrain N82-18802
CONTINUOUS WAVE LASERS
Design investigation of solar-powered lasers for space applications N82-18582
CONTINUUM MECHANICS
On a proposal for a continuum with microstructure N82-19052
CONTOUR SENSORS
A dynamic measure of controllability and observability for the placement of actuators and sensors on large space structures
[NASA-CR-165520] N82-18310
CONTOURS
ICFITG: A program for interactive contouring from an irregular triangular grid
[AD-A108515] N82-18666
CONTRACT MANAGEMENT
Selling to NASA
[NASA-TM-84136] N82-19083
CONTRACT NEGOTIATION
Selling to NASA
[NASA-TM-84136] N82-19083
CONTROL
Energy Management and Control Systems (EMCS) user satisfaction study
[PB82-103656] N82-18724
Emissions and efficiency performance of industrial coal stoker fired boilers
[PB82-115312] N82-18730
CONTROL EQUIPMENT
Three-engine control system for the prototype EH-101 helicopter
[AEDG-0/81-1566L] N82-18135
CONTROL SIMULATION
IAC control system analysis development N82-18296
CONTROL STABILITY
A control model for maneuvering flight for application to a computer-flight testing program N82-18153
ACOSS eight (Active Control Of Space Structures), phase 2
[AD-A108629] N82-18313
Apparatus for damping operator induced oscillations of a controlled system — flight control
[NASA-CASE-FRC-11041-1] N82-18493
Sensitivity of the characteristic gain loci
[PB82-113481] N82-18963
CONTROL THEORY
The influence of sensor and actuator characteristics on overall helicopter AFCS design N82-18171
IAC level 'O' program development N82-18295
Large Advanced Space Systems (LASS) computer-aided design program additions N82-18297
Central control system survey
[PB82-101961] N82-19109
CONTROL UNITS (COMPUTERS)
Programmable multiple digital cassette memory
[INPE-2089-RPE/309] N82-18880
CONTROLLED ATMOSPHERES
Investigations on air samples from the submarine Naecken, August 1980
[FOA-C-54036-H1] N82-18745
CONTROLLERS
A disturbance isolation controller for the solar electric propulsion system flight experiment N82-18299
CONVECTION
Convective rainfall estimation in Rio Grande do Sul State, Brazil: Preliminary results
[INPE-2271-RPE/400] N82-18604
CONVECTION CLOUDS
Precipitation field and intrastorm flow of supercell convective storms N82-18801
CONVECTIVE FLOW
Precipitation field and intrastorm flow of supercell convective storms N82-18801
CONVECTIVE HEAT TRANSFER
The Capenhurst Westair high temperature heat pump dryer
[PB82-115890] N82-18425
Thermal resistance of convectively cooled plates with applied heat flux and internal heat generation
[INPE-2291-PRE/066] N82-18541
Thermal resistance of a convection cooled flat plate with a nonuniform applied heat flux and internal generation of constant heat
[INPE-2131-RPE/355] N82-18542
CONVERGENCE
An error analysis for singular finite elements N82-18947
COOLING
Thermal resistance of convectively cooled plates with applied heat flux and internal heat generation
[INPE-2291-PRE/066] N82-18541
COOLING SYSTEMS
Performance analysis of vapour cycle cooling systems
[AD-A108254] N82-18418
COORDINATE TRANSFORMATIONS
A method of modeling multirate two-dimensional recursive digital filters N82-18497
A further inquiry into the theory of S-transformations and criterion matrices N82-18986
COORDINATES
ICFITG: A program for interactive contouring from an irregular triangular grid
[AD-A108515] N82-18666
COPPER
Electron vacancy production in near-symmetric collisions of 100 MeV copper ions
[ANU-P-771] N82-19018
COPPER SULFIDES
The electrical properties of Na3Cu4S4, mixed-valence one-dimensional metal
[AD-A108517] N82-19069
CORAL REEFS
Sedimentology and diagenesis of Bryozoan and sponge-rich carbonate buildups Great Bahama Bank N82-18769
CORN
A model for estimating the productivity of corn in the States of Sao Paulo
[INPE-2118-RPE/342] N82-18662
CORRECTION
Applications of the DoD world geodetic system: The 1972 charting by the use of a semiautomated system
[AD-A108326] N82-18668
CORRELATION
Multipath VLF propagation effects on correlation receivers
[AD-A108408] N82-18472
Some properties of the non-linear partial difference equation for the Ising-model correlation function
[CNRS-CPT-80-P-1226] N82-18955
Correlation in doped semiconductors
[INPE-2106-RPE/334] N82-19065
CORRELATORS
Investigation of large capacity optical memories for correlator applications
[AD-A108555] N82-18883
CORROSION RESISTANCE
Effects of microstructure and frequency on corrosion-fatigue crack growth in Ti-8Al-1Mo-1V and Ti-6Al-4V
[AD-A108361] N82-18377
Characterization of the microstructure of stabilized zirconia used on diesel-engine components
[DE81-028306] N82-18380
High-temperature corrosion resistance of ceramic materials
[PB82-104389] N82-18400
CORROSION TESTS
Shipboard exposure testing
[AD-A108146] N82-18375
COSMIC DUST
Experimental and theoretical studies of interstellar grains
[NASA-TM-83863] N82-19120
COSMIC RAYS
Isotopic stack - measurement of heavy cosmic ray isotopes N82-18246
Radiation environment mapping N82-18268
Advanced biostack experiment N82-18269
COSMIC X RAYS
Spectroscopy in X-ray astronomy N82-18251
COST ANALYSIS
Impact of technology on avionics cost trends
[AD-A108484] N82-18219
Comparison of coal based systems: Medium-BTU gas versus SNG for industrial applications
[PB82-117383] N82-18407
An economic analysis of the electric utility sector in the Ohio River Basin region
[PB82-103268] N82-18736
COST EFFECTIVENESS
Parametric study of the influence of the engine upon the operating cost of a civil helicopter N82-18131
An application of parallel computation to sequential computation: The problem of cost-effective resource allocation
[PB82-106739] N82-18925
Modern management in construction industry offices
[MBB-UR-493-81-O] N82-19085
Cost problems in the utilization phase of a weapon system
[MBB-UA-576-81-O] N82-19086
The yearly effect of the activities of the European Space Agency: Estimation of tax revenues due to the activities of ESA and of the resulting global short term economic impact. Volume 2: Main report
[ESA-CR(P)-1472] N82-19099
Integrating project worthiness into a cost-effectiveness framework for alternative analysis
[PB82-113685] N82-19106
COST ESTIMATES
Comparison of coal based systems: Medium-BTU gas versus SNG for industrial applications
[PB82-117383] N82-18407
COST REDUCTION
Potential reductions in aircraft operation and maintenance costs by using thrust computing support equipment
[AD-A108483] N82-18207
Cost problems in the utilization phase of a weapon system
[MBB-UA-576-81-O] N82-19086
Effective methods for overall project cost reduction
[MBB-UR-456-80-O] N82-19087
COULOMB POTENTIAL
Theoretical investigation of atomic structure and scattering processes
[AD-A108541] N82-19011
COUNTERS
Small size-range extension of an optical particle counter
[PB82-103623] N82-18575
COUPLED MODES
Stabilized microwave oscillator for a dielectric resonator
[INPE-2123-RPE/347] N82-18512
COUPLING
Theory of EMP coupling in the source region
[AD-A108751] N82-18458
Electromagnetic coupling to a conducting body of revolution with a homogeneous material region
[AD-A108386] N82-18473
Theoretical and experimental investigation of some slot antenna array problems
[AD-A108566] N82-18476
COWLINGS
Engine superficial temperature and infrared signature N82-18136

Measurement of the absorption properties of acoustic materials used in the fabrication of cowlings
[CETIM-11-H-886] N82-19002
CRACK GEOMETRY
Determination crack tip field parameters for elastic-plastic materials via an estimation scheme
[AD-A108687] N82-18636
CRACK INITIATION
Kinetics of crack initiation and propagation in metal-induced embrittlement of 4140 steel by indium
N82-18367
Comparison of notch-stress with strain-controlled low cycle fatigue of alpha-beta titanium alloys
[AD-A108646] N82-18376
CRACK PROPAGATION
Micromechanical predictions of crack propagation and fracture energy in a single fiber boron/aluminum model composite
[NASA-CR-168560] N82-18326
Micromechanisms of fracture and hypothermal aging of fibrous composites
[PB82-121369] N82-18333
Effects of microstructure and frequency on corrosion-fatigue crack growth in Ti-8Al-1Mo-1V and Ti-6Al-4V
[AD-A108381] N82-18377
Demonstration of crack growth by delayed hydrogen cracking in the rolled joints of Zr-2.5% Nb pressure tubes
[AECL-6953] N82-18637
CRACKING (FRACTURING)
Failure of fibrous composites. Part 1: Stress concentration, cracks and notches. Part 2: Toughness
[PB82-113531] N82-18332
Analysis of post-tensioned girder anchorage zones
[PB82-122268] N82-18436
A compilation of stress intensity factor solutions for flawed fastener holes
[AD-A108753] N82-18628
CRASHES
Test site instrumentation study. Volume 2: Crash 1 and crash 2 raw data
[PB82-111832] N82-18233
CRATERS
Bomb crater repair techniques for permanent airfields. Report 1: Series 1 tests
[AD-A108716] N82-18229
CREEP TESTS
Determination of the high temperature strength of ceramic. Discussion of testing techniques: Flexural and tensile tests, creep tests with flexural and tensile load
[ESA-TT-716] N82-18399
CRITERIA
Criteria for the installation of energy conservation measures
[PB82-104712] N82-18727
CROP GROWTH
A model for estimating the productivity of corn in the States of Sao Paulo
[INPE-2118-RPE/342] N82-18662
CROSS FLOW
Testing and analysis of a wet-dry crossflow cooling tower. Volume 1: Test program and results
[PB82-103771] N82-18752
CROSSLINKING
Restructurable VLSI program
[AD-A108276] N82-18521
CRUDE OIL
Development of a multidetector petroleum oil in water monitor
[PB82-105306] N82-18568
CRUISING FLIGHT
Wind tunnel investigation of high speed rotor noise
N82-18146
Automatic generation of equations for rotor-body systems with dynamic inflow for a priori ordering schemes N82-18162
A numerical approach to co-axial rotor aerodynamics N82-18157
CRUSTAL FRACTURES
Reports on crustal movements and deformations
[NASA-TM-83872] N82-18786
CRYOGENIC FLUID STORAGE
Hard-on-hard (ceramic) long-life seals and riders for cryogenic coolers
[AD-A108848] N82-18394
CRYOGENICS
Gas-surface interactions in cryogenic whole air sampling
[AD-A108255] N82-18742
CRYSTAL DEFECTS
Transient capacitance measurements of deep level defects introduced in beta-ray compensated germanium by long-term annealing at room temperature
[AAEC/E-501] N82-19074
Transient conductance spectroscopy measurements of defect states in Gamma-irradiated n-channel silicon field effect transistors with possible Gamma-dosemeter applications
[AAEC/E-504] N82-19077
CRYSTAL GROWTH
Materials science N82-18247
GaAs shallow-homojunction solar cells
[NASA-CR-165579] N82-18682
Photovoltaic detectors for infrared operation
[INPE-2148-RPE/369] N82-19059
CRYSTAL STRUCTURE
Texture developments associated with abnormal grain growth in low carbon steel sheet N82-18368
Quantum chemical investigations of the mechanism of cationic polymerization and theoretical prediction of crystal densities and decomposition pathways of energetic molecules
[AD-A108520] N82-18396
Near neighbor separations of surface atoms
[DE82-002166] N82-19026
A model for stored energy in amorphous silica
[AERE-TP-877] N82-19073
On the conditions required for vacancy loop growth in irradiated metals and alloys
[AERE-R-9810] N82-19076
CRYSTALS
Neutron scattering studies of atomic vibration in nickel and solid dimethylacetylene N82-19066
CUMULUS CLOUDS
Florida Area Cumulus Experiment (FACE), 1980: Operational summary and data inventory
[PB82-113291] N82-18841
CURIE TEMPERATURE
Radiation effects in amorphous metallic alloys — phosphorus segregation
[DE82-001603] N82-18378
CURRENT DENSITY
Standard test case runs for the EMPULSE monopole fieldsolver and conductivity generation model
[AD-A108739] N82-18980
Beam propagation experimental study
[AD-A108604] N82-19006
Simple analysis of light ion beam losses in deuterium plasmas channels
[AD-A108287] N82-19009
Equilibrium studies of skin like pressure and current-density profiles — Tokamaks
[REPT-81-134] N82-19040
CURVES (GEOMETRY)
Existence of patches bounded by lines of curvature
[PB82-114471] N82-18964
CUSPS (MATHEMATICS)
Some Dirichlet series whose poles are related to cusp forms
[CTH-MATH-1981-14] N82-18962
CUTTING
Precision reciprocating filament chopper
[NASA-CASE-LAR-12564-2] N82-18604
CYANIDES
Hydrogen cyanide health effects
[PB82-116039] N82-18864
CYBERNETICS
Identification of the adaptive feedback of the human motor system using the Response Difference Method (RDM)
[WTHD-134] N82-18869
CYCLIC COMPOUNDS
Carboranylcyclotriphosphazenes and their polymers — thermal insulation
[NASA-CASE-ARC-11176-1] N82-18369
CYCLIC LOADS
Comparison of notch-stress with strain-controlled low cycle fatigue of alpha-beta titanium alloys
[AD-A108646] N82-18376
Probabilistic and hazard analysis for pore pressure increase in soils due to seismic loading
[PB82-122417] N82-18420
CYCLOTRON RESONANCE
Physical mechanism of wave-particle resonances i a curved magnetic field
[AD-A108560] N82-1908
CYLINDERS
Mixture motion in an engine cylinder
[PB82-121146] N82-18807
CYTOGENESIS
Effect of weightlessness on lymphocyte proliferation N82-18861
CYTOLOGY
Effect of weightlessness on lymphocyte proliferation N82-18861

D

DAMAGE
Estimating regional losses to agricultural producers from airborne residuals in the Ohio River Basin Energy Study Region, 1976-2000
[PB82-113679] N82-18439
DAMAGE ASSESSMENT
State-of-the-art for assessing earthquake hazards in the United States. Interpretation of strong ground motion records
[AD-A108615] N82-18793
Comparison of U.S. and Swedish Aerial Target Vulnerability Assessment Methodologies (ATVAM)
[FOA-REPTS-VOL-15-NO-4] N82-18993
DAMPING
An experimental investigation of gapwise periodicity and unsteady aerodynamic response in an oscillating cascade. Volume 2: Data report. Part 1: Text and mode 1 data
[NASA-CR-165457-VOL-2-PT-1] N82-18160
An experimental investigation of gapwise periodicity and unsteady aerodynamic response in an oscillating cascade. Volume 2: Data report. Part 2: Mode 2 data
[NASA-CR-165457-VOL-2-PT-2] N82-18161
Dynamic structural analysis by analog simulation
[PB82-110677] N82-18951
DATA ACQUISITION
Test site instrumentation study. Volume 2: Crash 1 and crash 2 raw data
[PB82-111832] N82-18233
Automated PCM encoder temperature test
[AD-A108184] N82-18889
DATA BASE MANAGEMENT SYSTEMS
Relational data bank for Burroughs computers
[INPE-2116-RPE/340] N82-18466
Proceedings of the NBS/IEEE/ACM Software Tool Fair
[PB82-112392] N82-18926
DATA BASES
A simulation tool for distributed databases
[AD-A108819] N82-18892
An automated data management/analysis system for space shuttle orbiter tiles — stress analysis
[NASA-TM-83261] N82-18915
Full text information systems: A review and assessment of the technology N82-19092
Common data base experiment: Progress report on data analysis — of seismic data
[FOA-C-20431-T1] N82-19094
The Integrated Library System (ILS): User manual
[PB82-114966] N82-19095
Army Library conversion: Cost assessment plan
[PB82-120353] N82-19096
DATA COLLECTION PLATFORMS
A microcomputer for control of data collection platforms — GOES satellites
[INPE-2104-RPE/331] N82-18681
DATA COMPRESSION
On digital processing via PDQ factorization
[AD-A108364] N82-18695
Smoothing splines: Regression, derivatives and deconvolution
[AD-A108631] N82-18981
DATA LINKS
A new external limit to the capacity of interference channels
[INPE-2162-RPE/360] N82-18455
Queueing analysis of a shared voice-data link
[AD-A108336] N82-18475
DATA MANAGEMENT
Defense mapping agency digital data base evolution
[AD-A108327] N82-18685

An automated data management/analysis system for space shuttle orbiter tiles — stress analysis
[NASA-TM-83891] N82-18915

DATA PROCESSING
Basalt data utilization project
[NASA-CR-165557] N82-19660
SQL Front-End functional description
[AD-A108508] N82-18984
Distributed artificial intelligence
[AD-A108734] N82-18932
A PRF sorter based on list manipulation techniques
[AD-A108365] N82-18934
Urban data for comparative analyses of cities
[PB82-128675] N82-19107

DATA RECORDING
A design for a 32-channel multiplexer — for unmanned aircraft navigation sensors
[RAE-TM-RAD-NAV-145] N82-18503

DATA REDUCTION
Improvements and extensions of the Geometrical Dilution of Precision (GDOP) concept for selecting navigation measurements
[AD-A108607] N82-18197
Test site instrumentation study. Volume 2: Crash 1 and crash 2 raw data
[PB82-111832] N82-18233
Common data base experiment: Progress report on data analysis — of seismic data
[FOA-C-20431-T1] N82-19094

DATA RETRIEVAL
Frontiers in data storage, retrieval and display. Proceedings of a Marine geology and geophysics data workshop
[PB82-100892] N82-18901

DATA SAMPLING
A method of modeling multirate two-dimensional recursive digital filters N82-18497
Analysis of gust structure in the atmospheric boundary layer by using conditional sampling
[FFA-TN-HU-2262-PT-1] N82-18796
Data modifications based on order: Pushback; a configural polysampling approach N82-18973

DATA SMOOTHING
The computation of Laplacian smoothing splines with examples
[AD-A108746] N82-18976

DATA STORAGE
Frontiers in data storage, retrieval and display. Proceedings of a Marine geology and geophysics data workshop
[PB82-100892] N82-18901
Full text information systems: A review and assessment of the technology N82-19092

DATA SYSTEMS
Frontiers in data storage, retrieval and display. Proceedings of a Marine geology and geophysics data workshop
[PB82-100892] N82-18901

DATA TRANSMISSION
Development of a low data rate repeater
[AD-A108154] N82-18468
Multiple access communication: The finite user population problem
[AD-A108337] N82-18474

DEAD RECKONING
On the calculation of separated flow on helicopter fuselages
[MBB-UD-321-81-O] N82-18188

DECISION MAKING
Modeling human attention allocation strategies with competing criteria
[AD-A108609] N82-18875
Efficient facsimile communication with computer controlled memory switching
[MBB-BB-488-81-O] N82-18893
Urban data for comparative analyses of cities
[PB82-128675] N82-19107

DECISION THEORY
On asymptotic optimality of Bayes empirical Bayes estimators N82-18972

DECOMPOSITION
Quantum chemical investigations of the mechanism of cationic polymerization and theoretical prediction of crystal densities and decomposition pathways of energetic molecules
[AD-A108520] N82-18398

DEFECTS
Defects characterization and dimensioning by means of the ultrasound spectroscopy
[CISE-1886] N82-18367
A compilation of stress intensity factor solutions for flawed fastener holes
[AD-A108788] N82-18528

DEFENSE PROGRAM
Review of defense-related vertical and short takeoff and landing (V/STOL) aircraft programs
[GPO-85-276] N82-18205

DEFORMATION
Hot rolled asphalt: Effect of binder properties on resistance to deformation
[PB82-122884] N82-18432
Nonlinear elastic beams, frames and structural analysis
[CTH-R-31/1979] N82-18645

DEGREES OF FREEDOM
Dynamic and aeroelastic characteristics of complete windturbine systems N82-18128

DEICERS
Icing problems for wind turbines. Summary of studies performed during winter season 1980/81
[FFA-TN-HU-2262-PT-4] N82-18721

DELAY
Time delays in solar bursts measured in the mm-cm range of wavelengths
[INPE-2251-PRE/034] N82-19125

DEMAND (ECONOMICS)
The Ohio River Basin energy facility siting model. Volume 1: Methodology
[PB82-102591] N82-18740

DEMODULATORS
A 10 MHz 90 deg PM demodulator
[INPE-2157-RPE/376] N82-18513

DEMOGRAPHY
Ohio River Basin energy study: Social values and energy policy
[PB82-101494] N82-18735
Incorporation of environmental impact indices into noisemap
[AD-A108616] N82-18743

DENMARK
The climate of Denmark. Summaries of observations from light vessels. Part 1: Wind, visibility, air temperature cloud cover, and weather
[DMI-CLIMATOL-PAPERS-6] N82-18838

DENSIFICATION
Densification of refuse-derived fuels: Preparation, properties and systems for small communities
[PB82-109904] N82-18408
Fundamental considerations for preparing densified refuse derived fuel
[PB82-101668] N82-18410

DENSITOMETERS
Applied research and development of falling-sphere densitometers payloads of improved design
[AD-A108316] N82-18560

DENSITY (MASS/VOLUME)
The propagation of inertial-internal waves in coastal upwelling regions
[PB82-113275] N82-18851

DENSITY DISTRIBUTION
Explicit solution of the inverse problem for a vibrating string
[AD-A108133] N82-18835
Solitons in one-dimensional charge density wave systems N82-19051

DEPOSITION
Investigation of the CNTD mechanism and its effect on microstructural properties of SiC and AlN
[AD-A108891] N82-18371
Coagulation and deposition of ultrafine aerosols in turbulent pipe flow N82-18535

DEPTH MEASUREMENT
Ground-truth observations of ice-covered North Slope Lakes imaged by radar
[NASA-TM-84127] N82-18664

DESALINIZATION
Development of novel porous substrates for ultrafiltration, desalination and water reclamation, part 2
[PB82-109920] N82-18363
Multi-saline sample distillation apparatus for hydrogen isotope analyses: Design and accuracy
[PB82-115460] N82-18573

DESIGN ANALYSIS
Design philosophy of the Hughes model 500 helicopter N82-18140
Technological needs of advanced Earth-observation spacecraft N82-18282
Design investigation of solar-powered lasers for space applications N82-18562
Design, evaluation, and fabrication of low-cost composite blades for intermediate-size wind turbines
[NASA-CR-165342] N82-18683
The design of an interface to a programming system and MENUNIX: A menu based interface to UNIX (user manual)
[AD-A108829] N82-18980
Design optimization of the chlorination process. Volume 1: Comparison of optimized pilot system with existing full scale systems
[PB82-100835] N82-19110

DESIGN TO COST
Task analytic techniques: Application to the design of a flight simulator instructor/operator console
[AD-A108724] N82-18227
Effective methods for overall project cost reduction
[MBB-UR-456-80-O] N82-19087

DESORPTION
The theory and application of temperature programmed desorption in the study of unsupported iron and iron-copper Fischer-Tropsch synthesis catalysts N82-18339

DESULFURIZING
EPA utility FGD (Flue Gas Desulfurization) survey
[PB82-115868] N82-18786

DEUTERIUM PLASMA
Simple analysis of light ion beam losses in deuterium plasmas channels
[AD-A108287] N82-19009

DEVELOPING NATIONS
The Global 2000 report to the President. Entering the twenty-first century, volume 1
[PB82-100801] N82-19080
The Global 2000 report to the President. Entering the twenty-first century, volume 2
[PB82-100819] N82-19081
The Global 2000 report to the President. Documentation on the Government's Global sectoral models: The Government's Global model, volume 3
[PB82-100827] N82-19082
Fourth Annual Community Planning and Development Challenges: Energy, Environment, Water
[PB82-125790] N82-19108

DIAGNOSIS
Analysis of volatile metabolites in biological fluids as indicators of prodromal disease condition
[NASA-CR-167513] N82-18659

DICHLORODIPHENYLTRICHLOROETHANE
An equilibrium model for the partitioning of synthetic organic compounds: Formulation and calibration
[PB82-116682] N82-18748

DICKE RADIOMETERS
Observations with an imaging 35 GHz radiometer of terrain in Malmslatt, July 1980
[FOA-C-30240-E1/E3] N82-18672

DIELECTRIC PROPERTIES
Semiconductor injection lasers with a circular resonator: A study of GaAs-(GaAl)As dielectric waveguides and their incorporation into a laser resonator N82-18576

DIELECTRICS
Measurement of the dielectric constant of ceramic Al2O3 substrates
[LEOK-TR-1980-04] N82-18392
Electromagnetic coupling to a conducting body of revolution with a homogeneous material region
[AD-A108385] N82-18473
Secondary electron emission from a charged dielectric in the presence of normal and oblique electric fields
[NASA-CR-168558] N82-18507
Mapping of electrical potential distributions with charged particle beams
[NASA-CR-168556] N82-18509

DIESEL ENGINES
Characterization of the microstructure of stabilized zirconia used on diesel-engine components
[DE81-029303] N82-18360

DIESEL FUELS
Physicochemical properties of diesel particulate matter N82-18335

DIFFERENCE EQUATIONS
Some properties of the non-linear partial difference equation for the Ising-model correlation function [CNRS-CPT-80-P-1226] N82-18955
DIFFERENTIAL EQUATIONS
Three dimensional field computation [PB82-107169] N82-18401
A stochastic approach to global error estimation in the numerical solution of ordinary differential equations [INPE-2290-PRE/065] N82-18944
Numerical methods for stiff differential equations and Josephson interferometer equations [AD-A108873] N82-18950
Application of the Alpha-Beta procedure to differential games [INPE-2136-RPE/356] N82-18882
DIFFERENTIAL GEOMETRY
Existence of patches bounded by lines of curvature [PB82-114471] N82-18964
DIFFERENTIATION
Effect of weightlessness on lymphocyte proliferation N82-18261
DIFFRACTION PATHS
Neutron scattering studies of atomic vibration in nickel and solid dimethylacetylene N82-19066
DIFFRACTION PATTERNS
Computer implementation of a program for the analysis of circular reflectors using the geometric theory of diffraction [INPE-2132-RPE/356] N82-18452
Low temperature and neutron physics studies [DE82-001573] N82-19025
DIFFRACTOMETERS
Neutron scattering studies of atomic vibration in nickel and solid dimethylacetylene N82-19066
DIFFUSION
Quasi-elastic laser light diffusion [CISE-1711] N82-18596
DIFFUSION COEFFICIENT
Chronoamperometric transients at the stationary disk microelectrode [AD-A108567] N82-18519
DIFFUSION THEORY
GaAs FET device modeling and performance [AD-A108745] N82-19070
DIFFUSION WELDING
Metal honeycomb to porous wireform substrate diffusion bond evaluation [NASA-TM-82793] N82-18612
DIGITAL COMPUTERS
Measurements of antenna pulse responses [AD-A108181] N82-18465
Microsoft: Microsoft COBOL V4.40, indexed I-O module, level 1 [PB82-100969] N82-18904
DIGITAL DATA
A General Purpose Interface Bus (GPIB) [RAE-TM-RAD-NAV-166] N82-18505
On connectivity properties of grayscale pictures [AD-A108602] N82-18583
DIGITAL FILTERS
A method of modeling multirate two-dimensional recursive digital filters N82-18497
Performance of fir adaptive filters using recursive algorithms — speech processing N82-18490
DIGITAL INTEGRATORS
Charge circuits for analog LSI N82-18500
A 10 MHz 60 deg PM demodulator [INPE-2157-RPE/376] N82-18513
Carrier recovery system for modem applications with digital processing using PSK or DPSK modulation [INPE-2096-RPE/325] N82-18923
DIGITAL RADAR SYSTEMS
Simulation of modern radar apparatus in full mission flight and tactic simulators [MBB-UA-595-81-O] N82-18482
DIGITAL SIMULATION
Implementation of an overlaid version of P2 simulation [AD-A108592] N82-18307
Simulation of modern radar apparatus in full mission flight and tactic simulators [MBB-UA-595-81-O] N82-18482
Ground-water resources of the White River Basin, Madison County, Indiana [PB82-109644] N82-18675
DIGITAL SYSTEMS
Ultra scanning techniques [AD-A108871] N82-18895
On digital processing via PDQ factorization [AD-A108884] N82-18835
DIGITAL TECHNIQUES
Time domain vibration testing techniques in stochastic environment: Model reference adaptive system approach N82-18824
Programmable multiple digital cassette memory [INPE-2090-RPE/329] N82-18880
Processing and correlation of digitalized images in a spectral range [MBB-UA-596-81-O] N82-18941
DIODES
Numerical simulation of diode rectifier bridges: Application of a new method to the brushless excitation system [DRIC-T-6476] N82-18504
DIRECT CURRENT
DC-magnetic field vector measurement N82-18245
DIRECTIONAL SOLIDIFICATION (CRYSTALS)
Reusable thermal cycling clamp — holders for directional solidification experiments [NASA-CASE-LAR-12868-1] N82-18380
DIRECTIONAL STABILITY
Interpretation and construction of a dynamic similarity model of the A 310 wings [MBB-FE-17/S/PUB/42] N82-18212
DIRICHLET PROBLEM
Some Dirichlet series whose poles are related to cusp forms [CTH-MATH-1981-14] N82-18962
DISCRETE FUNCTIONS
A stochastic approach to global error estimation in the numerical solution of ordinary differential equations [INPE-2290-PRE/065] N82-18944
DISCRIMINATION
Qualitative texture discrimination [AD-A108582] N82-18937
DISEASES
Analysis of volatile metabolites in biological fluids as indicators of prodromal disease condition [NASA-CR-167513] N82-18859
DISKS (SHAPES)
Development of materials and process technology for dual alloy disks [NASA-CR-165224] N82-18370
Chronoamperometric transients at the stationary disk microelectrode [AD-A108567] N82-18519
DISLOCATIONS (MATERIALS)
On a proposal for a continuum with microstructure N82-19052
DISPERSION
Soot radiation from diffusion flames N82-18334
DISPERSIONS
Evaluation of point source dispersion models [PB82-121062] N82-18762
DISPLACEMENT
Response of a structure solicited by displacements imposed on a part of its edge — computer program [CETIM-11-L-182] N82-18644
DISPLAY DEVICES
The multi mode matrix flat panel display: Technology and applications N82-18169
Analytical study of cockpit information requirements [AD-A108524] N82-18218
Survey of multi-function display and control technology [NASA-CR-167510] N82-18309
Frontiers in data storage, retrieval and display. Proceedings of a Marine geology and geophysics data workshop [PB82-100892] N82-18901
DISTANCE
Evaluation of the visual acquisition range of enroute air traffic from cockpit observations — collision avoidance [ESA-TT-691] N82-18661
DISTILLATION
Multi-saline sample distillation apparatus for hydrogen isotope analyses: Design and accuracy [PB82-115460] N82-18573
Geothermal energy market study on the Atlantic coastal plain: Technical feasibility of use of eastern geothermal energy in vacuum distillation of ethanol fuel [PB82-123001] N82-18732
DISTILLATION EQUIPMENT
Frequency response analysis of distillation column interaction N82-18341
Multi-saline sample distillation apparatus for hydrogen isotope analyses: Design and accuracy [PB82-115460] N82-18573
DISTORTION
Spectral model predictions of mean-square-shear distortion rates [AD-A108211] N82-18543
Distortional buckling of thin-web beam columns [PB82-105271] N82-18650
DISTRIBUTED PARAMETER SYSTEMS
Distributed intelligence for air fleet control [AD-A108611] N82-18195
Distributed sensor networks [AD-A108275] N82-18888
A simulation tool for distributed databases [AD-A108619] N82-18882
Two approaches to deadlock in distributed systems N82-18909
System control procedure development for a distributed microcomputer network for avionics utilizing a non-responsive time-division multiplexed bus as the inter-computer communication link N82-18927
DISTRIBUTION FUNCTIONS
Wave normal directions and wave distribution functions for ground based transmitter signals observed on Geos 1 [CRPE-NT-99] N82-18479
Renewal tables: Tables of functions arising in renewal theory [AD-A108264] N82-18975
On testing monotone tendencies [AD-A108332] N82-18977
DIVING (UNDERWATER)
Research predictions for underwater activities in the 1990's [FOA-C-58010-H1] N82-18862
DOCUMENT STORAGE
Full text information systems: A review and assessment of the technology N82-19092
DOCUMENTATION
Effect of automatic processing on specification of problem solutions for computer programs [AD-A108570] N82-18919
DOMESTIC ENERGY
Energy consumption patterns: Illinois, Indiana, Kentucky, Ohio, Pennsylvania, and West Virginia (1975) [PB82-101476] N82-18734
Energy and the fate of ecosystems: Study of nuclear and alternative energy systems. Supporting paper 8 [PB82-113747] N82-18749
DONOR MATERIALS
Electronic states of a negative ion donor in semiconductors [INPE-2092-RPE/322] N82-19061
Electronic structure of the D(-) state and excited donor states of grain impurities in doped semiconductors [INPE-2115-RPE/339] N82-19063
DOPED CRYSTALS
Electron hopping energy influence on the specific heat and conductivity of phosphorus doped silicon [INPE-2301-PRE/070] N82-19044
Diagonal and off-diagonal disorder in doped semiconductors [INPE-2292-PRE/067] N82-19057
Paramagnetic susceptibility of phosphorus doped silicon [INPE-2105-RPE/332] N82-19064
DOPPLER EFFECT
Pulsed heterodyne CO2 laser/scanner system [AD-A108186] N82-18589
DOPPLER RADAR
R and D equipment information report: Fault tolerant weather radar processor [AD-A108253] N82-18809
Radar detection of turbulence in thunderstorms [AD-A108679] N82-18812
DOWNWASH
Helicopter rotor downwash: Results of experimental research at the DFVLR-rotor test stand and their comparison with theoretical results N82-18158

DRAG MEASUREMENT
Measurements in the near-wake of a transport model, to determine the lift, drag and drag components using Maskell's analysis
[RAE-TR-81012] N82-18177

DRAG REDUCTION
Developments in rotary wing aircraft aerodynamics
N82-18120

Laminar airfoils for transport aircraft
[ESA-TT-690] N82-18190

Drag reduction and adaptive boundary conditions
[AD-A108808] N82-18544

DRAINAGE PATTERNS
Use of flow-duration curves to evaluate effects of urbanization on streamflow patterns on Long Island, New York
[PB82-114307] N82-18673

DRIFT RATE
Thermal hydraulic stability of flow in parallel channels N82-18536

DRILLING
Exploratory study on manual drilling
[CETIM-1-8E-0-80] N82-18420

DRILLS
Exploratory study on manual drilling
[CETIM-1-8E-0-80] N82-18420

DRONE AIRCRAFT
A design for a 32-channel multiplexer — for unmanned aircraft navigation sensors
[RAE-TM-RAD-NAV-145] N82-18503

DRYING APPARATUS
The Capenhurst Westair high temperature heat pump dryer
[PB82-116690] N82-18425

DUCTED ROCKET ENGINES
Theoretical considerations of boron combustion in ducted rockets
[ESA-TT-703] N82-18322

DUPLEX OPERATION
An on board supervisory system for applications in space missions
[INPE-2097-RPE/327] N82-18216

DURABILITY
Ceramic roadway aggregates with improved polish and wear resistance
[PB82-103987] N82-18426

JT9D ceramic outer air seal system refinement program
[NASA-CR-165554] N82-18603

DUST
Experimental and theoretical studies on gas cyclone separators operating at high efficiency N82-18340

DYNAMIC CHARACTERISTICS
Dynamic and aeroelastic characteristics of complete windturbine systems N82-18128

A study of the techniques of dynamic analysis of helicopter type structures N82-18129

Dynamic mechanical properties of some wood-polymer composite materials N82-18324

DYNAMIC CONTROL
IAC control system analysis development
N82-18298

DYNAMIC LOADS
Static and dynamic analysis of axially loaded wire ropes N82-18625

Response of reinforced concrete plate-column connections to dynamic and static horizontal loads. Appendices E to H
[PB82-101544] N82-18646

DYNAMIC MODELS
Vibration and buckling studies of pretensioned structures N82-18282

Theory and application of experimental model analysis in earthquake engineering
[PB82-122409] N82-18430

DYNAMIC PRESSURE
Frequency response analysis of distillation column interaction N82-18341

DYNAMIC RESPONSE
Dynamics of aircraft antiskid braking systems — conducted at the Langley aircraft landing loads and traction facility
[NASA-TP-1959] N82-18204

Frequency response analysis of distillation column interaction [illegible]2-18341

A completely deformable Timoshenko [illegible] type slider crank mechanism [illegible]-18602

Dynamic analysis and design of constrained mechanical systems
[AD-A108885] N82-18629

Design sensitivity analysis and optimization of constrained dynamic systems
[AD-A108884] N82-18630

Generalized coordinate partitioning in dynamic analysis of mechanical systems
[AD-A108883] N82-18631

Earthquake response of sea-based storage tanks by a hybrid element method-theory and computer analysis
[PB82-104993] N82-18647

Dynamical nonlinear material response and failure
[AD-A108822] N82-19013

DYNAMIC STRUCTURAL ANALYSIS
Large Advanced Space Systems (LASS) computer-aided design program additions
N82-18287

Configurational and system requirements for control of large space systems N82-18302

A dynamic measure of controllability and observability for the placement of actuators and sensors on large space structures
[NASA-CR-166520] N82-18310

Response of a structure solicited by displacements imposed on a part of its edge — computer program
[CETIM-11-L-182] N82-18644

Response of reinforced concrete plate-column connections to dynamic and static horizontal loads. Appendices E to H
[PB82-101544] N82-18646

Dynamic structural analysis by analog simulation
[PB82-110677] N82-18651

E

EARTH (PLANET)
An explicit method of solution of the geomagnetic induction problem
[AD-A109369] N82-18795

Planetary magnetospheres
[NASA-TM-83841] N82-19122

EARTH CRUST
Reports on crustal movements and deformations
[NASA-TM-83872] N82-18786

EARTH LIMB
Grille spectrometer N82-18236

Methods for interpreting atmospheric spectral observations by Sun sighting through the Earth limb
[ESA-TT-715] N82-18796

EARTH MOVEMENTS
Reports on crustal movements and deformations
[NASA-TM-83872] N82-18786

Catalog of significant earthquakes, 2000 B.C. - 1979: Including quantitative casualties and damage
[PB82-117425] N82-18799

EARTH OBSERVATIONS (FROM SPACE)
Spacelab mission 1 experiment descriptions second edition
[NASA-TM-82448] N82-18234

Metric camera experiment N82-18239

Microwave remote sensing experiment
N82-18240

Technology development of the Space Transportation System mission and terrestrial applications of satellite technology
[NASA-TM-84131] N82-19130

EARTH SATELLITES
A rapid estimation of near Earth satellite lifetimes with quasi-dynamic atmosphere model with application to a proposed Brazilian satellite
[INPE-2287-PRE/063] N82-18272

EARTHQUAKE DAMAGE
Theory and application of experimental model analysis in earthquake engineering
[PB82-122409] N82-18430

State-of-the-art for assessing earthquake hazards in the United States. Interpretation of strong ground motion records
[AD-A108815] N82-18793

Catalog of significant earthquakes, 2000 B.C. - 1979: Including quantitative casualties and damage
[PB82-117425] N82-18799

EARTHQUAKE RESISTANT STRUCTURES
Earthquake response of sea-based storage tanks by a hybrid element method-theory and computer analysis
[PB82-104993] N82-18647

State-of-the-art for assessing earthquake hazards in the United States. Interpretation of strong ground motion records
[AD-A108815] N82-18793

EARTHQUAKES
Probabilistic and hazard analysis for pore pressure increase in soils due to seismic loading
[PB82-122417] N82-18429

Theory and application of experimental model analysis in earthquake engineering
[PB82-122409] N82-18430

ECCENTRICS
A completely deformable Timoshenko beam type slider crank mechanism N82-18602

ECOLOGY
Ohio River Basin energy study: Land use and terrestrial ecology
[PB82-110347] N82-18440

West Virginia baseline --- on ecology, geology, climatology, and socioeconomics.
[PB82-103672] N82-18738

ECONOMETRICS
National energy research and development program --- bibliography of belgian scientific and technical reports N82-18707

ANALYZE user guide
[DE82-001323] N82-18924

ECONOMIC ANALYSIS
Comparison of coal based systems: Medium-BTU gas versus SNG for industrial applications
[PB82-117383] N82-18407

An economic analysis of coal supply in the Ohio River Basin Energy Study Region
[PB82-113341] N82-18414

Feasibility study on energy recovery and cogeneration from an existing municipal incinerator, phase 1
[DE82-001143] N82-18701

FEDSOL: Program user's manual and economic optimization guide for solar Federal building projects
[PB82-107012] N82-18729

An economic analysis of the electric utility sector in the Ohio River Basin region
[PB82-103268] N82-18736

Energy consumption in the Ohio River Basin Energy Study region, 1974, by end user and fuel type
[PB82-104811] N82-18739

ECONOMIC DEVELOPMENT
A baseline assessment of coal industry structure in the Ohio River Basin Energy Study region
[PB82-103615] N82-18737

The Global 2000 report to the President. Entering the twenty-first century, volume 1
[PB82-100801] N82-19080

The Global 2000 report to the President. Entering the twenty-first century, volume 2
[PB82-100819] N82-19081

The Global 2000 report to the President. Documentation on the Government's Global sectoral models: The Government's Global model, volume 3
[PB82-100827] N82-19082

ECONOMIC FACTORS
Economic losses in the Columbus SMSA due to long-range transport of airborne residuals in the Ohio River Basin Energy Study Region
[PB82-110735] N82-18438

Estimating regional losses to agricultural producers from airborne residuals in the Ohio River Basin Energy Study Region, 1976-2000
[PB82-113879] N82-18439

ECONOMIC IMPACT
The yearly effect of the activities of the European Space Agency: Estimation of tax revenues due to the activities of ESA and of the resulting global short term economic impact. Volume 2: Main report
[ESA-CR(P)-1472] N82-19099

ECOSYSTEMS
A land use analysis of existing and potential coal surface mining areas in the Ohio River Basin Energy Study region
[PB82-105172] N82-18679

An equilibrium model for the partitioning of synthetic organic compounds: Formulation and calibration
[PB82-116682] N82-18748

Energy and the fate of ecosystems: Study of nuclear and alternative energy systems. Supporting paper 8
[PB82-113747] N82-18749

Coastal upwelling ecosystems analysis. Technical report 40: Atlas of the JOINT 2 1976 aircraft winds for the 500 foot level
[PB82-113911] N82-18842
Coastal upwelling ecosystems analysis. Atlas of the JOINT 2 1977 aircraft winds for the 500 foot level
[PB82-113929] N82-18843
Mesoscale studies of flow regimes and fluxes of particulate matter in coastal waters
[DE82-001749] N82-18850
EDGE DISLOCATIONS
An experimental determination of the effect of cyclic stress on void growth in ultra-high-purity aluminum during simultaneous 800 MeV proton irradiation
N82-18364
EDITING ROUTINES (COMPUTERS)
NASEDIT: The interactive NASTRON editor
[MBB-Z-2-81-O] N82-18843
EFFECTIVENESS
Criteria for the installation of energy conservation measures
[PB82-104712] N82-18727
EFFLUENTS
The use of element-specific detectors coupled with high-performance liquid chromatographs
[AD-A108839] N82-18343
HERL biological exposure chamber conceptual design
[PB82-114848] N82-18574
EIGENVALUES
Static and dynamic analysis of axially loaded wire ropes N82-18625
EIGENVECTORS
Usage and limitations of characteristic vector analysis of remote sensing multispectral data for the identification and quantification of water quality parameters N82-18656
EJECTION INJURIES
Physiological acceptability tests of the SJU-5/A ejection seat: Second physiological acceptance demonstration
[AD-A108868] N82-18194
EJECTION SEATS
Multiple ejection effects analysis
[AD-A108277] N82-18192
Physiological acceptability tests of the SJU-5/A ejection seat: Second physiological acceptance demonstration
[AD-A108868] N82-18194
ELASTIC BUCKLING
Distortional buckling of thin-web beam columns
[PB82-105271] N82-18650
ELASTIC DAMPING
Status report on the Aeronautical Research Institute of Sweden version of the missile aerodynamics program LARV, for calculation of static aerodynamic properties and longitudinal aerodynamic damping derivatives. Part 1: Theory — Low Aspect Ratio Vehicle (LARV)
[FFA-TN-AU-1661-PT-1] N82-18308
Response of reinforced concrete plate-column connections to dynamic and static horizontal loads. Appendices E to H
[PB82-101544] N82-18646
ELASTIC DEFORMATION
Determination crack tip field parameters for elastic-plastic materials via an estimation scheme
[AD-A108287] N82-18636
ELASTIC PLATES
Ultrasonic input-output for transmitting and receiving longitudinal transducers coupled to same face of isotropic elastic plate
[NASA-CR-3506] N82-18613
ELASTIC PROPERTIES
Elastic stresses in U-shaped bellows
[AECL-6476] N82-18638
Lower bound equilibrium design of slabs
[PB82-105263] N82-18649
ELASTIC WAVES
Ultrasonic input-output for transmitting and receiving longitudinal transducers coupled to same face of isotropic elastic plate
[NASA-CR-3506] N82-18613
ELASTOPLASTICITY
The response of solids to elastic/plastic indentation to adhesion measurements N82-18623
ELECTRIC BRIDGES
Power converter
[NASA-CASE-FRC-11014-1] N82-18494
Numerical simulation of diode rectifier bridges: Application of a new method to the brushless excitation system
[DRIC-T-6478] N82-18504
Superconducting electronics
[AD-A108402] N82-18520
ELECTRIC CONDUCTORS
Thermal and electrical properties of solids at low temperatures
[DE82-000727] N82-18993
ELECTRIC CONNECTORS
Cables for face equipment standardization of requirements
[PB82-113620] N82-18685
ELECTRIC CONTACTS
Fabrication and characterization of ohmic contacts made with gold on heavily tin doped N type surface layers in gallium arsenide N82-18496
Influence of contact conditions and the circuit on short negative differential mobility semiconducting devices
[AD-A108140] N82-19067
ELECTRIC CURRENT
Jump behavior of circuits and systems
N82-18502
ELECTRIC FIELDS
TM/TE polarization ratios in a sample of 30 kHz sferics received at altitudes from 0 to 70 km
[AD-A108182] N82-18464
Standard test case runs for the EMPULSE monopole fieldsolver and conductivity generation model
[AD-A108739] N82-18990
ELECTRIC GENERATORS
Electrical generating unit inventory 1976-1986: Illinois, Indiana, Kentucky, Ohio, Pennsylvania and West Virginia
[PB82-112184] N82-18441
High-temperature, solid-oxide-electrolyte fuel-cell power-generating system
[DE82-002095] N82-18706
High speed permanent magnet generator material investigations: Rare earth magnets
[AD-A108550] N82-18992
ELECTRIC MOMENTS
Impedance of monopole antennas on vehicles by moment methods — Numerical Electromagnetic Code (NEC 1)
[RSRE-MEMO-3414] N82-18447
ELECTRIC POTENTIAL
Jump behavior of circuits and systems
N82-18502
Mapping of electrical potential distributions with charged particle beams
[NASA-CR-166556] N82-18506
ELECTRIC POWER PLANTS
The Ohio River Basin Energy Facility siting model. Volume 2: Sites and on-line dates
[PB82-112111] N82-18442
Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant. Conceptual Design Engineering Report (CDER). Volume 4: Supplementary engineering data
[NASA-CR-165452-VOL-4] N82-18688
An economic analysis of the electric utility sector in the Ohio River Basin region
[PB82-103269] N82-18736
The Ohio River Basin energy facility siting model. Volume 1: Methodology
[PB82-102591] N82-18740
Characterization of scrubbed and unscrubbed power plant plumes
[PB82-101346] N82-18761
ELECTRIC POWER TRANSMISSION
Electromagnetic compatibility analysis for a satellite power system receiving site in the Mojave Desert
[PB82-100710] N82-18723
ELECTRIC PULSES
Measured pulse transfer characteristics of high impedance microstrip lines
[AD-A108266] N82-18517
ELECTRICAL IMPEDANCE
Impedance of monopole antennas on vehicles by moment methods — Numerical Electromagnetic Code (NEC 1)
[RSRE-MEMO-3414] N82-18447
Measured pulse transfer characteristics of high impedance microstrip lines
[AD-A108266] N82-18517
Principles and applications of radio frequency impedance probes
[AD-A108677] N82-19038
ELECTRICAL RESISTIVITY
An explicit method of solution of the geomagnetic induction problem
[AD-A108889] N82-18795
Thermal and electrical properties of solids at low temperatures
[DE82-000727] N82-18993
Diagonal and off-diagonal disorder in doped semiconductors
[INPE-2262-PRE/067] N82-19057
Electrical resistivity of P ions implanted on Si
[INPE-2145-RPE/367] N82-19060
Correlation in doped semiconductors
[INPE-2108-RPE/334] N82-19065
The electrical properties of Na3Cu4S4, mixed-valence one-dimensional metal
[AD-A108517] N82-19068
ELECTROCHEMISTRY
Some comparisons between the energetics of electrochemical and homogeneous electron-transfer reactions
[AD-A108195] N82-18347
Chronoamperometric transients at the stationary disk microelectrode
[AD-A108567] N82-18519
ELECTROCONDUCTIVITY
Electron hopping energy influence on the specific heat and conductivity of phosphorus doped silicon
[INPE-2301-PRE/070] N82-19044
ELECTRODEPOSITION
Selective jet plating N82-18339
Investigation of a galvanic separated aluminum coating as surface layer protection for high strength steel
[MBB-BB-486-O] N82-18383
Electroforming of space and aircraft structures
[MBB-BB-491-O] N82-18419
ELECTRODES
Chronoamperometric transients at the stationary disk microelectrode
[AD-A108567] N82-18519
High-temperature, solid-oxide-electrolyte fuel-cell power-generating system
[DE82-002095] N82-18706
ELECTROFORMING
Electroforming of space and aircraft structures
[MBB-BB-491-O] N82-18419
Investigation of the strength of galvanic deposits
[MBB-BB-487-O] N82-18641
ELECTROKINETICS
The surface properties and flotation of rare earth minerals N82-18365
ELECTROLYTES
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 1. Task 1: Binary ternary and quarternary phase diagrams containing Li(+), Na(+), K(+), CO3(=), SO3(=) and OH(-)
[DE82-000690] N82-18704
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 2. Task 2: Equilibria between the carbonate electrolyte and the C-H-O-S gas phase. Task 3: Vapour pressures and the volitization of the alkali species
[DE82-000689] N82-18705
ELECTROMAGNETIC COMPATIBILITY
Spectrum resource assessment in the 2300-2450 MHz band
[PB82-115452] N82-18492
Electromagnetic compatibility analysis for a satellite power system receiving site in the Mojave Desert
[PB82-100710] N82-18723
ELECTROMAGNETIC FIELDS
Determination of the field scattered by an axially incident plane wave
[INPE-2179-NTE/175] N82-18448
Transient fields produced in heterogeneous bodies by electromagnetic pulses
[AD-A108500] N82-18477
ELECTROMAGNETIC PROPERTIES
Measurement of the dielectric constant of ceramic Al2O3 substrates
[LEOK-TR-1980-04] N82-18392
ELECTROMAGNETIC PULSES
Theory of EMP coupling in the source region
[AD-A108751] N82-18458

Transient fields produced in heterogeneous bodies by electromagnetic pulses
[AD-A108800] N82-18477
ELECTROMAGNETIC RADIATION
Electromagnetic coupling to a conducting body of revolution with a homogeneous material region
[AD-A108595] N82-18473
On the electromagnetic plane wave scattering from a wire grid with rhombic cells
[REPT-8-114] N82-18486
ELECTROMAGNETIC SURFACE WAVES
On the self-consistent solutions of pulsar plasma waves
[INPE-2302-PRE/071] N82-19036
ELECTROMAGNETIC WAVE TRANSMISSION
A possible way of specifically correcting location and navigational errors caused by reflection and other propagation anomalies
[ESA-TT-667] N82-18196
A propagation experiment involving reflection and diffraction
[AD-A108644] N82-18476
ELECTROMAGNETISM
Basic research in electronics (JSEP)
[AD-A108602] N82-18525
ELECTROMECHANICAL DEVICES
An assessment of the magnitude of electromechanical failures occuring within Air Force Command, Control, Communications and Intelligence (C3I) systems
[AD-A108203] N82-18461
ELECTRON BEAMS
Secondary electron emission from a charged dielectric in the presence of normal and oblique electric fields
[NASA-CR-166558] N82-18507
Alignment signals from electrons scattering near an edge for electron beam microfabrication N82-19004
The 4th International Topical Conference on High-Power Electron and Ion-Beam Research and Technology
[AD-A108353] N82-19037
ELECTRON DENSITY (CONCENTRATION)
Comparative study of the electronic density peak and peak height of the F sub 2 layer calculated by CCIR and observed by Cachoeira Paulista and Fortaleza for magnetically calm periods
[INPE-2144-RPE/366] N82-18784
Inhomogeneous relativistic electron systems: A density functional formalism N82-19050
Electron and impurity correlations in doped semiconductors
[INPE-2309-PRE/074] N82-19056
ELECTRON DIFFRACTION
Electron-spin-polarization effects in low energy electron diffraction, ion neutralization and metastable atom deexcitation at solid surfaces
[DE82-001179] N82-19019
ELECTRON EMISSION
Secondary electron emission from a charged dielectric in the presence of normal and oblique electric fields
[NASA-CR-166558] N82-18507
ELECTRON ENERGY
Electron energy loss spectroscopy of gallium arsenide and other materials
[AD-A108657] N82-18346
Electron vacancy production in near-symmetric collisions of 100 MeV copper ions
[ANU-P-771] N82-19018
Electron hopping energy influence on the specific heat and conductivity of phosphorus doped silicon
[INPE-2301-PRE/070] N82-19044
Plasmon excitation in alkaline earth metals
N82-19045
ELECTRON GAS
Inhomogeneous relativistic electron systems: A density functional formalism N82-19050
ELECTRON IRRADIATION
Optical investigations of the recombination processes in laser-annealed and thermally-annealed semiconductors
[AD-A108627] N82-19071
ELECTRON PLASMA
On the self-consistent solutions of pulsar plasma waves
[INPE-2302-PRE/071] N82-19036
ELECTRON SCATTERING
Alignment signals from electrons scattering near an edge for electron beam microfabrication N82-19004
Theoretical investigation of atomic structure and scattering processes
[AD-A108541] N82-19011
Near neighbor separations of surface atoms
[DE82-002166] N82-19026
Electron-phonon scattering rates in antimony: Radio-frequency size effect N82-19048
ELECTRON SOURCES
The 4th International Topical Conference on High-Power Electron and Ion-Beam Research and Technology
[AD-A108353] N82-19037
ELECTRON SPECTROSCOPY
Electron energy loss spectroscopy of gallium arsenide and other materials
[AD-A108657] N82-18346
ELECTRON STATES
Electronic states of a negative ion donor in semiconductors
[INPE-2062-RPE/322] N82-19061
ELECTRON TRANSFER
Some comparisons between the energetics of electrochemical and homogeneous electron-transfer reactions
[AD-A108195] N82-18347
Effects of electron transference energy in semiconductors — germanium antimonides and silicon phosphides
[INPE-2129-RPE/353] N82-19062
ELECTRON TRANSITIONS
Investigations about the internal conversion coefficient for transition energies near the threshold
[CEA-R-5052] N82-19016
ELECTRONIC COUNTERMEASURES
AN/ALQ-135 tail warning system follow-on operational test and evaluation
[AD-A108348] N82-18471
ELECTRONIC EQUIPMENT
Analysis of Built-In-Test (BIT) false alarm conditions
[AD-A108752] N82-18217
Electronic equipment, general requirements
[AD-A108366] N82-18518
Basic research in electronics (JSEP)
[AD-A108602] N82-18525
The Conference on High Temperature Electronics
[NASA-CR-166505] N82-18534
ELECTRONIC EQUIPMENT TESTS
AN/ALQ-135 tail warning system follow-on operational test and evaluation
[AD-A108348] N82-18471
ELECTRONIC PACKAGING
A microcircuit for space applications
[AD-A108286] N82-18523
Influence of contact conditions and the circuit on short negative differential mobility semiconducting devices
[AD-A108140] N82-19067
ELECTRONS
Low-energy electron flux and its reaction to active experimentation of Spacelab N82-18244
Correlation in doped semiconductors
[INPE-2106-RPE/334] N82-19065
ELECTROPHOTOMETRY
Investigations by means of laser fluorescence spectroscopy of the system (A/super 1/capital sigma/super plus/-X/super 1/capital sigma/super plus/) of Li(f)D
[MPIS-19/1980] N82-18355
ELECTROPHYSIOLOGY
Personal miniature electrophysiological tape recorder N82-18263
ELECTROPLATING
Fully galvanic fabrication of complex forms
[MBB-BB-469-O] N82-18384
ELECTROSTATIC CHARGE
Use of glow discharge in fluidized beds
[NASA-CASE-ARC-11245-1] N82-18401
Mapping of electrical potential distributions with charged particle beams
[NASA-CR-166556] N82-18506
ELECTROSTATICS
Low-energy electron flux and its reaction to active experimentation of Spacelab N82-18244
Three dimensional field computation
[PB82-107160] N82-18491
ELEMENTARY PARTICLES
Angular scattering and channeling widths of positive and negative particles at multi-GeV energies
[DE82-002903] N82-19024
ELIMINATION
Automatic element reordering for finite element analysis with frontal solution schemes
[PB82-115114] N82-18866
ELLIPTICAL CYLINDERS
Theoretical and experimental investigation of some slot antenna array problems
[AD-A108586] N82-18478
Burgers approximation for two-dimensional flow past an ellipse
[NASA-CR-166552] N82-18540
ELLIPTICAL ORBITS
General study of optimal low thrust, limited power transfers between arbitrary elliptical orbits
[ESA-TT-697] N82-18271
EMBRITTLEMENT
Kinetics of crack initiation and propagation in metal-induced embrittlement of 4140 steel by indium
N82-18367
EMISSION
Characterization of scrubbed and unscrubbed power plant plumes
[PB82-101346] N82-18761
Evaluation of point source dispersion models
[PB82-121062] N82-18762
Quality assurance audits for SIP and NECRMP emission inventories: New York and New Jersey
[PB82-114273] N82-18767
Analytic optical potentials for nucleon-nucleus nucleus-nucleus collisions involving light and medium nuclei
[NASA-TM-83224] N82-19028
EMITTERS
High voltage power transistor development
[NASA-CR-165547] N82-18508
ENERGETIC PARTICLES
Some comparisons between the energetics of electrochemical and homogeneous electron-transfer reactions
[AD-A108195] N82-18347
Quantum chemical investigations of the mechanism of cationic polymerization and theoretical prediction of crystal densities and decomposition pathways of energetic molecules
[AD-A108520] N82-18398
ENERGY ABSORPTION
Basic physical and chemical processes in space radiation effects on polymers N82-18277
Pulsed radiolysis of model aromatic polymers and epoxy based matrix materials N82-18278
Differential sound absorption technique and effect of ion-pairing and pressure on sound absorption in sea water and aqueous mixtures of magnesium sulfate and sodium chloride
[AD-A108569] N82-18997
ENERGY ABSORPTION FILMS
Development of selective solar absorbers on the basis of aluminum roll-bond heat exchangers
[BMFT-FB-T-81-183] N82-18715
Development of selective solar absorbers on the basis of aluminum roll-bond heat exchangers
[BMFT-FB-T-81-186] N82-18717
ENERGY CONSERVATION
CYCLE: A general computer code for thermodynamic cycle computations. Studies of cogeneration in district heating systems
[WTHD-135] N82-18708
Energy Management and Control Systems (EMCS) user satisfaction study
[PB82-103656] N82-18724
Criteria for the installation of energy conservation measures
[PB82-104712] N82-18727
Performance of the Norris Cotton Federal Office Building for the first 3 years of operation
[PB82-105487] N82-18728
Fourth Annual Community Planning and Development Challenges: Energy, Environment, Water
[PB82-125790] N82-19108
ENERGY CONSUMPTION
CYCLE: A general computer code for thermodynamic cycle computations. Studies of cogeneration in district heating systems
[WTHD-135] N82-18708

Indoor climate, outdoor climate, and energy consumption. An approach to the calculation of the effect of the outdoor and indoor climate on the energy consumption in buildings, based on methods of statistical analysis
[WTHD-137] N82-18709
Energy Management and Control Systems (EMCS) user satisfaction study
[PB82-109866] N82-18724
Energy consumption patterns: Illinois, Indiana, Kentucky, Ohio, Pennsylvania, and West Virginia (1976)
[PB82-101478] N82-18734
Energy consumption in the Ohio River Basin Energy Study region, 1974, by end user and fuel type
[PB82-104811] N82-18739

ENERGY CONVERSION
Electrical generating unit inventory 1976-1986: Illinois, Indiana, Kentucky, Ohio, Pennsylvania and West Virginia
[PB82-112194] N82-18441
Open-cycle vapor compression heat pump
[PB82-110503] N82-18553
Energy consumption patterns: Illinois, Indiana, Kentucky, Ohio, Pennsylvania, and West Virginia (1976)
[PB82-101478] N82-18734

ENERGY CONVERSION EFFICIENCY
High concentration in GaAs photovoltaic systems
[CISE-1713] N82-18529
Thermodynamic limits for solar energy conversion by a quantum-thermal hybrid system
[NASA-TM-83229] N82-18695
The ultimate efficiency of photosensitive systems
[NASA-TM-83230] N82-18696
Thermodynamic limits to the efficiency of solar energy conversion by quantum devices
[NASA-TM-83228] N82-18697
Measurements of wake interaction effects on the power output from small wind turbine models
[FFA-TN-HU-2189-PT-5] N82-18720

ENERGY DISSIPATION
Micromechanical predictions of crack propagation and fracture energy in a single fiber boron/aluminum model composite
[NASA-CR-165550] N82-18326
Electron energy loss spectroscopy of gallium arsenide and other materials
[AD-A108657] N82-18346
Simple analysis of light ion beam losses in deuterium plasmas channels
[AD-A108267] N82-19009
Plasmon excitation in alkaline earth metals
N82-19045

ENERGY DISTRIBUTION
Spatial energy distribution -- scanning a tunable diode laser beam automatically
[NASA-CASE-LAR-12831-1] N82-18557

ENERGY GAPS (SOLID STATE)
Photovoltaic detectors for infrared operation
[INPE-2146-RPE/366] N82-19059
Effects of electron transference energy in semiconductors -- germanium antimonides and silicon phosphides
[INPE-2129-RPE/352] N82-19062

ENERGY LEVELS
Low-energy electron flux and its reaction to active experimentation of Spacelab N82-18244
Electron vacancy production in near-symmetric collisions of 100 MeV copper ions
[ANU-P-771] N82-19018

ENERGY POLICY
Aviation and space flight research activities
N82-18174
Electrical generating unit inventory 1976-1986: Illinois, Indiana, Kentucky, Ohio, Pennsylvania and West Virginia
[PB82-112194] N82-18441
Coal mine siting for the Ohio River Basin energy study
[PB82-106119] N82-18680
Energy: A continuing bibliography with indexes, issue 31
[NASA-SP-7043(31)] N82-18687
Energy policies for resilience and national security
[AD-A108263] N82-18700
Ohio River Basin energy study: Social values and energy policy
[PB82-101494] N82-18735
Energy and the fate of ecosystems: Study of nuclear and alternative energy systems. Supporting paper 8
[PB82-113747] N82-18749

ENERGY REQUIREMENTS
An economic analysis of coal supply in the Ohio River Basin Energy Study Region
[PB82-113341] N82-18414
Energy equivalents for selected pavement materials: Their production and placement
[PB82-121187] N82-18433
FEDSOL: Program user's manual and economic optimization guide for solar Federal building projects
[PB82-107012] N82-18729
An economic analysis of the electric utility sector in the Ohio River Basin region
[PB82-103266] N82-18736

ENERGY STORAGE
A model for stored energy in amorphous silica
[AERE-TP-877] N82-19073

ENERGY TECHNOLOGY
South point gasohol project: A water assessment study
[PB82-111485] N82-18413
Materials for instrumentation for fossil energy technologies. A review and program plan of research and development needs
[PB82-116229] N82-18571
Energy: A continuing bibliography with indexes, issue 31
[NASA-SP-7043(31)] N82-18687
Low NO subx heavy fuel combustor concept program. Phase 1A: Coal gas addendum
[NASA-CR-165577] N82-18590
Energy policies for resilience and national security
[AD-A108263] N82-18700
National energy research and development program -- bibliography of belgian scientific and technical reports N82-18707
Railway transport of low temperature heat from large power stations by means of alternative heat carriers and water
[BMFT-FB-T-81-145] N82-18710
A 100 kWe solar thermal power plant in Kuwait, phase 1
[BMFT-FB-T-81-178] N82-18713

ENERGY TRANSFER
Mode selective vibrational energy transfer in methylfluoride
[MPIS-6/1981] N82-18356
Investigations about the internal conversion coefficient for transition energies near the threshold
[CEA-R-5052] N82-19016

ENGINE CONTROL
A redundancy concept for a digital CSAS
N82-18170

ENGINE DESIGN
Prediction of off-design performance of turbo-shaft engines a simplified method N82-18132
Component design and development for future helicopter engines N82-18134
Three-engine control system for the prototype EH-101 helicopter
[AEBG-9/81-1568L] N82-18135
Advanced air launched missile motor designed methods
[AD-A108634] N82-18318

ENGINE FAILURE
A digital simulation program describing the motion of an aircraft undergoing engine failure during its takeoff ground roll
[AD-A108420] N82-18210

ENGINE INLETS
Effects of fan inlet temperature disturbances on the stability of a turbofan engine
[NASA-TM-82599] N82-18222

ENGINE NOISE
Preliminary thoughts on helicopter cabin noise prediction methods N82-18148

ENGINE PARTS
Characterization of the microstructure of stabilized zirconia used on diesel-engine components
[DE81-028303] N82-18360

ENGINE TESTS
Measurement techniques used to assess the installed power of a helicopter engine N82-18133
Comparison of two parallel/series flow turbofan propulsion concepts for supersonic V/STOL
[NASA-TM-82743] N82-18176

ENGINEERING DRAWINGS
The design, fabrication and installation of cable routing mockups in support of Spacelab 2
[NASA-CR-161975] N82-18312

ENTRAINMENT
Experimental and theoretical studies on gas cyclone separators operating at high efficiency N82-18396

ENVIRONMENT EFFECTS
Ohio River Basin energy study: Land use and terrestrial ecology
[PB82-110347] N82-18448
A land use analysis of existing and potential coal surface mining areas in the Ohio River Basin Energy Study region
[PB82-105172] N82-18679
Commercial Ocean Thermal Energy Conversion (OTEC) licensing Final Environment Impact Statement
[PB82-117532] N82-18733
Incorporation of environmental impact indices into noisemap
[AD-A108616] N82-18743
Energy and the fate of ecosystems: Study of nuclear and alternative energy systems. Supporting paper 8
[PB82-113747] N82-18749
Assessment of future environmental trends and problems: Industrial use of applied genetics and biotechnologies
[PB82-118951] N82-18750
Environmental assessment, source test and evaluation report: Lurgi (Kosovo) medium-Btu gasification
[PB82-114075] N82-18751

ENVIRONMENT MANAGEMENT
The Global 2000 report to the President. Entering the twenty-first century, volume 1
[PB82-100801] N82-19080
The Global 2000 report to the President. Entering the twenty-first century, volume 2
[PB82-100819] N82-19081
The Global 2000 report to the President. Documentation on the Government's Global sectoral models: The Government's Global model, volume 3
[PB82-100827] N82-19082

ENVIRONMENT PROTECTION
Studies relating to the synthesis of monomethylhydrazine by chloramination and problem relating to the protection of the environment from the vapors of 1, 1-dimethylhydrazine, monomethylhydrazine and hydrazine
[AD-A108369] N82-18323
The Ohio River Basin energy facility siting model. Volume 1: Methodology
[PB82-102591] N82-18740

ENVIRONMENTAL MONITORING
A water vapor monitor using differential infrared absorption
[PB82-114422] N82-18586
Measurement of river sediments
[WMO-561] N82-18670

ENVIRONMENTAL QUALITY
Environmental assessment, source test and evaluation report: Lurgi (Kosovo) medium-Btu gasification
[PB82-114075] N82-18751

ENVIRONMENTAL SURVEYS
Commercial Ocean Thermal Energy Conversion (OTEC) licensing Final Environment Impact Statement
[PB82-117532] N82-18733
Executive summary of the Cumberland River Basin regional plan: Water and related land resources report
[PB82-111519] N82-18747

ENVIRONMENTAL TESTS
Energy equivalents for selected pavement materials: Their production and placement
[PB82-121187] N82-18433

EPHEMERIDES
The prediction of satellite ephemeris errors as they result from surveillance system measurement errors
[AD-A108477] N82-19115

EPOXY MATRIX COMPOSITES
Pulsed radiolysis of model aromatic polymers and epoxy based matrix materials N82-18276

EPOXY RESINS
Basic physical and chemical processes in space radiation effects on polymers N82-18277

EQUATIONS OF MOTION
Burgers approximation for two-dimensional flow past an ellipse
[NASA-CR-168552] N82-18640
Dynamic analysis and design of constrained mechanical systems
[AD-A108685] N82-18629
Design sensitivity analysis and optimization of constrained dynamic systems
[AD-A108684] N82-18630
Generalized coordinate partitioning in dynamic analysis of mechanical systems
[AD-A108683] N82-18631
Stabilization of the numerical integration of equations of motion
[ESA-TT-676] N82-18661
EQUATORIAL ATMOSPHERE
A simulation of equatorial plasma bubble signatures on the OI 6300 A nightglow meridional profile over Brazilian low latitude
[INPE-2260-PRE/042] N82-18779
Equatorial spread F instability conditions as determined from ionograms
[INPE-2310-PRE/075] N82-18780
EQUATORIAL REGIONS
Interpretation of equatorial hydrographic, nutrient element and radioisotope data
[DE82-001699] N82-18655
EQUILIBRIUM EQUATIONS
Equilibrium studies of skin like pressure and current-density profiles — Tokamaks
[REPT-81-134] N82-19040
EQUIPMENT SPECIFICATIONS
Electronic equipment, general requirements
[AD-A108388] N82-18518
The Conference on High Temperature Electronics
[NASA-CR-168505] N82-18534
Materials for instrumentation for fossil energy technologies. A review and program plan of research and development needs
[PB82-116229] N82-18571
EQUIVALENCE
On certain connections between: Infinite zeros of proper rational matrices, dynamic equivalence and the interactor — state feedback and cascade control
[PB82-114513] N82-18965
EQUIVALENT CIRCUITS
I-V characterization of solar cells
[INPE-2141-RPE/383] N82-18699
ERROR ANALYSIS
Experiments in regional scale numerical weather prediction including use of SESAME '79 data
[AD-A108372] N82-18837
A stochastic approach to global error estimation in the numerical solution of ordinary differential equations
[INPE-2290-PRE/065] N82-18944
An error analysis for singular finite elements
N82-18947
The prediction of satellite ephemeris errors as they result from surveillance system measurement errors
[AD-A108477] N82-19115
ERROR CORRECTING DEVICES
An inexpensive photoelectric remote tilt meter
[PB82-103649] N82-18567
ERROR DETECTION CODES
Error processing techniques for the Modified READ facsimile code
[AD-A108806] N82-18561
ERYTHROCYTES
The influence of space flight on erythrokinetics in man N82-18258
ESA SATELLITES
Imaging microwave radiometer. Phase A study. Volume 1: Executive summary — instrument for the European Remote Sensing system payload
[ESS/SS-1006] N82-18564
ESTIMATING
On sequential unbiased and Bayes type estimates of parameters in a contingency table N82-18970
Data modifications based on order: Pushback; a configural polysampling approach N82-18973
Optimization in statistics: An introduction
[AD-A108653] N82-18980
ESTUARIES
An investigation of chemistry and toxicity of ozone-produced oxidants and bromate to selected estuarine species
[PB82-118381] N82-18795
ETCHANTS
The application of chemical etching to the failure analysis of semiconductor devices (literature survey and preliminary experiments). Volume 1: Phase 1 report
[ESA-CR(P)-1470-VOL-1] N82-18518
ETCHING
The application of chemical etching to the failure analysis of semiconductor devices (experimental). Volume 2: Phase 2 report
[ESA-CR(P)-1470-VOL-2] N82-18519
ETHNIC FACTORS
The 1981 Summer Research Fellowship Program
[NASA-CR-168814] N82-19079
ETHYL ALCOHOL
Geothermal energy market study on the Atlantic coastal plain: Technical feasibility of use of eastern geothermal energy in vacuum distillation of ethanol fuel
[PB82-123001] N82-18732
EUROPE
Examination of the operational prospects for remote sensing — in Europe
[ESA-CR(P)-1476] N82-18669
EUROPEAN AIRBUS
Measurements in the near-wake of a transport model, to determine the lift, drag and drag components using Maskell's analysis
[RAE-TR-81012] N82-18177
EUROPEAN SPACE AGENCY
The yearly effect of the activities of the European Space Agency: Estimation of tax revenues due to the activities of ESA and of the resulting global short term economic impact. Volume 2: Main report
[ESA-CR(P)-1472] N82-19099
EVALUATION
Evaluation of residential and commercial solar/gas heating and cooling technologies, volume 2
[PB82-103854] N82-18726
Performance of the Norris Cotton Federal Office Building for the first 3 years of operation
[PB82-105487] N82-18728
Honeywell information systems, COBOL, version 3.0
[PB82-106071] N82-18900
IBM corporation: IBM 5280 COBOL, release 3, indexed 1-O module, level 1
[PB82-100934] N82-18902
IBM corporation: IBM vs FORTRAN release 1 (5748-FO3)
[PB82-100942] N82-18903
Microsoft: Microsoft COBOL V4.40, indexed I-O module, level 1
[PB82-100959] N82-18904
Selecting sufficient sets of test paths for program testing N82-18905
EXCIMERS
Pulsed radiolysis of model aromatic polymers and epoxy based matrix materials N82-18278
Investigation of a 460 nm XeF laser
[AD-A108132] N82-18587
EXCITATION
Plasmon excitation in alkaline earth metals
N82-19045
Electronic structure of the D(-) state and excited donor states of grain impurities in doped semiconductors
[INPE-2115-RPE/339] N82-19063
EXHAUST EMISSION
Physicochemical properties of diesel particulate matter N82-18335
Emissions assessment of conventional stationary combustion systems: Summary report
[PB82-109414] N82-18753
Inventory of emissions from marine operations within the California coastal waters
[PB82-105099] N82-18757
Compilation of air pollutant emission factors (including supplements 1-7), Supplement 12
[PB82-101213] N82-18760
EXHAUST GASES
Fuel-rich plume combustion
[AD-A108138] N82-18349
Mechanisms of exhaust pollutants and plume formation in continuous combustion
[AD-A109089] N82-18350
Emissions and efficiency performance of industrial coal stoker fired boilers
[PB82-115312] N82-18730
Hydrogen cyanide health effects
[PB82-116039] N82-18884
Ammonia health effects
[PB82-116047] N82-18885
EXHAUST NOZZLES
Prediction of off-design performance of turbo-shaft engines a simplified method N82-18132
EXHAUST SYSTEMS
Measurement techniques used to assess the installed power of a helicopter engine N82-18133
Engine superficial temperature and infrared signature N82-18136
EXISTENCE
Existence of patches bounded by lines of curvature
[PB82-114471] N82-18964
EXOBIOLOGY
Nutation of Helianthus Annuus in a microgravity environment N82-18265
Microorganisms and biomolecules in space hard environment N82-18267
Aerospace Medicine and Biology: A continuing bibliography with indexes, supplement 227. January 1982
[NASA-SP-7011(227)] N82-18656
EXOSPHERE
A rapid estimation of near Earth satellite lifetimes with quasi-dynamic atmosphere model with application to a proposed Brazilian satellite
[INPE-2287-PRE/063] N82-18272
EXPERIMENTAL DESIGN
Space experiments with particle accelerators — Spacelab N82-18241
Phenomena induced by charged particle beams — experimental design for Spacelab N82-18242
Atmospheric emission photometric imaging
N82-18243
Low-energy electron flux and its reaction to active experimentation of Spacelab N82-18244
DC-magnetic field vector measurement
N82-18245
Isotopic stack - measurement of heavy cosmic ray isotopes N82-18246
Materials science N82-18247
Wetting, spreading and operating characteristics of bearing lubricants in a zero-gravity environment — tribology experiment assembly N82-18248
Effect of weightlessness on lymphocyte proliferation N82-18261
Three-dimensional ballistocardiography in weightlessness N82-18262
Personal miniature electrophysiological tape recorder N82-18263
Mass discrimination during weightlessness
N82-18264
Nutation of Helianthus Annuus in a microgravity environment N82-18265
One-sided comparisons for treatments with a control — distribution theory for likelihood ratio statistics
[AD-A108331] N82-18978
EXPERIMENTATION
Florida Area Cumulus Experiment (FACE), 1980: Operational summary and data inventory
[PB82-113291] N82-18841
EXPLOSIVES
Description of hot spots associated with localized shear zones in impact tests
[AD-A108542] N82-18403
EXPOSURE
A study of the effects of long-term exposure to fuels and fluids on the behavior of advanced composite materials
[NASA-CR-165763] N82-18327
Shipboard exposure testing
[AD-A108146] N82-18375
EXTERNAL COMBUSTION ENGINES
Emissions and efficiency performance of industrial coal stoker fired boilers
[PB82-115312] N82-18730
EXTRATERRESTRIAL RADIATION
Basic physical and chemical processes in space radiation effects on polymers N82-18277
EXTREMELY HIGH FREQUENCIES
Radio equipment for propagation experiments at the frequencies 11, 18, and 36 GHz
[FOA-A-30027-E2] N82-18490

EXTREMUM VALUES
Computable optimal value bounds and solution vector estimates for general parametric NLP programs
[AD-A108239] N82-18954

F

F REGION
Theoretical analysis of the real and apparent velocities of vertical plasma drift in the equatorial ionosphere
[INPE-2143-RPE/365] N82-18782
Comparative study of the electronic density peak and peak height of the F sub 2 layer calculated by CCIR and observed by Cachoeira Paulista and Fortaleza for magnetically calm periods
[INPE-2144-RPE/366] N82-18784

F-14 AIRCRAFT
Investigation of crossdeck pendant catapult slot interaction; proposed corrective measures
[AD-A108149] N82-18232

FABRICATION
Mechanisms of exhaust pollutants and plume formation in continuous combustion
[AD-A108089] N82-18350
Fabrication and characterization of ohmic contacts made with gold on heavily tin doped N type surface layers in gallium arsenide N82-18496
High voltage power transistor development
[NASA-CR-165547] N82-18506
Inspection integrated with fabrication — ultrasonic flaw detection
[CETIM-15-H-194] N82-18622
GaAs shallow-homojunction solar cells
[NASA-CR-165579] N82-18692
High speed permanent magnet generator material investigations: Rare earth magnets
[AD-A108660] N82-18992
Submicron FETs using molecular beam epitaxy
[AD-A108556] N82-19068

FABRICS
Finite-element formulation for the analysis of interfaces, nonlinear and large displacement problems in geotechnical engineering N82-18415

FACSIMILE COMMUNICATION
Error processing techniques for the Modified READ facsimile code
[AD-A108606] N82-18561
Efficient facsimile communication with computer controlled memory switching
[MBB-SS-406-81-O] N82-18893

FACTOR ANALYSIS
Ranking and selection in designed experiments: Complete factorial experimentals
[AD-A108188] N82-18979

FACTORIAL DESIGN
Ranking and selection in designed experiments: Complete factorial experimentals
[AD-A108188] N82-18979

FACTORIZATION
On digital processing via PDQ factorization
[AD-A108364] N82-18935

FADDEEV EQUATIONS
Wave function formalisms in the channel coupling array theory of many-body scattering
[BONN-HE-80-15] N82-18968
A multi-cluster, n-particle generalization of the three-particle Faddeev wave function equations
[BONN-HE-80-16] N82-18969

FAILURE
An assessment of the magnitude of electromechanical failures occuring within Air Force Command, Control, Communications and Intelligence (C3I) systems
[AD-A108203] N82-18461

FAILURE ANALYSIS
Investigation of crossdeck pendant catapult slot interaction; proposed corrective measures
[AD-A108149] N82-18232
Bayesian reliability tests made practical
[AD-A108150] N82-18615
Failure-free reliability tests
[AD-A108197] N82-18616
The application of chemical etching to the failure analysis of semiconductor devices (literature survey and preliminary experiments). Volume 1: Phase 1 report
[ESA-CR(P)-1470-VOL-1] N82-18618
The application of chemical etching to the failure analysis of semiconductor devices (experimental). Volume 2: Phase 2 report
[ESA-CR(P)-1470-VOL-2] N82-18619
Energy Management and Control Systems (EMCS) user satisfaction study
[PB82-103686] N82-18724

FAILURE MODES
The effects of electron and gamma radiation on epoxy-based materials N82-18276
An investigation of ship propeller fatigue N82-18627

FALLING SPHERES
Applied research and development of falling-sphere densitometers payloads of improved design
[AD-A108316] N82-18560

FAR ULTRAVIOLET RADIATION
A photon-counting photodiode array detector for far ultraviolet (FUV) astronomy
[NASA-CR-168551] N82-19118

FAST FOURIER TRANSFORMATIONS
Processing and correlation of digitalized images in a spectral range
[MBB-UA-596-81-O] N82-18941

FAST NEUTRONS
Neutron transport from targets to moderators
[PB82-106915] N82-19027
Time of flight analysis of charge exchange neutral particles from the TORTUR 2 plasma — toroidal turbulence experiment (TORTUR)
[REPT-81-136] N82-19042

FASTENERS
A compilation of stress intensity factor solutions for flawed fastener holes
[AD-A108753] N82-18626

FATIGUE (MATERIALS)
Effects of microstructure and frequency on corrosion-fatigue crack growth in Ti-6Al-1Mo-1V and Ti-6Al-4V
[AD-A108361] N82-18377
Fatigue microcrack behavior under the influence of surface residual stresses
[AD-A108691] N82-18633
Demonstration of crack growth by delayed hydrogen cracking in the rolled joints of Zr-2.5% Nb pressure tubes
[AECL-6653] N82-18637
On a proposal for a continuum with microstructure N82-19052

FAULT TOLERANCE
R and D equipment information report: Fault tolerant weather radar processor
[AD-A108253] N82-18909

FEASIBILITY ANALYSIS
Imaging microwave radiometer. Phase A study. Volume 1: Executive summary — instrument for the European Remote Sensing system payload
[ESS/SS-1006] N82-18564
Feasibility study on energy recovery and cogeneration from an existing municipal incinerator, phase 1
[DE82-001143] N82-18701

FEDERAL BUDGETS
Federal funds for research and development, volume 29, fiscal years 1979, 1980 and 1981
[PB82-118902] N82-19090

FEEDBACK CONTROL
Analysis and design of hydraulic servosystems for the improvement of pulsed machinery for the Army
[TDCK-75058] N82-18605
Robustness in multivariable control system design
[PB82-121401] N82-18943
Sensitivity of the characteristic gain loci
[PB82-113481] N82-18963
On certain connections between: Infinite zeros of proper rational matrices, dynamic equivalence and the interactor — state feedback and cascade control
[PB82-114513] N82-18965

FENCES (BARRIERS)
Theoretical and experimental investigation of some slot antenna array problems
[AD-A108566] N82-18478

FERMI SURFACES
Electron-phonon scattering rates in antimony: Radio-frequency size effect N82-19045

FERMIONS
On the composite structure of elementary particles N82-19003

FERROMAGNETISM
Some properties of the non-linear partial differential equation for the Ising-model correlation function
[CNRS-CPT-80-P-1226] N82-1895

FEYNMAN DIAGRAMS
Feynman path integral and Poisson processes with piecewise classical paths
[CNRS-CPT-80-P-1244] N82-1895

FIBER COMPOSITES
The construction and use of toughness maps in a fracture analysis of the micromechanics of a composite failure
[PB82-113523] N82-18331

FIBER OPTICS
Spatial, High-Accuracy, Positioning-Encoding Sensor (SHAPES) for large space system control applications N82-1829
Fiber optic transmission line stabilization apparatus and method
[NASA-CASE-NPO-15036-1] N82-1902
Fiber optic data bus for the AN/GYQ-21(V)
[AD-A108394] N82-19031
NITINOL interconnect device for optical fiber waveguides
[AD-A108278] N82-1903

FIBER REINFORCED COMPOSITES
Improved moisture resistance of fiber-reinforced plastic
[AD-A109190] N82-1839

FIBER RELEASE
Mitigation of conductive fiber release by selected coatings
[AD-A108270] N82-1832

FIBER STRENGTH
The construction and use of toughness maps in a fracture analysis of the micromechanics of a composite failure
[PB82-113523] N82-18331
Failure of fibrous composites. Part 1: Stress concentration, cracks and notches. Part 2: Toughness
[PB82-113531] N82-18332

FIELD EFFECT TRANSISTORS
Silicon MESFETS N82-1849
A unified cad model for MOSFETS N82-18501
Reliability investigation of low noise GaAs FETs
[AD-A108396] N82-18516
A 16 x 16 element extrinsic silicon detector array
[NASA-CR-166285] N82-1855
Submicron FETs using molecular beam epitaxy
[AD-A108556] N82-1906
GaAs FET device modeling and performance
[AD-A108745] N82-19070
Microwave semiconductor research: Materials, devices, circuits
[AD-A108399] N82-19072
Transient conductance spectroscopy measurements of defect states in Gamma-irradiated n-channel silicon field effect transistors with possible Gamma-dosemeter applications
[AAEC/E-504] N82-19077

FIELD EMISSION
A theoretical study of photo-field emission from a metal surface N82-19046

FIELD OF VIEW
Filtration of elements of orbital images contaminated by clouds, to obtain improved measurements of the black body temperature for use in oceanography
[INPE-2121-RPE/345] N82-18645

FIELD THEORY (ALGEBRA)
Chromostatics of two-quark systems
[DE82-001181] N82-19022

FIELD THEORY (PHYSICS)
Spontaneous breakdown of chiral symmetry in semi-classical method. 1: Boundary condition on the path integral
[CNRS-CPT-80-P-1217] N82-18956

FIGHTER AIRCRAFT
Theoretical investigations on the influence of different strake, tail unit, and conventional HLW arrangement as well as of CCV on the aerodynamic characteristics of fighter aircraft configurations
[MBB-FE-122/S/PUB/36] N82-18211

FILLETS
Shrinkage effects in T-fillet welds in 5083 aluminum
[PB82-114570] N82-18611

FILTRATION
Development of novel porous substrates for ultrafiltration, desalination and water reclamation, part 2
[PB82-108880] N82-18363
High concentration in GaAs photovoltaic systems
[CIBE-1713] N82-18529
Filtration of elements of orbital images contaminated by clouds, to obtain improved measurements of the black body temperature for use in oceanography
[INPE-2121-RPE/345] N82-18845

FINANCIAL MANAGEMENT
Effective methods for overall project cost reduction
[MBB-UR-456-80-O] N82-19067

FINE STRUCTURE
Near neighbor separations of surface atoms
[DE82-002166] N82-19026

FINITE ELEMENT METHOD
Model characteristics of rotor blades: Finite element approach and measurement by ground vibration test N82-18127
A study of the techniques of dynamic analysis of helicopter type structures N82-18129
Interpretation and construction of a dynamic similarity model of the A 310 wings
[MBB-FE-17/S/PUB/42] N82-18212
Characterization of the Airbus horizontal stabilizers of CFRP construction and structural analysis with the finite element method
[MBB-UT-13-81-O] N82-18213
Finite element thermal-structural modeling of orbiting truss structures N82-18261
Vibration and buckling studies of pretensioned structures N82-18282
Control technology development N82-18296
Finite-element formulation for the analysis of interfaces, nonlinear and large displacement problems in geotechnical engineering N82-18415
Modeling techniques for analysis of stiffened shell structures, using computer program ADINA
[AD-A106726] N82-18634
A quantitative evaluation of the feasibility of, and suitable hardware architecture for, an adaptive parallel finite-element system
[AD-A106492] N82-18687
Axisymmetric triangular element with six nodal points
[INPE-2260-PRE/064] N82-18945
An error analysis for singular finite elements N82-18947
Use of angular finite elements for the numerical analysis of transport equation
[CEA-N-2169] N82-18956
Automatic element reordering for finite element analysis with frontal solution schemes
[PB82-115114] N82-18966

FIRE FIGHTING
Evaluation of the North Island A/C crash/rescue training facility
[AD-A106740] N82-18228

FIRE PREVENTION
Evaluation of Megatard 2700: A proposed new fire retardant system
[PB82-108515] N82-18360

FISHERIES
Technology and oceanography: An assessment of Federal technologies for oceanographic research and monitoring
[OTA-O-142] N82-18844

FLAME SPRAYING
Friction coefficient of flame spread materials --- metal coatings
[CETIM-12-DO-71] N82-18366

FLAMES
Soot radiation from diffusion flames N82-18334

FLANGES
Shrinkage effects in T-fillet welds in 5083 aluminum
[PB82-114670] N82-18611

FLAPPING
A simplified method for predicting rotor blade airloads N82-18124

FLAT PLATES
Thermal resistance of a convection cooled flat plate with a nonuniform applied heat flux and internal generation of constant heat
[INPE-2131-RPE/365] N82-18542

FLEXIBLE SPACECRAFT
Integrated controls/structures study of advanced space systems N82-18303
Active control of space structures: Proof of concept experiment N82-18304

FLEXING
Vibration damping characteristics of graphite/epoxy composites for large space structures N82-18283
Determination of the high temperature strength of ceramic. Discussion of testing techniques: Flexural and tensile tests, creep tests with flexural and tensile load
[ESA-TT-716] N82-18399

FLIGHT CHARACTERISTICS
A complete method for computation of blade mode characteristics and responses in forward flight N82-18126
Flight characteristics design and development of the MBB/KHI BK117 helicopter N82-18150
An analytical investigation of the free-tip rotor for helicopters
[NASA-TM-81345] N82-18179

FLIGHT CLOTHING
Scatter diagrams based on the anthropometric survey of 2000 Royal Airforce aircrew (1970/1971)
[RAE-TR-81017] N82-18657

FLIGHT CONTROL
A redundancy concept for a digital CSAS N82-18170
The influence of sensor and actuator characteristics on overall helicopter AFCS design N82-18171
Integration of inertial sensors in helicopters N82-18173
Integrated control design techniques
[AD-A106223] N82-18224
Apparatus for damping operator induced oscillations of a controlled system --- flight control
[NASA-CASE-FRC-11041-1] N82-18493

FLIGHT CREWS
Aircrew restraint and mobility test fixture
[AD-A106274] N82-18193
Scatter diagrams based on the anthropometric survey of 2000 Royal Airforce aircrew (1970/1971)
[RAE-TR-81017] N82-18657
Statistical tools for determining fitness to fly
[AD-A106599] N82-18660

FLIGHT FITNESS
Statistical tools for determining fitness to fly
[AD-A106599] N82-18660

FLIGHT PATHS
Midair and near midair collisions on two- and three-dimensional curvilinear flight paths
[ESA-TT-685] N82-18200
Evaluation of the visual acquisition range of enroute air traffic from cockpit observations --- collision avoidance
[ESA-TT-691] N82-18661

FLIGHT SAFETY
Evaluation of the visual acquisition range of enroute air traffic from cockpit observations --- collision avoidance
[ESA-TT-691] N82-18661

FLIGHT SIMULATION
The role of simulation in the design process N82-18154
Rotorcraft flight simulation computer program C81 with DATAMAP interface. Volume 2: Programmer's manual
[AD-A106294] N82-18231
A design for a 32-channel multiplexer --- for unmanned aircraft navigation sensors
[RAE-TM-RAD-NAV-145] N82-18503

FLIGHT SIMULATORS
Task analytic techniques: Application to the design of a flight simulator instructor/operator console
[AD-A106724] N82-18227

FLIGHT TESTS
Measurement techniques used to assess the installed power of a helicopter engine N82-18133
SH-60B test program N82-18141
Evaluation of the helicopter low airspeed system LASSIE N82-18172
A design for a 32-channel multiplexer --- for unmanned aircraft navigation sensors
[RAE-TM-RAD-NAV-145] N82-18503

FLIGHT TRAINING
Task analytic techniques: Application to the design of a flight simulator instructor/operator console
[AD-A106724] N82-18227

FLOOD CONTROL
Flash flood forecasting --- and damage control measures
[WMO-577] N82-18671

FLOOD DAMAGE
Flash flood forecasting --- and damage control measures
[WMO-577] N82-18671

FLOOD PREDICTIONS
Flash flood forecasting --- and damage control measures
[WMO-577] N82-18671

FLOORS
The design, fabrication and installation of cable routing mockups in support of Spacelab 2
[NASA-CR-161975] N82-18312

FLOW CHARACTERISTICS
Investigation of supersonic separated flow in a compression corner by laser Doppler anemometry N82-18176
Ground-water resources of the White River Basin, Madison County, Indiana
[PB82-109644] N82-18675
Mesoscale studies of flow regimes and fluxes of particulate matter in coastal waters
[DE82-001740] N82-18850

FLOW DISTRIBUTION
The problem of calculation of the flow around helicopter rotor blade tips N82-18160
Separated flow around helicopter bodies N82-18163
A method of predicting fuselage loads in hover N82-18164
Rime ice accretion and its effect on airfoil performance N82-18175
A method of characteristic surfaces. The approximate solution of three-dimensional supersonic flow fields from the near field up to the sonic boom region N82-18182
On the calculation of separated flow on helicopter fuselages
[MBB-UD-321-81-O] N82-18186
Improvement of rocket engine plume analysis techniques
[NASA-CR-167516] N82-18316
Spectral model predictions of mean-square-shear distortion rates
[AD-A106211] N82-18543
Experimental model studies of a hydraulic ram with special emphasis on the velocities in the ram tube
[MPIS-26/1980] N82-18550
Statistical modeling of shear in the upper ocean
[AD-A106212] N82-18848

FLOW EQUATIONS
A complete method for computation of blade mode characteristics and responses in forward flight N82-18126

FLOW MEASUREMENT
Evaluation of the helicopter low airspeed system LASSIE N82-18172
Soil physical processes of groundwater recharge through Indian black cotton soils
[PB82-112137] N82-18674

FLOW THEORY
Theoretical prediction of base pressure on missile bodies having a turbulent dead-air region at supersonic velocities
[ESA-TT-706] N82-18191
Experimental model studies of a hydraulic ram with special emphasis on the velocities in the ram tube
[MPIS-26/1980] N82-18550
On a proposal for a continuum with microstructure N82-19052

FLOW VELOCITY
Experimental and theoretical studies on gas cyclone separators operating at high efficiency N82-18340
Instrumentation for imaging of fluid flow using nuclear magnetic resonance with an example of one-dimensional flow imaging N82-18537
Mixture motion in an engine cylinder
[PB82-121146] N82-18607
The velocity field near the orifice of a Helmholtz resonator in grazing flow
[NASA-CR-168548] N82-18994
Flow velocity and angularity measurements in the FDL trisonic gasdynamic facility and self-adaptive wall wind tunnels with a laser transit anemometer
[AD-A106427] N82-19119

FLUES

EPA utility FGD (Flue Gas Desulfurization) survey
[PB82-118969] N82-18766

FLUID FLOW

Wetting, spreading and operating characteristics of bearing lubricants in a zero-gravity environment — tribology experiment assembly N82-18248

Experimental and theoretical studies on gas cyclone separators operating at high efficiency N82-18340

Instrumentation for imaging of fluid flow using nuclear magnetic resonance with an example of one-dimensional flow imaging N82-18537

Spectral model predictions of mean-square-shear distortion rates
[AD-A108211] N82-18543

A general computer program for fluid-flow, heat-transfer and chemical-reaction processes
[HTS/81/10] N82-18549

Use of flow-duration curves to evaluate effects of urbanization on streamflow patterns on Long Island, New York
[PB82-114307] N82-18673

Testing and analysis of a wet-dry crossflow cooling tower. Volume 1: Test program and results
[PB82-103771] N82-18752

FLUIDICS

Preliminary design of a hydraulic power supply for a laminar jet angular rate sensor
[AD-A108729] N82-18562

FLUIDIZED BED PROCESSORS

Use of glow discharge in fluidized beds
[NASA-CASE-ARC-11245-1] N82-18401

Comparative study of air classifiers
[PB82-108121] N82-18411

Study of automatic control system to maintain constant percentage SO2 retention in a pressurized FBC
[PB82-110829] N82-18758

FLUORESCENCE

Investigations by means of laser fluorescence spectroscopy of the system (A/super 1/capital sigma/super plus/-X/super 1/capital sigma/super plus/) of Li(7)D
[MPIS-19/1980] N82-18355

Investigation of a 480 nm XeF laser
[AD-A108132] N82-18587

FLUORIDES

Mode selective vibrational energy transfer in methylfluoride
[MPIS-6/1981] N82-18356

FLUX (RATE)

Low-energy electron flux and its reaction to active experimentation of Spacelab N82-18244

Neutron transport from targets to moderators
[PB82-109915] N82-19027

FORECASTING

Regression type mathematical models of the interaction of meteorology and agricultural productivity. Objectives, uses and operational problems
[INPE-2117-RPE/341] N82-18661

Model predictions and trend analysis N82-18773

FOREST MANAGEMENT

Examination of the operational prospects for remote sensing — in Europe
[ESA-CR(P)-1478] N82-18669

FORGING

Replacing milled drawn aluminum pieces by precision forged ones
[V-2158] N82-18381

FORMALDEHYDE

Studies relating to the synthesis of monomethylhydrazine by chloramination and problem relating to the protection of the environment from the vapors of 1, 1-dimethylhydrazine, monomethylhydrazine and hydrazine
[AD-A108369] N82-18323

FORMALISM

Plan synthesis: A logical perspective
[AD-A108733] N82-18933

Generalizing specifications for uniformly implemented loops
[AD-A108585] N82-18949

FORMATIONS

The environmental stratigraphy and depositional systems of the precambrian (?)-Cambrian campito formation, eastern California and western Nevada N82-18768

FORMING TECHNIQUES

The 2nd Seminar on Efficient Metal Forming and Machining
[PB82-109745] N82-18431

FORTRAN

A digital algorithm for composite laminate analysis, FORTRAN
[AD-A108201] N82-18330

Honeywell information systems, advanced FORTRAN release 1.1
[PB82-108014] N82-18894

IBM corporation: IBM vs FORTRAN release 1 (5748-FO3)
[PB82-100942] N82-18903

FOSSIL FUELS

Materials for instrumentation for fossil energy technologies. A review and program plan of research and development needs
[PB82-115229] N82-18571

FOUNDATIONS

Foundations of structures in polar waters
[AD-A108344] N82-18417

FOURIER ANALYSIS

An experimental investigation of gapwise periodicity and unsteady aerodynamic response in an oscillating cascade. Volume 2: Data report. Part 1: Text and mode 1 data
[NASA-CR-165457-VOL-2-PT-1] N82-18180

An experimental investigation of gapwise periodicity and unsteady aerodynamic response in an oscillating cascade. Volume 2: Data report. Part 2: Mode 2 data
[NASA-CR-165457-VOL-2-PT-2] N82-18181

Smoothing splines: Regression, derivatives and deconvolution
[AD-A108631] N82-18981

FOURIER TRANSFORMATION

Study of high speed complex number algorithms — for determining antenna for field radiation patterns
[NASA-CR-166743] N82-18914

FRACTURE MECHANICS

Micromechanical predictions of crack propagation and fracture energy in a single fiber boron/aluminum model composite
[NASA-CR-168550] N82-18326

Failure of fibrous composites. Part 1: Stress concentration, cracks and notches. Part 2: Toughness
[PB82-113531] N82-18332

Micromechanisms of fracture and hypothermal aging of fibrous composites
[PB82-121369] N82-18333

The response of solids to elastic/plastic indentation to adhesion measurements N82-18623

Determination crack tip field parameters for elastic-plastic materials via an estimation scheme
[AD-A108267] N82-18636

FRACTURE STRENGTH

An assessment of buffer strips for improving damage tolerance of composite laminates at elevated temperature
[NASA-TM-83257] N82-18325

The construction and use of toughness maps in a fracture analysis of the micromechanics of a composite failure
[PB82-113523] N82-18331

Professor M. M. Protodyakonovs strength coefficient f of rocks
[AD-A108209] N82-18791

FRAMES

Nonlinear elastic beams, frames and structural analysis
[CTH-R-31/1979] N82-18645

FREE ELECTRONS

Formulation of normalized non-linear free electron laser equations
[AD-A108358] N82-18596

FREE FLOW

Wind tunnel and laboratory calibration of balloon-borne wind sensors
[AD-A108678] N82-18614

FREQUENCY ANALYZERS

Wideband HF channel analyzer
[AD-A108694] N82-18886

FREQUENCY ASSIGNMENT

Spectrum resource assessment in the 2300-2450 MHz band
[PB82-115452] N82-18492

FREQUENCY DIVISION MULTIPLEXING

A new external limit to the capacity of interference channels
[INPE-2162-RPE/360] N82-18493

FREQUENCY MEASUREMENT

Wideband HF channel analyzer
[AD-A108694] N82-18886

FREQUENCY MODULATION

FM modulators using a phase locked loop
[INPE-2293-NTE/177] N82-18511

Industrial burner and process efficiency program
[PB82-115486] N82-18731

FREQUENCY STABILITY

Stabilized microwave oscillator for a dielectric resonator
[INPE-2123-RPE/347] N82-18512

FREQUENCY SYNTHESIZERS

Method for shaping and aiming narrow beams — sonar mapping and target identification
[NASA-CASE-NPO-14632-1] N82-18443

FRICTION

Hard-on-hard (ceramic) long-life seals and riders for cryogenic coolers
[AD-A108646] N82-18394

FRICTION MEASUREMENT

Static and dynamic analysis of axially loaded wire ropes N82-18625

FROST

The use of environmental satellites for frost monitoring
[INPE-2126-RPE/352] N82-18805

FUEL CELLS

Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 1. Task 1: Binary ternary and quarternary phase diagrams containing Li(+), Na(+), K(+), CO3(=), SO3(=) and OH(-)
[DE82-000690] N82-18704

Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 2. Task 2: Equilibria between the carbonate electrolyte and the C-H-O-S gas phase. Task 3: Vapour pressures and the volitisation of the alkali species
[DE82-000689] N82-18705

High-temperature, solid-oxide-electrolyte fuel-cell power-generating system
[DE82-002095] N82-18706

Mission operation report: Space Shuttle program. STS-2 postflight medical operations
[NASA-TM-84135] N82-18858

FUEL COMBUSTION

Fuel-rich plume combustion
[AD-A108136] N82-18349

Mechanisms of exhaust pollutants and plume formation in continuous combustion
[AD-A109059] N82-18350

Industrial burner and process efficiency program
[PB82-115486] N82-18731

Compilation of air pollutant emission factors (including supplements 1-7), Supplement 12
[PB82-101213] N82-18760

FUEL CONSUMPTION

Developments in rotary wing aircraft aerodynamics N82-18120

Parametric study of the influence of the engine upon the operating cost of a civil helicopter N82-18131

Component design and development for future helicopter engines N82-18134

Gasoline equivalent fuel economy determination for alternate automotive fuels
[PB82-120072] N82-18412

Industrial burner and process efficiency program
[PB82-115486] N82-18731

FUEL INJECTION

Low thrust monopropellant engine
[NASA-CASE-GSC-12194-2] N82-18314

FUEL OILS

Oxidation and formation of deposit precursors in hydrocarbon fuels
[NASA-CR-165534] N82-18402

FUEL PRODUCTION

Densification of refuse-derived fuels: Preparation, properties and systems for small communities
[PB82-103904] N82-18408

Fundamental considerations for preparing densified refuse derived fuel
[PB82-101656] N82-18410

FUELS
A study of the effects of long-term exposure to fuels and fluids on the behavior of advanced composite materials
[NASA-CR-165763] N82-18327
Energy consumption in the Ohio River Basin Energy Study region, 1974, by end user and fuel type
[PB82-104811] N82-18739
Emissions assessment of conventional stationary combustion systems: Summary report
[PB82-109414] N82-18753

FUNCTIONAL ANALYSIS
Sensitivity theory for nonlinear systems. 1: Nonlinear functional analysis approach
[ORNL/TM-7304] N82-18984

FUNCTIONAL DESIGN SPECIFICATIONS
Analogue SAR signal processing: Breadboard design, implementation, evaluation and component specification — synthetic aperture radar
[ESA-CR(P)-1463] N82-18480
Study of synthetic aperture radar in 2D - 2FS operation over the ocean — European Remote Sensing system
[ESA-CR(P)-1475] N82-18481
Electronic equipment, general requirements
[AD-A108366] N82-18518

FUNCTIONS (MATHEMATICS)
Theodor von Karman and applied mathematics
[MPIS-9/1981] N82-18959

FURNACES
Materials science N82-18247
High-temperature, solid-oxide-electrolyte fuel-cell power-generating system
[DE82-002095] N82-18706

FUSELAGES
Flight characteristics design and development of the MBB/KHI BK117 helicopter N82-18150
Automatic generation of equations for rotor-body systems with dynamic inflow for a priori ordering schemes N82-18152
Separated flow around helicopter bodies N82-18163
A method of predicting fuselage loads in hover N82-18164
On the calculation of separated flow on helicopter fuselages
[MBB-UD-321-81-O] N82-18188

FUZZY SETS
On connectivity properties of grayscale pictures
[AD-A108802] N82-18583
Modeling human attention allocation strategies with competing criteria
[AD-A108509] N82-18875
Changing the fuzzy rule of detachment
[INPE-2266-PRE/047] N82-18948

FUZZY SYSTEMS
Modeling human attention allocation strategies with competing criteria
[AD-A108509] N82-18875
Continuation of information tracks research: Inventor of prospects
[IWIS-A-80-IN-62-18] N82-19093

G

GALACTIC RADIATION
Isotopic stack - measurement of heavy cosmic ray isotopes N82-18246
Spectroscopy in X-ray astronomy N82-18251
A complete X-ray sample of the high latitude sky from HEAO-1 A-2: log N lo S and luminosity functions
[NASA-TM-82168] N82-18787
V.L.F. ionosonde and long-distance propagation anomalies produced by galactic CEN X-4 X-ray burst in May 1979
[INPE-2250-PRE/033] N82-19129

GALLIUM ARSENIDES
Electron energy loss spectroscopy of gallium arsenide and other materials
[AD-A108657] N82-18346
Fabrication and characterization of ohmic contacts made with gold on heavily tin doped N type surface layers in gallium arsenide N82-18496
Reliability investigation of low noise GaAs FETs
[AD-A108398] N82-18516
Semiconductor injection lasers with a circular resonator: A study of GaAs-(GaAl)As dielectric waveguides and their incorporation into a laser resonator N82-18576
GaAs shallow-homojunction solar cells
[NASA-CR-165579] N82-18682
Electronic transport in ultrathin heterostructures
[AD-A108390] N82-19007
GaAs FET device modeling and performance
[AD-A108745] N82-19070
Microwave semiconductor research: Materials, devices, circuits
[AD-A108389] N82-19072

GAME THEORY
Application of the Alpha-Beta procedure to differential games
[INPE-2135-RPE/358] N82-18982

GAMMA RAYS
Theory of EMP coupling in the source region
[AD-A108751] N82-18458
Transient conductance spectroscopy measurements of defect states in Gamma-irradiated n-channel silicon field effect transistors with possible Gamma-dosemeter applications
[AAEC/E-504] N82-19077

GAS ANALYSIS
A water vapor monitor using differential infrared absorption
[PB82-114422] N82-18586
Gas-surface interactions in cryogenic whole air sampling
[AD-A108255] N82-18742
Stratospheric aerosols and precursor gases N82-18777

GAS CHROMATOGRAPHY
Identifying and determining halocarbons in water using headspace gas chromatography
[AD-A108345] N82-18342
Analysis of volatile metabolites in biological fluids as indicators of prodromal disease condition
[NASA-CR-167513] N82-18859

GAS COOLING
Evaluation of residential and commercial solar/gas heating and cooling technologies. Volume 1: Program overview
[PB82-103847] N82-18725
Evaluation of residential and commercial solar/gas heating and cooling technologies, volume 2
[PB82-103854] N82-18726

GAS FLOW
STS-2 Induced Environment Contamination Monitor (IECM): Quick-look report
[NASA-TM-82457] N82-18670

GAS GENERATORS
Theoretical considerations of boron combustion in ducted rockets
[ESA-TT-703] N82-18322

GAS HEATING
Evaluation of residential and commercial solar/gas heating and cooling technologies. Volume 1: Program overview
[PB82-103847] N82-18725
Evaluation of residential and commercial solar/gas heating and cooling technologies, volume 2
[PB82-103854] N82-18726

GAS INJECTION
Assessment of steam-injected gas turbine systems and their potential application
[NASA-TM-82735] N82-18694

GAS TRANSPORT
Experimental and theoretical studies on gas cyclone separators operating at high efficiency N82-18340

GAS TURBINE ENGINES
Component design and development for future helicopter engines N82-18134

GAS TURBINES
Evaluation of present thermal barrier coatings for potential service in electric utility gas turbines
[NASA-CR-165545] N82-18368
High temperature coatings for gas turbines: A review — diffusion coatings and their mechanical properties
[NLR-MP-81003-U] N82-18385
Determination of the high temperature strength of ceramic. Discussion of testing techniques: Flexural and tensile tests, creep tests with flexural and tensile load
[ESA-TT-716] N82-18399
Low NO subx heavy fuel combustor concept program. Phase 1A: Coal gas addendum
[NASA-CR-165577] N82-18690
Assessment of steam-injected gas turbine systems and their potential application
[NASA-TM-82735] N82-18694

GAS-METAL INTERACTIONS
An investigation of the kinetics for hydrogen chemisorption on iron metal surfaces
[NASA-CR-166555] N82-18369

GASES
EPA utility FGD (Flue Gas Desulfurization) survey
[PB82-115856] N82-18766

GASOHOL (FUEL)
South point gasohol project: A water assessment study
[PB82-111485] N82-18413

GASOLINE
Gasoline equivalent fuel economy determination for alternate automotive fuels
[PB82-120072] N82-18412

GATES (CIRCUITS)
GaAs FET device modeling and performance
[AD-A108745] N82-19070

GEAR TEETH
The measurement of the mobility of structures at acoustic frequencies N82-18149

GENERAL AVIATION AIRCRAFT
Study of cabin noise control for twin engine general aviation aircraft
[NASA-CR-165833] N82-18995

GENETICS
Assessment of future environmental trends and problems: Industrial use of applied genetics and biotechnologies
[PB82-118951] N82-18750

GEODESIC LINES
Existence of patches bounded by lines of curvature
[PB82-114471] N82-18964

GEODESY
Applications of the DoD world geodetic system: The 1972 charting by the use of a semiautomated system
[AD-A108326] N82-18966

GEODETIC COORDINATES
A further inquiry into the theory of S-transformations and criterion matrices N82-18966

GEOGRAPHY
West Virginia baseline --- on ecology, geology, climatology, and socioeconomics.
[PB82-103672] N82-18738

GEOLOGICAL FAULTS
State-of-the-art for assessing earthquake hazards in the United States. Interpretation of strong ground motion records
[AD-A108615] N82-18793

GEOLOGICAL SURVEYS
Environmental geologic studies on the southeastern Atlantic Outer Continental Shelf, 1977-1978
[PB82-109265] N82-18800

GEOMAGNETIC TAIL
The properties of ionospheric singly ionized oxygen ions as observed in the magnetotail boundary layer and northern plasma lobe
[IPS-81-11] N82-18797

GEOMAGNETISM
Design practices for controlling spacecraft charging interactions
[NASA-TM-82781] N82-18311
An explicit method of solution of the geomagnetic induction problem
[AD-A109369] N82-18795

GEOMETRIC DILUTION OF PRECISION
Improvements and extensions of the Geometrical Dilution of Precision (GDOP) concept for selecting navigation measurements
[AD-A108807] N82-18197

GEOMETRICAL THEORY OF DIFFRACTION
Determination of the field scattered by an axially incident plane wave
[INPE-2179-NTE/175] N82-18448
Volumetric pattern prediction of antennas on aircraft using the geometrical theory of diffraction
[ESA-TT-677] N82-18483

GEOMETRY
Topics in computational geometry N82-18913

GEOMORPHOLOGY
An observation-well network concept as applied to North Carolina
[PB82-108089] N82-18678

GEOPHYSICS
Studies related to the deep earth gas
[PB82-103821] N82-18409

Frontiers in data storage, retrieval and display. Proceedings of a Marine geology and geophysics data workshop
[PB82-100882] N82-18901
GEOS 1 SATELLITE
Wave normal directions and wave distribution functions for ground based transmitter signals observed on Geos 1
[CRPE-NT-98] N82-18479
GEOSYNCHRONOUS ORBITS
Design practices for controlling spacecraft charging interactions
[NASA-TM-82781] N82-18311
GEOTHERMAL ENERGY UTILIZATION
Geothermal energy market study on the Atlantic coastal plain: Technical feasibility of use of eastern geothermal energy in vacuum distillation of ethanol fuel
[PB82-123001] N82-18732
GEOTHERMAL RESOURCES
Geothermal energy market study on the Atlantic coastal plain: Technical feasibility of use of eastern geothermal energy in vacuum distillation of ethanol fuel
[PB82-123001] N82-18732
GEOTROPISM
Nutation of Helianthus Annuus in a microgravity environment N82-18265
GERMANIUM
Transient capacitance measurements of deep level defects introduced in beta-ray compensated germanium by long-term annealing at room temperature
[AAEC/E-501] N82-19074
GIANT STARS
Theoretical studies of the RS Canum Venaticorum stars
[NASA-CR-168549] N82-19116
GIRDERS
Analysis of post-tensioned girder anchorage zones
[PB82-122266] N82-18436
GLASS
Dynamical nonlinear material response and failure
[AD-A108622] N82-19013
GLASS FIBER REINFORCED PLASTICS
Failure of fibrous composites. Part 1: Stress concentration, cracks and notches. Part 2: Toughness
[PB82-113531] N82-18232
GLASS FIBERS
Micromechanisms of fracture and hypothermal aging of fibrous composites
[PB82-121369] N82-18333
Design, evaluation, and fabrication of low-cost composite blades for intermediate-size wind turbines
[NASA-CR-165342] N82-18693
GLOBAL POSITIONING SYSTEM
Improvements and extensions of the Geometrical Dilution of Precision (GDOP) concept for selecting navigation measurements
[AD-A108607] N82-18197
GLOW DISCHARGES
Use of glow discharge in fluidized beds
[NASA-CASE-ARC-11245-1] N82-18401
GLUONS
Chromostatics of two-quark systems
[DE82-001161] N82-19022
Quark-gluon plasma and ultra-relativistic nucleus-nucleus collisions
[DE81-030821] N82-19023
GOES SATELLITES
A microcomputer for control of data collection platforms — GOES satellites
[INPE-2104-RPE/301] N82-18881
GOGGLES
Experimental investigation of visual aids for helicopters: Low level flight at night and poor visibility N82-18168
GOLD
Fabrication and characterization of ohmic contacts made with gold on heavily tin doped N type surface layers in gallium arsenide N82-18496
GOVERNMENT/INDUSTRY RELATIONS
Selling to NASA
[NASA-TM-84136] N82-19063
GOVERNMENTS
Non-Federal computer acquisition practices provide useful information for streamlining Federal methods
[PB82-120884] N82-19091
GRAIN BOUNDARIES
On the conditions required for vacancy loop growth in irradiated metals and alloys
[AERE-R-9810] N82-19076
GRAPH THEORY
Solution of large sets of linear equations using cellular arrays N82-18946
GRAPHITE
Improved graphite fiber adhesion
[AD-A108233] N82-18329
GRAPHITE-EPOXY COMPOSITES
The effects of electron and gamma radiation on epoxy-based materials N82-18276
The effects of microcracking on the thermal expansion of graphite-epoxy composites
N82-18279
Thermal expansion of graphite-epoxy between 116 K and 366 K N82-18280
Vibration damping characteristics of graphite/epoxy composites for large space structures N82-18283
An assessment of buffer strips for improving damage tolerance of composite laminates at elevated temperature
[NASA-TM-83257] N82-18325
A study of the effects of long-term exposure to fuels and fluids on the behavior of advanced composite materials
[NASA-CR-165763] N82-18327
GRAPHITE-POLYIMIDE COMPOSITES
The effects of electron and gamma radiation on epoxy-based materials N82-18276
GRAPHS (CHARTS)
Wind-ceiling-visibility data at selected airports. Volume 1: New England region
[AD-A108155] N82-18816
Wind-ceiling-visibility data at selected airports, volume 2. Part A: Eastern region
[AD-A108156] N82-18817
Wind-ceiling-visibility data at selected airports. Volume 2, part B: Eastern region
[AD-A108157] N82-18818
Wind-ceiling-visibility data at selected airports. Volume 3, part A: Southern region
[AD-A108158] N82-18819
Wind-ceiling-visibility data at selected airports. Volume 3, part B: Southern region
[AD-A108159] N82-18820
Wind-ceiling-visibility data at selected airports. Volume 4, part A: Great Lakes region
[AD-A108160] N82-18821
Wind-ceiling-visibility data at selected airports. Volume 4, part B: Great Lakes region
[AD-A108161] N82-18822
Wind-ceiling-visibility data at selected airports. Volume 5, part A: Central region
[AD-A108162] N82-18823
Wind-ceiling-visibility data at selected airports. Volume 5, part B: Central region
[AD-A108163] N82-18824
GRAVITATIONAL EFFECTS
Three-dimensional ballistocardiography in weightlessness N82-18262
Nutation of Helianthus Annuus in a microgravity environment N82-18295
GREAT BASIN (US)
Water resources data for California. Volume 1: Colorado River Basin, Southern Great Basin from Mexican Border to mono Lake Basin and Pacific Slope Basins from Tijuana River to Santa Maria River
[PB82-116937] N82-18683
Water resources data for California. Volume 4: Northern Central Valley Basins and the Great Basin from Honey Lake Basin to Oregon state line
[PB82-117011] N82-18684
GREENHOUSES
Wastewater treatment facilities-sludge management system, Albuquerque, New Mexico
[PB82-117029] N82-19111
GROUND EFFECT MACHINES
Mobility bibliography
[AD-A108228] N82-19104
GROUND SPEED
A digital simulation program describing the motion of an aircraft undergoing engine failure during its takeoff ground roll
[AD-A108420] N82-18210
GROUND SUPPORT EQUIPMENT
Analysis of Built-In-Test (BIT) false alarm conditions
[AD-A108752] N82-18217
Further development of the test concept of the ALPHA JET engine LARZAC 04 N82-18223
GROUND TESTS
SH-606 test program N82-18141
GROUND TRUTH
Ground-truth observations of ice-covered North Slope Lakes imaged by radar
[NASA-TM-84127] N82-18664
GROUND WATER
Soil physical processes of groundwater recharge through Indian black cotton soils
[PB82-112137] N82-18674
Ground-water resources of the White River Basin, Madison County, Indiana
[PB82-109844] N82-18675
Ground-water for the Salt Basin, Eagle Flat, Red Light Draw, Green River Valley, and Presidio Bolson in westernmost Texas
[PB82-105299] N82-18759
GROUND WAVE PROPAGATION
Integral equation approach to the propagation of low-frequency groundwaves over irregular terrain. 2: Two-dimensional terrain features and elevated receivers
[AD-A108578] N82-18459
GROUP DYNAMICS
Modeling human attention allocation strategies with competing criteria
[AD-A108509] N82-18676
GUIDANCE SENSORS
Spatial, High-Accuracy, Positioning-Encoding Sensor (SHAPES) for large space system control applications N82-18286
Automated longwall guidance and control vertical control subsystem, volume 1
[NASA-CR-161969] N82-18658
GUSTS
Analysis of gust structure in the atmospheric boundary layer by using conditional sampling
[FFA-TN-HU-2262-PT-1] N82-18798

H

HALOCARBONS
Identifying and determining halocarbons in water using headspace gas chromatography
[AD-A108345] N82-18342
HALOGEN OCCULTATION EXPERIMENT
Analysis of UV protection requirements and testing of candidate attenuators for the Haloe optical instrument
[NASA-TM-83247] N82-18652
HAMILTONIAN FUNCTIONS
Stabilization of the numerical integration of equations of motion
[ESA-TT-676] N82-18961
HANDLING EQUIPMENT
Orbiter based construction equipment N82-18290
HARDENING (MATERIALS)
Investigation on the functioning of gold-tin superconducting films for the measurement of secondary sonic shock waves in He2 flow
[MPIS-8/1981] N82-18565
HARMONIC MOTION
A simplified method for predicting rotor blade airloads N82-18124
HEALTH
Hydrogen cyanide health effects
[PB82-116039] N82-18864
Ammonia health effects
[PB82-116047] N82-18865
HEAT EXCHANGERS
Experimental study of an integral catalytic combustor: Heat exchanger for Stirling engines
[NASA-TM-82783] N82-18691
Development of selective solar absorbers on the basis of aluminum roll-bond heat exchangers
[BMFT-FB-T-81-183] N82-18715
Development of selective solar absorbers on the basis of aluminum roll-bond heat exchangers
[BMFT-FB-T-81-186] N82-18717
HEAT FLUX
Thermal hydraulic stability of flow in parallel channels N82-18539
Thermal resistance of a convection cooled flat plate with a nonuniform applied heat flux and internal generation of constant heat
[INPE-2131-RPE/355] N82-18542

HEAT GENERATION
Thermal resistance of convectively cooled plates with applied heat flux and internal heat generation
[INPE-2291-PRE/066] N82-18541
CYCLE: A general computer code for thermodynamic cycle computations. Studies of cogeneration in district heating systems
[WTHD-136] N82-18706
HEAT ISLANDS
Radiometric studies of the heat island
[INPE-2156-RPE/375] N82-18454
HEAT PUMPS
The Capenhurst Westair high temperature heat pump dryer
[PB82-116690] N82-18425
Report on the experiences with the gas compression heat pump system of the school and sports center at Altenkunstadt
[BMFT-FB-T-81-175] N82-18552
Open-cycle vapor compression heat pump
[PB82-110503] N82-18553
HEAT STORAGE
Railway transport of low temperature heat from large power stations by means of alternative heat carriers and water
[BMFT-FB-T-81-145] N82-18710
Model of seasonal heat storage --- reservoirs
[BMFT-FB-T-81-176] N82-18711
HEAT TRANSFER
Engine superficial temperature and infrared signature N82-18136
Finite element thermal-structural modeling of orbiting truss structures N82-18261
Analytical prediction of turbulent heat transfer parameters
[AD-A109024] N82-18548
A general computer program for fluid-flow, heat-transfer and chemical-reaction processes
[HTS/81/10] N82-18549
Experimental investigation of heat and mass transfer rates in regenerating type solar collector
[PB82-112244] N82-18722
HEAT TREATMENT
Characterizing heat treatment installations
[CETIM-12-G-199] N82-18387
HEATING EQUIPMENT
Preliminary guidelines for condition assessment of buildings being considered for solar retrofit
[PB82-113269] N82-18437
Monitoring of thermal stratification of the storage tank of the Mabel Lee Hall Solar-Hot-Water Facility
[DE82-002110] N82-18703
HEAVY NUCLEI
Isotopic stack - measurement of heavy cosmic ray isotopes N82-18246
HEISENBERG THEORY
Comparison of two-particle cluster expansions for b.c.c. spin of 1/2 systems N82-19047
HELICOPTER CONTROL
A control model for maneuvering flight for application to a computer-flight testing program N82-18153
A redundancy concept for a digital CSAS N82-18170
The influence of sensor and actuator characteristics on overall helicopter AFCS design N82-18171
HELICOPTER DESIGN
A study of the techniques of dynamic analysis of helicopter type structures N82-18129
The effects of slight non-linearities on modal testing of helicopter-like structures N82-18130
Point of view of a helicopter manufacturer on airworthiness regulations N82-18137
Military requirements: Too little or too much N82-18138
Parametric criteria and impact on design trends N82-18139
Design philosophy of the Hughes model 500 helicopter N82-18140
SH-606 test program N82-18141
Naval versions of the Dauphin and the AS 15 TT weapon system N82-18142
Army Lynx: Product development matched to military combat development N82-18143
A light helicopter for night firing N82-18144
Flight characteristics design and development of the MBB/KHI BK117 helicopter N82-18150
The role of simulation in the design process N82-18154
Impact of systems technology and integration on helicopter design N82-18165
The multimode matrix flat panel display: Technology and applications N82-18169
Integration of inertial sensors in helicopters N82-18173
HELICOPTER ENGINES
Parametric study of the influence of the engine upon the operating cost of a civil helicopter N82-18131
Measurement techniques used to assess the installed power of a helicopter engine N82-18133
Component design and development for future helicopter engines N82-18134
Three-engine control system for the prototype EH-101 helicopter
[AEBG-9/81-1569L] N82-18135
HELICOPTER PERFORMANCE
An analytical investigation of the free-tip rotor for helicopters
[NASA-TM-81345] N82-18179
HELICOPTER TAIL ROTORS
Wind tunnel investigation of high speed rotor noise N82-18146
HELICOPTER WAKES
Seventh European Rotorcraft and Powered Lift Aircraft Forum N82-18119
A simplified approach to the free wake analysis of a hovering rotor N82-18121
An experimental analysis of the shape of a rotor wake N82-18122
Optimum performance and wake geometry of co-axial rotor in hover N82-18156
A numerical approach to co-axial rotor aerodynamics N82-18157
HELICOPTERS
The effects of slight non-linearities on modal testing of helicopter-like structures N82-18130
Preliminary thougnts on helicopter cabin noise prediction methods N82-18148
The measurement of the mobility of structures at acoustic frequencies N82-18149
Separated flow around helicopter bodies N82-18163
Mast mounted visual aids N82-18167
Experimental investigation of visual aids for helicopters: Low level flight at night and poor visibility N82-18168
Evaluation of the helicopter low airspeed system LASSIE N82-18172
An analytical investigation of the free-tip rotor for helicopters
[NASA-TM-81345] N82-18179
On the calculation of separated flow on helicopter fuselages
[MBB-UD-321-81-O] N82-18188
A design for a 32-channel multiplexer --- for unmanned aircraft navigation sensors
[RAE-TM-RAD-NAV-145] N82-18503
HELIUM ISOTOPES
Zero sound attenuation from order parameter fluctuations in liquid He-3 N82-19049
HELMET MOUNTED DISPLAYS
Experimental investigation of visual aids for helicopters: Low level flight at night and poor visibility N82-18168
HELMHOLTZ VORTICITY EQUATION
The velocity field near the orifice of a Helmholtz resonator in grazing flow
[NASA-CR-166546] N82-18994
HEMODYNAMIC RESPONSES
Measurement of central venous pressure and determination of hormones in blood serum during weightlessness N82-18259
HEMODYNAMICS
The influence of space flight on erythrokinetics in man N82-18258
Three-dimensional ballistocardiography in weightlessness N82-18262
HERMETIC SEALS
Airtight collector casings --- and roof mounting frame for solar absorber panels
[BMFT-FB-T-81-164] N82-18716
HETERODYNING
Joint Services Electronics Program
[AD-A106347] N82-18526
Radiation detection with point-contact Josephson junctions N82-19054
HETEROGENEITY
Transient fields produced in heterogeneous bodies by electromagnetic pulses
[AD-A106500] N82-18477
HETEROJUNCTIONS
Electronic transport in ultrathin heterostructures
[AD-A106360] N82-19007
HEURISTIC METHODS
Topics in computational geometry N82-18913
A heuristic for deriving loop functions
[AD-A106880] N82-18921
Automatic element reordering for finite element analysis with frontal solution schemes
[PB82-115114] N82-18966
HEWLETT-PACKARD COMPUTERS
Hewlett Packard company HP-3000 series 3, release A.00.04 indexed 1-0 module
[PB82-106022] N82-18895
HIGH ALTITUDE BALLOONS
Development of a low data rate repeater
[AD-A106154] N82-18498
LIMS Instrument Package (LIP) balloon experiment: Nimbus 7 satellite correlative temperature, ozone, water vapor, and nitric acid measurements
[NASA-TM-83259] N82-18741
HIGH FREQUENCIES
Asymptotic high frequency modes of homogeneous waveguide structures with impedance boundaries
[REPT-S-120] N82-18488
Wideband HF channel analyzer
[AD-A106694] N82-18686
HIGH LEVEL LANGUAGES
Relational data bank for Burroughs computers
[INPE-2116-RPE/340] N82-18456
The JOVIAL (J73) workbook, volumes 1 through 6
[AD-A106527] N82-18916
The JOVIAL (J73) workbook, volumes 10 through 12
[AD-A106528] N82-18917
The JOVIAL (J73) workbook, volumes 13 through 15
[AD-A106529] N82-18918
HIGH POWER LASERS
A study to survey NASA laser applications and identify suitable lasers for specific NASA needs N82-18580
Investigation of possibilities for solar-powered high-energy lasers in space N82-18581
HIGH RESOLUTION
A high resolution, high counting rate bidimensional, MWPC imaging detector for small angle X-ray diffraction studies
[PB82-120886] N82-18569
HIGH SPEED
High speed permanent magnet generator material investigations: Rare earth magnets
[AD-A106580] N82-18892
HIGH STRENGTH STEELS
Investigation of a galvanic separated aluminum coating as surface layer protection for high strength steel
[NBS-SS-486-O] N82-18363
HIGH TEMPERATURE
The Capenhurst Westair high temperature heat pump dryer
[PB82-116690] N82-18425
The Conference on High Temperature Electronics
[NASA-CR-166606] N82-18534
High-temperature, solid-oxide-electrolyte fuel-cell power-generating system
[DE82-002095] N82-18706
HIGH TEMPERATURE RESEARCH
Determination of the high temperature strength of ceramic. Discussion of testing techniques: Flexural and tensile tests, creep tests with flexural and tensile load
[ESA-TT-716] N82-18399
HIGH TEMPERATURE TESTS
High temperature in absorption measurements
[AD-A106601] N82-18588
HIGH VOLTAGES
High voltage power transistor development
[NASA-CR-165547] N82-18506
Test setups for the development of high voltage circuit breakers for high short circuit capacities
[BMFT-FB-T-81-194] N82-18514
SF6 plastic film insulated outdoor bushing for metalclad switchgear operating at system voltages of 420 kV and above
[BMFT-FB-T-81-172] N82-18532
HIGHWAYS
Ceramic roadway aggregates with improved polish and wear resistance
[PB82-103987] N82-18426

HISTORIES
The evolution of meteorological forecasting
[INPE-2181-RPE/372] N82-18806
NASA pocket statistics
[NASA-TM-84134] N82-19084
HOLE GEOMETRY (MECHANICS)
A compilation of stress intensity factor solutions for flawed fastener holes
[AD-A108789] N82-18626
HOLES (ELECTRON DEFICIENCIES)
Laser hole burning spectroscopy: A high resolution probe of molecular environments
[AD-A108849] N82-18590
Electron vacancy production in near-symmetric collisions of 100 MeV copper ions
[ANU-P-771] N82-19018
HOMOGENEITY
Some comparisons between the energétics of electrochemical and homogeneous electron-transfer reactions
[AD-A108196] N82-18347
HOMOJUNCTIONS
GaAs shallow-homojunction solar cells
[NASA-CR-165879] N82-18692
HONEYCOMB STRUCTURES
Metal honeycomb to porous wireform substrate diffusion bond evaluation
[NASA-TM-82783] N82-18612
HONEYWELL COMPUTERS
Honeywell information systems, COBOL, version 3.0
[PB82-108071] N82-18900
HORMONES
Measurement of central venous pressure and determination of hormones in blood serum during weightlessness N82-18259
HORN ANTENNAS
Computer implementation of a program for the analysis of circular reflectors using the geometric theory of diffraction
[INPE-2132-RPE/358] N82-18452
HOT-WIRE FLOWMETERS
An experimental analysis of the shape of a rotor wake N82-18122
HOVERING
A simplified approach to the free wake analysis of a hovering rotor N82-18121
Optimum performance and wake geometry of co-axial rotor in hover N82-18156
A numerical approach to co-axial rotor aerodynamics N82-18157
A method of predicting fuselage loads in hover N82-18164
HOVERING STABILITY
Hover tests of a model H-force rotor N82-18159
HUMAN FACTORS ENGINEERING
Point of view of a helicopter manufacturer on airworthiness regulations N82-18137
Multiple ejection effects analysis
[AD-A108277] N82-18192
What engineers should do to assure the reliability of technical systems
[MBB-UR-478-81-O] N82-18821
Incorporation of environmental impact indices into noisemap
[AD-A108616] N82-18743
Scatter diagrams based on the anthropometric survey of 2000 Royal Airforce aircrew (1970/1971)
[RAE-TR-81017] N82-18857
Flight ergonomics in the aircraft industry personnel-ergonomic development
[MBB-FE-301/S/PUB/44] N82-18872
Human engineering procedures guide
[AD-A108843] N82-18873
Activities of the Committee on Human factors: October 1, 1980 - September 30, 1981
[AD-A108808] N82-18874
The human as a constrained optimal text editor N82-18910
Reliability methodology in task identification for the development of new transportation systems
[MBB-UR-473-81-O] N82-19105
HUMAN PERFORMANCE
Time-sharing manual control and memory search: The joint effects of input and output modality competition, priorities and control order
[AD-A108721] N82-18867
Identification of the adaptive feedback of the human motor system using the Response Difference Method (RDM)
[WTHD-134] N82-18869
HURRICANES
Atlantic hurricane wind probability forecasting (WINDFA)
[AD-A108756] N82-18810
HYBRID CIRCUITS
A microcircuit for space applications
[AD-A108286] N82-18523
HYDRAULIC EQUIPMENT
Preliminary design of a hydraulic power supply for a laminar jet angular rate sensor
[AD-A108729] N82-18562
Analysis and design of hydraulic servosystems for the improvement of pulsed machinery for the Army
[TDCK-75058] N82-18805
HYDRAULIC FLUIDS
Thermal hydraulic stability of flow in parallel channels N82-18536
HYDRAULIC TEST TUNNELS
Effect of air content on broadband noise measurements in the 1.22-m diameter water tunnel
[AD-A108540] N82-19000
HYDRAZINES
Molecular interactions of high energy fuels and jet fuels with oncogenic viruses and endogenous viruses
[AD-A108377] N82-18855
HYDROCARBON FUELS
Oxidation and formation of deposit precursors in hydrocarbon fuels
[NASA-CR-165534] N82-18402
Studies related to the deep earth gas
[PB82-103821] N82-18409
HYDROCARBONS
Investigation on air samples from the submarine Sjoehunden, August 1979
[FOA-C-54035-H1] N82-18744
HYDRODYNAMICS
Drag reduction and adaptive boundary conditions
[AD-A108609] N82-18544
HYDROGEN
Studies on plastic instability, notch deformation and hydrogen effects in spheroidized steel N82-18366
An investigation of the kinetics for hydrogen chemisorption on iron metal surfaces
[NASA-CR-168555] N82-18389
The effect of hydrogen on the solid solution strengthening and softening of nickel
[AD-A108654] N82-18374
Demonstration of crack growth by delayed hydrogen cracking in the rolled joints of Zr-2.5% Nb pressure tubes
[AECL-6853] N82-18637
HYDROGEN COMPOUNDS
Hydrogen cyanide health effects
[PB82-110039] N82-18884
HYDROGEN ISOTOPES
Multi-saline sample distillation apparatus for hydrogen isotope analyses: Design and accuracy
[PB82-115460] N82-18573
HYDROGEOLOGY
Frontiers in data storage, retrieval and display. Proceedings of a Marine geology and geophysics data workshop
[PB82-100892] N82-18901
HYDROGRAPHY
Interpretation of equatorial hydrographic, nutrient element and radioisotope data
[DE82-001699] N82-18655
HYDROLOGY
Measurement of river sediments
[WMO-561] N82-18670
Ground-water resources of the White River Basin, Madison County, Indiana
[PB82-109644] N82-18675
Water resources data for West Virginia, water year 1980
[PB82-111334] N82-18662
West Virginia baseline — on ecology, geology, climatology, and socioeconomics.
[PB82-103672] N82-18736
Winter and summer simulations with the GLAS climate model
[NASA-TM-83866] N82-18807
HYDROPHONES
Modified Ambient Sea Noise Indicator with ambient noise directionality estimator
[AD-A108389] N82-18986
HYDROXYL EMISSION
Waves in the OH emissive layer N82-18237
HYPERFINE STRUCTURE
Hyperfine structure and isotope-shift measurements of short-lived elements by laser spectroscopy
[DE82-001986] N82-18354
HYPOTHESES
A complete method for computation of blade mode characteristics and responses in forward flight N82-18128
On empirical foundations of information science
[PB82-125996] N82-19098
HYSTERESIS
Response of reinforced concrete plate-column connections to dynamic and static horizontal loads. Appendices E to H
[PB82-101544] N82-18646
High speed permanent magnet generator material investigations: Rare earth magnets
[AD-A108550] N82-18992

I

I BEAMS
Inelastic beam buckling experiments
[PB82-103292] N82-18648
IBM COMPUTERS
IBM corporation: IBM 5280 COBOL, release 3, indexed 1-O module, level 1
[PB82-100934] N82-18902
IBM corporation: IBM vs FORTRAN release 1 (5748-FO3)
[PB82-100942] N82-18903
ICE FORMATION
Rime ice accretion and its effect on airfoil performance N82-18175
Icing problems for wind turbines. Summary of studies performed during winter season 1980/81
[FFA-TN-HU-2262-PT-4] N82-18721
ICE MAPPING
Electromagnetic subsurface measurements
[AD-A108192] N82-18469
ICE REPORTING
Electromagnetic subsurface measurements
[AD-A108192] N82-18469
Ground-truth observations of ice-covered North Slope Lakes imaged by radar
[NASA-TM-84127] N82-18664
IDAHO
Wind-ceiling-visibility data at selected airports. Volume 8: Northwest region
[AD-A108168] N82-18829
IGNITION
Weak and strong ignition. 1: Numerical simulations of shock tube experiments
[AD-A108363] N82-18344
Industrial burner and process. efficiency program
[PB82-115466] N82-18731
IGNITION TEMPERATURE
Description of hot spots associated with localized shear zones in impact tests
[AD-A108542] N82-18403
IMAGE CORRELATORS
Automatic relocation of ground control points in LANDSAT imagery
[RAE-TR-81071] N82-18657
IMAGE PROCESSING
A survey of the limits on radar imaging
[AD-A108598] N82-18462
Evaluation of two AN/APS-94 side-looking airborne radar systems in the detection of search and rescue targets
[AD-A108404] N82-18468
Basic research in electronics (JSEP)
[AD-A108502] N82-18525
Spectral transformation in the SOFI complex for processing photographic images on the ES computer, part 1
[NASA-TM-75632-PT-1] N82-18556
On connectivity properties of grayscale pictures
[AD-A108602] N82-18563
Filtration of elements of orbital images contaminated by clouds, to obtain improved measurements of the black body temperature for use in oceanography
[INPE-2121-RPE/345] N82-18645

Ultic scanning techniques
[AD-A108371] N82-18885
Matrix data analysis: Color/B and W coding is not always enough
[AD-A108406] N82-18930
Profiling sensitivity to image quality
[AD-A108405] N82-18931
On digital processing via PDQ factorization
[AD-A108364] N82-18935
Synthesis of textures using simultaneous autoregressive models
[AD-A108584] N82-18936
Qualitative texture discrimination
[AD-A108582] N82-18937
Computational approaches to image understanding
[AD-A108191] N82-18938
Processing and correlation of digitalized images in a spectral range
[MBB-UA-596-81-O] N82-18941
IMAGE RESOLUTION
The effect of atmospheric turbulence on air to ground photography
[RAE-TR-81085] N82-18555
On connectivity properties of grayscale pictures
[AD-A108602] N82-18563
Profiling sensitivity to image quality
[AD-A108405] N82-18931
IMAGES
Radiometric studies of the heat island
[INPE-2158-RPE/375] N82-18454
IMAGING TECHNIQUES
Atmospheric emission photometric imaging
N82-18243
Observations with an imaging 35 GHz radiometer of terrain in Malmslatt, July 1980
[FOA-C-30240-E1/E3] N82-18672
IMMUNITY
Effects of prolonged weightlessness on the humoral immune response of humans N82-18260
IMMUNOLOGY
Effect of weightlessness on lymphocyte proliferation N82-18261
IMPACT TESTS
Description of hot spots associated with localized shear zones in impact tests
[AD-A108542] N82-18403
IMPEDANCE
Asymptotic high frequency modes of homogeneous waveguide structures with impedance boundaries
[REPT-S-120] N82-18488
IMPLOSIONS
Wavelength scaling for reactor-size laser fusion targets
[AD-A108547] N82-18591
IMPURITIES
The influence of impurities on the discharge behavior in SPICA — plasma screw pinch confinement apparatus (SPICA)
[REPT-81-135] N82-19041
Electron and impurity correlations in doped semiconductors
[INPE-2309-PRE/074] N82-19056
Electrical resistivity of P ions implanted on Si
[INPE-2145-RPE/367] N82-19060
Electronic structure of the D(-) state and excited donor states of grain impurities in doped semiconductors
[INPE-2115-RPE/339] N82-19063
Paramagnetic susceptibility of phosphorus doped silicon
[INPE-2105-RPE/332] N82-19064
Correlation in doped semiconductors
[INPE-2109-RPE/334] N82-19065
INCIDENT RADIATION
The TIRGO secondary mirror modulation system
[IPS-81-6] N82-19034
INCINERATORS
Feasibility study on energy recovery and cogeneration from an existing municipal incinerator, phase 1
[DE82-001143] N82-18701
INDENTATION
The response of solids to elastic/plastic indentation to adhesion measurements N82-18623
INDEXES (DOCUMENTATION)
Quality assurance audits for SIP and NECRMP emission inventories: New York and New Jersey
[PB82-114273] N82-18767
Directory of the NOAA Library and Information network
[PB82-114869] N82-19097
On empirical foundations of information science
[PB82-125996] N82-19098
INDICATING INSTRUMENTS
A water vapor monitor using differential infrared absorption
[PB82-114422] N82-18586
INDIUM
Kinetics of crack initiation and propagation in metal-induced embrittlement of 4140 steel by indium
N82-18367
INDIUM ANTIMONIDES
Low-background performance of a monolithic InSb CCD array
[NASA-TM-84216] N82-19117
INDUCTION MOTORS
Single phase permanent magnet synchronous motors N82-18495
INDUCTORS
Jump behavior of circuits and systems
N82-18502
INDUSTRIAL ENERGY
National energy research and development program --- bibliography of belgian scientific and technical reports N82-18707
INDUSTRIAL MANAGEMENT
Assessment of future environmental trends and problems: Industrial use of applied genetics and biotechnologies
[PB82-116951] N82-18750
Human engineering procedures guide
[AD-A108643] N82-18873
Corporate organizationl design and its effect on innovation
[PB82-108903] N82-19089
INDUSTRIAL PLANTS
South point gasohol project: A water assessment study
[PB82-111485] N82-18413
INDUSTRIAL SAFETY
What engineers should do to assure the reliability of technical systems
[MBB-UR-478-81-O] N82-18621
Reliability methodology in task identification for the development of new transportation systems
[MBB-UR-473-81-O] N82-19105
INDUSTRIAL WASTES
Direct combustion of industrial dry, composite waste in suspension
[DE81-030679] N82-18352
INDUSTRIES
Dimensions: Volume 65, number 5
[PB82-120367] N82-18570
A baseline assessment of coal industry structure in the Ohio River Basin Energy Study region
[PB82-103615] N82-18737
INELASTIC STRESS
Inelastic beam buckling experiments
[PB82-103292] N82-18646
INERTIA
A dynamical model of wind-induced near-inertial motions
[AD-A108667] N82-18846
INERTIA PRINCIPLE
Models of near inertial vertical shear
[AD-A108686] N82-18847
INERTIAL PLATFORMS
Integration of inertial sensors in helicopters
N82-18173
Software features applicable to inertial measurement unit self alignment
[AD-A108511] N82-18196
INFORMATION DISSEMINATION
Seasat data utilization project
[NASA-CR-168557] N82-18660
Catalog of significant earthquakes, 2000 B.C. - 1979: Including quantitative casualties and damage
[PB82-117425] N82-18799
INFORMATION FLOW
Integration of complex systems in current and future aircraft projects for the example of avionics
[MBB-UH-18-80-O] N82-18221
INFORMATION MANAGEMENT
Integration of complex systems in current and future aircraft projects for the example of avionics
[MBB-UH-18-80-O] N82-18221
The world wide military command and control information system: Problems in information resource management
[AD-A108454] N82-18882
Directory of the NOAA Library and Information network
[PB82-114869] N82-19097
INFORMATION RETRIEVAL
Relational data bank for Burroughs computers
[INPE-2116-RPE/340] N82-18456
Continuation of information tracks research: Inventor of prospects
[IWIS-A-80-IN-62-18] N82-19093
INFORMATION SYSTEMS
Analytical study of cockpit information requirements
[AD-A108524] N82-18218
The world wide military command and control information system: Problems in information resource management
[AD-A108454] N82-18882
A methodology for the evaluation of languages for the development of information system performance models N82-18907
Full text information systems: A review and assessment of the technology N82-19092
Urban data for comparative analyses of cities
[PB82-125675] N82-19107
INFORMATION THEORY
Optimization in statistics: An introduction
[AD-A108653] N82-18980
Continuation of information tracks research: Inventor of prospects
[IWIS-A-80-IN-62-18] N82-19093
On empirical foundations of information science
[PB82-125996] N82-19098
INFRARED ABSORPTION
A water vapor monitor using differential infrared absorption
[PB82-114422] N82-18586
INFRARED DETECTORS
Evaluation of linear arrays of infrared detectors for the 1.5 to 5 micron range
[RT-80/198] N82-18531
A 16 x 16 element extrinsic silicon detector array
[NASA-CR-166285] N82-18559
Photovoltaic detectors for infrared operation
[INPE-2146-RPE/368] N82-19059
Low-background performance of a monolithic InSb CCD array
[NASA-TM-84216] N82-19117
INFRARED IMAGERY
Shortrange forecasting of cloudiness and precipitation through extrapolation of GOES imagery
[AD-A108678] N82-18813
INFRARED LASERS
Solar power satellites, summary
[OTA-E-145] N82-18305
Competing reaction channels in IR laser induced unimolecular reactions N82-18336
Multiphoton dissociation and thermal unimolecular reactions induced by infrared lasers N82-18337
Wavelength scaling for reactor-size laser fusion targets
[AD-A108547] N82-18591
INFRARED PHOTOGRAPHY
Waves in the OH emissive layer N82-18237
INFRARED RADIATION
Engine superficial temperature and infrared signature N82-18136
Evaluation of linear arrays of infrared detectors for the 1.5 to 5 micron range
[RT-80/198] N82-18531
INFRARED SCANNERS
Pulsed heterodyne CO2 laser/scanner system
[AD-A108186] N82-18589
INFRARED SPECTRA
An imaging spectrometric observatory N82-18235
INFRARED SPECTROSCOPY
Grille spectrometer N82-18236
INFRARED TELESCOPES
System for stabilization and pointing of a stratospheric balloon-borne telescope
[INPE-2103-RPE/330] N82-18558
The TIRGO secondary mirror modulation system
[IPS-81-6] N82-19034
Low-background performance of a monolithic InSb CCD array
[NASA-TM-84216] N82-19117

INHOMOGENEITY
Inhomogeneous relativistic electron systems: A density functional formalism N82-19060

INITIATORS (EXPLOSIVES)
Evaluation of a thermal response test for electropyrotechnical devices: Summary
[TP-18835/80] N82-18406

INJECTION LASERS
Semiconductor injection lasers with a circular resonator: A study of GaAs-(GaAl)As dielectric waveguides and their incorporation into a laser resonator N82-18576
Laser physics and laser spectroscopy
[AD-A108274] N82-18593

INLET FLOW
Experimental and theoretical studies on gas cyclone separators operating at high efficiency N82-18340

INORGANIC CHEMISTRY
Optical spectra of nonmetallic inorganic transient species in aqueous solution
[PB82-108141] N82-18359

INPUT/OUTPUT ROUTINES
Active control of space structures: Proof of concept experiment N82-18304
Structure of a multibeam adaptive space-time processor
[AD-A108362] N82-18524
SQL Front-End functional description
[AD-A108606] N82-18684

INSPECTION
Analysis of Built-in-Test (BIT) false alarm conditions
[AD-A108752] N82-18217

INSTALLING
Criteria for the installation of energy conservation measures
[PB82-104712] N82-18727

INSTRUCTION SETS (COMPUTERS)
Flex firmware
[RSRE-81009] N82-18879

INSTRUCTORS
Task analytic techniques: Application to the design of a flight simulator instructor/operator console
[AD-A108724] N82-18227

INSTRUMENT ORIENTATION
System for stabilization and pointing of a stratospheric balloon-borne telescope
[INPE-2103-RPE/330] N82-18558

INSTRUMENT PACKAGES
Applied research and development of falling-sphere densitometers payloads of improved design
[AD-A108316] N82-18580

INTEGRAL EQUATIONS
Integral equation approach to the propagation of low-frequency groundwaves over irregular terrain. 2: Two-dimensional terrain features and elevated receivers
[AD-A108578] N82-18459
An integral equation for the velocity field of irrotational flows around blunt bodies
[ESA-TT-702] N82-18551
Renewal tables: Tables of functions arising in renewal theory
[AD-A108264] N82-18875
Smoothing splines: Regression, derivatives and deconvolution
[AD-A108631] N82-18861

INTEGRAL TRANSFORMATIONS
Processing and correlation of digitalized images in a spectral range
[MBB-UA-596-81-O] N82-18941

INTEGRATED CIRCUITS
Silicon MESFETS N82-18496
A General Purpose Interface Bus (GPIB)
[RAE-TM-RAD-NAV-166] N82-18505
Measured pulse transfer characteristics of high impedance microstrip lines
[AD-A108298] N82-18517
Joint Services Electronics Program
[AD-A108347] N82-18528
Acoustic microscopy for nondestructive evaluation of materials — and integrated circuits
[AD-A108423] N82-18817
Performance limits of integrated circuit simulation on a dedicated minicomputer system N82-18876
Semiconductor measurement technology: The capabilities and limitations of Auger sputter profiling for studies of semiconductors
[PB82-120122] N82-19075

INTELSAT 5 SATELLITE
INTELSAT V-D (F-4) launch
[NASA-TM-84135] N82-18273
Launch mission summary: INTELSAT 5 (F4) ATLAS/CENTAUR-58
[NASA-TM-84132] N82-18274

INTERACTIVE CONTROL
NASEDIT: The interactive NASTRON editor
[MBB-Z-2-81-O] N82-18843
Procedure based generalized interactive systems N82-18928

INTERFACES
New developments in cockpit-human interfaces
[RAE-TM-FS-412] N82-18215
A General Purpose Interface Bus (GPIB)
[RAE-TM-RAD-NAV-166] N82-18505

INTERFEROMETERS
Numerical methods for stiff differential equations and Josephson interferometer equations
[AD-A108373] N82-18950
Low temperature and neutron physics studies
[DE82-001573] N82-19025

INTERGALACTIC MEDIA
Investigation on Atmospheric H and D through the measurement of their Lyman-alpha emissions N82-18238
A complete X-ray sample of the high latitude sky from HEAO-1 A-2: log N lo S and luminosity functions
[NASA-TM-82166] N82-15787

INTERMETALLICS
Radiation effects in amorphous metallic alloys — phosphorus segregation
[DE82-001603] N82-18378

INTERNAL COMBUSTION ENGINES
Mixture motion in an engine cylinder
[PB82-121146] N82-18607

INTERNAL WAVES
A dynamical model of wind-induced near-inertial motions
[AD-A108667] N82-13846
Models of near inertial vertical shear
[AD-A108666] N82-18847
The propagation of inertial-internal waves in coastal upwelling regions
[PB82-113275] N82-18851

INTERNATIONAL COOPERATION
The centratlan aerogeophysical operation in the region of the Mid-Atlantic ridge. INPE participation
[INPE-2142-RPE/364] N82-18653
Common data base experiment: Progress report on data analysis — of seismic data
[FOA-C-20431-T1] N82-19094
Fourth Annual Community Planning and Development Challenges: Energy, Environment, Water
[PB82-125790] N82-19108

INTERPLANETARY MEDIUM
Investigation on Atmospheric H and D through the measurement of their Lyman-alpha emissions N82-18238

INTERPROCESSOR COMMUNICATION
Distributed intelligence for air fleet control
[AD-A108811] N82-18195
An on board supervisory system for applications in space missions
[INPE-2097-RPE/327] N82-18216
Performance evaluation of a multiple processor system with shared busses N82-18877
Two approaches to deadlock in distributed systems N82-18909
System control procedure development for a distributed microcomputer network for avionics utilizing a non-responsive time-division multiplexed bus as the inter-computer communication link N82-18927

INTERSTELLAR CHEMISTRY
Experimental and theoretical studies of interstellar grains
[NASA-TM-83883] N82-19120

INTERSTELLAR MATTER
Experimental and theoretical studies of interstellar grains
[NASA-TM-83883] N82-19120

INVENTORIES
Electrical generating unit inventory 1976-1986: Illinois, Indiana, Kentucky, Ohio, Pennsylvania and West Virginia
[PB82-112194] N82-18441
Quality assurance audits for SIP and NECRAP emission inventories: New York and New Jersey
[PB82-114273] N82-18767

INVENTORY CONTROLS
A closed queueing network model for multi-echelon repairable item provisioning
[AD-A108401] N82-18929

INVERSIONS
Numerical techniques for inverse problems N82-18908
Algorithm for the inverse of a Hermitian Toeplitz matrix
[AD-A108957] N82-18952

INVERTED CONVERTERS (DC TO AC)
Power converter
[NASA-CASE-FRC-11014-1] N82-18484

INVISCID FLOW
Some recent developments in aeronautical fluid mechanics — calculation methods
[RAE-TM-AERO-1894] N82-18539

IODINE LASERS
Theoretical studies of solar-pumped lasers
[NASA-CR-168554] N82-18577

ION ATOM INTERACTIONS
Charge transfer cross-sections of argon ions colliding on argon atoms
[CEA-CONF-5209] N82-19014

ION BEAMS
Hyperfine structure and isotope-shift measurements of short-lived elements by laser spectroscopy
[DE82-001999] N82-18354
Wind tunnel and laboratory calibration of balloon-borne wind sensors
[AD-A108676] N82-18814
Steady state numerical solution of magnetically insulated charge flow in coaxial geometry
[AD-A108633] N82-18991
Simple analysis of light ion beam losses in deuterium plasmas channels
[AD-A108287] N82-19009
The 4th International Topical Conference on High-Power Electron and Ion-Beam Research and Technology
[AD-A108353] N82-19037

ION CHARGE
Charge transfer cross-sections of argon ions colliding on argon atoms
[CEA-CONF-5209] N82-19014

ION IMPLANTATION
Two dimensional sub-bands in ion implantation — semiconductors
[INPE-2147-RPE/369] N82-19059
Electrical resistivity of P ions implanted on Si
[INPE-2145-RPE/367] N82-19060

ION INJECTION
Hyperfine structure and isotope-shift measurements of short-lived elements by laser spectroscopy
[DE82-001999] N82-18354

ION MOTION
Atmospheric emission photometric imaging N82-18243

ION SOURCES
The 4th International Topical Conference on High-Power Electron and Ion-Beam Research and Technology
[AD-A108353] N82-19037

ION STORAGE
Hyperfine structure and isotope-shift measurements of short-lived elements by laser spectroscopy
[DE82-001999] N82-18354

IONIC COLLISIONS
A study of the collisional dynamics for collisions of UF6(-) atoms and molecules
[AD-A108419] N82-19012
Electron-spin-polarization effects in low energy electron diffraction, ion neutralization and metastable atom deexcitation at solid surfaces
[DE82-001179] N82-19019

IONIZATION
Theoretical analysis of the real and apparent velocities of vertical plasma drift in the equatorial ionosphere
[INPE-2143-RPE/365] N82-18782

IONIZATION CROSS SECTIONS
Charge transfer cross-sections of argon ions colliding on argon atoms
[CEA-CONF-5209] N82-19014

IONIZING RADIATION
Basic physical and chemical processes in space radiation effects on polymers N82-18277

IONOGRAMS
Equatorial spread F instability conditions as determined from ionograms
[INPE-2310-PRE/075] N82-18780
IONOSPHERE
Ionospheric program
[INPE-2113-RPE/337] N82-18778
Equatorial spread F instability conditions as determined from ionograms
[INPE-2310-PRE/075] N82-18780
Principles and applications of radio frequency impedance probes
[AD-A108677] N82-19038
IONOSPHERIC CONDUCTIVITY
Calculation of ionospheric conductivity profiles by inverting VLF/LV reflections data. 1: Isotropic propagation
[AD-A108577] N82-18460
IONOSPHERIC DISTURBANCES
A simulation of equatorial plasma bubble signatures on the OI 6300 A nightglow meridional profile over Brazilian low latitude
[INPE-2280-PRE/042] N82-18779
IONOSPHERIC PROPAGATION
Calculation of ionospheric conductivity profiles by inverting VLF/LV reflections data. 1: Isotropic propagation
[AD-A108577] N82-18460
Multipath VLF propagation effects on correlation receivers
[AD-A108408] N82-18472
Ionosphere research
[AD-A108805] N82-18794
V.L.F. ionosonde and long-distance propagation anomalies produced by galactic CEN X-4 X-ray burst in May 1979
[INPE-2250-PRE/033] N82-19129
IONS
Optical spectra of nonmetallic inorganic transient species in aqueous solution
[PB82-109141] N82-18359
Electron vacancy production in near-symmetric collisions of 100 MeV copper ions
[ANU-P-771] N82-19018
IRON
An investigation of the kinetics for hydrogen chemisorption on iron metal surfaces
[NASA-CR-168555] N82-18369
IRON ALLOYS
The oxidation of dilute iron-silicon alloys ((Si) or = 1w/o) in carbon dioxide
[AD-A105328] N82-18372
IRRADIANCE
A reference solar spectral irradiance for use in atmospheric modeling N82-18775
ISOLATION
A disturbance isolation controller for the solar electric propulsion system flight experiment N82-18299
ISOTOPE EFFECT
Hyperfine structure and isotope-shift measurements of short-lived elements by laser spectroscopy
[DE82-001989] N82-18354
ISOTOPES
Isotopic stack - measurement of heavy cosmic ray isotopes N82-18246
Three-stage mass spectrometer for isotopic analysis of radionuclides in environmental samples
[DE82-001739] N82-18353
ISOTROPIC TURBULENCE
Ultrasonic input-output for transmitting and receiving longitudinal transducers coupled to same face of isotropic elastic plate
[NASA-CR-3506] N82-18613

J

J INTEGRAL
Determination crack tip field parameters for elastic-plastic materials via an estimation scheme
[AD-A108867] N82-18836
JET AIRCRAFT
Further development of the test concept of the ALPHA JET engine LARZAC 04 N82-18223
JET CONTROL
Potential reductions in aircraft operation and maintenance costs by using thrust computing support equipment
[AD-A108483] N82-18207
JET ENGINE FUELS
Molecular interactions of high energy fuels and jet fuels with oncogenic viruses and endogenous viruses
[AD-A108377] N82-18655
JET FLOW
Selective jet plating N82-18338
Preliminary design of a hydraulic power supply for a laminar jet angular rate sensor
[AD-A108729] N82-18562
JET LIFT
Measurements in the near-wake of a transport model, to determine the lift, drag and drag components using Maskell's analysis
[RAE-TR-81012] N82-18177
JET NOZZLES
The formation of a ring vortex at a circular jet nozzle and its transformation during takeoff into a liquid layer and at the liquid surface
[MPIS-27/1980] N82-18186
JET PROPULSION
Further development of the test concept of the ALPHA JET engine LARZAC 04 N82-18223
JOINTS (JUNCTIONS)
Demonstration of crack growth by delayed hydrogen cracking in the rolled joints of Zr-2.5% Nb pressure tubes
[AECL-6853] N82-18637
JOSEPHSON JUNCTIONS
Superconducting electronics
[AD-A108402] N82-18520
Mixing with a SQUID at millimeter waves — Josephson junction
[REPT-S-117] N82-18533
Numerical methods for stiff differential equations and Josephson interferometer equations
[AD-A106373] N82-18950
Radiation detection with point-contact Josephson junctions N82-19054
JOURNAL BEARINGS
Wetting, spreading and operating characteristics of bearing lubricants in a zero-gravity environment — tribology experiment assembly N82-18248
JUMPERS
Jump behavior of circuits and systems
N82-18502
JUPITER (PLANET)
Planetary magnetospheres
[NASA-TM-83841] N82-19122

K

KALMAN FILTERS
Extension of proportional navigation by the use of optimal filtering and control methods
[ESA-TT-683] N82-18199
Performance of fir adaptive filters using recursive algorithms — speech processing N82-18499
KARMAN VORTEX STREET
Theodor von Karman and applied mathematics
[MPIS-9/1981] N82-18959
KEYING
The human as a constrained optimal text editor
N82-18910
KINEMATICS
Kinematic analysis of mechanical systems
[AD-A108682] N82-18632
KIRCHHOFF LAW OF NETWORKS
Jump behavior of circuits and systems
N82-18502

L

LAGRANGE COORDINATES
Modal characteristics of rotor blades: Finite element approach and measurement by ground vibration test
N82-18127
LAKE ICE
Ground-truth observations of ice-covered North Slope Lakes imaged by radar
[NASA-TM-84127] N82-18664
LAKES
Ground-truth observations of ice-covered North Slope Lakes imaged by radar
[NASA-TM-84127] N82-18664
Water resources data for California. Volume 3: Southern Central Valley Basins and the Great Basin from Walker River to Truckee River
[PB82-117003] N82-18681
Water resources data for California. Volume 1: Colorado River Basin, Southern Great Basin from Mexican Border to mono Lake Basin and Pacific Slope Basins from Tijuana River to Santa Maria River
[PB82-116887] N82-18683
LAMINAR BOUNDARY LAYER
Drag reduction and adaptive boundary conditions
[AD-A108809] N82-18544
LAMINAR FLOW
Investigation of supersonic separated flow in a compression corner by laser Doppler anemometry
N82-18176
Prediction of laminar-to-turbulent boundary layer transition in axial-flow turbomachinery
[AD-A108642] N82-18545
Preliminary design of a hydraulic power supply for a laminar jet angular rate sensor
[AD-A108729] N82-18562
LAMINAR FLOW AIRFOILS
Laminar airfoils for transport aircraft
[ESA-TT-680] N82-18190
LAMINATES
The effects of microcracking on the thermal expansion of graphite-epoxy composites
N82-18279
An assessment of buffer strips for improving damage tolerance of composite laminates at elevated temperature
[NASA-TM-83257] N82-18325
A digital algorithm for composite laminate analysis, FORTRAN
[AD-A108201] N82-18330
LAND MANAGEMENT
PATTERN: A system for land management planning
[PB82-101452] N82-18426
Examination of the operational prospects for remote sensing — in Europe
[ESA-CR(P)-1478] N82-18669
LAND USE
PATTERN: A system for land management planning
[PB82-101452] N82-18426
Ohio River Basin energy study: Land use and terrestrial ecology
[PB82-110347] N82-18440
A land use analysis of existing and potential coal surface mining areas in the Ohio River Basin Energy Study region
[PB82-105172] N82-18679
LANDING AIDS
Development of a clear air radar to detect meteorological hazards at airports
[AD-A108236] N82-18835
LANDMARKS
United States Coast Pilot 9. Pacific and Arctic Coasts Alaska: Cape Spencer to Beaufort Sea
[PB82-109562] N82-18201
LANDSAT SATELLITES
Technology development of the Space Transportation System mission and terrestrial applications of satellite technology
[NASA-TM-84131] N82-19130
LANTHANUM COMPOUNDS
High-temperature, solid-oxide-electrolyte fuel-cell power-generating system
[DE82-002095] N82-18706
LAPLACE TRANSFORMATION
Static and dynamic analysis of axially loaded wire ropes N82-18625
The computation of Laplacian smoothing splines with examples
[AD-A108746] N82-18976
LARGE SCALE INTEGRATION
Charge circuits for analog LSI N82-18500
Restructurable VLSI program
[AD-A108276] N82-18521
LARGE SPACE STRUCTURES
Large space systems technology, 1981 — conferences
[NASA-CP-2215-PT-1] N82-18275
Basic physical and chemical processes in space radiation effects on polymers N82-18277
Pulsed radiolysis of model aromatic polymers and epoxy based matrix materials N82-18278

The effects of microcracking on the thermal expansion of graphite-epoxy composites N82-18279
Thermal expansion of graphite-epoxy between 116 K and 366 K N82-18280
Finite element thermal-structural modeling of orbiting truss structures N82-18281
Vibration and buckling studies of pretensioned structures N82-18282
Vibration damping characteristics of graphite/epoxy composites for large space structures N82-18283
The potential of nonperiodic truss structures for space applications N82-18284
IAC level 'O' program development N82-18285
IAC control system analysis development N82-18286
Large Advanced Space Systems (LASS) computer-aided design program additions N82-18287
Sequential deployment of truss structures N82-18288
Mobile work station concept for assembly of large space structures (zero gravity simulation tests) N82-18289
Orbiter based construction equipment N82-18290
Deployable platform systems development N82-18291
Technological needs of advanced Earth-observation spacecraft N82-18292
LSS control technology N82-18293
Spatial, High-Accuracy, Positioning-Encoding Sensor (SHAPES) for large space system control applications N82-18295
Control technology development N82-18296
LSS reference platform control N82-18297
Systems identification technology development for large space systems N82-18301
Configurational and system requirements for control of large space systems N82-18302
Integrated controls/structures study of advanced space systems N82-18303
Active control of space structures: Proof of concept experiment N82-18304
A dynamic measure of controllability and observability for the placement of actuators and sensors on large space structures
[NASA-CR-166520] N82-18310
ACOSS eight (Active Control Of Space Structures), phase 2
[AD-A108629] N82-18313
General description of nestable column structural and assembly technology — large space structures
[NASA-TM-83255] N82-18526

LASER ANEMOMETERS
Mechanisms of exhaust pollutants and plume formation in continuous combustion
[AD-A109059] N82-18350
Long range laser anemometry with particular reference to wind power development
[FFA-TN-HU-2262-PT-3] N82-18840
Flow velocity and angularity measurements in the FDL trisonic gasdynamic facility and self-adaptive wall wind tunnels with a laser transit anemometer
[AD-A108427] N82-19118

LASER APPLICATIONS
Restructurable VLSI program
[AD-A108276] N82-18521
Space Laser Power Transmission System Studies — conferences
[NASA-CP-2214] N82-18578
Preliminary study on the use of lasers for the transmission of power N82-18579
A study to survey NASA laser applications and identify suitable lasers for specific NASA needs N82-18580
Investigation of possibilities for solar-powered high-energy lasers in space N82-18581
Laser rocket system analysis N82-18584
Laser power conversion system analysis N82-18585
Space laser power transmission N82-18586
Study of laser created metal vapour plasmas
[AD-A108588] N82-18594
Formulation of normalized non-linear free electron laser equations
[AD-A108368] N82-18596

LASER DAMAGE
Surface statistics investigations
[AD-A108234] N82-18395

Optical investigations of the recombination processes in laser-annealed and thermally-annealed semiconductors
[AD-A108627] N82-19071

LASER FUSION
Wavelength scaling for reactor-size laser fusion targets
[AD-A108547] N82-18591

LASER MODES
Competition effects in lasers
[AD-A108658] N82-18592

LASER OUTPUTS
Spatial energy distribution — scanning a tunable diode laser beam automatically
[NASA-CASE-LAR-12631-1] N82-18557
Quasi-elastic laser light diffusion
[CISE-1711] N82-18598

LASER PLASMA INTERACTIONS
Study of laser created metal vapour plasmas
[AD-A108588] N82-18594
Activities Report of the Institute for Plasma Research N82-19043

LASER PROPULSION
A study to survey NASA laser applications and identify suitable lasers for specific NASA needs N82-18580

LASER PUMPING
Theoretical studies of solar-pumped lasers
[NASA-CR-166554] N82-18577
Investigation of possibilities for solar-powered high-energy lasers in space N82-18581
Design investigation of solar-powered lasers for space applications N82-18582

LASER SPECTROSCOPY
Investigations by means of laser fluorescence spectroscopy of the system (A/super 1/capital sigma/super plus/-X/super 1/capital sigma/super plus/) of Li(6)D
[MPIS-19/1980] N82-18355
Laser physics and laser spectroscopy
[AD-A108374] N82-18593
Laser spectroscopy of solid state electrolytes
[AD-A108961] N82-18597

LASER STABILITY
Joint Services Electronics Program
[AD-A108347] N82-18526

LASERS
Laser hole burning spectroscopy: A high resolution probe of molecular environments
[AD-A108549] N82-18590
Theoretical investigation of atomic structure and scattering processes
[AD-A108541] N82-19011

LAUNCH WINDOWS
Launch mission summary: INTELSAT 5 (F4) ATLAS/CENTAUR-56
[NASA-TM-84132] N82-18274

LAWS
On empirical foundations of information science
[PB82-125996] N82-19098

LEAD ISOTOPES
Elastic and inelastic scattering measurements for the Mg-24 plus Pb-208 and Si-28 plus Pb-208 systems
[ANU-P-768] N82-19017

LEAD OXIDES
Photovoltaic detectors for infrared operation
[INPE-2146-RPE/366] N82-19059

LEARNING
Computational modeling of evolutionary learning N82-18911

LEARNING THEORY
Computational modeling of evolutionary learning N82-18911

LEPTONS
Study of inclusive semi-leptonic neutral current reactions in neutrino and antineutrino interactions between 12 and 200 GeV
[CEA-R-2180] N82-19015

LIBRARIES
The Integrated Library System (ILS): User manual
[PB82-114966] N82-19095
Army Library conversion: Cost assessment plan
[PB82-120363] N82-19096
Directory of the NOAA Library and Information network
[PB82-114980] N82-19097

LIBRATIONAL MOTION
Neutron scattering studies of atomic vibration in nickel and solid dimethylacetylene N82-19085

LICENSING
Commercial Ocean Thermal Energy Conversion (OTEC) licensing Final Environment Impact Statement
[PB82-117532] N82-18776

LIFE (DURABILITY)
Reliability investigation of low noise GaAs FETs
[AD-A108396] N82-18916
Investigation of cold cathodes for long life CO sub 2 waveguide lasers
[AD-A108882] N82-18895

LIFE CYCLE COSTS
Effective methods for overall project cost reduction
[MBB-UR-456-80-O] N82-19037

LIFE SUPPORT SYSTEMS
Bibliography on carbohydrate synthesis. Selected works, 1861 - 1981
[NASA-CR-166553] N82-18671

LIFT
A three-dimensional approach to lift and moment coefficients of rotating blades N82-18125
Slotted variable camber flap
[NASA-CASE-LAR-12541-1] N82-18203
Theoretical investigations on the influence of different strake, tail unit, and conventional HLW arrangement as well as of CCV on the aerodynamic characteristics of fighter aircraft configurations
[MBB-FE-122/S/PUB/36] N82-18211

LIFT AUGMENTATION
XFV-12A diagnostic and development programs
[AD-A108354] N82-18226

LIGHT BEAMS
Part 2: The deflexion of startlight by the Sun N82-19114

LIGHT EMITTING DIODES
The multi mode matrix flat panel display: Technology and applications N82-18169

LIGHT SCATTERING
Measurements of lidar backscattering from clouds
[ESA-TT-689] N82-18900
Experimental results of multiple scattering
[AD-A108291] N82-19032

LIGHT SPEED
Part 2: The deflexion of startlight by the Sun N82-19114

LIGNIN
The surface properties and flotation of rare earth minerals N82-18365

LIKELIHOOD RATIO
Structure of a multibeam adaptive space-time processor
[AD-A108352] N82-18524
Multi-sample cluster analysis and approaches to validity studies in clustering individuals N82-18986
One-sided comparisons for treatments with a control — distribution theory for likelihood ratio statistics
[AD-A108331] N82-18978

LIMNOLOGY
West Virginia baseline --- on ecology, geology, climatology, and socioeconomics.
[PB82-103672] N82-18736

LINE OF SIGHT
LOS selective fading and AN/FRC-170(V) radio hybrid computer simulation phase A report
[AD-A108747] N82-18457

LINEAR ARRAYS
One class of optimum linear equally spaced antenna arrays with summary of difference radiation patterns
[AD-A108176] N82-18470
Evaluation of linear arrays of infrared detectors for the 1.5 to 5 micron range
[RT-80/196] N82-18531
Low-background performance of a monolithic InSb CCD array
[NASA-TM-84216] N82-19117

LINEAR CIRCUITS
Electrical characterization and specification of special purpose linear microcircuits
[AD-A108247] N82-18515

LINEAR EQUATIONS
Solution of large sets of linear equations using cellular arrays N82-18946
Algorithm for the inverse of a Hermitian Toeplitz matrix
[AD-A108357] N82-18952
The line method for solving partial differential equations encountered in the literature N82-18950

LINEAR PROGRAMMING
ANALYZE user guide
[DE82-001389] N82-18924

LINEAR SYSTEMS
Robustness in multivariable control system design
[PB82-121401] N82-18943
Mathematical techniques for nonlinear system theory
[AD-A108370] N82-18953

LININGS
Measurement of the absorption properties of acoustic materials used in the fabrication of cowlings
[CETIM-11-H-285] N82-19002

LIQUEFACTION
Physical and chemical characteristics of synthetic asphalt produced from liquefaction of sewage sludge
[PB82-119082] N82-18422

LIQUID CHROMATOGRAPHY
The use of element-specific detectors coupled with high-performance liquid chromatographs
[AD-A108539] N82-18343

LIQUID HELIUM
Zero sound attenuation from order parameter fluctuations in liquid He-3 N82-19049

LIQUID LITHIUM
Solvation of some non-metals in liquid lithium and sodium
[BLG-536] N82-18351

LIQUID PHASES
Two-dimensional nuclear magnetic resonance in liquids N82-19005

LIQUID PROPELLANT ROCKET ENGINES
Low thrust monopropellant engine
[NASA-CASE-GSC-12194-2] N82-18314

LIQUID SODIUM
Solvation of some non-metals in liquid lithium and sodium
[BLG-536] N82-18351

LIQUIDS
A study of the effects of long-term exposure to fuels and fluids on the behavior of advanced composite materials
[NASA-CR-165763] N82-18327
Dynamical nonlinear material response and failure
[AD-A108822] N82-19013

LITERATURE
Dimensions: Volume 65, number 5
[PB82-120387] N82-18570

LITHIUM COMPOUNDS
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 1. Task 1: Binary ternary and quarternary phase diagrams containing Li(+), Na(+), K(+), CO3(=), SO3(=) and OH(-)
[DE82-000690] N82-18704

LITHIUM HYDRIDES
Investigations by means of laser fluorescence spectroscopy of the system (A/super 1/capital sigma/super plus/-X/super 1/capital sigma/super plus/) of Li(7)D
[MPIS-19/1980] N82-18355

LOADING MOMENTS
Some unsteady aerodynamic effects on helicopter rotors N82-18162
Determination of the high temperature strength of ceramic. Discussion of testing techniques: Flexural and tensile tests, creep tests with flexural and tensile load
[ESA-TT-716] N82-18399

LOADS (FORCES)
Theory and application of experimental model analysis in earthquake engineering
[PB82-122409] N82-18430

LOCI
Sensitivity of the characteristic gain loci
[PB82-113481] N82-18963

LOGIC DESIGN
The influence of sensor and actuator characteristics on overall helicopter AFCS design N82-18171

LOGISTICS MANAGEMENT
Cost problems in the utilization phase of a weapon system
[MBB-UA-576-81-O] N82-19086

LONG ISLAND (NY)
Use of flow-duration curves to evaluate effects of urbanization on streamflow patterns on Long Island, New York
[PB82-114307] N82-18673

LONG TERM EFFECTS
An observation-well network concept as applied to North Carolina
[PB82-108089] N82-18676
Transient capacitance measurements of deep level defects introduced in beta-ray compensated germanium by long-term annealing at room temperature
[AAEC/E-501] N82-19074

LONGITUDINAL CONTROL
Preliminary investigation into the addition of auxiliary longitudinal thrust on helicopter agility N82-18155

LOOPS
FM modulators using a phase locked loop
[INPE-2293-NTE/177] N82-18511

LOW ALTITUDE
An automated low cloud prediction system
[AD-A108681] N82-18815

LOW CARBON STEELS
Texture developments associated with abnormal grain growth in low carbon steel sheet N82-18388

LOW FREQUENCIES
Calculation of ionospheric conductivity profiles by inverting VLF/LV reflections data. 1: Isotropic propagation
[AD-A108577] N82-18460

LOW PASS FILTERS
An active filter for the simultaneous realization of several transfer functions
[INPE-2208-PRE/069] N82-18509

LOW TEMPERATURE
Thermal and electrical properties of solids at low temperatures
[DE82-000727] N82-18993

LOW TEMPERATURE PHYSICS
Low temperature and neutron physics studies
[DE82-001573] N82-19025

LOW THRUST
Low thrust monopropellant engine
[NASA-CASE-GSC-12194-2] N82-18314

LUBRICANTS
Wetting, spreading and operating characteristics of bearing lubricants in a zero-gravity environment — tribology experiment assembly N82-18248
Quantitative chromatographic analyses of N-phenyl-alpha-naphthylamine and N-phenyl-beta-naphthylamine
[AD-A108362] N82-18345
Research in tribology and bearings
[PB82-108923] N82-18606

LUMINESCENCE
Characteristics of the 6300 angstrom OI luminescence at a low latitude American sector
[INPE-2114-RPE/336] N82-18783

LUMINOUS INTENSITY
Quasi-elastic laser light diffusion
[CISE-1711] N82-18596
A simulation of equatorial plasma bubble signatures on the OI 6300 A nightglow meridional profile over Brazilian low latitude
[INPE-2260-PRE/042] N82-18779
Characteristics of the 6300 angstrom OI luminescence at a low latitude American sector
[INPE-2114-RPE/336] N82-18783

LYMAN ALPHA RADIATION
Investigation on Atmospheric H and D through the measurement of their Lyman-alpha emissions
N82-18236

LYMAN SPECTRA
Investigation on Atmospheric H and D through the measurement of their Lyman-alpha emissions
N82-18236

LYMPHOCYTES
Effect of weightlessness on lymphocyte proliferation N82-18261

M

MACHINE ORIENTED LANGUAGES
A descriptive language for thin film conductors
[IND-FB-107] N82-18528
A re-usable code generator for PRIME 50-series computers
[AD-A108820] N82-18891

MACHINE TOOLS
Precision reciprocating filament chopper
[NASA-CASE-LAR-12564-2] N82-18604

MACHINE-INDEPENDENT PROGRAMS
A re-usable code generator for PRIME 50-series computers
[AD-A108820] N82-18891

MACHINING
The 2nd Seminar on Efficient Metal Forming and Machining
[PB82-109745] N82-18431

MAGELLANIC CLOUDS
H2O maser survey in the magnellanic clouds
[INPE-2279-PRE/057] N82-18781

MAGNESIUM ISOTOPES
Elastic and inelastic scattering measurements for the Mg-24 plus Pb-208 and Si-28 plus Pb-208 systems
[ANU-P-786] N82-19017

MAGNETIC DISTURBANCES
Comparative study of the electronic density peak and peak height of the F sub 2 layer calculated by CCIR and observed by Cachoeira Paulista and Fortaleza for magnetically calm periods
[INPE-2144-RPE/368] N82-18794
The global Pc 5 event of 14-15 November 1979
[AD-A108143] N82-18789

MAGNETIC FIELD CONFIGURATIONS
Physical mechanism of wave-particle resonances in a curved magnetic field
[AD-A108360] N82-19039

MAGNETIC FIELDS
TM/TE polarization ratios in a sample of 30 kHz sferics received at altitudes from 0 to 70 km
[AD-A108182] N82-18484
Electron and impurity correlations in doped semiconductors
[INPE-2309-PRE/074] N82-19056

MAGNETIC FLUX
DC-magnetic field vector measurement
N82-18245

MAGNETIC INDUCTION
Single phase permanent magnet synchronous motors N82-18495
An explicit method of solution of the geomagnetic induction problem
[AD-A109369] N82-18795

MAGNETIC PERMEABILITY
Paramagnetic susceptibility of phosphorus doped silicon
[INPE-2105-RPE/332] N82-19084
Random anisotropy in Ising spin glass
[INPE-2277-PRE/055] N82-19078

MAGNETIC PROPERTIES
Radiation effects in amorphous metallic alloys — phosphorus segregation
[DE82-001603] N82-18378
Three dimensional field computation
[PB82-107160] N82-18491
High speed permanent magnet generator material investigations: Rare earth magnets
[AD-A108550] N82-18992

MAGNETIC STORAGE
Programmable multiple digital cassette memory
[INPE-2099-RPE/329] N82-18880

MAGNETIC VARIATIONS
Mm- to cm-wavelength time delays in solar burst emission burst emission and the effect of varying magnetic field
[INPE-2278-PRE/056] N82-19124

MAGNETOHYDRODYNAMIC STABILITY
Equatorial spread F instability conditions as determined from ionograms
[INPE-2310-PRE/075] N82-18780
Theoretical aspects of the nonlinear interaction of drift-type instabilities in a plasma N82-19035

MAGNETOHYDRODYNAMICS
Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant. Conceptual Design Engineering Report (CDER). Volume 4: Supplementary engineering data
[NASA-CR-165452-VOL-4] N82-18586

MAGNETOMETERS
Mixing with a SQUID at millimeter waves — Josephson junction
[REPT-S-117] N82-18533

MAGNETOPAUSE
The properties of ionospheric singly ionized oxygen ions as observed in the magnetotail boundary layer and northern plasma lobe
[IPS-81-11] N82-18797

MAGNETOSPHERE
The global Pc 5 event of 14-16 November 1979
[AD-A108148] N82-18789
Planetary magnetospheres
[NASA-TM-83841] N82-19122
MAGNETOSTATIC FIELDS
Three dimensional field computation
[PB82-107160] N82-18491
MAGNETS
High speed permanent magnet generator material investigations: Rare earth magnets
[AD-A108880] N82-18992
MAINTAINABILITY
Integrated control design techniques
[AD-A108223] N82-18224
Suggested models for analyzing and forecasting demand for components of army vehicles
[PHL-1979-86] N82-18963
MAINTENANCE
Investigation into the utility of some quick setting cements for runway repair
[B-80-157/80.7.0157] N82-18225
Bomb crater repair techniques for permanent airfields. Report 1: Series 1 tests
[AD-A108716] N82-18229
A closed queueing network model for multi-echelon repairable item provisioning
[AD-A108401] N82-18909
MAN MACHINE SYSTEMS
New developments in cockpit-human interfaces
[RAE-TM-FS-412] N82-18215
Modeling human attention allocation strategies with competing criteria
[AD-A108509] N82-18875
The design of an interface to a programming system and MENUNIX: A menu based interface to UNIX (user manual)
[AD-A108829] N82-18890
The human as a constrained optimal text editor
N82-18910
Man/computer communication: From artificial intelligence and behavioral science perspectives
[FOA-C-53005-H2] N82-18942
MANAGEMENT
The Global 2000 report to the President. Entering the twenty-first century, volume 1
[PB82-100801] N82-19060
MANAGEMENT ANALYSIS
Defense mapping agency digital data base evolution
[AD-A108327] N82-18865
MANAGEMENT INFORMATION SYSTEMS
Army Library conversion: Cost assessment plan
[PB82-120353] N82-19096
MANAGEMENT METHODS
Cost problems in the utilization phase of a weapon system
[MBB-UA-576-81-O] N82-19066
Non-Federal computer acquisition practices provide useful information for streamlining Federal methods
[PB82-120884] N82-19091
MANAGEMENT PLANNING
Municipal wastewater: Research strategy supplement, 1981-1985
[PB82-120106] N82-18763
Human engineering procedures guide
[AD-A108843] N82-18873
Efficient facsimile communication with computer controlled memory switching
[MBB-DS-496-81-O] N82-18893
Modern management in construction industry offices
[MBB-UR-493-81-O] N82-19085
Effective methods for overall project cost reduction
[MBB-UR-458-80-O] N82-19087
Ground work for project organization in development projects: Experience in space flight
[MBB-UR-476-81-O] N82-19088
MANAGEMENT SYSTEMS
Flight ergonomics in the aircraft industry personnel-ergonomic development
[MBB-FE-301/S/PUB/44] N82-18872
MANEUVERABILITY
A control model for maneuvering flight for application to a computer-flight testing program N82-18153
Preliminary investigation into the addition of auxiliary longitudinal thrust on helicopter agility N82-18155
MANUAL CONTROL
Exploratory study on manual drilling
[CETIM-1-6E-0-80] N82-18420
Time-sharing manual control and memory search: The joint effects of input and output modality competition, priorities and control order
[AD-A108721] N82-18857
MANUALS
Manual on marine meteorological services. (Annex 6 to the WMO Technical Regulations) -- of the World Meteorological Organization
[WMO-558] N82-18839
The JOVIAL (J73) workbook, volumes 1 through 6
[AD-A108627] N82-18916
MANUFACTURING
Point of view of a helicopter manufacturer on airworthiness regulations N82-18137
MANY BODY PROBLEM
Wave function formalisms in the channel coupling array theory of many-body scattering
[BONN-HE-80-15] N82-18966
MAPPING
Mapping of electrical potential distributions with charged particle beams
[NASA-CR-166556] N82-18506
Defense mapping agency digital data base evolution
[AD-A108327] N82-18865
ICFITG: A program for interactive contouring from an irregular triangular grid
[AD-A108515] N82-18866
Automated slope generation using raster technology
[AD-A108700] N82-18867
Applications of the DoD world geodetic system: The 1972 charting by the use of a semiautomated system
[AD-A108326] N82-18868
Litho scanning techniques
[AD-A108371] N82-18865
Matrix data analysis: Color/B and W coding is not always enough
[AD-A108406] N82-18930
Profiling sensitivity to image quality
[AD-A108405] N82-18931
MAPS
Ground-water for the Salt Basin, Eagle Flat, Red Light Draw, Green River Valley, and Presidio Bolson in westernmost Texas
[PB82-105269] N82-18759
Georges Bank: An annotated bibliography of atlases, inventories and map series
[PB82-107665] N82-18853
MARINE ENVIRONMENTS
Inventory of emissions from marine operations within the California coastal waters
[PB82-108089] N82-18757
MARINE METEOROLOGY
US Navy Marine Climatic Atlas of the World. Volume 9: World-wide means and standard deviations
[AD-A108222] N82-18636
Manual on marine meteorological services. (Annex 6 to the WMO Technical Regulations) -- of the World Meteorological Organization
[WMO-558] N82-18839
MARKET RESEARCH
Market assessment of photovoltaic power systems for agricultural applications in Nigeria
[NASA-CR-165511] N82-18696
Geothermal energy market study on the Atlantic coastal plain: Technical feasibility of use of eastern geothermal energy in vacuum distillation of ethanol fuel
[PB82-123001] N82-18732
MARKETING
Selling to NASA
[NASA-TM-84136] N82-19083
MARKOV PROCESSES
A stochastic approach to global error estimation in the numerical solution of ordinary differential equations
[INPE-2290-PRE/085] N82-18944
MASS
Modal characteristics of rotor blades: Finite element approach and measurement by ground vibration test
N82-18127
MASS SPECTROMETERS
Three-stage mass spectrometer for isotopic analysis of radionuclides in environmental samples
[DE82-001739] N82-18353
MASS TRANSFER
A general computer program for fluid-flow, heat-transfer and chemical-reaction processes
[HTS/81/10] N82-18
Experimental investigation of heat and mass transfer rates in regenerating type solar collector
[PB82-112244] N82-187
Testing and analysis of a wet-dry crossflow cooling tower. Volume 1: Test program and results
[PB82-103771] N82-187
MASSACHUSETTS
Georges Bank: An annotated bibliography of atlases, inventories and map series
[PB82-107665] N82-18
MATCHING
Existence of patches bounded by lines of curvature
[PB82-114471] N82-188
MATERIALS HANDLING
Cost problems in the utilization phase of a weapon system
[MBB-UA-576-81-O] N82-190
MATERIALS RECOVERY
Comparative study of air classifiers
[PB82-106121] N82-18411
MATHEMATICAL LOGIC
Plan synthesis: A logical perspective
[AD-A108733] N82-189
Changing the fuzzy rule of detachment
[INPE-2266-PRE/047] N82-1894
MATHEMATICAL MODELS
Parametric criteria and impact on design trends
N82-181
Control technology development N82-182
Volumetric pattern prediction of antennas on aircraft using the geometrical theory of diffraction
[ESA-TT-677] N82-184
Three dimensional field computation
[PB82-107160] N82-18491
A method of modeling multirate two-dimensional recursive digital filters N82-1849
A unified cad model for MOSFETS N82-18501
Dynamic structural analysis by analog simulation
[PB82-110677] N82-186
The Ohio River Basin energy facility siting model. Volume 1: Methodology
[PB82-102591] N82-1874
An equilibrium model for the partitioning of synthetic organic compounds: Formulation and calibration
[PB82-116662] N82-1874
Numerical techniques for inverse problems
N82-189
ANALYZE user guide
[DE82-001323] N82-1892
MATHEMATICAL TABLES
Renewal tables: Tables of functions arising in renewal theory
[AD-A108264] N82-189
MATRICES (MATHEMATICS)
Structure of a multibeam adaptive space-time processor
[AD-A108352] N82-185
Numerical techniques for inverse problems
N82-189
Algorithm for the inverse of a Hermitian Toeplitz matrix
[AD-A108357] N82-18
On certain connections between: Infinite zeros of proper rational matrices, dynamic equivalence and the interactor -- state feedback and cascade control
[PB82-114513] N82-18
Automatic element reordering for finite element analysis with frontal solution schemes
[PB82-115114] N82-18
A further inquiry into the theory of S-transformations and criterion matrices N82-18
MATRIX MANAGEMENT
Corporate organizational design and its effect on innovation
[PB82-108903] N82-190
MATRIX METHODS
A dynamic measure of controllability and observability for the placement of actuators and sensors on large space structures
[NASA-CR-166520] N82-18
MATRIX THEORY
Optimization of functions of matrices with applications to statistical problems
[AD-A108366] N82-18

MAXIMUM LIKELIHOOD ESTIMATES
Statistical tools for determining fitness to fly [AD-A108689] N82-18860
Multi-sample cluster analysis and approaches to validity studies in clustering individuals N82-18966
MAYPOLE ANTENNAS
Systems identification technology development for large space systems N82-18301
MEAN
Partial sequential tests for the mean of a normal distribution N82-18969
MEAN SQUARE VALUES
Spectral model predictions of mean-square-shear distortion rates [AD-A108211] N82-18543
MEASURING INSTRUMENTS
Materials for instrumentation for fossil energy technologies. A review and program plan of research and development needs [PB82-116229] N82-18571
MECHANICAL DEVICES
An assessment of the magnitude of electromechanical failures occuring within Air Force Command, Control, Communications and Intelligence (C3I) systems [AD-A108203] N82-18461
Dynamic analysis and design of constrained mechanical systems [AD-A108685] N82-18629
Design sensitivity analysis and optimization of constrained dynamic systems [AD-A108684] N82-18630
Generalized coordinate partitioning in dynamic analysis of mechanical systems [AD-A108683] N82-18631
Kinematic analysis of mechanical systems [AD-A108682] N82-18632
MECHANICAL PROPERTIES
The effects of electron and gamma radiation on epoxy-based materials N82-18276
Dynamic mechanical properties of some wood-polymer composite materials N82-18324
Mechanical-property data CT 91-T7E69 aluminum, powder metallurgy product [AD-A108710] N82-18373
The influence of composition on the structure and mechanical properties of the compound NiAl [ESA-TT-700] N82-18362
High temperature coatings for gas turbines: A review — diffusion coatings and their mechanical properties [NLR-MP-81003-U] N82-18365
Elastic stresses in U-shaped bellows [AECL-6476] N82-18638
MEDICAL PHENOMENA
Research predictions for underwater activities in the 1980's [FOA-C-56010-H1] N82-18862
MELTING
Manual on physico-chemical strengthening of freezing and thawing soils [NRC/CNR-TT-1978] N82-18416
MELTING POINTS
Low thrust monopropellant engine [NASA-CASE-GSC-12194-2] N82-18314
MEMORY
Time-sharing manual control and memory search: The joint effects of input and output modality competition, priorities and control order [AD-A108721] N82-18867
MERCURY (PLANET)
Part 1: Relativistic pathway modification of the planets N82-19113
Planetary magnetospheres [NASA-TM-83841] N82-19122
MERCURY CADMIUM TELLURIDES
Growth of HgCdTe by modified molecular beam epitaxy [AD-A108750] N82-19008
MESH
On the electromagnetic plane wave scattering from a wire grid with rhombic cells [REPT-S-114] N82-18486
MESOSCALE PHENOMENA
Experiments in regional scale numerical weather prediction including use of SESAME '79 data [AD-A108372] N82-18637
MESOSPHERE
High altitude atmospheric physics program [INPE-2111-RPE/336] N82-18785
METABOLISM
Study of chlorine dioxide and its metabolites in man [PB82-109356] N82-18863
METABOLITES
Analysis of volatile metabolites in biological fluids as indicators of prodromal disease condition [NASA-CR-167513] N82-18859
METAL BONDING
Bond strength of galvanic coatings under thermal stress from the example of galvanic forming [MBB-BB-488-O] N82-18642
METAL COATINGS
Replacing milled drawn aluminum pieces by precision forged ones [V-2158] N82-18381
Fully galvanic fabrication of complex forms [MBB-BB-489-O] N82-18384
Friction coefficient of flame spread materials — metal coatings [CETIM-12-DO-71] N82-18386
Electroforming of space and aircraft structures [MBB-BB-491-O] N82-18419
Investigation of the strength of galvanic deposits [MBB-BB-487-O] N82-18641
Bond strength of galvanic coatings under thermal stress from the example of galvanic forming [MBB-BB-488-O] N82-18642
METAL FATIGUE
An investigation of ship propeller fatigue N82-18627
METAL FILMS
Fully galvanic fabrication of complex forms [MBB-BB-489-O] N82-18384
METAL FOILS
Metal honeycomb to porous wireform substrate diffusion bond evaluation [NASA-TM-82793] N82-18612
METAL OXIDE SEMICONDUCTORS
A unified cad model for MOSFETS N82-18501
METAL POWDER
Development of materials and process technology for dual alloy disks [NASA-CR-165224] N82-18370
METAL SHEETS
Texture developments associated with abnormal grain growth in low carbon steel sheet N82-18388
METAL SURFACES
An investigation of the kinetics for hydrogen chemisorption on iron metal surfaces [NASA-CR-168555] N82-18389
The application of chemical etching to the failure analysis of semiconductor devices (experimental). Volume 2: Phase 2 report [ESA-CR(P)-1470-VOL-2] N82-18619
A theoretical study of photo-field emission from a metal surface N82-19046
METAL VAPORS
Study of laser created metal vapour plasmas [AD-A108586] N82-18594
METALLIZING
Replacing milled drawn aluminum pieces by precision forged ones [V-2158] N82-18381
METALLOGRAPHY
X-ray measurement of residual stress in metals at Chalk River Nuclear Laboratories [AECL-6961] N82-18639
METALLOIDS
Replacing milled drawn aluminum pieces by precision forged ones [V-2158] N82-18381
METALS
The electrical properties of Na3Cu4S4, mixed-valence one-dimensional metal [AD-A108517] N82-19060
On the conditions required for vacancy loop growth in irradiated metals and alloys [AERE-R-9810] N82-19076
METASTABLE ATOMS
Electron-spin-polarization effects in low energy electron diffraction, ion neutralization and metastable atom deexcitation at solid surfaces [DE82-001179] N82-19019
METEOROLOGICAL CHARTS
Low level wind study, Bald Hills: Thunderstorm season, 1976 - 1977 [AD-A108207] N82-18811
Wind-ceiling-visibility data at selected airports. Volume 1: New England region [AD-A108155] N82-18816
Wind-ceiling-visibility data at selected airports, volume 2. Part A: Eastern region [AD-A108156] N82-18817
Wind-ceiling-visibility data at selected airports. Volume 2, part B: Eastern region [AD-A108157] N82-18818
Wind-ceiling-visibility data at selected airports. Volume 3, part A: Southern region [AD-A108158] N82-18819
Wind-ceiling-visibility data at selected airports. Volume 3, part B: Southern region [AD-A108159] N82-18820
Wind-ceiling-visibility data at selected airports. Volume 4, part A: Great Lakes region [AD-A108160] N82-18821
Wind-ceiling-visibility data at selected airports. Volume 4, part B: Great Lakes region [AD-A108161] N82-18822
Wind-ceiling-visibility data at selected airports. Volume 5, part A: Central region [AD-A108162] N82-18823
Wind-ceiling-visibility data at selected airports. Volume 5, part B: Central region [AD-A108163] N82-18824
Wind-ceiling-visibility data at selected airports. Volume 6, part A: Southwest region [AD-A108164] N82-18825
US Navy Marine Climatic Atlas of the World. Volume 9: World-wide means and standard deviations [AD-A108222] N82-18836
Coastal upwelling ecosystems analysic. Technical report 40: Atlas of the JOINT 2 1976 aircraft winds for the 500 foot level [PB82-113911] N82-18842
Coastal upwelling ecosystems analysis. Atlas of the JOINT 2 1977 aircraft winds for the 500 foot level [PB82-113929] N82-18843
METEOROLOGICAL INSTRUMENTS
An inexpensive photoelectric remote tilt meter [PB82-103649] N82-18567
Wind tunnel and laboratory calibration of balloon-borne wind sensors [AD-A108676] N82-18814
METEOROLOGICAL PARAMETERS
Oceanographic and Meteorological Conditions in the North Pacific [AD-A108754] N82-18654
Seasat data utilization project [NASA-CR-168557] N82-18660
Regression type mathematical models of the interaction of meteorology and agricultural productivity. Objectives, uses and operational problems [INPE-2117-RPE/341] N82-18661
Winter and summer simulations with the GLAS climate model [NASA-TM-83866] N82-18807
METEOROLOGICAL RADAR
R and D equipment information report: Fault tolerant weather radar processor [AD-A108253] N82-18809
Development of a clear air radar to detect meteorological hazards at airports [AD-A108236] N82-18835
METEOROLOGICAL SATELLITES
Climate observing system studies: An element of the NASA Climate Research Program: Workshop report [NASA-TM-84040] N82-18808
METEOROLOGICAL SERVICES
The evolution of meteorological forecasting [INPE-2151-RPE/372] N82-18806
Manual on marine meteorological services. (Annex 6 to the WMO Technical Regulations) — of the World Meteorological Organization [WMO-558] N82-18839
METHANATION
Studies related to the deep earth gas [PB82-103821] N82-18409
METHANE
Studies related to the deep earth gas [PB82-103821] N82-18409
METHOD OF CHARACTERISTICS
A method of characteristic surfaces. The approximate solution of three-dimensional supersonic flow fields from the near field up to the sonic boom region N82-18182

METHOD OF MOMENTS
Impedance of monopole antennas on vehicles by moment methods — Numerical Electromagnetic Code (NEC 1)
[RSRE-MEMO-3414] N82-18447

METHYL COMPOUNDS
Mode selective vibrational energy transfer in methylfluoride
[MPIS-6/1981] N82-18356
The influence of the spin-rotor coupling of methyl groups in solids on their NMR relaxation
[ISBN-90-6231-090-7] N82-19055

METHYLHYDRAZINE
Studies relating to the synthesis of monomethylhydrazine by chloramination and problem relating to the protection of the environment from the vapors of 1, 1-dimethylhydrazine, monomethylhydrazine and hydrazine
[AD-A108369] N82-18323

MICROCOMPUTERS
A microcomputer for control of data collection platforms — GOES satellites
[INPE-2104-RPE/331] N82-18881
System control procedure development for a distributed microcomputer network for avionics utilizing a non-responsive time-division multiplexed bus as the inter-computer communication link N82-18927

MICROCRACKS
The effects of microcracking on the thermal expansion of graphite-epoxy composites
N82-18279
Fatigue microcrack behavior under the influence of surface residual stresses
[AD-A108891] N82-18633

MICROELECTRONICS
Electrical characterization and specification of special purpose linear microcircuits
[AD-A108247] N82-18515
Chronoamperometric transients at the stationary disk microelectrode
[AD-A108587] N82-18519
A microcircuit for space applications
[AD-A108296] N82-18523
The Conference on High Temperature Electronics
[NASA-CR-168505] N82-18534
Influence of contact conditions and the circuit on short negative differential mobility semiconducting devices
[AD-A108140] N82-19067

MICROMETEOROLOGY
Coastal upwelling ecosystems analysis. Atlas of the JOINT 2 1977 aircraft winds for the 500 foot level
[PB82-113929] N82-18643

MICROORGANISMS
Microorganisms and biomolecules in space hard environment N82-18267

MICROSCOPY
Acoustic microscopy for nondestructive evaluation of materials — and integrated circuits
[AD-A108423] N82-18617

MICROSTRIP TRANSMISSION LINES
A double-balanced mixer for 2 GHz
[INPE-2150-RPE/371] N82-18453
Measured pulse transfer characteristics of high impedance microstrip lines
[AD-A108266] N82-18517

MICROSTRUCTURE
Micromechanisms of fracture and hypothermal aging of fibrous composites
[PB82-121369] N82-18333
Effects of microstructure and frequency on corrosion-fatigue crack growth in Ti-8Al-1Mo-1V and Ti-6Al-4V
[AD-A108361] N82-18377
Characterization of the microstructure of stabilized zirconia used on diesel-engine components
[DE81-029303] N82-18380
The influence of composition on the structure and mechanical properties of the compound NiAl
[ESA-TT-700] N82-18362
Alignment signals from electrons scattering near an edge for electron beam microfabrication N82-19004
On a proposal for a continuum with microstructure
N82-19052

MICROWAVE AMPLIFIERS
Simulation of pulsed IMPATT oscillators and injection-locked amplifiers
[AD-A108483] N82-18522

MICROWAVE ANTENNAS
Microwave remote sensing experiment
N82-18240

MICROWAVE ATTENUATION
Effects of atmospheric turbulence on microwave and millimeter wave satellite communications systems
N82-18445
The influence of the atmosphere on microwave radiometric measurements in the 10 GHz to 400 GHz frequency range — and a computer program for determining atmospheric microwave attenuation
[ESA-TT-706] N82-18484

MICROWAVE CIRCUITS
Superconducting electronics
[AD-A108402] N82-18520

MICROWAVE EMISSION
Solar bursts measured at 8 mm wavelength — detected by tracking active areas
[REPT-S-122] N82-19127

MICROWAVE EQUIPMENT
Microwave remote sensing experiment
N82-18240
Microwave semiconductor research: Materials, devices, circuits
[AD-A108399] N82-19072

MICROWAVE FREQUENCIES
Spectrum resource assessment in the 2300-2450 MHz band
[PB82-115452] N82-18492

MICROWAVE IMAGERY
Imaging microwave radiometer. Phase A study. Volume 1: Executive summary — instrument for the European Remote Sensing system payload
[ESS/SS-1006] N82-18564
Observations with an imaging 35 GHz radiometer of terrain in Malmslatt, July 1980
[FOA-C-30240-E1/E3] N82-18672

MICROWAVE OSCILLATORS
Stabilized microwave oscillator for a dielectric resonator
[INPE-2123-RPE/347] N82-18512
Simulation of pulsed IMPATT oscillators and injection-locked amplifiers
[AD-A108483] N82-18522

MICROWAVE RADIOMETERS
Technological needs of advanced Earth-observation spacecraft N82-18292
Imaging microwave radiometer. Phase A study. Volume 1: Executive summary — instrument for the European Remote Sensing system payload
[ESS/SS-1006] N82-18564

MICROWAVE TRANSMISSION
Solar power satellites, summary
[OTA-E-145] N82-18305
Ultramicrowave communications system, phase 3
[NASA-CR-167519] N82-18444
Effects of atmospheric turbulence on microwave and millimeter wave satellite communications systems
N82-18445
Wave normal directions and wave distribution functions for ground based transmitter signals observed on Geos 1
[CRPE-NT-99] N82-18479
Preliminary study on the use of lasers for the transmission of power N82-18579

MICROWAVES
Experimental results of multiple scattering
[AD-A108291] N82-19032
Time delays in solar bursts measured in the mm-cm range of wavelengths
[INPE-2251-PRE/034] N82-19125

MIDAIR COLLISIONS
Midair and near midair collisions on two- and three-dimensional curvilinear flight paths
[ESA-TT-685] N82-18200

MILITARY AIRCRAFT
Naval versions of the Dauphin and the AS 15 TT weapon system N82-18142
Army Lynx: Product development matched to military combat development N82-18143
A light helicopter for night firing N82-18144

MILITARY HELICOPTERS
Preliminary investigation into the addition of auxiliary longitudinal thrust on helicopter agility N82-18155
Review of helicopter Mast Mounted Sight (MMS) base motion isolation and Line-of-Sight (LOS) stabilization concepts N82-18166
Vibration levels in Army helicopters: Measurement recommendations and data
[AD-A106131] N82-18209

MILITARY OPERATIONS
Military requirements: Too little or too much
N82-18139
Naval versions of the Dauphin and the AS 15 TT weapon system N82-18142
Army Lynx: Product development matched to military combat development N82-18143
Simulation of modern radar apparatus in full mission flight and tactic simulators
[MBB-UA-585-81-O] N82-18482

MILITARY TECHNOLOGY
Military requirements: Too little or too much
N82-18139
Tethered rotorplatforms and their mission potential
N82-18145

MILLIMETER WAVES
Ultramicrowave communications system, phase 3
[NASA-CR-167519] N82-18444
Effects of atmospheric turbulence on microwave and millimeter wave satellite communications systems
N82-18445
A review of satellite communication and propagation experiments for frequencies above 10 GHz
[DFVLR-MITT-81-06] N82-18485
Background variations in millimeter wave telescopes due to the radome structure
[REPT-S-121] N82-18489
Mixing with a SQUID at millimeter waves — Josephson junction
[REPT-S-117] N82-18533
Time delays in solar bursts measured in the mm-cm range of wavelengths
[INPE-2251-PRE/034] N82-19125

MINERAL EXPLORATION
Technology and oceanography: An assessment of Federal technologies for oceanographic research and monitoring
[OTA-O-142] N82-18844

MINES (EXCAVATIONS)
Automated longwall guidance and control vertical control subsystem, volume 1
[NASA-CR-161969] N82-18658
Automated longwall guidance and control vertical control subsystem, volume 2 — user manuals (computer programs)
[NASA-CR-161970] N82-18659
Coal mine siting for the Ohio River Basin energy study
[PB82-108119] N82-18680

MINICOMPUTERS
Performance limits of integrated circuit simulation on a dedicated minicomputer system N82-18876
The Integrated Library System (ILS): User manual
[PB82-114968] N82-19095

MINING
An economic analysis of coal supply in the Ohio River Basin Energy Study Region
[PB82-113341] N82-18414
Automated longwall guidance and control vertical control subsystem, volume 1
[NASA-CR-161969] N82-18658
Cables for face equipment standardization of requirements
[PB82-113820] N82-18685
A baseline assessment of coal industry structure in the Ohio River Basin Energy Study region
[PB82-103615] N82-18737

MIRRORS
The TIRGO secondary mirror modulation system
[IPS-81-6] N82-19034

MISSILE BODIES
Theoretical prediction of base pressure on missile bodies having a turbulent dead-air region at supersonic velocities
[ESA-TT-708] N82-18191

MISSILE CONFIGURATIONS
Status report on the Aeronautical Research Institute of Sweden version of the missile aerodynamics program LARV, for calculation of static aerodynamic properties and longitudinal aerodynamic damping derivatives. Part 1: Theory — Low Aspect Ratio Vehicle (LARV)
[FFA-TN-AU-1661-PT-1] N82-18308

MISSILE CONTROL
Extension of proportional navigation by the use of optimal filtering and control methods
[ESA-TT-683] N82-18199

MISSILE TRAJECTORIES
Implementation of an overlaid version of P2 simulation
[AD-A108682] N82-18307
MISSILES
Advanced air launched missile motor designed methods
[AD-A108634] N82-18318
MISSION PLANNING
Spacelab mission 1 experiment descriptions second edition
[NASA-TM-82448] N82-18234
MIXING CIRCUITS
A double-balanced mixer for 2 GHz
[INPE-2150-RPE/371] N82-18453
Superconducting electronics
[AD-A108402] N82-18520
Mixing with a SQUID at millimeter waves — Josephson junction
[REPT-S-117] N82-18533
MODAL RESPONSE
The effects of slight non-linearities on modal testing of helicopter-like structures N82-18130
Response of a structure solicited by displacements imposed on a part of its edge — computer program
[CETIM-11-L-182] N82-18644
MODE TRANSFORMERS
On the quasi-TEM modes in general multiconductor transmission lines
[REPT-S-118] N82-18487
MODELS
The Ohio River Basin Energy Facility siting model. Volume 2: Sites and on-line dates
[PB82-112111] N82-18442
MODEMS
Carrier recovery system for modem applications with digital processing using PSK or DPSK modulation
[INPE-2095-RPE/325] N82-18923
MODES (STANDING WAVES)
On the quasi-TEM modes in general multiconductor transmission lines
[REPT-S-118] N82-18487
Asymptotic high frequency modes of homogeneous waveguide structures with impedance bounderies
[REPT-S-120] N82-18488
MODULATION
The TIRGO secondary mirror modulation system
[IPS-81-8] N82-19034
MODULATORS
FM modulators using a phase locked loop
[INPE-2293-NTE/177] N82-18511
MOISTURE RESISTANCE
Improved moisture resistance of fiber-reinforced plastic
[AD-A109190] N82-18398
MOLECULAR BEAM EPITAXY
Growth of HgCdTe by modified molecular beam epitaxy
[AD-A108750] N82-19008
Submicron FETs using molecular beam epitaxy
[AD-A108556] N82-19068
MOLECULAR CLOUDS
H2O maser survey in the magnellanic clouds
[INPE-2279-PRE/057] N82-18781
MOLECULAR EXCITATION
Mode selective vibrational energy transfer in methylfluoride
[MPIS-6/1981] N82-18358
Research on atomic, molecular, and nuclear physics
[DE82-001175] N82-19020
MOLECULAR INTERACTIONS
Molecular interactions of high energy fuels and jet fuels with oncogenic viruses and endogenous viruses
[AD-A108377] N82-18855
Research on atomic, molecular, and nuclear physics
[DE82-001175] N82-19020
MOLECULAR ROTATION
The influence of the spin-rotor coupling of methyl groups in solids on their NMR relaxation
[ISBN-90-6231-090-7] N82-19055
Laboratory measurements of cometary photochemical phenomena
[NASA-CR-168506] N82-19123
MOLECULAR STRUCTURE
Dynamical nonlinear material response and failure
[AD-A108822] N82-19013
MOLECULES
Microorganisms and biomolecules in space hard environment N82-18267
MOMENTS
A three-dimensional approach to lift and moment coefficients of rotating blades N82-18125
MOMENTUM THEORY
An extension of the local momentum theory to the rotors operating in twisted flow field N82-18123
MONITORS
Development of a multidetector petroleum oil in water monitor
[PB82-105206] N82-18568
MONOCHROMATORS
Engine superficial temperature and infrared signature N82-18136
Stratospheric instruments and analyses N82-18776
MONOMERS
Oxidation and formation of deposit precursors in hydrocarbon fuels
[NASA-CR-165534] N82-18402
MONOPOLE ANTENNAS
Impedance of monopole antennas on vehicles by moment methods — Numerical Electromagnetic Code (NEC 1)
[RSRE-MEMO-3414] N82-18447
MONOPOLES
Standard test case runs for the EMPULSE monopole fieldsolver and conductivity generation model
[AD-A108739] N82-18990
MONOPROPELLANTS
Low thrust monopropellant engine
[NASA-CASE-GSC-12194-2] N82-18314
MONOTONE FUNCTIONS
On asymptotic optimality of Bayes empirical Bayes estimators N82-18972
MONTE CARLO METHOD
On asymptotic optimality of Bayes empirical Bayes estimators N82-18972
MORTARS (MATERIAL)
Properties of Portland cement concretes containing pozzolanic admixtures
[PB82-120965] N82-18434
MOTION SICKNESS
Vestibular experiments N82-18256
MULTIPATH TRANSMISSION
Multipath VLF propagation effects on correlation receivers
[AD-A108408] N82-18472
Radio equipment for propagation experiments at the frequencies 11, 18, and 36 GHz
[FOA-A-30027-E2] N82-18490
MULTIPHOTON ABSORPTION
Competing reaction channels in IR laser induced unimolecular reactions N82-18336
Multiphoton dissociation and thermal unimolecular reactions induced by infrared lasers N82-18337
MULTIPLEXING
Test and evaluation of reduced rate multiplexers
[AD-A108202] N82-18463
Queueing analysis of a shared voice-data link
[AD-A108336] N82-18475
MULTIPROCESSING (COMPUTERS)
Performance evaluation of a multiple processor system with shared busses N82-18877
MULTISPECTRAL PHOTOGRAPHY
Automatic relocation of ground control points in LANDSAT imagery
[RAE-TR-81071] N82-18657
MULTIVARIATE STATISTICAL ANALYSIS
Indoor climate, outdoor climate, and energy consumption. An approach to the calculation of the effect of the outdoor and indoor climate on the energy consumption in buildings, based on methods of statistical analysis
[WTHD-137] N82-18739
Optimization in statistics: An introduction
[AD-A108653] N82-18960

N

N-TYPE SEMICONDUCTORS
Correlation in doped semiconductors
[INPE-2108-RPE/334] N82-19065
NAPHTHALENE
Quantitative chromatographic analyses of N-phenyl-alpha-naphthylamine and N-phenyl-beta-naphthylamine
[AD-A108362] N82-18345
NASA PROGRAMS
NASA space communications program
[GPO-85-553] N82-18450
Climate observing system studies: An element of the NASA Climate Research Program: Workshop report
[NASA-TM-84040] N82-18806
Selling to NASA
[NASA-TM-84136] N82-19083
NASA pocket statistics
[NASA-TM-84134] N82-19084
NASTRAN
NASEDIT: The interactive NASTRON editor
[MBB-Z-2-81-O] N82-18643
NATURAL GAS
Studies related to the deep earth gas
[PB82-103821] N82-18409
Report on the experiences with the gas compression heat pump system of the school and sports center at Altenkunstadt
[BMFT-FB-T-81-175] N82-18552
NAVIER-STOKES EQUATION
Experimental model studies of a hydraulic ram with special emphasis on the velocities in the ram tube
[MPIS-28/1980] N82-18550
NAVIGATION
Integrated control design techniques
[AD-A108223] N82-18224
NAVIGATION AIDS
United States Coast Pilot 9. Pacific and Arctic Coasts Alaska: Cape Spencer to Beufort Sea
[PB82-109562] N82-18201
NAVIGATION INSTRUMENTS
A design for a 32-channel multiplexer — for unmanned aircraft navigation sensors
[RAE-TM-RAD-NAV-145] N82-18503
NEAR INFRARED RADIATION
Waves in the OH emissive layer N82-18237
NEBULAE
Very wide field camera N82-18250
NEGATIVE IONS
Electronic states of a negative ion donor in semiconductors
[INPE-2092-RPE/322] N82-19061
NEODYMIUM LASERS
Laser physics and laser spectroscopy
[AD-A108374] N82-18593
NETWORK ANALYSIS
An observation-well network concept as applied to North Carolina
[PB82-106069] N82-18676
Two approaches to deadlock in distributed systems N82-18909
A closed queueing network model for multi-echelon repairable item provisioning
[AD-A108401] N82-18939
NETWORK SYNTHESIS
An active filter for the simultaneous realization of several transfer functions
[INPE-2298-PRE/069] N82-18509
NEUROSPORA
Preliminary characterization of persisting circadian rhythms during space flight: Neurospora as a model system N82-18266
NEUTRINOS
Study of inclusive semi-leptonic neutral current reactions in neutrino and antineutrino interactions between 12 and 200 GeV
[CEA-N-2150] N82-19015
NEUTRON BEAMS
Neutron transport from targets to moderators
[PB82-106915] N82-19027
NEUTRON PHYSICS
Low temperature and neutron physics studies
[DE82-001573] N82-19025
NEUTRON SCATTERING
Neutron scattering studies of atomic vibration in nickel and solid dimethylacetylene N82-19066
NEVADA
Wind-ceiling-visibility data at selected airports. Volume 9, part A: Western region
[AD-A108169] N82-18830
NICKEL
Neutron scattering studies of atomic vibration in nickel and solid dimethylacetylene N82-19066

NICKEL ALLOYS
Development of materials and process technology for dual alloy disks
[NASA-CR-165224] N82-18370
The effect of hydrogen on the solid solution strengthening and softening of nickel
[AD-A108654] N82-18374
NICKEL COMPOUNDS
The influence of composition on the structure and mechanical properties of the compound NiAl
[ESA-TT-700] N82-18382
NIGHT FLIGHTS (AIRCRAFT)
A light helicopter for night firing N82-18144
Experimental investigation of visual aids for helicopters: Low level flight at night and poor visibility N82-18168
NIGHTGLOW
Waves in the OH emissive layer N82-18237
A simulation of equatorial plasma bubble signatures on the OI 6300 A nightglow meridional profile over Brazilian low latitude
[INPE-2260-PRE/042] N82-18779
Characteristics of the 6300 angstrom OI luminescence at a low latitude American sector
[INPE-2114-RPE/338] N82-18783
NIOBIUM
Radiation detection with point-contact Josephson junctions N82-19054
NITINOL ALLOYS
NITINOL interconnect device for optical fiber waveguides
[AD-A108278] N82-19033
NITRILES
Ammoxidation of toluene and xylenes to nitriles
[PB82-105420] N82-18361
NITRITES
Effect of oxidation of soil organic matter on water quality: Role of nitrification and denitrification
[PB82-103946] N82-18755
NITROGEN OXIDES
Low NO subx heavy fuel combustor concept program. Phase 1A: Coal gas addendum
[NASA-CR-165577] N82-18690
Emissions assessment of conventional stationary combustion systems: Summary report
[PB82-109414] N82-18753
Quality assurance audits for SIP and NECRMP emission inventories: New York and New Jersey
[PB82-114273] N82-18767
NOISE (SOUND)
FRAM 2 Single Channel Ambient Noise Statistics
[AD-A108755] N82-18999
NOISE INTENSITY
Preliminary thoughts on helicopter cabin noise prediction methods N82-18148
NOISE MEASUREMENT
Modified Ambient Sea Noise Indicator with ambient noise directionality estimator
[AD-A108389] N82-18998
Effect of air content on broadband noise measurements in the 1.22-m diameter water tunnel
[AD-A108540] N82-19000
NOISE POLLUTION
Incorporation of environmental impact indices into noisemap
[AD-A108616] N82-18743
NOISE PREDICTION (AIRCRAFT)
Study of cabin noise control for twin engine general aviation aircraft
[NASA-CR-165833] N82-18995
Annoyance caused by propeller airplane flyover noise: Preliminary results
[NASA-TM-83244] N82-18996
NOISE PROPAGATION
Effect of tactile vibration on annoyance to synthesized propfan noise
[NASA-TM-83258] N82-18866
Study of cabin noise control for twin engine general aviation aircraft
[NASA-CR-165833] N82-18995
Theoretical and experimental investigations of the outward propagation of tire noise
[MBB-BB-483-81-O] N82-19001
NOISE REDUCTION
The measurement of the mobility of structures at acoustic frequencies N82-18149
Study of cabin noise control for twin engine general aviation aircraft
[NASA-CR-165833] N82-18995
NOISE SPECTRA
The measurement of the mobility of structures at acoustic frequencies N82-18149
NONDESTRUCTIVE TESTS
Defects characterization and dimensioning by means of the ultrasound spectroscopy
[CISE-1696] N82-18357
Proceedings of the DARPA/AFWAL review of progress in quantitative nondestructive evaluation
[AD-A108741] N82-18614
Acoustic microscopy for nondestructive evaluation of materials — and integrated circuits
[AD-A108423] N82-18617
Nondestructive testing of CFRP
[MBB-BB-477-81-O] N82-18620
Inspection integrated with fabrication — ultrasonic flaw detection
[CETIM-15-H-194] N82-18622
NONLINEAR EQUATIONS
Formulation of normalized non-linear free electron laser equations
[AD-A108358] N82-18596
Kinematic analysis of mechanical systems
[AD-A108682] N82-18632
Some properties of the non-linear partial difference equation for the Ising-model correlation function
[CNRS-CPT-80-P-1226] N82-18955
Sensitivity theory for nonlinear systems. 1: Nonlinear functional analysis approach
[ORNL/TM-7304] N82-18984
NONLINEAR FILTERS
Apparatus for damping operator induced oscillations of a controlled system — flight control
[NASA-CASE-FRC-11041-1] N82-18493
NONLINEAR PROGRAMMING
Computable optimal value bounds and solution vector estimates for general parametric NLP programs
[AD-A108229] N82-18954
NONLINEAR SYSTEMS
The line method for solving partial differential equations encountered in the literature N82-18960
Sensitivity theory for nonlinear systems. 1: Nonlinear functional analysis approach
[ORNL/TM-7304] N82-18984
Dynamical nonlinear material response and failure
[AD-A108822] N82-19013
Theoretical aspects of the nonlinear interaction of drift-type instabilities in a plasma N82-19035
NONLINEARITY
The effects of slight non-linearities on modal testing of helicopter-like structures N82-18130
Nonlinear elastic beams, frames and structural analysis
[CTH-R-31/1979] N82-18645
NORMAL DENSITY FUNCTIONS
Partial sequential tests for the mean of a normal distribution N82-18969
NORTH CAROLINA
An observation-well network concept as applied to North Carolina
[PB82-106089] N82-18676
NOTCH SENSITIVITY
Failure of fibrous composites. Part 1: Stress concentration, cracks and notches. Part 2: Toughness
[PB82-113531] N82-18332
Studies on plastic instability, notch deformation and hydrogen effects in spheroidized steel N82-18366
Comparison of notch-stress with strain-controlled low cycle fatigue of alpha-beta titanium alloys
[AD-A108548] N82-18376
NOTCH STRENGTH
Failure of fibrous composites. Part 1: Stress concentration, cracks and notches. Part 2: Toughness
[PB82-113531] N82-18332
NOTCH TESTS
An assessment of buffer strips for improving damage tolerance of composite laminates at elevated temperature
[NASA-TM-83257] N82-18325
NOZZLE FLOW
Selective jet plating N82-18338
NUCLEAR EXPLOSION EFFECT
Theory of EMP coupling in the source region
[AD-A108751] N82-18458
NUCLEAR INTERACTIONS
On the composite structure of elementary particles N82-19003
Analytic optical potentials for nucleon-nucleus nucleus-nucleus collisions involving light and medium nuclei
[NASA-TM-83224] N82-19028
NUCLEAR MAGNETIC RESONANCE
Instrumentation for imaging of fluid flow using nuclear magnetic resonance with an example of one-dimensional flow imaging N82-18537
Two-dimensional nuclear magnetic resonance in liquids N82-19005
The influence of the spin-rotor coupling of methyl groups in solids on their NMR relaxation
[ISBN-90-6231-090-7] N82-19066
NUCLEAR MODELS
Study of inclusive semi-leptonic neutral current reactions in neutrino and antineutrino interactions between 12 and 200 GeV
[CEA-N-2150] N82-19015
Electron vacancy production in near-symmetric collisions of 100 MeV copper ions
[ANU-P-771] N82-19016
NUCLEAR POTENTIAL
Elastic and inelastic scattering measurements for the Mg-24 plus Pb-208 and Si-28 plus Pb-208 systems
[ANU-P-786] N82-19017
NUCLEAR RADIATION SPECTROSCOPY
Three-stage mass spectrometer for isotopic analysis of radionuclides in environmental samples
[DE82-001739] N82-18353
NUCLEAR SCATTERING
Analytic optical potentials for nucleon-nucleus nucleus-nucleus collisions involving light and medium nuclei
[NASA-TM-83224] N82-19028
NUCLEON-NUCLEON INTERACTIONS
Quark-gluon plasma and ultra-relativistic nucleus-nucleus collisions
[DE81-030321] N82-19023
NULL HYPOTHESIS
On testing monotone tendencies
[AD-A108332] N82-18977
NUMBER THEORY
Some Dirichlet series whose poles are related to cusp forms
[CTH-MATH-1981-14] N82-18962
NUMERICAL ANALYSIS
A complete method for computation of blade mode characteristics and responses in forward flight N82-18126
Numerical analysis and FORTRAN program for the computation of the turbulent wakes of turbomachinery rotor blades, isolated airfoils and cascade of airfoils
[NASA-CR-3509] N82-18184
ANALYZE user guide
[DE82-001323] N82-18924
An application of parallel computation to sequential computation: The problem of cost-effective resource allocation
[PB82-108739] N82-18925
Numerical methods for stiff differential equations and Josephson interferometer equations
[AD-A108373] N82-18950
Steady state numerical solution of magnetically insulated charge flow in coaxial geometry
[AD-A108633] N82-18991
NUMERICAL CONTROL
Distributed intelligence for air fleet control
[AD-A108611] N82-18195
Software features applicable to inertial measurement unit self alignment
[AD-A108511] N82-18196
IAC level 'O' program development N82-18285
IAC control system analysis development N82-18286
NUMERICAL FLOW VISUALIZATION
The problem of calculation of the flow around helicopter rotor blade tips N82-18160
Separated flow around helicopter bodies N82-18163
NUMERICAL INTEGRATION
Research in algebraic manipulation
[AD-A108603] N82-18951
Stabilization of the numerical integration of equations of motion
[ESA-TT-676] N82-18961
NUMERICAL STABILITY
Stabilization of the numerical integration of equations of motion
[ESA-TT-676] N82-18961

NUMERICAL WEATHER FORECASTING

Atlantic hurricane wind probability forecastting (WINDPA) [AD-A108756] N82-18810

Shortrange forecasting of cloudiness and precipitation through extrapolation of GOES imagery [AD-A108678] N82-18813

An automated low cloud prediction system [AD-A108681] N82-18815

Experiments in regional scale numerical weather prediction including use of SESAME '79 data [AD-A108372] N82-18837

NUTATION

Nutation of Helianthus Annuus in a microgravity environment N82-18265

NUTRIENTS

Interpretation of equatorial hydrographic, nutrient element and radioisotope data [DE82-001699] N82-18655

O

OBLIQUE WINGS

Spin-tunnel investigation of a 1/13-scale model of the NASA AD-1 oblique-wing research aircraft [NASA-TM-83236] N82-18183

OCEAN BOTTOM

Foundations of structures in polar waters [AD-A108344] N82-18417

The centratlan aerogeophysical operation in the region of the Mid-Atlantic ridge. INPE participation [INPE-2142-RPE/364] N82-18653

Site investigations and submarine soil mechanics in polar regions [AD-A108269] N82-18790

Subsea trenching in the Arctic [AD-A108341] N82-18849

OCEAN CURRENTS

Statistical modeling of shear in the upper ocean [AD-A108212] N82-18848

OCEAN DATA ACQUISITIONS SYSTEMS

Examination of the operational prospects for remote sensing — in Europe [ESA-CR(P)-1476] N82-18669

Technology and oceanography: An assessment of Federal technologies for oceanographic research and monitoring [OTA-O-142] N82-18844

OCEAN DYNAMICS

HF radar measurements of surface currents in the German Bight during MARSEN phase 2, part 2 [PB82-124553] N82-18852

OCEAN MODELS

The centratlan aerogeophysical operation in the region of the Mid-Atlantic ridge. INPE participation [INPE-2142-RPE/364] N82-18653

Seasat data utilization project [NASA-CR-168557] N82-18660

A dynamical model of wind-induced near-inertial motions [AD-A108687] N82-18846

OCEAN SURFACE

Study of synthetic aperture radar in 2D - 2FS operation over the ocean — European Remote Sensing system [ESA-CR(P)-1475] N82-18461

Interpretation of equatorial hydrographic, nutrient element and radioisotope data [DE82-001699] N82-18655

A dynamical model of wind-induced near-inertial motions [AD-A108687] N82-18846

OCEAN TEMPERATURE

Commercial Ocean Thermal Energy Conversion (OTEC) licensing Final Environment Impact Statement [PB82-117532] N82-18733

US Navy Marine Climatic Atlas of the World. Volume 9: World-wide means and standard deviations [AD-A108222] N82-18836

OCEAN THERMAL ENERGY CONVERSION

Commercial Ocean Thermal Energy Conversion (OTEC) licensing Final Environment Impact Statement [PB82-117532] N82-18733

OCEANOGRAPHIC PARAMETERS

United States Coast Pilot 9. Pacific and Arctic Coasts Alaska: Cape Spencer to Beaufort Sea [PB82-109562] N82-18201

Oceanographic and Meteorological Conditions in the North Pacific [AD-A108754] N82-18654

Seasat data utilization project [NASA-CR-168557] N82-18660

OCEANOGRAPHY

The centratlan aerogeophysical operation in the region of the Mid-Atlantic ridge. INPE participation [INPE-2142-RPE/364] N82-18653

US Navy Marine Climatic Atlas of the World. Volume 9: World-wide means and standard deviations [AD-A108222] N82-18836

Technology and oceanography: An assessment of Federal technologies for oceanographic research and monitoring [OTA-O-142] N82-18844

OFFSHORE ENERGY SOURCES

Mesoscale studies of flow regimes and fluxes of particulate matter in coastal waters [DE82-001740] N82-18850

OFFSHORE PLATFORMS

Foundations of structures in polar waters [AD-A108344] N82-18417

Site investigations and submarine soil mechanics in polar regions [AD-A108269] N82-18790

OHIO RIVER (US)

Economic losses in the Columbus SMSA due to long-range transport of airborne residuals in the Ohio River Basin Energy Study Region [PB82-110735] N82-18438

Ohio River Basin energy study: Land use and terrestrial ecology [PB82-110347] N82-18440

OIL POLLUTION

Performance testing of four skimming systems [PB82-101353] N82-18756

OIL SLICKS

Performance testing of four skimming systems [PB82-101353] N82-18756

ON-LINE SYSTEMS

Full text information systems: A review and assessment of the technology N82-19092

The Integrated Library System (ILS): User manual [PB82-114968] N82-19095

Army Library conversion: Cost assessment plan [PB82-120353] N82-19096

ONBOARD DATA PROCESSING

An on board supervisory system for applications in space missions [INPE-2097-RPE/327] N82-18216

ONE DIMENSIONAL FLOW

Instrumentation for imaging of fluid flow using nuclear magnetic resonance with an example of one-dimensional flow imaging N82-18537

OPERATING COSTS

Parametric study of the influence of the engine upon the operating cost of a civil helicopter N82-18131

Parametric criteria and impact on design trends N82-18139

Potential reductions in aircraft operation and maintenance costs by using thrust computing support equipment [AD-A108463] N82-18207

OPERATING SYSTEMS (COMPUTERS)

The design of an interface to a programming system and MENUNIX: A menu based interface to UNIX (user manual) [AD-A108929] N82-18890

Hewlett Packard company HP-3000 series 3, release A.00.04 indexed 1-0 module [PB82-106022] N82-18895

OPERATIONAL PROBLEMS

Characterizing heat treatment installations [CETIM-12-G-199] N82-18387

Operating experience with the Harwell thermo-mechanical generators [AERE-R-9829] N82-18527

OPERATOR PERFORMANCE

Modeling human attention allocation strategies with competing criteria [AD-A108509] N82-18875

The human as a constrained optimal text editor N82-18910

OPERATORS (MATHEMATICS)

Wave function formalisms in the channel coupling array theory of many-body scattering [BONN-HE-80-15] N82-18988

OPERATORS (PERSONNEL)

Task analytic techniques: Application to the design of a flight simulator instructor/operator console [AD-A108724] N82-18227

OPTICAL DATA PROCESSING

Applications of multi-pinhole gamma camera collimation to tomography and image enhancement N82-18554

Processing and correlation of digitalized images in a spectral range [MBB-UA-596-81-O] N82-18941

OPTICAL EQUIPMENT

Analysis of UV protection requirements and testing of candidate attenuators for the Haloe optical instrument [NASA-TM-83247] N82-18652

Heat reflecting field stop [NASA-CASE-LAR-12443-1] N82-19030

OPTICAL FILTERS

Investigation of large capacity optical memories for correlator applications [AD-A108555] N82-18883

OPTICAL MEASURING INSTRUMENTS

Small size-range extension of an optical particle counter [PB82-103623] N82-18575

OPTICAL MEMORY (DATA STORAGE)

Investigation of large capacity optical memories for correlator applications [AD-A108555] N82-18883

OPTICAL PATHS

The effect of atmospheric turbulence on air to ground photography [RAE-TR-81065] N82-18555

OPTICAL PROPERTIES

Optical investigations of the recombination processes in laser-annealed and thermally-annealed semiconductors [AD-A108627] N82-19071

OPTICAL RADAR

Pulsed heterodyne CO2 laser/scanner system [AD-A108186] N82-18589

Measurements of lidar backscattering from clouds [ESA-TT-689] N82-18600

OPTICAL RESONATORS

Semiconductor injection lasers with a circular resonator: A study of GaAs-(GaAl)As dielectric waveguides and their incorporation into a laser resonator N82-18576

OPTICAL WAVEGUIDES

Semiconductor injection lasers with a circular resonator: A study of GaAs-(GaAl)As dielectric waveguides and their incorporation into a laser resonator N82-18576

Fiber optic transmission line stabilization apparatus and method [NASA-CASE-NPO-15036-1] N82-19029

NITINOL interconnect device for optical fiber waveguides [AD-A108278] N82-19033

OPTIMAL CONTROL

Extension of proportional navigation by the use of optimal filtering and control methods [ESA-TT-683] N82-18199

A dynamic measure of controllability and observability for the placement of actuators and sensors on large space structures [NASA-CR-168520] N82-18310

Optimal control of an M/G/1 queueing system [INPE-2139-RPE/362] N82-18929

OPTIMIZATION

Parametric criteria and impact on design trends N82-18139

One class of optimum linear equally spaced antenna arrays with summary of difference radiation patterns [AD-A108176] N82-18470

Dynamic analysis and design of constrained mechanical systems [AD-A108665] N82-18629

Design sensitivity analysis and optimization of constrained dynamic systems [AD-A108664] N82-18630

Generalized coordinate partitioning in dynamic analysis of mechanical systems [AD-A108663] N82-18631

FEDSOL: Program user's manual and economic optimization guide for solar Federal building projects [PB82-107012] N82-18729

Topics in computational geometry N82-18913

Computable optimal value bounds and solution vector estimates for general parametric NLP programs
[AD-A106229] N82-18954

Optimization in statistics: An introduction
[AD-A106653] N82-18960

Optimization of functions of matrices with applications to statistical problems
[AD-A106988] N82-18967

Design optimization of the chlorination process. Volume 1: Comparison of optimized pilot system with existing full scale systems
[PB82-100836] N82-19110

ORBIT CALCULATION
General study of optimal low thrust, limited power transfers between arbitrary elliptical orbits
[ESA-TT-697] N82-18271

The prediction of satellite ephemeris errors as they result from surveillance system measurement errors
[AD-A106477] N82-19115

ORBITAL ASSEMBLY
Mobile work station concept for assembly of large space structures (zero gravity simulation tests)
N82-18289

Orbiter based construction equipment N82-18290

General description of nestable column structural and assembly technology — large space structures
[NASA-TM-83256] N82-18626

ORBITAL MECHANICS
Relativistic effects in the solar system
[IFKKI-81/2] N82-19112

Part 1: Relativistic pathway modification of the planets N82-19113

ORBITAL POSITION ESTIMATION
An adaptive satellite orbit estimation scheme using an analytical approach and a dynamical model compensation technique
[INPE-2304-PRE/072] N82-18270

A study of autonomous rendezvous and docking systems N82-18298

ORBITAL RENDEZVOUS
A study of autonomous rendezvous and docking systems N82-18298

ORBITAL WORKSHOPS
Mobile work station concept for assembly of large space structures (zero gravity simulation tests)
N82-18289

OREGON
Wind-ceiling-visibility data at selected airports. Volume 8: Northwest region
[AD-A106168] N82-18829

ORGANIC COMPOUNDS
Quality assurance audits for SIP and NECRMP emission inventories: New York and New Jersey
[PB82-114273] N82-18767

ORGANIC WASTES (FUEL CONVERSION)
Physical and chemical characteristics of synthetic asphalt produced from liquefaction of sewage sludge
[PB82-119062] N82-18422

ORGANIZATIONS
Non-Federal computer acquisition practices provide useful information for streamlining Federal methods
[PB82-120924] N82-19091

ORIFICES
The velocity field near the orifice of a Helmholtz resonator in grazing flow
[NASA-CR-166546] N82-18994

OROGRAPHY
Winter and summer simulations with the GLAS climate model
[NASA-TM-83866] N82-18807

OSCILLATING FLOW
Developments in rotary wing aircraft aerodynamics
N82-18120

An experimental investigation of gapwise periodicity and unsteady aerodynamic response in an oscillating cascade. Volume 2: Data report. Part 1: Text and mode 1 data
[NASA-CR-165457-VOL-2-PT-1] N82-18180

An experimental investigation of gapwise periodicity and unsteady aerodynamic response in an oscillating cascade. Volume 2: Data report. Part 2: Mode 2 data
[NASA-CR-165457-VOL-2-PT-2] N82-18181

Interpretation and construction of a dynamic similarity model of the A 310 wings
[MBB-FE-17/S/PUB/42] N82-18212

OSCILLATION DAMPERS
Apparatus for damping operator induced oscillations of a controlled system — flight control
[NASA-CASE-FRC-11041-1] N82-18493

OSCILLATIONS
Cavity oscillation in cruise missile carrier aircraft
[AD-A106610] N82-18185

Characteristics of the 6300 angstrom OI luminescence at a low latitude American sector
[INPE-2114-RPE/338] N82-18783

Stabilization of the numerical integration of equations of motion
[ESA-TT-676] N82-18961

OSCILLATORS
Small signal design of a dielectric resonator stabilized oscillator
[INPE-2285-PRE/061] N82-18510

OUTCROPS
The environmental stratigraphy and depositional systems of the precambrian (?)-Cambrian campito formation, eastern California and western Nevada
N82-18768

OUTPUT
Measurements of wake interaction effects on the power output from small wind turbine models
[FFA-TN-HU-2189-PT-5] N82-18720

OXIDATION
Ammoxidation of toluene and xylenes to nitriles
[PB82-105420] N82-18361

The oxidation of dilute iron-silicon alloys ((Si) or = 1w/o) in carbon dioxide
[AD-A106326] N82-18372

Oxidation and formation of deposit precursors in hydrocarbon fuels
[NASA-CR-165534] N82-18402

Effect of oxidation of soil organic matter on water quality: Role of nitrification and denitrification
[PB82-103946] N82-18755

OXIDATION RESISTANCE
Mitigation of conductive fiber release by selected coatings
[AD-A106270] N82-18326

OXIDATION-REDUCTION REACTIONS
Chronoamperometric transients at the stationary disk microelectrode
[AD-A106567] N82-18519

OXYGEN IONS
The properties of ionospheric singly ionized oxygen ions as observed in the magnetotail boundary layer and northern plasma lobe
[IPS-81-11] N82-18797

OZONE
An investigation of chemistry and toxicity of ozone-produced oxidants and bromate to selected estuarine species
[PB82-116351] N82-18765

The Stratosphere 1981: Theory and measurements
[NASA-TM-84125] N82-18770

Multidimensional aspects: Ozone, temperature and transport N82-18772

Model predictions and trend analysis N82-18773

OZONOMETRY
Stratospheric instruments and analyses
N82-18776

P

P-N-P JUNCTIONS
Photovoltaic detectors for infrared operation
[INPE-2146-RPE/366] N82-19059

PACIFIC OCEAN
Oceanographic and Meteorological Conditions in the North Pacific
[AD-A106754] N82-18654

PACKAGING
General description of nestable column structural and assembly technology — large space structures
[NASA-TM-83256] N82-18626

Development of thin wraparound junction silicon solar cells
[NASA-CR-165570] N82-18689

Design of sounding rocket payloads
[AD-A106271] N82-18792

PALLADIUM
Thermal and electrical properties of solids at low temperatures
[DE82-000727] N82-18993

PANELS
Shrinkage effects in T-fillet welds in 5083 aluminum
[PB82-114570] N82-18611

PARABOLIC REFLECTORS
Computer implementation of a program for the analysis of circular reflectors using the geometric theory of diffraction
[INPE-2132-RPE/356] N82-18452

PARALLEL FLOW
Thermal hydraulic stability of flow in parallel channels N82-18638

PARALLEL PROCESSING (COMPUTERS)
A quantitative evaluation of the feasibility of, and suitable hardware architecture for, an adaptive parallel finite-element system
[AD-A106492] N82-18867

PARALLEL PROGRAMMING
Coordination of computation in a binary tree of processors: An architectural proposal N82-18878

PARAMAGNETISM
Paramagnetic susceptibility of phosphorus doped silicon
[INPE-2105-RPE/332] N82-19064

PARAMETER IDENTIFICATION
ACOSS eight (Active Control Of Space Structures), phase 2
[AD-A106629] N82-18313

On sequential unbiased and Bayes type estimates of parameters in a contingency table N82-18970

PARAMETERIZATION
Parametric criteria and impact on design trends
N82-18139

PARITY
Spontaneous breakdown of chiral symmetry in semi-classical method. 1: Boundary condition on the path integral
[CNRS-CPT-80-P-1217] N82-18956

Weak-interaction experiments at low energies: Results from atomic and nuclear physics
[DE82-001724] N82-19021

PARSING ALGORITHMS
Flexible parsing
[AD-A109076] N82-18940

PARTIAL DIFFERENTIAL EQUATIONS
The line method for solving partial differential equations encountered in the literature N82-18960

PARTICLE ACCELERATOR TARGETS
Neutron transport from targets to moderators
[PB82-106915] N82-19027

PARTICLE ACCELERATORS
Space experiments with particle accelerators — Spacelab N82-18241

PARTICLE BEAMS
Phenomena induced by charged particle beams — experimental design for Spacelab N82-18242

Mapping of electrical potential distributions with charged particle beams
[NASA-CR-168558] N82-18508

Standard test case runs for the EMPULSE monopole fieldsolver and conductivity generation model
[AD-A106739] N82-18990

PARTICLE COLLISIONS
Charge transfer cross-sections of argon ions colliding on argon atoms
[CEA-CONF-5209] N82-19014

Electron vacancy production in near-symmetric collisions of 100 MeV copper ions
[ANU-P-771] N82-19018

Analytic optical potentials for nucleon-nucleus nucleus-nucleus collisions involving light and medium nuclei
[NASA-TM-83224] N82-19028

PARTICLE EMISSION
STS-2 Induced Environment Contamination Monitor (IECM): Quick-look report
[NASA-TM-82457] N82-18870

PARTICLE INTERACTIONS
Feynman path integral and Poisson processes with piecewise classical paths
[CNRS-CPT-80-P-1244] N82-18957

Study of inclusive semi-leptonic neutral current reactions in neutrino and antineutrino interactions between 12 and 200 GeV
[CEA-N-2150] N82-19015

PARTICLE MOTION
DC-magnetic field vector measurement
N82-18245

PARTICLE SIZE DISTRIBUTION
Coagulation and deposition of ultrafine aerosols in turbulent pipe flow N82-18535
PARTICLE SPIN
Spontaneous breakdown of chiral symmetry in semi-classical method. 1: Boundary condition on the path integral
[CNRS-CPT-80-P-1217] N82-18956
Weak-interaction experiments at low energies: Results from atomic and nuclear physics
[DE82-001734] N82-19021
Comparison of two-particle cluster expansions for b.c.c. spin of 1/2 systems N82-19047
PARTICLE THEORY
On the composite structure of elementary particles N82-19003
PARTICLE TRAJECTORIES
Mapping of electrical potential distributions with charged particle beams
[NASA-CR-166558] N82-18508
PARTICLES
Small size-range extension of an optical particle counter
[PB82-103623] N82-18575
PARTICULATE SAMPLING
Physicochemical properties of diesel particulate matter N82-18335
Mesoscale studies of flow regimes and fluxes of particulate matter in coastal waters
[DE82-001740] N82-18850
PASSENGER AIRCRAFT
A study to define the research and technology requirements for advanced turbo/propfan transport aircraft
[NASA-CR-166138] N82-18202
PASSENGERS
Effect of tactile vibration on annoyance to synthesized propfan noise
[NASA-TM-83256] N82-18866
PATENT POLICY
Patent Abstract Digest, volume 1
[AD-A108672] N82-19100
Patent Abstract Digest, volume 2
[AD-A108673] N82-19101
Patent Abstract Digest, volume 3
[AD-A108674] N82-19102
PATTERN METHOD (FORECASTING)
Experimental model studies of a hydraulic ram with special emphasis on the velocities in the ram tube
[MPIS-28/1980] N82-18550
PATTERN RECOGNITION
On connectivity properties of grayscale pictures
[AD-A108602] N82-18563
Synthesis of textures using simultaneous autoregressive models
[AD-A108584] N82-18936
Qualitative texture discrimination
[AD-A108582] N82-18937
Computational approaches to image understanding
[AD-A108191] N82-18938
Flexible parsing
[AD-A109076] N82-18940
Multi-sample cluster analysis and approaches to validity studies in clustering individuals N82-18968
PATTERN REGISTRATION
Automatic relocation of ground control points in LANDSAT imagery
[RAE-TR-81071] N82-18657
PAVEMENTS
Investigation of compaction criteria for airport pavement subgrade soils
[AD-A108516] N82-18230
Energy equivalents for selected pavement materials: Their production and placement
[PB82-121187] N82-18433
PAYLOADS
Applied research and development of falling-sphere densitometers payloads of improved design
[AD-A108316] N82-18580
Laser rocket system analysis N82-18584
Design of sounding rocket payloads
[AD-A108271] N82-18792
PELLETS
Densification of refuse-derived fuels: Preparation, properties and systems for small communities
[PB82-103804] N82-18408
Fundamental considerations for preparing densified refuse derived fuel
[PB82-101686] N82-18410
Wavelength scaling for reactor-size laser fusion targets
[AD-A108547] N82-18591
PERFORMANCE PREDICTION
LOS selective fading and AN/FRC-170(V) radio hybrid computer simulation phase A report
[AD-A108747] N82-18457
PERFORMANCE TESTS
Test setups for the development of high voltage circuit breakers for high short circuit capacities
[BMFT-FB-T-81-194] N82-18514
Measurement and evaluation methods for an angular accelerometer
[PB82-115973] N82-18572
Performance testing of four skimming systems
[PB82-101353] N82-18756
PERIODIC VARIATIONS
Application of the ONER dynamic stall model to a helicopter blade in forward flight N82-18161
PERIPHERAL EQUIPMENT (COMPUTERS)
Programmable multiple digital cassette memory
[INPE-2099-RPE/329] N82-18880
PERMAFROST
Manual on physico-chemical strengthening of freezing and thawing soils
[NRC/CNR-TT-1976] N82-18416
PERMITTIVITY
Measurement of the dielectric constant of ceramic Al2O3 substrates
[LEOK-TR-1980-04] N82-18392
PERSHING MISSILE
Implementation of an overlaid version of P2 simulation
[AD-A108592] N82-18307
PERSONNEL MANAGEMENT
Flight ergonomics in the aircraft industry personnel-ergonomic development
[MBB-FE-301/S/PUB/44] N82-18872
PERSONNEL SELECTION
Flight ergonomics in the aircraft industry personnel-ergonomic development
[MBB-FE-301/S/PUB/44] N82-18872
PERTURBATION
Sensitivity of the characteristic gain loci
[PB82-113481] N82-18963
PERTURBATION THEORY
A rapid estimation of near Earth satellite lifetimes with quasi-dynamic atmosphere model with application to a proposed Brazilian satellite
[INPE-2287-PRE/063] N82-18272
Stabilization of the numerical integration of equations of motion
[ESA-TT-676] N82-18961
PETROLOGY
Studies related to the deep earth gas
[PB82-103821] N82-18409
PHASE DIAGRAMS
Effect of thermal cycling on the movement of the alpha Zr/alpha Zr-2.5 wt percent Nb alloy
[AECL-6883] N82-18379
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 1. Task 1: Binary ternary and quarternary phase diagrams containing Li(+), Na(+), K(+), CO3(=), SO3(=) and OH(-)
[DE82-000690] N82-18704
PHASE LOCKED SYSTEMS
FM modulators using a phase locked loop
[INPE-2293-NTE/177] N82-18511
PHASE MODULATION
A four-phase modulation system for use with and adaptive array N82-18446
A 10 MHz 60 deg PM demodulator
[INPE-2157-RPE/376] N82-18513
PHASE SHIFT
Competition effects in lasers
[AD-A108658] N82-18592
Formulation of normalized non-linear free electron laser equations
[AD-A108358] N82-18596
PHASE SHIFT CIRCUITS
Fiber optic transmission line stabilization apparatus and method
[NASA-CASE-NPO-15096-1] N82-19029
PHASE SHIFT KEYING
Carrier recovery system for modem applications with digital processing using PSK or DPSK modulation
[INPE-2095-RPE/325] N82-18923
PHASE TRANSFORMATIONS
The formation of a ring vortex at a circular jet nozzle and its transformation during takeoff into a liquid layer and at the liquid surface
[MPIS-27/1980] N82-18186
Comparison of two-particle cluster expansions for b.c.c. spin of 1/2 systems N82-19047
Zero sound attenuation from order parameter fluctuations in liquid He-3 N82-19049
A model for stored energy in amorphous silica
[AERE-TP-877] N82-19073
PHENYLS
Quantitative chromatographic analyses of N-phenyl-alpha-naphthylamine and N-phenyl-beta-naphthylamine
[AD-A108362] N82-18345
PHONONS
Electron-phonon scattering rates in antimony. Radio-frequency size effect N82-19048
PHOSPHAZENE
Carboranylcyclotriphosphazenes and their polymers — thermal insulation
[NASA-CASE-ARC-11178-1] N82-18389
PHOSPHORUS
Radiation effects in amorphous metallic alloys — phosphorus segregation
[DE82-001603] N82-18378
Electron hopping energy influence on the specific heat and conductivity of phosphorus doped silicon
[INPE-2301-PRE/070] N82-19044
Diagonal and off-diagonal disorder in doped semiconductors
[INPE-2292-PRE/067] N82-19057
Electrical resistivity of P ions implanted on Si
[INPE-2145-RPE/367] N82-19060
Paramagnetic susceptibility of phosphorus doped silicon
[INPE-2105-RPE/332] N82-19064
PHOSPHORUS POLYMERS
Carboranylcyclotriphosphazenes and their polymers — thermal insulation
[NASA-CASE-ARC-11178-1] N82-18389
PHOTOCHEMICAL REACTIONS
Characterization of scrubbed and unscrubbed power plant plumes
[PB82-101346] N82-18761
The Stratosphere 1981: Theory and measurements
[NASA-TM-84125] N82-18770
Multidimensional aspects: Ozone, temperature and transport N82-18772
Chemical kinetics and photochemistry N82-18774
Laboratory measurements of cometary photochemical phenomena
[NASA-CR-166506] N82-19123
PHOTOCONDUCTIVITY
Photoexcitations in polyacetylene
[AD-A107831] N82-18393
PHOTOCONDUCTORS
An inexpensive photoelectric remote tilt meter
[PB82-103649] N82-18567
PHOTODIODES
A photon-counting photodiode array detector for far ultraviolet (FUV) astronomy
[NASA-CR-166551] N82-19116
PHOTODISSOCIATION
Laboratory measurements of cometary photochemical phenomena
[NASA-CR-166506] N82-19123
PHOTOELECTRIC EFFECT
Competition effects in lasers
[AD-A108658] N82-18592
PHOTOELECTRIC EMISSION
A theoretical study of photo-field emission from a metal surface N82-19046
PHOTOLUMINESCENCE
Photoexcitations in polyacetylene
[AD-A107831] N82-18393
PHOTOMETRY
Spacelab mission 1 experiment descriptions second edition
[NASA-TM-82448] N82-18234
Atmospheric emission photometric imaging N82-18243
The use of element-specific detectors coupled with high-performance liquid chromatographs
[AD-A108539] N82-18343

PHOTOMULTIPLIER TUBES
Tests concerning technological problems with charge transfer electron multipliers
[TDI/1.1851/80] N82-18530
PHOTONS
A photon-counting photodiode array detector for far ultraviolet (FUV) astronomy
[NASA-CR-168551] N82-19118
PHOTOOXIDATION
Feasibility of photocatalytic oxidation for wastewater clean-up and reuse
[PB82-108457] N82-18358
PHOTOSENSITIVITY
The ultimate efficiency of photosensitive systems
[NASA-TM-83230] N82-18696
PHOTOSPHERE
Theoretical studies of the RS Canum Venaticorúm stars
[NASA-CR-168549] N82-19116
PHOTOVOLTAIC CELLS
Development of thin wraparound junction silicon solar cells
[NASA-CR-165570] N82-18689
Market assessment of photovoltaic power systems for agricultural applications in Nigeria
[NASA-CR-165511] N82-18698
I-V characterization of solar cells
[INPE-2141-RPE/363] N82-18699
Development and tests of experimental solar generators for concentrating systems
[BMFT-FB-T-81-193] N82-18718
Photovoltaic detectors for infrared operation
[INPE-2146-RPE/368] N82-19059
PHOTOVOLTAIC CONVERSION
The ultimate efficiency of photosensitive systems
[NASA-TM-83230] N82-18696
Market assessment of photovoltaic power systems for agricultural applications in Nigeria
[NASA-CR-165511] N82-18698
PHYSICAL CHEMISTRY
Physicochemical properties of diesel particulate matter N82-18335
PHYSICAL FITNESS
Statistical tools for determining fitness to fly
[AD-A108599] N82-18860
PHYSIOCHEMISTRY
Manual on physico-chemical strengthening of freezing and thawing soils
[NRC/CNR-TT-1978] N82-18416
PHYSIOLOGICAL EFFECTS
Physiological acceptability tests of the SJU-5/A ejection seat: Second physiological acceptance demonstration
[AD-A108688] N82-18194
Hydrogen cyanide health effects
[PB82-116039] N82-18864
Ammonia health effects
[PB82-116047] N82-18865
Effect of tactile vibration on annoyance to synthesized propfan noise
[NASA-TM-83258] N82-18866
PHYSIOLOGICAL TESTS
Three-dimensional ballistocardiography in weightlessness N82-18262
Study of chlorine dioxide and its metabolites in man
[PB82-109356] N82-18863
PILOT PLANTS
Fundamental considerations for preparing densified refuse derived fuel
[PB82-101668] N82-18410
Report on the experiences with the gas compression heat pump system of the school and sports center at Altenkunstadt
[BMFT-FB-T-81-175] N82-18552
Construction and operation of a one ton per hour pilot plant for the VEW coal conversion process
[BMFT-FB-T-81-177] N82-18712
PINHOLE CAMERAS
Applications of multi-pinhole gamma camera collimation to tomography and image enhancement N82-18554
PIPE FLOW
Coagulation and deposition of ultrafine aerosols in turbulent pipe flow N82-18535
PIPES (TUBES)
On the relationship between transitional and fully turbulent shear flow
[AD-A108367] N82-18547
Demonstration of crack growth by delayed hydrogen cracking in the rolled joints of Zr-2.5% Nb pressure tubes
[AECL-6863] N82-18637
PLANAR STRUCTURES
Generalized coordinate partitioning in dynamic analysis of mechanical systems
[AD-A108683] N82-18631
PLANE WAVES
Determination of the field scattered by an axially incident plane wave
[INPE-2179-NTE/175] N82-18448
On the electromagnetic plane wave scattering from a wire grid with rhombic cells
[REPT-S-114] N82-18486
PLANETARY ATMOSPHERES
Planetary magnetospheres
[NASA-TM-83841] N82-19122
PLANETARY MAGNETIC FIELDS
Planetary magnetospheres
[NASA-TM-83841] N82-19122
PLANNING
Plan synthesis: A logical perspective
[AD-A108733] N82-18933
PLASMA CONDUCTIVITY
Standard test case runs for the EMPULSE monopole fieldsolver and conductivity generation model
[AD-A108739] N82-18990
PLASMA CONTROL
Dynamics of an intense electron ring in a modified betatron field
[AD-A108359] N82-19010
PLASMA DECAY
The influence of impurities on the discharge behavior in SPICA — plasma screw pinch confinement apparatus (SPICA)
[REPT-81-135] N82-19041
PLASMA DIAGNOSTICS
Quark-gluon plasma and ultra-relativistic nucleus-nucleus collisions
[DE81-030321] N82-19023
Principles and applications of radio frequency impedance probes
[AD-A108677] N82-19038
Activities Report of the Institute for Plasma Research N82-19043
PLASMA DRIFT
Theoretical analysis of the real and apparent velocities of vertical plasma drift in the equatorial ionosphere
[INPE-2143-RPE/365] N82-18782
Theoretical aspects of the nonlinear interaction of drift-type instabilities in a plasma N82-19035
PLASMA DYNAMICS
On the self-consistent solutions of pulsar plasma waves
[INPE-2302-PRE/071] N82-19036
PLASMA INTERACTIONS
Theoretical aspects of the nonlinear interaction of drift-type instabilities in a plasma N82-19035
PLASMA JETS
The influence of impurities on the discharge behavior in SPICA — plasma screw pinch confinement apparatus (SPICA)
[REPT-81-135] N82-19041
PLASMA PHYSICS
Spacelab mission 1 experiment descriptions second edition
[NASA-TM-82448] N82-18234
Study of laser created metal vapour plasmas
[AD-A108586] N82-18594
Equilibrium studies of skin like pressure and current-density profiles — Tokamaks
[REPT-81-134] N82-19040
PLASMA PINCH
The influence of impurities on the discharge behavior in SPICA — plasma screw pinch confinement apparatus (SPICA)
[REPT-81-135] N82-19041
PLASMA WAVES
The global Pc 5 event of 14-15 November 1979
[AD-A108143] N82-18789
On the self-consistent solutions of pulsar plasma waves
[INPE-2302-PRE/071] N82-19036
Physical mechanism of wave-particle resonances in a curved magnetic field
[AD-A108360] N82-19039
PLASMA-PARTICLE INTERACTIONS
Phenomena induced by charged particle beams — experimental design for Spacelab N82-18242
PLASMAPAUSE
The properties of ionospheric singly ionized oxygen ions as observed in the magnetotail boundary layer and northern plasma lobe
[IPS-81-11] N82-18797
PLASMONS
Plasmon excitation in alkaline earth metals N82-19045
PLASTIC DEFORMATION
Studies on plastic instability, notch deformation and hydrogen effects in spheroidized steel N82-18366
The effect of hydrogen on the solid solution strengthening and softening of nickel
[AD-A108654] N82-18374
Determination crack tip field parameters for elastic-plastic materials via an estimation scheme
[AD-A108267] N82-18636
PLASTIC FLOW
Birefringence and stress in polymer melts under shear and extension N82-18391
PLASTIC PROPERTIES
Inelastic beam buckling experiments
[PB82-103292] N82-18648
PLATES (STRUCTURAL MEMBERS)
Shrinkage effects in bead-on-plate welds in 5083 aluminium
[PB82-114596] N82-18610
PLATING
Selective jet plating N82-18338
PLOWING
Subsea trenching in the Arctic
[AD-A108341] N82-18849
PLUMES
Fuel-rich plume combustion
[AD-A108136] N82-18349
Mechanisms of exhaust pollutants and plume formation in continuous combustion
[AD-A109059] N82-18350
Characterization of scrubbed and unscrubbed power plant plumes
[PB82-101346] N82-18761
POINT DEFECTS
Positron studies of point defect interactions in metals
[SF-02150] N82-19053
POINTING CONTROL SYSTEMS
LSS control technology N82-18293
Control of large space antennas: Wrap-rib-hoop/column N82-18294
Spatial, High-Accuracy, Positioning-Encoding Sensor (SHAPES) for large space system control applications N82-18295
LSS reference platform control N82-18297
POINTS
Shipboard exposure testing
[AD-A108146] N82-18375
POISSON EQUATION
A three-dimensional wind model for complex terrain N82-18802
POLARIMETERS
TM/TE polarization ratios in a sample of 30 kHz sferics received at altitudes from 0 to 70 km
[AD-A108182] N82-18464
POLARIZATION (SPIN ALIGNMENT)
Electron-spin-polarization effects in low energy electron diffraction, ion neutralization and metastable atom deexcitation at solid surfaces
[DE82-001179] N82-19019
POLICIES
Urban data for comparative analyses of cities
[PB82-125675] N82-19107
POLISHING
Ceramic roadway aggregates with improved polish and wear resistance
[PB82-103987] N82-18428
POLLUTION CONTROL
Evaluation of the North Island A/C crash/rescue training facility
[AD-A108740] N82-18228
Feasibility of photocatalytic oxidation for wastewater clean-up and reuse
[PB82-108457] N82-18358
Comparative study of air classifiers
[PB82-106121] N82-18411
Testing and analysis of a wet-dry crossflow cooling tower. Volume 1: Test program and results
[PB82-103771] N82-18752

Performance testing of four skimming systems
[PB82-101353] N82-18756
Study of automatic control system to maintain constant percentage SO2 retention in a pressurized FBC
[PB82-110693] N82-18758
Solar energy for pollution control
[PB82-116658] N82-18764
EPA utility FGD (Flue Gas Desulfurization) survey
[PB82-115656] N82-18766

POLLUTION MONITORING
Development of a multidetector petroleum oil in water monitor
[PB82-105206] N82-18566

POLLUTION TRANSPORT
Economic losses in the Columbus SMSA due to long-range transport of airborne residuals in the Ohio River Basin Energy Study Region
[PB82-110735] N82-18438
Inventory of emissions from marine operations within the California coastal waters
[PB82-105099] N82-18757
Evaluation of point source dispersion models
[PB82-121062] N82-18762

POLYACETYLENE
Photoexcitations in polyacetylene
[AD-A107831] N82-18393

POLYMER CHEMISTRY
Birefringence and stress in polymer melts under shear and extension N82-18391

POLYMER MATRIX COMPOSITES
Basic physical and chemical processes in space radiation effects on polymers N82-18277
Dynamic mechanical properties of some wood-polymer composite materials N82-18324

POLYMERIZATION
Carboranylcyclotriphosphazenes and their polymers — thermal insulation
[NASA-CASE-ARC-11176-1] N82-18389
Quantum chemical investigations of the mechanism of cationic polymerization and theoretical prediction of crystal densities and decomposition pathways of energetic molecules
[AD-A108520] N82-18396

POLYMERS
Properties of multiphase polyurethane systems
[AD-A108519] N82-18397

POLYNOMIALS
Mathematical techniques for nonlinear system history
[AD-A108370] N82-18953

POLYURETHANE RESINS
Properties of multiphase polyurethane systems
[AD-A108519] N82-18397

POLYVINYL CHLORIDE
Properties of multiphase polyurethane systems
[AD-A108519] N82-18397

POPULATIONS
Fourth Annual Community Planning and Development Challenges: Energy, Environment, Water
[PB82-125790] N82-19108

POROUS MATERIALS
Development of novel porous substrates for ultrafiltration, desalination and water reclamation, part 2
[PB82-103920] N82-18363
Probabilistic and hazard analysis for pore pressure increase in soils due to seismic loading
[PB82-122417] N82-18429

PORTABLE EQUIPMENT
Personal miniature electrophysiological tape recorder N82-18263

POSITION (LOCATION)
A possible way of specifically correcting location and navigational errors caused by reflection and other propagation anomalies
[ESA-TT-667] N82-18198
Tone receiver for satellite position determination
[INPE-2159-RPE/378] N82-18306
A dynamic measure of controllability and observability for the placement of actuators and sensors on large space structures
[NASA-CR-168520] N82-18310

POSITION ERRORS
A possible way of specifically correcting location and navigational errors caused by reflection and other propagation anomalies
[ESA-TT-667] N82-18198

POSITRON ANNIHILATION
Positron studies of point defect interactions in metals
[SF-02150] N82-19053

POSTFLIGHT ANALYSIS
STS-2 Induced Environment Contamination Monitor (IECM): Quick-look report
[NASA-TM-82457] N82-18870

POSTMISSION ANALYSIS (SPACECRAFT)
Mission operation report: Space Shuttle program. STS-2 postflight medical operations
[NASA-TM-84135] N82-18858

POSTURE
Vestibulo-spinal reflex mechanisms N82-18257

POTABLE WATER
Mission operation report: Space Shuttle program. STS-2 postflight medical operations
[NASA-TM-84135] N82-18858

POTASSIUM COMPOUNDS
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 1. Task 1: Binary ternary and quarternary phase diagrams containing Li(+), Na(+), K(+), CO3(=), SO3(=) and OH(-)
[DE82-000690] N82-18704

POTENTIAL FLOW
The problem of calculation of the flow around helicopter rotor blade tips N82-18160
An integral equation for the velocity field of irrotational flows around blunt bodies
[ESA-TT-702] N82-18551

POTENTIAL THEORY
On the calculation of transonic blade tip flow for helicopter rotors
[MBB-UD-320-81-O] N82-18187

POWDER METALLURGY
Mechanical-property data CT 91-T7E69 aluminum, powder metallurgy product
[AD-A108710] N82-18373

POWER EFFICIENCY
A two dimensional study of the maximum power that can be obtained from a wind turbine in a wind shear layer
[FFA-134] N82-18719
Measurements of wake interaction effects on the power output from small wind turbine models
[FFA-TN-HU-2189-PT-5] N82-18720

POWER LINES
The design, fabrication and installation of cable routing mockups in support of Spacelab 2
[NASA-CR-161975] N82-18312
Cables for face equipment standardization of requirements
[PB82-113820] N82-18685

POWER PLANTS
Conceptual design of a solar cogeneration facility industrial process heat. Volume 2: Appendices
[DE82-001578] N82-18702

POWER SPECTRA
Quasi-elastic laser light diffusion
[CISE-1711] N82-18598

POWER TRANSMISSION (LASERS)
Space Laser Power Transmission System Studies — conferences
[NASA-CP-2214] N82-18578
Preliminary study on the use of lasers for the transmission of power N82-18579
A study to survey NASA laser applications and identify suitable lasers for specific NASA needs
N82-18580
Investigation of possibilities for solar-powered high-energy lasers in space N82-18581

PRECIPITATION (METEOROLOGY)
Water resources data for California. Volume 4: Northern Central Valley Basins and the Great Basin from Honey Lake Basin to Oregon state line
[PB82-117011] N82-18684
Aircraft measurements and analysis of severe storms: 1976 field experiment
[NASA-CR-168519] N82-18803
Radar detection of turbulence in thunderstorms
[AD-A108679] N82-18812
Experiments in regional scale numerical weather prediction including use of SESAME '79 data
[AD-A108372] N82-18837

PREDICTION ANALYSIS TECHNIQUES
Prediction of laminar-to-turbulent boundary layer transition in axial-flow turbomachinery
[AD-A108642] N82-18545
State-of-the-art for assessing earthquake hazards in the United States. Interpretation of strong ground motion records
[AD-A108615] N82-18793
The prediction of satellite ephemeris errors as they result from surveillance system measurement errors
[AD-A108477] N82-19115

PRELAUNCH SUMMARIES
INTELSAT V-D (F-4) launch
[NASA-TM-84133] N82-18273
Launch mission summary: INTELSAT 5 (F4) ATLAS/CENTAUR-58
[NASA-TM-84132] N82-18274

PRESIDENTIAL REPORTS
The Global 2000 report to the President. Entering the twenty-first century, volume 1
[PB82-100801] N82-19080
The Global 2000 report to the President. Entering the twenty-first century, volume 2
[PB82-100819] N82-19081
The Global 2000 report to the President. Documentation on the Government's Global sectoral models: The Government's Global model, volume 3
[PB82-100827] N82-19082

PRESSURE DISTRIBUTION
Separated flow around helicopter bodies
N82-18163
Cavity oscillation in cruise missile carrier aircraft
[AD-A108610] N82-18185
Equilibrium studies of skin like pressure and current-density profiles — Tokamaks
[REPT-81-134] N82-19040

PRESSURE ICE
Subsea trenching in the Arctic
[AD-A108341] N82-18849

PRESSURE VESSELS
User's manual for Solid Propulsion Optimization Code (SPOC). Volume 1: Technical description
[AD-A108224] N82-18319
User's manual for Solid Propulsion Optimization Code (SPOC). Volume 2: User's guide
[AD-A108225] N82-18320
User's manual for Solid Propulsion Optimization Code (SPOC). Volume 3: Program description
[AD-A108226] N82-18321

PRESTRESSING
Vibration and buckling studies of pretensioned structures N82-18282

PRINTED CIRCUITS
A descriptive language for thin film conductors
[IND-FB-107] N82-18528

PRIORITIES
Time-sharing manual control and memory search: The joint effects of input and output modality competition, priorities and control order
[AD-A108721] N82-18867

PROBABILITY DENSITY FUNCTIONS
On simple robust confidence procedures
N82-18971

PROBABILITY DISTRIBUTION FUNCTIONS
Remarks concerning Chase's results on testing for ordered alternatives
[AD-A108148] N82-18974

PROBABILITY THEORY
Atlantic hurricane wind probability forecasting (WINDPA)
[AD-A108756] N82-18810
On sequential unbiased and Bayes type estimates of parameters in a contingency table N82-18970

PROBE METHOD (FORECASTING)
An automated low cloud prediction system
[AD-A108681] N82-18815

PROBLEM SOLVING
Numerical techniques for inverse problems
N82-18906
Topics in computational geometry N82-18913
Effect of automatic processing on specification of problem solutions for computer programs
[AD-A108570] N82-18919
An application of parallel computation to sequential computation: The problem of cost-effective resource allocation
[PB82-108739] N82-18925
Solution of large sets of linear equations using cellular arrays N82-18948
Automatic element reordering for finite element analysis with frontal solution schemes
[PB82-115114] N82-18966

Modern management in construction industry offices
[MBB-UR-493-81-O] N82-19085
PROCESS CONTROL (INDUSTRY)
Exploratory study on a universal workshop
[CETIM-1-4N-12-9] N82-18421
PROCESS HEAT
Open-cycle vapor compression heat pump
[PB82-110503] N82-18553
Industrial burner and process efficiency program
[PB82-115486] N82-18731
PROCUREMENT MANAGEMENT
Selling to NASA
[NASA-TM-84136] N82-19083
Corporate organizationl design and its effect on innovation
[PB82-108903] N82-19089
PRODUCT DEVELOPMENT
SH-606 test program N82-18141
Army Lynx: Product development matched to military combat development N82-18143
Tests concerning technological problems with charge transfer electron multipliers
[TDI/1.1861/80] N82-18530
Selling to NASA
[NASA-TM-84136] N82-19083
Modern management in construction industry offices
[MBB-UR-493-81-O] N82-19085
Corporate organizationl design and its effect on innovation
[PB82-108903] N82-19089
PRODUCTION ENGINEERING
Exploratory study on a universal workshop
[CETIM-1-4N-12-9] N82-18421
PRODUCTIVITY
A model for estimating the productivity of corn in the States of Sao Paulo
[INPE-2118-RPE/342] N82-18662
PROFILOMETERS
Electromagnetic subsurface measurements
[AD-A108192] N82-18489
PROGRAM VERIFICATION (COMPUTERS)
Honeywell information systems, advanced FORTRAN release 1.1
[PB82-106014] N82-18894
Hewlett Packard company HP-3000 series 3, COBOL 2/3000, release A.00.04
[PB82-106030] N82-18896
Datapoint 6600, COBOL 3.4
[PB82-106048] N82-18897
IBM corporation IBM 5280 COBOL, release 3
[PB82-106055] N82-18898
Microsoft, microsoft COBOL V4.40
[PB82-106063] N82-18899
Selecting sufficient sets of test paths for program testing N82-18905
Self-checking programs: An axiomatic approach to the validation of programs by the use of assertions
N82-18912
A heuristic for deriving loop functions
[AD-A108660] N82-18921
A program testing assistant
[AD-A108147] N82-18922
Generalizing specifications for uniformly implemented loops
[AD-A108585] N82-18949
PROGRAMMED INSTRUCTION
The JOVIAL (J73) workbook, volumes 10 through 12
[AD-A108528] N82-18917
The JOVIAL (J73) workbook, volumes 13 through 15
[AD-A108529] N82-18918
PROGRAMMING LANGUAGES
A descriptive language for thin film conductors
[IND-FB-107] N82-18526
A methodology for the evaluation of languages for the development of information system performance models N82-18907
The JOVIAL (J73) workbook, volumes 1 through 6
[AD-A108527] N82-18916
PROJECT PLANNING
Deployable platform systems development
N82-18291
Technological needs of advanced Earth-observation spacecraft N82-18292
LSS control technology N82-18293
Control of large space antennas: Wrap-rib-hoop/column N82-18294
Spatial, High-Accuracy, Positioning-Encoding Sensor (SHAPES) for large space system control applications N82-18295
Control technology development N82-18296
LSS reference platform control N82-18297
Ground work for project organization in development projects: Experience in space flight
[MBB-UR-476-81-O] N82-19088
PROPELLANT COMBUSTION
Theoretical considerations of boron combustion in ducted rockets
[ESA-TT-703] N82-18322
PROPELLANT DECOMPOSITION
Decomposition and interaction of propellant ingredients
[AD-A108135] N82-18404
PROPELLANT GRAINS
User's manual for Solid Propulsion Optimization Code (SPOC). Volume 1: Technical description
[AD-A108224] N82-18319
User's manual for Solid Propulsion Optimization Code (SPOC). Volume 2: User's guide
[AD-A108225] N82-18320
User's manual for Solid Propulsion Optimization Code (SPOC). Volume 3: Program description
[AD-A108226] N82-18321
PROPELLANT SENSITIVITY
Description of hot spots associated with localized shear zones in impact tests
[AD-A108542] N82-18403
PROPELLER BLADES
Preliminary thoughts on helicopter cabin noise prediction methods N82-18148
Study of cabin noise control for twin engine general aviation aircraft
[NASA-CR-165833] N82-18995
PROPELLER FANS
A study to define the research and technology requirements for advanced turbo/propfan transport aircraft
[NASA-CR-166138] N82-18202
PROPELLERS
An extension of the local momentum theory to the rotors operating in twisted flow field N82-18123
Annoyance caused by propeller airplane flyover noise: Preliminary results
[NASA-TM-83244] N82-18996
PROPORTIONAL CONTROL
Extension of proportional navigation by the use of optimal filtering and control methods
[ESA-TT-683] N82-18199
PROPORTIONAL COUNTERS
A high resolution, high counting rate bidimensional, MWPC imaging detector for small angle X-ray diffraction studies
[PB82-120866] N82-18569
PROPRIOCEPTION
Identification of the adaptive feedback of the human motor system using the Response Difference Method (RDM)
[WTHD-134] N82-18869
PROPULSION SYSTEM PERFORMANCE
Prediction of off-design performance of turbo-shaft engines a simplified method N82-18132
Three-engine control system for the prototype EH-101 helicopter
[AEBG-9/81-1568L] N82-18135
Comparison of two parallel/series flow turbofan propulsion concepts for supersonic V/STOL
[NASA-TM-82743] N82-18178
PROTECTIVE COATINGS
Mitigation of conductive fiber release by selected coatings
[AD-A108270] N82-18328
Investigation of a galvanic separated aluminum coating as surface layer protection for high strength steel
[NBB-BB-486-O] N82-18383
Fully galvanic fabrication of complex forms
[MBB-BB-489-O] N82-18384
High temperature coatings for gas turbines: A review — diffusion coatings and their mechanical properties
[NLR-MP-81003-U] N82-18385
Investigation of the strength of galvanic deposits
[MBB-BB-487-O] N82-18641
Bond strength of galvanic coatings under thermal stress from the example of galvanic forming
[MBB-BB-488-O] N82-18642
PROTON IRRADIATION
An experimental determination of the effect of cyclic stress on void growth in ultra-high-purity aluminum during simultaneous 800 MeV proton irradiation
N82-18364
PROTOTYPES
Three-engine control system for the prototype EH-101 helicopter
[AEBG-9/81-1568L] N82-18135
The design, fabrication and installation of cable routing mockups in support of Spacelab 2
[NASA-CR-161975] N82-18312
PROVING
Self-checking programs: An axiomatic approach to the validation of programs by the use of assertions
N82-18912
PSYCHOACOUSTICS
Annoyance caused by propeller airplane flyover noise: Preliminary results
[NASA-TM-83244] N82-18996
PSYCHOLINGUISTICS
How an unfamiliar thing should be called
[AD-A109179] N82-18868
PULSARS
On the self-consistent solutions of pulsar plasma waves
[INPE-2302-PRE/071] N82-19036
PULSE CODE MODULATION
Test and evaluation of reduced rate multiplexers
[AD-A108202] N82-18463
Automated PCM encoder temperature test
[AD-A108184] N82-18889
PULSE COMMUNICATION
Test and evaluation of reduced rate multiplexers
[AD-A108202] N82-18463
PULSE GENERATORS
Simulation of pulsed IMPATT oscillators and injection-locked amplifiers
[AD-A108483] N82-18522
PULSE MODULATION
Measurements of antenna pulse response
[AD-A108181] N82-18465
PULSE RATE
A PRF sorter based on list manipulation techniques
[AD-A108365] N82-18934
PULSED LASERS
Theoretical studies of solar-pumped lasers
[NASA-CR-168554] N82-18577
Pulsed and CW semiconductor laser range finding for space flight applications
[MBB-UA-563-81-O] N82-18599
PURITY
An experimental determination of the effect of cyclic stress on void growth in ultra-high-purity aluminum during simultaneous 800 MeV proton irradiation
N82-18364

Q

QUALITY CONTROL
Nondestructive testing of CFRP
[MBB-BB-477-81-O] N82-18620
QUANTUM CHEMISTRY
Quantum chemical investigations of the mechanism of cationic polymerization and theoretical prediction of crystal densities and decomposition pathways of energetic molecules
[AD-A108520] N82-18396
QUANTUM CHROMODYNAMICS
Spontaneous breakdown of chiral symmetry in semi-classical method. 1: Boundary condition on the path integral
[CNRS-CPT-80-P-1217] N82-18956
Chromostatics of two-quark systems
[DE82-001181] N82-19022
Quark-gluon plasma and ultra-relativistic nucleus-nucleus collisions
[DE81-030321] N82-19023
QUANTUM MECHANICS
A unified cad model for MOSFETS N82-18501
Two-dimensional nuclear magnetic resonance in liquids N82-19005
Solitons in one-dimensional charge density wave systems N82-19051
The influence of the spin-rotor coupling of methyl groups in solids on their NMR relaxation
[ISBN-90-6231-090-7] N82-19055

QUANTUM THEORY
Feynman path integral and Poisson processes with piecewise classical paths
[CNRS-CPT-80-P-1244] N82-18957
QUARK PARTON MODEL
On the composite structure of elementary particles N82-19003
QUARKS
Chromostatics of two-quark systems
[DE82-001181] N82-19022
Quark-gluon plasma and ultra-relativistic nucleus-nucleus collisions
[DE81-030321] N82-19023
QUENCHING
The effect of hydrogen on the solid solution strengthening and softening of nickel
[AD-A108654] N82-18374
QUEUEING THEORY
Queueing analysis of a shared voice-data link
[AD-A108336] N82-18475
Optimal control of an M/G/1 queueing system
[INPE-2139-RPE/362] N82-18929
A closed queueing network model for multi-echelon repairable item provisioning
[AD-A108401] N82-18939

R

RADAR ANTENNAS
A survey of the limits on radar imaging
[AD-A108598] N82-18462
RADAR ECHOES
Radar detection of turbulence in thunderstorms
[AD-A108679] N82-18812
RADAR EQUIPMENT
Electromagnetic subsurface measurements
[AD-A108192] N82-18469
Simulation of modern radar apparatus in full mission flight and tactic simulators
[MBB-UA-565-81-O] N82-18482
RADAR IMAGERY
A survey of the limits on radar imaging
[AD-A108598] N82-18462
Study of synthetic aperture radar in 2D - 2FS operation over the ocean — European Remote Sensing system
[ESA-CR(P)-1475] N82-18481
RADAR MEASUREMENT
HF radar measurements of surface currents in the German Bight during MARSEN phase 2, part 2
[PB82-124553] N82-18852
RADIANCE
Usage and limitations of characteristic vector analysis of remote sensing multispectral data for the identification and quantification of water quality parameters N82-18656
RADIANT FLUX DENSITY
Measurement of the solar constant N82-18253
Solar spectrum from 170 to 3200 nanometers N82-18254
RADIATION COUNTERS
Isotopic stack - measurement of heavy cosmic ray isotopes N82-18246
A photon-counting photodiode array detector for far ultraviolet (FUV) astronomy
[NASA-CR-168551] N82-19118
RADIATION DETECTORS
Radiation detection with point-contact Josephson junctions N82-19054
RADIATION DOSAGE
Radiation environment mapping N82-18268
RADIATION EFFECTS
Advanced biostack experiment N82-18269
The effects of electron and gamma radiation on epoxy-based materials N82-18276
Basic physical and chemical processes in space radiation effects on polymers N82-18277
Pulsed radiolysis of model aromatic polymers and epoxy based matrix materials N82-18278
Radiation effects in amorphous metallic alloys — phosphorus segregation
[DE82-001603] N82-18378
Winter and summer simulations with the GLAS climate model
[NASA-TM-83866] N82-18807
Transient conductance spectroscopy measurements of defect states in Gamma-irradiated n-channel silicon field effect transistors with possible Gamma-dosemeter applications
[AAEC/E-504] N82-19077
RADIATION HAZARDS
Radiation environment mapping N82-18268
Advanced biostack experiment N82-18269
RADIATION MEASUREMENT
Radiation environment mapping N82-18268
RADIATION TRANSPORT
Angular scattering and channeling widths of positive and negative particles at multi-GeV energies
[DE82-002933] N82-19024
RADIATIVE HEAT TRANSFER
Soot radiation from diffusion flames N82-18334
RADICALS
Optical spectra of nonmetallic inorganic transient species in aqueous solution
[PB82-109141] N82-18359
Laboratory measurements of cometary photochemical phenomena
[NASA-CR-168506] N82-19123
RADIO ASTRONOMY
H2O maser survey in the magnellanic clouds
[INPE-2279-PRE/057] N82-18781
RADIO COMMUNICATION
Ultramicrowave communications system, phase 3
[NASA-CR-167519] N82-18444
RADIO ECHOES
Ionosphere research
[AD-A108905] N82-18794
RADIO EMISSION
Time delays in solar bursts measured in the mm-cm range of wavelengths
[INPE-2251-PRE/034] N82-19125
RADIO EQUIPMENT
LOS selective fading and AN/FRC-170(V) radio hybrid computer simulation phase A report
[AD-A108747] N82-18457
Radio equipment for propagation experiments at the frequencies 11, 18, and 36 GHz
[FOA-A-30027-E2] N82-18490
RADIO FILTERS
A double-balanced mixer for 2 GHz
[INPE-2150-RPE/371] N82-18453
RADIO FREQUENCIES
Principles and applications of radio frequency impedance probes
[AD-A108677] N82-19038
Electron-phonon scattering rates in antimony: Radio-frequency size effect N82-19048
RADIO FREQUENCY HEATING
Activities Report of the Institute for Plasma Research N82-19043
RADIO FREQUENCY INTERFERENCE
A review of satellite communication and propagation experiments for frequencies above 10 GHz
[DFVLR-MITT-81-08] N82-18485
RADIO RECEIVERS
A possible way of specifically correcting location and navigational errors caused by reflection and other propagation anomalies
[ESA-TT-667] N82-18198
Ultramicrowave communications system, phase 3
[NASA-CR-167519] N82-18444
Integral equation approach to the propagation of low-frequency groundwaves over irregular terrain. 2: Two-dimensional terrain features and elevated receivers
[AD-A108578] N82-18459
TM/TE polarization ratios in a sample of 30 kHz sferics received at altitudes from 0 to 70 km
[AD-A108182] N82-18464
Multipath VLF propagation effects on correlation receivers
[AD-A108408] N82-18472
RADIO SCATTERING
A possible way of specifically correcting location and navigational errors caused by reflection and other propagation anomalies
[ESA-TT-667] N82-18198
RADIO TELEMETRY
Multiple access communication: The finite user population problem
[AD-A108337] N82-18474
RADIO TELESCOPES
Background variations in millimeter wave telescopes due to the radome structure
[REPT-S-121] N82-18489
Development of the solar active region 2684 at 8 mm wavelength, September 22 - 27, 1980
[REPT-S-123] N82-19128
RADIO TRACKING
Results of Sun measurements at the Metsaehovi radio research station at 37 GHz (Autumn 1978) — high resolution mapping and tracking of active areas: detection of high and low temperature areas
[REPT-S-115] N82-19126
Solar bursts measured at 8 mm wavelength --- detected by tracking active areas
[REPT-S-122] N82-19127
RADIO TRANSMISSION
Radio equipment for propagation experiments at the frequencies 11, 18, and 36 GHz
[FOA-A-30027-E2] N82-18490
RADIO TRANSMITTERS
Ultramicrowave communications system, phase 3
[NASA-CR-167519] N82-18444
RADIOACTIVE ISOTOPES
Interpretation of equatorial hydrographic, nutrient element and radioisotope data
[DE82-001699] N82-18655
RADIOISOTOPE BATTERIES
Operating experience with the Harwell thermo-mechanical generators
[AERE-R-9829] N82-18527
RADIOLYSIS
Pulsed radiolysis of model aromatic polymers and epoxy based matrix materials N82-18278
RADIOMETERS
Active cavity radiometer N82-18252
Measurement of the solar constant N82-18253
Control of large space antennas: Wrap-rib-hoop/column N82-18294
Integrated controls/structures study of advanced space systems N82-18303
Radiometric studies of the heat island
[INPE-2156-RPE/375] N82-18454
Stratospheric instruments and analyses N82-18776
RADIOMETRIC RESOLUTION
Radiometric studies of the heat island
[INPE-2156-RPE/375] N82-18454
The influence of the atmosphere on microwave radiometric measurements in the 10 GHz to 400 GHz frequency range --- and a computer program for determining atmospheric microwave attenuation
[ESA-TT-706] N82-18484
Evaluation of linear arrays of infrared detectors for the 1.5 to 5 micron range
[RT-80/198] N82-18531
RADOMES
Background variations in millimeter wave telescopes due to the radome structure
[REPT-S-121] N82-18489
RAIL TRANSPORTATION
Railway transport of low temperature heat from large power stations by means of alternative heat carriers and water
[BMFT-FB-T-81-145] N82-18710
Central control system survey
[PB82-101981] N82-19109
RAIN
C-5A austere airfield operational utility evaluation. Phase 2: Operation on unpaved soil surfaces following rainfall
[AD-A108597] N82-18208
Link availability in satellite telecommunication subject to correlated rain attenuation at the ground terrain
[INPE-2260-PRE/058] N82-18451
Areawide stormwater pollution analysis with the macroscopic planning (ABMAC) model. Part 1: Documentation and application. Part 2: User's manual
[PB82-107947] N82-18677
Precipitation field and intrastorm flow of supercell convective storms N82-18801
Convective rainfall estimation in Rio Grande do Sul State, Brazil: Preliminary results
[INPE-2271-RPE/400] N82-18804
RAINSTORMS
Precipitation field and intrastorm flow of supercell convective storms N82-18801
RAMJET ENGINES
Fuel-rich plume combustion
[AD-A108136] N82-18349

RAMS (PUMPS)

Experimental model studies of a hydraulic ram with special emphasis on the velocities in the ram tube
[MPIS-28/1980] N82-18550

RANGE FINDERS

Pulsed and CW semiconductor laser range finding for space flight applications
[MBB-UA-583-81-O] N82-18599

RANK TESTS

Ranking and selection in designed experiments: Complete factorial experimentals
[AD-A108188] N82-18979

RANKING

Remarks concerning Chase's results on testing for ordered alternatives
[AD-A108148] N82-18974

RAPID TRANSIT SYSTEMS

Integrating project worthiness into a cost-effectivenss framework for alternative analysis
[PB82-113695] N82-19106

Central control system survey
[PB82-101981] N82-19109

RARE EARTH ELEMENTS

Laser hole burning spectroscopy: A high resolution probe of molecular environments
[AD-A108549] N82-18590

High speed permanent magnet generator material investigations: Rare earth magnets
[AD-A108550] N82-18992

RAY TRACING

Computer prediction of dual reflector antenna radiation properties
[NASA-CR-165114] N82-18449

REACTION KINETICS

Competing reaction channels in IR laser induced unimolecular reactions N82-18336

Some comparisons between the energetics of electrochemical and homogeneous electron-transfer reactions
[AD-A108195] N82-18347

Mode selective vibrational energy transfer in methylfluoride
[MPIS-6/1981] N82-18356

Ammoxidation of toluene and xylenes to nitriles
[PB82-105420] N82-18361

An investigation of the kinetics for hydrogen chemisorption on iron metal surfaces
[NASA-CR-168555] N82-18369

Investigation of a 460 nm XeF laser
[AD-A108132] N82-18587

Chemical kinetics and photochemistry
N82-18774

REACTION PRODUCTS

Oxidation and formation of deposit precursors in hydrocarbon fuels
[NASA-CR-165534] N82-18402

REACTIVITY

Evaluation of a thermal response test for electropyrotechnical devices: Summary
[TP-15225/80] N82-18405

REACTOR PHYSICS

Neutron transport from targets to moderators
[PB82-106915] N82-19027

RECIPROCATION

Precision reciprocating filament chopper
[NASA-CASE-LAR-12564-2] N82-18604

RECLAMATION

A land use analysis of existing and potential coal surface mining areas in the Ohio River Basin Energy Study region ,
[PB82-105172] N82-18679

RECOMBINATION REACTIONS

Optical investigations of the recombination processes in laser-annealed and thermally-annealed semiconductors
[AD-A108627] N82-19071

RECORDING INSTRUMENTS

Small size-range extension of an optical particle counter
[PB82-103623] N82-18575

RECTANGULAR GUIDES

Radiation detection with point-contact Josephson junctions N82-19054

RECTANGULAR PLATES

Thermal resistance of convectively cooled plates with applied heat flux and internal heat generation
[INPE-2291-PRE/066] N82-18541

RECTIFIERS

Numerical simulation of diode rectifier bridges: Application of a new method to the brushless excitation system
[DRIC-T-6478] N82-18504

RECURSIVE FUNCTIONS

A method of modeling multirate two-dimensional recursive digital filters N82-18497

Performance of fir adaptive filters using recursive algorithms --- speech processing N82-18499

Remarks concerning Chase's results on testing for ordered alternatives
[AD-A108148] N82-18974

RECYCLING

Energy equivalents for selected pavement materials: Their production and placement
[PB82-121167] N82-18433

NASA Technology Utilization House technical support package Summary of results and house description
[NASA-TM-X-74686] N82-19103

REDUNDANCY

A redundancy concept for a digital CSAS
N82-18170

REFLECTORS

Heat reflecting field stop
[NASA-CASE-LAR-12443-1] N82-19030

REFLEXES

Vestibulo-spinal reflex mechanisms N82-18257

REFRACTIVITY

Experimental results of multiple scattering
[AD-A108291] N82-19032

Relativistic effects in the solar system
[IFKKI-81/2] N82-19112

REFRACTORY COATINGS

High temperature coatings for gas turbines: A review --- diffusion coatings and their mechanical properties
[NLR-MP-81003-U] N82-18385

REFRACTORY MATERIALS

High-temperature corrosion resistance of ceramic materials
[PB82-104399] N82-18400

Investigation of the strength of galvanic deposits
[MBB-BB-487-O] N82-18641

REGENERATORS

Experimental investigation of heat and mass transfer rates in regenerating type solar collector
[PB82-112244] N82-18722

REGIONAL PLANNING

PATTERN: A system for land management planning
[PB82-101452] N82-18426

The Ohio River Basin Energy Facility siting model. Volume 2: Sites and on-line dates
[PB82-112111] N82-18442

Planning process study: Arkansas-White-Red River Basins
[PB82-111584] N82-18746

REGRESSION ANALYSIS

The analysis of repeated measurements through time N82-18967

Multi-sample cluster analysis and approaches to validity studies in clustering individuals N82-18968

On testing monotone tendencies
[AD-A108332] N82-18977

REGULATIONS

Point of view of a helicopter manufacturer on airworthiness regulations N82-18137

Manual on marine meteorological services. (Annex 6 to the WMO Technical Regulations) --- of the World Meteorological Organization
[WMO-558] N82-18839

REINFORCED PLASTICS

Micromechanisms of fracture and hypothermal aging of fibrous composites
[PB82-121369] N82-18333

Improved moisture resistance of fiber-reinforced plastic
[AD-A109190] N82-18398

REINFORCEMENT (STRUCTURES)

Finite-element formulation for the analysis of interfaces, nonlinear and large displacement problems in geotechnical engineering N82-18415

Collapse limit states of reinforced earth retaining walls
[PB82-113515] N82-18423

RELATIVISTIC EFFECTS

Inhomogeneous relativistic electron systems: A density functional formalism N82-19050

Relativistic effects in the solar system
[IFKKI-81/2] N82-19112

RELATIVISTIC ELECTRON BEAMS

Beam propagation experimental study
[AD-A108504] N82-19006

RELATIVISTIC PARTICLES

Inhomogeneous relativistic electron systems: A density functional formalism N82-19050

RELATIVISTIC PLASMAS

Quark-gluon plasma and ultra-relativistic nucleus-nucleus collisions
[DE81-030321] N82-19023

RELATIVISTIC VELOCITY

Part 1: Relativistic pathway modification of the planets N82-19113

Part 2: The deflexion of startlight by the Sun
N82-19114

RELIABILITY

Reliability investigation of low noise GaAs FETs
[AD-A108398] N82-18516

Bayesian reliability tests made practical
[AD-A108150] N82-18615

Selecting sufficient sets of test paths for program testing N82-18905

RELIABILITY ANALYSIS

Failure-free reliability tests
[AD-A108197] N82-18616

REMOTE CONTROL

An inexpensive photoelectric remote tilt meter
[PB82-103649] N82-18567

REMOTE SENSING

Study of synthetic aperture radar in 2D - 2FS operation over the ocean --- European Remote Sensing system
[ESA-CR(P)-1475] N82-18481

A study to survey NASA laser applications and identify suitable lasers for specific NASA needs
N82-18580

Examination of the operational prospects for remote sensing --- in Europe
[ESA-CR(P)-1476] N82-18669

Climate observing system studies: An element of the NASA Climate Research Program: Workshop report
[NASA-TM-84040] N82-18808

HF radar measurements of surface currents in the German Bight during MARSEN phase 2, part 2
[PB82-124553] N82-18852

REMOVAL

Study of automatic control system to maintain constant percentage SO2 retention in a pressurized FBC
[PB82-110693] N82-18758

REPEATERS

Development of a low data rate repeater
[AD-A108154] N82-18468

REPLENISHMENT

Soil physical processes of groundwater recharge through Indian black cotton soils
[PB82-112137] N82-18674

REQUIREMENTS

Analytical study of cockpit information requirements
[AD-A108524] N82-18218

RESCUE OPERATIONS

Evaluation of two AN/APS-94 side-looking airborne radar systems in the detection of search and rescue targets
[AD-A108404] N82-18486

RESEARCH

Research predictions for underwater activities in the 1980's
[FOA-C-58010-H1] N82-18862

RESEARCH AND DEVELOPMENT

NASA space communications program
[GPO-85-553] N82-18450

Dimensions: Volume 65, number 5
[PB82-120387] N82-18570

Materials for instrumentation for fossil energy technologies. A review and program plan of research and development needs
[PB82-116229] N82-18571

The 1981 Summer Research Fellowship Program
[NASA-CR-165814] N82-19079

Federal funds for research and development, volume 29, fiscal years 1979, 1980 and 1981
[PB82-118902] N82-19090

RESEARCH FACILITIES

Aviation and space flight research activities
N82-18174

Characterizing heat treatment installations
[CETIM-12-G-199] N82-18387

RESEARCH MANAGEMENT
Municipal wastewater: Research strategy supplement, 1981-1985
[PB82-120106] N82-18763
Activities of the Committee on Human factors: October 1, 1980 - September 30, 1981
[AD-A108606] N82-18874
The 1981 Summer Research Fellowship Program
[NASA-CR-165814] N82-19079

RESERVOIRS
Water resources data for California. Volume 3: Southern Central Valley Basins and the Great Basin from Walker River to Truckee River
[PB82-117003] N82-18681

RESIDENTIAL ENERGY
Monitoring of thermal stratification of the storage tank of the Mabel Lee Hall Solar-Hot-Water Facility
[DE82-002110] N82-18703
National energy research and development program — bibliography of belgian scientific and technical reports N82-18707
Evaluation of residential and commercial solar/gas heating and cooling technologies. Volume 1: Program overview
[PB82-103847] N82-18725
Evaluation of residential and commercial solar/gas heating and cooling technologies, volume 2
[PB82-103854] N82-18726
NASA Technology Utilization House technical support package Summary of results and house description
[NASA-TM-X-74886] N82-19103

RESIDUAL STRESS
An assessment of buffer strips for improving damage tolerance of composite laminates at elevated temperature
[NASA-TM-83257] N82-18325
A time dependent flow model for the inner region of a turbulent boundary layer N82-18536
Shrinkage effects in T-fillet welds in 5083 aluminum
[PB82-114570] N82-18611
Fatigue microcrack behavior under the influence of surface residual stresses
[AD-A108691] N82-18633
X-ray measurement of residual stress in metals at Chalk River Nuclear Laboratories
[AECL-6961] N82-18639

RESIN MATRIX COMPOSITES
Vibration damping characteristics of graphite/epoxy composites for large space structures N82-18283
Design, evaluation, and fabrication of low-cost composite blades for intermediate-size wind turbines
[NASA-CR-165342] N82-18693

RESONANCE SCATTERING
Research on atomic, molecular, and nuclear physics
[DE82-001175] N82-19020

RESONANT FREQUENCIES
Theoretical and experimental investigations of the outward propagation of tire noise
[MBB-BB-483-81-O] N82-19001

RESONATORS
Small signal design of a dielectric resonator stabilized oscillator
[INPE-2285-PRE/061] N82-18510
Stabilized microwave oscillator for a dielectric resonator
[INPE-2123-RPE/347] N82-18512
The velocity field near the orifice of a Helmholtz resonator in grazing flow
[NASA-CR-166548] N82-18994

RESOURCE ALLOCATION
An application of parallel computation to sequential computation: The problem of cost-effective resource allocation
[PB82-108739] N82-18925

RESOURCES
The Global 2000 report to the President. Entering the twenty-first century, volume 1
[PB82-100801] N82-19080

RESOURCES MANAGEMENT
The Global 2000 report to the President. Entering the twenty-first century, volume 2
[PB82-100819] N82-19081
The Global 2000 report to the President. Documentation on the Government's Global sectoral models: The Government's Global model, volume 3
[PB82-100827] N82-19082

RETAINING
Collapse limit states of reinforced earth retaining walls
[PB82-113515] N82-18423

RETARDANTS
Evaluation of Megatard 2700: A proposed new fire retardant system
[PB82-108515] N82-18360

RETROFITTING
Preliminary guidelines for condition assessment of buildings being considered for solar retrofit
[PB82-113259] N82-18437

REUSE
Reusable thermal cycling clamp --- holders for directional solidification experiments
[NASA-CASE-LAR-12868-1] N82-18390

REVENUE
The yearly effect of the activities of the European Space Agency: Estimation of tax revenues due to the activities of ESA and of the resulting global short term economic impact. Volume 2: Main report
[ESA-CR(P)-1472] N82-19099

REVISIONS
Naval versions of the Dauphin and the AS 15 TT weapon system N82-18142
Applications of the DoD world geodetic system: The 1972 charting by the use of a semiautomated system
[AD-A108326] N82-18668

RHEOLOGY
Birefringence and stress in polymer melts under shear and extension N82-18391

RIGID ROTORS
Flight characteristics design and development of the MBB/KHI BK117 helicopter N82-18150
A general purpose program for rotor blade dynamics N82-18151
Automatic generation of equations for rotor-body systems with dynamic inflow for a priori ordering schemes N82-18152
Helicopter rotor downwash: Results of experimental research at the DFVLR-rotor test stand and their comparison with theoretical results N82-18156

RIGID STRUCTURES
Integrated controls/structures study of advanced space systems N82-18303
Modeling techniques for analysis of stiffened shell structures, using computer program ADINA
[AD-A108728] N82-18634

RIGIDITY
Interpretation and construction of a dynamic similarity model of the A 310 wings
[MBB-FE-17/S/PUB/42] N82-18212

RING LASERS
Competition effects in lasers
[AD-A108658] N82-18592

RINGS (MATHEMATICS)
Mathematical techniques for nonlinear system history
[AD-A108370] N82-18953

RIVER BASINS
Ohio River Basin energy study: Land use and terrestrial ecology
[PB82-110347] N82-18440
Water resources data for California. Volume 1: Colorado River Basin, Southern Great Basin from Mexican Border to mono Lake Basin and Pacific Slope Basins from Tijuana River to Santa Maria River
[PB82-116997] N82-18683
West Virginia baseline --- on ecology, geology, climatology, and socioeconomics.
[PB82-103672] N82-18738
The Ohio River Basin energy facility siting model. Volume 1: Methodology
[PB82-102591] N82-18740
Planning process study: Arkansas-White-Red River Basins
[PB82-111584] N82-18746
Ground-water for the Salt Basin, Eagle Flat, Red Light Draw, Green River Valley, and Presidio Bolson in westernmost Texas
[PB82-105289] N82-18759

RIVERS
Measurement of river sediments
[WMO-561] N82-18670

ROADS
Finite-element formulation for the analysis of interfaces, nonlinear and large displacement problems in geotechnical engineering N82-18415
Analysis of thermal stresses in internally sealed concrete bridge decks
[PB82-122668] N82-18435

ROBUSTNESS (MATHEMATICS)
Robustness in multivariable control system design
[PB82-121401] N82-18943
On simple robust confidence procedures N82-18971

ROCK MECHANICS
Professor M. M. Protodyakonovs strength coefficient f of rocks
[AD-A108209] N82-18791

ROCKET ENGINE DESIGN
User's manual for Solid Propulsion Optimization Code (SPOC). Volume 1: Technical description
[AD-A108224] N82-18319
User's manual for Solid Propulsion Optimization Code (SPOC). Volume 2: User's guide
[AD-A108225] N82-18320
User's manual for Solid Propulsion Optimization Code (SPOC). Volume 3: Program description
[AD-A108226] N82-18321

ROCKET EXHAUST
Improvement of rocket engine plume analysis techniques
[NASA-CR-167516] N82-18316

ROCKET NOZZLES
Exact involute bodies of revolution
[AD-A108659] N82-18317
User's manual for Solid Propulsion Optimization Code (SPOC). Volume 1: Technical description
[AD-A108224] N82-18319
User's manual for Solid Propulsion Optimization Code (SPOC). Volume 2: User's guide
[AD-A108225] N82-18320
User's manual for Solid Propulsion Optimization Code (SPOC). Volume 3: Program description
[AD-A108226] N82-18321

ROCKET THRUST
Primary propulsion/large space system interaction study
[NASA-CR-165277] N82-18315

ROCKET VEHICLES
Laser rocket system analysis N82-18584

ROCKET-BORNE INSTRUMENTS
Design of sounding rocket payloads
[AD-A108271] N82-18792

ROCKS
Professor M. M. Protodyakonovs strength coefficient f of rocks
[AD-A108209] N82-18791

ROCKY MOUNTAINS (NORTH AMERICA)
Wind-ceiling-visibility data at selected airports. Volume 7, part A: Rocky Mountain region
[AD-A108166] N82-18827
Wind-ceiling-visibility data at selected airports. Volume 7, part B: Rocky Mountain region
[AD-A108167] N82-18828

ROTARY WING AIRCRAFT
Rotorcraft flight simulation computer program C81 with DATAMAP interface. Volume 2: Programmer's manual
[AD-A108294] N82-18231

ROTARY WINGS
Seventh European Rotorcraft and Powered Lift Aircraft Forum N82-18119
Developments in rotary wing aircraft aerodynamics N82-18120
A simplified approach to the free wake analysis of a hovering rotor N82-18121
An experimental analysis of the shape of a rotor wake N82-18122
An extension of the local momentum theory to the rotors operating in twisted flow field N82-18123
A complete method for computation of blade mode characteristics and responses in forward flight N82-18126
Wind tunnel investigation of high speed rotor noise N82-18146
Prediction of blade vortex interaction noise from measured blade pressure N82-18147
A general purpose program for rotor blade dynamics N82-18151
Automatic generation of equations for rotor-body systems with dynamic inflow for a priori ordering schemes N82-18152

Optimum performance and wake geometry of co-axial rotor in hover N82-18156
A numerical approach to co-axial rotor aerodynamics N82-18157
Helicopter rotor downwash: Results of experimental research at the DFVLR-rotor test stand and their comparison with theoretical results N82-18158
Hover tests of a model H-force rotor N82-18159
The problem of calculation of the flow around helicopter rotor blade tips N82-18160
Application of the ONER dynamic stall model to a helicopter blade in forward flight N82-18161
Some unsteady aerodynamic effects on helicopter rotors N82-18162
An analytical investigation of the free-tip rotor for helicopters
[NASA-TM-81345] N82-18179
On the calculation of transonic blade tip flow for helicopter rotors
[MBB-UD-320-81-O] N82-18187

ROTATION
An extension of the local momentum theory to the rotors operating in twisted flow field N82-18123

ROTOR AERODYNAMICS
Seventh European Rotorcraft and Powered Lift Aircraft Forum N82-18119
Developments in rotary wing aircraft aerodynamics N82-18120
A simplified approach to the free wake analysis of a hovering rotor N82-18121
An extension of the local momentum theory to the rotors operating in twisted flow field N82-18123
A simplified method for predicting rotor blade airloads N82-18124
Hover tests of a model H-force rotor N82-18159
The problem of calculation of the flow around helicopter rotor blade tips N82-18160
Numerical analysis and FORTRAN program for the computation of the turbulent wakes of turbomachinery rotor blades, isolated airfoils and cascade of airfoils
[NASA-CR-3509] N82-18184

ROTOR BLADES (TURBOMACHINERY)
Seventh European Rotorcraft and Powered Lift Aircraft Forum N82-18119
Developments in rotary wing aircraft aerodynamics N82-18120
A simplified approach to the free wake analysis of a hovering rotor N82-18121
An experimental analysis of the shape of a rotor wake N82-18122
A simplified method for predicting rotor blade airloads N82-18124
A three-dimensional approach to lift and moment coefficients of rotating blades N82-18125
A complete method for computation of blade mode characteristics and responses in forward flight N82-18126
Modal characteristics of rotor blades: Finite element approach and measurement by ground vibration test N82-18127
Numerical analysis and FORTRAN program for the computation of the turbulent wakes of turbomachinery rotor blades, isolated airfoils and cascade of airfoils
[NASA-CR-3509] N82-18184
Design, evaluation, and fabrication of low-cost composite blades for intermediate-size wind turbines
[NASA-CR-165342] N82-18693

ROTOR LIFT
A three-dimensional approach to lift and moment coefficients of rotating blades N82-18125

ROTOR SPEED
An extension of the local momentum theory to the rotors operating in twisted flow field N82-18123
A simplified method for predicting rotor blade airloads N82-18124
Wind tunnel investigation of high speed rotor noise N82-18146

ROTORCRAFT AIRCRAFT
Tethered rotorplatforms and their mission potential N82-18145

RUN TIME (COMPUTERS)
Syntax oriented analysis of the run time performance of programs N82-18908

RUNWAY CONDITIONS
C-5A austere airfield operational utility evaluation. Phase 2: Operation on unpaved soil surfaces following rainfall
[AD-A106697] N82-18208
Investigation into the utility of some quick setting cements for runway repair
[B-80-157/80.7.0157] N82-18225
Investigation of compaction criteria for airport pavement subgrade soils
[AD-A108516] N82-18230

RUNWAYS
Bomb crater repair techniques for permanent airfields. Report 1: Series 1 tests
[AD-A106716] N82-18229
Investigation of compaction criteria for airport pavement subgrade soils
[AD-A108516] N82-18230

S

S MATRIX THEORY
Feynman path integral and Poisson processes with piecewise classical paths
[CNRS-CPT-80-P-1244] N82-18957

SAFETY FACTORS
What engineers should do to assure the reliability of technical systems
[MBB-UR-478-81-O] N82-18621
Criteria for the installation of energy conservation measures
[PB82-104712] N82-18727
Study of chlorine dioxide and its metabolites in man
[PB82-109356] N82-18863
Reliability methodology in task identification for the development of new transportation systems
[MBB-UR-473-81-O] N82-19105

SAFETY MANAGEMENT
What engineers should do to assure the reliability of technical systems
[MBB-UR-478-81-O] N82-18621
Reliability methodology in task identification for the development of new transportation systems
[MBB-UR-473-81-O] N82-19105

SALINITY
Multi-saline sample distillation apparatus for hydrogen isotope analyses: Design and accuracy
[PB82-115460] N82-18573

SALT SPRAY TESTS
Shipboard exposure testing
[AD-A108146] N82-18375

SAMPLING
On simple robust confidence procedures N82-18971

SANDS
Probabilistic and hazard analysis for pore pressure increase in soils due to seismic loading
[PB82-122417] N82-18429

SATELLITE CONFIGURATIONS
Methodology of uniaxial transient vibration test for satellites
[CNES-81/CT/PRT/SST/SM/194] N82-18640

SATELLITE CONTROL
LSS control technology N82-18293
Control of large space antennas: Wrap-rib-hoop/column N82-18294
Spatial, High-Accuracy, Positioning-Encoding Sensor (SHAPES) for large space system control applications N82-18295
Control technology development N82-18296
LSS reference platform control N82-18297

SATELLITE DESIGN
Design practices for controlling spacecraft charging interactions
[NASA-TM-82781] N82-18311

SATELLITE INSTRUMENTS
Imaging microwave radiometer. Phase A study. Volume 1: Executive summary — instrument for the European Remote Sensing system payload
[ESS/SS-1006] N82-18564

SATELLITE LIFETIME
A rapid estimation of near Earth satellite lifetimes with quasi-dynamic atmosphere model with application to a proposed Brazilian satellite
[INPE-2287-PRE/063] N82-18272

SATELLITE OBSERVATION
The use of environmental satellites for frost monitoring
[INPE-2128-RPE/352] N82-18805

SATELLITE ORBITS
An adaptive satellite orbit estimation scheme using an analytical approach and a dynamical model compensation technique
[INPE-2304-PRE/072] N82-18270

SATELLITE ORIENTATION
A study of autonomous rendezvous and docking systems N82-18298

SATELLITE POWER TRANSMISSION (TO EARTH)
Space Laser Power Transmission System Studies — conferences
[NASA-CP-2214] N82-18578
Preliminary study on the use of lasers for the transmission of power N82-18579
A study to survey NASA laser applications and identify suitable lasers for specific NASA needs N82-18580
Utility and technology for a space central power station N82-18583
Laser rocket system analysis N82-18584
Laser power conversion system analysis N82-18585
Space laser power transmission N82-18586
Electromagnetic compatibility analysis for a satellite power system receiving site in the Mojave Desert
[PB82-100710] N82-18723

SATELLITE SOLAR POWER STATIONS
Solar power satellites, summary
[OTA-E-145] N82-18305

SATELLITE TRACKING
Tone receiver for satellite position determination
[INPE-2159-RPE/378] N82-18306
The prediction of satellite ephemeris errors as they result from surveillance system measurement errors
[AD-A108477] N82-19115

SATELLITE TRANSMISSION
A review of satellite communication and propagation experiments for frequencies above 10 GHz
[DFVLR-MITT-81-08] N82-18485

SATURN (PLANET)
Planetary magnetospheres
[NASA-TM-83841] N82-19122

SCALE MODELS
Measurements in the near-wake of a transport model, to determine the lift, drag and drag components using Maskell's analysis
[RAE-TR-81012] N82-18177
Spin-tunnel investigation of a 1/13-scale model of the NASA AD-1 oblique-wing research aircraft
[NASA-TM-83236] N82-18183
Theory and application of experimental model analysis in earthquake engineering
[PB82-122409] N82-18430
Measurements of wake interaction effects on the power output from small wind turbine models
[FFA-TN-HU-2189-PT-5] N82-18720

SCALERS
Usage and limitations of characteristic vector analysis of remote sensing multispectral data for the identification and quantification of water quality parameters N82-18656

SCALING LAWS
Wavelength scaling for reactor-size laser fusion targets
[AD-A108547] N82-18591

SCANNING
Litho scanning techniques
[AD-A108371] N82-18885

SCATHA SATELLITE
A worst case spacecraft environment as observed by SCATHA on 24 April 1979
[AD-A108680] N82-19121

SCATTERING
Small signal design of a dielectric resonator stabilized oscillator
[INPE-2285-PRE/061] N82-18510
Wave function formalisms in the channel coupling array theory of many-body scattering
[BONN-HE-80-15] N82-18988
A multi-cluster, n-particle generalization of the three-particle Faddeev wave function equations
[BONN-HE-80-16] N82-18989

SCATTERING CROSS SECTIONS
A study of the collisional dynamics for collisions of UF6(-) atoms and molecules
[AD-A108419] N82-19012
Elastic and inelastic scattering measurements for the Mg-24 plus Pb-208 and Si-28 plus Pb-208 systems
[ANU-P-788] N82-19017

Angular scattering and channeling widths of positive and negative particles at multi-GeV energies
[DE82-008883] N82-19024

SCENE ANALYSIS
Computational approaches to image understanding
[AD-A108191] N82-18936

SCHEDULES
Modern management in construction industry offices
[MBB-UR-493-81-O] N82-19085

SCHEDULING
Optimal control of an M/G/1 queueing system
[INPE-2139-RPE/362] N82-18929

SCHROEDINGER EQUATION
A multi-cluster, n-particle generalization of the three-particle Faddeev wave function equations
[BONN-HE-80-16] N82-18989

SEA BREEZE
Coastal upwelling ecosystems analysis. Technical report 40: Atlas of the JOINT 2 1976 aircraft winds for the 500 foot level
[PB82-113911] N82-18842

SEA ICE
Foundations of structures in polar waters
[AD-A108344] N82-18417
FRAM 2 Single Channel Ambient Noise Statistics
[AD-A108755] N82-18999

SEA WATER
Differential sound absorption technique and effect of ion-pairing and pressure on sound absorption in sea water and aqueous mixtures of magnesium sulfate and sodium chloride
[AD-A108569] N82-18997

SEALING
Investigation into the utility of some quick setting cements for runway repair
[B-80-157/80.7.0157] N82-18225

SEALS (STOPPERS)
Hard-on-hard (ceramic) long-life seals and riders for cryogenic coolers
[AD-A108846] N82-18394
JT9D ceramic outer air seal system refinement program
[NASA-CR-165554] N82-18603

SEARCH PROFILES
Continuation of information tracks research: Inventor of prospects
[IWIS-A-80-IN-82-16] N82-19093

SEARCH RADAR
Evaluation of two AN/APS-94 side-looking airborne radar systems in the detection of search and rescue targets
[AD-A108404] N82-18466

SEASAT-A SATELLITE
Seasat data utilization project
[NASA-CR-168557] N82-18660

SECURITY
Energy policies for resilience and national security
[AD-A108263] N82-18700

SEDIMENT TRANSPORT
Measurement of river sediments
[WMO-561] N82-18670
Environmental geologic studies on the southeastern Atlantic Outer Continental Shelf, 1977-1978
[PB82-109265] N82-18800

SEDIMENTS
Sedimentology and diagenesis of Bryozoan and sponge-rich carbonate buildups Great Bahama Bank N82-18769
Environmental geologic studies on the southeastern Atlantic Outer Continental Shelf, 1977-1978
[PB82-109265] N82-18800

SEISMIC ENERGY
Probabilistic and hazard analysis for pore pressure increase in soils due to seismic loading
[PB82-122417] N82-18429
Catalog of significant earthquakes, 2000 B.C. - 1979: Including quantitative casualties and damage
[PB82-117425] N82-18799

SEISMIC WAVES
Common data base experiment: Progress report on data analysis — of seismic data
[FOA-C-20431-T1] N82-19094

SEISMOLOGY
Catalog of significant earthquakes, 2000 B.C. - 1979: Including quantitative casualties and damage
[PB82-117425] N82-18799

SELECTIVE FADING
LOS selective fading and AN/FRC-170(V) radio hybrid computer simulation phase A report
[AD-A108747] N82-18457

SELECTIVITY
Development of selective solar absorbers on the basis of aluminum roll-bond heat exchangers
[BMFT-FB-T-81-183] N82-18715
Development of selective solar absorbers on the basis of aluminum roll-bond heat exchangers
[BMFT-FB-T-81-186] N82-18717

SELF ALIGNMENT
Software features applicable to inertial measurement unit self alignment
[AD-A108511] N82-18196

SELF CONSISTENT FIELDS
On the self-consistent solutions of pulsar plasma waves
[INPE-2302-PRE/071] N82-19036

SELF LUBRICATING MATERIALS
Research in tribology and bearings
[PB82-108923] N82-18606

SEMICONDUCTOR DEVICES
Superconducting electronics
[AD-A108402] N82-18520
The application of chemical etching to the failure analysis of semiconductor devices (literature survey and premilinary experiments). Volume 1: Phase 1 report
[ESA-CR(P)-1470-VOL-1] N82-18618
The application of chemical etching to the failure analysis of semiconductor devices (experimental). Volume 2: Phase 2 report
[ESA-CR(P)-1470-VOL-2] N82-18619
Influence of contact conditions and the circuit on short negative differential mobility semiconducting devices
[AD-A108140] N82-19067
Microwave semiconductor research: Materials, devices, circuits
[AD-A108399] N82-19072
Semiconductor measurement technology: The capabilities and limitations of Auger sputter profiling for studies of semiconductors
[PB82-120122] N82-19075

SEMICONDUCTOR JUNCTIONS
Two dimensional sub-bands in ion implantation — semiconductors
[INPE-2147-RPE/369] N82-19058

SEMICONDUCTOR LASERS
Joint Services Electronics Program
[AD-A108347] N82-18526
Semiconductor injection lasers with a circular resonator: A study of GaAs-(GaAl)As dielectric waveguides and their incorporation into a laser resonator N82-18576
Pulsed and CW semiconductor laser range finding for space flight applications
[MBB-UA-563-81-O] N82-18599

SEMICONDUCTORS (MATERIALS)
I-V characterization of solar cells
[INPE-2141-RPE/363] N82-18699
Electron hopping energy influence on the specific heat and conductivity of phosphorus doped silicon
[INPE-2301-PRE/070] N82-19044
Electron and impurity correlations in doped semiconductors
[INPE-2309-PRE/074] N82-19056
Photovoltaic detectors for infrared operation
[INPE-2146-RPE/368] N82-19059
Effects of electron transference energy in semiconductors — germanium antimonides and silicon phosphides
[INPE-2129-RPE/353] N82-19062
Electronic structure of the D(-) state and excited donor states of grain impurities in doped semiconductors
[INPE-2115-RPE/339] N82-19063
Optical investigations of the recombination processes in laser-annealed and thermally-annealed semiconductors
[AD-A108627] N82-19071

SENSITIVITY
Measurement and evaluation methods for an angular accelerometer
[PB82-115973] N82-18572
Sensitivity of the characteristic gain loci
[PB82-113481] N82-18963
Sensitivity theory for nonlinear systems. 1: Nonlinear functional analysis approach
[ORNL/TM-7304] N82-18964

SENSORIMOTOR PERFORMANCE
Identification of the adaptive feedback of the human motor system using the Response Difference Method (RDM)
[WTHD-134] N82-18869

SENSORS
The influence of sensor and actuator characteristics on overall helicopter AFCS design N82-18171

SENSORY DISCRIMINATION
Mass discrimination during weightlessness N82-18264

SENSORY FEEDBACK
Identification of the adaptive feedback of the human motor system using the Response Difference Method (RDM)
[WTHD-134] N82-18869

SEPAC (PAYLOAD)
Space experiments with particle accelerators — Spacelab N82-18241

SEPARATED FLOW
Separated flow around helicopter bodies N82-18163
A method of predicting fuselage loads in hover N82-18164
Investigation of supersonic separated flow in a comparison corner by laser Doppler anemometry N82-18176
On the calculation of separated flow on helicopter fuselages
[MBB-UD-321-81-O] N82-18188

SEPARATORS
Experimental and theoretical studies on gas cyclone separators operating at high efficiency N82-18340

SEQUENCING
Automatic element reordering for finite element analysis with frontal solution schemes
[PB82-115114] N82-18966

SEQUENTIAL ANALYSIS
Partial sequential tests for the mean of a normal distribution N82-18969
On sequential unbiased and Bayes type estimates of parameters in a contingency table N82-18970

SERIES (MATHEMATICS)
Some Dirichlet series whose poles are related to cusp forms
[CTH-MATH-1981-14] N82-18962

SERVOMECHANISMS
Analysis and design of hydraulic servosystems for the improvement of pulsed machinery for the Army
[TDCK-75058] N82-18605

SEWAGE
Adaptation of the simplex gasification process to the coconversion of municipal solid waste and sewage sludge
[PB82-112418] N82-18406
Physical and chemical characteristics of synthetic asphalt produced from liquefaction of sewage sludge
[PB82-119082] N82-18422

SEWAGE TREATMENT
Solar energy for pollution control
[PB82-116658] N82-18764

SHEAR
Automated longwall guidance and control vertical control subsystem, volume 1
[NASA-CR-161969] N82-18658

SHEAR FLOW
A time dependent flow model for the inner region of a turbulent boundary layer N82-18536
Spectral model predictions of mean-square-shear distortion rates
[AD-A108211] N82-18543
On the relationship between transitional and fully turbulent shear flow
[AD-A108367] N82-18547
Models of near inertial vertical shear
[AD-A108686] N82-18847
Statistical modeling of shear in the upper ocean
[AD-A108212] N82-18848

SHEAR LAYERS
A two dimensional study of the maximum power that can be obtained from a wind turbine in a wind shear layer
[FFA-134] N82-18719

SHEAR PROPERTIES
Description of hot spots associated with localized shear zones in impact tests
[AD-A108542] N82-18403

SHEAR STRESS
A time dependent flow model for the inner region of a turbulent boundary layer N82-18536

SHELLS (STRUCTURAL FORMS)
Modeling techniques for analysis of stiffened shell structures, using computer program ADINA
[AD-A108728] N82-18634

SHIPS
An investigation of ship propeller fatigue
N82-18627

SHOALS
Sedimentology and diagenesis of Bryozoan and sponge-rich carbonate buildups Great Bahama Bank
N82-18769

SHOCK TUBES
Weak and strong ignition. 1: Numerical simulations of shock tube experiments
[AD-A108369] N82-18344

High temperature in absorption measurements
[AD-A108601] N82-18588

SHOCK WAVE ATTENUATION
Investigation on the functioning of gold-tin superconducting films for the measurement of secondary sonic shock waves in He2 flow
[MPIS-6/1981] N82-18565

SHOCK WAVES
High temperature in absorption measurements
[AD-A108601] N82-18588

SHORT CIRCUITS
Test setups for the development of high voltage circuit breakers for high short circuit capacities
[BMFT-FB-T-81-194] N82-18514

SHORT TAKEOFF AIRCRAFT
Review of defense-related vertical and short takeoff and landing (V/STOL) aircraft programs
[GPO-55-278] N82-18205

XFV-12A diagnostic and development programs
[AD-A108354] N82-18206

SHRINKAGE
Effects of weld eccentricity on longitudinal shrinkage
[PB82-121153] N82-18608

Shrinkage effects in butt welds in 5083 aluminium
[PB82-121138] N82-18609

Shrinkage effects in bead-on-plate welds in 5083 aluminium
[PB82-114596] N82-18610

Shrinkage effects in T-fillet welds in 5083 aluminum
[PB82-114570] N82-18611

SIDE-LOOKING RADAR
Evaluation of two AN/APS-94 side-looking airborne radar systems in the detection of search and rescue targets
[AD-A108404] N82-18466

SIGNAL ANALYZERS
Wideband HF channel analyzer
[AD-A108694] N82-18886

SIGNAL ENCODING
A four-phase modulation system for use with and adaptive array N82-18446

SIGNAL FADING
Link availability in satellite telecommunication subject to correlated rain attenuation at the ground terrain
[INPE-2280-PRE/058] N82-18451

SIGNAL PROCESSING
Analogue SAR signal processing: Breadboard design, implementation, evaluation and component specification — synthetic aperture radar
[ESA-CR(P)-1463] N82-18480

A design for a 32-channel multiplexer — for unmanned aircraft navigation sensors
[RAE-TM-RAD-NAV-145] N82-18503

Structure of a multibeam adaptive space-time processor
[AD-A108352] N82-18524

Joint Services Electronics Program
[AD-A108347] N82-18526

Error processing techniques for the Modified READ facsimile code
[AD-A108608] N82-18561

Proceedings of the DARPA/AFWAL review of progress in quantitative nondestructive evaluation
[AD-A108741] N82-18614

R and D equipment information report: Fault tolerant weather radar processor
[AD-A108253] N82-18809

Wideband HF channel analyzer
[AD-A108694] N82-18886

SIGNAL REFLECTION
Defects characterization and dimensioning by means of the ultrasound spectroscopy
[CISE-1666] N82-18357

SIGNAL STABILIZATION
Fiber optic transmission line stabilization apparatus and method
[NASA-CASE-NPO-15036-1] N82-19029

SILICA GLASS
Surface statistics investigations
[AD-A108234] N82-18395

SILICON
Silicon MESFETS N82-18498

A 16 x 16 element extrinsic silicon detector array
[NASA-CR-166285] N82-18559

Electron hopping energy influence on the specific heat and conductivity of phosphorus doped silicon
[INPE-2301-PRE/070] N82-19044

Diagonal and off-diagonal disorder in doped semiconductors
[INPE-2292-PRE/067] N82-19057

Electrical resistivity of P ions implanted on Si
[INPE-2145-RPE/367] N82-19060

Paramagnetic susceptibility of phosphorus doped silicon
[INPE-2105-RPE/332] N82-19064

SILICON ALLOYS
The oxidation of dilute iron-silicon alloys ((Si) or = 1w/o) in carbon dioxide
[AD-A108328] N82-18372

SILICON CARBIDES
Investigation of the CNTD mechanism and its effect on microstructural properties of SiC and AIN
[AD-A108581] N82-18371

SILICON COMPOUNDS
A model for stored energy in amorphous silica
[AERE-TP-877] N82-19073

SILICON DIOXIDE
Properties of Portland cement concretes containing pozzolanic admixtures
[PB82-120965] N82-18434

SILICON FILMS
Development of thin wraparound junction silicon solar cells
[NASA-CR-165570] N82-18689

Alignment signals from electrons scattering near an edge for electron beam microfabrication N82-19004

SILICON ISOTOPES
Elastic and inelastic scattering measurements for the Mg-24 plus Pb-208 and Si-28 plus Pb-208 systems
[ANU-P-788] N82-19017

SILICON TRANSISTORS
Transient conductance spectroscopy measurements of defect states in Gamma-irradiated n-channel silicon field effect transistors with possible Gamma-dosemeter applications
[AAEC/E-504] N82-19077

SIMULATION
Simulation of pulsed IMPATT oscillators and injection-locked amplifiers
[AD-A108483] N82-18522

SINGLE CRYSTALS
Electron-phonon scattering rates in antimony: Radio-frequency size effect N82-19046

The electrical properties of Na3Cu4S4, mixed-valence one-dimensional metal
[AD-A108517] N82-19069

SITE SELECTION
The Ohio River Basin Energy Facility siting model. Volume 2: Sites and on-line dates
[PB82-112111] N82-18442

Coal mine siting for the Ohio River Basin energy study
[PB82-108119] N82-18680

The Ohio River Basin energy facility siting model. Volume 1: Methodology
[PB82-102591] N82-18740

Site investigations and submarine soil mechanics in polar regions
[AD-A108269] N82-18790

SKIN FRICTION
Laminar airfoils for transport aircraft
[ESA-TT-680] N82-18190

SLABS
Lower bound equilibrium design of slabs
[PB82-105263] N82-18649

SLEDS
Test site instrumentation study. Volume 2: Crash 1 and crash 2 raw data
[PB82-111832] N82-18233

SLOPES
Automated slope generation using raster technology
[AD-A108700] N82-18667

SLOT ANTENNAS
Theoretical and experimental investigation of some slot antenna array problems
[AD-A108566] N82-18478

SLUDGE
Adaptation of the simplex gasification process to the coconversion of municipal solid waste and sewage sludge
[PB82-112416] N82-18406

Physical and chemical characteristics of synthetic asphalt produced from liquefaction of sewage sludge
[PB82-119082] N82-18422

Wastewater treatment facilities-sludge management system, Albuquerque, New Mexico
[PB82-117029] N82-19111

SMOOTHING
Smoothing splines: Regression, derivatives and deconvolution
[AD-A108631] N82-18981

SNOW COVER
Spectral albedos of midlatitude snowpacks
[NASA-TM-83858] N82-18683

SOCIAL FACTORS
Ohio River Basin energy study: Social values and energy policy
[PB82-101494] N82-18735

SODIUM
The electrical properties of Na3Cu4S4, mixed-valence one-dimensional metal
[AD-A108517] N82-19069

SODIUM COMPOUNDS
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 1. Task 1: Binary ternary and quarternary phase diagrams containing Li(+), Na(+), K(+), CO3(=), SO3(=) and OH(-)
[DE82-000690] N82-18704

SOIL MECHANICS
Investigation of compaction criteria for airport pavement subgrade soils
[AD-A108518] N82-18230

Manual on physico-chemical strengthening of freezing and thawing soils
[NRC/CNR-TT-1978] N82-18416

Collapse limit states of reinforced earth retaining walls
[PB82-113515] N82-18423

PMATRX: An algorithm for transforming n-Dimensional data into plotted curves
[PB82-114483] N82-18424

CANDE-1980: Box culverts and soil models
[PB82-102393] N82-18427

Probabilistic and hazard analysis for pore pressure increase in soils due to seismic loading
[PB82-122417] N82-18429

Soil physical processes of groundwater recharge through Indian black cotton soils
[PB82-112137] N82-18674

Soil properties of USSR strategic areas. Volume 1: Soil property comparisons for selected USSR and U.S. soils
[AD-A108743] N82-18786

Site investigations and submarine soil mechanics in polar regions
[AD-A108269] N82-18790

Axisymmetric triangular element with six nodal points
[INPE-2289-PRE/064] N82-18945

SOIL MOISTURE
C-5A austere airfield operational utility evaluation. Phase 2: Operation on unpaved soil surfaces following rainfall
[AD-A108597] N82-18208

Soil physical processes of groundwater recharge through Indian black cotton soils
[PB82-112137] N82-18674

SOIL SCIENCE
Effect of oxidation of soil organic matter on water quality: Role of nitrification and denitrification
[PB82-103946] N82-18755

Soil properties of USSR strategic areas. Volume 1: Soil property comparisons for selected USSR and U.S. soils
[AD-A108743] N82-18788

SOILS

Finite-element formulation for the analysis of interfaces, nonlinear and large displacement problems in geotechnical engineering N82-18415

PMATRIX: An algorithm for transforming n-Dimensional data into plotted curves
[PB82-114463] N82-18424

CANDE-1980: Box culverts and soil models
[PB82-102383] N82-18427

Soil properties of USSR strategic areas. Volume 1: Soil property comparisons for selected USSR and U.S. soils
[AD-A108743] N82-18788

SOLAR ACTIVITY

Results of Sun measurements at the Metsaehovi radio research station at 37 GHz (Autumn 1978) -- high resolution mapping and tracking of active areas: detection of high and low temperature areas
[REPT-S-115] N82-19126

Development of the solar active region 2684 at 8 mm wavelength, September 22 - 27, 1980
[REPT-S-123] N82-19128

SOLAR ARRAYS

A disturbance isolation controller for the solar electric propulsion system flight experiment N82-18299

SOLAR CELLS

Development of thin wraparound junction silicon solar cells
[NASA-CR-165570] N82-18689

GaAs shallow-homojunction solar cells
[NASA-CR-165579] N82-18692

I-V characterization of solar cells
[INPE-2141-RPE/363] N82-18699

Construction and testing of a test stand for solar cells and concentrating collectors
[BMFT-FB-T-81-179] N82-18714

Development and tests of experimental solar generators for concentrating systems
[BMFT-FB-T-81-193] N82-18718

SOLAR COLLECTORS

Solar power satellites, summary
[OTA-E-145] N82-18305

Monitoring of thermal stratification of the storage tank of the Mabel Lee Hall Solar-Hot-Water Facility
[DE82-002110] N82-18703

Construction and testing of a test stand for solar cells and concentrating collectors
[BMFT-FB-T-81-179] N82-18714

Development of selective solar absorbers on the basis of aluminum roll-bond heat exchangers
[BMFT-FB-T-81-183] N82-18715

Airtight collector casings --- and roof mounting frame for solar absorber panels
[BMFT-FB-T-81-184] N82-18716

Development of selective solar absorbers on the basis of aluminum roll-bond heat exchangers
[BMFT-FB-T-81-186] N82-18717

Development and tests of experimental solar generators for concentrating systems
[BMFT-FB-T-81-193] N82-18718

Experimental investigation of heat and mass transfer rates in regenerating type solar collector
[PB82-112244] N82-18722

FEDSOL: Program user's manual and economic optimization guide for solar Federal building projects
[PB82-107012] N82-18729

SOLAR CONSTANT

Measurement of the solar constant N82-18253

Solar spectrum from 170 to 3200 nanometers N82-18254

SOLAR COOLING

Evaluation of residential and commercial solar/gas heating and cooling technologies. Volume 1: Program overview
[PB82-103847] N82-18725

Evaluation of residential and commercial solar/gas heating and cooling technologies, volume 2
[PB82-103854] N82-18726

SOLAR CYCLES

Active cavity radiometer N82-18252

Solar spectrum from 170 to 3200 nanometers N82-18254

SOLAR ELECTRIC PROPULSION

A disturbance isolation controller for the solar electric propulsion system flight experiment N82-18299

SOLAR ENERGY

Evaluation of residential and commercial solar/gas heating and cooling technologies. Volume 1: Program overview
[PB82-103847] N82-18725

FEDSOL: Program user's manual and economic optimization guide for solar Federal building projects
[PB82-107012] N82-18729

Solar energy for pollution control
[PB82-116658] N82-18764

SOLAR ENERGY ABSORBERS

Airtight collector casings --- and roof mounting frame for solar absorber panels
[BMFT-FB-T-81-184] N82-18716

SOLAR ENERGY CONVERSION

Preliminary guidelines for condition assessment of buildings being considered for solar retrofit
[PB82-113259] N82-18437

High concentration in GaAs photovoltaic systems
[CISE-1713] N82-18529

Solar energy control system -- temperature measurement
[NASA-CASE-MFS-25287-1] N82-18686

Thermodynamic limits for solar energy conversion by a quantum-thermal hybrid system
[NASA-TM-83229] N82-18695

The ultimate efficiency of photosensitive systems
[NASA-TM-83230] N82-18696

Thermodynamic limits to the efficiency of solar energy conversion by quantum devices
[NASA-TM-83228] N82-18697

Market assessment of photovoltaic power systems for agricultural applications in Nigeria
[NASA-CR-165511] N82-18698

A 100 kWe solar thermal power plant in Kuwait, phase 1
[BMFT-FB-T-81-178] N82-18713

NASA Technology Utilization House technical support package Summary of results and house description
[NASA-TM-X-74666] N82-19103

SOLAR FLUX DENSITY

Active cavity radiometer N82-18252

SOLAR GENERATORS

Preliminary guidelines for condition assessment of buildings being considered for solar retrofit
[PB82-113259] N82-18437

Investigation of possibilities for solar-powered high-energy lasers in space N82-18581

Design investigation of solar-powered lasers for space applications N82-18582

Conceptual design of a solar cogeneration facility industrial process heat. Volume 2: Appendices
[DE82-001578] N82-18702

A 100 kWe solar thermal power plant in Kuwait, phase 1
[BMFT-FB-T-81-178] N82-18713

SOLAR HEATING

Solar energy control system --- temperature measurement
[NASA-CASE-MFS-25287-1] N82-18686

Evaluation of residential and commercial solar/gas heating and cooling technologies. Volume 1: Program overview
[PB82-103847] N82-18725

Evaluation of residential and commercial solar/gas heating and cooling technologies, volume 2
[PB82-103854] N82-18726

SOLAR HOUSES

NASA Technology Utilization House technical support package Summary of results and house description
[NASA-TM-X-74666] N82-19103

SOLAR MAGNETIC FIELD

Mm- to cm-wavelength time delays in solar burst emission burst emission and the effect of varying magnetic field
[INPE-2278-PRE/056] N82-19124

SOLAR PHYSICS

Time delays in solar bursts measured in the mm-cm range of wavelengths
[INPE-2251-PRE/034] N82-19125

SOLAR RADIATION

Active cavity radiometer N82-18252

Theoretical studies of solar-pumped lasers
[NASA-CR-166554] N82-18577

A worst case spacecraft environment as observed by SCATHA on 24 April 1979
[AD-A108680] N82-19121

SOLAR RADIO BURSTS

Mm- to cm-wavelength time delays in solar burst emission burst emission and the effect of varying magnetic field
[INPE-2278-PRE/056] N82-19124

Time delays in solar bursts measured in the mm-cm range of wavelengths
[INPE-2251-PRE/034] N82-19125

Solar bursts measured at 8 mm wavelength --- detected by tracking active areas
[REPT-S-122] N82-19127

SOLAR RADIO EMISSION

Measurement of the solar constant N82-18253

Solar spectrum from 170 to 3200 nanometers N82-18254

Development of the solar active region 2684 at 8 mm wavelength, September 22 - 27, 1980
[REPT-S-123] N82-19128

SOLAR SPECTRA

Solar spectrum from 170 to 3200 nanometers N82-18254

A reference solar spectral irradiance for use in atmospheric modeling N82-18775

SOLAR SYSTEM

Relativistic effects in the solar system
[IFKKI-81/2] N82-19112

SOLAR TEMPERATURE

Results of Sun measurements at the Metsaehovi radio research station at 37 GHz (Autumn 1978) -- high resolution mapping and tracking of active areas: detection of high and low temperature areas
[REPT-S-115] N82-19126

SOLAR WIND

The global Pc 5 event of 14-15 November 1979
[AD-A108143] N82-18789

SOLENOIDS

Precision reciprocating filament chopper
[NASA-CASE-LAR-12564-2] N82-18604

SOLID ELECTROLYTES

Laser spectroscopy of solid state electrolytes
[AD-A108981] N82-18597

SOLID PROPELLANT ROCKET ENGINES

Advanced air launched missile motor designed methods
[AD-A108634] N82-18318

User's manual for Solid Propulsion Optimization Code (SPOC). Volume 1: Technical description
[AD-A108224] N82-18319

User's manual for Solid Propulsion Optimization Code (SPOC). Volume 2: User's guide
[AD-A108225] N82-18320

User's manual for Solid Propulsion Optimization Code (SPOC). Volume 3: Program description
[AD-A108226] N82-18321

Energy contributions associated with combustion instability
[AD-A108137] N82-18346

SOLID PROPELLANTS

Decomposition and interaction of propellant ingredients
[AD-A108135] N82-18404

SOLID ROCKET PROPELLANTS

Theoretical considerations of boron combustion in ducted rockets
[ESA-TT-703] N82-18322

SOLID SOLUTIONS

The effect of hydrogen on the solid solution strengthening and softening of nickel
[AD-A108654] N82-18374

SOLID STATE DEVICES

Basic research in electronics (JSEP)
[AD-A108502] N82-18525

Laser spectroscopy of solid state electrolytes
[AD-A108981] N82-18597

SOLID SURFACES

Electron-spin-polarization effects in low energy electron diffraction, ion neutralization and metastable atom deexcitation at solid surfaces
[DE82-001179] N82-19019

Near neighbor separations of surface atoms
[DE82-002166] N82-19026

SOLID WASTES

Solar energy for pollution control
[PB82-116658] N82-18764

SOLIDIFICATION

Materials science N82-18247

SOLIDS

The response of solids to elastic/plastic indentation to adhesion measurements N82-18623

The influence of the spin-rotor coupling of methyl groups in solids on their NMR relaxation
[ISBN-90-6231-090-7] N82-19065

SOLIDS FLOW
Use of glow discharge in fluidized beds
[NASA-CASE-ARC-11245-1] N82-18401

SOLITARY WAVES
Solitons in one-dimensional charge density wave systems N82-19051

SOLUTIONS
Evaluation of Megatard 2700: A proposed new fire retardant system
[PB82-108515] N82-18360

SOLVATION
Solvation of some non-metals in liquid lithium and sodium
[BLG-596] N82-18351

SONAR
Method for shaping and aiming narrow beams — sonar mapping and target identification
[NASA-CASE-NPO-14632-1] N82-18443

SONOBUOYS
Modified Ambient Sea Noise Indicator with ambient noise directionality estimator
[AD-A108389] N82-18998

SOOT
Soot radiation from diffusion flames N82-18334

SOUND GENERATORS
Theoretical and experimental investigations of the outward propagation of tire noise
[MBB-BB-483-81-O] N82-19001

SOUND PROPAGATION
Investigation on the functioning of gold-tin superconducting films for the measurement of secondary sonic shock waves in He2 flow
[MPIS-8/1981] N82-18565

SOUND RANGING
Tone receiver for satellite position determination
[INPE-2159-RPE/378] N82-18306
Distributed sensor networks
[AD-A108275] N82-18886

SOUND TRANSMISSION
Preliminary thoughts on helicopter cabin noise prediction methods N82-18148
Differential sound absorption technique and effect of ion-pairing and pressure on sound absorption in sea water and aqueous mixtures of magnesium sulfate and sodium chloride
[AD-A108589] N82-18997
Measurement of the absorption properties of acoustic materials used in the fabrication of cowlings
[CETIM-11-H-285] N82-19002

SOUNDING ROCKETS
Design of sounding rocket payloads
[AD-A108771] N82-18792

SPACE COMMUNICATION
Ultramicrowave communications system, phase 3
[NASA-CR-167519] N82-18444

SPACE COOLING (BUILDINGS)
Indoor climate, outdoor climate, and energy consumption. An approach to the calculation of the effect of the outdoor and indoor climate on the energy consumption in buildings, based on methods of statistical analysis
[WTHD-137] N82-18709

SPACE ENVIRONMENT SIMULATION
Mobile work station concept for assembly of large space structures (zero gravity simulation tests) N82-18269
Physiological responses to prolonged bed rest and fluid immersion in man: A compendium of research (1974 - 1980)
[NASA-TM-81324] N82-18854

SPACE ERECTABLE STRUCTURES
General description of nestable column structural and assembly technology — large space structures
[NASA-TM-83255] N82-18626

SPACE HEATING (BUILDINGS)
Report on the experiences with the gas compression heat pump system of the school and sports center at Altenkunstadt
[BMFT-FB-T-81-175] N82-18552
Indoor climate, outdoor climate, and energy consumption. An approach to the calculation of the effect of the outdoor and indoor climate on the energy consumption in buildings, based on methods of statistical analysis
[WTHD-137] N82-18709

SPACE MISSIONS
NASA pocket statistics
[NASA-TM-84134] N82-19084

SPACE PLASMAS
Spacelab mission 1 experiment descriptions second edition
[NASA-TM-82448] N82-18234
Space experiments with particle accelerators — Spacelab N82-18241
Phenomena induced by charged particle beams — experimental design for Spacelab N82-18242
Atmospheric emission photometric imaging N82-18243
Design practices for controlling spacecraft charging interactions
[NASA-TM-82781] N82-18311

SPACE PLATFORMS
Large space systems technology, 1981 — conferences
[NASA-CP-2215-PT-1] N82-18275
Modular attitude control of a large space platform N82-18300
Space Laser Power Transmission System Studies — conferences
[NASA-CP-2214] N82-18578
Preliminary study on the use of lasers for the transmission of power N82-18579
A study to survey NASA laser applications and identify suitable lasers for specific NASA needs N82-18580
Investigation of possibilities for solar-powered high-energy lasers in space N82-18581
Design investigation of solar-powered lasers for space applications N82-18582
Utility and technology for a space central power station N82-18583
Laser rocket system analysis N82-18584
Laser power conversion system analysis N82-18585
Space laser power transmission N82-18586

SPACE PROCESSING
Spacelab mission 1 experiment descriptions second edition
[NASA-TM-82448] N82-18234
Materials science N82-18247

SPACE PROGRAMS
Ionospheric program
[INPE-2113-RPE/337] N82-18778
Ground work for project organization in development projects: Experience in space flight
[MBB-UR-476-81-O] N82-19066

SPACE SHUTTLE ORBITERS
A disturbance isolation controller for the solar electric propulsion system flight experiment N82-18299
Survey of multi-function display and control technology
[NASA-CR-167510] N82-18309
An automated data management/analysis system for space shuttle orbiter tiles — stress analysis
[NASA-TM-83261] N82-18915

SPACE SHUTTLES
STS-2 Induced Environment Contamination Monitor (IECM): Quick-look report
[NASA-TM-82457] N82-18870

SPACE STATIONS
Deployable platform systems development N82-18291
LSS control technology N82-18293
Control of large space antennas: Wrap-rib-hoop/column N82-18294
Spatial, High-Accuracy, Positioning-Encoding Sensor (SHAPES) for large space system control applications N82-18295
Control technology development N82-18296
LSS reference platform control N82-18297
Preliminary study on the use of lasers for the transmission of power N82-18579
Utility and technology for a space central power station N82-18583

SPACE SURVEILLANCE (GROUND BASED)
The prediction of satellite ephemeris errors as they result from surveillance system measurement errors
[AD-A108477] N82-19115

SPACE TRANSPORTATION
Laser rocket system analysis N82-18584

SPACE TRANSPORTATION SYSTEM
Technology development of the Space Transportation System mission and terrestrial applications of satellite technology
[NASA-TM-84131] N82-19130

SPACE TRANSPORTATION SYSTEM 2 FLIGHT
Mission operation report: Space Shuttle program. STS-2 postflight medical operations
[NASA-TM-84135] N82-18858

SPACEBORNE EXPERIMENTS
Spacelab mission 1 experiment descriptions second edition
[NASA-TM-82448] N82-18234
Effects of rectilinear acceleration, optokinetic and caloric stimuli in space N82-18255
Vestibular experiments N82-18256
Vestibulo-spinal reflex mechanisms N82-18257
The influence of space flight on erythrokinetics in man N82-18258
Measurement of central venous pressure and determination of hormones in blood serum during weightlessness N82-18259
Effects of prolonged weightlessness on the humoral immune response of humans N82-18260
Three-dimensional ballistocardiography in weightlessness N82-18262
Personal miniature electrophysiological tape recorder N82-18263
Preliminary characterization of persisting circadian rhythms during space flight: Neurospora as a model system N82-18266
Microorganisms and biomolecules in space hard environment N82-18267
Advanced biostack experiment N82-18269
STS-2 Induced Environment Contamination Monitor (IECM): Quick-look report
[NASA-TM-82457] N82-18870

SPACEBORNE PHOTOGRAPHY
Metric camera experiment N82-18239

SPACEBORNE TELESCOPES
Spacelab mission 1 experiment descriptions second edition
[NASA-TM-82448] N82-18234
Far ultraviolet astronomy using the FAUST telescope N82-18249

SPACECRAFT CHARGING
Design practices for controlling spacecraft charging interactions
[NASA-TM-82781] N82-18311
A worst case spacecraft environment as observed by SCATHA on 24 April 1979
[AD-A108680] N82-19121

SPACECRAFT COMMUNICATION
Effects of atmospheric turbulence on microwave and millimeter wave satellite communications systems N82-18445
NASA space communications program
[GPO-85-553] N82-18450

SPACECRAFT CONFIGURATIONS
INTELSAT V-D (F-4) launch
[NASA-TM-84133] N82-18273

SPACECRAFT CONTAMINATION
STS-2 Induced Environment Contamination Monitor (IECM): Quick-look report
[NASA-TM-82457] N82-18870

SPACECRAFT CONTROL
An on board supervisory system for applications in space missions
[INPE-2097-RPE/327] N82-18216
Integrated controls/structures study of advanced space systems N82-18303
Active control of space structures: Proof of concept experiment N82-18304
Utility and technology for a space central power station N82-18583

SPACECRAFT DOCKING
A study of autonomous rendezvous and docking systems N82-18298

SPACECRAFT ENVIRONMENTS
Radiation environment mapping N82-18268

SPACECRAFT LAUNCHING
INTELSAT V-D (F-4) launch
[NASA-TM-84133] N82-18273
Launch mission summary: INTELSAT 5 (F4) ATLAS/CENTAUR-58
[NASA-TM-84132] N82-18274

SPACECRAFT PERFORMANCE
NASA pocket statistics
[NASA-TM-84134] N82-19084

SPACECRAFT POWER SUPPLIES
Utility and technology for a space central power station N82-18583
Laser rocket system analysis N82-18584

SPACECRAFT PROPULSION

Primary propulsion/large space system interaction study [NASA-CR-165277] N82-18315

SPACECRAFT STABILITY

Methodology of uniaxial transient vibration test for satellites [CNES-81/CT/PRT/SST/SM/184] N82-18640

SPACECRAFT STRUCTURES

Electroforming of space and aircraft structures [MBB-BB-491-O] N82-18419

SPACELAB

Radiation environment mapping N82-18268

The design, fabrication and installation of cable routing mockups in support of Spacelab 2 [NASA-CR-161975] N82-18312

SPACELAB PAYLOADS

Spacelab mission 1 experiment descriptions second edition [NASA-TM-82448] N82-18234

An imaging spectrometric observatory N82-18235

Grille spectrometer N82-18236

Waves in the OH emissive layer N82-18237

Investigation on Atmospheric H and D through the measurement of their Lyman-alpha emissions N82-18238

Metric camera experiment N82-18239

Microwave remote sensing experiment N82-18240

Space experiments with particle accelerators — Spacelab N82-18241

Phenomena induced by charged particle beams — experimental design for Spacelab N82-18242

Low-energy electron flux and its reaction to active experimentation of Spacelab N82-18244

DC-magnetic field vector measurement N82-18245

Materials science N82-18247

Effect of weightlessness on lymphocyte proliferation N82-18261

Three-dimensional ballistocardiography in weightlessness N82-18262

Personal miniature electrophysiological tape recorder N82-18263

Mass discrimination during weightlessness N82-18264

Nutation of Helianthus Annuus in a microgravity environment N82-18265

Preliminary characterization of persisting circadian rhythms during space flight: Neurospora as a model system N82-18266

Microorganisms and biomolecules in space hard environment N82-18267

Advanced biostack experiment N82-18269

SPACING

One class of optimum linear equally spaced antenna arrays with summary of difference radiation patterns [AD-A108176] N82-18470

SPALLATION

Neutron transport from targets to moderators [PB82-106915] N82-19027

SPATIAL DISTRIBUTION

Spatial energy distribution — scanning a tunable diode laser beam automatically [NASA-CASE-LAR-12631-1] N82-18557

Beam propagation experimental study [AD-A108504] N82-19006

SPATIAL RESOLUTION

A high resolution, high counting rate bidimensional, MWPC imaging detector for small angle X-ray diffraction studies [PB82-120866] N82-18569

SPECIFIC HEAT

Electron hopping energy influence on the specific heat and conductivity of phosphorus doped silicon [INPE-2301-PRE/070] N82-19044

Electron and impurity correlations in doped semiconductors [INPE-2309-PRE/074] N82-19056

Diagonal and off-diagonal disorder in doped semiconductors [INPE-2292-PRE/067] N82-19057

Random anisotropy in Ising spin glass [INPE-2277-PRE/055] N82-19078

SPECIFICATIONS

Electrical characterization and specification of special purpose linear microcircuits [AD-A108247] N82-18515

SPECTRA

High concentration in GaAs photovoltaic systems [CISE-1713] N82-18529

SPECTRAL CORRELATION

Two-dimensional nuclear magnetic resonance in liquids N82-19005

SPECTRAL EMISSION

Solar spectrum from 170 to 3200 nanometers N82-18254

SPECTRAL REFLECTANCE

Spectral albedos of midlatitude snowpacks [NASA-TM-83858] N82-18663

SPECTRAL RESOLUTION

Spectral transformation in the SOFI complex for processing photographic images on the ES computer, part 1 [NASA-TM-75632-PT-1] N82-18558

Methods for interpreting atmospheric spectral observations by Sun sighting through the Earth limb [ESA-TT-715] N82-18796

SPECTROGRAPHS

Analysis of UV protection requirements and testing of candidate attenuators for the Haloe optical instrument [NASA-TM-83247] N82-18652

SPECTROMETERS

An imaging spectrometric observatory N82 18235

SPECTROPHOTOGRAPHY

Spectral transformation in the SOFI complex for processing photographic images on the ES computer, part 1 [NASA-TM-75632-PT-1] N82-18556

SPECTROPHOTOMETERS

Stratospheric instruments and analyses N82-18776

SPECTROSCOPIC ANALYSIS

Three-stage mass spectrometer for isotopic analysis of radionuclides in environmental samples [DE82-001739] N82-18353

SPECTROSCOPY

Transient conductance spectroscopy measurements of defect states in Gamma-irradiated n-channel silicon field effect transistors with possible Gamma-dosemeter applications [AAEC/E-504] N82-19077

SPECTRUM ANALYSIS

The theory and application of temperature programmed desorption in the study of unsupported iron and iron-copper Fischer-Tropsch synthesis catalysts N82-18339

Explicit solution of the inverse problem for a vibrating string [AD-A108133] N82-18635

Radiation detection with point-contact Josephson junctions N82-19054

SPECULAR REFLECTION

A propagation experiment involving reflection and diffraction [AD-A108644] N82-18476

SPEECH

Queueing analysis of a shared voice-data link [AD-A108336] N82-18475

SPEECH RECOGNITION

Time-sharing manual control and memory search: The joint effects of input and output modality competition, priorities and control order [AD-A108721] N82-18867

SPEED INDICATORS

Evaluation of the helicopter low airspeed system LASSIE N82-18172

SPEED REGULATORS

Three-engine control system for the prototype EH-101 helicopter [AEBG-9/81-1568L] N82-18135

SPHERES

Experimental results of multiple scattering [AD-A108291] N82-19032

SPHEROIDS

Studies on plastic instability, notch deformation and hydrogen effects in spheroidized steel N82-18366

SPIN GLASS

Random anisotropy in Ising spin glass [INPE-2277-PRE/055] N82-19078

SPIN STABILIZATION

Spin-tunnel investigation of a 1/13-scale model of the NASA AD-1 oblique-wing research aircraft [NASA-TM-83236] N82-18183

SPIN-LATTICE RELAXATION

The influence of the spin-rotor coupling of methyl groups in solids on their NMR relaxation [ISBN-90-6231-090-7] N82-19055

SPIN-SPIN COUPLING

Some properties of the non-linear partial difference equation for the Ising-model correlation function [CNRS-CPT-80-P-1226] N82-18955

Comparison of two-particle cluster expansions for b.c.c. spin of 1/2 systems N82-19047

SPINAL CORD

Vestibulo-spinal reflex mechanisms N82-18257

SPLINE FUNCTIONS

The computation of Laplacian smoothing splines with examples [AD-A108746] N82-18976

Smoothing splines: Regression, derivatives and deconvolution [AD-A108631] N82-18981

SPONGES (MATERIALS)

Sedimentology and diagenesis of Bryozoan and sponge-rich carbonate buildups Great Bahama Bank N82-18769

SPRAYED COATINGS

Evaluation of present thermal barrier coatings for potential service in electric utility gas turbines [NASA-CR-165545] N82-18368

High temperature coatings for gas turbines: A review — diffusion coatings and their mechanical properties [NLR-MP-81003-U] N82-18385

Friction coefficient of flame spread materials — metal coatings [CETIM-12-DO-71] N82-18386

JT9D ceramic outer air seal system refinement program [NASA-CR-165554] N82-18603

SPREAD F

A simulation of equatorial plasma bubble signatures on the OI 6300 A nightglow meridional profile over Brazilian low latitude [INPE-2260-PRE/042] N82-18779

Equatorial spread F instability conditions as determined from ionograms [INPE-2310-PRE/075] N82-18780

SPUTTERING

Semiconductor measurement technology: The capabilities and limitations of Auger sputter profiling for studies of semiconductors [PB82-120122] N82-19075

STABILITY

Effects of fan inlet temperature disturbances on the stability of a turbofan engine [NASA-TM-82699] N82-18222

STABILITY AUGMENTATION

A redundancy concept for a digital CSAS N82-18170

STABILIZATION

Review of helicopter Mast Mounted Sight (MMS) base motion isolation and Line-of-Sight (LOS) stabilization concepts N82-18166

Integration of inertial sensors in helicopters N82-18173

STABILIZED PLATFORMS

Review of helicopter Mast Mounted Sight (MMS) base motion isolation and Line-of-Sight (LOS) stabilization concepts N82-18166

Mast mounted visual aids N82-18167

Software features applicable to inertial measurement unit self alignment [AD-A108511] N82-18196

System for stabilization and pointing of a stratospheric balloon-borne telescope [INPE-2103-RPE/330] N82-18558

STAINLESS STEELS

Moving body velocity arresting line — stainless steel cables with energy absorbing sleeves [NASA-CASE-LAR-12372-1] N82-18601

STANDARDS

Hewlett Packard company HP-3000 series 3, release A.00.04 indexed 1-0 module [PB82-106022] N82-18895

Honeywell information systems, COBOL, version 3.0 [PB82-106071] N82-18900

IBM corporation: IBM 5280 COBOL, release 3, indexed 1-O module, level 1 [PB82-100934] N82-18902

IBM corporation: IBM vs FORTRAN release 1 (5748-FO3) [PB82-100942] N82-18903

Microsoft: Microsoft COBOL V4.40, indexed I-O module, level 1
[PB82-100956] N82-18904
STANDING WAVES
Experimental results of multiple scattering
[AD-A106291] N82-19032
STARS
Part 2: The deflexion of starlight by the Sun
N82-19114
STATIC DISCHARGERS
Use of glow discharge in fluidized beds
[NASA-CASE-ARC-11245-1] N82-18401
STATIC LOADS
Status report on the Aeronautical Research Institute of Sweden version of the missile aerodynamics program LARV, for calculation of static aerodynamic properties and longitudinal aerodynamic damping derivatives. Part 1: Theory — Low Aspect Ratio Vehicle (LARV)
[FFA-TN-AU-1661-PT-1] N82-18306
STATIC TESTS
Static and dynamic analysis of axially loaded wire ropes N82-18625
STATISTICAL ANALYSIS
Surface statistics investigations
[AD-A106234] N82-18395
Queueing analysis of a shared voice-data link
[AD-A108336] N82-18475
Statistical tools for determining fitness to fly
[AD-A106599] N82-18960
On simple robust confidence procedures
N82-18971
Optimization of functions of matrices with applications to statistical problems
[AD-A106369] N82-18967
STATISTICAL DISTRIBUTIONS
Bayesian reliability tests made practical
[AD-A106150] N82-18615
One-sided comparisons for treatments with a control — distribution theory for likelihood ratio statistics
[AD-A108331] N82-18978
STATISTICAL MECHANICS
A unified cad model for MOSFETS N82-18501
STATISTICAL TESTS
Partial sequential tests for the mean of a normal distribution N82-18969
Remarks concerning Chase's results on testing for ordered alternatives
[AD-A106148] N82-18974
One-sided comparisons for treatments with a control — distribution theory for likelihood ratio statistics
[AD-A108331] N82-18978
STEADY STATE
Steady state numerical solution of magnetically insulated charge flow in coaxial geometry
[AD-A108633] N82-18991
STEAM TURBINES
Assessment of steam-injected gas turbine systems and their potential application
[NASA-TM-82735] N82-18694
STEEL STRUCTURES
Fully galvanic fabrication of complex forms
[MBB-BB-486-O] N82-18384
STEELS
Studies on plastic instability, notch deformation and hydrogen effects in spheroidized steel N82-18366
Kinetics of crack initiation and propagation in metal-induced embrittlement of 4140 steel by indium
N82-18367
Fatigue microcrack behavior under the influence of surface residual stresses
[AD-A108691] N82-18633
STELLAR MAGNETIC FIELDS
Theoretical studies of the RS Canum Venaticorum stars
[NASA-CR-168549] N82-19116
STELLAR RADIATION
Part 2: The deflexion of starlight by the Sun
N82-19114
STIFFNESS MATRIX
Modal characteristics of rotor blades: Finite element approach and measurement by ground vibration test
N82-18127
Lower bound equilibrium design of slabs
[PB82-105263] N82-18649
Axisymmetric triangular element with six nodal points
[INPE-2289-PRE/064] N82-18945
Numerical methods for stiff differential equations and Josephson interferometer equations
[AD-A106373] N82-18950
STIMULATED EMISSION DEVICES
Thermodynamic limits to the efficiency of solar energy conversion by quantum devices
[NASA-TM-83228] N82-18697
STIRLING CYCLE
Operating experience with the Harwell thermo-mechanical generators
[AERE-R-9829] N82-18527
Experimental study of an integral catalytic combustor: Heat exchanger for Stirling engines
[NASA-TM-82783] N82-18691
STOCHASTIC PROCESSES
Time domain vibration testing techniques in stochastic environment: Model reference adaptive system approach N82-18624
Feynman path integral and Poisson processes with piecewise classical paths
[CNRS-CPT-80-P-1244] N82-18957
Renewal tables: Tables of functions arising in renewal theory
[AD-A106264] N82-18975
STOICHIOMETRY
The influence of composition on the structure and mechanical properties of the compound NiAl
[ESA-TT-700] N82-18382
STORAGE RINGS (PARTICLE ACCELERATORS)
Dynamics of an intense electron ring in a modified betatron field
[AD-A108359] N82-19010
STORAGE TANKS
Earthquake response of sea-based storage tanks by a hybrid element method-theory and computer analysis
[PB82-104993] N82-18647
Monitoring of thermal stratification of the storage tank of the Mabel Lee Hall Solar-Hot-Water Facility
[DE82-002110] N82-18703
Model of seasonal heat storage — reservoirs
[BMFT-FB-T-81-176] N82-18711
STORMS (METEOROLOGY)
Aircraft measurements and analysis of severe storms: 1976 field experiment
[NASA-CR-168519] N82-18803
STRAIN RATE
The effect of hydrogen on the solid solution strengthening and softening of nickel
[AD-A106654] N82-18374
STRATIFICATION
Monitoring of thermal stratification of the storage tank of the Mabel Lee Hall Solar-Hot-Water Facility
[DE82-002110] N82-18703
STRATIFIED FLOW
Statistical modeling of shear in the upper ocean
[AD-A108212] N82-18848
STRATIGRAPHY
The environmental stratigraphy and depositional systems of the precambrian (?)-Cambrian campito formation, eastern California and western Nevada
N82-18768
Sedimentology and diagenesis of Bryozoan and sponge-rich carbonate buildups Great Bahama Bank
N82-18769
STRATOSPHERE
System for stabilization and pointing of a stratospheric balloon-borne telescope
[INPE-2103-RPE/330] N82-18558
Gas-surface interactions in cryogenic whole air sampling
[AD-A108256] N82-18742
The Stratosphere 1981: Theory and measurements
[NASA-TM-84125] N82-18770
Trace species N82-18771
Multidimensional aspects: Ozone, temperature and transport N82-18772
Model predictions and trend analysis N82-18773
Chemical kinetics and photochemistry
N82-18774
A reference solar spectral irradiance for use in atmospheric modeling N82-18775
Stratospheric instruments and analyses
N82-18776
Stratospheric aerosols and precursor gases
N82-18777
High altitude atmospheric physics program
[INPE-2111-RPE/336] N82-18785
STREAMS
Use of flow-duration curves to evaluate effects of urbanization on streamflow patterns on Long Island, New York
[PB82-114307] N82-18673
Water resources data for California. Volume 3: Southern Central Valley Basins and the Great Basin from Walker River to Truckee River
[PB82-117603] N82-18681
STRESS ANALYSIS
A digital algorithm for composite laminate analysis, FORTRAN
[AD-A106201] N82-18330
A compilation of stress intensity factor solutions for flawed fastener holes
[AD-A108753] N82-18628
An automated data management/analysis system for space shuttle orbiter tiles — stress analysis
[NASA-TM-83261] N82-18915
STRESS CONCENTRATION
Failure of fibrous composites. Part 1: Stress concentration, cracks and notches. Part 2: Toughness
[PB82-113531] N82-18332
STRESS CYCLES
An experimental determination of the effect of cyclic stress on void growth in ultra-high-purity aluminum during simultaneous 800 MeV proton irradiation
N82-18364
STRESS FUNCTIONS
A stress function for evaluating strategies for water quality management
[PB82-109828] N82-18678
STRESS INTENSITY FACTORS
A compilation of stress intensity factor solutions for flawed fastener holes
[AD-A108753] N82-18628
STRESS MEASUREMENT
X-ray measurement of residual stress in metals at Chalk River Nuclear Laboratories
[AECL-6961] N82-18639
STRESS-STRAIN RELATIONSHIPS
Vibration damping characteristics of graphite/epoxy composites for large space structures N82-18283
Properties of multiphase polyurethane systems
[AD-A108519] N82-18397
PMATRX: An algorithm for transforming n-Dimensional data into plotted curves
[PB82-114463] N82-18424
Analysis of post-tensioned girder anchorage zones
[PB82-122266] N82-18436
Determination crack tip field parameters for elastic-plastic materials via an estimation scheme
[AD-A108267] N82-18636
Axisymmetric triangular element with six nodal points
[INPE-2289-PRE/064] N82-18945
STRINGS
Explicit solution of the inverse problem for a vibrating string
[AD-A106133] N82-18635
STRIP MINING
A land use analysis of existing and potential coal surface mining areas in the Ohio River Basin Energy Study region
[PB82-105172] N82-18679
Coal mine siting for the Ohio River Basin energy study
[PB82-106119] N82-18680
STRUCTURAL ANALYSIS
Properties of multiphase polyurethane systems
[AD-A108519] N82-18397
Analysis of post-tensioned girder anchorage zones
[PB82-122266] N82-18436
NASEDIT: The interactive NASTRON editor
[MBB-Z-2-81-O] N82-18643
Nonlinear elastic beams, frames and structural analysis
[CTH-R-31/1979] N82-18645
Lower bound equilibrium design of slabs
[PB82-105263] N82-18649
STRUCTURAL DESIGN
Impact of systems technology and integration on helicopter design N82-18165
Sequential deployment of truss structures
N82-18285
ACOSS eight (Active Control Of Space Structures), phase 2
[AD-A108629] N82-18313

Stabilized microwave oscillator for a dielectric resonator
[INPE-2123-RPE/347] N82-18512
Applied research and development of falling-sphere densitometers payloads of improved design
[AD-A108316] N82-18560
Dynamic analysis and design of constrained mechanical systems
[AD-A108685] N82-18629
Design sensitivity analysis and optimization of constrained dynamic systems
[AD-A108684] N82-18630
Generalized coordinate partitioning in dynamic analysis of mechanical systems
[AD-A108683] N82-18631
Conceptual design of a solar cogeneration facility industrial process heat. Volume 2: Appendices
[DE82-001578] N82-18702

STRUCTURAL DESIGN CRITERIA
Design philosophy of the Hughes model 600 helicopter N82-18140
SH-608 test program N82-18141
Large space systems technology, 1981 — conferences
[NASA-CP-2215-PT-1] N82-18275

STRUCTURAL ENGINEERING
Mobile work station concept for assembly of large space structures (zero gravity simulation tests) N82-18269
Theory and application of experimental model analysis in earthquake engineering
[PB82-122409] N82-18430
Performance of the Norris Cotton Federal Office Building for the first 3 years of operation
[PB82-105487] N82-18728

STRUCTURAL FAILURE
Collapse limit states of reinforced earth retaining walls
[PB82-113515] N82-18423

STRUCTURAL MEMBERS
Response of reinforced concrete plate-column connections to dynamic and static horiztontal loads. Appendices E to H
[PB82-101544] N82-18646

STRUCTURAL STRAIN
Comparison of notch-stress with strain-controlled low cycle fatigue of alpha-beta titanium alloys
[AD-A108548] N82-18376

STRUCTURAL VIBRATION
The potential of nonperiodic truss structures for space applications N82-18284

STRUTS
General description of nestable column structural and assembly technology — large space structures
[NASA-TM-83255] N82-18626

SUBMARINES
Investigation on air samples from the submarine Sjoehunden, August 1979
[FOA-C-54035-H1] N82-18744
Investigations on air samples from the submarine Naecken, August 1980
[FOA-C-54036-H1] N82-18745

SUBMERGING
Physiological responses to prolonged bed rest and fluid immersion in man: A compendium of research (1974 - 1980)
[NASA-TM-81324] N82-18654

SUBSONIC AIRCRAFT
Tendencies in the development of subsonic transport aircraft with special consideration of aerodynamics
[ESA-TT-705] N82-18214

SUBSONIC FLOW
Theodor von Karman and applied mathematics
[MPIS-9/1981] N82-18959

SUBSTRATES
Development of novel porous substrates for ultrafiltration, desalination and water reclamation, part 2
[PB82-103920] N82-18363

SUITABILITY
Exploratory study on manual drilling
[CETIM-1-6E-0-60] N82-18420

SULFATES
Economic losses in the Columbus SMSA due to long-range transport of airborne residuals in the Ohio River Basin Energy Study Region
[PB82-110735] N82-18438

SULFONATES
The surface properties and flotation of rare earth minerals N82-18365

SULFUR COMPOUNDS
Stratospheric aerosols and precursor gases N82-18777

SULFUR DIOXIDES
Emissions assessment of conventional stationary combustion systems: Summary report
[PB82-109414] N82-18753
Study of automatic control system to maintain constant percentage SO2 retention in a pressurized FBC
[PB82-110893] N82-18756

SUMMER
Convective rainfall estimation in Rio Grande do Sul State, Brazil: Preliminary results
[INPE-2271-RPE/400] N82-18804

SUN
Relativistic effects in the solar system
[IFKKI-81/2] N82-19112
Results of Sun measurements at the Metsaehovi radio research station at 37 GHz (Autumn 1978) — high resolution mapping and tracking of active areas: detection of high and low temperature areas
[REPT-S-115] N82-19126

SUPERCONDUCTIVITY
Superconducting electronics
[AD-A108402] N82-18520
Investigation on the functioning of gold-tin superconducting films for the measurement of secondary sonic shock waves in He2 flow
[MPIS-8/1981] N82-18565

SUPERCONDUCTORS
Superconducting electronics
[AD-A108402] N82-18520

SUPERHIGH FREQUENCIES
A review of satellite communication and propagation experiments for frequencies above 10 GHz
[DFVLR-MITT-81-08] N82-18485
Radio equipment for propagation experiments at the frequencies 11, 18, and 36 GHz
[FOA-A-30027-E2] N82-18490

SUPERSONIC DRAG
Theoretical prediction of base pressure on missile bodies having a turbulent dead-air region at supersonic velocities
[ESA-TT-709] N82-18191

SUPERSONIC FLOW
Investigation of supersonic separated flow in a comparison corner by laser Doppler anemometry N82-18176
A method of characteristic surfaces. The approximate solution of three-dimensional supersonic flow fields from the near field up to the sonic boom region N82-18182

SUPERSONIC NOZZLES
Improvement of rocket engine plume analysis techniques
[NASA-CR-167516] N82-18316

SURFACE CRACKS
Fatigue microcrack behavior under the influence of surface residual stresses
[AD-A108691] N82-18633

SURFACE LAYERS
Electroforming of space and aircraft structures
[MBB-BB-491-O] N82-18419

SURFACE PROPERTIES
Studies on plastic instability, notch deformation and hydrogen effects in spheroidized steel N82-18366
Texture developments associated with abnormal grain growth in low carbon steel sheet N82-18388

SURFACE ROUGHNESS
Surface statistics investigations
[AD-A108234] N82-18395

SURFACE TEMPERATURE
Engine superficial temperature and infrared signature N82-18136
The theory and application of temperature programmed desorption in the study of unsupported iron and iron-copper Fischer-Tropsch synthesis catalysts N82-18339

SURFACE VEHICLES
Suggested models for analyzing and forecasting demand for components of army vehicles
[PHL-1979-35] N82-18963
Mobility bibliography
[AD-A108228] N82-19104

SURVEYS
Environmental assessment, source test and evaluation report: Lurgi (Kosovo) medium-Btu gasification
[PB82-114075] N82-18751
Soil properties of USSR strategic areas. Volume 1: Soil property comparisons for selected USSR and U.S. soils
[AD-A108743] N82-18788
Urban data for comparative analyses of cities
[PB82-125675] N82-19107

SWEDEN
Observations with an imaging 35 GHz radiometer of terrain in Malmslaett, July 1980
[FOA-C-30240-E1/E3] N82-18672

SWEPTBACK WINGS
Investigations of the separation behavior on airfoils at high angles of attack, using linear lift theory
[MBB-FE-122/S/PUB/37] N82-18189

SYMMETRY
Spontaneous breakdown of chiral symmetry in semi-classical method. 1: Boundary condition on the path integral
[CNRS-CPT-80-P-1217] N82-18958

SYNCHRONOUS MOTORS
Single phase permanent magnet synchronous motors N82-18495

SYNTAX
Syntax oriented analysis of the run time performance of programs N82-18908

SYNTHESIS (CHEMISTRY)
The theory and application of temperature programmed desorption in the study of unsupported iron and iron-copper Fischer-Tropsch synthesis catalysts N82-18339
Bibliography on carbohydrate synthesis. Selected works, 1861 - 1981
[NASA-CR-168553] N82-18671

SYNTHETIC APERTURE RADAR
Analogue SAR signal processing: Breadboard design, implementation, evaluation and component specification — synthetic aperture radar
[ESA-CR(P)-1463] N82-18480
Study of synthetic aperture radar in 2D - 2FS operation over the ocean — European Remote Sensing system
[ESA-CR(P)-1475] N82-18481

SYNTHETIC FOOD
Bibliography on carbohydrate synthesis. Selected works, 1861 - 1981
[NASA-CR-168553] N82-18671

SYNTHETIC FUELS
Comparison of coal based systems: Medium-BTU gas versus SNG for industrial applications
[PB82-117383] N82-18407
Gasoline equivalent fuel economy determination for alternate automotive fuels
[PB82-120072] N82-18412

SYNTHETIC RESINS
Development of novel porous substrates for ultrafiltration, desalination and water reclamation, part 2
[PB82-103920] N82-18363

SYSTEM EFFECTIVENESS
Prediction of off-design performance of turbo-shaft engines a simplified method N82-18132
Measurement techniques used to assess the installed power of a helicopter engine N82-18133
Component design and development for future helicopter engines N82-18134
Energy Management and Control Systems (EMCS) user satisfaction study
[PB82-103656] N82-18724

SYETEM IDENTIFICATION
Systems identification technology development for large space systems N82-18301
Configurational and system requirements for control of large space systems N82-18302

SYSTEMS ANALYSIS
SH-608 test program N82-18141
A light helicopter for night firing N82-18144
Task analytic techniques: Application to the design of a flight simulator instructor/operator console
[AD-A108724] N82-18227
CANDE-1980: Box culverts and soil models
[PB82-102393] N82-18427
Laser power conversion system analysis N82-18585

SYSTEMS ENGINEERING
The influence of sensor and actuator characteristics on overall helicopter AFCS design N82-18171
Deployable platform systems development N82-18291
Technological needs of advanced Earth-observation spacecraft N82-18292
LSS control technology N82-18293
Control of large space antennas: Wrap-rib-hoop/column N82-18294
Spatial, High-Accuracy, Positioning-Encoding Sensor (SHAPES) for large space system control applications N82-18295
Control technology development N82-18296
LSS reference platform control N82-18297
Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant. Conceptual Design Engineering Report (CDER). Volume 4: Supplementary engineering data [NASA-CR-165462-VOL-4] N82-18886
Design of sounding rocket payloads [AD-A108271] N82-18792
Technology development of the Space Transportation System mission and terrestrial applications of satellite technology [NASA-TM-84131] N82-19130

SYSTEMS INTEGRATION
Impact of systems technology and integration on helicopter design N82-18165
Integration of inertial sensors in helicopters N82-18173
Integrated control design techniques [AD-A108223] N82-18224
IAC level 'O' program development N82-18285
Large Advanced Space Systems (LASS) computer-aided design program additions N82-18287
Inspection integrated with fabrication — ultrasonic flaw detection [CETIM-15-H-194] N82-18622
System control procedure development for a distributed microcomputer network for avionics utilizing a non-responsive time-division multiplexed bus as the inter-computer communication link N82-18927

SYSTEMS SIMULATION
Numerical simulation of diode rectifier bridges: Application of a new method to the brushless excitation system [DRIC-T-6478] N82-18504

SYSTEMS STABILITY
Robustness in multivariable control system design [PB82-121401] N82-18943

T

T TAURI STARS
Theoretical studies of the RS Canum Venaticorum stars [NASA-CR-168549] N82-19116

TABLES (DATA)
The Ohio River Basin Energy Facility siting model. Volume 2: Sites and on-line dates [PB82-112111] N82-18442
Ground-water for the Salt Basin, Eagle Flat, Red Light Draw, Green River Valley, and Presidio Bolson in westernmost Texas [PB82-105289] N82-18759
Wind-ceiling-visibility data at selected airports. Volume 1: New England region [AD-A108155] N82-18816
Wind-ceiling-visibility data at selected airports, volume 2. Part A: Eastern region [AD-A108156] N82-18817
Wind-ceiling-visibility data at selected airports. Volume 2, part B: Eastern region [AD-A108157] N82-18818
Wind-ceiling-visibility data at selected airports. Volume 3, part A: Southern region [AD-A108158] N82-18819
Wind-ceiling-visibility data at selected airports. Volume 3, part B: Southern region [AD-A108159] N82-18820
Wind-ceiling-visibility data at selected airports. Volume 4, part A: Great Lakes region [AD-A108160] N82-18821
Wind-ceiling-visibility data at selected airports. Volume 4, part B: Great Lakes region [AD-A108161] N82-18822
Wind-ceiling-visibility data at selected airports. Volume 5, part A: Central region [AD-A108162] N82-18823
Wind-ceiling-visibility data at selected airports. Volume 5, part B: Central region [AD-A108163] N82-18824
Scatter diagrams based on the anthropometric survey of 2000 Royal Airforce aircrew (1970/1971) [RAE-TR-81017] N82-18957

TACTICS
Simulation of modern radar apparatus in full mission flight and tactic simulators [MBB-UA-595-81-O] N82-18482

TACTILE DISCRIMINATION
Effect of tactile vibration on annoyance to synthesized proplan noise [NASA-TM-83258] N82-18986

TAKEOFF RUNS
A digital simulation program describing the motion of an aircraft undergoing engine failure during its takeoff ground roll [AD-A108420] N82-18210

TAPE RECORDERS
Personal miniature electrophysiological tape recorder N82-18263

TARGET ACQUISITION
Tethered rotorplatforms and their mission potential N82-18145
Distributed sensor networks [AD-A108275] N82-18888

TARGET RECOGNITION
Tethered rotorplatforms and their mission potential N82-18145
Investigation of large capacity optical memories for correlator applications [AD-A108555] N82-18863

TARGET SIMULATORS
Comparison of U.S. and Swedish Aerial Target Vulnerability Assessment Methodologies (ATVAM) [FOA-REPTS-VOL-15-NO-4] N82-18965

TEA LASERS
Competing reaction channels in IR laser induced unimolecular reactions N82-18336

TECHNOLOGICAL FORECASTING.
Research predictions for underwater activities in the 1980's [FOA-C-58010-H1] N82-18662
The Global 2000 report to the President. Entering the twenty-first century, volume 1 [PB82-100801] N82-19080
The Global 2000 report to the President. Entering the twenty-first century, volume 2 [PB82-100819] N82-19081
The Global 2000 report to the President. Documentation on the Government's Global sectoral models: The Government's Global model, volume 3 [PB82-100827] N82-19082
Corporate organizationl design and its effect on innovation [PB82-108903] N82-19089

TECHNOLOGY ASSESSMENT
Review of defense-related vertical and short takeoff and landing (V/STOL) aircraft programs [GPO-85-278] N82-18205
Deployable platform systems development N82-18291
Survey of multi-function display and control technology [NASA-CR-167510] N82-18309
High-temperature corrosion resistance of ceramic materials [PB82-104389] N82-18400
The Conference on High Temperature Electronics [NASA-CR-168505] N82-18534
Dimensions: Volume 65, number 5 [PB82-120387] N82-18570
Assessment of future environmental trends and problems: Industrial use of applied genetics and biotechnologies [PB82-118851] N82-18750
Technology and oceanography: An assessment of Federal technologies for oceanographic research and monitoring [OTA-O-142] N82-18844
Fourth Annual Community Planning and Development Challenges: Energy, Environment, Water [PB82-125790] N82-19106

TECHNOLOGY TRANSFER
Impact of systems technology and integration on helicopter design N82-18165

TECHNOLOGY UTILIZATION
Ground work for project organization in development projects: Experience in space flight [MBB-UR-478-81-O] N82-19068
NASA Technology Utilization House technical support package Summary of results and house description [NASA-TM-X-74686] N82-19103

TECTONICS
Reports on crustal movements and deformations [NASA-TM-83872] N82-18786

TEFLON (TRADEMARK)
Secondary electron emission from a charged dielectric in the presence of normal and oblique electric fields [NASA-CR-168558] N82-18507

TELECOMMUNICATION
A four-phase modulation system for use with and adaptive array N82-18446
Link availability in satellite telecommunication subject to correlated rain attenuation at the ground terrain [INPE-2280-PRE/058] N82-18451
Engineering intelligibility testing of voice communication equipment [AD-A108138] N82-18467
Multiple access communication: The finite user population problem [AD-A108337] N82-18474
Spectrum resource assessment in the 2300-2450 MHz band [PB82-115452] N82-18492
Full text information systems: A review and assessment of the technology N82-19092

TELESCOPES
Heat reflecting field stop [NASA-CASE-LAR-12443-1] N82-19030

TEMPERATE REGIONS
Spectral albedos of midlatitude snowpacks [NASA-TM-83858] N82-18663

TEMPERATURE CONTROL
Thermal resistance of convectively cooled plates with applied heat flux and internal heat generation [INPE-2291-PRE/066] N82-18541
Heat reflecting field stop [NASA-CASE-LAR-12443-1] N82-19030

TEMPERATURE DEPENDENCE
Positron studies of point defect interactions in metals [SF-02150] N82-19053

TEMPERATURE DISTRIBUTION
Engine superficial temperature and infrared signature N82-18136
Analysis of thermal stresses in internally sealed concrete bridge decks [PB82-122886] N82-18435

TEMPERATURE EFFECTS
Effects of fan inlet temperature disturbances on the stability of a turbofan engine [NASA-TM-82899] N82-18222
The surface properties and flotation of rare earth minerals N82-18365

TEMPERATURE GRADIENTS
Monitoring of thermal stratification of the storage tank of the Mabel Lee Hall Solar-Hot-Water Facility [DE82-002110] N82-18703
US Navy Marine Climatic Atlas of the World. Volume 9: World-wide means and standard deviations [AD-A108222] N82-18836

TEMPERATURE MEASUREMENT
Solar energy control system — temperature measurement [NASA-CASE-MFS-25297-1] N82-18686

TEMPERATURE MEASURING INSTRUMENTS
Automated PCM encoder temperature test [AD-A108154] N82-18869

TENSILE CREEP
Determination of the high temperature strength of ceramic. Discussion of testing techniques: Flexural and tensile tests, creep tests with flexural and tensile load [ESA-TT-716] N82-18399

TENSILE DEFORMATION
Elastic stresses in U-shaped bellows [AECL-6476] N82-18638

TENSILE STRENGTH
Vibration and buckling studies of pretensioned structures N82-18282
Determination of the high temperature strength of ceramic. Discussion of testing techniques: Flexural and tensile tests, creep tests with flexural and tensile load
[ESA-TT-716] N82-18399

TENSILE TESTS
Kinetics of crack initiation and propagation in metal-induced embrittlement of 4140 steel by indium N82-18367
Determination of the high temperature strength of ceramic. Discussion of testing techniques: Flexural and tensile tests, creep tests with flexural and tensile load
[ESA-TT-716] N82-18399

TERMINOLOGY
How an unfamiliar thing should be called
[AD-A109179] N82-18988

TERRAIN
Observations with an imaging 35 GHz radiometer of terrain in Malmslatt, July 1980
[FOA-C-30240-E1/E3] N82-18672

TERRAIN ANALYSIS
A three-dimensional wind model for complex terrain N82-18802
Matrix data analysis: Color/B and W coding is not always enough
[AD-A108408] N82-18930
Profiling sensitivity to image quality
[AD-A108405] N82-18931

TEST CHAMBERS
HERL biological exposure chamber conceptual design
[PB82-114846] N82-18574

TEST FACILITIES
Evaluation of the North Island A/C crash/rescue training facility
[AD-A108740] N82-18226
Test site instrumentation study. Volume 2: Crash 1 and crash 2 raw data
[PB82-111832] N82-18233
Magnetohydrodynamics (MHD) Engineering Test Facility (ETF) 200 MWe power plant. Conceptual Design Engineering Report (CDER). Volume 4: Supplementary engineering data
[NASA-CR-165452-VOL-4] N82-18686

TEST PATTERN GENERATORS
Selecting sufficient sets of test paths for program testing N82-18905

TEST STANDS
Further development of the test concept of the ALPHA JET engine LARZAC 04 N82-18223
Construction and testing of a test stand for solar cells and concentrating collectors
[BMFT-FB-T-81-179] N82-18714

TETHERLINES
Tethered rotorplatforms and their mission potential N82-18145

TEXAS
Ground-water for the Salt Basin, Eagle Flat, Red Light Draw, Green River Valley, and Presidio Bolson in westernmost Texas
[PB82-105289] N82-18759

TEXTS
The human as a constrained optimal text editor N82-18910
Full text information systems: A review and assessment of the technology N82-19092

TEXTURES
Texture developments associated with abnormal grain growth in low carbon steel sheet N82-18386
Synthesis of textures using simultaneous autoregressive models
[AD-A108584] N82-18936
Qualitative texture discrimination
[AD-A108582] N82-18937

THEOREMS
A study of the techniques of dynamic analysis of helicopter type structures N82-18129

THERMAL ABSORPTION
Potential atmospheric carcinogens, phase 2/3: Analytical technique and field evaluation
[PB82-102476] N82-18362

THERMAL CONDUCTIVITY
Weak and strong ignition. 1: Numerical simulations of shock tube experiments
[AD-A108963] N82-18344
Thermal and electrical properties of solids at low temperatures
[DE82-000727] N82-18993

THERMAL CONTROL COATINGS
Evaluation of present thermal barrier coatings for potential service in electric utility gas turbines
[NASA-CR-165545] N82-18368

THERMAL CYCLING TESTS
Thermal expansion of graphite-epoxy between 116 K and 366 K N82-18280
Effect of thermal cycling on the movement of the alpha Zr/alpha Zr-2.5 wt percent Nb alloy
[AECL-6863] N82-18379
Reusable thermal cycling clamp --- holders for directional solidification experiments
[NASA-CASE-LAR-12868-1] N82-18390

THERMAL DIFFUSION
Finite element thermal-structural modeling of orbiting truss structures N82-18281

THERMAL ENERGY
Evaluation of a thermal response test for electropyrotechnical devices: Summary
[TP-15225/80] N82-18405

THERMAL EXPANSION
The effects of microcracking on the thermal expansion of graphite-epoxy composites N82-18279
Thermal expansion of graphite-epoxy between 116 K and 366 K N82-18280

THERMAL INSULATION
Carboranylcyclotriphosphazenes and their polymers --- thermal insulation
[NASA-CASE-ARC-11176-1] N82-18389

THERMAL MAPPING
Results of Sun measurements at the Metsaehovi radio research station at 37 GHz (Autumn 1978) --- high resolution mapping and tracking of active areas: detection of high and low temperature areas
[REPT-S-115] N82-19126

THERMAL POLLUTION
Commercial Ocean Thermal Energy Conversion (OTEC) licensing Final Environment Impact Statement
[PB82-117532] N82-18733

THERMAL RESISTANCE
Reusable thermal cycling clamp --- holders for directional solidification experiments
[NASA-CASE-LAR-12868-1] N82-18390
Thermal resistance of convectively cooled plates with applied heat flux and internal heat generation
[INPE-2291-PRE/066] N82-18541
Thermal resistance of a convection cooled flat plate with a nonuniform applied heat flux and internal generation of constant heat
[INPE-2131-RPE/355] N82-18542

THERMAL STABILITY
Energy contributions associated with combustion instability
[AD-A108137] N82-18346
Thermal hydraulic stability of flow in parallel channels N82-18536

THERMAL STRESSES
Thermal expansion of graphite-epoxy between 116 K and 366 K N82-18280
Analysis of thermal stresses in internally sealed concrete bridge decks
[PB82-122686] N82-18435
Bond strength of galvanic coatings under thermal stress from the example of galvanic forming
[MBB-SB-486-O] N82-18642

THERMOCHEMISTRY
Investigation of the CNTD mechanism and its effect on microstructural properties of SiC and AlN
[AD-A108581] N82-18371

THERMOCOUPLES
Solar energy control system --- temperature measurement
[NASA-CASE-MFS-25267-1] N82-18688

THERMODYNAMIC CYCLES
CYCLE: A general computer code for thermodynamic cycle computations. Studies of cogeneration in district heating systems
[WTHD-135] N82-18706

THERMODYNAMIC EFFICIENCY
Development of thin wraparound junction silicon solar cells
[NASA-CR-165570] N82-18689
Thermodynamic limits for solar energy conversion by a quantum-thermal hybrid system
[NASA-TM-83229] N82-18695

THERMODYNAMIC PROPERTIES
Solvation of some non-metals in liquid lithium and sodium
[BLG-536] N82-18351
Calculation of thermodynamic equilibria in the carbonate fuel cell, volume 2. Task 2: Equilibria between the carbonate electrolyte and the C-H-O-S gas phase. Task 3: Vapour pressures and the volitization of the alkali species
[DE82-000888] N82-18705

THERMODYNAMICS
Thermodynamic limits to the efficiency of solar energy conversion by quantum devices
[NASA-TM-83228] N82-18697

THERMOELECTRIC GENERATORS
Operating experience with the Harwell thermo-mechanical generators
[AERE-R-9829] N82-18527
A 100 kWe solar thermal power plant in Kuwait, phase 1
[BMFT-FB-T-81-178] N82-18713

THERMOPLASTIC RESINS
Description of hot spots associated with localized shear zones in impact tests
[AD-A108542] N82-18403

THERMOSPHERE
High altitude atmospheric physics program
[INPE-2111-RPE/336] N82-18795

THETA PINCH
Activities Report of the Institute for Plasma Research N82-19043

THICK FILMS
Growth of HgCdTe by modified molecular beam epitaxy
[AD-A108750] N82-19008

THIN FILMS
Investigation on the functioning of gold-tin superconducting films for the measurement of secondary sonic shock waves in He2 flow
[MPIS-8/1981] N82-18565
Electronic transport in ultrathin heterostructures
[AD-A108380] N82-19007

THREE BODY PROBLEM
A multi-cluster, n-particle generalization of the three-particle Faddeev wave function equations
[BONN-HE-80-16] N82-18969

THREE DIMENSIONAL BOUNDARY LAYER
Investigations of the separation behavior on airfoils at high angles of attack, using linear lift theory
[MBB-FE-122/S/PUB/37] N82-18189

THREE DIMENSIONAL FLOW
A three-dimensional approach to lift and moment coefficients of rotating blades N82-18125
A method of characteristic surfaces. The approximate solution of three-dimensional supersonic flow fields from the near field up to the sonic boom region N82-18182
On the calculation of transonic blade tip flow for helicopter rotors
[MBB-UD-320-81-O] N82-18187
An integral equation for the velocity field of irrotational flows around blunt bodies
[ESA-TT-702] N82-18651
A three-dimensional wind model for complex terrain N82-18802

THRUST AUGMENTATION
XFV-12A diagnostic and development programs
[AD-A108354] N82-18206

THRUST CONTROL
Potential reductions in aircraft operation and maintenance costs by using thrust computing support equipment
[AD-A108463] N82-18207

THRUST MEASUREMENT
Potential reductions in aircraft operation and maintenance costs by using thrust computing support equipment
[AD-A108463] N82-18207

THRUST PROGRAMMING
General study of optimal low thrust, limited power transfers between arbitrary elliptical orbits
[ESA-TT-697] N82-18271

THUNDERSTORMS
Low level wind study, Bald Hills: Thunderstorm season, 1976 - 1977
[AD-A108207] N82-18811

TIDAL WAVES
The propagation of inertial-internal waves in coastal upwelling regions
[PB82-113275] N82-18851

TILES

An automated data management/analysis system for space shuttle orbiter tiles -- stress analysis [NASA-TM-83261] N82-18915

TIME CONSTANT

Time domain vibration testing techniques in stochastic environment: Model reference adaptive system approach N82-18624

TIME DEPENDENCE

A time dependent flow model for the inner region of a turbulent boundary layer N82-18536

The analysis of repeated measurements through time N82-18967

TIME DIVISION MULTIPLE ACCESS

Multiple access communication: The finite user population problem [AD-A108337] N82-18474

TIME DIVISION MULTIPLEXING

A design for a 32-channel multiplexer -- for unmanned aircraft navigation sensors [RAE-TM-RAD-NAV-146] N82-18603

System control procedure development for a distributed microcomputer network for avionics utilizing a non-responsive time-division multiplexed bus as the inter-computer communication link N82-18627

TIME FUNCTIONS

Theoretical studies of solar-pumped lasers [NASA-CR-168664] N82-18577

TIME LAG

Mm- to cm-wavelength time delays in solar burst emission burst emission and the effect of varying magnetic field [INPE-2278-PRE/056] N82-19124

Time delays in solar bursts measured in the mm-cm range of wavelengths [INPE-2251-PRE/034] N82-19125

TIME OF FLIGHT SPECTROMETERS

Time of flight analysis of charge exchange neutral particles from the TORTUR 2 plasma -- toroidal turbulence experiment (TORTUR) [REPT-81-136] N82-19042

TIME SERIES ANALYSIS

Suggested models for analyzing and forecasting demand for components of army vehicles [PHL-1979-35] N82-18983

TIME SHARING

Procedure based generalized interactive systems N82-18926

TIMOSHENKO BEAMS

A completely deformable Timoshenko beam type slider crank mechanism N82-18602

TIN

Fabrication and characterization of ohmic contacts made with gold on heavily tin doped N type surface layers in gallium arsenide N82-18496

TIRES

Theoretical and experimental investigations of the outward propagation of tire noise [MBB-BB-483-81-O] N82-19001

TITANIUM ALLOYS

Comparison of notch-stress with strain-controlled low cycle fatigue of alpha-beta titanium alloys [AD-A108548] N82-18376

Effects of microstructure and frequency on corrosion-fatigue crack growth in Ti-8Al-1Mo-1V and Ti-6Al-4V [AD-A108361] N82-18377

TOKAMAK DEVICES

Equilibrium studies of skin like pressure and current-density profiles -- Tokamaks [REPT-81-134] N82-19040

TOLUENE

Ammoxidation of toluene and xylenes to nitriles [PB82-105420] N82-18361

TOMOGRAPHY

Applications of multi-pinhole gamma camera collimation to tomography and image enhancement N82-18554

TOOLING

Exploratory study on a universal workshop [CETIM-1-4N-12-9] N82-18421

TOPOGRAPHY

Automated slope generation using raster technology [AD-A108700] N82-18887

Matrix data analysis: Color/B and W coding is not always enough [AD-A108408] N82-18930

Profiling sensitivity to image quality [AD-A108405] N82-18931

TOROIDAL PLASMAS

Time of flight analysis of charge exchange neutral particles from the TORTUR 2 plasma -- toroidal turbulence experiment (TORTUR) [REPT-81-136] N82-19042

TOROIDAL SHELLS

The influence of impurities on the discharge behavior in SPICA -- plasma screw pinch confinement apparatus (SPICA) [REPT-81-135] N82-19041

TORQUE

Dynamics of aircraft antiskid braking systems -- conducted at the Langley aircraft landing loads and traction facility [NASA-TP-1959] N82-18204

TOUGHNESS

The construction and use of toughness maps in a fracture analysis of the micromechanics of a composite failure [PB82-113523] N82-18331

TOWERS

Testing and analysis of a wet-dry crossflow cooling tower. Volume 1: Test program and results [PB82-103771] N82-18752

TOXIC HAZARDS

An equilibrium model for the partitioning of synthetic organic compounds: Formulation and calibration [PB82-116682] N82-18748

NATO/CCMS pilot study on disposal of hazardous wastes, phases 1 and 2 [PB82-114562] N82-18754

Hydrogen cyanide health effects [PB82-116039] N82-18864

Ammonia health effects [PB82-116047] N82-18865

TOXICITY

An investigation of chemistry and toxicity of ozone-produced oxidants and bromate to selected estuarine species [PB82-116351] N82-18765

TRACE CONTAMINANTS

The Stratosphere 1981: Theory and measurements [NASA-TM-84125] N82-18770

Trace species N82-18771

TRACKED VEHICLES

The Link-Hiles driver training simulator for tracked vehicles: The effect of method and duration of training on the transfer of training [IZF-1980-28] N82-18226

TRACKING (POSITION)

Time-sharing manual control and memory search: The joint effects of input and output modality competition, priorities and control order [AD-A108721] N82-18867

TRACKING NETWORKS

On the calculation of separated flow on helicopter fuselages [MBB-UD-321-81-O] N82-18188

TRADEOFFS

Defense mapping agency digital data base evolution [AD-A108327] N82-18665

TRAILING-EDGE FLAPS

Slotted variable camber flap [NASA-CASE-LAR-12541-1] N82-18203

TRAINING DEVICES

Task analytic techniques: Application to the design of a flight simulator instructor/operator console [AD-A108724] N82-18227

TRAINING EVALUATION

Evaluation of the North Island A/C crash/rescue training facility [AD-A108740] N82-18228

The 1981 Summer Research Fellowship Program [NASA-CR-165814] N82-19079

TRAINING SIMULATORS

The Link-Hiles driver training simulator for tracked vehicles: The effect of method and duration of training on the transfer of training [IZF-1980-28] N82-18226

TRANSDUCERS

Measurement and evaluation methods for an angular accelerometer [PB82-115973] N82-18572

TRANSFER FUNCTIONS

Measurements of antenna pulse response [AD-A108181] N82-18465

The influence of the atmosphere on microwave radiometric measurements in the 10 GHz to 400 GHz frequency range --- and a computer program for determining atmospheric microwave attenuation [ESA-TT-708] N82-18484

An active filter for the simultaneous realization of several transfer functions [INPE-2298-PRE/069] N82-18509

On certain connections between: Infinite zeros of proper rational matrices, dynamic equivalence and the interactor -- state feedback and cascade control [PB82-114613] N82-18965

TRANSFER OF TRAINING

The Link-Hiles driver training simulator for tracked vehicles: The effect of method and duration of training on the transfer of training [IZF-1980-28] N82-18226

TRANSFER ORBITS

General study of optimal low thrust, limited power transfers between arbitrary elliptical orbits [ESA-TT-697] N82-18271

Utility and technology for a space central power station N82-18583

TRANSFORMATIONS (MATHEMATICS)

An adaptive satellite orbit estimation scheme using an analytical approach and a dynamical model compensation technique [INPE-2304-PRE/072] N82-18270

TRANSIENT RESPONSE

Evaluation of a thermal response test for electropyrotechnical devices: Summary [TP-15225/80] N82-18405

Methodology of uniaxial transient vibration test for satellites [CNES-81/CT/PRT/SST/SM/194] N82-18640

TRANSISTOR CIRCUITS

Power converter [NASA-CASE-FRC-11014-1] N82-18494

TRANSISTORS

High voltage power transistor development [NASA-CR-165547] N82-18506

TRANSITION FLOW

On the relationship between transitional and fully turbulent shear flow [AD-A108367] N82-18547

TRANSMISSION LINES

On the quasi-TEM modes in general multiconductor transmission lines [REPT-S-118] N82-18487

TRANSMITTANCE

Radiometric studies of the heat island [INPE-2156-RPE/375] N82-18454

TRANSMITTERS

Wave normal directions and wave distribution functions for ground based transmitter signals observed on Geos 1 [CRPE-NT-99] N82-18479

TRANSONIC FLOW

On the calculation of transonic blade tip flow for helicopter rotors [MBB-UD-320-81-O] N82-18187

Flow velocity and angularity measurements in the FDL trisonic gasdynamic facility and self-adaptive wall wind tunnels with a laser transit anemometer [AD-A108427] N82-19119

TRANSPORT AIRCRAFT

Laminar airfoils for transport aircraft [ESA-TT-680] N82-18190

C-5A austere airfield operational utility evaluation. Phase 2: Operation on unpaved soil surfaces following rainfall [AD-A108597] N82-18208

Tendencies in the development of subsonic transport aircraft with special consideration of aerodynamics [ESA-TT-705] N82-18214

TRANSPORT PROPERTIES

Multidimensional aspects: Ozone, temperature and transport N82-18772

Electronic transport in ultrathin heterostructures [AD-A108380] N82-19007

TRANSPORT THEORY

Use of angular finite elements for the numerical analysis of transport equation [CEA-N-2169] N82-18958

TRAPPED PARTICLES

Hyperfine structure and isotope-shift measurements of short-lived elements by laser spectroscopy [DE82-001999] N82-18354

Positron studies of point defect interactions in metals

[8F-02150] N82-19053

TREES (PLANTS)

The Capenhurst Westair high temperature heat pump dryer

[PB82-116890] N82-18425

TRENDS

Trends in airline avionics

[NLR-MP-80013-U] N82-18220

TRIBOLOGY

Wetting, spreading and operating characteristics of bearing lubricants in a zero-gravity environment — tribology experiment assembly N82-18248

Research in tribology and bearings

[PB82-106923] N82-18606

TROPOSPHERE

Trace species N82-18771

TRUSSES

Finite element thermal-structural modeling of orbiting truss structures N82-18261

The potential of nonperiodic truss structures for space applications N82-18264

Sequential deployment of truss structures N82-18288

Mobile work station concept for assembly of large space structures (zero gravity simulation tests) N82-18289

Modular attitude control of a large space platform N82-18300

Primary propulsion/large space system interaction study

[NASA-CR-165277] N82-18315

Dynamic structural analysis by analog simulation

[PB82-110677] N82-18651

TUNABLE LASERS

Multiphoton dissociation and thermal unimolecular reactions induced by infrared lasers N82-18337

Spatial energy distribution — scanning a tunable diode laser beam automatically

[NASA-CASE-LAR-12631-1] N82-18557

TURBINE BLADES

Seventh European Rotorcraft and Powered Lift Aircraft Forum N82-18119

Dynamic and aeroelastic characteristics of complete windturbine systems N82-18126

Icing problems for wind turbines. Summary of studies performed during winter season 1980/81

[FFA-TN-HU-2262-PT-4] N82-18721

TURBINE EXHAUST NOZZLES

Prediction of off-design performance of turbo-shaft engines a simplified method N82-18132

TURBINE WHEELS

Dynamic and aeroelastic characteristics of complete windturbine systems N82-18126

TURBINES

Dynamic and aeroelastic characteristics of complete windturbine systems N82-18126

TURBOFAN AIRCRAFT

A study to define the research and technology requirements for advanced turbo/propfan transport aircraft

[NASA-CR-166138] N82-18202

TURBOFAN ENGINES

Comparison of two parallel/series flow turbofan propulsion concepts for supersonic V/STOL

[NASA-TM-82743] N82-18178

A study to define the research and technology requirements for advanced turbo/propfan transport aircraft

[NASA-CR-166138] N82-18202

Effects of fan inlet temperature disturbances on the stability of a turbofan engine

[NASA-TM-82880] N82-18222

TURBOGENERATORS

Assessment of steam-injected gas turbine systems and their potential application

[NASA-TM-82735] N82-18694

TURBOMACHINERY

Prediction of laminar-to-turbulent boundary layer transition in axial-flow turbomachinery

[AD-A108842] N82-18545

TURBOPROP AIRCRAFT

Engine superficial temperature and infrared signature N82-18136

A study to define the research and technology requirements for advanced turbo/propfan transport aircraft

[NASA-CR-166138] N82-18202

TURBOPROP ENGINES

Engine superficial temperature and infrared signature N82-18136

A study to define the research and technology requirements for advanced turbo/propfan transport aircraft

[NASA-CR-166138] N82-18202

TURBOSHAFTS

Prediction of off-design performance of turbo-shaft engines a simplified method N82-18132

Measurement techniques used to assess the installed power of a helicopter engine N82-18133

TURBULENCE

Analysis of gust structure in the atmospheric boundary layer by using conditional sampling

[FFA-TN-HU-2262-PT-1] N82-18796

TURBULENT BOUNDARY LAYER

Theoretical prediction of base pressure on missile bodies having a turbulent dead-air region at supersonic velocities

[ESA-TT-706] N82-18191

A time dependent flow model for the inner region of a turbulent boundary layer N82-18536

On the relationship between transitional and fully turbulent shear flow

[AD-A108367] N82-18547

TURBULENT FLOW

Coagulation and deposition of ultrafine aerosols in turbulent pipe flow N82-18535

Prediction of laminar-to-turbulent boundary layer transition in axial-flow turbomachinery

[AD-A108842] N82-18545

On the relationship between transitional and fully turbulent shear flow

[AD-A108367] N82-18547

Analytical prediction of turbulent heat transfer parameters

[AD-A109024] N82-18546

TURBULENT MIXING

Mixture motion in an engine cylinder

[PB82-121146] N82-18607

TURBULENT WAKES

Measurements in the near-wake of a transport model, to determine the lift, drag and drag components using Maskell's analysis

[RAE-TR-81012] N82-18177

Numerical analysis and FORTRAN program for the computation of the turbulent wakes of turbomachinery rotor blades, isolated airfoils and cascade of airfoils

[NASA-CR-3509] N82-18184

TURNING FLIGHT

Midair and near midair collisions on two- and three-dimensional curvilinear flight paths

[ESA-TT-685] N82-18200

TWO BODY PROBLEM

An adaptive satellite orbit estimation scheme using an analytical approach and a dynamical model compensation technique

[INPE-2304-PRE/072] N82-18270

TWO DIMENSIONAL FLOW

Burgers approximation for two-dimensional flow past an ellipse

[NASA-CR-168552] N82-18540

A two dimensional study of the maximum power that can be obtained from a wind turbine in a wind shear layer

[FFA-134] N82-18719

TWO PHASE FLOW

Improvement of rocket engine plume analysis techniques

[NASA-CR-167516] N82-18316

TWO REFLECTOR ANTENNAS

Computer prediction of dual reflector antenna radiation properties

[NASA-CR-165114] N82-18449

U

U.S.S.R.

Soil properties of USSR strategic areas. Volume 1: Soil property comparisons for selected USSR and U.S. soils

[AD-A108743] N82-18798

ULTRASONIC FLAW DETECTION

Inspection integrated with fabrication — ultrasonic flaw detection

[CETIM-15-H-194] N82-18622

ULTRASONIC RADIATION

Ultrasonic input-output for transmitting and receiving longitudinal transducers coupled to same face of isotropic elastic plate

[NASA-CR-3506] N82-18613

ULTRASONIC SPECTROSCOPY

Defects characterization and dimensioning by means of the ultrasound spectroscopy

[CISE-1665] N82-18357

ULTRASONICS

Proceedings of the DARPA/AFWAL review of progress in quantitative nondestructive evaluation

[AD-A108741] N82-18614

ULTRAVIOLET ASTRONOMY

Far ultraviolet astronomy using the FAUST telescope N82-18249

A photon-counting photodiode array detector for far ultraviolet (FUV) astronomy

[NASA-CR-168551] N82-19116

ULTRAVIOLET FILTERS

Analysis of UV protection requirements and testing of candidate attenuators for the Haloe optical instrument

[NASA-TM-83247] N82-18662

ULTRAVIOLET PHOTOMETRY

Very wide field camera N82-18250

ULTRAVIOLET RADIATION

Very wide field camera N82-18250

ULTRAVIOLET SPECTRA

An imaging spectrometric observatory N82-18235

ULTRAVIOLET SPECTROSCOPY

Very wide field camera N82-18250

ULTRAVIOLET TELESCOPES

Very wide field camera N82-18250

UNDERGROUND STRUCTURES

CANDE-1980: Box culverts and soil models

[PB82-102393] N82-18427

Automated longwall guidance and control vertical control subsystem, volume 1

[NASA-CR-161969] N82-18658

Automated longwall guidance and control vertical control subsystem, volume 2 — user manuals (computer programs)

[NASA-CR-161970] N82-18659

UNDERWATER ACOUSTICS

Differential sound absorption technique and effect of ion-pairing and pressure on sound absorption in sea water and aqueous mixtures of magnesium sulfate and sodium chloride

[AD-A108569] N82-18997

Modified Ambient Sea Noise indicator with ambient noise directionality estimator

[AD-A108389] N82-18998

FRAM 2 Single Channel Ambient Noise Statistics

[AD-A108755] N82-18999

UNDERWATER ENGINEERING

Subsea trenching in the Arctic

[AD-A108341] N82-18849

UNDERWATER STRUCTURES

Earthquake response of sea-based storage tanks by a hybrid element method-theory and computer analysis

[PB82-104993] N82-18647

UNIMOLECULAR STRUCTURES

Competing reaction channels in IR laser induced unimolecular reactions N82-18336

Multiphoton dissociation and thermal unimolecular reactions induced by infrared lasers N82-18337

UNITED STATES OF AMERICA

The centralian aerogeophysical operation in the region of the Mid-Atlantic ridge. INPE participation

[INPE-2142-RPE/364] N82-18653

Energy policies for resilience and national security

[AD-A108263] N82-18700

Soil properties of USSR strategic areas. Volume 1: Soil property comparisons for selected USSR and U.S. soils

[AD-A108743] N82-18798

UNITS OF MEASUREMENT

Pulsed and CW semiconductor laser range finding for space flight applications

[MBB-UA-563-81-O] N82-18590

UNIVERSITIES

Federal funds for research and development, volume 29, fiscal years 1979, 1980 and 1981

[PB82-118802] N82-19090

UNIVERSITY PROGRAM

The 1981 Summer Research Fellowship Program

[NASA-CR-166814] N82-19079

UPWELLING WATER
Coastal upwelling ecosystems analysis. Technical report 40: Atlas of the JOINT 2 1976 aircraft winds for the 500 foot level
[PB82-113911] N82-18842
Coastal upwelling ecosystems analysis. Atlas of the JOINT 2 1977 aircraft winds for the 500 foot level
[PB82-113929] N82-18843
The propagation of inertial-internal waves in coastal upwelling regions
[PB82-113275] N82-18851

URANIUM FLUORIDES
A study of the collisional dynamics for collisions of UF6(-) atoms and molecules
[AD-A108419] N82-19012

URBAN DEVELOPMENT
Use of flow-duration curves to evaluate effects of urbanization on streamflow patterns on Long Island, New York
[PB82-114307] N82-18873
Fourth Annual Community Planning and Development Challenges: Energy, Environment, Water
[PB82-125790] N82-19108

URBAN PLANNING
Municipal wastewater: Research strategy supplement, 1981-1985
[PB82-120106] N82-18763
Fourth Annual Community Planning and Development Challenges: Energy, Environment, Water
[PB82-125790] N82-19108

URBAN RESEARCH
Urban data for comparative analyses of cities
[PB82-125675] N82-19107
Fourth Annual Community Planning and Development Challenges: Energy, Environment, Water
[PB82-125790] N82-19108

URBAN TRANSPORTATION
Reliability methodology in task identification for the development of new transportation systems
[MBB-UR-473-81-O] N82-19105
Integrating project worthiness into a cost-effectiveness framework for alternative analysis
[PB82-113895] N82-19106

USER MANUALS (COMPUTER PROGRAMS)
Rotorcraft flight simulation computer program C81 with DATAMAP interface. Volume 2: Programmer's manual
[AD-A108294] N82-18231
Automated longwall guidance and control vertical control subsystem, volume 2 — user manuals (computer programs)
[NASA-CR-161970] N82-18659
FEDSOL: Program user's manual and economic optimization guide for solar Federal building projects
[PB82-107012] N82-18729
The design of an interface to a programming system and MENUNIX: A menu based interface to UNIX (user manual)
[AD-A108929] N82-18890
An automated data management/analysis system for space shuttle orbiter tiles — stress analysis
[NASA-TM-83261] N82-18915
The JOVIAL (J73) workbook, volumes 10 through 12
[AD-A108528] N82-18917
The JOVIAL (J73) workbook, volumes 13 through 15
[AD-A108529] N82-18918
The Integrated Library System (ILS): User manual
[PB82-114968] N82-19095

USER REQUIREMENTS
Military requirements: Too little or too much
N82-18136
Energy Management and Control Systems (EMCS) user satisfaction study
[PB82-103656] N82-18724

UTILITIES
Evaluation of present thermal barrier coatings for potential service in electric utility gas turbines
[NASA-CR-165545] N82-18368
EPA utility FGD (Flue Gas Desulfurization) survey
[PB82-115658] N82-18766

V

V/STOL AIRCRAFT
Comparison of two parallel/series flow turbofan propulsion concepts for supersonic V/STOL
[NASA-TM-82743] N82-18178

VACANCIES (CRYSTAL DEFECTS)
On the conditions required for vacancy loop growth in irradiated metals and alloys
[AERE-R-9810] N82-19076

VACUUM
Microorganisms and biomolecules in space hard environment N82-18267

VACUUM APPARATUS
Geothermal energy market study on the Atlantic coastal plain: Technical feasibility of use of eastern geothermal energy in vacuum distillation of ethanol fuel
[PB82-123001] N82-18732

VACUUM PUMPS
Performance testing of four skimming systems
[PB82-101353] N82-18756

VALENCE
The electrical properties of Na3Cu4S4, mixed-valence one-dimensional metal
[AD-A108517] N82-19069

VALUE
Ohio River Basin energy study: Social values and energy policy
[PB82-101494] N82-18735

VANADIUM
Thermal and electrical properties of solids at low temperatures
[DE82-000727] N82-18993

VANES
Hover tests of a model H-force rotor N82-18159

VAPORS
Studies relating to the synthesis of monomethylhydrazine by chloramination and problem relating to the protection of the environment from the vapors of 1, 1-dimethylhydrazine, monomethylhydrazine and hydrazine
[AD-A108369] N82-18323
Performance analysis of vapour cycle cooling systems
[AD-A108254] N82-18418

VARIABILITY
The potential of nonperiodic truss structures for space applications N82-18284
A reference solar spectral irradiance for use in atmospheric modeling N82-18775

VARIABLE PITCH PROPELLERS
An investigation of ship propeller fatigue
N82-18627

VARIANCE (STATISTICS)
Renewal tables: Tables of functions arising in renewal theory
[AD-A108264] N82-18975

VARIATIONS
Model predictions and trend analysis N82-18773

VECTOR ANALYSIS
Usage and limitations of characteristic vector analysis of remote sensing multispectral data for the identification and quantification of water quality parameters N82-18656

VECTOR SPACES
DC-magnetic field vector measurement
N82-18245

VECTORS (MATHEMATICS)
Computable optimal value bounds and solution vector estimates for general parametric NLP programs
[AD-A108229] N82-18954

VEGETATION GROWTH
Nutation of Helianthus Annuus in a microgravity environment N82-18265

VEHICLE WHEELS
Theoretical and experimental investigations of the outward propagation of tire noise
[MBB-BB-483-81-O] N82-19001

VELOCITY DISTRIBUTION
An integral equation for the velocity field of irrotational flows around blunt bodies
[ESA-TT-702] N82-18551
GaAs FET device modeling and performance
[AD-A108745] N82-19070

VELOCITY MEASUREMENT
Spectral model predictions of mean-square-shear distortion rates
[AD-A108211] N82-18543
The velocity field near the orifice of a Helmholtz resonator in grazing flow
[NASA-CR-168548] N82-18894

VERSATILITY
Exploratory study on a universal workshop
[CETIM-1-4N-12-9] N82-18421

VERTICAL AIR CURRENTS
Aircraft measurements and analysis of severe storms: 1976 field experiment
[NASA-CR-168519] N82-18803

VERTICAL DISTRIBUTION
Theoretical analysis of the real and apparent velocities of vertical plasma drift in the equatorial ionosphere
[INPE-2143-RPE/365] N82-18782
Methods for interpreting atmospheric spectral observations by Sun sighting through the Earth limb
[ESA-TT-715] N82-18796

VERTICAL FLIGHT
Prediction of blade vortex interaction noise from measured blade pressure N82-18147

VERTICAL ORIENTATION
Automated longwall guidance and control vertical control subsystem, volume 1
[NASA-CR-161969] N82-18658
Models of near inertial vertical shear
[AD-A108686] N82-18847

VERTICAL TAKEOFF AIRCRAFT
Review of defense-related vertical and short takeoff and landing (V/STOL) aircraft programs
[GPO-55-278] N82-18205

VERY LOW FREQUENCIES
Multipath VLF propagation effects on correlation receivers
[AD-A108408] N82-18472
V.L.F. ionosonde and long-distance propagation anomalies produced by galactic CEN X-4 X-ray burst in May 1979
[INPE-2250-PRE/033] N82-19129

VESTIBULAR TESTS
Effects of rectilinear acceleration, optokinetic and caloric stimuli in space N82-18255
Vestibular experiments N82-18256
Vestibulo-spinal reflex mechanisms N82-18257

VIBRATION
Vibration levels in Army helicopters: Measurement recommendations and data
[AD-A108131] N82-18209

VIBRATION DAMPING
Review of helicopter Mast Mounted Sight (MMS) base motion isolation and Line-of-Sight (LOS) stabilization concepts N82-18166
Vibration damping characteristics of graphite/epoxy composites for large space structures N82-18283
Time domain vibration testing techniques in stochastic environment: Model reference adaptive system approach N82-18624

VIBRATION EFFECTS
Mode selective vibrational energy transfer in methylfluoride
[MPIS-6/1981] N82-18356

VIBRATION ISOLATORS
The measurement of the mobility of structures at acoustic frequencies N82-18149

VIBRATION MEASUREMENT
Vibration levels in Army helicopters: Measurement recommendations and data
[AD-A108131] N82-18209

VIBRATION PERCEPTION
Effect of tactile vibration on annoyance to synthesized propfan noise
[NASA-TM-83258] N82-18866

VIBRATION TESTS
Modal characteristics of rotor blades: Finite element approach and measurement by ground vibration test
N82-18127
Vibration levels in Army helicopters: Measurement recommendations and data
[AD-A108131] N82-18209
Time domain vibration testing techniques in stochastic environment: Model reference adaptive system approach N82-18624
Methodology of uniaxial transient vibration test for satellites
[CNES-81/CT/PRT/SST/SM/194] N82-18640

VIBRATIONAL SPECTRA
Explicit solution of the inverse problem for a vibrating string
[AD-A108133] N82-18635

VIBRATIONAL STRESS
Vibration and buckling studies of pretensioned structures N82-18282
VIBRATORY LOADS
Mast mounted visual aids N82-18167
VIDEO DATA
Processing and correlation of digitalized images in a spectral range
[MBB-UA-586-81-O] N82-18941
VIDEO EQUIPMENT
Mast mounted visual aids N82-18167
VIRUSES
Molecular interactions of high energy fuels and jet fuels with oncogenic viruses and endogenous viruses
[AD-A108377] N82-18855
VISCOELASTICITY
Dynamical nonlinear material response and failure
[AD-A108822] N82-19013
VISIBILITY
Wind-ceiling-visibility data at selected airports. Volume 1: New England region
[AD-A108155] N82-18816
Wind-ceiling-visibility data at selected airports, volume 2. Part A: Eastern region
[AD-A108156] N82-18817
Wind-ceiling-visibility data at selected airports. Volume 2, part B: Eastern region
[AD-A108157] N82-18818
Wind-ceiling-visibility data at selected airports. Volume 3, part A: Southern region
[AD-A108158] N82-18819
Wind-ceiling-visibility data at selected airports. Volume 3, part B: Southern region
[AD-A108159] N82-18820
Wind-ceiling-visibility data at selected airports. Volume 4, part A: Great Lakes region
[AD-A108160] N82-18821
Wind-ceiling-visibility data at selected airports. Volume 4, part B: Great Lakes region
[AD-A108161] N82-18822
Wind-ceiling-visibility data at selected airports. Volume 5, part A: Central region
[AD-A108162] N82-18823
Wind-ceiling-visibility data at selected airports. Volume 5, part B: Central region
[AD-A108163] N82-18824
Wind-ceiling-visibility data at selected airports. Volume 6, part A: Southwest region
[AD-A108164] N82-18825
Wind-ceiling-visibility data at selected airports. Volume 6, part B: Southwest region
[AD-A108165] N82-18826
Wind-ceiling-visibility data at selected airports. Volume 7, part A: Rocky Mountain region
[AD-A108166] N82-18827
Wind-ceiling-visibility data at selected airports. Volume 7, part B: Rocky Mountain region
[AD-A108167] N82-18828
Wind-ceiling-visibility data at selected airports. Volume 8: Northwest region
[AD-A108168] N82-18829
Wind-ceiling-visibility data at selected airports. Volume 9, part A: Western region
[AD-A108169] N82-18830
Wind-ceiling-visibility data at selected airports. Volume 9, part B: Western region
[AD-A108170] N82-18831
Wind-ceiling-visibility data at selected airports. Volume 10, part A: Alaskan and Pacific regions
[AD-A108171] N82-18832
Wind-ceiling-visibility data at selected airports. Volume 10, part B: Alaskan and Pacific regions
[AD-A108172] N82-18833
Wind-ceiling-visibility data at selected airports. Volume 11: Visibility time series for key stations
[AD-A108177] N82-18834
The climate of Denmark. Summaries of observations from light vessels. Part 1: Wind, visibility, air temperature cloud cover, and weather
[DMI-CLIMATOL-PAPERS-8] N82-18839
VISUAL AIDS
Mast mounted visual aids N82-18167
Experimental investigation of visual aids for helicopters: Low level flight at night and poor visibility N82-18168
VISUAL FLIGHT
Midair and near midair collisions on two- and three-dimensional curvilinear flight paths
[ESA-TT-685] N82-18200
Evaluation of the visual acquisition range of enroute air traffic from cockpit observations — collision avoidance
[ESA-TT-691] N82-18861
VOICE COMMUNICATION
Engineering intelligibility testing of voice communication equipment
[AD-A108138] N82-18467
Queueing analysis of a shared voice-data link
[AD-A108336] N82-18475
VOICE DATA PROCESSING
Engineering intelligibility testing of voice communication equipment
[AD-A108138] N82-18467
Performance of fir adaptive filters using recursive algorithms — speech processing N82-18499
VOIDS
An experimental determination of the effect of cyclic stress on void growth in ultra-high-purity aluminum during simultaneous 800 MeV proton irradiation
N82-18364
VOLATILITY
Analysis of volatile metabolites in biological fluids as indicators of prodromal disease condition
[NASA-CR-167513] N82-18859
VOLTAGE CONVERTERS (DC TO DC)
Power converter
[NASA-CASE-FRC-11014-1] N82-18494
VOLTAGE REGULATORS
Electrical characterization and specification of special purpose linear microcircuits
[AD-A108247] N82-18515
VORTEX RINGS
The formation of a ring vortex at a circular jet nozzle and its transformation during takeoff into a liquid layer and at the liquid surface
[MPIS-27/1980] N82-18186
VORTEX SHEDDING
Analytical prediction of turbulent heat transfer parameters
[AD-A109024] N82-18548
VORTEX SHEETS
A method of predicting fuselage loads in hover
N82-18164
VORTICES
Prediction of blade vortex interaction noise from measured blade pressure N82-18147
Optimum performance and wake geometry of co-axial rotor in hover N82-18156
A numerical approach to co-axial rotor aerodynamics N82-18157
Helicopter rotor downwash: Results of experimental research at the DFVLR-rotor test stand and their comparison with theoretical results N82-18158
Radar detection of turbulence in thunderstorms
[AD-A108679] N82-18812
VORTICITY EQUATIONS
Theodor von Karman and applied mathematics
[MPIS-9/1981] N82-18959
VULNERABILITY
Energy policies for resilience and national security
[AD-A108263] N82-18700
Comparison of U.S. and Swedish Aerial Target Vulnerability Assessment Methodologies (ATVAM)
[FOA-REPTS-VOL-15-NO-4] N82-18965

W

WAFERS
Restructurable VLSI program
[AD-A108276] N82-18521
WAKES
Measurements of wake interaction effects on the power output from small wind turbine models
[FFA-TN-HU-2189-PT-5] N82-18720
WALL FLOW
Experimental and theoretical studies on gas cyclone separators operating at high efficiency N82-18340
WALL PRESSURE
Equilibrium studies of skin like pressure and current-density profiles — Tokamaks
[REPT-81-134] N82-19040
WALLS
Collapse limit states of reinforced earth retaining walls
[PB82-113515] N82-18423
Automated longwall guidance and control vertical control subsystem, volume 1
[NASA-CR-161969] N82-18858
WARNING SYSTEMS
AN/ALQ-135 tail warning system follow-on operational test and evaluation
[AD-A108348] N82-18471
Flash flood forecasting — and damage control measures
[WMO-577] N82-18871
WASHINGTON
Wind-ceiling-visibility data at selected airports. Volume 8: Northwest region
[AD-A108168] N82-18829
WASTE DISPOSAL
NATO/CCMS pilot study on disposal of hazardous wastes, phases 1 and 2
[PB82-114582] N82-18754
WASTE ENERGY UTILIZATION
Densification of refuse-derived fuels: Preparation, properties and systems for small communities
[PB82-103904] N82-18408
Fundamental considerations for preparing densified refuse derived fuel
[PB82-101688] N82-18410
Physical and chemical characteristics of synthetic asphalt produced from liquefaction of sewage sludge
[PB82-119082] N82-18422
Open-cycle vapor compression heat pump
[PB82-110503] N82-18553
Feasibility study on energy recovery and cogeneration from an existing municipal incinerator, phase 1
[DE82-001143] N82-18701
WASTE TREATMENT
Feasibility of photocatalytic oxidation for wastewater clean-up and reuse
[PB82-108457] N82-18358
Municipal wastewater: Research strategy supplement, 1981-1985
[PB82-120106] N82-18763
WASTE UTILIZATION
Direct combustion of industrial dry, composite waste in suspension
[DE81-030679] N82-18352
Adaptation of the simplex gasification process to the coconversion of municipal solid waste and sewage sludge
[PB82-112418] N82-18406
WASTE WATER
Design optimization of the chlorination process. Volume 1: Comparison of optimized pilot system with existing full scale systems
[PB82-100835] N82-19110
Wastewater treatment facilities-sludge management system, Albuquerque, New Mexico
[PB82-117029] N82-19111
WASTES
Comparative study of air classifiers
[PB82-106121] N82-18411
WATER
Identifying and determining halocarbons in water using headspace gas chromatography
[AD-A108345] N82-18342
Multi-saline sample distillation apparatus for hydrogen isotope analyses: Design and accuracy
[PB82-115460] N82-18573
Monitoring of thermal stratification of the storage tank of the Mabel Lee Hall Solar-Hot-Water Facility
[DE82-002110] N82-18703
WATER COLOR
Measurement of river sediments
[WMO-561] N82-18870
WATER HAMMER
Experimental model studies of a hydraulic ram with special emphasis on the velocities in the ram tube
[MPIS-28/1980] N82-18550
WATER MANAGEMENT
Areawide stormwater pollution analysis with the macroscopic planning (ABMAC) model. Part 1: Documentation and application. Part 2: User's manual
[PB82-107947] N82-18677
A stress function for evaluating strategies for water quality management
[PB82-109828] N82-18678
Planning process study: Arkansas-White-Red River Basins
[PB82-111584] N82-18746
Executive summary of the Cumberland River Basin regional plan: Water and related land resources report
[PB82-111519] N82-18747

WATER MASERS
H2O maser survey in the magnellanic clouds
[INPE-2279-PRE/087] N82-18781
WATER POLLUTION
Development of a multidetector petroleum oil in water monitor
[PB82-109298] N82-18568
Areawide stormwater pollution analysis with the macroscopic planning (ABMAC) model. Part 1: Documentation and application. Part 2: User's manual
[PB82-107947] N82-18677
Mission operation report: Space Shuttle program. STS-2 postflight medical operations
[NASA-TM-84135] N82-18858
WATER QUALITY
South point geochol project: A water assessment study
[PB82-111485] N82-18413
Usage and limitations of characteristic vector analysis of remote sensing multispectral data for the identification and quantification of water quality parameters N82-18558
A stress function for evaluating strategies for water quality management
[PB82-109628] N82-18678
Water resources data for California. Volume 3: Southern Central Valley Basins and the Great Basin from Walker River to Truckee River
[PB82-117003] N82-18681
Effect of oxidation of soil organic matter on water quality: Role of nitrification and denitrification
[PB82-109946] N82-18755
WATER RECLAMATION
Development of novel porous substrates for ultrafiltration, desalination and water reclamation, part 2
[PB82-109920] N82-18363
Effect of oxidation of soil organic matter on water quality: Role of nitrification and denitrification
[PB82-109946] N82-18755
WATER RESOURCES
South point geochol project: A water assessment study
[PB82-111485] N82-18413
Ground-water resources of the White River Basin, Madison County, Indiana
[PB82-109844] N82-18675
Water resources data for California. Volume 3: Southern Central Valley Basins and the Great Basin from Walker River to Truckee River
[PB82-117003] N82-18681
Water resources data for West Virginia, water year 1980
[PB82-111634] N82-18682
Water resources data for California. Volume 1: Colorado River Basin, Southern Great Basin from Mexican Border to mono Lake Basin and Pacific Slope Basins from Tijuana River to Santa Maria River
[PB82-116997] N82-18683
Water resources data for California. Volume 4: Northern Central Valley Basins and the Great Basin from Honey Lake Basin to Oregon state line
[PB82-117011] N82-18684
Planning process study: Arkansas-White-Red River Basins
[PB82-111584] N82-18746
Executive summary of the Cumberland River Basin regional plan: Water and related land resources report
[PB82-111519] N82-18747
Ground-water for the Salt Basin, Eagle Flat, Red Light Draw, Green River Valley, and Presidio Bolson in westernmost Texas
[PB82-105289] N82-18759
WATER RUNOFF
Areawide stormwater pollution analysis with the macroscopic planning (ABMAC) model. Part 1: Documentation and application. Part 2: User's manual
[PB82-107947] N82-18677
WATER TABLES
Use of flow-duration curves to evaluate effects of urbanization on streamflow patterns on Long Island, New York
[PB82-114307] N82-18673
WATER TREATMENT
Feasibility of photocatalytic oxidation for wastewater clean-up and reuse
[PB82-109457] N82-18358
Municipal wastewater: Research strategy supplement, 1981-1985
[PB82-120106] N82-18763
Design optimization of the chlorination process. Volume 1: Comparison of optimized pilot system with existing full scale systems
[PB82-100696] N82-19110
Wastewater treatment facilities-sludge management system, Albuquerque, New Mexico
[PB82-117029] N82-19111
WATER VAPOR
A water vapor monitor using differential infrared absorption
[PB82-114422] N82-18566
WAVE DIFFRACTION
A propagation experiment involving reflection and diffraction
[AD-A108844] N82-18476
WAVE DISPERSION
The potential of nonperiodic truss structures for space applications N82-18284
WAVE FUNCTIONS
Wave normal directions and wave distribution functions for ground based transmitter signals observed on Geos 1
[CRPE-NT-89] N82-18479
Wave function formalisms in the channel coupling array theory of many-body scattering
[BONN-HE-80-15] N82-18988
A multi-cluster, n-particle generalization of the three-particle Faddeev wave function equations
[BONN-HE-80-16] N82-18989
WAVE INTERACTION
Weak and strong ignition. 1: Numerical simulations of shock tube experiments
[AD-A108363] N82-18344
Measurements of wake interaction effects on the power output from small wind turbine models
[FFA-TN-HU-2169-PT-5] N82-18720
WAVE PROPAGATION
A propagation experiment involving reflection and diffraction
[AD-A108844] N82-18476
Wave normal directions and wave distribution functions for ground based transmitter signals observed on Geos 1
[CRPE-NT-89] N82-18479
A review of satellite communication and propagation experiments for frequencies above 10 GHz
[DFVLR-MITT-81-08] N82-18485
The propagation of inertia-internal waves in coastal upwelling regions
[PB82-113275] N82-18851
WAVE SCATTERING
Determination of the field scattered by an axially incident plane wave
[INPE-2179-NTE/175] N82-18448
Computer implementation of a program for the analysis of circular reflectors using the geometric theory of diffraction
[INPE-2132-RPE/356] N82-18452
On the electromagnetic plane wave scattering from a wire grid with rhombic cells
[REPT-S-114] N82-18486
Wave function formalisms in the channel coupling array theory of many-body scattering
[BONN-HE-80-15] N82-18988
Neutron scattering studies of atomic vibration in nickel and solid dimethylacetylene N82-19066
WAVEFORMS
Ultrasonic input-output for transmitting and receiving longitudinal transducers coupled to same face of isotropic elastic plate
[NASA-CR-3506] N82-18613
WAVEGUIDE LASERS
Investigation of cold cathodes for long life CO sub 2 waveguide lasers
[AD-A108892] N82-18595
WAVEGUIDES
On the quasi-TEM modes in general multiconductor transmission lines
[REPT-S-118] N82-18487
Asymptotic high frequency modes of homogeneous waveguide structures with impedance boundaries
[REPT-S-120] N82-18488
WAVELENGTHS
Competing reaction channels in IR laser induced unimolecular reactions N82-18336
Wavelength scaling for reactor-size laser fusion targets
[AD-A108847] N82-18591
WEAK INTERACTIONS (FIELD THEORY)
Study of inclusive semi-leptonic neutral current reactions in neutrino and antineutrino interactions between 12 and 200 GeV
[CEA-N-2150] N82-19015
Weak-interaction experiments at low energies: Results from atomic and nuclear physics
[DE82-001724] N82-19021
WEAPON SYSTEMS
Naval versions of the Dauphin and the AS 15 TT weapon system N82-18142
A light helicopter for night firing N82-18144
Cost problems in the utilization phase of a weapon system
[MBB-UA-576-81-O] N82-19096
WEAR TESTS
Hard-on-hard (ceramic) long-life seals and riders for cryogenic coolers
[AD-A108646] N82-18394
Ceramic roadway aggregates with improved polish and wear resistance
[PB82-109987] N82-18428
WEATHER FORECASTING
Flash flood forecasting --- and damage control measures
[WMO-577] N82-18671
The use of environmental satellites for frost monitoring
[INPE-2128-RPE/352] N82-18805
The evolution of meteorological forecasting
[INPE-2151-RPE/372] N82-18806
Technology and oceanography: An assessment of Federal technologies for oceanographic research and monitoring
[OTA-O-142] N82-18844
WEATHER MODIFICATION
Florida Area Cumulus Experiment (FACE), 1980: Operational summary and data inventory
[PB82-113291] N82-18841
WEBS (SUPPORTS)
Distortional buckling of thin-web beam columns
[PB82-105271] N82-18650
WEIBULL DENSITY FUNCTIONS
Failure-free reliability tests
[AD-A108197] N82-18616
WEIGHT (MASS)
Mass discrimination during weightlessness N82-18264
WEIGHTLESSNESS
Wetting, spreading and operating characteristics of bearing lubricants in a zero-gravity environment --- tribology experiment assembly N82-18248
Effects of rectilinear acceleration, optokinetic and caloric stimuli in space N82-18255
Vestibular experiments N82-18256
The influence of space flight on erythrokinetics in man N82-18258
Measurement of central venous pressure and determination of hormones in blood serum during weightlessness N82-18259
Effects of prolonged weightlessness on the humoral immune response of humans N82-18260
Effect of weightlessness on lymphocyte proliferation N82-18261
Three-dimensional ballistocardiography in weightlessness N82-18262
Mass discrimination during weightlessness N82-18264
Nutation of Helianthus Annuus in a microgravity environment N82-18265
WEIGHTLESSNESS SIMULATION
Physiological responses to prolonged bed rest and fluid immersion in man: A compendium of research (1974 - 1980)
[NASA-TM-81324] N82-18854
WELD STRENGTH
Effects of weld eccentricity on longitudinal shrinkage
[PB82-121153] N82-18608
Shrinkage effects in butt welds in 5083 aluminium
[PB82-121138] N82-18609
Shrinkage effects in bead-on-plate welds in 5083 aluminium
[PB82-114596] N82-18610

WELD TESTS
Effects of weld eccentricity on longitudinal shrinkage
[PB82-121153] N82-18608
Shrinkage effects in butt welds in 5083 aluminium
[PB82-121138] N82-18609
Shrinkage effects in bead-on-plate welds in 5083 aluminium
[PB82-114596] N82-18610
WELDED JOINTS
Shrinkage effects in butt welds in 5083 aluminium
[PB82-121138] N82-18609
WELDED STRUCTURES
Effects of weld eccentricity on longitudinal shrinkage
[PB82-121153] N82-18608
Shrinkage effects in bead-on-plate welds in 5083 aluminium
[PB82-114596] N82-18610
Shrinkage effects in T-fillet welds in 5083 aluminum
[PB82-114570] N82-18611
WELLS
An observation-well network concept as applied to North Carolina
[PB82-106069] N82-18676
WEST VIRGINIA
Water resources data for West Virginia, water year 1980
[PB82-111634] N82-18682
WHEEL BRAKES
Dynamics of aircraft antiskid braking systems --- conducted at the Langley aircraft landing loads and traction facility
[NASA-TP-1959] N82-18204
WIND (METEOROLOGY)
Wind-ceiling-visibility data at selected airports. Volume 6, part B: Southwest region
[AD-A108165] N82-18826
Wind-ceiling-visibility data at selected airports. Volume 7, part A: Rocky Mountain region
[AD-A108166] N82-18827
The climate of Denmark. Summaries of observations from light vessels. Part 1: Wind, visibility, air temperature cloud cover, and weather
[DMI-CLIMATOL-PAPERS-8] N82-18838
Coastal upwelling ecosystems analysis. Atlas of the JOINT 2 1977 aircraft winds for the 500 foot level
[PB82-113929] N82-18843
A dynamical model of wind-induced near-inertial motions
[AD-A108687] N82-18846
WIND DIRECTION
Low level wind study, Bald Hills: Thunderstorm season, 1976 - 1977
[AD-A108207] N82-18811
Wind-ceiling-visibility data at selected airports. Volume 1: New England region
[AD-A108155] N82-18816
Wind-ceiling-visibility data at selected airports, volume 2. Part A: Eastern region
[AD-A108156] N82-18817
Wind-ceiling-visibility data at selected airports. Volume 2, part B: Eastern region
[AD-A108157] N82-18818
Wind-ceiling-visibility data at selected airports. Volume 3, part A: Southern region
[AD-A108158] N82-18819
Wind-ceiling-visibility data at selected airports. Volume 3, part B: Southern region
[AD-A108159] N82-18820
Wind-ceiling-visibility data at selected airports. Volume 4, part A: Great Lakes region
[AD-A108160] N82-18821
Wind-ceiling-visibility data at selected airports. Volume 4, part B: Great Lakes region
[AD-A108161] N82-18822
Wind-ceiling-visibility data at selected airports. Volume 5, part A: Central region
[AD-A108162] N82-18823
Wind-ceiling-visibility data at selected airports. Volume 5, part B: Central region
[AD-A108163] N82-18824
Wind-ceiling-visibility data at selected airports. Volume 6, part A: Southwest region
[AD-A108164] N82-18825
Wind-ceiling-visibility data at selected airports. Volume 6, part B: Southwest region
[AD-A108165] N82-18826
Wind-ceiling-visibility data at selected airports. Volume 7, part A: Rocky Mountain region
[AD-A108166] N82-18827
Wind-ceiling-visibility data at selected airports. Volume 9, part B: Western region
[AD-A108170] N82-18831
Wind-ceiling-visibility data at selected airports. Volume 10, part A: Alaskan and Pacific regions
[AD-A108171] N82-18832
Wind-ceiling-visibility data at selected airports. Volume 10, part B: Alaskan and Pacific regions
[AD-A108172] N82-18833
Wind-ceiling-visibility data at selected airports. Volume 11: Visibility time series for key stations
[AD-A108177] N82-18834
Coastal upwelling ecosystems analysis. Atlas of the JOINT 2 1977 aircraft winds for the 500 foot level
[PB82-113929] N82-18843
WIND MEASUREMENT
Analysis of gust structure in the atmospheric boundary layer by using conditional sampling
[FFA-TN-HU-2262-PT-1] N82-18798
A three-dimensional wind model for complex terrain N82-18802
Low level wind study, Bald Hills: Thunderstorm season, 1976 - 1977
[AD-A108207] N82-18811
Wind-ceiling-visibility data at selected airports. Volume 7, part B: Rocky Mountain region
[AD-A108167] N82-18828
Wind-ceiling-visibility data at selected airports. Volume 8: Northwest region
[AD-A108168] N82-18829
Wind-ceiling-visibility data at selected airports. Volume 9, part A: Western region
[AD-A108169] N82-18830
Long range laser anemometry with particular reference to wind power development
[FFA-TN-HU-2262-PT-3] N82-18840
WIND PROFILES
Wind-ceiling-visibility data at selected airports. Volume 7, part B: Rocky Mountain region
[AD-A108167] N82-18828
Wind-ceiling-visibility data at selected airports. Volume 8: Northwest region
[AD-A108168] N82-18829
Wind-ceiling-visibility data at selected airports. Volume 9, part A: Western region
[AD-A108169] N82-18830
WIND SHEAR
Low level wind study, Bald Hills: Thunderstorm season, 1976 - 1977
[AD-A108207] N82-18811
Development of a clear air radar to detect meteorological hazards at airports
[AD-A108236] N82-18835
Models of near inertial vertical shear
[AD-A108686] N82-18847
WIND TUNNEL APPARATUS
Flow velocity and angularity measurements in the FDL trisonic gasdynamic facility and self-adaptive wall wind tunnels with a laser transit anemometer
[AD-A108427] N82-19119
WIND TUNNEL TESTS
Separated flow around helicopter bodies N82-18163
Evaluation of the helicopter low airspeed system LASSIE N82-18172
An experimental investigation of gapwise periodicity and unsteady aerodynamic response in an oscillating cascade. Volume 2: Data report. Part 1: Text and mode 1 data
[NASA-CR-165457-VOL-2-PT-1] N82-18180
An experimental investigation of gapwise periodicity and unsteady aerodynamic response in an oscillating cascade. Volume 2: Data report. Part 2: Mode 2 data
[NASA-CR-165457-VOL-2-PT-2] N82-18181
Spin-tunnel investigation of a 1/13-scale model of the NASA AD-1 oblique-wing research aircraft
[NASA-TM-83236] N82-18183
Multiple ejection effects analysis
[AD-A108277] N82-18192
WIND TUNNEL WALLS
Flow velocity and angularity measurements in the FDL trisonic gasdynamic facility and self-adaptive wall wind tunnels with a laser transit anemometer
[AD-A108427] N82-19119
WIND VARIATIONS
The propagation of inertial-internal waves in coastal upwelling regions
[PB82-113275] N82-18851
WIND VELOCITY
R and D equipment information report: Fault tolerant weather radar processor
[AD-A108253] N82-18809
Low level wind study, Bald Hills: Thunderstorm season, 1976 - 1977
[AD-A108207] N82-18811
Wind tunnel and laboratory calibration of balloon-borne wind sensors
[AD-A108676] N82-18814
Wind-ceiling-visibility data at selected airports. Volume 1: New England region
[AD-A108155] N82-18816
Wind-ceiling-visibility data at selected airports, volume 2. Part A: Eastern region
[AD-A108156] N82-18817
Wind-ceiling-visibility data at selected airports. Volume 2, part B: Eastern region
[AD-A108157] N82-18818
Wind-ceiling-visibility data at selected airports. Volume 3, part A: Southern region
[AD-A108158] N82-18819
Wind-ceiling-visibility data at selected airports. Volume 3, part B: Southern region
[AD-A108159] N82-18820
Wind-ceiling-visibility data at selected airports. Volume 4, part A: Great Lakes region
[AD-A108160] N82-18821
Wind-ceiling-visibility data at selected airports. Volume 4, part B: Great Lakes region
[AD-A108161] N82-18822
Wind-ceiling-visibility data at selected airports. Volume 5, part A: Central region
[AD-A108162] N82-18823
Wind-ceiling-visibility data at selected airports. Volume 5, part B: Central region
[AD-A108163] N82-18824
Wind-ceiling-visibility data at selected airports. Volume 6, part A: Southwest region
[AD-A108164] N82-18825
Wind-ceiling-visibility data at selected airports. Volume 6, part B: Southwest region
[AD-A108165] N82-18826
Wind-ceiling-visibility data at selected airports. Volume 7, part A: Rocky Mountain region
[AD-A108166] N82-18827
Coastal upwelling ecosystems analysis. Atlas of the JOINT 2 1977 aircraft winds for the 500 foot level
[PB82-113929] N82-18843
WINDMILLS (WINDPOWERED MACHINES)
An extension of the local momentum theory to the rotors operating in twisted flow field N82-18123
Modal characteristics of rotor blades: Finite element approach and measurement by ground vibration test N82-18127
Dynamic and aeroelastic characteristics of complete windturbine systems N82-18128
WINDPOWER UTILIZATION
Long range laser anemometry with particular reference to wind power development
[FFA-TN-HU-2262-PT-3] N82-18840
WINDPOWERED GENERATORS
Design, evaluation, and fabrication of low-cost composite blades for intermediate-size wind turbines
[NASA-CR-165342] N82-18693
A two dimensional study of the maximum power that can be obtained from a wind turbine in a wind shear layer
[FFA-134] N82-18719
Measurements of wake interaction effects on the power output from small wind turbine models
[FFA-TN-HU-2189-PT-5] N82-18720
Icing problems for wind turbines. Summary of studies performed during winter season 1980/81
[FFA-TN-HU-2262-PT-4] N82-18721
WING CAMBER
Slotted variable camber flap
[NASA-CASE-LAR-12541-1] N82-18203
WING LOADING
Some unsteady aerodynamic effects on helicopter rotors N82-18162
WING OSCILLATIONS
Application of the ONER dynamic stall model to a helicopter blade in forward flight N82-18161

WING SLOTS
Slotted variable camber flap
[NASA-CASE-LAR-12541-1] N82-18203
WING TIPS
Hover tests of a model H-force rotor N82-18159
An analytical investigation of the free-tip rotor for helicopters
[NASA-TM-81348] N82-18179
WINGS
XFV-12A diagnostic and development programs
[AD-A108954] N82-18206
WIRE
Static and dynamic analysis of axially loaded wire ropes N82-18825
WIRE CLOTH
Metal honeycomb to porous wireform substrate diffusion bond evaluation
[NASA-TM-82780] N82-18812
WIRELESS COMMUNICATION
Efficient facsimile communication with computer controlled memory switching
[MBB-88-498-81-O] N82-18893
Carrier recovery system for modem applications with digital processing using PSK or DPSK modulation
[INPE-2095-RPE/325] N82-18923
WOOD
Dynamic mechanical properties of some wood-polymer composite materials N82-18324
WORD PROCESSING
The human as a constrained optimal text editor N82-18810
WORDS (LANGUAGE)
How an unfamiliar thing should be called
[AD-A109179] N82-18868
WORK SOFTENING
The effect of hydrogen on the solid solution strengthening and softening of nickel
[AD-A108654] N82-18374
WORK-REST CYCLE
Mission operation report: Space Shuttle program. STS-2 postflight medical operations
[NASA-TM-84135] N82-18858
WORKLOADS (PSYCHOPHYSIOLOGY)
Modeling human attention allocation strategies with competing criteria
[AD-A108509] N82-18875
WORLD METEOROLOGICAL ORGANIZATION
Manual on marine meteorological services. (Annex 6 to the WMO Technical Regulations) — of the World Meteorological Organization
[WMO-558] N82-18839

X

X RAY ASTRONOMY
Spacelab mission 1 experiment descriptions second edition
[NASA-TM-82448] N82-18234
Spectroscopy in X-ray astronomy N82-18251
A complete X-ray sample of the high latitude sky from HEAO-1 A-2: log N lo S and luminosity functions
[NASA-TM-82168] N82-18787
X RAY DIFFRACTION
X-ray measurement of residual stress in metals at Chalk River Nuclear Laboratories
[AECL-6961] N82-18839
X RAY IMAGERY
A high resolution, high counting rate bidimensional, MWPC imaging detector for small angle X-ray diffraction studies
[PB82-120886] N82-18589
X RAY SOURCES
V.L.F. Ionosonde, and long-distance propagation anomalies produced by galactic CEN X-4 X-ray burst in May 1979
[INPE-2250-PRE/033] N82-19129
X RAY SPECTRA
A complete X-ray sample of the high latitude sky from HEAO-1 A-2: log N lo S and luminosity functions
[NASA-TM-82168] N82-18787
X-Y PLOTTERS
Spatial energy distribution — scanning a tunable diode laser beam automatically
[NASA-CASE-LAR-12831-1] N82-18557
XENON FLUORIDE LASERS
Investigation of a 480 nm XeF laser
[AD-A108132] N82-18587
XYLENE
Ammoxidation of toluene and xylenes to nitriles
[PB82-106420] N82-18361

Y

YAG LASERS
Laser physics and laser spectroscopy
[AD-A108374] N82-18593

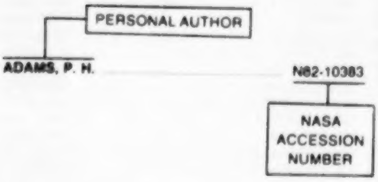
Z

ZIRCONIUM
Characterization of the microstructure of stabilized zirconia used on diesel-engine components
[DE81-029003] N82-18380
ZIRCONIUM ALLOYS
Effect of thermal cycling on the movement of the alpha Zr/alpha Zr-2.5 wt percent Nb alloy
[AECL-6883] N82-18379
ZIRCONIUM COMPOUNDS
Characterization of the microstructure of stabilized zirconia used on diesel-engine components
[DE81-029003] N82-18380
ZIRCONIUM HYDRIDES
Effect of thermal cycling on the movement of the alpha Zr/alpha Zr-2.5 wt percent Nb alloy
[AECL-6883] N82-18379
ZIRCONIUM OXIDES
Characterization of the microstructure of stabilized zirconia used on diesel-engine components
[DE81-029003] N82-18380

PERSONAL AUTHOR INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 9

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The NASA accession number denotes the number by which the citation is identified.

A

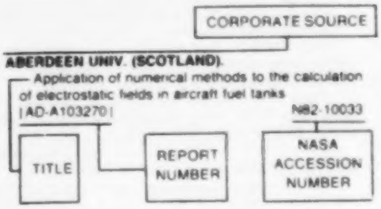
CORPORATE SOURCE INDEX

Typical Corporate Source Index Listing



CORPORATE SOURCE
ABERDEEN UNIV. (SCOTLAND).
Application of numerical methods to the calculation of electrostatic fields in aircraft fuel tanks
[AD-A103270]
N82-10033
TITLE
REPORT NUMBER
NASA ACCESSION NUMBER

Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The NASA accession number denotes the number by which the citation is identified. The titles are arranged under each corporate source in ascending accession number order.

A

ACADEMY OF NATURAL SCIENCES OF PHILADELPHIA, PA.
An investigation of chemistry and toxicity of ozone-produced oxidants and bromate to selected estuarine species
[PB82-116351] N82-18765

ACCUMETRICS CORP., CAMBRIDGE, MASS.
Applied research and development of falling-sphere densitometers payloads of improved design
[AD-A108316] N82-18580

ACUREX CORP., MOUNTAIN VIEW, CALIF.
Solar energy for pollution control
[PB82-116658] N82-18764

ADVANCED MECHANICAL TECHNOLOGY, INC., NEWTON, MASS.
Hard-on-hard (ceramic) long-life seals and riders for cryogenic coolers
[AD-A108646] N82-18394

AEG-TELEFUNKEN, WEDEL (WEST GERMANY).
Development and tests of experimental solar generators for concentrating systems
[BMFT-FB-T-81-193] N82-18718

AEROJET ELECTROSYSTEMS CO., AZUSA, CALIF.
A 16 x 16 element extrinsic silicon detector array
[NASA-CR-166265] N82-18559

AERONAUTICAL RESEARCH INST. OF SWEDEN, STOCKHOLM.
Status report on the Aeronautical Research Institute of Sweden version of the missile aerodynamics program LARV, for calculation of static aerodynamic properties and longitudinal aerodynamic damping derivatives. Part 1: Theory
[FFA-TN-AU-1661-PT-1] N82-18308
A two dimensional study of the maximum power that can be obtained from a wind turbine in a wind shear layer
[FFA-134] N82-18719
Measurements of wake interaction effects on the power output from small wind turbine models
[FFA-TN-HU-2189-PT-5] N82-18720
Icing problems for wind turbines. Summary of studies performed during winter season 1980/81
[FFA-TN-HU-2262-PT-4] N82-18721
Analysis of gust structure in the atmospheric boundary layer by using conditional sampling
[FFA-TN-HU-2262-PT-1] N82-18796
Long range laser anemometry with particular reference to wind power development
[FFA-TN-HU-2262-PT-3] N82-18840

AERONAUTICAL RESEARCH LABS., MELBOURNE (AUSTRALIA).
Performance analysis of vapour cycle cooling systems
[AD-A108254] N82-18418
Low level wind study, Bald Hills: Thunderstorm season, 1976 - 1977

INSTITUTE FOR DEFENSE ANALYSES, ARLINGTON, VA.
C-5A austere airfield operational utility evaluation. Phase 2: Operation on unpaved soil surfaces following rainfall
[AD-A108597] N82-18206
A survey of the limits on radar imaging
[AD-A108598] N82-18462

INSTITUTE FOR PERCEPTION RVO-TNO, SOESTERBERG (NETHERLANDS).
The Link-Hiles driver training simulator for tracked vehicles: The effect of method and duration of training on the transfer of training
[IZF-1980-28] N82-18226

INSTITUTE FOR TELECOMMUNICATION SCIENCES, BOULDER, COLO.
Electromagnetic compatibility analysis for a satellite power system receiving site in the Mojave Desert
[PB82-100710] N82-18723

INSTITUTE OF HYDROLOGY, WALLINGFORD (ENGLAND).
Soil physical processes of groundwater recharge through Indian black cotton soils
[PB82-112137] N82-18674

INSTITUTO DE PESQUISAS ESPACIAIS, SAO JOSE DOS CAMPOS (BRAZIL).
An on board supervisory system for applications in space missions
[INPE-2097-RPE/327] N82-18216
An adaptive satellite orbit estimation scheme using an analytical approach and a dynamical model compensation technique
[INPE-2304-PRE/072] N82-18270
A rapid estimation of near Earth satellite lifetimes with quasi-dynamic atmosphere model with application to a proposed Brazilian satellite
[INPE-2287-PRE/063] N82-18272
Tone receiver for satellite position determination
[INPE-2159-RPE/378] N82-18306
Determination of the field scattered by an axially incident plane wave
[INPE-2179-NTE/175] N82-18448

Link availability in satellite telecommunication subject to correlated rain attenuation at the ground terrain
[INPE-2280-PRE/058] N82-18451

Computer implementation of a program for the analysis of circular reflectors using the geometric theory of diffraction
[INPE-2132-RPE/358] N82-18452

A double-balanced mixer for 2 GHz
[INPE-2150-RPE/371] N82-18453

Radiometric studies of the heat island
[INPE-2156-RPE/375] N82-18454

A new external limit to the capacity of interference channels
[INPE-2162-RPE/380] N82-18455

Relational data bank for Burroughs computers
[INPE-2116-RPE/340] N82-18456

An active filter for the simultaneous realization of several transfer functions
[INPE-2298-PRE/069] N82-18509

Small signal design of a dielectric resonator stabilized oscillator
[INPE-2285-PRE/061] N82-18510

FM modulators using a phase locked loop
[INPE-2293-NTE/177] N82-18511

Stabilized microwave oscillator for a dielectric resonator
[INPE-2123-RPE/347] N82-18512

A 10 MHz 60 deg PM demodulator
[INPE-2157-RPE/376] N82-18513

Thermal resistance of convectively cooled plates with applied heat flux and internal heat generation
[INPE-2291-PRE/066] N82-18541

Thermal resistance of a convection cooled flat plate with a nonuniform applied heat flux and internal generation of constant heat
[INPE-2131-RPE/355] N82-18542

System for stabilization and pointing of a stratospheric balloon-borne telescope
[INPE-2103-RPE/330] N82-18558

The centratlan aerogeophysical operation in the region of the Mid-Atlantic ridge. INPE participation
[INPE-2142-RPE/364] N82-18653

Regression type mathematical models of the interaction of meteorology and agricultural productivity. Objectives, uses and operational problems
[INPE-2117-RPE/341] N82-18661

A model for estimating the productivity of corn in the States of Sao Paulo
[INPE-2118-RPE/342] N82-18662

I-V characterization of solar cells
[INPE-2141-RPE/363] N82-18699

Ionospheric program
[INPE-2113-RPE/337] N82-18778

A simulation of equatorial plasma bubble signatures on the OI 6300 A nightglow meridional profile over Brazilian low latitude
[INPE-2260-PRE/042] N82-18779

Equatorial spread F instability conditions as determined from ionograms
[INPE-2310-PRE/075] N82-18780

H2O maser survey in the magnellanic clouds
[INPE-2279-PRE/057] N82-18781

Theoretical analysis of the real and apparent velocities of vertical plasma drift in the equatorial ionosphere
[INPE-2143-RPE/365] N82-18782

Characteristics of the 6300 angstrom OI luminescence at a low latitude American sector
[INPE-2114-RPE/338] N82-18783

Comparative study of the electronic density peak and peak height of the F sub 2 layer calculated by CCIR and observed by Cachoeira Paulista and Fortaleza for magnetically calm periods
[INPE-2144-RPE/366] N82-18784

High altitude atmospheric physics program
[INPE-2111-RPE/336] N82-18785

Convective rainfall estimation in Rio Grande do Sul State, Brazil: Preliminary results
[INPE-2271-RPE/400] N82-18804

The use of environmental satellites for frost monitoring
[INPE-2128-RPE/352] N82-18805

The evolution of meteorological forecasting
[INPE-2151-RPE/372] N82-18806

Filtration of elements of orbital images contaminated by clouds, to obtain improved measurements of the black body temperature for use in oceanography
[INPE-2121-RPE/345] N82-18845

Programmable multiple digital cassette memory
[INPE-2099-RPE/329] N82-18880

A microcomputer for control of data collection platforms
[INPE-2104-RPE/331] N82-18881

Carrier recovery system for modem applications with digital processing using PSK or DPSK modulation
[INPE-2095-RPE/325] N82-18923

Optimal control of an M/G/1 queueing system
[INPE-2139-RPE/362] N82-18929

A stochastic approach to global error estimation in the numerical solution of ordinary differential equations
[INPE-2290-PRE/065] N82-18944

Axisymmetric triangular element with six nodal points
[INPE-2289-PRE/064] N82-18945

Changing the fuzzy rule of detachment
[INPE-2266-PRE/047] N82-18946

Application of the Alpha-Beta procedure to differential games
[INPE-2135-RPE/358] N82-18962

On the self-consistent solutions of pulsar plasma waves
[INPE-2302-PRE/071] N82-19036

Electron hopping energy influence on the specific heat and conductivity of phosphorus doped silicon
[INPE-2301-PRE/070] N82-19044

Electron and impurity correlations in doped semiconductors
[INPE-2309-PRE/074] N82-19056

Diagonal and off-diagonal disorder in doped semiconductors
[INPE-2292-PRE/067] N82-19057

Two dimensional sub-bands in ion implantation
[INPE-2147-RPE/369] N82-19058

Photovoltaic detectors for infrared operation
[INPE-2146-RPE/368] N82-19059

Electrical resistivity of P ions implanted on Si
[INPE-2145-RPE/367] N82-19060

Electronic states of a negative ion donor in semiconductors
[INPE-2092-RPE/322] N82-19061

Effects of electron transference energy in semiconductors
[INPE-2129-RPE/353] N82-19062

Electronic structure of the D(-) state and excited donor states of grain impurities in doped semiconductors
[INPE-2115-RPE/339] N82-19063

Paramagnetic susceptibility of phosphorus doped silicon
[INPE-2105-RPE/332] N82-19064

Correlation in doped semiconductors
[INPE-2106-RPE/334] N82-19065

Random anisotropy in Ising spin glass
[INPE-2277-PRE/055] N82-19078

Mm- to cm-wavelength time delays in solar burst emission burst emission and the effect of varying magnetic field
[INPE-2276-PRE/056] N82-19124

Time delays in solar bursts measured in the mm-cm range of wavelengths
[INPE-2251-PRE/034] N82-19125

V.L.F. ionosonde and long-distance propagation anomalies produced by galactic CEN X-4 X-ray burst in May 1979
[INPE-2250-PRE/033] N82-19129

INSTITUUT TNO VOOR BOUWMAYCRIALEN EN BOUWCONSTRUCTIES, DELFT (NETHERLANDS).

Investigation into the utility of some quick setting cements for runway repair
[B-80-157/60.7.0157] N82-18225

INSTITUUT TNO VOOR WISKUNDE, INFORMATIEVERWERKING EN STATISTIEK, THE HAGUE (NETHERLANDS).

Continuation of information tracks research: Inventor of prospects

Solar power satellites, summary
[OTA-E-145] N82-18305

Technology and oceanography: An assessment of Federal technologies for oceanographic research and monitoring
[OTA-O-142] N82-18844

OHIO DEPT. OF NATURAL RESOURCES, COLUMBUS.

South point gasohol project: A water assessment study
[PB82-111485] N82-18413

OHIO EDISON CO., AKRON.

Ohio River Basin energy study: Social values and energy policy
[PB82-101494] N82-18735

An economic analysis of the electric utility sector in the Ohio River Basin region
[PB82-103268] N82-18736

A baseline assessment of coal industry structure in the Ohio River Basin Energy Study region
[PB82-103615] N82-18737

West Virginia baseline
[PB82-103672] N82-18738

Energy consumption in the Ohio River Basin Energy Study region, 1974, by end user and fuel type
[PB82-104811] N82-18739

OHIO RIVER BASIN COMMISSION, CINCINNATI.

Executive summary of the Cumberland River Basin regional plan: Water and related land resources report [PB82-111519] N82-18747

OHIO STATE UNIV., COLUMBUS.

Hover tests of a model H-force rotor N82-18159

Rime ice accretion and its effect on airfoil performance N82-18175

Studies on plastic instability, notch deformation and hydrogen effects in spheroidized steel N82-18366

Effects of atmospheric turbulence on microwave and millimeter wave satellite communications systems N82-18445

A four-phase modulation system for use with and adaptive array N82-18446

Fabrication and characterization of ohmic contacts made with gold on heavily tin doped N type surface layers in gallium arsenide N82-18496

Molecular interactions of high energy fuels and jet fuels with oncogenic viruses and endogenous viruses [AD-A108377] N82-18855

Study of chlorine dioxide and its metabolites in man [PB82-109356] N82-18883

Selecting sufficient sets of test paths for program testing N82-18905

A methodology for the evaluation of languages for the development of information system performance models N82-18907

Ranking and selection in designed experiments: Complete factorial experimentals [AD-A108188] N82-18979

Optimization in statistics: An introduction [AD-A108653] N82-18980

Chromostatics of two-quark systems [DE82-001181] N82-19022

OKLAHOMA STATE UNIV., STILLWATER.

Automated PCM encoder temperature test [AD-A108184] N82-18889

OLD DOMINION UNIV., NORFOLK, VA.

Basic physical and chemical processes in space radiation effects on polymers N82-18277

Finite element thermal-structural modeling of orbiting truss structures N82-18281

A method of modeling multirate two-dimensional recursive digital filters N82-18497

Burgers approximation for two-dimensional flow past an ellipse [NASA-CR-168552] N82-18540

Theoretical studies of solar-pumped lasers [NASA-CR-168554] N82-18577

Usage and limitations of characteristic vector analysis of remote sensing multispectral data for the identification and quantification of water quality parameters N82-18656

OREGON STATE UNIV., CORVALLIS.

Mesoscale studies of flow regimes and fluxes of particulate matter in coastal waters [DE82-001740] N82-18850

OXFORD UNIV. (ENGLAND).

The electrical properties of Na3Cu4S4, mixed-valence one-dimensional metal [AD-A108517] N82-19069

Corporate organizationl design and its effect on innovation [PB82-108903] N82-19089

P

PACIFIC ENVIRONMENTAL SERVICES, INC., SANTA MONICA, CALIF.

Quality assurance audits for SIP and NECRMP emission inventories: New York and New Jersey [PB82-114273] N82-18767

PACIFIC GAS AND ELECTRIC CO., SAN RAMON, CALIF.

Conceptual design of a solar cogeneration facility industrial process heat. Volume 2: Appendices [DE82-001578] N82-18702

PACIFIC-SIERRA RESEARCH CORP., SANTA MONICA, CALIF.

Integral equation approach to the propagation of low-frequency groundwaves over irregular terrain. 2: Two-dimensional terrain features and elevated receivers [AD-A108579] N82-18459

Calculation of ionospheric conductivity profiles by inverting VLF/LV reflections data. 1: Isotropic propagation [AD-A108577] N82-18460

PACIFIC SOUTHWEST FOREST AND RANGE EXPERIMENT STATION, BERKELEY, CALIF.

An inexpensive photoelectric remote tilt meter [PB82-103649] N82-18567

PEABODY-GORDON-PIATT, INC., WINFIELD, KANS.

Direct combustion of industrial dry, composite waste in suspension [DE81-030679] N82-18352

PEDCO-ENVIRONMENTAL, INC., CINCINNATI, OHIO.

EPA utility FGD (Flue Gas Desulfurization) survey [PB82-115858] N82-18766

PENNSYLVANIA STATE UNIV., UNIVERSITY PARK.

Numerical analysis and FORTRAN program for the computation of the turbulent wakes of turbomachinery rotor blades, isolated airfoils and cascade of airfoils [NASA-CR-3509] N82-18184

Dynamic mechanical properties of some wood-polymer composite materials N82-18324

Physicochemical properties of diesel particulate matter N82-18335

Carboranylcyclotriphosphazenes and their polymers [NASA-CASE-ARC-11176-1] N82-18389

Secondary electron emission from a charged dielectric in the presence of normal and oblique electric fields [NASA-CR-168558] N82-18507

Mapping of electrical potential distributions with charged particle beams [NASA-CR-168556] N82-18508

Structure of a multibeam adaptive space-time processor [AD-A108352] N82-18524

Cables for face equipment standardization of requirements [PB82-113820] N82-18885

The analysis of repeated measurements through time N82-18967

Effect of air content on broadband noise measurements in the 1.22-m diameter water tunnel [AD-A108540] N82-19000

A theoretical study of photo-field emission from a metal surface N82-19046

PENNSYLVANIA UNIV., PHILADELPHIA.

Nutation of Helianthus Annuus in a microgravity environment N82-18265

Photoexcitations in polyacetylene [AD-A107831] N82-18393

Procedure based generalized interactive systems N82-18928

Solitons in one-dimensional charge density wave systems N82-19051

PERFORMANCE MEASUREMENT ASSOCIATES, INC., VIENNA, VA.

Effect of automatic processing on specification of problem solutions for computer programs [AD-A108570] N82-18919

PHYSICAL SCIENCES, INC., WOBURN, MASS.

High temperature in absorption measurements [AD-A108601] N82-18588

PHYSICS LAB. RVO-TNO, THE HAGUE (NETHERLANDS).

Suggested models for analyzing and forecasting demand for components of army vehicles [PHL-1979-35] N82-18963

PITTSBURG UNIV., PA.

Optimization of functions of matrices with applications to statistical problems [AD-A108368] N82-18987

POLITECNICO DI MILANO (ITALY).

An experimental analysis of the shape of a rotor wake N82-18122

A general purpose program for rotor blade dynamics N82-18151

POLYTECHNIC INST. OF NEW YORK, BROOKLYN.

Basic research in electronics (JSEP) [AD-A108502] N82-18525

PRATT AND WHITNEY AIRCRAFT GROUP, EAST HARTFORD, CONN.

JT9D ceramic outer air seal system refinement program [NASA-CR-165554] N82-18603

PRINCETON UNIV., N. J.

The theory and application of temperature programmed desorption in the study of unsupported iron and iron-copper Fischer-Tropsch synthesis catalysts N82-18339

Gas-surface interactions in cryogenic whole air sampling [AD-A108255] N82-18742

On simple robust confidence procedures N82-18971

Data modifications based on order: Pushback; a configural polysampling approach N82-18973

PURDUE UNIV., LAFAYETTE, IND.

A compilation of stress intensity factor solutions for flawed fastener holes [AD-A108753] N82-18628

Ohio River Basin energy study: Social values and energy policy [PB82-101494] N82-18735

Modeling human attention allocation strategies with competing criteria [AD-A108509] N82-18875

Q

QUEENSLAND UNIV., BRISBANE (AUSTRALIA).

Inelastic beam buckling experiments [PB82-103292] N82-18648

R

R AND D ASSOCIATES, MARINA DEL REY, CALIF.

Soil properties of USSR strategic areas. Volume 1: Soil property comparisons for selected USSR and U.S. soils [AD-A108743] N82-18788

RADIAN CORP., AUSTIN, TEX.

Environmental assessment, source test and evaluation report: Lurgi (Kosovo) medium-Btu gasification [PB82-114075] N82-18751

RADIAN CORP., DURHAM, N.C.

HERL biological exposure chamber conceptual design [PB82-114646] N82-18574

RAND CORP., SANTA MONICA, CALIF.

Distributed intelligence for air fleet control [AD-A108611] N82-18195

RAYTHEON CO., WAYLAND, MASS.

R and D equipment information report: Fault tolerant weather radar processor [AD-A108253] N82-18809

RENSSELAER POLYTECHNIC INST., TROY, N. Y.

A completely deformable Timoshenko beam type slider crank mechanism N82-18602

RESEARCH INST. OF NATIONAL DEFENCE, LINKOEPING (SWEDEN).

Radio equipment for propagation experiments at the frequencies 11, 18, and 36 GHz [FOA-A-30027-E2] N82-18490

Observations with an imaging 35 GHz radiometer of terrain in Malmslatt, July 1980 [FOA-C-30240-E1/E3] N82-18672

RESEARCH INST. OF NATIONAL DEFENCE, STOCKHOLM (SWEDEN).

Investigation on air samples from the submarine Sjoehunden, August 1979 [FOA-C-54035-H1] N82-18744

Investigations on air samples from the submarine Naecken, August 1980 [FOA-C-54036-H1] N82-18745

Research predictions for underwater activities in the 1980's [FOA-C-58010-H1] N82-18862

Man/computer communication: From artificial intelligence and behavioral science perspectives [FOA-C-53005-H2] N82-18942

Comparison of U.S. and Swedish Aerial Target Vulnerability Assessment Methodologies (ATVAM) [FOA-REPTS-VOL-15-NO-4] N82-18985

Common data base experiment: Progress report on data analysis [FOA-C-20431-T1] N82-19094

RHODE ISLAND UNIV., KINGSTON.

Stability analysis of the compressible, adiabatic, similar boundary layer equations (lower branch) [AD-A108507] N82-18546

RICE UNIV., HOUSTON, TEX.
Electron-spin-polarization effects in low energy electron diffraction, ion neutralization and metastable atom deexcitation at solid surfaces
[DE82-001179] N82-19019

ROCHESTER UNIV., N. Y.
Competition effects in lasers
[AD-A106656] N82-18592

ROCKWELL INTERNATIONAL CORP., COLUMBUS, OHIO.
XFV-12A diagnostic and development programs
[AD-A108354] N82-18206

ROCKWELL INTERNATIONAL CORP., EL SEGUNDO, CALIF.
Multiple ejection effects analysis
[AD-A108277] N82-18192

ROCKWELL INTERNATIONAL CORP., NEWBURY PARK, CALIF.
Development of a multidetector petroleum oil in water monitor
[PB82-105206] N82-18568

ROCKWELL INTERNATIONAL CORP., THOUSAND OAKS, CALIF.
Electronic transport in ultrathin heterostructures
[AD-A108390] N82-19007
Growth of HgCdTe by modified molecular beam epitaxy
[AD-A108750] N82-19008

ROCKWELL INTERNATIONAL SCIENCE CENTER, THOUSAND OAKS, CALIF.
Proceedings of the DARPA/AFWAL review of progress in quantitative nondestructive evaluation
[AD-A108741] N82-18614

RODGERS (RICHARD C.), JR., PALO ALTO, CALIF.
FEDSOL: Program user's manual and economic optimization guide for solar Federal building projects
[PB82-107012] N82-18729

ROLLS-ROYCE LTD., WATFORD (ENGLAND).
Measurement techniques used to assess the installed power of a helicopter engine N82-18133

ROME AIR DEVELOPMENT CENTER, GRIFFISS AFB, N.Y.
Test and evaluation of reduced rate multiplexers
[AD-A108202] N82-18463
TM/TE polarization ratios in a sample of 30 kHz sferics received at altitudes from 0 to 70 km
[AD-A108182] N82-18464
Measurements of antenna pulse response
[AD-A108181] N82-18465
Bayesian reliability tests made practical
[AD-A108150] N82-18615

ROME RESEARCH CORP., N. Y.
Litho scanning techniques
[AD-A108371] N82-18885

ROME UNIV. (ITALY).
Three-dimensional ballistocardiography in weightlessness N82-18262

ROYAL AIRCRAFT ESTABLISHMENT, FARNBOROUGH (ENGLAND).
The measurement of the mobility of structures at acoustic frequencies N82-18149
Preliminary investigation into the addition of auxiliary longitudinal thrust on helicopter agility N82-18155
Some unsteady aerodynamic effects on helicopter rotors N82-18162
Measurements in the near-wake of a transport model, to determine the lift, drag and drag components using Maskell's analysis
[RAE-TR-81012] N82-18177
New developments in cockpit-human interfaces
[RAE-TM-FS-412] N82-18215
A design for a 32-channel multiplexer
[RAE-TM-RAD-NAV-145] N82-18503
A General Purpose Interface Bus (GPIB)
[RAE-TM-RAD-NAV-168] N82-18505
Some recent developments in aeronautical fluid mechanics
[RAE-TM-AERO-1894] N82-18539
The effect of atmospheric turbulence on air to ground photography
[RAE-TR-81065] N82-18555
Automatic relocation of ground control points in LANDSAT imagery
[RAE-TR-81071] N82-18557
Scatter diagrams based on the anthropometric survey of 2000 Royal Airforce aircrew (1970/1971)
[RAE-TR-81017] N82-18857

ROYAL SIGNALS AND RADAR ESTABLISHMENT, MALVERN (ENGLAND).
Impedance of monopole antennas on vehicles by moment methods
[RSRE-MEMO-3414] N82-18447
Flex firmware
[RSRE-81009] N82-18879

S

SAN FERNANDO LABS., PACOIMA, CALIF.
Investigation of the CNTD mechanism and its effect on microstructural properties of SiC and AlN
[AD-A108581] N82-18371

SAN FRANCISCO UNIV., CALIF.
Radiation environment mapping N82-18268

SAN JOSE STATE UNIV., CALIF.
Use of glow discharge in fluidized beds
[NASA-CASE-ARC-11245-1] N82-18401

SCHAFER (W. J.) ASSOCIATES, INC., ARLINGTON, VA.
A study to survey NASA laser applications and identify suitable lasers for specific NASA needs N82-18580
Investigation of possibilities for solar-powered high-energy lasers in space N82-18581

SCIENCE APPLICATIONS, INC., MCLEAN, VA.
Spectral model predictions of mean-square-shear distortion rates
[AD-A108211] N82-18543
A dynamical model of wind-induced near-inertial motions
[AD-A108687] N82-18846
Models of near inertial vertical shear
[AD-A108686] N82-18847
Statistical modeling of shear in the upper ocean
[AD-A108212] N82-18848

SCIENCE APPLICATIONS, INC., MONTEREY, CALIF.
Atlantic hurricane wind probability forecasting (WINDPA)
[AD-A108756] N82-18810

SCIENCE RESEARCH COUNCIL, CHILTON (ENGLAND).
Three dimensional field computation
[PB82-107160] N82-18491
A high resolution, high counting rate bidimensional, MWPC imaging detector for small angle X-ray diffraction studies
[PB82-120868] N82-18569
Neutron transport from targets to moderators
[PB82-108915] N82-19027

SCIENCE RESEARCH COUNCIL, LONDON (ENGLAND).
Research in tribology and bearings
[PB82-108823] N82-18806

SCOTT ENVIRONMENTAL TECHNOLOGY, INC., SAN BERNARDINO, CALIF.
Inventory of emissions from marine operations within the California coastal waters
[PB82-105089] N82-18757

SCRIPPS INSTITUTION OF OCEANOGRAPHY, LA JOLLA, CALIF.
Oceanographic and Meteorological Conditions in the North Pacific
[AD-A108754] N82-18854
Differential sound absorption technique and effect of ion-pairing and pressure on sound absorption in sea water and aqueous mixtures of magnesium sulfate and sodium chloride
[AD-A108569] N82-18997

SERVICE DE LA PROGRAMMATION DE LA POLITIQUE SCIENTIFIQUE, BRUSSELS (BELGIUM).
National energy research and development program N82-18707

SIEMENS A.G., BERLIN (WEST GERMANY).
Test setups for the development of high voltage circuit breakers for high short circuit capacities
[BMFT-FB-T-81-184] N82-18514

SOCIETE EUROPEENNE DE PROPULSION, BORDEAUX (FRANCE).
Evaluation of a thermal response test for electropyrotechnical devices: Summary
[TP-15225/80] N82-18405

SOCIETE NATIONALE INDUSTRIELLE AEROSPATIALE, LA COURNEUVE (FRANCE).
A light helicopter for night firing N82-18144

SOCIETE NATIONALE INDUSTRIELLE AEROSPATIALE, MARIGNANE (FRANCE.)
A complete method for computation of blade mode characteristics and responses in forward flight N82-18126
Parametric study of the influence of the engine upon the operating cost of a civil helicopter N82-18131
Point of view of a helicopter manufacturer on airworthiness regulations N82-18137
Naval versions of the Dauphin and the AS 15 TT weapon system N82-18142

SOFTECH, INC., WALTHAM, MASS.
The JOVIAL (J73) workbook, volumes 1 through 6
[AD-A108527] N82-18916
The JOVIAL (J73) workbook, volumes 10 through 12
[AD-A108528] N82-18917
The JOVIAL (J73) workbook, volumes 13 through 15
[AD-A108529] N82-18918

SOIL CONSERVATION SERVICE, WASHINGTON, D. C.
Wastewater treatment facilities-sludge management system, Albuquerque, New Mexico
[PB82-117029] N82-19111

SOUTHAMPTON UNIV. (ENGLAND).
Developments in rotary wing aircraft aerodynamics N82-18120
Wind tunnel investigation of high speed rotor noise N82-18146
A method of predicting fuselage loads in hover N82-18164

SOUTHEASTERN CENTER FOR ELECTRICAL ENGINEERING EDUCATION, INC., ST. CLOUD, FLA.
Task analytic techniques: Application to the design of a flight simulator instructor/operator console
[AD-A108724] N82-18227

SOUTHWEST RESEARCH INST., HOUSTON, TEX.
Comparison of U.S. and Swedish Aerial Target Vulnerability Assessment Methodologies (ATVAM)
[FOA-REPTS-VOL-15-NO-4] N82-18865

SOUTHWEST RESEARCH INST., SAN ANTONIO, TEX.
Fatigue microcrack behavior under the influence of surface residual stresses
[AD-A108691] N82-18633

SPARTON ELECTRONICS, JACKSON, MICH.
Modified Ambient Sea Noise indicator with ambient noise directionality estimator
[AD-A108369] N82-18998

SPECTRON DEVELOPMENT LABS., INC., COSTA MESA, CALIF.
Flow velocity and angularity measurements in the FDL trisonic gasdynamic facility and self-adaptive wall wind tunnels with a laser transit anemometer
[AD-A108427] N82-19119

SRI INTERNATIONAL CORP., ARLINGTON, VA.
Evaluation of the North Island A/C crash/rescue training facility
[AD-A108740] N82-18228
Drag reduction and adaptive boundary conditions
[AD-A108609] N82-18544

SRI INTERNATIONAL CORP., MENLO PARK, CALIF.
Oxidation and formation of deposit precursors in hydrocarbon fuels
[NASA-CR-165534] N82-18402
Distributed artificial intelligence
[AD-A108734] N82-18932
Plan synthesis: A logical perspective
[AD-A108733] N82-18933
Central control system survey
[PB82-101961] N82-19109

STANFORD UNIV., CALIF.
Probabilistic and hazard analysis for pore pressure increase in soils due to seismic loading
[PB82-122417] N82-18429
Theory and application of experimental model analysis in earthquake engineering
[PB82-122409] N82-18430
Laser physics and laser spectroscopy
[AD-A108374] N82-18593
Acoustic microscopy for nondestructive evaluation of materials
[AD-A108423] N82-18617
Semiconductor measurement technology: The capabilities and limitations of Auger sputter profiling for studies of semiconductors
[PB82-120122] N82-19075

STATE DEPT., WASHINGTON, D. C.

The Global 2000 report to the President. Entering the twenty-first century, volume 1 [PB82-100801] N82-19060

The Global 2000 report to the President. Entering the twenty-first century, volume 2 [PB82-100819] N82-19061

The Global 2000 report to the President. Documentation on the Government's Global sectoral models: The Government's Global model, volume 3 [PB82-100827] N82-19062

STATE UNIV. OF NEW YORK AT ALBANY.

Chronoamperometric transients at the stationary disk microelectrode [AD-A108567] N82-18519

Experimental results of multiple scattering [AD-A108291] N82-19032

STATE UNIV. OF NEW YORK AT BINGHAMTON.

Preliminary characterization of persisting circadian rhythms during space flight: Neurospora as a model system N82-18266

STATE UNIV. OF NEW YORK AT STONY BROOK.

Zero sound attenuation from order parameter fluctuations in liquid He-3 N82-19049

STIRLING UNIV. (SCOTLAND).

Mass discrimination during weightlessness N82-18264

STRASBOURG UNIV. (FRANCE).

The yearly effect of the activities of the European Space Agency: Estimation of tax revenues due to the activities of ESA and of the resulting global short term economic impact. Volume 2: Main report [ESA-CR(P)-1472] N82-19099

STRATEGIC AIR COMMAND, OFFUTT AFB, NEBR.

AN/ALQ-135 tail warning system follow-on operational test and evaluation [AD-A108348] N82-18471

STRUCTURAL COMPOSITES INDUSTRIES, INC., AZUSA, CALIF.

Design, evaluation, and fabrication of low-cost composite blades for intermediate-size wind turbines [NASA-CR-165342] N82-18693

STUTTGART UNIV. (WEST GERMANY).

Model of seasonal heat storage [BMFT-FB-T-81-176] N82-18711

Activities Report of the Institute for Plasma Research N82-19043

SUFFOLK COUNTY DEPT. OF HEALTH SERVICES, N.Y.

Use of flow-duration curves to evaluate effects of urbanization on streamflow patterns on Long Island, New York [PB82-114307] N82-18673

SUMX CORP., AUSTIN, TEX.

Feasibility of photocatalytic oxidation for wastewater clean-up and reuse [PB82-108457] N82-18358

SYDKRAFT AB (SYDSVENSKA KRAFT- OCH VAERME AKTIEBOLAGET), MALMOE (SWEDEN).

Icing problems for wind turbines. Summary of studies performed during winter season 1980/81 [FFA-TN-HU-2262-PT-4] N82-18721

SYDNEY UNIV. (AUSTRALIA).

Lower bound equilibrium design of slabs [PB82-105263] N82-18649

Distortional buckling of thin-web beam columns [PB82-105271] N82-18650

SYRACUSE UNIV., N. Y.

Electromagnetic coupling to a conducting body of revolution with a homogeneous material region [AD-A108395] N82-18473

Solution of large sets of linear equations using cellular arrays N82-18946

T

TASMANIA UNIV., HOBART (AUSTRALIA).

Transient capacitance measurements of deep level defects introduced in beta-ray compensated germanium by long-term annealing at room temperature [AAEC/E-501] N82-19074

Transient conductance spectroscopy measurements of defect states in Gamma-irradiated n-channel silicon field effect transistors with possible Gamma-dosemeter applications [AAEC/E-504] N82-19077

TECHNISCHE HOCHSCHULE, AACHEN (WEST GERMANY).

Railway transport of low temperature heat from large power stations by means of alternative heat carriers and water [BMFT-FB-T-81-145] N82-18710

TECHNISCHE HOCHSCHULE, DARMSTADT (WEST GERMANY).

A descriptive language for thin film conductors [IND-FB-107] N82-18528

TECHNISCHE HOGESCHOOL, DELFT (NETHERLANDS).

Prediction of off-design performance of turbo-shaft engines a simplified method N82-18132

A method of characteristic surfaces. The approximate solution of three-dimensional supersonic flow fields from the near field up to the sonic boom region N82-18182

Ammoxidation of toluene and xylenes to nitriles [PB82-105420] N82-18361

Birefringence and stress in polymer melts under shear and extension N82-18391

An investigation of ship propeller fatigue N82-18627

CYCLE: A general computer code for thermodynamic cycle computations. Studies of cogeneration in district heating systems [WTHD-135] N82-18708

Indoor climate, outdoor climate, and energy consumption. An approach to the calculation of the effect of the outdoor and indoor climate on the energy consumption in buildings, based on methods of statistical analysis [WTHD-137] N82-18709

Identification of the adaptive feedback of the human motor system using the Response Difference Method (RDM) [WTHD-134] N82-18869

A further inquiry into the theory of S-transformations and criterion matrices N82-18986

Two-dimensional nuclear magnetic resonance in liquids N82-19005

Radiation detection with point-contact Josephson junctions N82-19054

The influence of the spin-rotor coupling of methyl groups in solids on their NMR relaxation [ISBN-90-6231-090-7] N82-19055

TEKNEKRON, INC., MCLEAN, VA.

Assessment of future environmental trends and problems: Industrial use of applied genetics and biotechnologies [PB82-118951] N82-18750

TEKNEKRON, INC., WALTHAM, MASS.

Evaluation of point source dispersion models [PB82-121062] N82-18762

TEL-AVIV UNIV. (ISRAEL).

On the relationship between transitional and fully turbulent shear flow [AD-A108367] N82-18547

TENNESSEE VALLEY AUTHORITY, CHATTANOOGA.

Testing and analysis of a wet-dry crossflow cooling tower. Volume 1: Test program and results [PB82-103771] N82-18752

TEXAS A&M UNIV., COLLEGE STATION.

Hyperfine structure and isotope-shift measurements of short-lived elements by laser spectroscopy [DE82-001896] N82-18354

Precipitation field and intrastorm flow of supercell convective storms N82-18601

TEXAS DEPT. OF WATER RESOURCES, AUSTIN.

Ground-water for the Salt Basin, Eagle Flat, Red Light Draw, Green River Valley, and Presidio Bolson in westernmost Texas [PB82-105289] N82-18759

TEXAS UNIV. AT ARLINGTON.

Analysis of post-tensioned girder anchorage zones [PB82-122266] N82-18436

Statistical tools for determining fitness to fly [AD-A108699] N82-18880

Two approaches to deadlock in distributed systems N82-18909

An error analysis for singular finite elements N82-18947

On the composite structure of elementary particles N82-19003

Theoretical aspects of the nonlinear interaction of drift-type instabilities in a plasma N82-19035

TEXTRON BELL HELICOPTER, FORT WORTH, TEX.

Rotorcraft flight simulation computer program C81 with DATAMAP interface. Volume 2: Programmer's manual [AD-A108294] N82-18231

THERMO ELECTRON CORP., WALTHAM, MASS.

Open-cycle vapor compression heat pump [PB82-110503] N82-18553

THIOKOL CORP., HUNTSVILLE, ALA.

Advanced air launched missile motor designed methods [AD-A108634] N82-18318

User's manual for Solid Propulsion Optimization Code (SPOC). Volume 1: Technical description [AD-A108224] N82-18319

User's manual for Solid Propulsion Optimization Code (SPOC). Volume 2: User's guide [AD-A108225] N82-18320

User's manual for Solid Propulsion Optimization Code (SPOC). Volume 3: Program description [AD-A108226] N82-18321

THOMSON-CSF, MEUDON-LA-FORET (FRANCE).

Study of synthetic aperture radar in 2D - 2FS operation over the ocean [ESA-CR(P)-1475] N82-18481

THOMSON-CSF, SAINT EGREVE (FRANCE).

Tests concerning technological problems with charge transfer electron multipliers [TDI/1.1851/80] N82-18530

TOKYO UNIV. (JAPAN).

An extension of the local momentum theory to the rotors operating in twisted flow field N82-18123

A numerical approach to co-axial rotor aerodynamics N82-18157

Space experiments with particle accelerators N82-18241

TORONTO UNIV., DOWNSVIEW (ONTARIO).

Study of laser created metal vapour plasmas [AD-A108586] N82-18594

TRANSPORT AND ROAD RESEARCH LAB., CROWTHORNE (ENGLAND).

Hot rolled asphalt: Effect of binder properties on resistance to deformation [PB82-122664] N82-18432

TRW DEFENSE AND SPACE SYSTEMS GROUP, REDONDO BEACH, CALIF.

ACOSS eight (Active Control Of Space Structures), phase 2 [AD-A108629] N82-18313

Heat reflecting field stop [NASA-CASE-LAR-12443-1] N82-19030

TRW, INC., CLEVELAND, OHIO.

Development of materials and process technology for dual alloy disks [NASA-CR-165224] N82-18370

TRW, INC., REDONDO BEACH, CALIF.

Low thrust monopropellant engine [NASA-CASE-GSC-12194-2] N82-18314

Emissions assessment of conventional stationary combustion systems: Summary report [PB82-109414] N82-18753

U

UNITED STATES CONFERENCE OF MAYORS, WASHINGTON, D.C.

Urban data for comparative analyses of cities [PB82-125675] N82-19107

UNITED TECHNOLOGIES CORP., EAST HARTFORD, CONN.

SH-606 test program N82-18141

UNITED TECHNOLOGIES CORP., SOUTH WINDSOR, CONN.

Low NO subx heavy fuel combustor concept program. Phase 1A: Coal gas addendum [NASA-CR-165577] N82-18690

UNITED TECHNOLOGIES RESEARCH CENTER, EAST HARTFORD, CONN.

An experimental investigation of gapwise periodicity and unsteady aerodynamic response in an oscillating cascade. Volume 2: Data report. Part 1: Text and mode 1 data [NASA-CR-165457-VOL-2-PT-1] N82-18180

An experimental investigation of gapwise periodicity and unsteady aerodynamic response in an oscillating cascade. Volume 2: Data report. Part 2: Mode 2 data [NASA-CR-165457-VOL-2-PT-2] N82-18181

Influence of contact conditions and the circuit on short negative differential mobility semiconducting devices
[AD-A108140] N82-19067

UNIVERSAL ENERGY SYSTEMS, INC., DAYTON, OHIO.
A digital algorithm for composite laminate analysis, FORTRAN
[AD-A108201] N82-18330

UNIVERSITY COLL., LONDON (ENGLAND).
Renewal tables: Tables of functions arising in renewal theory
[AD-A108264] N82-18975

V

VARIAN ASSOCIATES, PALO ALTO, CALIF.
Submicron FETs using molecular beam epitaxy
[AD-A108558] N82-19066

VEREINIGTE ELEKTRIZITAETSWERKE WESTFALEN A.G., DORTMUND (WEST GERMANY).
Construction and operation of a one ton per hour pilot plant for the VEW coal conversion process
[BMFT-FB-T-81-177] N82-18712

VEREINIGTE FLUGTECHNISCHE WERKE-FOKKER G.M.B.H., BREMEN (WEST GERMANY).
Further development of the test concept of the ALPHA JET engine LARZAC 04 N82-18223
Replacing milled drawn aluminum pieces by precision forged ones
[V-2158] N82-18381

VERMONT UNIV., BURLINGTON.
The electrical properties of Na3Cu4S4, mixed-valence one-dimensional metal
[AD-A108517] N82-19069

VIRGINIA POLYTECHNIC INST. AND STATE UNIV., BLACKSBURG.
The effects of slight non-linearities on modal testing of helicopter-like structures N82-18130
Thermal expansion of graphite-epoxy between 116 K and 366 K N82-18280

VIRGINIA UNIV., CHARLOTTESVILLE.
Superconducting electronics
[AD-A108402] N82-18520

W

WALLA WALLA COLLEGE, COLLEGE PLACE, WASHINGTON.
Study of high speed complex number algorithms
[NASA-CR-168743] N82-18914

WASHINGTON UNIV., SEATTLE.
Weak-interaction experiments at low energies: Results from atomic and nuclear physics
[DE82-001724] N82-19021
Quark-gluon plasma and ultra-relativistic nucleus-nucleus collisions
[DE81-030321] N82-19023

WEST VIRGINIA UNIV., MORGANTOWN.
An economic analysis of coal supply in the Ohio River Basin Energy Study Region
[PB82-113341] N82-18414
Economic losses in the Columbus SMSA due to long-range transport of airborne residuals in the Ohio River Basin Energy Study Region
[PB82-110735] N82-18438
Estimating regional losses to agricultural producers from airborne residuals in the Ohio River Basin Energy Study Region, 1976-2000
[PB82-113679] N82-18439
An economic analysis of the electric utility sector in the Ohio River Basin region
[PB82-103268] N82-18736
West Virginia baseline
[PB82-103672] N82-18738
Energy consumption in the Ohio River Basin Energy Study region, 1974, by end user and fuel type
[PB82-104811] N82-18739

WESTINGHOUSE ELECTRIC CORP., PITTSBURGH, PA.
Evaluation of present thermal barrier coatings for potential service in electric utility gas turbines
[NASA-CR-165545] N82-18368
High voltage power transistor development
[NASA-CR-165547] N82-18506
Testing and analysis of a wet-dry crossflow cooling tower. Volume 1: Test program and results
[PB82-103771] N82-18752

WESTINGHOUSE RESEARCH AND DEVELOPMENT CENTER, PITTSBURGH, PA.
High-temperature, solid-oxide-electrolyte fuel-cell power-generating system
[DE82-002095] N82-18706

WESTLAND HELICOPTERS LTD., YEOVIL (ENGLAND).
A study of the techniques of dynamic analysis of helicopter type structures N82-18129
Army Lynx: Product development matched to military combat development N82-18143
Preliminary thoughts on helicopter cabin noise prediction methods N82-18148
The role of simulation in the design process N82-18154

WISCONSIN UNIV. - MADISON.
Properties of multiphase polyurethane systems
[AD-A108519] N82-18397
The computation of Laplacian smoothing splines with examples
[AD-A108746] N82-18976

WOODS HOLE OCEANOGRAPHIC INSTITUTION, MASS.
Georges Bank: An annotated bibliography of atlases, inventories and map series
[PB82-107665] N82-18853

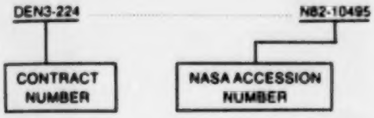
WORLD METEOROLOGICAL ORGANIZATION, GENEVA (SWITZERLAND).
Measurement of river sediments
[WMO-561] N82-18670
Flash flood forecasting
[WMO-577] N82-18671
Manual on marine meteorological services. (Annex 6 to the WMO Technical Regulations)
[WMO-558] N82-18839

WYOMING UNIV., LARAMIE.
Micromechanical predictions of crack propagation and fracture energy in a single fiber boron/aluminum model composite
[NASA-CR-168550] N82-18326

CONTRACT NUMBER INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 9

Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number the NASA accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order. The NASA accession number denotes the number by which the citation is identified.

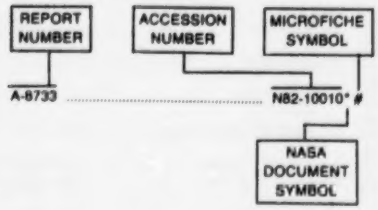
REPORT / ACCESSION NUMBER INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 9

Typical Report / Accession Number Index Listing



Listings in this index are arranged alphanumerically by report number. The NASA accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta
ILLINOIS
The John Crerar Library, Chicago

MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge
MISSOURI
Linda Hall Library, Kansas City
NEW YORK
Columbia University, New York
OKLAHOMA
University of Oklahoma, Bizzell Library
PENNSYLVANIA
Carnegie Library of Pittsburgh
WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an * following the accession number) are also received by the following public and free libraries:

CALIFORNIA
Los Angeles Public Library
San Diego Public Library
COLORADO
Denver Public Library
CONNECTICUT
Hartford Public Library
MARYLAND
Enoch Pratt Free Library, Baltimore
MASSACHUSETTS
Boston Public Library
MICHIGAN
Detroit Public Library
MINNESOTA
Minneapolis Public Library and Information Center
NEW JERSEY
Trenton Public Library

NEW YORK
Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library
OHIO
Akron Public Library
Cincinnati and Hamilton County Public Library
Cleveland Public Library
Dayton Public Library
Toledo and Lucas County Public Library
TEXAS
Dallas Public Library
Fort Worth Public Library
WASHINGTON
Seattle Public Library
WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

NAS 1.9/4:

WHAT YOU CAN DO FOR *STAR*

All users of this abstract service are urged to forward reports to be considered for announcement in *STAR*. This will aid NASA in its efforts to provide the fullest possible coverage of all scientific and technical publications that might support aeronautics and space research and development. If you have prepared relevant reports (other than those that you will transmit to NASA, DoD, or DOE through the usual contract- or grant-reporting channels), please send them for consideration to the NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Maryland 21240.

Reprints of journal articles, book chapters, and conference papers are also welcome. These will be considered for announcement in *STAR*'s companion journal, *International Aerospace Abstracts*.

You may specify a particular source to be included in a report announcement if you wish; otherwise the report will be placed on public sale at the National Technical Information Service. Copyrighted publications will be announced but not distributed or sold.

PURCHASE OF *STAR*

The semimonthly issues are available postpaid on subscription and in single copy from the Superintendent of Documents, United States Government Printing Office, Washington, D.C. 20402, United States of America.

Semimonthly issues

Annual subscription rates: $90.00 domestic, $112.00 foreign. Price per single copy: $4.75 domestic, $5.95 foreign.

Annual index issues

Pricing based upon pagination.

Domestic subscription rates

Apply to the United States, Canada, Mexico, and all Central and South American countries, except as noted below.

Foreign subscription rates

Apply to Argentina, Brazil, French Guiana, Guyana, Surinam, Belize, and all other countries throughout the world.

Payment should be by check, money order, or document coupons, and must accompany order. Remittances from foreign countries should be made by international money order or draft on an American bank, payable to the Superintendent of Documents, or by UNESCO book coupons.

PUBLISHED BY:

UNITED STATES GOVERNMENT
NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
SCIENTIFIC AND TECHNICAL INFORMATION BRANCH

Scientific and Technical Aerospace Reports, Volume 20, is prepared by the NASA Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by PRC Government Information Systems.

The Administrator of the National Aeronautics and Space Administration has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Agency. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through **February 28, 1985**.

US ISSN 0036-8741

INTRODUCTION

Scientific and Technical Aerospace Reports (STAR) is a major component of a comprehensive National Aeronautics and Space Administration information system covering aeronautics, space, and supporting disciplines. *STAR* is issued on the 8th and 23rd of each month and announces current publications of the following types:

- NASA, NASA contractor, and NASA grantee reports
- Reports issued by other U.S. Government agencies, domestic and foreign institutions, universities, and private firms
- Translations in report form
- NASA-owned patents and patent applications
- Dissertations and theses

Cumulative index volumes are published annually.

Journal, book, and conference literature, cover-to-cover journal translations, and certain foreign dissertations are announced in a companion journal, *International Aerospace Abstracts (IAA)*, available on subscription from the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

SUBJECT SCOPE

Subject scope of *STAR*, and *IAA* includes all aspects of aeronautics and space research and development, supporting basic and applied research, and applications. Aerospace aspects of earth resources, energy development, conservation, oceanography, environmental protection, urban transportation, and other topics of high national priority are also covered.

OTHER NASA PUBLICATIONS

Other NASA publications and information services are described in the publication, *The NASA Scientific and Technical Information System ... and How to Use It*, available without charge from the NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Maryland 21240.

HOW TO USE *STAR* SUBJECT CATEGORIES

STAR is categorized by 10 major subject divisions divided into 74 specific subject categories and one general category/division. The major subject divisions are listed in the Table of Contents, together with a note for each that defines its scope and provides any cross-references. For example:

AERONAUTICS

Includes aeronautics (general); aerodynamics; air transportation and safety; aircraft communications and navigation; aircraft design, testing and performance; aircraft instrumentation; aircraft propulsion and power; aircraft stability and control; and research and support facilities (air).

For related information see also *Astronautics*.

Each major division is further divided into as many as nine specific categories, which are identified by category numbers.

Abstracts in *STAR* are grouped by specific category, the categories appearing in sequential order. Category breaks in the abstract section are identified by the category number and title, and a scope note. Cross-references to other categories are provided as appropriate. For example:

02 AERODYNAMICS

Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.

For related information see also *34 Fluid Mechanics and Heat Transfer*.

CROSS-REFERENCES

Individual *STAR* abstracts are not ordinarily cross-referenced, except for certain conference reports or book translations that have had separate abstracts written for their component papers or chapters. Citations and abstracts of the components follow immediately after those of the parent document. When the subject content of a component differs sufficiently from the general content of the parent, a cross-reference citation also is printed at the end of the category to which it normally would have been assigned if it were independent.

DOCUMENTS ON MICROFICHE

Documents on microfiche(1) are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

AVAILABILITIES

One or more sources from which a document announced in *STAR* is available to the public is given in each citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code following the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Adminstration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its' Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this Introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free. (See discussion of patents and patent applications below.)

NASA PATENTS AND PATENT APPLICATIONS

Patents and patent applications owned by NASA are announced in *STAR* under appropriate subject categories and are referenced in the *STAR* indexes. In the Report/Accession Number Index, patents are indexed by the NASA Case Number (which appears in lieu of the report number in other indexes), the U.S. Patent Number, the U.S. Patent Application Serial Number, and the U.S. Patent Class. Patent applications for which patents have not yet been issued are indexed by the NASA Case Number and the U.S. Patent Application Serial Number.

NASA *patent application specifications* are sold in paper copy by the National Technical Information Service at price code A02 ($6.00 domestic; $12.00 foreign). Microfiche are sold at price code A01 ($4.00 domestic; $8.00 foreign). The US-Patent-Appl-SN- number should be used in ordering either paper copy or microfiche from NTIS. Printed copies of *patents* (which are not microfiched) are available for purchase at 50 cents per copy from:

Commissioner of Patents and Trademarks
U.S. Patent and Trademark Office
Washington, D.C. 20231

When ordering patents, the U.S. Patent Number should be used, and payment must be remitted in advance, preferably by money order or check payable to the Commissioner of Patents and Trademarks. Prepaid purchase coupons for ordering are also available from the Patent and Trademark Office. The patents and patent applications announced in *STAR* are owned by NASA and are available for royalty-free licensing. Requests for licensing terms and further information should be addressed to:

Assistant General Counsel for Patent Matters/Code GP-1
National Aeronautics and Space Administration
Washington, D.C. 20546

ELIGIBILITY AND REGISTRATION FOR NASA INFORMATION PRODUCTS AND SERVICES

A variety of services, in addition to the distribution of NASA scientific and technical reports and of *STAR* and its cumulative indexes, is available to organizations of the following types that have registered with NASA to receive specific services or products:

1. NASA offices, research centers, contractors, subcontractors, grantees, and consultants;
2. Other U.S. Government agencies and their contractors;
3. Libraries in the United States that have arrangements with NASA to maintain collections of NASA documents for public reference;
4. Other organizations in the United States having a need for NASA documents in work related to aeronautics and space research;
5. Organizations abroad that have established reciprocal document exchange arrangements with NASA.

Only the central service points or central points of document acquisition and control within qualified organizations are eligible to register for NASA products and services. Domestic organizations that may be eligible to receive various classes of NASA publications and services should address their requests for registration or for further information to:

NASA Scientific and Technical Information Facility
Attn.: Registration Activity
P.O. Box 8757
B.W.I. Airport, Maryland 21240

Organizations abroad should direct requests to the same address, but to the attention of: International Exchange Program.

AVAILABILITY OF *STAR* ABSTRACTS ON MICROFICHE

Microfiche of the abstract sections of this issue and other issues of *STAR* are available on annual subscription from NTIS, Attn: Subscriptions, 5285 Port Royal Road, Springfield, Virginia 22161. Annual subscription rates are $50.00 North America; $100.00 foreign. Abstract sections for previous years retroactive to 1964 are available at the current rates. Microfiche for individual *STAR* issue abstract sections are not available.

TABLE OF CONTENTS

AERONAUTICS

Includes aeronautics (general); aerodynamics; air transportation and safety; aircraft communications and navigation; aircraft design, testing and performance; aircraft instrumentation; aircraft propulsion and power; aircraft stability and control; and research and support facilities (air).

For related information see also *Astronautics*

01 AERONAUTICS (GENERAL) 1313

02 AERODYNAMICS 1316

Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.

For related information see also *34 Fluid Mechanics and Heat Transfer*

03 AIR TRANSPORTATION AND SAFETY 1321

Includes passenger and cargo air transport operations; and aircraft accidents.

For related information see also *16 Space Transportation* and *85 Urban Technology and Transportation.*

04 AIRCRAFT COMMUNICATIONS AND NAVIGATION 1322

Includes digital and voice communication with aircraft; air navigation systems (satellite and ground based); and air traffic control.

For related information see also *17 Spacecraft Communications, Command and Tracking* and *32 Communications.*

05 AIRCRAFT DESIGN, TESTING AND PERFORMANCE 1322

Includes aircraft simulation technology.

For related information see also *18 Spacecraft Design, Testing and Performance* and *39 Structural Mechanics.*

06 AIRCRAFT INSTRUMENTATION 1324

Includes cockpit and cabin display devices; and flight instruments.

For related information see also *19 Spacecraft Instrumentation* and *35 Instrumentation and Photography.*

07 AIRCRAFT PROPULSION AND POWER 1325

Includes prime propulsion systems and systems components, e.g., gas turbine engines and compressors; and on-board auxiliary power plants for aircraft.

For related information see also *20 Spacecraft Propulsion and Power, 28 Propellants and Fuels,* and *44 Energy Production and Conversion.*

08 AIRCRAFT STABILITY AND CONTROL 1326

Includes aircraft handling qualities; piloting; flight controls; and autopilots.

09 RESEARCH AND SUPPORT FACILITIES (AIR) 1327

Includes airports, hangars and runways; aircraft repair and overhaul facilities; wind tunnels; shock tube facilities; and engine test blocks.

For related information see also *14 Ground Support Systems and Facilities (Space).*

ASTRONAUTICS

Includes astronautics (general); astrodynamics; ground support systems and facilities (space); launch vehicles and space vehicles; space transportation; spacecraft communications, command and tracking; spacecraft design, testing and performance; spacecraft instrumentation; and spacecraft propulsion and power.

For related information see also *Aeronautics*

12 ASTRONAUTICS (GENERAL) 1328

For extraterrestrial exploration see *91 Lunar and Planetary Exploration.*

13 ASTRODYNAMICS 1329

Includes powered and free-flight trajectories; and orbit and launching dynamics.

14 GROUND SUPPORT SYSTEMS AND FACILITIES (SPACE) 1330

Includes launch complexes, research and production facilities; ground support equipment, e.g., mobile transporters; and simulators.

For related information see also *09 Research and Support Facilities (Air).*

15 LAUNCH VEHICLES AND SPACE VEHICLES 1330

Includes boosters; manned orbital laboratories; reusable vehicles; and space stations.

16 SPACE TRANSPORTATION 1336

Includes passenger and cargo space transportation, e.g., shuttle operations; and rescue techniques.

For related information see also *03 Air Transportation and Safety* and *85 Urban Technology and Transportation.*

17 SPACECRAFT COMMUNICATION, COMMAND AND TRACKING 1337

Includes telemetry; space communications networks; astronavigation; and radio blackout.

For related information see also *04 Aircraft Communications and Navigation* and *32 Communications.*

18 SPACECRAFT DESIGN, TESTING AND PERFORMANCE 1337

Includes spacecraft thermal and environmental control; and attitude control.

For life support systems see *54 Man/System Technology and Life Support.* For related information see also *05 Aircraft Design, Testing and Performance* and *39 Structural Mechanics.*

19 SPACECRAFT INSTRUMENTATION N.A.

For related information see also *06 Aircraft Instrumentation* and *35 Instrumentation and Photography.*

20 SPACECRAFT PROPULSION AND POWER 1338

Includes main propulsion systems and components, e.g., rocket engines; and spacecraft auxiliary power sources.

For related information see also *07 Aircraft Propulsion and Power, 28 Propellants and Fuels,* and *44 Energy Production and Conversion.*

CHEMISTRY AND MATERIALS

Includes chemistry and materials (general); composite materials; inorganic and physical chemistry; metallic materials; nonmetallic materials; and propellants and fuels.

23 CHEMISTRY AND MATERIALS (GENERAL) 1339
Includes biochemistry and organic chemistry.

24 COMPOSITE MATERIALS 1339
Includes laminates.

25 INORGANIC AND PHYSICAL CHEMISTRY 1341
Includes chemical analysis, e.g., chromatography; combustion theory; electrochemistry; and photochemistry.

For related information see also *77 Thermodynamics and Statistical Physics.*

26 METALLIC MATERIALS 1345
Includes physical, chemical, and mechanical properties of metals, e.g., corrosion; and metallurgy.

27 NONMETALLIC MATERIALS 1347
Includes physical, chemical, and mechanical properties of plastics, elastomers, lubricants, polymers, textiles, adhesives, and ceramic materials.

28 PROPELLANTS AND FUELS 1349
Includes rocket propellants, igniters, and oxidizers; storage and handling; and aircraft fuels.

For related information see also *07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power,* and *44 Energy Production and Conversion.*

ENGINEERING

Includes engineering (general); communications; electronics and electrical engineering; fluid mechanics and heat transfer; instrumentation and photography; lasers and masers; mechanical engineering; quality assurance and reliability; and structural mechanics.

For related information see also *Physics.*

31 ENGINEERING (GENERAL) 1350
Includes vacuum technology; control engineering; display engineering; and cryogenics.

32 COMMUNICATIONS 1351
Includes land and global communications; communications theory; and optical communications.

For related information see also *04 Aircraft Communications and Navigation* and *17 Spacecraft Communications, Command and Tracking.*

33 ELECTRONICS AND ELECTRICAL ENGINEERING 1359
Includes test equipment and maintainability; components, e.g., tunnel diodes and transistors; microminiaturization; and integrated circuity.

For related information see also *60 Computer Operations and Hardware* and *76 Solid-State Physics.*

34 FLUID MECHANICS AND HEAT TRANSFER 1363
Includes boundary layers; hydrodynamics; fluidics; mass transfer; and ablation cooling.

For related information see also *02 Aerodynamics* and *77 Thermodynamics and Statistical Physics.*

35 INSTRUMENTATION AND PHOTOGRAPHY 1368
Includes remote sensors; measuring instruments and gages; detectors; cameras and photographic supplies; and holography.

For aerial photography see *43 Earth Resources.* For related information see also *06 Aircraft Instrumentation* and *19 Spacecraft Instrumentation.*

36 LASERS AND MASERS 1369
Includes parametric amplifiers.

37 MECHANICAL ENGINEERING 1371
Includes auxiliary systems (non-power); machine elements and processes; and mechanical equipment.

38 QUALITY ASSURANCE AND RELIABILITY 1372
Includes product sampling procedures and techniques; and quality control.

39 STRUCTURAL MECHANICS 1373
Includes structural element design and weight analysis; fatigue; and thermal stress.

For applications see *05 Aircraft Design, Testing and Performance* and *18 Spacecraft Design, Testing and Performance.*

GEOSCIENCES

Includes geosciences (general); earth resources; energy production and conversion; environment pollution; geophysics; meteorology and climatology; and oceanography.

For related information see also *Space Sciences.*

42 GEOSCIENCES (GENERAL) N.A.

43 EARTH RESOURCES 1379
Includes remote sensing of earth resources by aircraft and spacecraft; photogrammetry; and aerial photography.

For instrumentation see *35 Instrumentation and Photography.*

44 ENERGY PRODUCTION AND CONVERSION 1388
Includes specific energy conversion systems, e.g., fuel cells and batteries; global sources of energy; fossil fuels; geophysical conversion; hydroelectric power; and wind power.

For related information see also *07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power, 28 Propellants and Fuels,* and *85 Urban Technology and Transportation.*

45 ENVIRONMENT POLLUTION 1393
Includes air, noise, thermal and water pollution; environment monitoring; and contamination control.

46 GEOPHYSICS 1395
Includes aeronomy; upper and lower atmosphere studies; ionospheric and magnetospheric physics; and geomagnetism.

For space radiation see *93 Space Radiation.*

47 METEOROLOGY AND CLIMATOLOGY 1400
Includes weather forecasting and modification.

48 OCEANOGRAPHY 1407
Includes biological, dynamic and physical oceanography; and marine resources.

LIFE SCIENCES

Includes sciences (general); aerospace medicine; behavioral sciences; man/system technology and life support; and planetary biology.

51 LIFE SCIENCES (GENERAL) 1408
Includes genetics.

52 AEROSPACE MEDICINE 1409
Includes physiological factors; biological effects of radiation; and weightlessness.

53 BEHAVIORAL SCIENCES 1412
Includes psychological factors; individual and group behavior; crew training and evaluation; and psychiatric research.

54 MAN/SYSTEM TECHNOLOGY AND LIFE SUPPORT 1412
Includes human engineering; biotechnology; and space suits and protective clothing.

55 PLANETARY BIOLOGY N.A.
Includes exobiology; and extraterrestrial life.

MATHEMATICAL AND COMPUTER SCIENCES

Includes mathematical and computer sciences (general); computer operations and hardware; computer programming and software; computer systems; cybernetics; numerical analysis; statistics and probability; systems analysis; and theoretical mathematics.

59 MATHEMATICAL AND COMPUTER SCIENCES (GENERAL) N.A.

60 COMPUTER OPERATIONS AND HARDWARE 1414
Includes computer graphics and data processing.
For components see *33 Electronics and Electrical Engineering.*

61 COMPUTER PROGRAMMING AND SOFTWARE 1417
Includes computer programs, routines, and algorithms.

62 COMPUTER SYSTEMS 1420
Includes computer networks.

63 CYBERNETICS 1421
Includes feedback and control theory.
For related information see also *54 Man/System Technology and Life Support.*

64 NUMERICAL ANALYSIS 1421
Includes iteration, difference equations, and numerical approximation.

65 STATISTICS AND PROBABILITY 1425
Includes data sampling and smoothing; Monte Carlo method; and stochastic processes.

66 SYSTEMS ANALYSIS 1426
Includes mathematical modeling; network analysis; and operations research.

67 THEORETICAL MATHEMATICS 1427
Includes topology and number theory.

PHYSICS

Includes physics (general); acoustics; atomic and molecular physics; nuclear and high-energy physics; optics; plasma physics; solid-state physics; and thermodynamics and statistical physics.
For related information see also *Engineering.*

70 PHYSICS (GENERAL) 1427
For geophysics see *46 Geophysics.* For astrophysics see *90 Astrophysics.* For solar physics see *92 Solar Physics.*

71 ACOUSTICS 1427
Includes sound generation, transmission, and attenuation.
For noise pollution see *45 Environment Pollution.*

72 ATOMIC AND MOLECULAR PHYSICS 1430
Includes atomic structure and molecular spectra.

73 NUCLEAR AND HIGH-ENERGY PHYSICS 1431
Includes elementary and nuclear particles; and reactor theory.
For space radiation see *93 Space Radiation.*

74 OPTICS 1432
Includes light phenomena.

75 PLASMA PHYSICS 1434
Includes magnetohydrodynamics and plasma fusion.
For ionospheric plasmas see *46 Geophysics.* For space plasmas see *90 Astrophysics.*

76 SOLID-STATE PHYSICS 1435
Includes superconductivity.
For related information see also *33 Electronics and Electrical Engineering* and *36 Lasers and Masers.*

77 THERMODYNAMICS AND STATISTICAL PHYSICS 1437
Includes quantum mechanics; and Bose and Fermi statistics.
For related information see also *25 Inorganic and Physical Chemistry* and *34 Fluid Mechanics and Heat Transfer.*

SOCIAL SCIENCES

Includes social sciences (general); administration and management; documentation and information science; economics and cost analysis; law and political science; and urban technology and transportation.

80 SOCIAL SCIENCES (GENERAL) N.A.
Includes educational matters.

81 ADMINISTRATION AND MANAGEMENT 1437
Includes management planning and research.

82 DOCUMENTATION AND INFORMATION SCIENCE **1438**

Includes information storage and retrieval technology; micrography; and library science.

For computer documentation see *61 Computer Programming and Software*.

83 ECONOMICS AND COST ANALYSIS **1439**

Includes cost effectiveness studies.

84 LAW AND POLITICAL SCIENCE **N.A.**

Includes space law; international law; international cooperation; and patent policy.

85 URBAN TECHNOLOGY AND TRANSPORTATION **1440**

Includes applications of space technology to urban problems; technology transfer; technology assessment; and surface and mass transportation.

For related information see *03 Air Transportation and Safety, 16 Space Transportation*, and *44 Energy Production and Conversion*.

SPACE SCIENCES

Includes space sciences (general); astronomy; astrophysics; lunar and planetary exploration; solar physics; and space radiation.

For related information see also *Geosciences*.

88 SPACE SCIENCES (GENERAL) **1441**

89 ASTRONOMY **1449**

Includes radio and gamma-ray astronomy; celestial mechanics; and astrometry.

90 ASTROPHYSICS **1450**

Includes cosmology; and interstellar and interplanetary gases and dust.

91 LUNAR AND PLANETARY EXPLORATION **1452**

Includes planetology; and manned and unmanned flights.

For spacecraft design see *18 Spacecraft Design, Testing and Performance*. For space stations see *15 Launch Vehicles and Space Vehicles*.

92 SOLAR PHYSICS **1453**

Includes solar activity, solar flares, solar radiation and sunspots.

93 SPACE RADIATION **1453**

Includes cosmic radiation; and inner and outer earth's radiation belts.

For biological effects of radiation see *52 Aerospace Medicine*. For theory see *73 Nuclear and High-Energy Physics*.

DEVELOPMENT AND EVALUATION OF AUTOMATIC LANDING CONTROL LAWS FOR LIGHT WING LOADING STOL AIRCRAFT

B Feinreich, O Degani, and G Gevaert Jul 1981 371 p refs

(Contract NAS2-9410)

(NASA-CR-166160) Avail NTIS HC A16/MF A01 CSCL 01C

Automatic flare and decrab control laws were developed for NASA's experimental Twin Otter This light wing loading STOL aircraft was equipped with direct lift control (DLC) wing spoilers to enhance flight path control Automatic landing control laws that made use of the spoilers were developed, evaluated in a simulation and the results compared with these obtained for configurations that did not use DLC The spoilers produced a significant improvement in performance A simulation that could be operated faster than real time in order to provide statistical landing data for a large number of landings over a wide spectrum of disturbances in a short time was constructed and used in the evaluation and refinement of control law configurations A longitudinal control law that had been previously developed and evaluated in flight was also simulated and its performance compared with that of the control laws developed Runway alignment control laws were also defined, evaluated, and refined to result in a final recommended configuration Good landing performance, compatible with Category 3 operation into STOL runways, was obtained Author

Scientific and Technical Aerospace Reports

A Semimonthly Publication of the National Aeronautics and Space Administration

01 AERONAUTICS (GENERAL)

N82-19131* National Aeronautics and Space Administration, Washington, D. C.
AERONAUTICAL ENGINEERING: A CONTINUING BIBLIOGRAPHY (SUPPLEMENT 143)
Jan. 1982 85 p
(NASA-SP-7037(143)) Avail: NTIS HC $5.00 CSCL 01A

This bibliography lists 254 reports, articles, and other documents introduced into the NASA scientific and technical information system in December 1981. A.R.H.

N82-19132*# National Aeronautics and Space Administration, Washington, D. C.
BIBLIOGRAPHY OF NASA PUBLISHED REPORTS ON GENERAL AVIATION, 1975 TO 1981
Jun. 1981 277 p
(NASA-TM-83307) Avail: NTIS HC A13/MF A01 CSCL 01B

This bibliography lists 478 documents which relate to all heavier-than-air fixed wing aircraft exclusive of military types and those used for commercial air transport. An exception is the inclusion of commuter transport aircraft types within the general aviation category. NASA publications included in this bibliography are: conference publications (CP), reference publications (RP), technical memorandums (TM, TMX), technical notes (TN), technical papers (TP), and contractor reports (CR). In addition, papers and articles on NASA general aviation programs published by technical societies (AIAA, SAE, etc.) are included, as well as those listed in NASA's Scientific and Technical Aerospace Reports (STAR) Journal. Author and subject indexes are also provided to facilitate use of the bibliography. T.M.

AN EXPERIMENTAL INVESTIGATION OF FLOW SURROUNDING AN AIRFOIL WITH A JET EXHAUSTING FROM THE LOWER SURFACE Final Report
A. Krothapalli and D. Leopold Jan. 1982 58 p refs
(Grant NsG-2111)
(NASA-CR-166131) Avail: NTIS HC A04/MF A01 CSCL 01A

The aerodynamics of an airfoil with a rectangular jet issuing from the lower surface at seventy percent of the chord, with and without a ground plane was studied. Measurements include surface pressure on the airfoil and the total pressure profiles in the near wake. These measurements were made at jet to free stream velocity ratios ranging from 0.5 to 5.0. The measurements indicated a significant positive and negative pressure regions on the lower surface of the airfoil ahead and after the nozzle exit respectively. The extent and intensity of these regions increase with increase in velocity ratio for the range covered here. The upper surface pressure distribution with velocity ratio show no significant variation. The presence of the ground plane, for height h, greater than one chord seem to have little influence on the overall pressure distribution of the airfoil. The airfoil wake centerline moves up with velocity ratio as compared to that of the free airfoil (without the jet). B.W.

A COMPUTER PROGRAM FOR WING SUBSONIC AERODYNAMIC PERFORMANCE ESTIMATES INCLUDING ATTAINABLE THRUST AND VORTEX LIFT EFFECTS Interim Report
Harry W. Carlson and Kenneth B. Walkley Washington NASA Mar. 1982 62 p refs
(Contract NAS1-16000)
(NASA-CR-3515) Avail: NTIS HC A04/MF A01 CSCL 01B

Numerical methods incorporated into a computer program to provide estimates of the subsonic aerodynamic performance of twisted and cambered wings of arbitrary planform with attainable thrust and vortex lift considerations are described. The computational system is based on a linearized theory lifting surface solution which provides a spanwise distribution of theoretical leading edge thrust in addition to the surface distribution of perturbation velocities. The approach used relies on a solution by iteration. The method also features a superposition of independent solutions for a cambered and twisted wing and a flat wing of the same planform to provide, at little additional expense, results for a large number of angles of attack or lift coefficients. A previously developed method is employed to assess the portion of the theoretical thrust actually attainable and the portion that is felt as a vortex normal force. B.W.

LA RECHERCHE AEROSPATIALE, BIMONTHLY BULLETIN NUMBER 1981-3, MAY - JUNE 1981

Claude Sevestre, ed. Paris ESA Oct. 1981 80 p refs Transl. into ENGLISH of "La Rech. Aerospatiale, Bull. Bimestriel (Paris), No. 1981-3, May-Jun. 1981" p 143-221 Sponsored by ESA

(ESA-TT-714) Avail: NTIS HC A05/MF A01; original report in FRENCH available at ONERA, PARIS FF 45

Advances in the aerospace industry are reviewed. Computation of vortex sheet rollup and transonic viscous flow are discussed. Topics also cover aircraft optimal control for gunnery, an algorithm for structural vibration mode calculation, aircraft antistatic protection testing, the modification of a transonic wind tunnel, and testing ventilated nozzle models. For individual titles, see N82-19153 through N82-19159.

ROLLING UP OF VORTEX SHEETS FROM THE EDGES OF LIFTING SURFACES c02

R. Legendre *In its* La Rech. Aerospatiale Bimonthly Bull. No. 1981-3, May-Jun. 1981 (ESA-TT-714) Oct. 1981 p 3-7 refs Transl. into ENGLISH of "La Rech. Aerospatiale, Bull. Bimestriel (Paris), No. 1981-4, May-Jun. 1981" p 143-147 (For primary document see N82-19152 10-01)

Avail: NTIS HC A05/MF A01; original report in FRENCH available at ONERA, Paris FF 45

Calculations of vortex sheets in three-dimensional unsteady flows of incompressible liquids are considered. The correct adaptation of calculations to the interpretation of experimental facts, relating to the transient periods preceding the establishment of permanent flows, is discussed. Several methods already available for calculating incompressible fluid flow around a lifting surface, causing the release of vortices, are criticised. An extension to subsonic flows is shown possible when Prandtl-Glavert linearization is justified by data pertinent to the problem. Author (ESA)

MULTIVARIABLE AIRCRAFT CONTROL BY MANEUVER COMMANDS: AN APPLICATION TO AIR TO SURFACE GUNNERY c08

Binh DangVu *In its* La Rech. Aerospatiale, Bimonthly Bull. No. 1981-3, May-Jun. 1981 (ESA-TT-714) Oct. 1981 p 9-19 refs Transl. into ENGLISH of "La Rech. Aerospatiale, Bull. Bimestriel (Paris), No. 1981-3, May-Jun. 1981" p 149-159 (For primary document see N82-19152 10-01)

Avail: NTIS HC A05/MF A01; original report in FRENCH available at ONERA, Paris FF 45

Aircraft control where pilot commands are variables directly related to aircraft motion in opposition to deflection angles of control surfaces is described. Linear optimal control theory is applied so as to improve flight qualities and reduce the work load of the pilot. A control system for sideslip, rate of roll, and rate of pitch was tested in numerical simulation and its efficiency for aiming in air-to-surface gunnery was assessed. Results show that control of the rate of pitch is well adapted for cancelling longitudinal aiming devitions, but that control of yaw rate is preferable to roll for cancelling lateral deviations. Another system obtained by integrating the flight control and fire control systems is also suggested. Author (ESA)

STRONG MATCHING METHOD FOR COMPUTING TRANSONIC VISCOUS FLOWS INCLUDING WAKES AND SEPARATIONS: LIFTING AIRFOILS c02

J. C. LeBalleur *In its* La Rech. Aerospatiale, Bimonthly Bull. No. 1981-3, May-Jun. 1981 (ESA-TT-714) Oct. 1981 p 21-45 refs Transl. into ENGLISH of "La Rech. Aerospatiale, Bull. Bimestriel (Paris), No. 1981-3, May-Jun. 1981" p 161-185 (For primary document see N82-19152 10-01)

Avail: NTIS HC A05/MF A01; original report in FRENCH available at ONERA, Paris FF 45

A general method is presented for computing lifting two-dimensional steady viscous flows with wakes and possibly separations inside viscous layers. The method uses a transonic potential calculation, strongly interacting with a defect integral method giving the viscous correction to apply inside boundary layers, laminar or turbulent, or inside dissymmetrical wakes. The mathematical model for matching, the viscous model for averaged mean velocities with reverse flow and for turbulent closure in nonequilibrium layers, and the different numerical solution techniques are described. The numerical coupling is reached through in iterative relaxation technique, either direct or semi-inverse according to the local shape parameters of the boundary layer or of the dissymmetrical wake. The wake geometry is calculated. The viscous mean flow is thoroughly determined and visualized. Examples of application to subsonic or supercritical airfoils, and to separated trailing-edges, are given. Author (ESA)

ELECTRICAL GROUND TESTING OF AIRCRAFT ANTISTATIC PROTECTION c03

A. Bruere *In its* La Rech. Aerospatiale, Bimonthly Bull. No. 1981-3, May-Jun. 1981 (ESA-TT-714) Oct. 1981 p 47-56 refs Transl. into ENGLISH of "La Rech. Aerospatiale, Bull. Bimestriel (Paris), No. 1981-3, May-Jun. 1981" p 187-196 (For primary document see N82-19152 10-01)

Avail: NTIS HC A05/MF A01; original report in FRENCH available at ONERA, Paris FF 45

Methods of ensuring aircraft protection against electrostatic spurious phenomena are reviewed and a device for ground testing of this protection is described. The equipment provides for checking the surface resistance of antistatic treatments as well as the quality of the electrical connections between the various components of the external structure and the aircraft potential reference point. Problems in electrostatic quality control for aircraft when testing in the presence of a finishing coat of paint are emphasized. The prototype device is depicted while operating and performance principles are explained. Author (ESA)

A SUBSPACE ITERATION ALGORITHM FOR SPINNING STRUCTURE VIBRATION MODE COMPUTATION c39

D. Osmont and L. Simon *In its* La Rech. Aerospatiale, Bimonthly Bull. No. 1981-3, May-Jun. 1981 (ESA-TT-714) Oct. 1981 p 57-62 refs Transl. into ENGLISH of "La Rech. Aerospatiale, Bull. Bimestriel (Paris), No. 1981-3, May-Jun. 1981" p 197-202 (For primary document see N82-19152 10-01)

Avail: NTIS HC A05/MF A01; original report in FRENCH available at ONERA, Paris FF 45

A subspace inverse iteration algorithm is presented. Calculations for approximations of vibration modes for a discretized rotating structure, using finite elements, are explained. The equation is constructed with eigenvalues and eigenvectors from which it is easy to deduce the vibration modes. algorithm is discussed. The matrices of mass gyroscopic coupling and rigidity for mechanical systems discretized using finite elements are of large dimension and have a band structure. The algorithm, which simultaneously calculates several eigenvectors, is well adapted to large systems. It can also be adapted to damped structures for which a symmetrical, structural, damped matrix is superposed on the gyroscopic coupling matrix. Author (ESA)

TESTING VENTILATED NOZZLE MODELS WITH SUPERSONIC PRIMARY FLOW **c02**

J. Paulon and J. Perucchini *In its* La Rech. Aerospatiale, Bimonthly Bull. No. 1981-3, May-Jun. 1981 (ESA-TT-714) Oct. 1981 p 75-79 refs Transl. into ENGLISH of "La Rech. Aerospatiale, Bull. Bimestriel (Paris), No. 1981-3, May-Jun. 1981" p 217-221 (For primary document see N82-19152 10-01)

Avail: NTIS HC A05/MF A01; original report in FRENCH available at ONERA, Paris FF 45

Ventilated nozzles, i.e., aircraft engine ejectors with, at the periphery of the engine flux, a low rate flow from a circuit different from that passing through the compressor, the combustion chamber and the turbine, are considered. Theoretical schemes that take precise and correct account of the evolution of the two fluxes in order to deduce nozzle efficiency and jet engine thrust are examined. Simplifying hypotheses are discussed and tests carried out in an aerothermodynamic laboratory to confirm them are described. Results define the domain of influence of downstream disturbances which can modify nozzle performance. Author (ESA)

NATIONAL AIRSPACE DATA INTERCHANGE NETWORK (NADIN) SUPPORT OF REMOTE MAINTENANCE MONITORING SYSTEM (RMMS) Final Report

Dec. 1981 111 p refs

(Contract DOT-FA79WA-4335)

(AD-A109125; NAC/FR-303J/01; FAA-RD-81-109) Avail: NTIS HC A06/MF A01 CSCL 05/2

National Airspace Data Interchange Network (NADIN) architectural enhancements necessary to support the Remote Maintenance Monitoring System (RMMS) and MMS programs are described. Several alternative approaches are formulated. These alternatives are compared and recommendations are made. It is found that: The NADIN backbone has sufficient capacity to handle initial RMMS traffic at adequate performance levels; An X.25 compatible interface for the NADIN and MPS connection is recommended; Additional frame routing capabilities at the NADIN concentrator and front end processors are required; and Future MPS communications will be best served by a fully distributed packet switched NADIN capable of supporting complete X.25 functions. THE EUROPEAN AIRBUS: A CHALLENGE TO THE AMERICAN COMMERCIAL AIRCRAFT INDUSTRY [DER EUROPAEISCHE AIRBUS EINE HERAUSFORDERUNG AN DIE AMERIKANISCHE VERKEHRSFLUG ZEUGINDUSTRIE]

Heribert Flosdorff 1981 56 p Partly in GERMAN and ENGLISH Presented at 7th A.W. Quick-B.H. Geothhert vorfesung, Aachen, 18 Feb. 1981

(MBB-UH-01-81-O) Avail: NTIS HC A04/MF A01

The challenge and competition of the European Airbus to the American aircraft industry is discussed. The history of the colaboration between western European countries in the development, planning, construction, and management of short and intermediate haul commercial jet airplanes is described. It is contended that sales to third world, oriental, and south east Asian countries, and the expansion to wide bodied airplanes established the airbus industry as an firm competitior on the world market. The wide bodied two engine aircraft shows considerable technical superiority and obvious aerodynamics improvements as compared to technologically equal wide bodied jets. The following comparisons with American similar aircrafts are made: performance reliability; flight operations data; aerodynamic standards; fuel consumption; noise absorption; weight/actual load operating span; production efficiency and strategy; A 310 advanced technology; cockpits; warning systems; and marketing potentials. Transl. by E.A.K.

NUMERICAL STUDY OF INCOMPRESSIBLE SLIGHTLY VISCOUS FLOW PAST BLUNT BODIES AND AIRFOILS Ph.D. Thesis

Angela Yit Lean Cheer 1981 94 p

Avail: Univ. Microfilms Order No. 8200050

A grid free numerical method is used to simulate incompressible flow at high Reynolds number. The numerical method simulates the flow inside the boundary layer by vortex sheets and the flow outside this layer by vortex blobs. The algorithm produces a smooth transition between the sheets and the blobs. The accuracy of this hybrid numerical method is tested in several numerical experiments. In the first experiment, the algorithm is used to simulate slightly viscous flow past a circular cylinder. In the second experiment, the algorithm is used to simulate flow past a Joukowski airfoil at various angles of attack. In the latter case, there is no evidence of 'blow-up' of the flow at the trailing edge of the airfoil. In both experiments, the calculated flow and its functionals (such as lift and drag coefficients) are in good agreement with both theoretical results and wind tunnel experiments. Dissert. Abstr.

SPANWISE LOADING DISTRIBUTION AND WAKE VELOCITY SURVEYS OF A SEMI-SPAN WING

Fort F. Felker, III, Raymond A. Piziali (Army Aviation Research and Development Command, Moffett Field, Calif.), and Jay K Gall (Informatics Inc., Moffett Field, Calif.) Feb. 1982 157 p refs Prepared in cooperation with Army Aviation Research and Development Command

(NASA-TM-84213; A-8819; USAAVRADCOM-TR-81-A-1) Avail: NTIS HC A09/MF A01 CSCL 01A

The spanwise distribution of bound circulation on a semi-span wing and the flow velocities in its wake were measured in a wind tunnel. Particular attention was given to documenting the flow velocities in and around the development tip vortex. A two-component laser velocimeter was used to make the velocity measurements. The spanwise distribution of bound circulation, three components of the time-averaged velocities throughout the near wake their standard deviations, and the integrated forces and moments on a metric tip as measured by an internal strain gage balance are presented without discussion. EXPERIMENTAL STUDY OF DELTA WING LEADING-EDGE DEVICES FOR DRAG REDUCTION AT HIGH LIFT
Thomas D. Johnson, Jr. and Dhanvada M. Rao Feb. 1982 139 p refs
(Contract NGR-47-003-052)
(NASA-CR-165846) Avail: NTIS HC A07/MF A01 CSCL 01A

The drag reduction devices selected for evaluation were the fence, slot, pylon-type vortex generator, and sharp leading-edge extension. These devices were tested on a 60 degree flatplate delta (with blunt leading edges) in the Langley Research Center 7- by 10-foot high-speed tunnel at low speed and to angles of attack of 28 degrees. Balance and static pressure measurements were taken. The results indicate that all the devices had significant drag reduction capability and improved longitudinal stability while a slight loss of lift and increased cruise drag occurred. R.J.F.

A VORTEX-FILAMENT AND CORE MODEL FOR WINGS WITH EDGE VORTEX SEPARATION
Jenn-Louh Pao and C. Edward Lan Feb. 1982 130 p refs
(Contract NCC1-18)
(NASA-CR-165847) Avail: NTIS HC A07/MF A01 CSCL 01A

A vortex filament-vortex core method for predicting aerodynamic characteristics of slender wings with edge vortex separation was developed. Semi-empirical but simple methods were used to determine the initial positions of the free sheet and vortex core. Comparison with available data indicates that: (1) the present method is generally accurate in predicting the lift and induced drag coefficients but the predicted pitching moment is too positive; (2) the spanwise lifting pressure distributions estimated by the one vortex core solution of the present method are significantly better than the results of Mehrotra's method relative to the pressure peak values for the flat delta; (3) the two vortex core system applied to the double delta and strake wings produce overall aerodynamic characteristics which have good agreement with data except for the pitching moment; and (4) the computer time for the present method is about two thirds of that of Mehrotra's method. A body-fitted grid embedment technique applicable to inviscid transonic airfoil flow field analysis was developed and verified through a series of tests. Test cases used to verify the technique show that the accuracy of the solution was increased by grid embedding. This enhancement of the solution is especially true when small supercritical zones occur which cannot be adequately described using the main grid only. Results obtained with the SKANFP full potential program are considered with regard to the massive separated flow and high lift and the undesirable unrealistic 'bump' in the vicinity of the separation point due to a mismatch between the unseparated and separated pressure distributions. Techniques used to eliminate this feature are discussed. A.R.H.

APPLICATION OF AN AIRFOIL STALL FLUTTER COMPUTER PREDICTION PROGRAM TO A THREE-DIMENSIONAL WING: PREDICTION VERSUS EXPERIMENT M.S. Thesis
Anthony J. Muffoletto Mar. 1982 136 p refs
(Grant NsG-3304)
(NASA-CR-168586) Avail: NTIS HC A07/MF A01 CSCL 01A

An aerodynamic computer code, capable of predicting unsteady and C sub m values for an airfoil undergoing dynamic stall, is used to predict the amplitudes and frequencies of a wing undergoing torsional stall flutter. The code, developed at United Technologies Research Corporation (UTRC), is an empirical prediction method designed to yield unsteady values of normal force and moment, given the airfoil's static coefficient characteristics and the unsteady aerodynamic values, alpha, A and B. In this experiment, conducted in the PSU 4' x 5' subsonic wind tunnel, the wing's elastic axis, torsional spring constant and initial angle of attack are varied, and the oscillation amplitudes and frequencies of the wing, while undergoing torsional stall flutter, are recorded. These experimental values show only fair comparisons with the predicted responses. Predictions tend to be good at low velocities and rather poor at higher velocities. Author

SOME OBSERVATIONS OF SURFACE PRESSURES AND THE NEAR WAKE OF A BLUNT TRAILING EDGE AIRFOIL

R. V. Digumarthi, S. P. Koutsoyannis, and K. Karamcheti Jun. 1981 189 p refs
(Grants NsG-2007; NsG-2233)
(NASA-CR-168563; SU-JIAA-TR-39) Avail: NTIS HC A09/MF A01 CSCL 01A

Experiments with a truncated and untruncated airfoils of profiles NACA 640A10, were carried out in subsonic wind tunnels in a velocity range of 19m/s to 54m/s corresponding to Reynolds numbers of 200,000 to 468,000 based on the chord. Airfoil spanned the test section to achieve two dimensionality of the model. Velocity measurements, pressure measurements, and vortex shedding in the wake were measured using a hotwire and pressure transducers. The measured chordwise static pressure distribution on the smooth trailing edge airfoil along the midspan plane, agreed with the theoretical results calculated on the basis of the potential flow for that airfoil. Boundary layer profiles measured in the midspan plane, behind the maximum thickness of the airfoil show no separation of the flow. Spanwise distribution of the measured static pressure on the upper surface of the airfoil shows uniformity for both configurations with and without the boundary layer trip. This uniformity of pressure distribution and separation indicates that the flow on the airfoil was uniform and two dimensional in character. T.M.

RAXJET: A COMPUTER PROGRAM FOR PREDICTING TRANSONIC, AXISYMMETRIC FLOW OVER NOZZLE AFTERBODIES WITH SUPERSONIC JET EXHAUSTS

Richard G. Wilmoth Feb. 1982 76 p refs
(NASA-TM-83235; L-14789) Avail: NTIS HC A05/MF A01 CSCL 01A

A viscous-inviscid interaction method to calculate the subsonic and transonic flow over nozzle afterbodies with supersonic jet exhausts was developed. The method iteratively combines a relaxation solution of the full potential equation for the inviscid external flow, a shock capturing-shock fitting inviscid jet solution, an integral boundary layer solution, a control volume method for treating separated flows, and an overlaid mixing layer solution. A computer program called RAXJET which incorporates the method, illustrates the predictive capabilities of the method by comparison with experimental data is described, a user's guide to the computer program is provided. The method accurately predicts afterbody pressures, drag, and flow field properties for attached and separated flows for which no shock induced separation occurs. E.A.K.

The increased emphasis of fuel conservation in the world and the rapid increase in the cost of jet fuel has stimulated a series of studies of both conventional and unconventional propulsion systems for commercial aircraft. The results of these studies indicate that a fuel saving of 15 to 30 percent may be realized by the use of an advanced high-speed turboprop (Prop-Fan) compared to aircraft equipped with high bypass turbofan engines of equivalent technology. The Prop-Fan propulsion system is being investigated as part of the NASA Aircraft Energy Efficient Program. This effort includes the wind tunnel testing of a series of 8 and 10-blade Prop-Fan models incorporate swept blades. Test results indicate efficiency levels near the goal of 80 percent at Mach 0.8 cruise and an altitude of 10.67 km (35,000 ft). Each successive swept model has shown improved efficiency relative to the straight blade model. The fourth model, with 45 deg swept blades reported herein, shows a net efficiency of 78.2 at the design point with a power loading of 301 kW/sq meter and a tip speed of 243.8 m/sec (800 ft/sec.). COMPUTATION OF TRANSONIC POTENTIAL FLOW ABOUT 3 DIMENSIONAL INLETS, DUCTS, AND BODIES

Theodore A. Reyhner Washington NASA Mar. 1982 94 p refs
(NASA-CR-3514; D6-49848) Avail: NTIS HC A05/MF A01 CSCL 01A

An analysis was developed and a computer code, P465 Version A, written for the prediction of transonic potential flow about three dimensional objects including inlet, duct, and body geometries. Finite differences and line relaxation are used to solve the complete potential flow equation. The coordinate system used for the calculations is independent of body geometry. Cylindrical coordinates are used for the computer code. The analysis is programmed in extended FORTRAN 4 for the CYBER 203 vector computer. The programming of the analysis is oriented toward taking advantage of the vector processing capabilities of this computer. Comparisons of computed results with experimental measurements are presented to verify the analysis. Descriptions of program input and output formats are also presented. B.W.

SUBSONIC PANEL METHOD FOR THE EFFICIENT ANALYSIS OF MULTIPLE GEOMETRY PERTURBATIONS

D. R. Bristow and J. D. Hawk Washington NASA Mar. 1982 101 p refs

(Contract NAS1-16156)
(NASA-CR-3528) Avail: NTIS HC A06/MF A01 CSCL 01A

An accurate and efficient method was developed for the aerodynamic analysis of a series of arbitrary small geometry perturbations to a given baseline configuration. The method is appropriate for wing-fuselage configurations in incompressible potential flow. Mathematical formulations are presented for three computer programs that are employed. The first program is a conventional surface panel method for calculating the baseline singularity distribution. The second program calculates a partial derivative matrix. Each element of the matrix is the rate of change of singularity strength at one point with respect to a surface coordinate of a different point. For each baseline configuration, the calculated quantities from the first two programs establish an input file for the third. The third program calculates the surface pressure distribution and forces and moments for a series of geometry perturbations. B.W.

EFFECTS OF INSTALLATION OF F101 DFE EXHAUST NOZZLES ON THE AFTERBODY-NOZZLE CHARACTERISTICS OF THE F-14 AIRPLANE
David E. Reubush and John R. Carlson Mar. 1982 133 p refs
(NASA-TM-83250; L-14895) Avail: NTIS HC A07/MF A01 CSCL 01A

A wind-tunnel investigation was conducted to determine the effects of F101 DFE (derivative fighter engine) nozzle axial positioning on the afterbody-nozzle longitudinal aerodynamic characteristics of the F-14 airplane. The model was tested in the Langley 16-Foot Transonic Tunnel at Mach numbers from 0.7 to 1.25 and angles of attack from about -2 to 6 degrees. Compressed air was used to simulate nozzle exhaust flow at jet total-pressure ratios from 1 (jet off) to about 8. The results of the investigation show that for subsonic Mach numbers the intermediate cruise nozzle position of the three positions tested resulted in the lowest drag. Author

The flow a subsonic jet from a slot shaped port was investigated. The following problems were examined: equations by mathematical models; subsonic free jets from a port opening; formulation of a boundary value problem for a subsonic free jet with maximum mass flow; and solving of boundary values for supersonic free jets with maximum mass flow. HIGH SPEED AERODYNAMIC CHARACTERISTICS OF THE GAFOPH AEROFOIL
B. D. Fairlie Sep. 1980 49 p refs
(AD-A108922; ARL/AERO-NOTE-398; AR-002-223) Avail: NTIS HC A03/MF A01 CSCL 20/4

Transonic wind tunnel tests are reported on a two dimensional model of the GAFOPH aerofoil. The tests covered Mach numbers in the range 0.5 to 0.85 and angles of incidence from -3 deg to above maximum life coefficient. Tests were conducted both with natural transition and with transition artificially fixed. Maximum lift coefficient was found to lie just below 0.8 for most of the Mach number range and was followed by a fairly gentle stall. Drag rise Mach number was found to lie between 0.75 and 0.76 for lift coefficients up to 0.4. A leading edge separation bubble was found on the upper surface of the aerofoil for angles of incidence greater than 2-1/2 deg. Author (GRA)

Unsteady pressure coefficients measured on an N.A.C.A. 0012 airfoil at geometric angles of attack of 0 and 10 degrees, Reynolds numbers of 700,000 and 1,000,000 and in the reduced frequency range of 0.5 to 6.4 (based upon the half chord) are presented. For simplicity the data are represented in terms of mean and unsteady pressure coefficients, which has both a magnitude and a phase. Primary conclusions are: (1) The difference pressures approach zero at the trailing edge. This corresponds to satisfying one statement of the Kutta condition. (2) Superposition of the unsteady processes in the steady flow seems accurate and valid up to reduced frequencies of 2. (3) For this airfoil with 16 deg trailing edge angle the effects of viscosity seem to be most prominent in the last 10 percent of the airfoil where the phase lags are much larger than those predicted by the linear theory. THE COMPRESSIBLE LAMINAR TWO-DIMENSIONAL WAKE WITH ARBRITRARY INITIAL ASYMMETRY Annual Report, 1 Oct. 1980 - 30 Sep. 1981
Anthony Demetriades Jul. 1981 86 p refs
(Grant AF-AFOSR-0267-80; AF Proj. 2307)
(AD-A109084; SWT-81-3; AFOSR-81-0841TR) Avail: NTIS HC A05/MF A01 CSCL 20/4

Closed-form analytic solutions are presented for the two dimensional laminar wake, which are applicable from the trailing edge to infinite downstream distances, and for any 'initial asymmetry' ratio of the two merging boundary layer thicknesses. An initially exponential velocity profile is assumed, and Gold's treatment is utilized of the evolution of the profile based on the Oseen approximation. The solutions show the effect of edge Mach number, Reynolds number, wall-to-stagnation temperature ratio and asymmetry factor. Beyond a certain distance from the trailing edge the solutions reduce to the well-known asymptotic behavior regardless of the magnitude of these parameters. In the 'non-equilibrium' region from the trailing edge to the equilibration distance, the supersonic/hypersonic cooled wake behaves rather abnormally. The effect of initial asymmetry is to deflect the wake center off the plane of the trailing edge, and to displace the wake center of the velocity relative to the temperature-density center without much affecting the velocity, temperature or density defect magnitudes or the wake thickness. Comparison with earlier work shows very good agreement with the Tollmien-Goldstein implicit solutions near the trailing edge for symmetric incompressible flows. Good agreement is also found with available experimental data. Author (GRA)

CHARACTERISTICS OF VON KARMAN-TREFFTZ PROFILES [ENIGE KARAKTERISTIEKE GROOTHEDEN VAN VON KARMAN-TREFFTZ PROFIELEN]

J. J. H. Blom Jun. 1981 40 p refs In DUTCH

(VTH-LR-323) Avail: NTIS HC A03/MF A01

For von Karman-Trefftz profiles, the characteristics which determine profile shape (profile nose dimensions, maximum thickness and position; tail slope and curvature) are stated as a function of transformation variables using the Timman method. The profile is obtained by iterative deformation of a von Karman profile with known transformation, corresponding as well as possible to the desired profile. The figures and relations which, enable a good choice of the required profile are given.

A METHOD OF CHARACTERISTIC SURFACES: THE APPROXIMATE SOLUTION OF THREE-DIMENSIONAL SUPERSONIC FLOW FIELDS, FROM THE NEAR FIELD UP TO THE SONIC BOOM REGION

T. P. M. Hendriks Aug. 1981 171 p refs

(VTH-LR-331) Avail: NTIS HC A08/MF A01

A method of characteristic surfaces used to describe supersonic flow past a three dimensional lifting or nonlifting body, uniformly valid up to first order, is developed. Uniformity is achieved by a straining of the spatial coordinates of the nonuniform solution derived from classical linearized theory. Development is based on a geometric study of the characteristic surfaces which envelop spatial disturbances in otherwise planar supersonic flow. Linearized theory gives a correct first order description of a complete three dimensional flow field provided that the intersection curves of the acoustical characteristic surfaces with the acoustical main characteristic planes are replaced by those of the corresponding first order surfaces and planes. A simplified procedure for supersonic flow fields, which are dominated by only one three dimensional disturbance field, is demonstrated using conical flow at the leeward side, and wave formation at the windward side of a supersonic delta wing.

AN INVESTIGATION INTO WING-CANARD INTERACTION FOR A MODEL WITH FORWARD SWEPT WINGS B.S. Thesis

S. B. Marshall and M. J. Knott Jun. 1981 88 p refs

(BU-261) Avail: NTIS HC A05/MF A01

A few of the fundamental wing/canard interference effects were investigated in a wind tunnel, and theoretically. In particular, the relative horizontal, vertical and pitch deflection of the two lifting surfaces on a fuselage were studied for their influence on interference and, as a consequence, on the principal lift, drag and moment coefficients. Results show not only how these coefficients are changed, but also, by the use of the theoretical model, the distribution of forces which are peculiar to this configuration. One variation on the standard shape was to add wing root fillets at the leading edge so as to influence stall characteristics; the virtues of such a scheme are quantified where possible. THE UNSTEADY AERODYNAMICS OF CERTAIN BLUFF SHAPES B.S. Thesis

K. P. Kalligas and N. Moyssidis Jun. 1981 71 p refs

(BU-264) Avail: NTIS HC A04/MF A01

A technique for obtaining reliable dynamic aerodynamic characteristics was devised. A 'decaying oscillations' rig was designed and built, then used to test a 1:3 scale Martin-Baker ejection seat and a 5:2:2 model container box. Limitations imposed either by wind tunnel turbulence or by nonlinear aerodynamics, meant restricting the range of the amplitude of oscillation to between 2 deg and 10 deg, each way. Results for the box and static stability characteristics of the ejection seat agree with previous work, giving an indication of the reliability of the technique. Regions of dynamic instability are almost invariably associated with attached flow on one surface and separated flow on another (usually opposite) surface, changing to separated flow on the first surface and attached flow on the second (via bubble flow) as the body changes attitude during oscillation. A theoretical approach to the nonlinear aerodynamics of such a system is outlined. Use of the technique in estimating add-mass, evaluating the net area under the curve: aerodynamic stiffness coefficient versus angle of incidence, is suggested. Author (ESA)

A STUDY OF THE EFFECTS OF LEADING-EDGE SLATS ON THE PERFORMANCE OF SLENDER WINGS B.S. Thesis

K. P. Graham and E. J. Motlhathudi Jun. 1981 85 p refs

(BU-266) Avail: NTIS HC A05/MF A01

The improvements in lift/drag (L/D) ratio predicted by conical delta with slats theory were confirmed. The L/D benefits on a slender delta of aspect ratio 1 with parallel leading edge slats were considered. The local normal force distributions for various values of incidence, slot width, and slat angle are measured on a conical delta with spanwise pressure tappings. Insight into the surface flow was gained by the oil flow pattern technique. It is concluded that considerable L/D improvements are found for certain geometric configurations when using parallel slats.

THE EFFECT OF A WELL ON THE AERODYNAMICS OF A SPOILER B.S. Thesis

N. A. Camm and J. J. Ovens Jun. 1981 82 p refs Original contains color illustrations

(BU-268) Avail: NTIS HC A05/MF A01

As an aid to spoiler design, the aerodynamics of a spoiler and its well were investigated. Particular attention was paid to gap and deployment angle. Three different shapes of spoiler and three types of well were tested. All tests were two dimensional, the spoiler being attached to a flat plate at zero incidence. A well was cut into the plate such that the spoiler was flush when not deployed. The Reynolds number was 62,000, based on fence chord. Flow visualization techniques and static pressure measurements were used both along the flat plate and around the spoiler to determine and understand the pressure distribution. Integration of the pressure results shows the normal force distribution. The application of the results to spoiler design is discussed through examples. Author (ESA)

REPORT OF THE AIR TRAFFIC FORECASTING WORKING PARTY, 1981
Sep. 1981 30 p ref
Copyright. Avail: Issuing Activity

The U.K. forecasting model (improved by including relative tourist prices as a variable in leisure traffic equations and by refining business traffic specifications) is used to predict air traffic demand in the 1990's. London airports are treated separately. The effects of oil price rises, a channel tunnel, and hotel constraints in London are discussed. An increase of between 28 and 70 million passagers is predicted, i.e., a 2.5% to 5% annual growth rate. Growth rates for domestic traffic are lower than those projected for international traffic so that domestic traffic, which was 26% of the total in 1979, falls by 1995 to 23% on the low scenario and 20% on the high scenario. AN ASSESSMENT OF THE CRASH FIRE HAZARD OF LIQUID HYDROGEN FUELED AIRCRAFT Final Report
Feb. 1982 132 p refs
(Contract NAS3-22482)
(NASA-CR-165526; ADL-85161) Avail: NTIS HC A07/MF A01 CSCL 01C

The crash fire hazards of liquid hydrogen fueled aircraft relative to those of mission equivalent aircraft fueled either with conventional fuel or with liquefied methane were evaluated. The aircraft evaluated were based on Lockheed Corporation design for 400 passenger, Mach 0.85, 5500 n. mile aircraft. Four crash scenarios were considered ranging from a minor incident causing some loss of fuel system integrity to a catastrophic crash. Major tasks included a review of hazardous properties of the alternate fuels and of historic crash fire data; a comparative hazard evluation for each of the three fuels under four crash scenarios a comprehensive review and analysis and an identification of areas further development work. The conclusion was that the crash fire hazards are not significantly different when compared in general for the three fuels, although some fuels showed minor advantages in one respect or another. ANALYSIS OF A NONLINEAR ALTITUDE TRACKING METHOD Final Report, Sep. - Dec. 1980
Barry R. Billmann Nov. 1981 57 p refs
(FAA Proj. 052-242-320)
(AD-A108878; FAA-CT-81-15; FAA-RD-81-60) Avail: NTIS HC A04/MF A01 CSCL 01/2

This report analyzes the performance of the nonlinear altitude tracker developed for the Active Beacon Collision Avoidance System (BCAS) by Lincoln Laboratory. The tracker is intended for use in the collision avoidance logic of the BCAS system. The nonlinear tracker performance was characterized through comparisons with the previous altitude tracker. The original tracker, used by the collision avoidance logic, was a simplistic alpha-beta tracker. The nonlinear tracker performance evaluation was conducted in three phases: (1) The stand-alone error characteristics of the tracker were obtained. Simulated mode C report sequences were provided directly to the tracker. (2) The nonlinear tracker was integrated directly into the collision avoidance logic. With the use of the Fast-Time Encounter Generator (FTEG), a comparative study of performance with the nonlinear tracker versus the alpha-beta tracker was made. (3) Selected live flight test encounters were used to analyze the relative performance of the alpha-beta tracker versus the nonlinear tracker. The stand-alone analysis revealed that the nonlinear tracker consistently had smaller maximal errors in vertical rate estimation and a smaller transient rate response delay than did the alpha-beta tracker. Both the live flight test encounter simulations and the FTEG scenario simulation indicated that nonlinear tracking often caused an increase in separation for encounters with vertically accelerating threats and reduced occurrences of incorrect command sense choice. DISENGAGEMENT OF SAFETY HARNESS BUCKLES - CT4 Report, Aug. - Dec. 1979
S. R. Sarrailhe and G. A. Thomas Mar. 1981 25 p
(AD-A109048; ARL/STRUC-NOTE-469) Avail: NTIS HC A02/MF A01 CSCL 13/12

During the crash of a CT4 Airtrainer in August, 1979 both safety harness buckles disengaged. The crash was very severe but the harnesses did not show signs of overloading. After a series of tests it was concluded that the buckles disengaged because of misalignment of the loads onto the buckle. This misalignment may not be represented in the standard test procedures and they may give a false sense of security. New tests are proposed, but further work would be desirable to establish design and test criteria. Author (GRA)

OPTIMAL AIRCRAFT LANDING PATTERNS FOR MINIMAL NOISE IMPACT Ph.D. Thesis
Robert Chi-Tuan Chang 1981 183 p
Avail: Univ. Microfilms Order No. 8129300

A total system to perform the task of optimizing aircraft landing trajectories with respect to aircraft noise annoyance in the area near airports was developed. The noise annoyance considered was solely due to aircraft. Multiple aircraft on multiple landing paths were studied by the total system developed. While many of the subsystems such as the aircraft noise signature model, annoyance model, optimization methods, etc. already existed, the task was to combine all these together into a single working system. The various subsystems included an annoyance model (aircraft noise signature model, population model, impact intensity weighting function), formulation of aircraft landing paths and constraints, performance measure, and optimization. A single numerical number, noise impact index, which represents the average severity of noise impact over the entire population of a community was adopted as the annoyance index. Dissert. Abstr.

ACTIVE BEACON COLLISION AVOIDANCE SYSTEM (BCAS) LOGIC PERFORMANCE DURING OPERATIONAL FLIGHT TESTS Report, 13 Jul. - 9 Sep. 1980
R. A. Tornese and A. L. McFarland Washington FAA Jan. 1981 123 p refs
(Contract DTFA01-81-C-10001)
(AD-A108693; MTR-80/W352; FAA-RD-80-138) Avail: NTIS HC A06/MF A01 CSCL 17/7

Between 13 July and 9 September 1980, operational flight tests of an Active BCAS Experimental Unit (BEU) were conducted. The flight tests included 129 approaches to 28 different airports during 60 hours of flight; 14 unplanned encounters which gave rise to BCAS alerts were recorded. In each of the encounters, the aircraft carrying the BEU came into a conflict with another aircraft entirely by chance. The other aircraft was not associated with the BCAS test program in any way. The primary purpose of the flight tests was to determine how many unplanned alerts would occur during normal flight operations and to assess whether each was a desirable or unwanted alert. In addition, alert correctness, timeliness, and utility were considered along with the potential impact of BCAS on the ATC system. The data was also used to determine approximately the region(s) where desensitization of BCAS threat logic should be applied to limit unwanted alerts. GRA

VEHICLE TEST REPORT: BATTRONIC PICKUP TRUCK
Theodore W. Price, Thomas W. Shain, Raymond J. Freeman, and Michael F. Pompa 1 Jan. 1982 47 p refs
(Contracts NAS7-100; DE-AI01-78CS-54209)
(NASA-CR-168637; JPL-Pub-82-8; DOE/CS-54209/6) Avail: NTIS HC A03/MF A01 CSCL 13F

An electric pickup truck was tested to characterize certain parameters and to provide baseline data that can be used for the comparison of improved batteries that may be incorporated into the vehicle at a later time. The vehicle tests were concentrated on the electrical drive subsystem; i.e., the batteries, controller, and motor. The tests included coastdowns to characterize the road load and range evaluations for both cyclic and constant speed conditions. A qualitative evaluation of the vehicle's performance was made by comparing its constant speed range performance with other vehicles. S.L.

DESCENT-RATE CUING FOR CARRIER LANDINGS: EFFECTS OF DISPLAY GAIN, DISPLAY NOISE AND AIRCRAFT TYPE Interim Report, 1 May 1980 - 30 Nov. 1981

Gavan Lintern, Daniel J. Sheppard, and Charles E. Kaul Oct 1981 42 p refs

(Contract N61339-78-C-0060)

(AD-A108801; TR-81-015; NAVTRAEQUIPCEN-78-C-0060-8) Avail: NTIS HC A03/MF A01 CSCL 01/2

Two studies are reported concerning the utility of modifying a conventional Fresnel Lens Optical Landing System (FLOLS) to include variable-length vertical light arrays, or arrows, in order to provide descent-rate information to pilots making carrier landings. In the first study, the Descent-Rate Cuing (DRC) algorithm incorporated an angular gain to provide glideslope displacement information. The DRC system did not significantly improve glideslope tracking performance. Lineup performance was not adversely affected. The effects of aircraft type and noise on the DRC were also examined. In the second study, the DRC algorithm incorporated a modified linear gain to provide glideslope displacement information. The DRC system consistently reduced glideslope error throughout the approach. Comparison of the data and previous research suggests that a DRC system incorporating a linear gain can produce a strong and consistent improvement in glideslope control in carrier landings. (FAA Proj. 161-200-130)

(AD-A108924; FAA-CT-80-54; FAA-EM-81-11) Avail: NTIS HC A03/MF A01 CSCL 01/3

The present status of transport aircraft cockpit standardization was evaluated by examination of regulations and other design practice documents and by interviews with airline pilots and engineers. Flight critical areas most in need of increased standardization were identified as (1) primary flight guidance instrumentation and (2) pilot input keyboards. Additional areas proposed for further industry consultation, possibly leading to further standardization at a future date, include flap, slat, and leading-edge device control and display systems; indicated airspeed (IAS)-Mach indicators; powerplant instrumentation; and electric and hydraulic power diagrams, displays, and controls. The continued use of a mixed metric and English unit measurement plan in both United States and foreign manufactured aircraft is noted, and the incidence of pilot dual qualifications and the need for criteria for digital system software certification are also discussed. HELICOPTER ICING SPRAY SYSTEM (HISS) NOZZLE IMPROVEMENT EVALUATION Final Report

Daumants Belte Sep. 1981 53 p refs

(AD-A109405; USAAEFA-79-02-2) Avail: NTIS HC A04/MF A01 CSCL 01/2

The U.S. Army Aviation Engineering Flight Activity (USAAEFA) operates a modified CH-47C helicopter as an airborne spray tanker to create a simulated icing test environment. This system was modified to improve its spray cloud characteristics with respect to uniformity of liquid water content (LWC) and reduction of drop size median volumetric diameter (MVD). The existing atomizers on the spray boom assembly were replaced by Sonic Development Corporation model 125-H 'Sonicore' nozzles. A UH-1H helicopter equipped with particle measuring spectrometers conducted in-flight sampling and calibration of a modified HISS spray cloud in conjunction with other helicopter icing tests. Average cross sectional dimensions of the present spray cloud was estimated as 36 ft wide and 8 ft deep. Usable values of cloud LWC in excess of 1 gram per cubic meter with a drop size MVD range of 20 to 35 microns can be generated at a 90 knot airspeed. GRA

DEVELOPMENT OF MANUFACTURING TECHNOLOGY FOR FABRICATION OF A COMPOSITE HELICOPTER MAIN ROTOR SPAR BY TUBULAR BRAIDING Final Report, Sep. 1978 - Sep. 1980

Mark L. White St. Louis, Mo. Army Aviation Research and Development Command Apr. 1981 81 p refs

(Contract DAAG46-78-C-0070)

(AD-A109377; R-1618; AVRADCOM-TR-81-F-9) Avail: NTIS HC A05/MF A01 CSCL 11/4

Mechanical tubular braiding has been shown to be a viable blade spar manufacturing process in a program which included preliminary design of an improved main rotor blade for the OH-58 helicopter. The blade incorporates an advanced aerodynamic shape and has as its primary structural member a Kevlar 49/epoxy spar fabricated by braiding. Achievement of an analytically acceptable blade and spar design meeting critical structural and dynamic requirements was not hindered by braiding process constraints. Mechanical property tests of flat panels and spar sections exhibited excellent correlation with analytical predictions, substantiating the applicability of normal composite laminate analysis methods and the validity of the specific design. Ballistic testing of spar sections demonstrated superior containment of structural damage compared to composite spars produced by more conventional methods. Manufacturing cost estimates predict a price reduction of 1/3 for the braided spar relative to a similar S-glass/epoxy spar for an OH-58 blade of identical external shape fabricated by orthodox, low-cost technology. A METHOD FOR APPLYING LINEAR OPTIMAL CONTROL THEORY TO THE DESIGN OF A REGULATOR FOR A FLEXIBLE AIRCRAFT

L. J. J. Erkelens and J. L. Simons 31 Mar. 1980 83 p refs Previously announced as NLR-TR-75118-C Sponsored by Directorate of Material Air RNLAF
(NLR-TR-80032-U; NLR-TR-75118-C) Avail: NTIS HC A05/MF A01

A hypothetical control system that provides improved rigid body and structural mode damping of a flexible aircraft in order to improve the riding quality and minimize the wing bending moment during flight in turbulence, is considered. The equations of motion are related to a high performance fighter aircraft with external stores. The feedback gains are determined, using linear optimal control theory. A quadratic optimization criterion, taking into account the normal acceleration at the pilot seat and the wing root bending moment, is used. A number of optimal and suboptimal regulators are calculated. The system performance is expressed in terms of pole location, frequency response, and power spectra for both pilot seat acceleration and wing root bending moment. Aircraft response to a deterministic gust disturbance is presented. Author (ESA)

ON THE DESIGN OF SOME AIRFOILS FOR SAILPLANE APPLICATION
L. M. M. Boermans and H. J. W. Selen Apr. 1981 47 p refs Presented at 17th OSTIV Congr., Paderborn, West Germany, 1981
(VTH-LR-326) Avail: NTIS HC A03/MF A01

Airfoils were designed such that, by adding material to the surface, an existing wing could be modified and tested in flight. Wind tunnel experiments on inner and outer wing segments are described, giving information on the quality of actual airfoils achieved in serial production and of the LSL airfoil analysis and design computer program. The characteristics of several modern airfoils used in standard class sailplanes are analyzed and typical differences in the case of smooth surface and of rough leading edge are clarified. Wind tunnel measurements with real insect remains on a wing segment are compared with a well known simulated bug pattern and shown to have greatly different drag characteristics. The application of pneumatic turbulators to reduce the drag of an airfoil is discussed. The computer program was used to modify the wing of an ASW-193 sailplane. Flight tests are satisfactory. A FURTHER STUDY OF HELICOPTER ROTOR PITCH-FLAP-PHASE COUPLING B.S. Thesis
A. East and N. S. Sehmi Jun. 1981 81 p refs
(BU-259) Avail: NTIS HC A05/MF A01

Pitch-flap phase coupling between the blades of a helicopter rotor was studied in order to improve overall aircraft stability. A mathematical model was constructed for the Westland Lynx helicopter, which incorporates a semiarticulated rotor head. Full expressions are derived in a lengthy, but accurate fashion for the blade flapping motion as well as for rotor hub forces and moments. The rotor state defined is believed to be more accurate than that of any previous, known treatment. Pitch-flap phase coupling of the form: blade pitch angle at rotor center line - blade pitch control angle + pitch-flap coupling gain (blade flap angle + pitch-flap-phase coupling lead/lag), is introduced. The effect on the rotor derivatives is given with change in phase lead/lag angle and control gain. A full six degrees of freedom model is extensively used for the study of stability, with the results beset with problems which are discussed. Author (ESA)

A DESIGN STUDY OF THE MARSHAL B.S. Thesis
D. Suen and G. H. Tan Jun. 1981 55 p refs
(BU-262) Avail: NTIS HC A04/MF A01

The feasibility of a six seat variant of the Britten Sheriff twin-engined aircraft, the Marshal, was studied. Results show that the Marshal, powered by two 200 h.p. engines and at an all-up-weight (AUW) of 3550 lb, can compete in the open market, both in terms of performance and price. No major structural alterations, except on the fuselage to accommodate two additional passengers, are envisaged. This aircraft is expected to be suitable for a touring role. For business flying, a high cruise speed is favored and so a turbocharged version was also considered. The performance level attainable, with two 200 h.p. turbocharged engines, compares well with the competition. However, at an AUW of 3700 lb, certain modifications to the wing are necessary. The indication is that the Marshal is a commercially viable project. Author (ESA)

DESIGN STUDY INTO A HIGH ENDURANCE MINI-ROTORCRAFT B.S. Thesis
D. A. E. Beedell and J. C. Hendy Jun. 1981 71 p refs Original contains color illustrations
(BU-265) Avail: NTIS HC A04/MF A01

Competing models in a minirotorcraft competition for maximum endurance with an all up weight no greater than 5 kg, must fly above a height of 5 m within an area 10 m square are discussed. A design in which aerodynamics, stability and control, and mechanical and structural aspects are considered to obtain the size and angular velocity of the rotor for minimum power, while sufficient stability and control for a long flight are still inherent in the overall system is presented. Weights of individual components are also examined. It is found that a rotor mounted engine configuration, with rotor radius about 1.6 m and rotational velocity 4 to 5 revs/sec, with engines half way along the rotors and with Hiller control rotors, is the most promising design. The possible endurance is some 12 hr and hence pilot error and mechanical failure become deciding factors. Author (ESA)

A CONCEPT FOR A FUEL EFFICIENT FLIGHT PLANNING AID FOR GENERAL AVIATION Final Report
B. P. Collins, A. L. Haines, and C. J. Wales Washington NASA Mar. 1982 96 p refs
(Contract NAS1-16430)
(NASA-CR-3533; MTR-81W233) Avail: NTIS HC A05/MF A01 CSCL 01D

A core equation for estimation of fuel burn from path profile data was developed. This equation was used as a necessary ingredient in a dynamic program to define a fuel efficient flight path. The resultant algorithm is oriented toward use by general aviation. The pilot provides a description of the desired ground track, standard aircraft parameters, and weather at selected waypoints. The algorithm then derives the fuel efficient altitudes and velocities at the waypoints. B.W.

ASSESSMENT OF AVIONIC EQUIPMENT FIELD RELIABILITY AND MAINTAINABILITY AS FUNCTIONS OF UNIT COST
Mark I. Knapp and Joseph W. Stahl 7 Oct. 1981 24 p refs Presented at the 16th Ann. Dept. of Defense Cost Analysis Symp., Arlington, Va., 4-7 Oct. 1981
(AD-A109373) Avail: NTIS HC A02/MF A01 CSCL 01/3

Pound-for-pound, avionics is generally recognized as the most expensive, complex and sophisticated part of an aircraft. Reliability and maintainability are critical characteristics that influence spares provisioning, maintenance resource requirements, system operational availability and, ultimately, investment and operating costs. Consequently, much attention has been focused upon improving the reliability and maintainability of avionics which, in the past, have been disappointingly low. This paper addresses avionics reliability and maintainability. The analysis was performed last year in partial response to a request of IDA by OASD (C(3)I) to provide information for use by DSARC principals at the Full-Scale Development milestone. Since the 5000 series of DoD Directives and Instructions emphasize analytical comparisons of any new systems under consideration by the DSARC with current, comparable systems, we undertook analyses to determine if there may be one or more historical relationships between field reliability and maintainability and avionic equipment characteristics that would assist in forecasting those attributes. EQUIPMENT FOR TESTING AND MEASURING A 'HELMET MOUNTED SIGHT AND DISPLAY' SYSTEM WITH A COUPLED MOVABLE TV CAMERA IN THE FLIGHT SIMULATOR FOR RESEARCH OF THE DFVLR
Friedrich Erdmann, R. Dierke, E. Biertuempel, R. Ehlers, and H. Loehr Nov. 1981 70 p refs Transl. into ENGLISH of "Ein Versuchsaufbau zum Ausmessen eines 'Helmet Mounted Sight/Display' mit Nachgeschaltetem Kameraschwenkrahmen im Forschungsflugsimulator der DFVLR" Rept. DFVLR-Mitt-80-04 DFVLR, Brunswick, Jan. 1980 Original report in GERMAN previously announced as ESA-95301
(ESA-TT-675; DFVLR-Mitt-80-04) Avail: NTIS HC A04/MF A01; DFVLR, Cologne DM 17,40

A test installation capable of static and dynamic measurements on a helmet mounted sight and display (HMS/D) during simulated helicopter motion, by means of a steerable camera rotation framework was built. The rotation frame is gyro controlled and moves about two axes (in pitch and yaw). The HMS/D generates the helmet line of sight referred to the simulator platform (the aircraft based system) in terms of azimuth and elevation. Through the helmet mounted display, using a semitransparent mirror, an electronically produced cross hair (the helmet mounted sight) is superimposed on the image in the right eye of the pilot. The TV picture is also reflected into his eye, enabling him to aim at a target on the sensor image. Test equipment accuracy is 40 min in azimuth, 20 min in elevation. Author (ESA)

DILUTION JET BEHAVIOR IN THE TURN SECTION OF A REVERSE FLOW COMBUSTER
Steven M. Riddlebaugh, Abraham Lipshitz (Ahuza, Haifa, Israel), and Isaac Greber (Case Western Reserve Univ., Cleveland, Ohio) Jan. 1982 15 p refs Presented at the 20th Aerospace Sci. Meeting, Orlando, Fla., 10-14 Jan. 1982; sponsored by AIAA
(NASA-TM-82776; E-1107; AIAA-82-0192) Avail: NTIS HC A02/MF A01 CSCL 21E

Measurements of the temperature field produced by a single jet and a row of dilution jets issued into a reverse flow combustor are presented. The temperature measurements are presented in the form of consecutive normalized temperature profiles, and jet trajectories. Single jet trajectories were swept toward the inner wall of the turn, whether injection was from the inner or outer wall. This behavior is explained by the radially inward velocity component necessary to support irrotational flow through the turn. Comparison between experimental results and model calculations showed poor agreement due to the model's not including the radial velocity component. A widely spaced row of jets produced trajectories similar to single jets at similar test conditions, but as spacing ratio was reduced, penetration was reduced to the point where the dilution jet flow attached to the wall. COOLED VARIABLE-AREA RADIAL TURBINE TECHNOLOGY PROGRAM Final Report
G. D. Large and L. J. Meyer Jan. 1982 303 p refs
(Contract NAS3-22004)
(NASA-CR-165408) Avail: NTIS HC A14/MF A01 CSCL 21E

The objective of this study was a conceptual evaluation and design analyses of a cooled variable-area radial turbine capable of maintaining nearly constant high efficiency when operated at a constant speed and pressure ratio over a range of flows corresponding to 50- to 100-percent maximum engine power. The results showed that a 1589K (2400 F) turbine was feasible that would satisfy a 4000-hour duty cycle life goal. The final design feasibility is based on 1988 material technology goals. A peak aerodynamic stage total efficiency of 0.88 was predicted at 100 percent power. Two candidate stators were identified: an articulated trailing-edge and a locally movable sidewall. Both concepts must be experimentally evaluated to determine the optimum configuration. A follow-on test program is proposed for this evaluation. Author

PERFORMANCE OF SINGLE-STAGE AXIAL-FLOW TRANSONIC COMPRESSOR WITH ROTOR AND STATOR ASPECT RATIOS OF 1.63 AND 1.78, RESPECTIVELY, AND WITH DESIGN PRESSURE RATIO OF 1.82
Royce D. Moore and Lonnie Reid Feb. 1982 112 p refs
(NASA-TP-1974; E-259) Avail: NTIS HC A06/MF A01 CSCL 21E

The overall and blade-element performance of a transonic compressor stage is presented over the stable operating flow range for speeds from 50 to 100 percent of design. The stage was designed for a pressure ratio of 1.82 at a flow 20.2 kg/sec and a tip speed of 455 m/sec. At design speed the stage achieved a peak efficiency of 0.821 at a pressure ratio of 1.817. The stage stall margin at design speed based on conditions at stall and peak efficiency was about 11 percent. Author

A CRITERION FOR THE PREDICTION OF THE RECOVERY CHARACTERISTICS OF SPINNING AIRCRAFT
T. H. Kerr 1981 24 p refs
(RAE-TN-AERO-2251) Copyright. Avail: Issuing Activity

Full scale spinning tests were analyzed in order to produce a recovery estimation method for straight and swept wing aircraft. The rate of rotation about spin axis X wing span/true rate of descent in ft/sec, was estimated from the general layout and loading of the aircraft. Antispin rolling moment coefficient (wind axis) due to the body at a mean incidence of 45 deg and antispin moment due to the movement of the rudder from neutral to fully antispin were calculated. The unbalanced (antispin) rolling moment coefficient is derived. This is plotted against (I- (pitching moment of inertia/rolling moment of inertia)) and whether the aircraft is likely to have a satisfactory spin recovery characteristic is assessed by reference to the empirical boundary tables provided. Data for Spitfire and Hurricane aircraft are provided. Recovery standards improve as pitching moment of inertia/rolling moment of inertia increases. Author (ESA)

AN EXPERIMENTAL STUDY OF THE EFFECT OF TAIL CONFIGURATION ON THE SPINNING CHARACTERISTICS OF GENERAL AVIATION AIRCRAFT M.S. Thesis
Mark G. Ballin Mar. 1982 182 p refs
(Grant NAG1-73)
(NASA-CR-168578) Avail: NTIS HC A09/MF A01 CSCL 01C

The feasibility of using static wind tunnel tests to obtain information about spin damping characteristics of an isolated general aviation aircraft tail was investigated. A representative tail section was oriented to the tunnel free streamline at angles simulating an equilibrium spin. A full range of normally encountered spin conditions was employed. Results of parametric studies performed to determine the effect of spin damping on several tail design parameters show satisfactory agreement with NASA rotary balance tests. Wing and body interference effects are present in the NASA studies at steep spin attitudes, but agreement improves with increasing pitch angle and spin rate, suggesting that rotational flow effects are minimal. Vertical position of the horizontal stabilizer is found to be a primary parameter affecting yaw damping, and horizontal tail chordwise position induces a substantial effect on pitching moment. SIMULATOR STUDY OF VORTEX ENCOUNTERS BY A TWIN-ENGINE, COMMERCIAL, JET TRANSPORT AIRPLANE
Earl C. Hastings, Jr. and Gerald L. Keyser, Jr. Feb. 1982 65 p refs
(NASA-TP-1966; L-14187) Avail: NTIS HC A04/MF A01 CSCL 01C

A simulator study of vortex encounters was conducted for a twin-engine, commercial, jet transport airplane encountering the vortex flow field of a heavy, four-engine, commercial, jet transport airplane in the final-approach configuration. The encounters were conducted with fixed controls and with a pilot using a state-of-the-art, manual-control system. Piloted encounters with the base-line vortex flow field out of ground effect (unattenuated) resulted in initial bank-angle excursions greater than 40 deg, coupled with initial sideslip-angle excursions greater than 10 deg. The severity of these initial upsets was significantly reduced when the vortex center was moved laterally or vertically away from the flight path of the encountering airplane. Smaller reductions occurred when the flow field was attenuated by the flight spoilers on the generating airplane. The largest reduction in the severity of the initial upsets, however, was from aging in ground effect. The severity of the initial upsets of the following airplane was relatively unaffected by the approach speed. Increasing the lift coefficient of the generating airplane resulted in an increase in the severity of the initial upsets. Author

FLUTTER AND TIME RESPONSE ANALYSES OF THREE DEGREE OF FREEDOM AIRFOILS IN TRANSONIC FLOW Final Report, Nov. 1979 - Dec. 1980
T. Y. Yang and C. H. Chen Wright-Patterson AFB, Ohio AFAWL Aug. 1981 60 p refs
(Grant AF-AFOSR-3523-78; AF Proj. 2307)
(AD-A108987; AFWAL-TR-81-3103) Avail: NTIS HC A04/MF A01 CSCL 20/4

Flutter and time response analyses are performed for a NACA 64A006 conventional and a MBB A-3 supercritical airfoil, both oscillating with plunge, pitch, and aileron pitch d.o.f.'s in small disturbance, transonic flow. The aerodynamic coefficients are calculated using the transonic code LTRAN2-NLR. The effects of various kinds of aeroelastic parameters on flutter speeds for the bending-torsion, bending-aileron, and torsion-aileron branches are studied. The flutter speeds associated with the bending-torsion branch are plotted against Mach number for different parameter values. The flutter speed, the amplitude ratio, and the phase difference at different Mach numbers are plotted against the mass ratio for both of two d.o.f. and a three d.o.f. case. Time-response results are obtained for the NACA 64A006 and the MBB A-3 airfoils at $M = 0.85$ and 0.765, respectively. Using the same sets of parameter values, the flight speeds used to obtain all the neutrally stable response are very close to the flutter speeds obtained in the flutter analysis. The principle of linear superposition of airloads is used in the flutter analysis but not in the response analysis. Author (GRA)

THE PRESSURE SIGNATURE METHOD FOR BLOCKAGE CORRECTIONS, AND ITS APPLICATIONS TO THE INDUSTRIAL WIND TUNNEL B.S. Thesis

A. S. Walker and N. P. Wiseman Jun. 1981 43 p refs
(BU-263) Avail: NTIS HC A03/MF A01

A recent method of correcting for errors due to blockage, applicable to complex shapes and high blockage ratios, was applied to the Aeronautical Engineering Department industrial wind tunnel. A tunnel centerline, source-sink distribution was derived from measured wall pressure signatures. The interference effect of the tunnel walls was calculated; blockage corrections were applied to in-tunnel measurements of forces and pressures. The drag coefficient of a normal flat plate of deliberately high blockage ratio (12%) was measured in the tunnel, then corrected to the value in unconfined flow. This is found to be close to the expected value and indicates that the pressure signature method can be reliably used to correct measurements obtained from models, up to this value of blockage. The effective body implied by the equivalent potential flow was also calculated. This compares well with the known effective body shapes of flat normal plates in confined flow. Author (ESA)

STUDENT'S EXPERIMENT TO FLY ON THIRD SHUTTLE MISSION

24 Feb. 1982 25 p refs
(NASA-News-Release-82-27; P82-10027) Avail: NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Md 21240 CSCL 22A

A spaceborne student experiment on insect motion during weightlessness scheduled to fly on the third flight of the space shuttle is described. The experiment will focus on the flight behavior in zero gravity of two species of flying insects with differing ratios of body mass to wing area, the velvetbean caterpillar moth and the honeybee drone. Ten insects of each species will be carried in separate canisters. The crew will remove the canisters from the storage locker and attach them to the mid-deck wall, where the insects will be observed and filmed by a data acquisition camera. R.J.F.

MANUFACTURING IN SPACE: FLUID DYNAMICS NUMERICAL ANALYSIS Annual Report, Aug. 1980 - Aug. 1981

S. J. Robertson, L. A. Nicholson, and L. W. Spradley Aug. 1981 51 p refs
(Contract NASw-3281)
(NASA-CR-168610; LMSC-HREC-TR-D784480) Avail: NTIS HC A04/MF A01 CSCL 22A

Natural convection in a spherical container with cooling at the center was numerically simulated using the Lockheed-developed General Interpolants Method (GIM) numerical fluid dynamic computer program. The numerical analysis was simplified by assuming axisymmetric flow in the spherical container, with the symmetry axis being a sphere diagonal parallel to the gravity vector. This axisymmetric spherical geometry was intended as an idealization of the proposed Lal/Kroes growing experiments to be performed on board Spacelab. Results were obtained for a range of Rayleigh numbers from 25 to 10,000. For a temperature difference of 10 C from the cooling sting at the center to the container surface, and a gravitional loading of 0.000001 g a computed maximum fluid velocity of about 2.4 x 0.00001 cm/sec was reached after about 250 sec. The computed velocities were found to be approximately proportional to the Rayleigh number over the range of Rayleigh numbers investigated. Author

SAFETY DEMONSTRATION STUDY ON PROPOSED BIORACK GLOVE BOX

H. S. Wolff, S. J. E. Humphrey, and J. Rashbass Paris ESA Mar. 1981 83 p Original contains color illustrations
(Contract ESA-4368/80/F-FC(SC))
(ESA-CR(P)-1482) Avail: NTIS HC A05/MF A01

A table top model of a glove box suitable for incorporation in the Spacelab biorack was tested. Containment tests following the internal dispersal of particles, microorganisms, and simulated spills of volatile materials were performed. The rate of removal of dispersed or volatilized substances from the working volume was investigated. The ergonomic aspects were considered. Results show that a simple design implemented with commercial components is capable of a very high degree of containment combined with a clean atmosphere in the working volume. Author (ESA)

FOLLOW ON STUDY ON FLUID PHYSICS MODULE (PM). PART 1: INDEPENDENT OPERATING FLUID PHYSICS MODULE (FPM) Final Report

C. DAdda, G. Levizzari, R. Cerrato, and G. Rovera Paris ESA 1981 117 p
(Contract ESA-3631/78/F-FC(SC))
(Rept-79-RV-0; ESA-CR(P)-1509) Avail: NTIS HC A06/MF A01

An independently operating FPM, directly interfaced with the Spacelab subsystem, is proposed. An interface unit (IU) connects the FPM to the 28 V power supply bus and to the Spacelab command and data management subsystem. The power supply provides the voltages needed by the FPM and IU. The analog and digital signals acquisition starts every FPM cinecamera frame. The analog signals are converted to a digital format and stored in a buffer memory, together with digital signals and the time of the experiment. A microprocessor supervises the acquisition and updates the time elapsed, counting the 1024 KHz signal, distributed by the remote acquisition unit. The FPM signals are displayed for monitoring and initial setting of experiment parameters. A lamp display gives the status of the FPM during operation and acquisition phases, and provides alarm signals for anomalous conditions. Improvements which enlarge operational range and add monitoring capabilities are listed, e.g., fluid recovery, axial vibration and frame marking of film. Author (ESA)

REPORT ON A STUDY OF THE MAINTENANCE IN READINESS OF ON-GROUND SPACECRAFT SYSTEMS FOR OPERATIONAL APPLICATION PROGRAMS

W. G. Cussen Paris ESA 24 Jun. 1981 46 p refs
(Contract ESA-4468/80/NL-AB)
(MBB-80-162/150; ESA-CR(P)-1513) Avail: NTIS HC A03/MF A01

Practical aspects of storage and maintenance of typical spacecraft equipment and program aspects relating to a decision to store such equipment were studied. Literature and experienced personnel were consulted. The long-term storage of operational equipment is expensive and should only be imposed on a project where there is a positively identified need. Where there is such a need it should be subject to a planned and coordinated approach recognized and directed at project management level from very early in the program. Onboard storage should be used as much as possible. Author (ESA)

GEOPOTENTIAL HARMONICS OF ORDER 29, 30 AND 31 FROM ANALYSIS OF RESONANT ORBITS

D. G. King-Hele and Doreen M. C. Walker Aug. 1981 27 p refs
(RAE-TR-81109; RAE-Space-603; BR81087) Copyright. Avail: Issuing Activity

The Earth gravitational potential was investigated in order to evaluate lumped harmonics of a particular order m by analyses of resonant satellite orbits (orbits with tracks over the Earth that repeat after m revolutions). Results on 30th order harmonics from analyses of 15th-order resonance, and results on 29th and 31st order harmonics from 29:2 and 31:2 resonances are reviewed. The values available for 30th order lumped harmonics of even degree are numerous enough to allow a solution for individual coefficients of degree up to 40. The best determined coefficients are those of degree 30. For the 29th and 31st order harmonics, and for the 30th order harmonics of odd degree, there are not enough values to determine individual coefficients, but the lumped values from particular satellites can be used for resonance testing of gravity field models, particularly the Goddard Earth Model (GEM) 10B (up to degree 36) and 10C (for degree > 36). The results of applying these tests are discussed. Author (ESA)

FINANCIAL ASSESSMENT OF THE SPACE OPERATIONS CENTER AS A PRIVATE BUSINESS VENTURE Final Report

Michael Simon Jan. 1982 28 p refs Presented at Am. Astronautical Soc. Ann. Meeting, San Diego, Calif., 26-29 Oct. 1981 Submitted for publication
(Contract NASw-3204)
(NASA-CR-168636; Rept-39) Avail: NTIS HC A03/MF A01 CSCL 14B

The possibility of private financing and operation of the Space Operations Center (SOC) is considered as an alternative to SOC development by the government. A hypothetical revenue model for SOC services is constructed and is compared with NASA estimates of SOC development and operating costs. A present value analysis based on a 1985 to 2000 investment horizon shows a potential for substantial profit in a private SOC venture, although the possibility of large losses is not discounted. Present value estimates range from $8.6 billion down to a low minus $3.3 billion. Author

TARGET/CLUTTER DISCRIMINATION TECHNIQUES FOR LASER SEMI-ACTIVE MISSILE SYSTEMS Ph.D. Thesis

Huey Frederick Anderson 1981 193 p
Avail: Univ. Microfilms Order No. 8128319

Laser semi-active missile systems, a class of precision guided weapons, are utilized in terminal homing applications. However, clutter signals due to atmospheric and battlefield aerosol backscatter degrade detection performance. Differences between target and clutter signals are determined through field measurements and computer simulations. On this basis two new discrimination and detection techniques are developed and evaluated. The first technique combines FFT processing, inverse filtering and adaptive detection. In the second technique, digital filtering is performed in the time domain and results are evaluated in the frequency domain. The techniques have been applied to realistic target and clutter signals resulting in improvement up to 10db in signal-to-clutter ratios. Adaptive detection when combined with inverse filtering provides correct decisions for all target and clutter signals processed. Dissert. Abstr.

N82-19254 Royal Aircraft Establishment, Farnborough (England).

TABLE OF SPACE VEHICLES, 1958 - 1980

H. Hiller and J. A. Pilkington Jul. 1981 52 p refs
(RAE-TR-81095; RAE-Space-602; BR81084) Copyright. Avail: Issuing Activity

Details of all space vehicles that escaped from the Earth's influence as a result of the 109 launchings from 1958 to 1980 are given. Name, international designation, launch date, mass, basic shape and size, details of orbit or trajectory, and the time and place of impact or landing on the Moon or a planet are indicated. The table includes orbits around the Sun, in the

Earth-Moon system, and around the Moon, around Mars, and around Venus. Author (ESA)

DEVELOPMENT OF STS/CENTAUR FAILURE PROBABILITIES LIFTOFF TO CENTAUR SEPARATION Final Report
James M. Hudson Feb. 1982 82 p
(Contract NAS9-16259)
(NASA-CR-167549; TR-82-1404) Avail: NTIS HC A05/MF A01 CSCL 22B

The results of an analysis to determine STS/Centaur catastrophic vehicle response probabilities for the phases of vehicle flight from STS liftoff to Centaur separation from the Orbiter are presented. The analysis considers only category one component failure modes as contributors to the vehicle response mode probabilities. The relevant component failure modes are grouped into one of fourteen categories of potential vehicle behavior. By assigning failure rates to each component, for each of its failure modes, the STS/Centaur vehicle response probabilities in each phase of flight can be calculated. The results of this study will be used in a DOE analysis to ascertain the hazard from carrying a nuclear payload on the STS. Author

GENERAL CONFIGURATION AND INTERNAL DISPOSITION OF EQUIPMENT IN A SATELLITE FOR COLLECTING ENVIRONMENTAL DATA
Carlos deOliveira Lino and Aydano Barreto Carleial Oct. 1981 32 p refs In PORTUGUESE; ENGLISH summary Presented at 33d Ann. Meeting of SBPC, Salvador, 81-5 Jul. 1981
(INPE-2240-PRE/026) Avail: NTIS HC A03/MF A01

The general configuration of an experimental satellite for reception and retransmission to the Earth of environmental data is described. The data originates from small automatic Earth stations equipped with sensors and capable of operating in remote locations. The interrelationships among the equipment blocks constituting the satellite and between these and the outside medium, which were used in the search for an adequate disposition for the equipment blocks are presented. The proposed internal and external disposition for the blocks is presented in drawings. Some mechanical quantities (position of the center of mass, moments of inertia) resulting from the mass distribution inherent to the chosen configuration, are calculated. S.L.

Avail: NTIS HC A21/MF A01 CSCL 22B

Systems-level technology for evolving cost-effective, STS compatible antennas that will be automatically deployed in orbit to perform a variety of missions in the 1985 to 2000 time period is discussed. For large space-based antenna systems, the LSST program has selected deployable antennas for development. The maturity of this class of antenna, demonstrated by the success of smaller size apertures, provides a potential capability for satisfying a significant number of near-term, space-based applications. The offset wrap-rib concept development is the basis of the JPL LSST antenna technology development program. Supporting technology to the antenna concept development include analytical performance prediction, the capability for measuring and evaluating mechanical antenna performance in the intended service environment, and the development of candidate system-level configurations for potential applications utilizing the offset wrap-rib antenna concept. The demonstration of 50 to 150 m, STS compatible, offset antenna technology readiness is reported. Fabrication of a ground and flight testable partial 55 m reflector section and feed support structure is discussed. Reduction to practice through ground test verification is presently contained in the program. Key objectives for the program include the design of a compatible feed support structure and the fabrication and testing of critical components. T.M.

The coupled free-free modes of the 55M LMSS antenna configuration are shown. They were determined using modal synthesis. Reflector modes clamped at the hub were calculated adopting the efficient cyclic symmetry technique. Similarly, clamped hub modes of the offset boom structure were calculated. The modes of the two substructures were then combined through the process of modal synthesis on the assumption that the interface at the hub structure is rigid thus satisfying statically determinate matching conditions. For attitude control purposes, only modes associated with symmetric components zero and one involve net motions of the center of gravity of the reflector. This condition restricts the set of admissible eigenfunctions for modal synthesis. Modes with symmetric components higher than one are excited only by forces acting on the ribs. These modes are totally uncoupled from the boom dynamics. T.M.

SURFACE MEASUREMENT SYSTEM DEVELOPMENT
Martin Berdahl *In* NASA. Langley Research Center Large Space Systems Technol., Pt. 2, 1981 Mar. 1982 p 479-490 (For primary document see N82-19257 10-15)
Avail: NTIS HC A21/MF A01 CSCL 22B

The development of an optical system designed to satisfy the requirements of early deployable concepts such as the LMSC offset wrap rib antenna is reported. The system is relatively lightweight, will measure distance to several targets, and provide data in engineering units in real time. Accuracy of measurements is such that use of the system will permit evaluation of surface quality of large parabolic antenna dishes. Operation of the system was conceptually proven. T.M.

RADIO FREQUENCY VERIFICATION TASKS RELATED TO A MULTIPLE APERTURE REFLECTOR SYSTEM

Thomas G. Campbell *In its* Large Space Systems Technol., Pt. 2, 1981 Mar. 1982 p 551-556 (For primary document see N82-19257 10-15)

Avail: NTIS HC A21/MF A01 CSCL 22B

The establishment of analytical methods for predicting the electromagnetic performance of multiple offset fed apertures for multiple beam large space antenna systems is highlighted. The development of experimental modeling techniques for verifying the analytical methods used in predicting the effects of surface roughness (pillows), scattering, and aperture coupling on RF performance is discussed. T.M.

N82-19265*# National Aeronautics and Space Administration. Langley Research Center, Hampton, Va.

PRELIMINARY EXPERIMENTAL TEST RESULTS USING 35 GHz OFFSET FED REFLECTOR SIMULATING SURFACE PILLOWS AND APERTURE CABLES

Thomas G. Campbell and W. Robert Young *In its* Large Space Systms Technol., Pt. 2, 1981 Mar. 1982 p 557-582 (For primary document see N82-19257 10-15)

Avail: NTIS HC A21/MF A01 CSCL 22B

The effects caused by reflector surface pillows and aperture cables on RF performance were determined. The test uses models that were designed to be replicas of a quad aperture at the proper F/D = 1.50 as provided in the LSST point design. Separate pillow models were machined from solid aluminum sections that simulated the surface contour pillows but on an exaggerated basis. The worse case pillow heights lamda/20 and lamda/5 were machined onto the precision reflector. In addition to the pillow effects, the scattering effects of aperture (Hoop/Column cables) cables were determined. Therefore, simulated quartz and graphite cables were tested with the smooth, lamda/20, and lamda/5 reflector models. T.M.

PRELIMINARY ANALYTICAL RESULTS USING SURFACE CURRENT INTEGRATION FOR PREDICTING EFFECTS OF SURFACE PILLOWS ON RF PERFORMANCE

C. E. Farrell and D. A. Strange *In* NASA. Langley Research Center Large Space Systems Technol., Pt. 2, 1981 Mar. 1982 p 583-590 (For primary document see N82-19257 10-15)

Avail: NTIS HC A21/MF A01 CSCL 22B

An overview of the fast integral RF evaluation (FIRE) program is presented. This program uses surface current integration to evaluate RF performance of antenna systems. It requires modeling of surfaces in X, Y, Z coordinates along equally spaced X and Y grids with Z in the focal directon. The far field contribution of each surface point includes the effects of the Z-component of surface current which is not included in the aperture integration technique. Because of this, surface current integration is the most effective and inclusive technique for predicting RF performance on non-ideal reflectors. Results obtained from use of the FIRE program and an aperture integration program to predictt RF performance of a LSS antenna concept are presented. T.M.

RF VERIFICATION TASKS UNDERWAY AT THE HARRIS CORPORATION FOR MULTIPLE APERTURE REFLECTOR SYSTEM

T. A. Gutwein *In* NASA. Langley Research Center Large Space Systems Technol., Pt. 2, 1981 Mar. 1982 p 591-604 (For primary document see N82-19257 10-15)

Avail: NTIS HC A21/MF A01 CSCL 22B

Mesh effects on gain and patterns and adjacent aperture coupling effects for 'pie' and circular apertures are discussed. Wire effects for Harris model with Langley scale model results included for assessing D/lamda effects, and wire effects with adjacent aperture coupling were determined. Reflector surface distortion effects (pillows and manufacturing roughness) were studied. T.M.

N82-19268*# National Aeronautics and Space Administration. Langley Research Center, Hampton, Va.

DISTORTED REFLECTOR ANTENNA PERFORMANCE PREDICTION TECHNIQUE

M. C. Bailey *In its* Large Space Systems Technol., Pt. 2, 1981 Mar. 1982 p 605-610 (For primary document see N82-19257 10-15)

Avail: NTIS HC A21/MF A01 CSCL 22B

The application of a 3-D curve-fit technique to the electromagnetic analysis of reflector antennas is presented. the reflector antennas are described by the coordinates of an irregular distribution of measured points on the reflector surface. The reflector antenna analysis method used to calculate radiation patterns is geometric-optics with aperture-integration since an efficient and accurate computer code was readily available for modification. T.M.

N82-19269*# National Aeronautics and Space Administration. Langley Research Center, Hampton, Va.

MEASUREMENT OF LOSSES OF MESH MEMBRANE MATERIAL FOR REFLECTOR APPLICATIONS WITH AN S-BAND RADIOMETER

Hans-Juergen C. Blume *In its* Large Space Systems Technol., Pt. 2, 1981 Mar. 1982 p 611-620 (For primary document see N82-19257 10-15)

Avail: NTIS HC A21/MF A01 CSCL 22B

The spatial resolution, the frequency of revisits, and the accuracy requirements for the detection of Earth surface parameters from space force the satellite designers to consider large space structures for microwaves. Some Earth surface parameters are only detectable with radiometers. Because the large reflectors should be much lighter than solid and deployable reflectors, mesh membrane material is considered to be used as the reflector. It is essential to determine the emissivity of the reflecting material even when close to zero to estimate the accuracy of the radiometer measurement. An existing S-band radiometer was used to determine the loss of a 1 sq m pretensioned mesh first in a field experiment and later in a well shielded laboratory set-up. The models for retrieving the emissivity of the mesh are described in detail and the equivalent losses for different mesh positions were calculated. T.M.

N82-19270*# Harris Corp., Melbourne, Fla.

THE SUITABILITY OF MESH MEMBRANE MATERIAL FOR RADIOMETER REFLECTOR APPLICATIONS

W. F. Croswell *In* NASA. Langley Research Center Large Space Systems Technol., Pt. 2, 1981 Mar. 1982 p 621-630 (For primary document see N82-19257 10-15)

Avail: NTIS HC A21/MF A01 CSCL 22B

The standard measurement system used for evaluating the transmission properties of mesh used in deployable antennas is shown schematically. The system allows the rapid measurement of the transmissivity of mesh samples at a given incidence angle. The analysis has the advantage in that the effects of conductivity loss, junction impedance, and cross polarization can be treated. T.M.

CONCEPTED DESIGN OF A SURFACE MEASUREMENT SYSTEM FOR LARGE DEPLOYABLE SPACE ANTENNAS

R. S. Neiswander *In* NASA. Langley Research Center Large

Space Systems Technol., Pt. 2, 1981 Mar. 1982 p 631-640 (For primary document see N82-19257 10-15)
Avail: NTIS HC A21/MF A01 CSCL 22B

The sensor system is in essence a point design, specifically interfacing with the Harris, Inc., 1000 meter deployable mesh communication antenna. The design can, without large modification, be adapted to other large deployable antennas such as the Lockheed Wrap-rib, the General Dynamics Precision Erectable Truss and the TRW Advanced Sunflower antennas. Measurements are optical displacements. The elements of the system are a central cluster of receivers near the apex of the antenna and active bright targets at the antenna. The cluster defines a single coordinate frame from which all surface positions are referenced. The receivers continuously observe an extended array of sample points located throughout the reflecting surface and its supporting structure. For the Harris antenna, the surface samples are at the mesh gore lines and at the supporting hoop. Output data is in real-time, compatible with on-board processing and active control of antenna figure. Lifetime of the system is at least 10 years continuous operation in space. T.M.

LAND MOBILE SATELLITE SYSTEMS (LMSS): SINGLE APERTURE SYSTEM DESIGN
W. J. Weber, III *In* NASA. Langley Research Center Large Space Systems Technol., Pt. 2, 1981 Mar. 1982 p 797-780 (For primary document see N82-19257 10-15)
Avail: NTIS HC A21/MF A01 CSCL 22B

The large size of the UHF antenna on the satellite provides two advantages with respect to the Land Mobile Satellite System design. It provides tremendous gain for both transmitting and receiving at the satellite and enables very simple, low power equipment in the mobile vehicle. The UHF antenna for this study was selected to have an aperture of 55 meters. This implies a beamwidth of roughly 0.45 degree and requires 87 beams to cover the continental United States. L.F.M.

STRUCTURAL ASSEMBLY DEMONSTRATION EXPERIMENT

Jack W. Stokes *In* NASA. Langley Research Center Large Space Systems Technol., Pt. 2, 1981 Mar. 1982 p 841-858 refs (For primary document see N82-19257 10-15)
Avail: NTIS HC A21/MF A01 CSCL 22B

The experiment is of an operational variety, designed to assess crew capability in Large Space System (LSS) assembly. The six Structural Assembly Demonstration Experiment objectives include: (1) the establishment of a quantitative correlation between LSS neutral buoyancy simulation and on-orbit assembly operations in order to enhance the validity of those assembly simulations; (2) the quantitative study of the capabilities and mechanics of human assembly in an Extravehicular Activity environment; (3) the further corroboration of the LSS Assembly Analysis cost algorithm through the obtainment of hard data base information; (4) the verification of LSS assembly techniques and timeless, as well as the identification of crew imposed loads and assembly aid requirements and concepts; (5) verification of a Launch/Assembly Platform structure concept for other LSS missions; and (6) lastly, to advance thermal control concepts through a flexible heat pipe.
L.F.M.

N82-19283*# Massachusetts Inst. of Tech., Cambridge.

STRUCTURAL ASSEMBLY DEMONSTRATION EXPERIMENT (SADE) EXPERIMENT DESIGN

D. L. Akin and M. L. Bowden *In* NASA. Langley Research Center Large Space Systems Technol., Pt. 2, 1981 Mar. 1982 p 859-880 (For primary document see N82-19257 10-15)
Avail: NTIS HC A21/MF A01 CSCL 22B

The Structural Assembly Demonstration Experiment concept is to erect a hybrid deployed/assembled structure as an early space experiment in large space structures technology. The basic objectives can be broken down into three generic areas: (1) by performing assembly tasks both in space and in neutral buoyancy simulation, a mathematical basis will be found for the validity conditions of neutral buoyancy, thus enhancing the utility of water as a medium for simulation of weightlessness; (2) a data base will be established describing the capabilities and limitations of EVA crewmembers including effects of such things as hardware size and crew restraints; and (3) experience of the M.I.T. Space Systems Lab in neutral buoyancy simulation of large space structures assembly indicates that the assembly procedure may create the largest loads that a structure will experience during its lifetime. Data obtained from the experiment will help establish an accurate loading model to aid designers of future space structures.

SOLAR ARRAY FLIGHT EXPERIMENT (SAFE)

R. W. Schock *In* NASA. Langley Research Center Large Space Systems Technol., Pt. 2, 1981 Mar. 1982 p 881-891 (For primary document see N82-19257 10-15)
Avail: NTIS HC A21/MF A01 CSCL 22B

The solar arrays flight experiment consists of four experiments on two different flights. The first experiment, termed the baseline, has a basic purpose to demonstrate the flight readiness of lightweight solar array technology for solar electric propulsion and other payload power applications. The early availability of this experiment and its basic large space structure characteristics make it a logical candidate to demonstrate other disciplines critical to large space structures. These demonstrations form the basis for three other solar array experiments, two in remote sensing and one in control. All of these experiments are briefly reviewed in this paper.

LARGE SPACE SHUTTLE FLIGHT EXPERIMENT

Lyle M. Jenkins *In* NASA. Langley Research Center Large Space Systems Technol., Pt. 2, 1981 Mar. 1982 p 893-909 (For primary document see N82-19257 10-15)
Avail: NTIS HC A21/MF A01 CSCL 22B

It appears practical to challenge the Orbiter DAP with a large, attached structure. The definition of this capability is a fundamental step in the development of nearly all large space systems currently under consideration. Experiment features may be incorporated that apply to control systems for large space systems such as modal damping devices. In a relatively simple deployable structure, the correlation of flight test results with ground test and analysis should provide a basis for extrapolation to more complex structures. Initial experiment concepts will provide a starting point for the examination of antenna feed mast requirements with the objective changing the design to produce a representative test article. Correlation of construction operations with ground simulations will provide for better task and time-line definition. EVA needs to be a direct benefit to the conduct of the experiment. Early consideration of safety issues is a precaution against defining an unacceptable experiment concept. Integration of many objectives seems feasible and is generally perceived as the only way to justify a relatively expensive experiment.

RETROSPECTIVE ANALYSIS OF SATELLITE THERMAL SYSTEMS M.S. Thesis [ANALISE RETROSPECTIVA DE SISTEMS TERMICOS PARA SATELITE]

Kiyoshi Yoneda Dec. 1981 75 p refs In PORTUGUESE; ENGLISH summary
(INPE-2295-TDL/069) Avail: NTIS HC A04/MF A01

The backward analysis of heat transfer in a satellite is studied. Given heat quantities generated by the Sun and the equipment, and given the component temperatures, the heat transfer coefficients for conduction and radiation are investigated. The mathematical formulation results in an ill conditioned noisy system of linear equations. Two methods for solving the system are discussed: the variable selection and the singular value decomposition methods. The use of the nonnegativity conditions for the heat transfer coefficients are discussed and more general solutions are presented.

OAO-3 END OF MISSION TESTS REPORT

Ford Kalil, F. Jerry Kull, R. McIntosh, S. Ollendorf, Donald L. Margolies, Jim Gemmell, C. Michael Tasevoli, R. S. Polidan, H. Kochevar, Cooper Chapman et al Sep. 1981 170 p refs Prepared in cooperation with Princeton University Observatory and Westinghouse Electric Corp., Pittsburgh
(NASA-TM-83824) Avail: NTIS HC A08/MF A01 CSCL 22A

Twelve engineering type tests were performed on several subsystems and experiment(s) of the OAO 3 spacecraft near its end of mission. The systems tested include: Princeton experiment package (PEP), fine error system guidance, inertial reference unit, star trackers, heat pipes, thermal control coatings, command and data handling, solar array, batteries, and onboard processor/power boost regulator. Generally, the systems performed well for the 8 1/2 years life of OAO 3, although some degradation was noted in the sensitivity of PEP and in the absorptivity of the skin coatings. Battery life was prolonged during the life of the mission in large part by carefully monitoring the charge-discharge cycle with careful attention not to overcharge. S.L.

RANGING AND SYCHRONIZATION BETWEEN NOMINALLY CO-ORBITAL SATELLITES Interim Report
J. W. Schwartz 24 Dec. 1981 16 p refs
(AD-A109272; NRL-8532) Avail: NTIS HC A02/MF A01 CSCL 22/3

A link between two satellites can provide direct measurements of clock synchronism and intersatellite range that are more accurate than estimates obtainable from ground measurements. Moreover these direct measurements can be made continuously with near-zero delays. Two approaches to ranging and synchronization between satellite pairs are 'balanced' systems in which each satellite makes a time-difference measurement, and 'full loop' systems in which a time-difference measurement is made on only one satellite. This report discusses factors which determine the ultimate limitations and capabilities of both approaches, and compares the schemes for applications in which two digital clocks are actually brought into synchronism with accuracies of several nanoseconds. The Naval Surface Weapons Center Aeroprediction Code has been extensively applied to the prediction of static and dynamic aerodynamics of missile configurations. Major extensions have recently been made to the Code, extending its capability to 0 less than or equal to M (infinity) less than or equal to 8 and 0 degrees less than or equal to alpha less than or equal to 180 degrees and improving the transonic and dynamic derivative predictions. The theoretical basis for the Code is reviewed. The Code is evaluated through comparisons of computational examples with experiment for body alone, body-tail, and body-tail-canard configurations. The speed and accuracy of the Code is ideal for use in preliminary design. Representative design charts (generated by the use of the Code) for both the static and dynamic aerodynamic coefficients of a wide variety of configuration components are included. The charts will aid the designer in making preliminary design estimates or for data comparisons. GRA

HYPERVELOCITY TRACK TESTS OF THE NASA GALILEO PROBE HEATSHIELD Final Report, 14 Oct. - 24 Nov. 1980
A. M. Adams AEDC Dec. 1980 19 p refs
(AD-A109042; AEDC-TSR-80-V60) Avail: NTIS HC A02/MF A01 CSCL 22/2

Tests were conducted in a hypervelocity track facility to establish the ablative characteristics of the heatshield material for the NASA/Ames Galileo Probe. Data were obtained from eight shots at launch velocities ranging from 15,850 fps to 17,950 fps. Six of the shots were conducted through an argon environment. The test required the nosetip to be recovered intact. Measurements were made of the model velocity and in-flight surface temperature. A description of the test unit, test article, and test technique is presented herein. Author (GRA)

EXUV. PHASE A STUDY. VOLUME 1: EXECUTIVE SUMMARY Final Report
Paris ESA Nov. 1979 73 p Prepared in cooperation with British Aerospace Dynamics Group, Bristol, England and Dornier-Werke G.m.b.H., Friedrichshafen, West Germany 5 Vol.
(Contract ESTEC-3846/79/NL-MS)
(Rept-44/69/JS/CB-Vol-1; ESA-CR(P)-1481-Vol-1) Avail: NTIS HC A05/MF A01

The study objectives, mission analysis, EXUV system and subsystem guidelines, and development program are summarized. The mission requires an extreme UV telescope whose nominal waveband is from 100 to 912 A, and a soft X-ray telescope in the 5 to 250 A waveband. The EXUV source examination needs spatial resolution and source position accuracy of arcmin order. The observation program is divided into a 6 month slow scan survey of the entire celestial sphere, 6 months complementary survey work, and a 12 month study of specific EXUV sources. A longitudinal satellite configuration with three axis stabilized attitude control is adopted. Thermal control, electrical power subsystems, data handling, and communications subsystems are described. Author (ESA)

Paris ESA Nov. 1979 282 p Prepared in cooperation with British Aerospace Dynamics Group, Bristol, England and Dornier-Werke G.m.b.H., Friedrichshafen, West Germany 5 Vol.
(Contract ESTEC-3846/79/NL-MS)
(Rept-44/69/JS/CB-Vol-2A; ESA-CR(P)-1481-Vol-2A) Avail: NTIS HC A13/MF A01

A longitudinal configuration comprising a service module and two telescope assemblies (X-ray, UV) was adopted for the EXUV satellite. The telescopes are parallel to launcher (Ariane) longitudinal axis. The advantages of longitudinal configuration over transverse are: less demanding dynamic balance requirements; payload growth potential; no solar scattering hazard from service module; and less sensitivity of payload contamination from thrusters. The satellite is three axis spin stabilized. The service module is a parallelipipedic box with two equipment floors supported by a central cylinder. The payload is on top of the service module. Each telescope is cantilevered at the focal plane assembly interface, using a statically determinate mounting system consisting of three sliding trunnions with spherical bearings. Author (ESA)

(Rept-44/69/JS/CB-Vol-2B; ESA-CR(P)-1481-Vol-2B) Avail: NTIS HC A16/MF A01

The EXUV satellite power storage/conditioning system, communication subsystem, data handling subsystem and attitude determination/control subsystem are described. During the launch and acquisition phases batteries supply all power required until the solar array is oriented towards the Sun. During the second year of operation the payload must be switched off for battery recharging. The telemetry system transmits 14 Kbits/sec scientific data to ground stations and 2 Kbit/sec housekeeping data. A 750 bit/sec telecommand rate ensures a 33 s sky map reloading. About 0.25 sec is required for two on/off commands. The onboard data processing system which is under ground control handles satellite orientation, payload activites, satellite housekeeping and scientific data transmission. Three axis stabilization is achieved by continuous x axis pointing towards the Sun with a simultaneous roll motion at nearly constant rate. Author (ESA)

NTIS HC A04/MF A01

The optical, mechanical, thermal, command/data interfaces of the EXUV X-ray and UV telescopes are defined, along with mass properties, ground handling, cleanliness, power requirements and budget. The telescopes are mounted on a support which also accommodates two star trackers forming part of the satellite attitude control system. Tracker/telescope interface is treated since maintenance of alignment between them is crucial to mission success. Advantages resulting from commonality between the telescopes include ease and cost of manufacture, development and testing. Accommodation and integration of the payload are facilitated.

(Contract ESTEC-3846/79/NL-MS)
(Rept-44/69/JS/CB-Vol-4; ESA-CR(P)-1481-Vol-4) Avail: NTIS HC A04/MF A01

Model utilization in the EXUV satellite development program is discussed and a master time schedule is outlined. Assembly, integration, test and launch plan are described. Ground support equipment specifications are given. A combination prototype/flight model offers large cost savings, as does a structural/thermal model. The master schedule comprises a 12 month project definition phase and a 36 month development/protoflight phase. Integration and test sequences include launch operations, structure/thermal model tests, engineering model tests, and prototype/flight model tests. Ground support equipment consists, where possible, of concepts, designs and test equipment from previous ESA programs.

ON THE DESIGN OF MISSILE MODELS FOR STATIC FORCE MEASUREMENTS IN WIND TUNNELS

Helmut Esch Aug. 1981 88 p refs In GERMAN; ENGLISH summary
(DFVLR-Mitt-81-21) Avail: NTIS HC A05/MF A01; DFVLR, Cologne DM 15.65

A computer program was developed to aid in the design of missile models, stings and balances for wind tunnel tests at high angle of attack. The high normal forces encountered in such tests, especially for slender missile configurations, can lead to overload of the balance or to contact between model and sting. Design optimization will help to increase the angle of attack range. Model dimensioning, force fields, and stress analysis in balance and sting are described and an optimization of geometrical parameter with respect to stress and balance exploitation is performed. The results show that improvements can be obtained by optimization of the sting length, usage of sting materials with high elasticity modulus, conical shaping of the balance sting, and by optimization of the ratio of sting diameter to model bore.

PROPULSION SYSTEM IGNITION OVERPRESSURE FOR THE SPACE SHUTTLE

R. S. Ryan, J. H. Jones, S. H. Guest, H. G. Struck, M. H. Rheinfurth, and V. S. Verferaime Dec. 1981 70 p refs
(NASA-TM-82458) Avail: NTIS HC A04/MF A01 CSCL 20H

Liquid and solid rocket motor propulsion systems create an overpressure wave during ignition, caused by the accelerating gas particles pushing against or displacing the air contained in the launch pad or launch facility and by the afterburning of the fuel-rich gases. This wave behaves as a blast or shock wave characterized by a positive triangular-shaped first pulse and a negative half-sine wave second pulse. The pulse travels up the space vehicle and has the potential of either overloading individual elements or exciting overall vehicle dynamics. The latter effect results from the phasing difference of the wave from one side of the vehicle to the other. This overpressure phasing, or delta P environment, because of its frequency content as well as amplitude, becomes a design driver for certain panels (e.g., thermal shields) and payloads for the Space Shuttle. The history of overpressure effects on the Space Shuttle, the basic overpressure phenomenon, Space Shuttle overpressure environment, scale model overpressure testing, and techniques for suppressing the overpressure environments are considered.

(NAS8-33808)
(NASA-CR-161945; LMSC-HREC-TR-D784490) Avail: NTIS HC A08/MF A01 CSCL 21H

This structural dynamic analysis supports development of the SSME by evaluating components subjected to critical dynamic loads, identifying significant parameters, and evaluating solution methods. Engine operating parameters at both rated and full power levels are considered. Detailed structural dynamic analyses of operationally critical and life limited components support the assessment of engine design modifications and environmental changes. Engine system test results are utilized to verify analytic model simulations. The SSME main chamber injector assembly is an assembly of 600 injector elements which are called LOX posts. The overall LOX post analysis procedure is shown. S.L.

ANALYSIS OF MULTIPATH INTERFERENCE FOR APATS
G. A. Robertshaw Hanscom AFB, Mass. Electronic Systems Div. Dec. 1981 68 p refs
(Contract F19628-81-C-0001; AF Proj. 4290)
(AD-A108797; MTR-8366; ESD-TR-81-255) Avail: NTIS HC A04/MF A01 CSCL 09/6

Multipath propagation and the resulting interference are theoretically analyzed for a ballistic missile re-entry vehicle (RV) to aircraft telemetry link in order to predict performance parameters for the ARIA Phased Array Telemetry System (APATS). A basic two-path model incorporating direct and specularly reflected transmission is presented. Model calculations, which take into account RV and APATS antenna gain, polarization, sea state and Doppler shift, yield the depth and frequency of fade anticipated for several mission scenarios. RF fades associated with RV antenna pattern nulls and modulation distortion resulting from a combination of Doppler shift and relative path delay are tentatively identified as the principal sources of link degradation which will limit APATS support altitudes. Areas of continuing interest and work are described. Author (GRA)

Phase 2 of the ARIA Phased Array Telemetry System (APATS) test program will include tower-air-ground (TAG) testing of system sensitivity, tracking capability, and other functions. As presently envisioned, these test configurations involve propagation paths for which transmitter and receiver (APATS) heights are small relative to baseline separations and interference caused by multipath propagation must be considered in the context of the test objectives. A two-path propagation model which incorporates specular reflection from the Earth is developed and calculations are performed for typical test configurations. The anticipated effects and ramifications of multipath interference are discussed and specific test configurations are recommended. GRA

(CNES-85.55.00; ESA-CR(P)-1491) Avail: NTIS HC A06/MF A01

The development of a positioning system with 5 to 10 cm trajectory accuracy and 1 to 2 m orbital accuracy is discussed. Experience gained from existing satellites is adapted in order to develop calculation methods and to deduce the best approach. The proposed system has onboard processing of ranging and tracking data so as to have a single time and frequency reference for the entire tracking operation. It can operate under any weather conditions. Calculations are based on short arcs (half a revolution) with satellite and ground station positions established in relation to one another. The trajectory arc is calculated from a spherical harmonics based global potential model. Simulations for 650 and 850 km altitude show that a higher number of ground stations is needed for 650 km, but otherwise system accuracy is similar. Author (ESA)

DYNAMIC ANALYSIS AND MODELING OF ELECTRODYNAMIC VIBRATION TEST FACILITIES APPLIED TO THE AIBG 160 kN SYSTEM

T. Oeguet and K. Muehlbauer *In* ESA Recent Advances in Space Struct. Design-Verification Tech. Oct. 1981 p 9-25 refs (For primary document see N82-19308 10-18)

Avail: NTIS HC A05/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

Mathematical dynamic models of a typical electrodynamic vibration exciter and of a slip table, including its hydrostatic bearings, are presented which can be coupled with test structure models in order to investigate problems of real vibration testing. Several of the model parameters were determined by direct measurement or calculation. Most of them, however, were obtained by fitting the calculated responses to the corresponding results of various dynamic tests performed with the test facility. The basic modelling procedure, the tests and analyses performed, and the models finally established are surveyed. Author (ESA)

METHODOLOGY OF UNIAXIAL TRANSIENT VIBRATION TESTS FOR SATELLITES

B. Boissin, A. Girard, and J. F. Imbert *In* ESA Recent Advances in Space Struct. Design-Verification Tech. Oct. 1981 p 35-53 refs Submitted for publication (For primary document see N82-19308 10-18)

(Contract ESA-4160/79/NL-AK)

Avail: NTIS HC A05/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

The problem of dependence of test specification on possible variations in launch vehicle and satellite dynamic characteristics is addressed. For most of the low frequency dynamic flight environment of a satellite, transient testing minimizes the risk of under or overtesting inherent to conventional sine testing. The feasibility of such tests on uniaxial electrodynamic shakers is cited. Realistic data for thrust transient, launch vehicle, and satellite characteristics are defined and dynamic response analysis is performed after a survey of current methods. Possible variations of parameters are identified and a sensitivity analysis is carried out. It is found that the frequency variations have the largest influence and must be considered simultaneously. A numerical procedure is developed that computes a worst shock spectrum envelope. Author (ESA)

ACHIEVEMENTS IN MULTI-AXES TESTING USING SERVOHYDRAULIC VIBRATION SYSTEM

W. Raasch *In* ESA Recent Advances in Space Struct. Design-Verification Tech. Oct. 1981 p 55-71 refs (For primary document see N82-19308 10-18)

Avail: NTIS HC A05/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

A multi-axes vibration table is described which was used in tests conducted to prove the limitations of reproducing specified acceleration time histories in three dimensions. Besides the good reproduction accuracy of transient acceleration signals, results show essential elastomechanic properties of the test specimens can be determined, using multi-axes transients as excitations. This means a drastic reduction in test duration. It is also found that multi-axes excitation may cause an amplification of vibration level in one axis if the excitation level in the orthogonal axis is magnified. Nevertheless, transient excitations result in lower vibrational response than sine sweep excitation. Author (ESA)

GIOTTO COMET HALLEY MISSION, PHASE A STUDY. VOLUME 1: SPACECRAFT DESIGN Final Report

Paris ESA May 1980 125 p refs Prepared in cooperation with Dornier-Werke G.m.b.H., Friedrichshafen, West Germany

(Contract ESA-4254/80/NL-MS)

(ESS/SS/1000; ESA-CR(P)-1489) Avail: NTIS HC A06/MF A01

A spacecraft for a post perihelion encounter with Comet Halley was designed. The GEOS design and hardware are used, subject to detail changes to subsystems. An X band telemetry system provides a bit rate of 40 Kbit/sec (under favorable weather conditions) using a despun, high gain, offset fed antenna. A dust shield protects the spacecraft from damage due to particle impact during encounter, the spin axis being aligned with the relative velocity vector. The spacecraft is suitable for Ariane launch, even if another payload is carried. Author (ESA)

A STUDY OF LIQUID HYDROGEN COOLED LO-2/LH-2 ROCKET COMBUSTOR WITH SLOTTED WALL LINER

Nobuyuki Yatsuyanagi, Masayuki Niino, Akinaga Kumakawa, Hiromi Gomi, Akio Suzuki, Hiroshi Sakamoto, Masaki Sasaki, and Eiji Sogame Aug. 1981 99 p refs In JAPANESE; ENGLISH summary

(NAL-TR-679; ISSN-0389-4010) Avail: NTIS HC A05/MF A01

An experimental investigation of the combustion and the heat transfer characteristics of a liquid oxygen-liquid hydrogen rocket combustor was conducted. The liquid hydrogen cooled chamber with a slotted wall liner made of OFHC copper for coolant passage was designed for use at a thrust level of 300 kgf with a nominal combustion chamber pressure of 35 atm. The following results were noted. The regenerative cooling combustion tests at the design thrust and the combustion pressure were sucessfully performed. The slotted wall chamber was revealed to have a sufficiently high heat transfer rate and enough cooling margin even in this small thrust level combustor. In the independent cooling experiments, a new thermal design equation was obtained, which should be recommended as the design equation for regeneratively cooled rocket engines. As a result, many design equations previously obtained from Joule heated tube experiments proved to be not suitable for the design of slotted wall combustors. Author

THE DAEDUT/PMLTNO HYBRID ROCKET MOTOR FACILITIES

H. F. R. Schoeyer and P. A. O. G. Korting May 1981 39 p refs Prepared in cooperation with Prins Maurits Lab. TNO

(VTH-LR-321; PML-1981-103) Avail: NTIS HC A03/MF A01

Hybrid rocket motors are introduced, and research/test facilities are described, including major system components and operational procedures. Aspects of the hybrid combustion process, which is characterized by the fuel and oxidizer being in different states of aggregation, are covered, including turbulence of oxidizer flow and fuel regression rate. A model of the combustion process is compared with experimental results for PMMA/oxygen; polyethylene/peroxide; rubber/nitric oxide; and polyethylene/oxygen. For PMMA/O2, the model agrees reasonably well with experiments, although at low pressures discrepancies between model and experiment are observed. Polyethylene and H2O2 also follow the predicted behavior. Doubts arise whether the model is applicable to metal enriched fuels. Only lithium enriched fuels show reasonable agreement between theory and experiment. Author (ESA)

THE ATTEMPTED SYNTHESES OF LOW OXIDATION STATE, ORGANOMETALLIC DERIVATIVES OF ALUMINUM, GALLIUM AND INDIUM. A NEW SYNTHESIS Al(CH2SiMe3)3

O. T. Beachley, Jr., C. Tessier-Youngs, R. G. Simmons, and R. B. Hallock 19 Mar. 1981 20 p refs Submitted for publication

(Contract N00014-78-C-0562; NR Proj. 053-686)

(AD-A109333; TR-8) Avail: NTIS HC A02/MF A01 CSCL 07/3

The synthesis of KAl(CH2SiMe3)2 by a reductive elimination reaction between Al(CH2SiMe3)3 and KH has been attempted but a pure product could not be isolated. The reactants combine at 70 C to form KAl(CH2SiMe3)3H, a white pyrophoric solid, which has been fully characterized. A molecular weight study indicates the presence of a mixture of monomeric and dimeric species in benzene solution. The pyrolysis of KAl(CH2SiMe3)3H at 205 C produces Si(CH3)4 but also CH4. The formation of Si(CH3)4 suggests that KAl(CH2SiMe3)2 might have been formed but the presence of CH4 indicates that a decomposition reaction occurs either prior to or after the formation of KAl(CH2SiMe3)2. The reactions of mixtures of KH-Al(CH3)3, KH-Ga(CH3)3, NaH-Ga(CH3)3, KH-In(CH3)3 and NaH-In(CH3)3 have also been investigated in order to determine the role of the organic substituent in the attempted reductive elimination reactions. In all cases the formation of CH4 during pyrolysis of KAl(CH3)H, KGa(CH3)3H and the other reaction mixtures is consistent with the occurrence of reduction but no pure compounds could be isolated. A new synthetic route to Al(CH2SiMe3)3 from AlBr3 and LiCH2SiMe3 in refluxing hexane is also described.

The objective of this research was to study the effects of temperature, ionic strength, and presence of additional organics on the aqueous solution/gas equilibria of a variety of chlorinated organic compounds: 1,1,1-trichloroethane, tetrachloroethylene, trichloroethylene, chloroform, methylene chloride, and o-dichlorobenzene. Henry's Constant for each alone was determined in pure water over the temperature range, 10 deg - 30 deg C, using an equilibrium, batch stripping reactor. Data were fit to a regression equation. Henry's constants for selected organic solvents were determined at ionic strengths up to 1.0 M (KCl). Results suggest that ionic strength effects on activity can be ignored in systems processing ionic strengths less than 0.07 M. Henry's constants for organic solvents dissolved in multicomponent aqueous mixtures of other organic solvents were measured. It was found that relatively small concentrations of the organic solvents in water mutually affected one another's volatility.

DEUTERIUM HYDROGEN ISOTOPE RATIOS IN ORGANIC MATTER, MINERAL OILS, AND NATURAL GASES Final Report, Mar. 1981

Martin Schoell Bonn Bundesministerium fuer Forschung und Technologie Nov. 1981 79 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie

(BMFT-FB-T-81-204; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 16.80

The dependence of the D/H isotope ratio in mineral oils and natural gases on the type of oil source rock and its usefulness for oil exploration were investigated. A technique was developed capable of determining D/H ratios in organic matter with an accuracy of + or - 2 pro mille. Results show that the isotope ratio in oils are indeed transferred by the mother rocks. Exchange experiments demonstrate that this ratio is not affected by exchange with water, even on geological time scales. The deuterium concentration in the methane of thermally formed natural gases is shown to be dependent on the maturity of the source organic matter, not on the type of mother rock. Cross correlation between the C14/C13 and the D/H ratios of natural gas methanes leads to a genetic diagram characterizing the origin of these gases. A criterium was also developed for the identification of bacterial natural gases. Author (ESA)

BOLT CLAMPUP RELAXATION IN A GRAPHITE/EPOXY LAMINATE

K. N. Shivakumar and John H. Crews, Jr. Jan. 1982 32 p refs Presented at ASTM Symp. on the Long-Term Behavior of Composites, Williamsburg, Va., 9-10 Mar. 1982
(NASA-TM-83268) Avail: NTIS HC A03/MF A01 CSCL 11D

A simple bolted joint was analyzed to calculate bolt clampup relaxation for a graphite/epoxy (T300/5208) laminate. A viscoelastic finite element analysis of a double-lap joint with a steel bolt was conducted. Clampup forces were calculated for various steady-state temperature-moisture conditions using a 20-year exposure duration. The finite element analysis predicted that clampup forces relax even for the room-temperature-dry condition. The relaxations were 8, 13, 20, and 30 percent for exposure durations of 1 day, 1 month, 1 year, and 20 years, respectively. As expected, higher temperatures and moisture levels each increased the relaxation rate. The combined viscoelastic effects of steady-state temperature and moisture appeared to be additive. From the finite-element analysis, a simple equation was developed for clampup force relaxation. This generalized equation was used to calculate clampup forces for the same temperature-moisture conditions as used in the finite-element analysis. The two sets of calculated results agreed well. RELATIVE EFFECTS OF A GRAPHITE FIBER REINFORCED EPOXY COMPOSITE AND NICKEL-ALUMINUM BRONZE ON A CATHODIC PROTECTION SYSTEM IN SEAWATER Interim Report

Harvey P. Hack and Aleksander B. Macander Nov. 1981 28 p
(AD-A109078; DTNSRDC/SME-81/73) Avail: NTIS HC A03/MF A01 CSCL 11/4

This study was designed to quantify the cathodic efficiency of a graphite fiber reinforced epoxy laminated composite material by comparing the amount of zinc consumption from a sacrificial-anode cathodic protection system on the composite with the consumption due to a nickel-aluminum bronze in seawater. Specimens of the composite or of bronze were electrically coupled to anode zinc in seawater at flow velocities of 0 and 10 meters per second for up to 270 days. The composite did not cause a significantly different current demand than bronze on the zinc sacrificial cathodic protection system. It was noted that this represents a worst-case condition for the composite, since the specimens were deliberately prepared with the graphite-fiber ends exposed on the test surface. Author (GRA)

THE DEVELOPMENT OF A LOW VELOCITY IMPACT METHODOLOGY FOR HYBRID MATERIAL SYSTEMS Final Report, Apr. 1980 - Apr. 1981

S. V. Hayes and E. F. Rybicki Jul. 1981 102 p refs
(Contract N00019-80-C-0265)
(AD-A109282; ATC-R-92000/1CR-63) Avail: NTIS HC A06/MF A01 CSCL 11/4

A design methodology for hybrid structures which describes the extent of damage and associated failure modes due to low velocity impact was undertaken. Hybrids can provide a synergistic improvement in damage resistance caused by foreign body low velocity impact over graphite/epoxy material and when properly designed, enhance the visual and NDI damage detection threshold of the baseline material. Improvements in the visible and NDI damage detectability threshold of graphite/epoxy material, subject to low velocity impact, via proper placement and use of Kevlar plies and metallic coatings within this baseline material were exhibited. Correlation between the math model and the damage tests was used to validate the model. Residual strength tests of damaged panels were run to quantify the static strength reduction experience. The math model was based upon physical parameters identified through experimental testing. These included transverse impact of hybrid and graphite-epoxy panels and tensile tests of the target materials at elevated strain rates. High speed photography of the impact events was used to provide dynamic modes of failure. GRA

MOISTURE AND THERMAL EXPANSION OF COMPOSITE MATERIALS M.S. Thesis. Interim Report

Douglas S. Cairns, Donald F. Adams, and David E. Walrath Nov. 1981 210 p refs
(Contract DAAG29-79-C-0189)
(AD-A109131; UWME-DR-101-104-1; ARO-16370.5-MS) Avail: NTIS HC A10/MF A01 CSCL 11/4

An experimental technique is presented for determining the moisture and thermal expansion coefficients of polymers, and polymer-matrix composite materials. Materials tested included Hercules 3501-6 neat epoxy resin, Hercules AS/3501-6 graphite/epoxy composite and Owens-Corning S2 glass fibers in the same Hercules 3501-6 epoxy matrix. Correlations of the experimentally determined moisture and thermal expansion properties with a nonlinear finite element micromechanics analysis are presented. Thermal expansion results for all three materials, both dry and moisture-conditioned, were obtained. Diffusivity constants were also experimentally determined. It is demonstrated that the moisture and thermal expansion of composite materials can be determined experimentally, and predicted numerically with generally good results. Author (GRA)

IMPROVEMENT OF THE X-RAY PROCEDURE FOR THE DETECTION OF DEFECTIVE ADHESIONS IN FIBER COMPOSITES BY ADDING CONTRAST SUBSTANCES TO THE ADHESIVES [VERBESSERUNG DES ROENTGENVERFAHRENS FUER DIE ERKENNBARKEIT VON FEHLKLEBUNGEN BEI FASERVERBUNDETEILEN DURCH BEIMENGUNG VON KONTRASTMITTELN IM KLEBSTOFF]

Bernd Lembke Bonn Bundesministerium der Verteidigung 1981 61 p refs In GERMAN; ENGLISH summary
(BMVg-FBWT-81-11) Avail: NTIS HC A04/MF A01; DOKZENTBw, Bonn DM 30

The detectability of defective adhesions in carbon fiber composites (CFC) by X-ray procedure is shown to be improved by increasing the absorption capacity of the adhesive, adding the contrast substances barium sulfate or aluminum. The adhesives BSL 313 A and AF 126-2 were tested with and without additives on metal-metal adhesion samples for strength and aging behavior and its defect detectability. The CFC laminate adhesions with defined defects were X-ray tested under various aging conditions with respect to tensile shearing strength, pealing resistance, shear deformation, and dynamic strength. The most favorable results were achieved with 12% of BaSO4 added to BSL 313 A, or with 9% added to AF 126-2. Specifications for the production of the adhesive sheet are provided for these adhesive systems. Author (ESA)

DESIGN AND FUNCTION OF AN EXPERIMENTAL WING BOX USING CARBON FIBER REINFORCED EPOXY VATLIT-C'85 [ONTWERP EN FABRICAGE VAN EEN EXPERIMENTELE VLEUGELDOOS UITGEVOERD IN KOOLSTOFVEZEL VERSTERKTE EPOXY VATLIT-C'85]

W. H. M. vanDreumel and A. H. J. Verlaan Apr. 1981 13 p refs In DUTCH
(VTH-LR-318) Avail: NTIS HC A02/MF A01

Design and construction of an experimental wing torsion box for the VATLIT project are described. Carbon fiber reinforced epoxy was used, starting with a supporting skin. The filters are oriented under + or - 45 deg. The prismatic box is made of two identical parts, bolted together. The sandwich construction provides bending stiffness. The sandwich core material is Nomex. Unidirectional netto prepreg material added between the fibers drastically increases the glueing surface and improves uniform load transfer without extreme stress concentrations. The dimensioning of the 1100 x 600 x 160 mm box was based on a 85 kNm bending moment, a 46 kN cross-force and a 25.5 kNm torsion moment. Author (ESA)

SHEAR DIFFUSION IN SANDWICH SPECIMENS HAVING GLASS REINFORCED PLASTIC FACE PLATES WITH PAPER HONEYCOMB CORES B.S. Thesis
A. M. Ahmad Mustapha and C. K. Liew Jun. 1981 48 p refs
(BU-270) Avail: NTIS HC A03/MF A01

The behavior of a glass reinforced plastic (GRP) strap used to join the face plates of two separate GRP skinned, paper honeycomb sandwich specimens, subjected to tensile loads up to 1.5 kN was investigated. The paper honeycomb core was 8.8 mm thick with 1/8 in. cell size. The average thickness of each face plate was 0.5 mm. Results indicate that strap length and thickness taper of the strap influence the load diffusion process. Specimen length is found to have very little effect. The theoretical model developed gives good, but conservative, correlation with experimental results. Moduli of the specimen found from three point bending tests are Young's modulus of the face plates symptotic to 15,000 N/sq mm and shear modulus of the core asymptotic to 10 N/sq mm. Author (ESA)

ANGULAR MOMENTUM ALIGNMENT IN NOZZLE EXPANSIONS OF GAS MIXTURES Ph.D. Thesis
William Raymond Sanders 1981 84 p
Avail: Univ. Microfilms Order No. 8129209

Nozzle expansions of gas mixtures containing I2 were examined to determine the degree of alignment of the axes of rotation of the I2 molecules. Conditions were chosen to produce a velocity difference between the components of the mixtures. Thus a test of the suggestion that nonisotropic velocity distributions in the flow enhance the degree of alignment occurring in molecular beams of nonspherical particles is provided. Classical trajectory calculations were carried out for 350 I2 molecules experiencing ten successive collisions with Ar atoms simulating a nozzle expansion exhibiting a significant degree of velocity slip. After each collision, the degree of alignment of the I2 molecules was determined. An argon ion laser was used to induce I2 fluorescence in expansions of I2 and CO2 from a slit nozzle. From measurements of the fluorescence intensities plane polarized parallel and perpendicular to the flow direction, the degree of polarization of the laser induced fluorescence was calculated. An equation is derived which relates I2 to the degree of polarization molecules used in the trajectory calculations. It is concluded that nonisotropic velocity distributions in the flow are necessary for the production of large degrees of alignment in light of the very small alignments found in earlier studies of pure I2 molecular beams. EFFECT OF NUCLEAR SPIN ON CHEMICAL REACTIONS AND INTERNAL MOLECULAR ROTATION Ph.D. Thesis
Larry Lee Sterna 1981 352 p
Avail: Univ. Microfilms Order No. 8200285

The magnetic isotope effect is studied and results are presented for the separation of C13 and C12 isotopes. Two models are included in the theoretical treatment of the effect, and geminate recombination is calculated. Both models contain terms which account for loss of radicals due to competitive chemical reactions. The two reactions studied are photolysis of benzophenone and toluene and the photolytic decomposition of dibenzylketone(1,3-diphenyl-2-propanone). The theory and results for the use of Zeeman spin-lattice relaxation as a probe of methyl group rotation in the solid state are presented. Experimental results are presented for the time and angular dependences of rotational polarization, the methyl group magnetic moment, and methyl-methyl steric interactions. Dissert. Abstr.

PERCOLATION AND CONDUCTION PHENOMENA IN DISORDERED COMPOSITE MEDIA Ph.D. Thesis
Philip Henry Winterfeld 1981 320 p
Avail: Univ. Microfilms Order No. 8126041

A model of a chaotic composite is presented. Space is subdivided into granular regions and a fraction of grains, chosen at random, are labeled conducting, the rest not. A chaotic composite is modeled as a continuum. A Voronoi tessellation is constructed. Algorithms are outlined to construct the tessellation in two and three dimensions and the tessellation's geometrical statistics are obtained. A two dimensional chaotic composite is modeled by selecting at random a given number of polygons in a tessellation and labelling them conducting, the rest nonconducting. Percolation properties obtained are the cluster distribution, the percolation threshold and the percolation probability. Conduction properties are obtained by a network reduction and by finite element analysis. Two finite element analyses arise, one from imposing a potential drop across the system and another from imposing a current flow through it, that yield upper and lower bounds to the conductivity, respectively. By refinement of the finite element technique, convergence of the bounds results. Percolation and conduction properties of composites generated from the Voronoi tessellation are compared to those from regular tessellations, i.e., the square, triangular and hexagonal.

CHEMICAL DESULPHURISATION OF COAL
Geoffrey F. Morrison Jun. 1981 72 p refs
(ICTIS-TR-15; ISBN-92-9029-066-8) Copyright. Avail: Issuing Activity

The forms of organic and pyritic sulfur in coal and the chemical reactions these may undergo are assessed. Processes for the chemical cleaning of coal are described and evaluated, including wet oxidation, chlorinolysis, hydrothermal, microwave, and chemical comminution processes. The additional sulfur removed by chemical as compared to physical cleaning processes is insufficient to justify the additional complexity and cost of preparation. More research is required into the modes of occurrence and chemistry of sulfur in coal, particularly of organic sulfur, before the efficiency of the chemical cleaning of coal can be improved. NASA REDOX CELL STACK SHUNT CURRENT, PUMPING POWER, AND CELL PERFORMANCE TRADEOFFS Final Report

Norman Hagedorn, Mark A. Hoberecht, and Lawrence H. Thaller Feb. 1982 33 p refs
(Contract DE-AI01-80AL-12726)
(NASA-TM-82686; DOE/NASA/12726-11; E-967) Avail: NTIS HC A03/MF A01 CSCL 10C

The NASA Redox energy storage system is under active technology development. The hardware undergoing laboratory testing is either 310 sq. cm. or 929 sq. cm. (0.33 sq. ft. or 1.0 sq. ft. per cell active area with up to 40 individual cells connected to make up a modular cell stack. This size of hardware allows rather accurate projections to be made of the shunt power/pump power tradeoffs. The modeling studies that were completed on the system concept are reviewed along with the approach of mapping the performance of Redox cells over a wide range of flow rates and depths of discharge of the Redox solutions. Methods are outlined for estimating the pumping and shunt current losses for any type of cell and stack combination. These methods are applicable to a variety of pumping options that are present with Redox systems. The results show that a fully developed Redox system has acceptable parasitic losses when using a fixed flow rate adequate to meet the worst conditions of current density and depth of discharge. These losses are reduced by about 65 percent if variable flow schedules are used. The exact value of the overall parasitics will depend on the specific system requirements of current density, voltage limits, charge, discharge time, etc. S.L.

QUANTITATIVE THERMAL DESORPTION SPECTROMETRY OF NOBLE GASES IN SOLIDS Ph.D. Thesis
Aart vanGorkum 1981 157 p refs
Avail: NTIS HC A08/MF A01

Quantitative thermal desorption spectrometry carried out with the doses below limits to avoid the creation of surface disorder, the interaction of gas atoms during the desorption cycle, the retrapping of helium during the desorption cycle, and the multiple occupation of traps by helium is described. These limits are quantified, and it is shown that in general small amounts of gas have to be detected. The accuracy with which the energy E and frequency factor nu can be extracted from a measured 1st order desorption peak is ultimately limited by shot noise in the mass spectrometer. This noise is quantified for both the static and dynamic modes of operation. Examples are given showing that accuracies of approximately 1% can be obtained for peaks with 100 million practicles for practically achievable values of L and S. J.D.H.

THERMAL INVESTIGATION OF UNSTABLE SUBSTANCES, INCLUDING A COMPARISON OF DIFFERENT THERMAL ANALYTICAL TECHNIQUES Ph.D. Thesis
Robert Bernard Barendregt 11 Feb. 1981 143 p refs
Avail: NTIS HC A07/MF A01

A procedure for the determination of the heat conductivity of a monatomic gas from measurements of the structure of the unsteady thermal boundary layer at the end wall of a shock tube is proposed. In the non-ionized case the structure of the boundary layer determined by means of laser schlieren measurements appears to be self similar. Improved analysis of the schlieren data and accurate pressure measurements yield heat conductivity data with an accuracy of 4% for temperatures up to 7000 K (argon, pressure 30,000 Pa to 100,000 Pa). There are still systematic errors of a few percent, due to the influence of side wall boundary layers and to the simplifications in the procedure for the determination of the state of the gas outside the boundary layer. In the ionized case a model for the development of the thermal boundary layer is proposed. S.L.

A HIGH RESOLUTION SPECTROSCOPIC STUDY OF THE v SUB 2 BAND OF HYDROGEN SULFIDE AND THE 1-0 BAND OF HYDROGEN IODIDE Ph.D. Thesis - Maryland Univ.
Lawrence Larrabee Strow Dec. 1981 159 p refs
(NASA-TM-83852) Avail: NTIS HC A08/MF A01 CSCL 07D

A tunable diode laser spectrometer was constructed and used to study: (1) the effects of centrifugal distortion on the transition frequencies and strengths of the nu sub 2 band of H2S, and (2) nuclear quadrupole hyperfine structure in the 1-0 band of HI. A total of 126 line frequencies and 94 line strengths in the nu sub 2 band of H2S were measured. The average accuracy of the line frequency measurements was + or - 0.0016 cm. The line strengths were measured to an average accuracy of about 3 percent. The effect of the finite spectral width of the diode laser on the measurement of line strengths is discussed. The observed H2S line frequencies were fit to Watson's AS and NS reduced Hamiltonian in both the Ir and IIIr coordinate representations in order to determine the best set of rotation distortion constants for the upper state of the nu sub 2 band. Comparisons of the observed line strengths in this band to rigid rotor line strengths are also presented. Nuclear quadrupole hyperfine structure in the low J lines of the 1-0 band of HI was observed. The upper vibrational state nuclear quadrupole coupling constant, determined from the observed splittings, was -1850 MHz + or - 12 MHz or 1.2 percent + or - 0.7 percent larger than the ground state coupling constant. S.L.

INVESTIGATION OF A CaCl MOLECULAR JET BY MEANS OF LASER INDUCED FLUORESCENCE Thesis [UNTERSUCHUNG EINES CaCl-DUESENSTRAHLS DURCH LASERINDUZIERTE FLUORESZENZ]
Dietmar Otten Dec. 1980 61 p refs In GERMAN
(MPIS-29/1980; ISSN-0436-1199) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 11,85

Internal conditions in CaCl jet nozzles were investigated. The division of oscillation conditions is considered. The CaCl was chosen for its on the one hand completely different bonding characteristics, and on the other hand its well known absorption spectra in visible light, which makes it possible to penetrate it with continuous dye lasers. The structure of the CaCl molecule, the molecular beam activation, and fluorescent measurements are described. First measurements on CaCl jet nozzles for relaxation equations between oscillation and rotation during expansion with different carrier gases are also reported. Transl. by E.A.K.

STUDY OF THE MAGNETIC PHASE DEPENDENCE OF THE Ni-CO REACTION RATE Final Research Report, 1 Oct. 1976 - 30 Sep. 1981
M. S. Dresselhaus 13 Nov. 1981 7 p refs
(Grant AF-AFOSR-3130-77; AF Proj. 2301)
(AD-A108422; AFOSR-81-0776TR) Avail: NTIS HC A02/MF A01 CSCL 07/2

Our studies of the magnetic phase dependence of chemical reactions includes both an experimental and a theoretical program. We describe below progress made during the funding period of the grant in both the experimental and theoretical programs. The experimental program focused firstly on repeating previously reported observations of a strong, oscillatory magnetic field dependence of a chemical reaction, the carbonylation of Ni to form nickel carbonyl. Using a more sensitive experimental system than that of the previous workers, we were not able to repeat their reported results. The second experimental program focused on the observation of a change in reaction rate and activation energy of the chemical reaction due to a magnetic phase transition of the reacting substrate. This phenomenon was conveniently studied using nickel copper alloys to vary the Curie temperature. Cluster calculations for the energy levels showed that the addition of a single carbon monoxide group fills the d shell and leads to a diamagnetic complex. The third experimental program addressed the observation of the Hedvall effect in a reaction where the magnetic species was purely catalytic, namely the hydrogenation of ethylene on nickel copper surfaces. The theoretical modeling was carried out with a spin polarized calculation of the energy levels of an ethylene molecule bound to a nickel cluster. GRA

Detonation Induction distances have been measured at room-temperature at various initial pressures in hydrogen-oxygen third gas mixtures. Various detonation parameters of these mixtures have been calculated at various initial temperatures down to 100K. A conical burner tube with a wide approach section has been set up to measure the normal flame speeds of various hydrogen-oxygen third gas mixtures at temperatures down to 200K. A new combustion tube is being assembled for the study of heat addition to an existing flow of air. Rigorous calculations have been made to evaluate the performance of ramjets using hydrogen or propane as fuel and flying at speeds ranging from M (infinity) = 1 to M (infinity) = 10.

This research project is concerned with determining the mechanisms governing the formation and combustion of metal/agglomerate/metal oxide particles throughout the solid rocket motor, that is, surface/near surface, cavity, and nozzle regions. Also of concern is the influence these particles have on propellant combustion characteristics and motor performance. The efforts of this past year were directed toward developing the experimental equipment needed for determining particle size distributions at and near the propellant surface. A solid propellant strand window bomb with a servo controlled positioning device was constructed and operated. Also, the interface of this equipment with data recording and reduction equipment was accomplished. The laser imaging device to be used to measure particle size distributions is undergoing calibration tests.

CONFIGURATIONAL EFFECTS IN THE ADSORPTION OF HD ON ZnO
G. L. Griffin and J. T. Yates, Jr. Dec. 1981 12 p refs Submitted for publication
(Contract N00014-81-F-0008)
(AD-A109368; TR-24) Avail: NTIS HC A02/MF A01 CSCL 07/4

Hydrogen deuterate, (HD) adsorption on ZnO surfaces has been studied by infrared spectroscopy as a function of ZnO temperature. It is shown that at 300K, the configuration Zn(H)-O(D) is preferred, as expected on thermodynamic grounds. As the temperature is lowered, the configuration Zn(D)-O(H) becomes preferred on kinetic grounds. We demonstrate that configuration reversal on heating must proceed via HD desorption and subsequent re-adsorption. This behavior is consistent with a model in which the transition state for HD adsorption is characterized by nearly complete dissociation of the H-D bond.

WEAK AND STRONG IGNITION. 2: SENSITIVITY OF THE HYDROGEN-OXYGEN SYSTEM Interim Report
E. S. Oran and J. P. Boris 7 Dec. 1981 39 p refs
(RR0130144; ZF43451001)
(AD-A108843; NRL-MR-4671) Avail: NTIS HC A03/MF A01 CSCL 21/2

This paper identifies the physical and chemical mechanisms which cause certain mixtures of hydrogen, oxygen and argon to be very sensitive to sound wave or entropy (temperature) perturbations. Detailed simulations of the effects of sound waves in typical mixtures are used to show explicity the effects of such fluctuations on the chemical induction time. A quantity delta TAU max. is defined which represents the maximum variation produced in the chemical induction time of a system given the amplitude and frequency of a perturbation. It is observed that these perturbations may cause ignition to occur unevenly in such mixtures and this leads to ignition which appears spotty. Using detailed numerical simulations and a generalized induction parameter model derived from it, delta TAU max is evaluated and a criterion is developed for spotty and smooth ignition behind reflected shock waves. These effects are related to weak and strong ignition observed in shock tube experiments.

PHOTOASSISTED REACTIONS ON DOPED METAL OXIDE PARTICLES Technical Report, 1 Jan. - 31 Dec. 1981
J. M. White 31 Dec. 1981 28 p refs Submitted for publication
(Contract N00014-75-C-0922; NR Proj. 056-578)
(AD-A109383; TR-21) Avail: NTIS HC A03/MF A01 CSCL 07/5

Photoassisted reactions involving doped metal oxide semiconductor powders are reviewed. The mechanisms, insofar as they are now understood, are discussed for several reactions involving gas phase water near its equilibrium vapor pressure in contact with the oxide. Experimental results are presented along with some discussion of how these processes may be involved with heterogeneous processes in the atmosphere. Author (GRA)

MULTIANGULAR SCANNING ABSORPTION-EMISSION TECHNIQUES FOR THREE-DIMENSIONAL COMBUSTION DIAGNOSTICS Annual Report, 1 Sep. 1980 - 30 Aug. 1981
Robert Goulard 1 Dec. 1981 14 p refs
(Contract AF-AFOSR-3439-77; AF Proj. 2308)
(AD-A109060; AFOSR-81-0857TR) Avail: NTIS HC A02/MF A01 CSCL 21/2

This program explores the potential of absorption techniques for low ppm, real time 3-dimensional combustion diagnostics. In the current phase of activity, a laser beam has been transformed into a sheet of light and made to converge on a 126-element array, with electronics suitable for repeatable 1.5 KHz scanning and data processing. Available memory modules (4K) allow for 34 successive slicings of a passing target within 20 milliseconds. In this manner, a detailed projection of three-dimensional flow field concentrations is available. An axisymmetrical flow (tobacco smoke rings) has been measured and a tomographic procedure

was applied to these data. Better ranges of absorption are being considered and multiangular experiments (non-symmetrical cases) will follow. The construction of a portable tomographic unit is also in progress. It was upgraded to nonsteady flow capabilities by coupling a CAMAC digitizer with a MINC minicomputer. The source and sensor part of the experiment have been completed. Data processing and flow controls will follow. A theoretical review of flow instabilities is underway. Existing qualitative work suggests three-dimensional patterns for which this tomographic approach is ideally suited.

INITIATION, COMBUSTION AND TRANSITION TO DETONATION IN HOMOGENEOUS AND HETEROGENEOUS REACTIVE MIXTURES: A SUMMARY Final Report, 1 Jun. 1980 - 31 May 1981

Roger A. Strehlow, Harold O. Barthel, and Herman Krier Sep. 1981 76 p refs
(Grant AF-AFOSR-3336-77; AF Proj. 2308)
(AD-A109057; AFOSR-81-0840TR) Avail: NTIS HC A05/MF A01 CSCL 21/2

Certain aspects of ignition source effects in reactive fuel-air mixtures are discussed. These aspects include effects of chemical sensitizers, flame acceleration, flame area, and ignition point location. The other area involves the hydrodynamic modeling of ignition and flamespreading in granular energetic solids to predict the potential for deflagration-to-detonation transition (DDT). Key results in the first area are that chemically sensitized clouds can lead to detonation, that flame acceleration or a large increase in the time rate of increase of the flame area are needed for transition from deflagration to detonation and that it is very difficult to generate damaging overpressure from edge-ignited combustion even for very high subsonic burning velocities. The research dealing with analysis of DDT in porous high energy solid propellant has shown (for the first time) actual steady-state detonation solutions, following the unsteady flow, for materials with sufficient porosity and critical burning rate properties. Limits of the run-up length to detonation are predicted as a function of propellant chemical energy, burning rate, bed porosity, and granulation (size). The detonation states conform to realistic measured conditions for porous HMX and RDX propellants. GRA

ELECTRON EXCHANGE BETWEEN BIS (ETA MESON-6-ARENE) CHROMIUM (I) AND BIS (ETA MESON-6-ARENE) CHROMIUM (O). COMPARISONS BETWEEN EXPERIMENTAL AND CALCULATED KINETICS PARAMETERS

Tomi T-T. Li, Michael J. Weaver, and Carl H. Brubaker, Jr. 15 Dec. 1981 26 p refs Submitted for publication
(Contract N00014-79-C-0670)
(AD-A109051; TR-7) Avail: NTIS HC A03/MF A01 CSCL 07/3

Comparisons have been made between kinetics parameters for the self exchange of (eta(6)-arene)2Cr(I)/(eta(6)-arene)2Cr(O) (where arene = benzene, toluene, methoxylbenzene, biphenyl, ethylbenzoate and chlorobezene) measured by ESR line broadening in dimethylsulfoxide, with the predictions from contemporary electron-transfer theory. The biphenyl system was additionally studied in a number of other solvents. These reactions provide especially tractable systems with which to test theories of outer-sphere electron transfer since the work terms should be essentially zero, and the inner-shell contributions. Delta G to the free energy barrier are small and can be estimated from infra-red spectroscopy combined with crystallographic data. These were found to be somewhat (ca. 5-20 fold) larger than the corresponding frequency factors derived from the experimental activation enthalpies combined with the dielectric continuum estimates of the activation entropies. These 'experimental' frequency factors are compared with the estimates obtained from the 'reactive collision' and the 'ion-pair pre-equilibrium' models. The majority of the experimental frequency factors were found to be numerically closer to the predictions of the former model.

(MPIS-32/1980; ISSN-0436-1199) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 15,75

Integral profiles of total and Penning ionization profiles of the He - Ar were measured by singlet and triplet system. Collision with good velocity resolution of ionization profiles were determined. It is found that it is possible, despite the simplicity of the two body impact, to apply a theoretical curve on measurements of complicated anelastic processes. One channel measurements rated two very interdependent dimensions providing the real component and the imaginary component of the potentials.

ON THE CONTROL OF COCURRENT TUBULAR CHEMICAL REACTORS

S. P. Banks and A. A. N. Al-shawi Oct. 1981 16 p refs
(RR-160) Avail: NTIS HC A02/MF A01

A dynamic model of a nonadiabatic tubular reactor in the form of a set of partial differential equations by using mass and energy balance to study optimal control was obtained. Distributed parameter theory is used to derive optimal control criteria from an infinite dimensional Riccati equation without consideration of Laplace transforms in t and z. The mean squared error of the actual and equilibrium states is used as the cost functional, since the dynamic equations are obtained as a linearization of the true nonlinear dynamics about the equilibrium states. On-line calculations required are for the Fourier coefficients of system state and for the summations involved in feed flow rates and absolute temperatures. Author (ESA)

ON THE DISRUPTIVE VAPORIZATION AND BURNING OF EMULSIFIED AND MULTICOMPONENT FUEL DROPLETS Ph.D. Thesis
Juan Carlos LasherasToralba 1981 246 p
Avail: Univ. Microfilms Order No. 8129595

Systematic experimental studies of the combustion and vaporization properties of isolated free droplets of emulsified and multicomponent fuel droplets were conducted. For the case of emulsified fuel droplets the liquid-phase disruption is caused by the internal boiling of the dispersed-phase when the droplet temperature reaches the superheat-limit temperature of the dispersed-phase in the emulsion. For the case of water-in-fuel emulsions it is shown that the liquid-phase disruption is primarily governed by a very fast growth of the water vapor bubbles which is controlled by the large pressure difference between the vapor and the surrounding liquid. The experimental results substantiate the theory that the disruptive phenomena results from the homogeneous bubble nucleation of the superheated droplet core when the droplet temperature reaches the superheat-limit temperature of the solution. The concept of liquid-phase disruption is extended to practical solution and emulsions formed by the addition of methanol, ethanol or water to a conventional distillate fuel oil. Dissert. Abstr.

Mixed convection gives rise to thermal exchanges due to natural convection as well as those resulting from forced convection. The relative importance of these two exchange processes is determined by the value of the Froude number, namely the quotient of the Reynolds number and the square root of the Grashof number. The industrial sectors concerned with flows of liquid metal are defined. The heat transfers to which the latter are subjected are: nonisothermal conditions created by the imperatives of working a metal product, and molten metals used as heat transfer fluids. Iron, steelmaking, and energy production are emphasized. S.L.

The magnetic properties of copper, bronzes, brasses, aluminum bronzes and German silver are summarized. Pure copper is scarcely affected by magnetic fields, but even very low iron contents have a perceptible influence. If bronze is to be nonmagnetic, iron content must be < 0.05%. For brasses, a soaking treatment (1 hr at 800 to 850 C) followed by rapid cooling lowers susceptibility to magnetic field action. Manganese and iron can increase susceptibility. Binary alloys (Fe in traces) have a susceptibility of 0.0000002. Magnetism is present from 0.15% iron concentration. This limit is raised to 0.5% after quenching at 900 C. German silver alloys are safest, since the critical iron content is lower (0.5%) than for the other copper alloys. Author (ESA)

ENVIRONMENTAL DURABILITY OF ELECTROPLATED BLACK CHROMIUM
James R. Lowery Dec. 1981 13 p refs
(NASA-TM-82454) Avail: NTIS HC A02/MF A01 CSCL 11F

A study was undertaken to determine the durability of nickel-black chromium plated aluminum in an outdoor rural, industrial, and seacoast environment. Test panels were exposed to these environments for 60, 36, and 13 months, respectively. The results of this study showed that no significant optical degradation occurred from exposure to either of these environments, although a considerable amount of corrosion occurred on the panels exposed to the seacoast environment. The rural and industrial atmosphere produced only a slight amount of corrosion on test panels. Author

The application of the superplastic forming/diffusion bonding (SPF/DB) process to supersonic cruise research is investigated. The capability of an SPF/DB titanium structure to meet the structural requirements of the inner wing area of the NASA arrow-wing advanced supersonic transport design is evaluated. Selection of structural concepts and their optimization for minimum weight, SPF/DB process optimization, fabrication of representative specimens, and specimen testing and evaluation are described. The structural area used includes both upper and lower wing panels, where the upper wing panel is used for static compression strength evaluation and the lower panel, in tension, is used for fracture mechanics evaluations. The individual test specimens, cut from six large panels, consist of 39 static specimens, 10 fracture mechanics specimens, and one each full size panel for compression stability and fracture mechanics testing. Tests are performed at temperatures of -54 C (-65 F), room temperature, and 260 C (500 F). B.W.

HC A03/MF A01

Measurement of the first order interaction coefficients of nine metals on oxygen in liquid lead using a solid electrolyte cell is described. The lead oxygen system was studied first in order to check the reliability of the experimental apparatus. The Gibbs energy of dissolution of oxygen in liquid lead, the self interaction coefficient of oxygen in liquid lead, and first order action coefficients of the metals are reported and compared with previous findings in the literature. Application of the model of McLellan to Pb-Metal-O solutions and of the quasichemical model of Jacob and Alcock is considered. The entropy interaction coefficient was observed to be a linear function of the enthalpy interaction coefficient.

Eighteen plasma sprayed coating systems, nine based on the NiCoCrAly chemistry and nine based on the CoCrAly composition, were evaluated to identify coating systems which provide equivalent or superior life to that shown by the electron beam physical vapor deposited NiCoCrAly and CoCrAly coatings respectively. NiCoCrAly type coatings were examined on a single crystal alloy and the CoCrAly based coatings were optimized on the B1900+ Hf alloy. Cyclic burner rig oxidation and hot corrosion and tensile ductility tests used to evaluate the various coating candidates. For the single crystal alloy, a low pressure chamber plasma sprayed NiCoCrAly + Si coating exhibited a 2x oxidation life improvement at 1394 K (2050 F) over the vapor deposited NiCoCrAly material while showing equivalent tensile ductility. A silicon modified low pressure chamber plasma sprayed CoCrAly coating was found to be more durable than the baseline vapor deposited CoCrAly coating on the B1900+ Hf alloy.

INTERACTION OF MICROSEGREGATION AND COARSENING DURING DENDRITIC NICKEL-BASE ALLOY MONOCRYSTAL GROWTH Final Report, 1 Apr. 1977 - 31 Aug. 1981
T. Z. Kattamis 31 Oct. 1981 57 p refs
(Grant AF-AFOSR-3344-77)
(AD-A108980; UC-MET-KAT-4-1981; AFOSR-81-0860TR)
Avail: NTIS HC A04/MF A01 CSCL 11/6

Dendritic monocrystals of various Ni-Al-Ta and Ni-Cr alloys, some of which were microalloyed with C,B,Zr or Hf were processed at various growth rates up to 200 cm/h, or cooling rates up to 4.44 K/s under a thermal gradient in the mushy zone of 80 K/cm and in some cases 180 K/cm. The solidification microstructure was substantially refined with increasing growth rate and dendrite arm spacings as fine as 1 to 2 micrometer were observed in laser or electron beam surface glazed monocrystals. Microsegregation of Al, Ta and Cr was found to depend on growth conditions. With increasing cooling rate the volume fraction of nonequilibrium interdendritic upsilo minus upsilo prime eutectic or secondary upsilo prime increases. At the high growth rates achieved in surface glazing this volume fraction is greatly reduced. Very high growth rates are required for complete elimination of interdendritic upsilo prime through solute trapping, and formation of a completely homogeneous surface layer. With the present chilling techniques available growth of homogeneous monocrystals at such high rates is not possible.

HC A02/MF A01 CSCL 11/3

Aluminum is a widely used metal in military applications such as vehicles, bridges, air-cushion vehicles, etc., but its use is limited to areas where the aluminum alloys would not be under load with variable or constant stresses and to areas where there would be almost no severe abrasion or corrosion. Anodic coatings tend to increase the abrasion and corrosion resistance of aluminum and its alloys, but the coatings have a detrimental effect on the fatigue endurance (in some instances by as much as 65 percent). The objective of this work was to provide a surface treatment and/or coatings that will allow the use of aluminum wrought alloys in any type of environment and that will be able to withstand the effects of abrasion and stress corrosion and temperature changes up to 344 deg F with an increased fatigue endurance.

Control of alloy composition and processing to achieve grain coarsening resistance in rapidly solidified alloys is examined via the theory of grain boundary pinning and particle coarsening. The principles are illustrated for the case of manganese sulfides in steels. A thermodynamic survey of potential stable dispersed phases identifies TiN and rare-earth sulfides as particularly promising for alloy development via rapid solidification.

A STUDY OF DISLOCATION DENSITY AND PHASE ELONGATION AS A FUNCTION OF DEFORMATION IN SINTERED TUNGSTEN COMPOSITES [EN STUDIE AV DISLOKATIONSTAETHETEN OCH FASTOEJNINGEN SOM FUNKTION AV DEFORMATION I SINTRADE VOLFRAMKOMPOSITER]
Ulf Lindegren Oct. 1981 37 p refs In SWEDISH
(FOA-C-20428-D4) Avail: NTIS HC A03/MF A01

Dislocation density and phase elongation are calculated from the observed dislocation density in the tungsten grains. The studied composite is a DXT alloy. It contains 90% W, 6% Ni, and 4% Fe. In the sintered form, it consists of tungsten grains embedded in a weaker matrix. Such composites are used for armor piercing projectiles. Electron microscopes were used to determine the dislocation density. Results show the difference in the dislocation density values of the matrix and the tungsten grains measured for a total deformation up to 5%. For higher deformations, calculated values are indicated, based on theoretical models. A method is described for producing thin films by electropolishing and ion implantation.

INFLUENCE OF FABRICATION CONDITIONS AND STABILITY OF AUSTENITE ON THE FORMING BEHAVIOR OF AUSTENITIC STAINLESS STEELS Final Report
Werner Kueppers Bonn Bundesministerium fuer Forschung und Technologie Nov. 1981 89 p refs In GERMAN; ENGLISH

summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-192; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 18.90

The effect of cold rolling conditions on austenitic steel stretching and deep drawing properties is discussed. During the fabrication of three coils of various stability of austenite, the degree of cold forming between the annealing processes was varied by cold rolling from the thickness of hot rolled coil to final thickness without, or with one or two, intermediate annealings. It is shown that the best stretch forming is made with unstable austenitic steels, and becomes better with increasing sheet thickness. The most favorable deep drawing behavior is gained with highest degrees of cold rolling before final annealing and is independent of the stability of austenite. Cold rolling to the highest degree before intermediate annealing and deformation before final annealing are important. It is found that conditions can be given for cold rolling to obtain best forming behavior.

FATIGUE CRACK GROWTH IN ALUMINUM ALLOYS
L. B. Vogelesang Jun. 1981 19 p refs Presented at 5th Intern. Conf. on Fracture, Cannes, France, 29 Mar. - 3 Apr. 1981
(VTH-LR-324) Avail: NTIS HC A02/MF A01

Fatigue crack propagation tests with different wave shapes were carried out in vacuum, air, and salt water, on 7075-T6 and 7024-T3 center-cracked sheet specimens. Scanning electron microscope studies of plastic castings of the fatigue cracks are discussed. Crack growth is shown to be sensitive to the loading rate during uploading and relatively insensitive to holding periods. The observations support a model for crack growth based on the synergistic effects of crack tip plasticity and the environmental contribution to tensile decohesion. Author (ESA)

CORROSION OF CARBON STEEL AT HIGH TEMPERATURE IN REDUCING CHEMICAL CONDITIONS
P. A. Borroni, E. Diacci, R. Rizzi, and C. Ronchetti 1981 20 p refs Presented at 8th Intern. Congr. on Metal. Corrosion, Mainz, West Germany, 6-11 Sep. 1981 Sponsored by Comitato Nazionale per l'Energia Nucleare (CNEN)
(CISE-1699) Avail: NTIS HC A02/MF A01

Corrosion tests of carbon steel were carried out in a dynamic loop at high temperature and pressure under reducing chemical conditions. These experiments were performed in ammoniated water, with and without oxygen, at temperatures up to 250 C. Corrosion rate was determined by measuring the linear polarization resistance drop in the water. Redox potential of the water and corrosion potential of the steel were also measured. The influence of additions of hydrazine on the same potentials and corrosion rate was determined. Results show that (1) the measurement method is capable of following the change in corrosion rate due to increasing surface passivation and that (2) the most important parameter relevant to corrosion rate at equilibrium is water quality, even in the presence of a reducing agent.

THE POLARIZED INFRARED REFLECTION SPECTROSCOPIC CHARACTERIZATION AND AQUEOUS DURABILITY OF LITHIA-DISILICATE GLASS CERAMICS Ph.D. Thesis
Walter John McCracken 1981 132 p
Avail: Univ. Microfilms Order No. 8127450

The structure property environment relationship of glass ceramic materials was investigated in order to study their changes during aqueous corrosion. Polarized infrared reflection spectroscopy (PIRRS) is used to assign atomic vibrational modes to the peaks in reflection spectra of single crystals of quartz, lithia disilicate, and lithia metasilicate. The effect on the PIRRS data of increasing the number of nonbridging oxygens per silica tetrahedra in the silicate structure is demonstrated. By combining the PIRRS data of single crystal lithia disilicate and the PIRRS data of polycrystalline lithia disilicate glass ceramics the glass ceramic surface can be characterized so that changes in the surface structure during aqueous corrosion can be monitored. Aqueous durability of lithia disilicate glass ceramics was studied using four volume fractions of crystallinity and three different pH environments. The crystallization significantly affects the corrosion behavior of the lithia disilicate glass. In general, the least surface damage is observed on all the materials when exposed to acidic solution and the most extensive surface alterations occur on all the materials exposed to the basic solutions. On glass, network dissolution occurs uniformly over the entire exposed surface. On glass ceramics, network dissolution proceeds at different rates over the surface, with the highest rate occurring on the glassy phase. In addition to ion exchange and network dissolution, phase boundary attack between the glass and crystalline phases and intracrystalline attack are important in glass ceramic systems exposed to basic solutions, or to static neutral solutions for long times. FRACTURE MECHANICS AND FAILURE PREDICTIONS FOR GLASS, GLASS-CERAMIC, CERAMIC SYSTEMS Ph.D. Thesis
Ronald Alan Palmer 1981 170 p
Avail: Univ. Microfilms Order No. 8127457

The fatigue parameters for the lithium disilicate glass/glass-ceramic system were determined, in examining the effects of crystallization on fatigue behavior. Two methods (dynamic fatigue and slow crack growth) were employed and were found to produce different values for the fatigue parameters. It was found that aqueous corrosion has a severe effect on the fatigue parameters, as measured in dynamic fatigue, especially after aging up for up to one week in distilled water. The lithium disilicate glass, which is known to readily form a gel layer in water, exhibits the most rapid change in parameters. The most crystalline composition (92% crystalline) shows the greatest strength loss due to aging. At low volume fraction of crystals (7%) a residual stress in the glassy matrix effects a strength increase and a decrease in the environmental sensitivity which disappears with aging in water. No effect of aging in water was found in the slow crack growth studies. In all cases, the environmental sensitivity was found to be much higher in these experiments than in dynamic fatigue. The limitations of the present fracture mechanics theory are discussed in the light of the inconsistencies found between these methods. A matrix of tests, including static and dynamic fatigue and proof tests, is proposed as an improved method of characterizing the fatigue behavior of a material.

THE SYNTHESIS OF BIODEGRADABLE BLOCK COPOLYMERS CONTAINING AMYLOSE AND POLYESTER OLIGOMERIC BLOCKS Ph.D. Thesis
Kiu-Seung Lee 1981 127 p
Avail: Univ. Microfilms Order No. 8121763

Block co- and terpolymers containing amylose and polyester oligomeric blocks were synthesized using a six step reaction scheme. Block co- and terpolymers were readily degraded by alpha amylase, an enzyme present in the human body. Intrinsic viscosity versus time of enzymatic exposure were used to follow the biodegradation of the polymers. The block co- and terpolymers were characterized by a variety of techniques. The chemical properties and physical properties of the polymers were measured. All of the data collected support the formation of biodegradable block copolymers. Dissert. Abstr.

FREE VOLUME THEORY OF DIFFUSION INTO POLYMERS. PART 1: METHOD OF PREDICTING ACTIVATION ENERGIES OF DIFFUSION FOR GASES INTO ELASTO-

MERS. PART 2: DIFFUSION OF NON-IONIC DYES INTO SEMI-CRYSTALLINE POLY (ETHYLENE TEREPHTHALATE) FILMS. PART 3: RELATIONSHIP BETWEEN GLASS-TRANSITION AND DYEING-TRANSITION TEMPERATURES Ph.D. Thesis

Rochana Kosiyanon 1981 192 p

Avail: Univ. Microfilms Order No. 8121737

The validity of Fujita's free volume theory, applied to the diffusion of various penetrants into polymers, was tested. The diffusion of five gasses into nine amorphous polymers is examined. An equation is derived to predict the activation energies of diffusion, the temperature of diffusion, the glass transition temperature of the polymer, and a constant depending on the penetrant. This equation and the theoretical approach on which it is based are shown to be satisfactory for a set of five simple gases, diffusing into a set of nine elastomers. A modified theory is applied to the disperse dyeing of semi-crystalline Poly(ethylene terephthalate) fibers and film. Several systems such as vapor phase dyeing, aqueous and solvent dyeing are examined. The analysis of the data confirms the validity of certain aspects of the proposed, modified free volume theory. The modified theory is extended to describe the transition temperature of dyeing. A mathematical expression is deduced which makes it possible to predict the transition temperature of dyeing in any system which conforms to the basic assumptions inherent in the modified theory. The predictions agree with the experimental data for a two-component, vapor phase dyeing system. Dissert. Abstr.

TRIBOLOGICAL PROPERTIES AT 25 C OF SEVEN POLYIMIDE FILMS BONDED TO 440 C HIGH-TEMPERATURE STAINLESS STEEL

Robert L. Fusaro Feb. 1982 23 p refs

(NASA-TP-1944; E-758) Avail: NTIS HC A02/MF A01 CSCL 07C

The tribological properties of seven polyimide films applied to 440 C high temperature stainless steel substrates were studied at 25 C with a pin-on-disk type of friction and were apparatus. The polyimides fell into two groups according to friction and wear properties. Group I polyimides had slightly lower friction but much higher wear than group II polyimides. The wear mechanism was predominately adhesion, but the wear particles were larger for group I polyimides. For most of the polyimides the transfer films consisted of clumps of compacted wear particles. One polyimide composition produced a very thin transfer film that sheared plastically in the contact area. Author

SURFACE CHEMISTRY AND WEAR BEHAVIOR OF SINGLE-CRYSTAL SILICON CARBIDE SLIDING AGAINST IRON AT TEMPERATURES TO 1500 C IN VACUUM

Kazuhisa Miyoshi and Donald H. Buckley Feb. 1982 14 p refs

(NASA-TP-1947; E-654) Avail: NTIS HC A02/MF A01 CSCL 07C

X-ray photoelectron and Auger electron spectroscopy analyses and morphological studies of wear and metal transfer were conducted with a single-crystal silicon carbide 0001 surface in contact with iron at various temperatures to 1500 C in a vacuum of 10 to the minus 8th power pascal. The results indicate that below 800 C, carbide-carbon and silicon are primarily seen on the silicon carbide surface. Above 800 C the graphite increases rapidly with increase in temperature. The outermost surficial layer, which consists mostly of graphite and little silicon at temperatures above 1200 C is about 2 nm thick. A thicker layer, which consists of a mixture of graphite, carbide, and silicon is approximately 100 nm thick. The closer the surface sliding temperature is to 800 C, the more the metal transfer produced. Above 800 C, there was a transfer of rough, discontinuous, and thin iron debris instead of smooth, continuous and thin iron film which was observed to transfer below 800 C. Two kinds of fracture pits were observed on the silicon carbide surface: (1) a pit with a spherical asperity; and (2) multiangular shaped pits. Author

LABORATORY EVALUATION OF MULTIVISCOSITY-GRADE ENGINE OILS IN US ARMY DIESEL ENGINES Interim Report, Nov. 1978 - Jun. 1980

Richard B. Moon and Alan F. Montemayor May 1981 567 p refs

(Contracts DAAK70-78-C-0001; DAAK70-80-C-0001; DA Proj. 1L7-62733-AH-20)

(AD-A108890; AFLRL-112) Avail: NTIS HC A24/MF A01 CSCL 11/8

Seven multigrade engine oils were tested against 10 grade and 30 grade reference oil in the DD 6V-53T engine using a 240-hour tracked-vehicle cyclic endurance test and in the Teledyne Continental LD/LDT-465 engines using a 210-hour wheeled-vehicle cyclic endurance test. The results of these tests are tabulated and compared with results from reference oil tests. Two SAE 15W-40 oils proved equal or better than the reference oil and were recommended for adoption as MIL-L-2104 oils. GRA

IMPACT RESPONSE CHARACTERISTICS OF POLYMERIC MATERIALS Final Report, 27 Apr. 1979 - 30 Apr. 1981

William B. Hillig Nov. 1981 98 p refs

(Contract N00019-79-C-0347)

(AD-A109281; SRD-81-081) Avail: NTIS HC A05/MF A01 CSCL 11/9

Studies concerned with determining, understanding, and trying to predict the behavior of polymethylmethacrylate (PMMA) and polycarbonate (PC) under impact are discussed. In the present work the impact velocity was extended to 2.1, 125, and 220 m/s using a 4.5 mm steel ball as the projectile. Because of dispersion effects the pulse detected using an instrumented Hopkinson impact bar was markedly distorted. A new semi-empirical procedure for correcting the pulse was developed. Analysis of the data showed that the deduced Young's modulus of PMMA slowly increases with increasing impact velocity. However, the derived modulus of PC decreases by a fctor of five when the impact velocity was increased from 2.1 to 220 m/s. A theoretically based model was formulated to 'predict' the impact response of the two materials from their elastic modulus, densification properties, and stress relaxation laws. This modified spring/dashpot model allows the response of the polymers to be continuously varied between series-like and parallel-like. The PMMA was found to require a predominantly series-like mode description, whereas the PC response was more parallel-like. GRA

MORPHOLOGY OF THE POLYSTYRENE/POLY(VINYL METHYL ETHER) BLEND AS STUDIED BY EXCIMER FLUORESCENCE Final Report, 16 Oct. 1978 - 15 Oct. 1981

Curtis W. Frank 14 Dec. 1981 7 p refs

(Contract DAAG29-78-C-0047)

(AD-A109143; ARO-15770.2-C) Avail: NTIS HC A02/MF A01 CSCL 07/3

Excimer fluorescence was used to study conformational statistics and aggregation in miscible and immiscible blends of polystyrene with poly(vinyl methyl ether) At low polystyrene concentration in miscible blends, excimer fluorescence of isolated polystyrene chains is analyzed in terms of a one dimensional random walk of the migrating singlet exciton. At high concentration in miscible blends the energy migration is three-dimensional. Knowledge of the fluorescence behavior for miscible blends was used to determine the phase composition for phase separated blends. GRA

MOLYBDENUM DISULPHIDE LUBRICATION. A CONTINUATION SURVEY: 1977/78
A. R. Lansdown and W. R. Burke, ed. Jun. 1981 37 p refs
Previously announced as ESA-CR(P)-1330
(ESA-TRIB-4; ESA-CR(P)-1330; ISSN-0250-4448) Avail: NTIS HC A03/MF A01

Aspects of molybdenum disulfide lubrication considered include chemical and physical properties, the lubrication mechanism, its incorporation in bulk solids, its use in oils and greases, and whether it has anticorrosive properties. Although a reduction in molybdenite supply means higher prices for molybdenum-containing materials, the literature indicates that molybdenum disulphide based lubricants are becoming more widely used as multipurpose products for general use following the energy crisis. They reduce fuel and oil consumption in car engines, are wear effective up to 700 F, and are solvent resistant. Author (ESA)

PARAMETRIC STUDY OF PROPELLANT CRACK COMBUSTION Final Report, 1979
Kibong Kim 21 Oct. 1981 37 p refs
(AD-A108769; NSWC/TR-79-485) Avail: NTIS HC A03/MF A01 CSCL 21/9

Selective calculations have been made for burning in cracks as it pertains to solid rocket motor propellants. The possibility of obtaining pressures high enough to cause a shock-to-detonation transition (sdt) in propellant grains is examined. Variables affecting the crack combustion process which were selected for study are: crack shape; location; surface roughness; propellant deformation; ignition criterion; and burning rate. The variables are evaluated and ordered in groups of relative importance. Results suggest that SDT should not occur in propellants unless the granulation of the grain is severe enough to provide large burning surface area. Author (GRA)

IMPEDIMENTS TO ENERGY AND MATERIALS RECOVERY FACILITIES FOR MUNICIPAL SOLID WASTE Final Report
Ernest H. Manuel, Jr. and Fritz W. Efaw Sep. 1981 229 p refs Prepared in cooperation with Franklin Associates, Prairie Village, Kans.
(Contract EPA-68-03-2761)
(PB82-102302; EPA-600/2-81-181) Avail: NTIS HC A11/MF A01 CSCL 21D

The impediments to recycling municipal solid waste were studied. The eight facilities selected for indepth analysis represented a cross section of technologies, ownership types, geographical locations, and recovered products. None of the facilities were economical in the context of providing the least cost mode of disposal, and all eight facilities experienced net operating losses. A major impediment encountered by most of the facilities was competition from lower-cost landfills. GRA

TIME EFFECTS OF LOW-AMPLITUDE SHEAR MODULUS OF COHESIVE SOILS Ph.D. Thesis
George Andreas Athanasopoulos 1981 300 p
Avail: Univ. Microfilms Order No. 8125061

The results of an experimental investigation of time effects on the low-amplitude shear modulus, G sub 0, of artificial and natural cohesive soils are described. The main objectives of the investigation were: (1) evaluation of the effects of drained creep on G sub 0; (2) evaluation of the effects of a temporary total stress release on G sub 0; and (3) correlation of G sub 0 with the undrained shearing strength of cohesive soils. In addition, preliminary studies were performed regarding age-induced overconsolidation and temporary drop of stiffness following the application of the stress increments in a resonant column test.

STUDY OF NEAR-THRESHOLD FATIGUE CRACK PROPAGATION IN PIPELINE STEELS IN HIGH PRESSURE ENVIRONMENTS Final Report
M. Mitchell Nov. 1981 133 p refs
(Contract NAS2-10312)
(NASA-CR-166295; SC5230.17FR) Avail: NTIS HC A07/MF A01 CSCL 11F

Near threshold fatigue crack propagation in pipeline steels in high pressure environments was studied. The objective was to determine the level of threshold stress intensity for fatigue crack growth rate behavior in a high strength low alloy X60 pipeline-type steel. Complete results have been generated for gaseous hydrogen at ambient pressure, laboratory air at ambient pressure and approximately 60% relative humidity as well as vacuum of 0.000067 Pa ($<$ 0.0000005 torr) at R-ratios = K(min)/K(max) of 0.1, 0.5, and 0.8. Fatigue crack growth rate behavior in gaseous hydrogen, methane, and methane plus 10 percent hydrogen at 6.89 MPa (100 psi) was determined.

SYSTEM IDENTIFICATION FOR MULTIVARIABLE CONTROL
Gerrit Adrianus vanZee 6 May 1981 119 p refs
Avail: NTIS HC A06/MF A01

System identification methods and modern control theory are applied to industrial processes. These processes must often be controlled in order to meet certain requirements with respect to the product quality, safety, energy consumption, and environmental load. Modern control system design methods which take the occurring interaction phenomena and stochastic disturbances into account are used. An accurate dynamic mathematical model of the process, by theoretical modelling and/or by system identification is obtained. The computational aspects of two important types of identifications methods, i.e., stochastic realization and prediction error based parameter estimation are studied. The studied computational aspects are the robustness, the accuracy, and the computational costs of the methods. Theoretical analyses and applications to a multivariable pilot scale process, operating under closed loop conditions are investigated.

EFFECT OF VACUUM PROCESSING ON OUTGASSING WITHIN AN ORBITING MOLECULAR SHIELD
R. A. Outlaw Mar. 1982 14 p refs
(NASA-TP-1980; L-14987) Avail: NTIS HC A02/MF A01 CSCL 20H

The limiting hydrogen number density in an orbiting molecular shield is highly dependent on the outgassing rates from the materials of construction for the shield, experimental apparatus, and other hardware contained within the shield. Ordinary degassing temperatures used for ultrahigh vacuum studies (less than 450 C) are not sufficient to process metals so that the contribution to the number density within the shield due to outgassing is less than the theoretically attainable level (approximately 200 per cu. cm). Pure aluminum and type 347 stainless steel were studied as candidate shield materials. Measurements of their hydrogen concentration and diffusion coefficients were made, and the effects of high temperature vacuum processing (greater than 600 C) on their resulting outgassing rates was determined. The densities in a molecular shield due to the outgassing from either metal were substantially less ($<$ 0.003) than the density due to the ambient atomic hydrogen flux at an orbital altitude of 500 km.

FOUNDATIONS FOR COMPUTER SIMULATION OF A LOW PRESSURE OIL FLOODED SINGLE SCREW AIR COMPRESSOR M.S. Thesis - Purdue Univ.
Thomas W. Bein Dec. 1981 122 p refs
(AD-A108230; DTNSRDC/PAS-81/24) Avail: NTIS HC A06/MF A01 CSCL 13/7

The necessary logic to construct a computer model to predict the performance of an oil flooded, single screw air compressor is developed. The geometric variables and relationships used to describe the general single screw mechanism are developed. The governing equations to describe the processes are developed from their primary relationships. The assumptions used in the development are also defined and justified. The computer model predicts the internal pressure, temperature, and flowrates through the leakage paths throughout the compression cycle of the single screw compressor. The model uses empirical external values as the basis for the internal predictions. The computer values are compared to the empirical values, and conclusions are drawn based on the results. Recommendations are made for future efforts to improve the computer model and to verify some of the conclusions that are drawn.

A mechanism for blast-induced liquefaction was tested in a series of high pressure undrained, isotropic compression tests on saturated samples of Eniwetok beach sand and Ottawa sand. Theory, based on inelastic volume compressibility of sand, was shown to be valid for the case of quasi-static, isotropic loading. Specimens of Eniwetok sand subjected to an initial effective stress of 1 MPa were liquefied by a single cycle of loading of 34 MPa. Specimens of Ottawa sand, tested in the same manner, generated excess pore pressure but not enough to completely liquefy the soil. The errors introduced by flexibility of the testing systems were analyzed and found to be insignificant. Suggestions for future research were made. Author (GRA)

ABRASION-EROSION RESISTANCE OF FIBER REINFORCED CONCRETE Final Report
Tony C Liu and James E McDonald Nov 1981 31 p refs Presented at the Am Soc for Testing and Mater Symp on Durability of Concrete, Orlando, Fla, Dec 1980
(AD-A108988; WES/MP/SL-81-32) Avail NTIS HC A03/MF A01 CSCL 11/2

The concrete was used for repair of abrasion erosion damaged areas such as stilling basins, conduits, sluiceways, and discharge laterals in hydraulic structures. Thirteen concrete mixtures of three water cement ratios ranging from 0.40 to 0.72, each containing one of four different types of steel fibers, were tested. As is true of concrete without steel fibers, the abrasion erosion resistance of FRC increased with decrease in water cement ratio and consequent increase in compressive strength. The lengths of the fibers had very little effect on the abrasion erosion resistance, and the FRC containing collated and hooked fibers had better abrasion erosion resistance than the comparable concrete containing straight fibers. A comparison of the performance of FRC and concrete not containing fibers clearly showed that FRC was less resistant to abrasion erosion than concrete of the same aggregate type and water cement ratio without fibers. PRECAST CONCRETE PAVEMENTS Final Report, Nov. 1978 - Sep. 1980
Raymond S Rollings and Yu T Chou Nov 1981 66 p refs
(DA Proj 4A1-61102-AT-22)
(AD-A108802; WES/MP/GL-81-10) Avail NTIS HC A04/MF A01 CSCL 13/13

This report reviewed published literature on precast concrete pavements and found that precast concrete pavements have had some limited application in airfields, roads, and storage areas. This review of past experience and an analytical study of precast slabs concluded that existing design and construction techniques can be adapted for use with precast concrete pavements, but more work is needed to develop effective and easily constructed load transfer designs for slab joints. Precast concrete does not offer any advantage for conventional pavements due to its high cost and surface roughness, but it may find applications for special problems such as construction in adverse weather, subgrade settlement, temporary pavements that need to be relocated, and military operations. (PB82-110644; NSF/MEA-81010; Rept-20) Avail NTIS HC A14/MF A01 CSCL 13H

Grouping and loading problems associated with flexible manufacturing systems (FMS) are addressed. The solution to the grouping problem is to organize the machines so that each machine in a particular group is able to perform the same operations. The loading problem is to allocate the operations and associated tools of a set of selected part types among the machine groups, subject to the technological and capacity constraints of FMS. A closed network of queues (CNC) model is used. The expected production rate is defined as a function of the number of parts in the system, the number and sizes of machine groups, and the workload assigned to each group. Alternative loading objectives are defined in addition to the balancing and unbalancing objective examined. Nonlinear mixed integer for mutations of the loading problem are developed GRA

IMPROVEMENTS TO SPEECH QUALITY FROM A DIVING HELMET
D J Meares Dec 1981 9 p refs
(BBC-RD-1981/9) Avail BBC, Kingswood Warren, Tadworth, Surrey, England

The normal quality of speech received from a microphone in a diving helmet is far from acceptable for broadcasting. It is both severely distorted in terms of spectral content and, where air is supplied to the diver via a 'demand valve', the noise level from the demand valve is extremely high. These problems are examined and ways in which they can be overcome without losing the verisimilitude of the event are suggested. Author

DIGITAL AUDIO. RECURSIVE DIGITAL FILTERING FOR HIGH QUALITY AUDIO SIGNALS
G W McNally and C En, Dec 1981 32 p refs
(BBC-RD-1981/10) Avail BBC, Kingswood Warren, Tadworth,

Surrey, England

A high speed, low cost digital signal processor was designed and built suitable for real-time operations on high quality sound signals. The purpose of the work described here is to examine its application to audio filters of a kind currently found in equipment such as mixing desks. The methods by which digital audio filters may be designed are reviewed and a detailed study is presented of the many ways in which the design may be realized and implemented. The Report describes two structures in detail which were identified as providing high performance with ease of implementation. The effects of coefficient quantization and round-off noise are quantified by computer simulation of the hardware structure, and by these means, a specification for the required world-length is determined. An example is given of a four filter cascade for audio equalization with a suitable implementation in programmable hardware. The filters are controlled by flexible commands issued on an internationally standarized communications bus.

GROUND STATION DIGITAL INTERFACE

K. F. Fraser and U. R. Krieser Sep. 1980 66 p refs
(ARL/MECH-ENG-Rept-158) Copyright Avail: Issuing Activity

Digital computer interface equipment was developed to enable the recovery of digital data encoded in special format and recorded, both in flight and in laboratory experiments, using an analog magnetic tape transport. The recorded data were first reproduced, in a continuous manner, at a ground station processing center, using an analogue magnetic tape reproducing machine and was then taken to the input of the interface equipment. Serial to parallel conversion of the data into 16-bit words suitable for direct entry into a computer, under interrupt control, was performed by the interface equipment. Time-of-day information which is normaly multiplexed with other digital data and recorded on the magnetic tape, effectively constitutes an identifier which may be used for specifying the location of any areas of interest on the tape. To enable the analog reproducing machine to be stopped at any predetermined location, a present stop signal generator was incorporated in the interface equipment. Complete details, together with a functional description, of each circuit within the digital interface equipment are included.

COMPARATIVE STUDIES OF CORRELATION TECHNIQUES IN THE SIDELOBE CANCELLER IN THE PRESENCE OF PULSE-TYPE JAMMING SIGNALS

E. Egner and D. Baumgarten Apr. 1981 35 p refs In GERMAN; ENGLISH summary
(Contracts BMVg-RuS-1/80; BMVg-T/RF-31/71435/71340)
(Rept-3/81; Lfd-187) Copyright Avail: Issuing Activity

A digitally implemented sidelobe canceller is proposed in replacement of the sidelobe blanker usually used for suppressing pulse type jamming signals which may otherwise reduce the sidelobe cancellation performance of radar array processing against interference significantly. The signal processing methods in the control loop correlator are reviewed and a concept for a digitally implemented canceller is derived. Its filter weight vector is computed by a linear inhomogeneous differential equation with periodic coefficients, the solution of which is found by reduction to a linear difference equation with constant coefficients. The theory is supported by results of an analog computer simulation and by a bench test of a digital adaptive spatial filter. The latter results indicate that integration correlation is superior to low pass correlation in suppressing jamming signals.

MEASUREMENTS OF AZIMUTH AND DISTANCE USING ARBITRARY CONFIGURATIONS OF SENSORS WITH UNKNOWN COORDINATES IN TWO DIMENSIONS

W. Brandenburg Jul. 1981 33 p refs In GERMAN; ENGLISH summary
(Contracts BMVg-SuK-2.4/80; BMVg-GF-5/81)
(Rept-7/81; Lfd-191) Copyright Avail: Issuing Activity

In two dimensional space, a unique solution can be found for the determination of the azimuth and distance of unknown sources by means of the measurement of time delays from an arbitrary configuration of sensors whose exact coordinates are unknown. A typical example is the deployment of sonobuoys. Significant simplification is obtained when the sensor-source distance is infinite. For the case of finite distance, an iterative procedure is required, using as initial conditions the distances of the different sensors with respect to a reference sensor, but not their relative directions or relative distances. The accuracy is better the closer the sources are with respect to the reference sensor. Iterative methods are also presented for identifying the deformation of an antenna, using narrowband processes.

DETERMINATION OF THE VELOCITY AND THE DISTANCE OF A MOVING CW SOURCE BY EXPLOITING THE DOPPLER EFFECT ON THE REVERBERATION SIGNAL

J. Ziegenbein Jun. 1981 30 p refs In GERMAN; ENGLISH summary
(Contracts BMVg-GF-80; BMVg-SuK-2)
(Rept-6/81; Lfd-190) Copyright Avail: Issuing Activity

A ship intercept analysis method is proposed. The Doppler frequency spread of the reverberation signals received in a bistatic sonar configuration are analyzed in order to determine the ship velocity vector and distance. The principle of the method is explained and the accuracy is estimated. A priori knowledge of the source frequency is not required. A stationary and a moving receiver are considered. In the latter case, the velocity vector of the receiver should be known accurately. Sea experiments are not available.

COMPARISON OF SUBJECTIVE AND AUTOMATIC PROCEDURES FOR ESTIMATING APPARENT TARGET LENGTH FROM ECHO DURATION

F. Dommermuth Sep. 1981 12 p refs In GERMAN; ENGLISH summary Supplement to FHP-6-79
(Contract BMVg-T/RF-37/71501/71300)
(Rept-8/81; Lfd-192; FHP-6-79) Copyright Avail: Issuing Activity

The capabilities of human operators and of automatic procedures in estimating the length of targets detected by such localization systems as sonar or radar are compared. The measurement of the apparent, i.e., radially projected, length is achieved by using signals with sufficient bandwidth to resolve the reflecting target into several resolution cells. One hundred echo examples were presented to nine test operators and likewise processed automatically by means of a maximum likelihood procedure. Statistical testing shows that the performance of the individual human operators is worse than that of the automatic procedure. The average performance of the operators on the contrary compares well with more objective procedure.

PHASE PERTURBATION MEASUREMENTS THROUGH A HEATED IONOSPHERE Final Report

A. Frey and W. E. Gordon Feb. 1982 38 p refs
(Contract NAS9-16428)
(NASA-CR-167550) Avail: NTIS HC A03/MF A01 CSCL 20N

High frequency radiowaves incident on an overdense (i.e., HF-frequency < penetration frequency) ionosphere produce electron density irregularities. The effect of such ionospheric irregularities on the phase of UHF-radiowaves was determined. For that purpose the phase of radiowaves originating from celestial radio sources was observed with two antennas. The radiosources were chosen such that the line of sight to at least one of the antennas (usually both) passed through the modified volume of the ionosphere. Observations at 430 MHz and at 2380 MHz indicate that natural irregularities have a much stronger effect on the UHF phase fluctuations than the HF-induced irregularities for presently achieved HF-power densities of 20-80 uW/sq m. It is not clear whether some of the effects observed are the result of HF-modification of the ionosphere. Upper limits on the phase perturbations produced by HF-modification are 10 deg at 2380 MHz and 80 deg at 430 MHz. A.R.H.

SAR CALIBRATION TECHNOLOGY REVIEW Final Report

J. L. Walker and R. W. Larson Aug. 1981 161 p refs
(Contract NAS9-16135)
(NASA-CR-167534; Rept-150400-7-F) Avail: NTIS HC A08/MF A01 CSCL 17I

Synthetic Aperture Radar (SAR) calibration technology including a general description of the primary calibration techniques and some of the factors which affect the performance of calibrated SAR systems are reviewed. The use of reference reflectors for measurement of the total system transfer function along with an on-board calibration signal generator for monitoring the temporal variations of the receiver to processor output is a practical approach for SAR calibration. However, preliminary error analysis and previous experimental measurements indicate that reflectivity measurement accuracies of better than 3 dB will be difficult to achieve. This is not adequate for many applications and, therefore, improved end-to-end SAR calibration techniques are required. R.J.F.

DEVELOPMENT OF A SYNTHETIC APERTURE RADAR DESIGN APPROACH FOR WIDE-SWATH IMPLEMENTATION Final Report

B. R. Jean Sep. 1981 35 p refs
(Contract NAS9-16102)
(NASA-CR-167536; RSC-4272) Avail: NTIS HC A03/MF A01 CSCL 17I

The first phase of a study program to develop an advanced synthetic aperture radar design concept is presented. Attributes of particular importance for the system design include wide swath coverage, reduced power requirements, and versatility in the selection of frequency, polarization and incident angle. The multiple beam configuration provides imaging at a nearly constant angle of incidence and offers the potential of realizing a wide range of the attributes desired for an orbital imaging radar for Earth resources applications. STUDY OF THE AVAILABILITY OF SATELLITE TELECOMMUNICATION LINKS SUBJECT TO ATTENUATION BY RAIN

Janio Kono and Aydano Barreto Carleial Oct. 1981 45 p refs In PORTUGUESE; ENGLISH summary Presented at 33rd Ann. Meeting of SBPC, Salvador, 8-15 Jul. 1981
(INPE-2239-PRE/025) Avail: NTIS HC A03/MF A01

A model for satellite telecommunication links subject to attenuation by rain is presented. Parameterized equations describe the joint probability density of the attenuations in the Earth-to-space and space-to-Earth paths. The correlation coefficient between the two marginal densities is a free parameter. Link availability is calculated by numerical integration of the joint density over the region of the plane that corresponds to satisfactory communications. The method is applied to the case of a network of low-capacity Earth stations that communicate through a satellite using frequency-division multiple access with a single channel per carrier (SCPC), and to a link where the entire bandwidth of the satellite transponder is occupied by a single carrier. The results show that the value of the correlation coefficient may be important in link design. M.D.K.

COMPENSATION FOR DIRECT AND REVERSE INTERCONNECTION IN AN INFINITE EMITTER ARRAY

L. V. Ryzhkova *In its* Antenna (Selected Articles), No. 8, 1970 (FTD-ID(RS)T-0993-81) 2 Nov. 1981 p 1-15 refs Transl. into ENGLISH from Antenny (USSR), no. 8, 1970 (For primary document see N82-19413 10-32)
Avail: NTIS HC A03/MF A01 CSCL 20/14

An infinite emitter array is presented in the form of a multiterminal network whose input connectors coincide with the inputs of actual emitters and whose output connectors coincide with the outputs of individual emitters. This permits expressing all elements of the emitter array scatter matrix by the coupling coefficient between the input connectors. The possibility of compensation for the leakage of energy from one of the channels to the inputs of other channels and the reradiation, by the apertures, of the energy which has landed on them from other apertures is studied. Author

ANIK-B PROGRAM DELIVERY PILOT PROJECT. A 12 MONTH PERFORMANCE ASSESSMENT

I. Bischof, J. W. B. Day, R. W. Huck, W. T. Kerr, and N. G. Davies Dec. 1981 124 p refs

(CRC-1349) Avail: NTIS HC A06/MF A01

An assessment of the Program Delivery Pilot Project (PDPP), one of the most significant projects of the ANIK-B Communications Program of the Department of Communications (DOC) is provided. This project is a field trial involving the reception of television signals at 12 GHz from the 20 watt RF channels of the ANIK-B using low cost TV receive-only earth terminals with antenna diameters of 1.2 and 1.8m. The PDPP has been in operation since late September 1979 with approximately 80 receive-only terminals located in the two geographically distinct regions of northwestern Ontario and British Columbia, the Yukon and Northwest Territories. The objectives of the project are to demonstrate, evaluate and gain field experience with direct-to-home and small community satellite broadcasting, to provide a testing ground and small initial market for terminals, to contribute to policy development and plans for future operational use of broadcasting satellites and to provide information to the various interested agencies. FRESNEL-REGION FIELDS AND ANTENNA NOISE-TEMPERATURE CALCULATIONS FOR ADVANCED MICROWAVE SOUNDING UNITS

R. F. Schmidt Jan. 1982 42 p refs

(NASA-TM-83813) Avail: NTIS HC A03/MF A01 CSCL 20N

A transition from the antenna noise temperature formulation for extended noise sources in the far-field or Fraunhofer-region of an antenna to one of the intermediate near field or Fresnel-region is discussed. The effort is directed toward microwave antenna simulations and high-speed digital computer analysis of radiometric sounding units used to obtain water vapor and temperature profiles of the atmosphere. Fresnel-region fields are compared at various distances from the aperture. The antenna noise temperature contribution of an annular noise source is computed in the Fresnel-region (D squared/16 lambda) for a 13.2 cm diameter offset-paraboloid aperture at 60 GHz. The time-average Poynting vector is used to effect the computation. B.W.

MULTI-DIMENSIONAL SIGNAL-PROCESSING RESEARCH PROGRAM Semiannual Technical Summary, 1 Oct. 1980 - 31 Mar. 1981

Dan E. Dudgeon 31 Mar. 1981 53 p refs

(Contract F19628-80-C-0002; AF Proj. 4594)

(AD-A108641; ESD-TR-81-94) Avail: NTIS HC A04/MF A01 CSCL 09/2

In the area of image segmentation and classification, a hierarchical segmentation scheme was developed for processing images with several region classes. Adaptive contrast enhancement was used as a preprocessor for image segmentation based on texture rather than gray level. These techniques were also applied to aerial images degraded by light cloud cover and haze. The primary effects of this type of degradation are a reduction in contrast and an increase in the local average intensity of the image. Two aspects of the iterative implementation of multidimensional digital filters are also discussed. This first concerns spatial truncation effects which occur during the iteration because the image frame buffer has a finite storage capability. The errors caused by this truncation are closely related to the solution of a boundary value problem with boundary conditions specified on the frame edges. These errors can be eliminated by including the boundary conditions in the spatially truncated iteration. Potential multiprocessor architectures are discussed. GRA

THE RESPONSE OF A TWO-WIRE TRANSMISSION LINE TO INCIDENT FIELD AND VOLTAGE EXCITATION, INCLUDING THE EFFECTS OF HIGHER ORDER MODES Phase Report, 1 Oct. 1979 - 30 Sep. 1980

Yehuda Leviatan and Arlon T. Adams Griffiss AFB, N.Y. RADC Aug. 1981 88 p refs

(Contract F30602-79-C-0011; AF Proj. 2338)

(AD-A108780; RADC-TR-81-214) Avail: NTIS HC A05/MF A01 CSCL 09/5

The main objective of this report has been to derive the induced current on a two-wire transmission line due to incident field excitation. Special attention has been paid to the case of voltage source excitation, where the current may be given, at least approximately, using the so-called leaky-wave concept. The influence of the electrical dimensions of the structure on the currents and the relative importance of the higher modes is examined by numerical examples. Author (GRA)

AN ASCII FORTRAN SUBROUTINE FOR COMPUTING THE ELECTROMAGNETIC RADIATION SCATTERED BY A SPHERE Technical Report, period ending May 1980

Merrill E. Milham Nov. 1981 43 p refs
(DA Proj. 1L1-62662-A-554)
(AD-A108772; ARCSL-TR-81088) Avail: NTIS HC A03/MF A01 CSCL 20/6

This report describes the ASCMIE subroutine for performing Mie scattering calculations by means of the downward recursion algorithm developed by J. V. Dave. ASCMIE is written in UNIVAC 1100 series ASCII FORTRAN language. The ASCII FORTRAN compiler is a modern, state-of-the-art compiler which implements the ANSI FORTRAN 77 standard; this compiler is intended as a future replacement for the UNIVAC 1100 series FORTRAN V compiler. Rather than carry out a straightforward conversion of the FORTRAN V Mie scattering routine to ASCII FORTRAN, the code was completely rewritten in order to incorporate new ASCII FORTRAN language elements. The result is a more structured, modular, Mie scattering code which executes faster than the FORTRAN V code. Author (GRA)

VLFACM PROGRAM DESCRIPTION AND OPERATIONAL MANUAL Final Report

J. P. Hauser, F. J. Rhoads, and Francis J. Kelly 24 Nov. 1981 59 p refs
(AD-A109003; NRL-8530) Avail: NTIS HC A04/MF A01 CSCL 17/2

VLFACM is a FORTRAN computer program which can compute signal or noise field strengths and signal-to-noise, signal-to-jam, or signal-to-jam-plus-noise ratios in the 14- to 3-kHz frequency range. Additional postprocessing programs exist which can plot VLFACM results in the form of rectangular or polar contour maps, field strength versus distance plots, or diurnal plots. Author (GRA)

SEA ICE MOVEMENTS FROM SYNTHETIC APERTURE RADAR Final Report, 1 Apr. 1979 - 30 Jun. 1981

David A. Rothrock and Alan S. Thorndike 1 Dec. 1981 84 p refs
(Contract N00014-79-C-0418; NR Proj. 307-428)
(AD-A109002) Avail: NTIS HC A05/MF A01 CSCL 08/12

The spatial structure of the sea ice velocity field determines ridging, open water production and ice stress. The velocity has been measured roughly every 2 km along an 865 km track from SEASAT synthetic aperture radar. The movement shows individual pieces as large as 100 km. The spatial autocorrelation function of velocity has been estimated from these data and FGGE and AIDJEX buoy data, and has a length scale of roughly 1000 km. A model of the movement of a set of pieces shows the large uncertainty in opening and ridging estimated from velocities measured at only three points. Author (GRA)

COMPUTER MODELS FOR CONDUCTING SURFACES Final Technical Report, Sep. 1979 - Sep. 1980

Jitendra Singh Griffiss AFB, N.Y. RADC Aug. 1981 170 p refs
(Contract F30602-79-C-0091; AF Proj. 2338)
(AD-A108763; RADC-TR-81-222) Avail: NTIS HC A08/MF A01 CSCL 09/5

Under this effort work has been done to derive and use closed form expressions for generalized impedance parameters involving rectangular, conducting patches in free space. A Galerkin model for the interaction between two wires, a wire and a patch and two patches has been developed. Basis functions sinusoidal in the direction of the current and triangular in the transverse direction have been used. Farrar's Integration technique has been used so as to give most of the results of the model in closed form. Author (GRA)

UNBOUNDED SPEED VARIABILITY IN DISTRIBUTED COMMUNICATIONS SYSTEMS

John H. Reif and Paul G. Spirakis 1981 19 p refs
(Contract N00014-80-C-0647; Grant NSF MCS-79-21024)
(AD-A108824; TR-14-81) Avail: NTIS HC A02/MF A01 CSCL 09/2

The problem of synchronizing communication between distributed processes whose speeds (steps per real time unit) vary dynamically is discussed. The implementation of a distributed local scheduler to find matching pairs is reported. The only means of synchronization are boolean 'flag' variables, each of which can be written by only one process and read by at most one other process. No global bounds in the speeds of processes are assumed. Processes with speed zero are considered dead. However, when their speed is nonzero then they execute their programs correctly. Dead processes do not harm the algorithms' performance with respect to pairs of other running processes. When the rate of change of the ratio of speeds of neighbour processes is bounded, then any two of these processes will establish communication within a constant number of steps of the slowest process with high likelihood. The implementation presented has the property of achieving relative real time response. The techniques can be used to solve other problems such as resource allocation and implementation of parallel languages such as CSP and Ada. Note that we do not have any probability assumptions about the system behavior, although our algorithms use the technique of probabilistic choice. GRA

VARIATIONS IN PROPAGATION ATTENUATION AT THE FREQUENCIES 11, 18 AND 36 GHz [VARIATIONER I UTBREDNINGSDAEMPNING VID FREKVENSERNA 11, 18 OCH 36 GHz]

Bernt Danielsson and Lennart Nilsson May 1981 20 p refs
In SWEDISH
(FOA-A-30028-E2; RI-1015/81) Avail: NTIS HC A02/MF A01

In order to assess the effect of variations in propagation attenuation on the performance of transmitters operating at frequencies > 10 GHz, field strengths were measured over a 15 km path with free visibility. At 18 and 36 GHz, the depolarization effects of the atmosphere were recorded. Data was processed with a PDP 11/10 computer at a sampling frequency of 5 Hz. Results show that atmospheric anomalies cause multipath propagation, resulting in strong variation of the attenuation with quick and deep fading, whereas signal variations due to precipitation develop more slowly. The influence grows when the frequency increases. Depolarization occurs in relation to important propagation disturbances. Author (ESA)

TELEVISION SERVICES IN EUROPE IN THE AGE OF DIRECT SATELLITE TELEVISION [LES SERVICES NOUVEAUX DE TELEVISION ENVISAGEABLES EN EUROPE A L'AGE DU SATELLITE DE TELEVISION DIRECTE]

Bernard Gonner Paris ESA Jan. 1981 224 p refs In FRENCH
(Contract ESA-4139/79/F-FC(SC))
(ESA-CR(P)-1503) Avail: NTIS HC A10/MF A01

Consumer and industrial reaction to direct satellite television is discussed. Legal aspects raised at the Geneva conferences are summarized. Existing techniques are reviewed and the expansion of services is outlined. A country by country breakdown of the economic, social, cultural, and legal impact of satellite television is provided. The television and peritelevision market in Western Europe to the year 2000 is forecast, and the effect on this satellite television is evaluated. The outlook is good, with increased program variety, cheap teletext and increased quality leading to more receivers being bought and more satellites sold to countries outside Europe. Frequencies used for ground based television transmission can be used for other purposes, e g citizens' band radio. Author (ESA)

ANALOGUE SAR SIGNAL PROCESSING: DEVICE EVALUATION AND RADIATION TESTS
K. M. Harvey, M. A. B. Hugues, C. Lambert, D. W. Sergeant, and D. W. Cruse Paris ESA Nov. 1980 147 p refs
(Contract ESA-3400/77/NL-HP(SC))
(Rept-3972-Issue-1; ESA-CR(P)-1512) Avail: NTIS HC A06/MF A01

For onboard satellite SAR signal processing, charge coupled video integrators for prefiltering/subaperture filtering, and a bucket brigade binary-analog correlator, were tested. Breadboard performance at room temperature and after X-irradiation is reported. Dark current is excessive in the video integrators and the transfer inefficiency is large. One device is insensitive to radiation up to 4.5 KRads, the other is sensitive to doses < 500 Rads, although both came from the same wafer. The correlator meets data processing and power supply immunity requirements, but does not meet low power and temperature stability requirements. No significant radiation damage is observed below 2 KRads. Author (ESA)

SPECTRUM SAVING SPEECH TRANSMISSION FOR LAND MOBILE RADIO. A STUDY ON SINGLE SIDEBAND TRANSMISSION IN 5 kHz CHANNELS FOR 2 AND 4 m BANDWIDTHS Final Report
Heribert Gorzel and Manfred Poetter Bonn Bundesministerium fuer Forschung und Technologie Oct. 1981 85 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-173; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 17,65

The spectrum efficiency of single sideband in the two and four m band was studied. Requirements on transmitter and receiver were investigated. Receiver and oscillator are synchronized by a short burst before any transmission, instead of by a continuous pilot carrier during the entire transmission. It is shown that the performance of current FM units is met at one fifth of the power. The problem of fast automatic gain control for compensating for the influence of multipath fading, especially at higher vehicular speeds, is not yet satisfactorily solved. Author (ESA)

SIGNAL ANALYSIS USING THE MAXIMUM ENTROPY METHOD [SIGNAALANALYSE MET DE MAXIMALE ENTROPIEMETHODE]
W. Kuik Mar. 1981 43 p refs In DUTCH
(VTH-LR-318) Avail: NTIS HC A03/MF A01

The analysis of discrete series is explained using the maximum entropy method in order to solve data processing problems in the aeroelastic study of wind turbines. Discrete Fourier spectrum and maximum entropy spectrum are compared. This method searches for an autoregressive model for a series containing a maximum of information about entropy. The autoregressive model is outlined and the notions 'information' and 'entropy' in signal analysis are defined. Energy and phase spectrum construction, starting from an autoregressive model, is described, with examples. The maximum entropy method is valuable where Fourier transformation techniques hardly work or fail. Author (ESA)

MODELING OF THE INFLUENCE OF STATIC ACCELERATION ON SURFACE WAVE (QUARTZ) OSCILLATOR Ph.D. Thesis
Patrick Levesque Jan. 1982 149 p refs Transl. into ENGLISH from "Modelisation de l'Influence des Accelerations Statiques sur les Dispositifs a Ondes Elastiques de Surface", Rept. ONERA-NT-1981-3 ONERA, Paris, 1981 Original report in FRENCH previously announced as N82-14470
(ESA-TT-726; ONERA-NT-1981-3) Avail: NTIS HC A07/MF A01

The application of a static acceleration on a quartz oscillator, working in elastic surface wave mode, is modeled. Modification of the wave propagation speed through the substrate and its frequency are studied. Experiment proves that this frequency shift depends on the nature of the substrate through which the wave is propagating, but also on its dimensions and its mode of attachment. Theory confirms and explains these results, and also shows the relationship between the stresses arising in the substrate during the acceleration and the sensitivity to this acceleration of surface wave devices. PLANNING OF A C-BAND PULSE DOPPLER RADAR WITH POLARIZATION DIVERSITY FOR ATMOSPHERIC RESEARCH IN THE MESOSCALE RANGE
Herbert Schuster Sep. 1981 49 p refs In GERMAN; ENGLISH summary Report will also be announced as translation (ESA-TT-750)
(DFVLR-Mitt-81-28; ESA-TT-750) Avail: NTIS HC A03/MF A01; DFVLR, Cologne DM 11,80

A radar system was defined, suitable for research in cloud physics requiring measured values of meteorological parameters relevant to a complete model of the behavior of the observed object in space and time. This problem can be solved using remote sensing methods, especially radar measuring methods. A semimobile system, comprising computer controlled pulse Doppler radar with polarization diversity and digitized radar signal processing is recommended. The fundamental attributes of the radar system are summarized. Author (ESA)

DIRECT BROADCAST SATELLITES: POLICIES, PROSPECTS, AND POTENTIAL COMPETITION
Kim E. Degnan, Kenneth R. Dunmore, and Vincent Sardella Mar. 1981 144 p refs
(PB82-110164; NTIA-SP-81-11) Avail: NTIS HC A07/MF A01 CSCL 17B

Potential service options and concentration for a direct broadcast satellite (DBS) television service are examined relative to regulatory issues. The conclusion is drawn that pay television is the most likely service, absent regulation, to be provided due to the large potential cashflow that offsets the high risk of the enterprise. The extent of competition with terrestrial distribution modes is examined with respect to substitutability and geography. Technical, cost, and demand characteristics are discussed in order to evaluate the potential for competing DBS systems. T.M.

DECREASING DG AND DIRECTION DISPERSION OF MAIN MAXIMUM OF BEAM PATTERN OF SECTIONAL TRAVELING WAVE ANTENNA
V. I. Zamyatin and L. G. Korniyenko *In its* Antenna (Selected Articles) (FTD-ID(RS)T-0940-81) 4 Nov. 1981 p 1-17 refs Transl. into ENGLISH from Antenny (USSR), no. 15, 1972 (For primary document see N82-19448 10-32)
Avail: NTIS HC A04/MF A01 CSCL 20/14

Formulas to analyze and reduce the directive gain and direction dispersion of the main maximum of the beam pattern of a sectional traveling wave antenna when there are errors of the wave number in the system and phase errors at the sites of contact between the sections are presented. A condition of optimality of sectioning and a condition in which the limiting directive gain was missing were obtained. The effectiveness of the sampling of phase errors was studied. Results of a statistical analysis of the field of traveling wave sectional antennas are discussed. M.D.K.

ASSESSMENT OF AIRCRAFT CAPACITIVE CIRCUIT MEDIUM WAVE ANTENNAS ACCORDING TO THEIR EFFICIENCY
E. O. Brudnyy and L. Ya. Ilnitskiy *In its* Antenna (Selected Articles) (FTD-ID(RS)T-0940-81) 4 Nov. 1981 p 53-59 refs Transl. into ENGLISH from Antenny (USSR), no. 15, 1972 (For primary document see N82-19448 10-32)
Avail: NTIS HC A04/MF A01 CSCL 20/14

A method for assessing aircraft capacitive circuit medium wave antennas according to their efficiency is presented. The measure of efficiency is the product of the antenna capacitance times the active altitude. An expression was obtained which links the antenna efficiency to its geometric dimensions. The suggested method discussed produces the optimal dimensions for aircraft capacitive circuit antennas direction during their designing. Author

WAVE PROPAGATION PROBLEMS IN CERTAIN ELASTIC ANISOTROPIC HALF SPACES Ph.D. Thesis
Constantine George Caracostis 1981 204 p
Avail: Univ. Microfilms Order No. 8129570

The Smirnov-Sobolev method of self-similar potentials is used to solve certain propagation problems in anisotropic media. The solutions are expressed in terms of analytic functions determined from the boundary conditions in a straightforward manner. The first problem concerns the two dimensional case of an orthotropic material under plain-strain conditions subjected to a suddenly applied line force on the surface or in the interior of a half space. The second type treats the three dimensional problem of a point force suddenly applied on the surface of a transversely isotropic half space. This solution is formed by a rotational superposition of the solutions for a plane strain and for an antiplane problem with appropriately defined boundary conditions. The mapping of the wave fields in the complex domain composed of a four-sheeted Riemann surface is examined in detail. Techniques used in the numerical treatment of certain singularities are discussed. Time histories for the displacements and stresses in the two dimensional case and as time histories of only the displacements in the three dimensional case are given.
Dissert. Abstr.

FINITE-ELEMENT ANALYSIS FOR DESIGN OF CLASSICAL AND ELECTRONICALLY OPERATED MACHINES Ph.D. Thesis
Fakhry Ahmed Fouad 1981 251 p
Avail: Univ. Microfilms Order No. 8126257

A method for analysis of magnetic fields in electrical machines is developed. A modular approach is developed to analyze the effects of machine geometry on machine performance and to solve for the magnetic field for any set of winding excitation currents as well as for any relative stator to rotor angular position. This generalized finite element approach is applied to the calculation of various machine parameters and performance characteristics. These parameters include a rigorous calculation of the saturated values of machine inductances, core losses, flux density waveforms throughout the magnetic circuit, induced EMF's and flux distributions under various load conditions. These parameters are key elements in the dynamic simulation of such machine systems. The advantage of this generalized machine modeling is the ability to predict accurately machine performance characteristics during design stages using the digital computer. Dissert. Abstr.

DEVELOPMENT AND CHARACTERIZATION OF THE FLIP-CHIP DIODE Ph.D. Thesis
Claude Samuel Setzer 1981 436 p
Avail: Univ. Microfilms Order No. 8117918

The standard structure of the Schottky diode chip incorporated an ohmic contact on the back surface of the chip and an array of anodes on the front surface, one of which must be contacted by a sharply pointed whisker. This contact whisker is troublesome because it inherently has less than the desired mechanical stability and adds considerable uncertainty to choke structure design due to inability to predict its exact shape The development of a new millimeter-wave Schottky diode structure which eliminates the whisker completely and allows direct bonding of the anode to the RF choke structure Detailed theoretical analysis of this new structure, the Flip-Chip, is presented and shows that it will be capable of not only adding the mechanical stability and predictability of a directly bonded structure, but will also allow improvement of diode sensitivity through reduction of parasitic elements Also, complete details of technology necessary for fabrication of the device are presented, along with preliminary experimental performance data which indicats great promise for future uses of the Flip-Chip diode Dissert Abstr

ANALYSIS AND SYNTHESIS OF BINARY SEQUENCES Ph.D. Thesis

Henry Eugene Stern 1981 176 p

Avail Univ Microfilms Order No 8128325

A method which combines the concept of run length with the technique of piecewise polynomial convolution for rectangular waveforms, is proposed for the analysis of binary sequences of arbitrary length The synthesis of short binary sequences with desired correlation properties is facilitated Long binary sequences, or time series, are treated as the outcomes of a generalized Markov chain Given a transition matrix, correlation of coefficients are calculated and simulation models to generate sample sequences tested Conversely, given a set of correlation coefficients, a transition matrix optimum in a least squares sense, is defined For moderately long sequences, an iterative procedure is developed which combines the deterministic selection of run lengths with their statistical placement in the sequence Examples of synthesis are given for the three techniques Dissert Abstr

MATHEMATICAL AND GRAPHICAL TOOLS FOR THE CREATION OF COMPUTATIONAL ARRAYS Ph.D. Thesis

Uri Chanan Weiser 1981 148 p

Avail Univ Microfilms Order No 8129930

A formalism for describing the behavior of computational networks at the algorithmic level is introduced Formal mathematical models for delay and combinatorial elements establish a direct correspondance between mathematical expressions defining a function, and graphs representing the computational networks which compute that function Different and often more efficient networks can be developed using transformations on either the graphs or the mathematical expressions describing those networks These transformations are expressed by formal rules which exist in both the mathematical and the dual graphical form The concept of a wavefront is presented to simplify the mathematical notation and to enhance understanding of the progression of sets of data elements through a computational network Dissert Abstr

A 12 GHz MIXER WITH PLANAR CIRCUITS IN A WAVEGUIDE

Eduardo Antonio Parada Tude Jul 1981 25 p refs In PORTUGUESE; ENGLISH summary Presented at 33rd Ann Meeting of SBPC, Salvador, Bahia, 8-15 Jul 1981

(INPE-2149-RPE/370) Avail NTIS HC A02/MF A01

A 12 GHz mixer, used in satellite communications, which produces an intermediate frequency of 1 to 3 GHz is presented The conversion is achieved by a Schottky diode mounted in a planar circuit in the waveguide This technique consists of inserting a metal plate in the middle of the waveguide, parallel to the E plane The image frequency was short circuited so as to obtain a lower conversion loss A computer program was developed for this purpose, which calculates the line increment due to the short effect, in the ridge waveguide formed by the planar circuit The prototype has presented low conversion loss (6 dB) and good reproducibility, which may be credited to ease of construction S.L.

TWO DIMENSIONAL FILTERS FOR DIGITAL PROCESSING OF IMAGES: DESIGN AND IMPLEMENTATION TECHNIQUES [FILTROS BIDIMENSIONAIS PARA PROCESSAMENTO DIGITAL DE IMAGENS: TECNICAS DE PROJETO E IMPLEMENTACAO]

Gilberto Camara Neto and Edson Alves Ribeiro Nov. 1981 12 p refs In PORTUGUESE; ENGLISH summary Presented at the 4th Natl. Congr. on Appl. and Computational Math., Rio de Janeiro, 8-11 Sep. 1981 Submitted for publication

(INPE-2273-PRE/053) Avail: NTIS HC A02/MF A01

Two design methods of two dimensional digital filters are presented Finite impulse response filters which make possible linear phase frequency responses are emphasized The design methods considered are windowing and transformations In the windowing methods, a time limited function is sought, the Fourier transform of which would be a best approximation to a given frequency limited function An approximate solution for the one dimensional case is the Kaiser window; a two dimensional Kaiser window is proposed. In the transformation method, a change of variables transforms a one dimensional frequency response into a two dimensional one Finally, implementation of filters and their application is discussed for the case of LANDSAT images. A MICROWAVE FET OSCILLATOR DESIGN APPROACH AND ITS APPLICATION IN AN INJECTION LOCKED OSCILLATOR
P. Morrison and R. Douville Jan. 1982 47 p refs
(CRC-1347) Avail: NTIS HC A03/MF A01

A low power 14 GHz MIC GaAs FET oscillator was designed. The analytical model of the oscillator and design approach used are discussed in detail. A shunt feedback oscillator configuration was employed. Approximations were made to account for FET large signal effects in the design for maximum oscillator output power. An expression relating oscillator output power to feedback loop loss is presented. The requirement for filtering in the feedback loop is discussed. Experimental results were compared with theory and found to be in good agreement. Output power was 10 dBm at 14.0 GHz. The injection locked characteristics of the oscillator were experimentally investigated. It was found that for a 15 dB injection gain, the locking bandwidth was 69 MHz. The FM noise properties and transient performance of the injection locked oscillator are presented. Author

Further progress in the use of SnO2 thin films as solid state gas sensors is reported. Films of SnO2, prepared by the radio frequency sputtering technique, were doped with antimony and tested in H2 and CO in order to elucidate the mechanisms of gas sensitivity. Improvements in the response and recovery times were then obtained by the incorporation of gold in the oxide material. Zeolite films were deposited on the SnO2 films in order to enhance the selectivity process of gas sensors. Finally, a working device was prepared using state-of-the-art fabrication techniques. GRA

SUPERCONDUCTING NIOBIUM-TIN RESONATORS Final Report

Bernhard Hillebrand, Norbert Krause, Hans Pfister, Kurt Schnitzke, Yilmaz Uzel, and Karl Wohlleben Bonn Bundesministerium fuer Forschung und Technologie Oct. 1981 72 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie

(BMFT-FB-T-81-188; ISSN-0340-7608) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 15,20

A preparation method was developed for covering a Nb substrate with Nb 35 n layers by exposing the substrate to saturated tin vapor for 3 to 4 hr at 1050 C. The method preanodizes the Nb substrate and heats it up. Alternatively, small amounts of SnF2 are added. With TE011 X-band resonators, critical flux densities up to 100 mT and quality factors up to 9.10 exp 10 (at 1.5 K) are reached. Average values amount to 60 mT and 2.10 exp 9 (at 1.5 K) and 1.10 exp 9 (at 4.2 K). Comparable results are obtained with TM010 resonators.

CONTACTLESS OPTOELECTRONIC POSITION SENSING Final Report

Guenter Hege and Reinhold Litschel Bonn Bundesministerium fuer Forschung und Technologie Nov. 1981 53 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie

(BMFT-FB-T-81-191; ISSN-0340-7608) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 11,35

A photoelectric lateral perflectometer sensing system and an axial probe depth sensor were developed, since increasing automation in production processes gives rise to an equivalent demand in optoelectronic sensor systems for automatic measurement and control. Concentric circular grids are used for two dimensional sensing with the perflectometer as well as for automatic adjustment of the instrument. The resulting Moire patterns are detected by a matrix solid state image sensor. The use of light emitting diodes gives a small and rugged z axis probe. As with the autofocus, the measuring principle employs the concept of disappearing parallax. Accuracy in the submicrometer range makes it possible to use the perflectometer for dimensional measuring as well as for exact positioning of work pieces having moderate surface roughness and dimensions. The z axis probe has a capture range of + or - 1 mm and an accuracy of better than 1 micron even on rough surfaces.

Ga (As, P): N - LED'S FOR MONOCHROMATIC ILLUMINATION Final Report, Dec. 1980

Ludwig Hoffmann Bonn Bundesministerium fuer Forschung und Technologie Nov. 1981 68 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie

(BMFT-FB-T-81-198; ISSN-0340-7608) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 14,30

The feasibility of decreasing Ga hole concentration to improve the internal quantum efficency of Ga As/sub 1-x/P/sub x/light emitting diodes doped with nitrogen was studied. It is assumed that the concentration determines the lifetime of the minority carriers. Continuous liquid phase epitaxial layers with thicknesses up to 15 microns were grown on exactly oriented 100 - surfaces of VPE layers with sufficient p-type doping. Two diagnostic techniques are developed: (1) nitrogen concentration measurement by photocurrent spectroscopy at 300 K; and (2) deep level energy determination by photocapacity measurement at 300 K. BRITISH AERODYNAMICS GROUP (BAE) SOLAR-ARRAY DRIVE MECHANISM: LIFE TEST, STRIPDOWN AND OPTICAL ENCODER EXAMINATION

A. J. Walton, J. Gillies, and J. A. Duvall Dec. 1980 31 p

(ESA-TRIB-2; ISSN-0250-4448) Avail: NTIS HC A03/MF A01

A drive mechanism which rotates a satellite solar array at 1 rev/day was tested. The real time life test simulated actual satellite operating conditions of vacuum and temperature (including eclipses) and lasted four years. Termination was caused by a failure in the optical sensing elements of the position sensing digital encoder. The mechanism behaves according to specification as regards drive motor power, error angle compared with a 24 hr clock and performance of power slip rings. Examination at the end of the test shows the mechanism to be in excellent mechanical condition, there being no features (apart from the encoder) that might limit the life to less than the projected seven years. Results for the main parameters are summarized. Details of the post test examination, which includes the measurements made on the optical encoder elements, are given. Author (ESA)

THERMAL VACUUM REAL-LIFE TEST OF AN MARCONI SPACE AND DEFENCE SYSTEMS (MSDS) SOLAR-ARRAY DRIVE MECHANISM (MSDS 002). FIRST FOUR YEARS OF OPERATION

K. Parker, A. Douglas, and W. R. Burke, ed. Jan. 1981 40 p

(ESA-TRIB-3; ISSN-0250-4449) Avail: NTIS HC A03/MF A01

The first part of a 7 yr life test on a mechanism which turns a satellite solar array at 1rev/day is reported. A thermal transfer shroud, surrounding the mechanism in a vacuum chamber, is held at a constant temperature of 22.5 C while the shaft temperature, measured near the top of the shaft at the large bearing, is changed at 6-monthly intervals so that it operates alternately at 60 and 10 C. At the beginning of each 6-monthly cycle, 30 eclipse simulations are performed, i.e., the shaft temperature is reduced from 60 C to 0 C in 72 min and is returned to 60 C in as short a time as possible. Apart from a very small increase in motor power during eclipse simulation, no changes in the mechanism parameters occur with temperature. The mechanism operates within motor power and angular rotation accuracy specifications. The electrical noise on all slip rings increased during the first two years, but then slowly decreased. Certain slip ring pairs show a noise level in excess of the arbitrary limits set at the start of the test, and two slip ring pairs give large periodic noise transients which may be due to mechanical damage to the slip rings or brushes. HIGH STABILITY COPLANAR OSCILLATORS

E. M. Bastida and P. Bergamini 1981 9 p refs Presented at 11th European Microwave Conf., Amsterdam, 7-11 Sep. 1981

(CISE-1720) Avail: NTIS HC A02/MF A01

The feasibility of various kinds of coplanar oscillators, stabilized by a high Q dielectric cavity, was demonstrated. Their performance is comparable with devices obtained with microstrip circuits. An X-band coplanar oscillator with a frequency versus temperature stability better than + or - 0.2 ppm/C, over the temperature range -50 to 50C, is described. It has a loaded quality factor Q sub L asymptotic to 3500, a drain pushing figure of 8 ppm/V, and particularly appealing FM noise characteristics. The coplanar approach allows overall reduction in oscillator size; it can be placed directly over the cavity on a monolithic chip (including the active portion of the linear oscillator), avoiding unwanted linear oscillator coupling anywhere in the circuit. RADIATIVE HEAT TRANSFER IN TURBULENT MHD CHANNEL FLOW Ph.D. Thesis
Fariborz Alipour-Haghighi 1981 148 p
Avail: Univ. Microfilms Order No. 8128371

Radiative heat transfer in a MHD channel has been studied for fully developed turbulent flow of an electrically conducting fluid. A uniform magnetic field is imposed transverse to the flow direction between the electrically insulated parallel plates. Thermal entry region is analyzed for constant wall temperature including viscous dissipation and Joulean heating. A van Dreist mixing length model with Mei and Squire correction factor is used for eddy diffusivity of momentum and a modified Cebeci model is used for eddy conductivity. An exponential wide band model is employed in evaluation of radiative heat flux for a real gas. The tegro-differential equation for thermal energy transport is solved by a finite difference iterative method. It is shown that radiative heat transer is a major mechanism of heat transfer in the channel and accelerates the thermal development and results in reduced gas temperature profiles. Dissert. Abstr.

STATIC AND HYDRODYNAMIC STUDIES OF THE CONFORMATION OF ADSORBED MACROMOLECULES AT THE SOLID/LIQUID INTERFACE Ph.D. Thesis
David Paul Yavorsky 1981 272 p
Avail: Univ. Microfilms Order No. 8127094

The structure of an adsorbed macromolecular layer at the solid/liquid interface under both stationary and flow conditions is examined. The conformation of adsorbed bovine serum albumin (BSA) is deduced from the thickness of surface layers formed on the pore walls of track etched (mica) membranes. Changes in membrane permeability due to protein adsorption are related directly to a net reduction in pore size or an equivalent adsorbed layer thickness. Complementary permeability measurements using electrolyte conduction, tracer diffusion, and pressure driven flow have verified the unique structural qualities of the track etched membrane and collectively demonstrate an ability to determine bare pore size with an accuracy of + or - 2A. The average static thickness of an adsorbed BSA layer, as derived from electrolyte conduction and tracer diffusion, was 43 + or - 3A independent of pore size. In comparison with the known BSA solution dimensions, this measured thickness is consistent with a monolayer of structurally unperturbed protein molecules each oriented in a 'side-on' position. Pronounced conformational changes in adsorbed BSA layers were observed under conditions of shear flow. Electrostatic interactions were also shown to significantly affect adsorbed protein conformation through changes in solution ionic strength and surface charge. Dissert. Abstr.

MAINTENANCE OF HYDROSTATIC TRANSMISSIONS
A. Esposito Oct. 1981 10 p Transl. into ENGLISH from Oleodinamica Pneumatica, (Italy) no. 9, 1980 p 156-159
(DRIC-T-6497; BR81311) Copyright Avail: Issuing Activity

Problems in hydrostatic transmission maintenance are identified and ways of overcoming them are suggested. It is found that problems arise from lack of lubrication, impurities in the oil, and cavitation at the pump and at the motor. It is under suggested that under nonsevere operating conditions, oil and filter should be changed every year, or every 1500 to 2000 hr running time. Under severe operating conditions or in dusty environments, the interval should be every 6 months or 1000 hr. Author (ESA)

FREE-WAVE PROPAGATION IN FLUID-LOADED THICK-WALLED CIRCULAR PIPES
S. A. Lester Nov. 1981 20 p refs
(AMTE-N-TM-81903; BR81307) Copyright Avail: Issuing Activity

Wave propagation and sound radiation by layered pipes is treated by analyzing the dispersion relation of an infinite thick-walled pipe which contains, and is surrounded by, and inviscid fluid. Pipe wall displacements satisfy the exact linear equations of elasticity. The interior and exterior fluids satisfy the scalar Helmholtz wave equation. The differential equations are solved by Fourier transforms, giving the dispersion relation which connects frequency with axial and circumferential wavenumbers. The dispersion relation is solved numerically, producing examples of axial wavenumber versus frequency plots for selected circumferential harmonics. Author (ESA)

STUDY OF LIQUID SLOSH IN THE TRACKING AND DATA RELAY SATELLITE HYDRAZINE TANKS Final Report
Daniel D. Kana and Franklin T. Dodge Nov. 1981 124 p refs

(Contract NAS5-26482; SwRI Proj. 02-6539)
(NASA-CR-166745) Avail: NTIS HC A06/MF A01 CSCL 20D

An experimental study was conducted to provide data for evaluation of the parameters for an analytical mechanical model representation of liquid/interface dynamics in the TDRSS propellant tanks. Models were developed for two liquid-under ullege (forward tank) configurations and for one liquid-over-ullage (aft tank) configuration. However, additional test runs were conducted with liquids of different densities in both cases to allow separation of bladder stiffness and gravity effects under various simulated steady acceleration conditions. Both static and dynamic parameters are evaluated to provide a good prediction of observed results. Author

EFFECT OF LOCATION IN AN ARRAY ON HEAT TRANSFER TO A CYLINDER IN CROSSFLOW
Robert J. Simoneau and G. James VanFossen, Jr. 1982 15 p refs Proposed for presentation at the 3rd Joint Thermophy. Fluids, Plasma and Heat Transfer Conf., St. Louis, 7-11 Jun. 1982
(NASA-TM-82797; E-1131) Avail: NTIS HC A02/MF A01 CSCL 20D

An experiment was conducted to measure the heat transfer from a heated cylinder in crossflow in an array of circular cylinders. All cylinders had a length-to-diameter ratio of 3.0. Both in-line and staggered array patterns were studied. The cylinders were spaced 2.67 diameters apart center-to-center in both the axial and transverse directions to the flow. The row containing the heated cylinder remained in a fixed position in the channel and the relative location of this row within the array was changed by adding up to five upstream rows. The working fluid was nitrogen gas at pressures from 100 to 600 kPa. The Reynolds number ranged based on cylinder diameter and average unobstructed channel velocity was from 5,000 to 125,000. Turbulence intensity. profiles were measured for each case at a point one half space upstream of the row containing the heated cylinder. The basis of comparison for all the heat transfer data was the single row with the heated cylinder. For the in-line cases the addition of a single row of cylinders upstream of the row containing the heated cylinder increased the heat transfer by an average of 50 percent above the base case. Adding up to five more rows caused no increase or decrease in heat transfer. Adding rows in the staggered array cases resulted in average increases in heat transfer of 21, 64, 58, 46, and 46 percent for one to five upstream rows, respectively. Author

HYDRODYNAMIC AND AERODYNAMIC BREAKUP OF LIQUID SHEETS
R. Ingebo 1982 5 p refs Proposed for presentation at the 2nd Intern. Conf. on Liquid Atomization and Spray Systems, Madison, Wisc., 20-24 Jun. 1982
(NASA-TM-82800; E1139) Avail: NTIS HC A02/MF A01 CSCL 20D

The effect of hydrodynamic, aerodynamic and liquid surface forces on the mean drop diameter of water sprays that are produced by the breakup of nonswirling and swirling water sheets in quiescent air and in airflows similar to those encountered in gas turbine combustors is investigated. The mean drop diameter is used to characterize fuel sprays and it is a very important factor in determining the performance and exhaust emissions of gas turbine combustors. S.L.

INVESTIGATIONS OF FLOWFIELDS FOUND IN TYPICAL COMBUSTOR GEOMETRIES Semiannual Status Report, 1 Aug. 1981 - 31 Jan. 1982
D. G. Lilley 31 Jan. 1982 138 p refs
(Grant NAG3-74)
(NASA-CR-168585; SASR-3) Avail: NTIS HC A07/MF A01 CSCL 20D

Measurements and computations are being applied to an axisymmetric swirling flow, emerging from swirl vanes at angle phi, entering a large chamber test section via a sudden expansion of various side-wall angles alpha. New features are: the turbulence measurements are being performed on swirling as well as nonswirling flow; and all measurements and computations are also being performed on a confined jet flowfield with realistic downstream blockage. Recent activity falls into three categories: (1) Time-mean flowfield characterization by five-hole pitot probe measurements and by flow visualization; (2) Turbulence measurements by a variety of single- and multi-wire hot-wire probe techniques; and (3) Flowfield computations using the computer code developed during the previous year's research program. MASS AND MOMENTUM TURBULENT TRANSPORT EXPERIMENTS WITH CONFINED COAXIAL JETS Interim Report, 18 Feb. - 18 Oct. 1981
B. V. Johnson and J. C. Bennett Nov. 1981 157 p refs
(Contract NAS3-22771)
(NASA-CR-165574; R81-915540-9) Avail: NTIS HC A08/MF A01 CSCL 20D

Downstream mixing of coaxial jets discharging in an expanded duct was studied to obtain data for the evaluation and improvement of turbulent transport models currently used in a variety of computational procedures throughout the propulsion community for combustor flow modeling. Flow visualization studies showed four major shear regions occurring: a wake region immediately downstream of the innet jet inlet duct; a shear region further downstream between the inner and annular jets; a recirculation zone; and a reattachment zone. A combination of turbulent momentum transport rate and two velocity component data were obtained from simultaneous measurements with a two color laser velocimeter (LV) system. Axial, radial and azimuthal velocities and turbulent momentum transport rate measurements in the r-z and r-theta planes were used to determine the mean value, second central moment (or rms fluctuation from mean), skewness and kurtosis for each data set probability density function (p.d.f.). A combination of turbulent mass transpurt rate, concentration and velocity data were obtained system. Velocity and mass transport in all three directions as well as concentration distributions were used to obtain the mean, second central moments, skewness and kurtosis for each p.d.f. These LV/LIF measurements also exposed the existence of a large region of countergradient turbulent axial mass transport in the region where the annular jet fluid was accelerating the inner jet fluid. SHOCK TUBE DETERMINATION OF THE HEAT CONDUCTIVITY OF NON-IONIZED AND PARTIALLY IONIZED ARGON Ph.D. Thesis
Avraham Hirschberg 27 Feb. 1981 249 p refs
Avail: NTIS HC A11/MF A01

A procedure to determine the heat conductivity of a monatomic gas, from measurements of the structure of the unsteady thermal boundary layer at the end-wall of a shock tube, is proposed. In the non-ionized case the structure of the boundary layer determined by means of laser schlieren measurements appears to be self-similar. Improved analysis of the schlieren data and accurate pressure measurements yielded conductivity data with an accuracy of 4% for temperatures up to 7000 K. In the ionized case a model for the development of the thermal boundary layer was proposed to consider the processes of ionization and thermal relaxation. Data on electron and atom density profiles from laser schlieren measurements agree within 10% with theory for a moderate degree of ionization (3%). Quantitative information on radiative cooling was obtained from absorption and pressure measurements outside the boundary layer. Experimental information on the influence of ionization relaxation on the structure of the boundary layer and data on the ionization rate of hydrogen by collisions with argon atoms is also presented. NASA Symp. on Computational Aspects of Heat Transfer in Struct. Hampton, Va., 3-5 Nov. 1981
(NASA-TM-83266; L-15104) Avail: NTIS HC A03/MF A01 CSCL 20D

Research on structural problems associated with aerodynamic heating, conducted by the National Advisory Committee for Aeronautics (NACA) during its last decade are described. The text of a special presentation given at the NASA Symposium on Computational Aspects of Heat Transfer in Structure is presented. Some early thermostructural research activities using charts is also discussed. The principal message of the paper is that although vehicle oriented research programs speed development of new technology for specific missions, too much effort may be expended on developing technology which is never used because a vehicle is never built. A healthy research program must provide freedom to explore new ideas that have no obvious applications at the time to generate the technology that makes important, unanticipated flight or vehicle opportunities possible.

LAMINAR FLOW TRANSITION: A LARGE-EDDY SIMULATION APPROACH Final Report, 14 Jul. 1980 - 30 Sep. 1981
Sedat Biringen Washington NASA Feb. 1982 34 p refs
(Contract NAS1-16289)
(NASA-CR-3518; NEAR-TR-251) Avail: NTIS HC A03/MF A01 CSCL 20D

A vectorized, semi-implicit code was developed for the solution of the time-dependent, three dimensional equations of motion in plane Poiseuille flow by the large-eddy simulation technique. The code is tested by comparing results with those obtained from the solutions of the Orr-Sommerfeld equation. Comparisons indicate that finite-differences employed along the cross-stream direction act as an implicit filter. This removes the necessity of explicit filtering along this direction (where a nonhomogeneous mesh is used) for the simulation of laminar flow transition into turbulence in which small scale turbulence will be accounted for by a subgrid scale turbulence model.

SEARCH FOR LARGE-SCALE COHERENT STRUCTURES IN THE NEARLY SELF-PRESERVING REGION OF A TURBULENT AXISYMMETRIC JET Final Report, 1 Sep. 1979 - 31 Aug. 1980
A. K. M. F. Hussain Mar. 1981 32 p refs
(Contract F49620-79-C-0227; AF Proj. 2307)
(AD-A108334; AFOSR-81-0760TR) Avail: NTIS HC A03/MF A01 CSCL 20/4

In an attempt to explore the existence of large-scale coherent structures in the self-preserving region of an axisymmetric free air jet, a 2.54 cm air jet at a Reynolds number of 46,000 has been investigated for distances in excess of 40 diameters using both long and short time-averaged space-time correlation measurements. Conventional space-time correlation data with probe separations in the streamwise direction by as much as 25 diameters suggest the existence of large-scale coherent structures centered off the jet axis. The radial extent of these structures is about one local jet diameter, and the azimuthal extent is about a quadrant of the cross-section. Time series of short time-averaged correlations between longitudinal velocity fluctuations obtained with two arrays of hot-wires separated in the streamwise direction strongly support the existence of these structures. Nearly periodic peaks and valleys were intermittently observed. A qualitative picture of the spatial characteristics of these structures was inferred from the short time-averaged cross correlation of these time series with a sinusoidal model function. Traces of instantaneous transverse velocity and Reynolds stress as well as the instantaneous velocity vector patterns obtained from a radial array of X-wires also depict existence of large-scale organized motions.

THE INVESTIGATION OF THE PROPAGATION MECHANISM OF PRESSURE FLUCTUATION IN TURBULENT FLOW Final Report
Victor Zakkay and Vincent Barra Feb. 1981 39 p refs
(Grant AF-AFOSR-0128-79; AF Proj. 2307)
(AD-A108498; NYU/DAS-81-23; AFOSR-81-0759TR) Avail: NTIS HC A03/MF A01 CSCL 20/4

A one foot induction wind tunnel was built for the purpose of studying the coherent structure of turbulence. Simultaneous measurements of velocity, wall pressure and wall-shear fluctuations were made on the wall of a one foot pipe in a range of velocities from 30 to 700 ft/sec. The results presented here were obtained for flow conditions which differ significantly from those in previous studies. For the majority of the tests, the free stream velocity is in the high subsonic regime, and the Reynolds number is an order of magnitude higher than that for which the coherent structure has previously been investigated. The measurements were made on the wall of an axially symmetric one foot test section in order to insure true two dimensionality of the flow.

RESEARCH ON THE EFFECTS OF HYDROSTATIC PRESSURE ON THE ELECTRONIC STATES OF IMPURITIES Final Report
J. Mattler Sep. 1981 15 p refs
(Grant DA-ERO-78-G-063; DA Proj. 1T1-61102-BH-57)
(AD-A108403) Avail: NTIS HC A02/MF A01 CSCL 20/4

The theoretically predicted shift of vibronic components and change of their distribution under high pressure were confirmed by the low temperature emission spectra of the natural crystal scapolite. The insensibility of the self-activated luminescence in the ZnS : B crystals to the high pressure action indicated that it comes from a tightly associated new luminescence center. The differences between the high pressure action on the cubic and hexagonal ZnS : Mn crystals are interpreted by the resonance energy transfer. The pressure shifts of the excitonic excitation bands in the ZnS and ZnSe crystals agree with the gap shifts calculated for these crystals but are smaller than the experimentally found pressure shifts of the donor-acceptor luminescence bands.

INFLUENCE OF VELOCITY SHEAR ON THE RAYLEIGH-TAYLOR INSTABILITY Interim Report
P. N. Guzdar, P. Satyanarayana, J. D. Huba, and S. L. Ossakow 16 Dec. 1981 27 p refs
(DNA Proj. S99-QAXH; RR0330244)
(AD-A108800; NRL-MR-4701) Avail: NTIS HC A03/MF A01 CSCL 14/1

The influence of a transverse velocity shear on the Rayleigh-Taylor instability is investigated. It is found that a sheared velocity flow can substantially reduce the growth rate of the Rayleigh-Taylor instability in the short wavelength regime (i.e., $kL > 1$ where L is the scale length of the density inhomogeneity), and causes the growth rate to maximize at $kL \sim 1.0$. Applications of this result to ionospheric phenomena (equatorial spread F (ESF) and ionospheric plasma clouds) are discussed. In particular, the effect of shear could account for, at times, the 100's of km modulation observed on the bottomside of the ESF ionosphere and the km scale size wavelengths observed in barium cloud prompt striation phenomena.

Boundary layer transition and surface heating distributions on graphite fine weave carbon-carbon, and metallic nosetip materials were derived from surface temperature responses measured in nitrogen environments during both free-flight and track-guided testing in the AEDC Hyperballistics Range/Track G. Innovative test procedures were developed, and heat transfer results were validated against established theory through experiments using a super-smooth tungsten model. Quantitative definitions of mean transition front locations were established by deriving heat flux distributions from measured temperatures, and comparisons made with existing nosetip transition correlations. Qualitative transition locations were inferred directly from temperature distributions to investigate preferred orientations on fine weave nosetips. Levels of roughness augmented heat transfer were generally shown to be below values predicted by state of the art methods.

The mathematical modeling of a physical continuum by a set of first-order partial differential equations is commonly redundant, i.e., it includes more equations than unknowns. A simple analysis gives the reduced set, which fully determines the field quantities satisfying appropriately prescribed initial and boundary conditions. An algebraic look at the system provides the appropriate choice for descretization, which is a necessary condition for solvability and stability. The same is tried for a number of variational representations of the field in terms of primitive variables. A few of the latter formulations are new.

SURFACE LAYER ORIENTATION COORDINATION FOR BOUNDARY LAYER CALCULATIONS ON GENERAL CONFIGURATIONS [OBERFLAECHENORIENTIERTE KOORDINATEN FUER GRENZSCHICHTBERECHNUNGEN AN ALLGEMEINEN KONFIGURATIONEN]
E. H. Hirschel 23 Apr. 1981 28 p refs In GERMAN
(MBB-FE-122/S/PUB/41; DGLR-81-014) Avail: NTIS HC A03/MF A01

Three dimensional boundary layered bodies were calculated by coordinate system. General wing and fuselage surface configurations made for curvilinear, nonorthogonal, local monoclinic coordinates, and the boundary layer coordinates for calculations of the first degree show an exception for these coordinates. Metric tensors and curved tensors on surfaces are illustrated, transformation laws Cartesian coordinates of friction free foreign flow in the boundary layer coordinates are reported. The tensorial concepts are applied in the formulation of boundary layer equations and the calculation of the flow pattern of friction free foreign flow and boundary wall flows are detailed.

HIGH PERFORMANCE VARIABLE CONDUCTANCE HEAT PIPE (VCHP) FOLLOW-ON DEVELOPMENT: PHASE 2 Final Report
Paris ESA 27 Apr. 1981 82 p refs 2 Vol.
(Contract ESA-3737/78)
(SABCA-JPM/LN/HO5/NO144-Vol-1; ESA-CR(P)-1497-Vol-1) Avail: NTIS HC A05/MF A01

Design characterization tests, and wick optimization of a VCHP used for spacecraft temperature control are summarized. The 1 cm diameter VCHP was subjected to adverse environment, aging, and thermal tests. An ammonia heat carrier, and cold gas reservoir conductance control are used. Heat conductance is 100 Wm, even in zero gravity. Performance is maintained when control gas is added to the working fluid. The gas reservoir achieves a 5 C control range when input power varies from 2 to 120 W, with an effective length of 0.75 m (90 Wm). The stainless steel pipe is bendable and performs well up to 30 mm adverse tilt, and can start up at 120 W from -40 C. Theoretical expressions for a saturated wick were used to optimize the wick with respect to its porosity and fiber diameter. Results show that for a specified capillary pressure limit, a porosity of 0.79 gives the highest permeability. The corresponding fiber diameter is then set such that the expressions for the capillary pressure limit give the required value.

FOLLOW-ON DEVELOPMENT OF SMALL CRYOGENIC HEAT PIPES: PHASE 2 REPORT
Paris ESA Feb. 1981 102 p refs 2 Vol.
(Contract ESA-3737/78)
(SABCA-JPM/LN/HO5/N11-Vol-2; ESA-CR(P)-1497-Vol-2) Avail: NTIS HC A06/MF A01

Cryogenic heat pipe literature is reviewed and a 6 mm pipe is described. Most cryopipes derive from grooved profiles developed for use at ambient temperatures, and have diameters > 10 mm. Below 10 mm, only artery geometries provide appreciable power transport capabilities, but these geometries present pressure containment problems due to the high liquid inventories involved. The 6 mm pipe is based on classical heat pipes featuring ammonia in a stainless steel tube and a single layer wall capillary structure. The ammonia is replaced by methane, nitrogen, or ethane. The pipe performs well in the 70 to 150 K range. It is suitable for spaceborne low power sensors, detectors, and low noise amplifiers.

AN INVESTIGATION OF WALL PRESSURE FLUCTUATIONS BEHIND A SUDDEN ENLARGEMENT OF THE CROSS SECTIONAL AREA OF A ROUND PIPE
Bernhard Stahl Aug. 1981 74 p refs In GERMAN; ENGLISH summary
(DFVLR-FB-81-35) Avail: NTIS HC A04/MF A01; DFVLR, Cologne DM 13,35

Wall pressure fluctuations behind an abrupt enlargement of a round pipe cross section, where flowing air forms a turbulent mixing zone generating aerodynamic noise, were investigated theoretically and experimentally. Microphone measurements along the pipe wall indicate that the greatest part of the energy lies in the low frequency wall pressure fluctuations, and that these fluctuations encompass the entire mixing zone. The propagating acoustic modes in the flow field within the pipe were computed using the wave equation, and compared with the experimentally determined pipe resonances. Narrow band measurements made with different boundary conditions (open pipe end, anechoically closed pipe) show that the resonances occurring in the pipe can strongly influence the pressure fluctuations. For the low frequency pressure fluctuations, mode decomposition shows that most of the energy lies in the axisymmetric mode m = 0.

ON THE NEUMANN PROBLEM FOR THE PRESSURE IN A NAVIER-STOKES MODEL
B. J. Alfrink Aug. 1981 13 p refs Presented at 2nd Intern. Conf. on Numerical Methods in Laminar and Turbulent Flow, Venice, 13-16 Jul. 1981
(Publ-257) Avail: NTIS HC A02/MF A01

The numerical solution of two dimensional viscous incompressible fluid flow is treated. As the transient pressure solution is required, the differential system is formulated in terms of primitive variables. The equation of motion is split into divergence free and curl free parts. The pressure is solved, using the marker and cell algorithm. The Neumann problem for the pressure must satisfy a Gauss theorem. Care has to be taken to fulfill this compatibility condition in discrete form. Results show that by using a regular grid this is not realized in general. Particular attention is paid to the treatment of boundary conditions on a space-staggered grid. Author (ESA)

TRANSID: A COMPUTER PROGRAM FOR THE ANALYSIS OF HYDRAULIC TRANSIENTS IN CONDENSER COOLING CIRCUITS

A. Capozza 1981 43 p refs Presented at 5th Intern. Symp. on Water Column Separation, Obernach, West Germany, 28-30 Sep. 1981 Sponsored by Ente Nazionale per l'Energia Eletricca (CISE-1722) Avail: NTIS HC A03/MF A01

A computer program to predict the hazards of a given pump regime to the integrity of a cooling circuit was developed. The computer program is based on models of overpressures resulting from water column separation phenomena induced by strong and swift variations of cooling water flow rate in the circuit. The TRANSID version, termed TR/2, is described. The TRANSID code is written in FORTRAN IV language. It runs on an IBM 4341 as well as on a CDC CYBER 76. The total storage occupation, including the necessary system routines, is equivalent to 360 Kbytes on an IBM 4341 and 35 Kwords on a CYBER 76. The CPU time, for time step and for space mesh, is equivalent to 10 msec and 1 msec. Pump trip-off transients predicted by the TR/2 code are compared with in situ condenser cooling circuit measurements. Author (ESA)

NUMERICAL CALCULATION OF STEADY TWO-DIMENSIONAL AXI-SYMMETRICAL TURBULENT BOUNDARY LAYER OF A COMPRESSIBLE FLUID

Wang Ying-shih *In its* Acta Mech. Sinica (Selected Articles) (FTD-ID(RS)T-0708-81) 12 Nov. 1981 p 1-23 refs Transl. into ENGLISH from Acta. Mech. Sinica (China), no. 1, 1980 23 p (For primary document see N82-19513 10-34) Avail: NTIS HC A04/MF A01 CSCL 20/4

A momentum equation expressed by the stress tensor was employed to derive the momentum equation of a non-rotational steady axi-symmetrical turbulent boundary layer of a compressible fluid in the axi-symmetrical coordinate system. It was found that if the flow in the duct was to be treated as viscous fluid everywhere then the curvature of the duct and the rate of variation of the curvature along the direction of the flow cannot be too large. This was not proven in existing literature. Based on the set of equations proposed in this paper, a computer program is compiled and a numerical example is computed. M.D.K.

LAMINAR HEAT TRANSFER WITH MASS INJECTION AND CHEMICAL REACTION

Zu Tie-lin *In its* Acta Mech. Sinica (Selected Articles) (FTD-ID(RS)T-0708-81) 12 Nov. 1981 p 24-43 refs Transl. into ENGLISH from Acta Mech. Sinica (China), no. 1, 1980 20 p (For primary document see N82-19513 10-34) Avail: NTIS HC A04/MF A01 CSCL 20/4

A general stoichiometric formula was derived to simplify a boundary layer problem with mass injection and chemical reaction. An analysis was performed using chemical equilibrium as an example. The calculated results were found to be consistent with the experimental ones. When the amount of injection is zero, the relevant data were in good agreement with the results. Finally, it was pointed out that with the increasing available energy of the exo-thermic reaction the effect of Lewis number on heat transfer decreases as the capability of heat generating reactions increases. LEAST SQUARES FINITE ELEMENT ANALYSIS OF STEADY HIGH SUBSONIC PLANE POTENTIAL FLOWS

Bo-nan Jiang and Jia-zhen Chai *In its* Acta Mech. Sinica (Selected Articles) (FTD-ID(RS)T-0708-81) 12 Nov. 1981 p 53-59 refs Transl. into ENGLISH from Acta Mech. Sinica (China), no. 1, 1980 7 p (For primary document see N82-19513 10-34) Avail: NTIS HC A04/MF A01 CSCL 20/4

A least squares finite element method was used to analyze steady, subsonic plane potential flows. Several advantages of the method for solving problems of compressible potential flows are discussed. An iteration method was employed to find the numerical solutions. Both the variable stiffness and constant stiffness models were tried. It was found that the variable stiffness method is especially suitable for high subsonic flows. M.D.K.

THE AERODYNAMICAL ANALYSIS OF BODY IN HYPERSONIC SOURCE FLOW FIELD

Guo-can Ling *In its* Acta Mech. Sinica (Selected Articles) (FTD-ID(RS)T-0708-81) 12 Nov. 1981 p 60-70 refs Transl. into ENGLISH from Acta Mech. Sinica (China), no. 1, 1980 11 p (For primary document see N82-19513 10-34) Avail: NTIS HC A04/MF A01 CSCL 20/4

The hypersonic source flow field, a typical non-uniform free stream flow field, around a body was investigated. Various aerodynamic coefficients were obtained by means of Newton's theory. Analysis of the effects of the non-uniformity of the free stream was emphasized. It was found that under the condition of small angle of attack the analytical results are satisfactory. M.D.K.

AUTOMATIC ANALYSIS OF MULTISPECTRAL IMAGES

Luciano Vieira Dutra, Ricado Cartaxo Modesto deSouza, Fernando Augusto Mitsuo, II, and Jose Carlos Moreira Aug 1981 33 p refs In PORTUGUESE; ENGLISH summary

(INPE-2212-MD/009) Avail NTIS HC A03/MF A01

Some ideas of automatic multispectral image analysis are introduced Automatic multispectral image analysis plays a central role in numerically oriented remote sensing systems It presupposes the utilization of electronic equipments, mainly computers and their peripherals, to help people to interpret the information contained in multispectral digital imagery This necessity derives from the great amount of multispectral data gathered by remote sensors within satellites and airplanes When the number of channels or spectral bands is increased, the interpretation becomes more complex and subjective In some cases, for example, in harvest estimation in national or regional level, it is imperative to use computer systems to complete the work within the time required Automatic analysis also aimes to eliminate subjective factors that appear in the human interpretation, so increasing the global precision R J F

CONCEPTION OF AN APPARATUS FOR PRESSURE, DENSITY, AND TEMPERATURE MEASUREMENTS IN THE CRITICAL REGION OF PURE FLUIDS IN SPACELAB Final Report, Feb. 1979
Wolfgang Wagner, Hans-Georg Kratz, and Willi Pentermann Bonn Bundesministerium fuer Forschung und Technologie Nov. 1981 40 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-81-026; ISSN-0170-1339) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Gemany DM 8,40

A multicell arrangement, allowing isochoric pressure, density and temperature measurements, in the critical region of pure fluids in order to establish their thermodynamic properties in the absence of gravity, is described. The knowledge of these properties is a prerequisite for obtaining correct equations of state and strongly affects the dimensioning of chemical engineering processing plants. Fundamental aspects of measuring thermodynamic data in the critical region are discussed and applied to the Spacelab environment. The layout of the apparatus, its temperature control, and the instrumentation for density and pressure measursments are described. Author (ESA)

A neutron spectrometer and telescope based on double elastic interaction in two scintillators was tested on two neutron sources: a solid deuterium titanium target for D(d, n)He3 reaction, and a tritium gas cell for T(p, n)He3. The spectrometer provides a relative resolution of the ion temperature from 20% to 70% at ion temperatures around 1 keV and a flight path length of 2 m. For ion temperatures around 5 keV, the figures are 10% to 20% and for 10 keV, 7% to 10%. The telescope provides spatial resolutions from 0.25 to 0.50 m with flight path lengths from 0.6 to 1.3 m. The width of the energy peak of a neutron source used for calibrating must be known to within a few keV to obtain adequate resolutions. Author (ESA)

DIGITAL TIME CONTROL FOR CAMERA SHUTTERS
Manfred Ackermann Jul. 1980 37 p refs Transl. into English of mono. "Digitale Zeitsteuerung fuer Kameraverschlusse" West Germany Sponsored by Bundesministerium fuer Forschung und Technologie, Bonn
(PB82-116328; BMFT-FB-T-80-026) Avail: NTIS HC A03/MF A01 CSCL 14E

The employment of a digital circuitry instead of mechanical escapements for the shutter control of automatically controlled exposure meters in still cameras is discussed. A way to determine the proper exposure time is described. Automatic exposure has the advantage that it summarizes digitally the light quantities which enter when the shutter is open. It is found that exposure control has the possibility for accuracy, especially when lighting conditions are changing, and also at long exposure times. GRA

ON THE SYNERGISTIC EFFECTS OF LASER/PHONON-STIMULATED PROCESSES: A MASTER EQUATION APPROACH Interim Technical Report
Jui-teng Lin and Thomas F. George Dec. 1981 17 p refs Submitted for publication
(Contract N00014-80-C-0472; NR Proj. 056-749)
(AD-A109025; TR-16) Avail: NTIS HC A02/MF A01 CSCL 20/5

The synergistic effects of an adspecies/surface system influenced by a coherent laser field and an incoherent thermal phonon field are theoretically investigated. A generalized master equation is derived in the Schrodinger-Markoff picture and the total stimulated transition rates are decomposed into three parts: thermal phonon, laser and the interference terms. The energy transfer dynamics is pictured via the evolution equation of the average excitation of the active mode. A random phase of the off-diagonal matrix elements induced by the laser-stimulated surface processes is introduced. Finally, possible applications of the laser/phonon-stimulated master equation are discussed. Author (GRA)

DEVELOPMENT OF A NOVEL LASER MATERIAL FOR MINIATURIZED LASER SYSTEMS Quarterly Technical Report, 1 Jul. - 30 Sep. 1981

Walter K. Zwicker, Sel Colak, and Jacob Khurgin Nov. 1981 28 p refs
(Contract MDA903-81-C-0034; DARPA Order 4040)
(AD-A109129; QTR-4) Avail: NTIS HC A03/MF A01 CSCL 20/5

Our work during this quarter dealt with the growth and evaluation of NPP crystals for a 1.06 micrometer miniature laser and Er(3+) stoichiometric crystals for an eyesafe miniature laser emitting at 1.54 micrometer. Crystals of NPP up to 2x2x20 mm for fabrication of miniature laser rods were grown by a previously described high-temperature, solution-growth technique. Flash-lamp-pumped lasing experiments were conducted using various sizes of NPP crystals, in both the free-oscillation and Q-switched modes at different pulse repetition rates. Output pulse energies and properties of the laser output beam were measured. The efficiencies for the free-oscillation mode were close to the maximum published values; for the Q-switched mode, the efficiencies were low compared to published values. Crystals of ErP5O14 were grown by the same technique used for NPP; crystals of ErLiP4O12 and ErAl3(BO3)4 were grown by related fluxed-melt techniques. These crystals were several millimeters in size. Both Yb and Gd were added in various ratios as sensitizing and/or diluent ions. the absorption and emission properties of the Er3+ luminescence in some samples of ErP5O14, LiErP4O12, and ErAl3(BO3)4 have been studied both in the visible and infrared regions of the spectrum. Preliminary evaluations of these materials for laser applications have been made. GRA

ELECTRONICS FOR DATA ACQUISITION OF LASER GYROSCOPE MEASUREMENTS

Friedrich Posnien Apr. 1981 54 p refs In GERMAN; ENGLISH summary
(Contract BWB-E/F-51-E/90001/85484)
(DFVLR-Mitt-81-16) Avail: NTIS HC A04/MF A01; DFVLR, Cologne DM 15

The electronics for a signal readout system for laser gyroscopes are described. In the analog part of the readout electronics, a single beam readout method was used, enhancing the signal to noise ratio as compared to the interference stripe pattern. Two digital methods for identifying the lock-in-gap and for steering the output counter were investigated. The first is based on identification by monostable multivibrators, the second on identification by a digital comparator. Author (ESA)

CONVENTIONAL ENGINE TECHNOLOGY. VOLUME 1: STATUS OF OTTO CYCLE ENGINE TECHNOLOGY
M. W. Dowdy 15 Dec. 1981 216 p refs
(Contracts NAS7-100; DE-AI01-80CS-50194)
(NASA-CR-168643; JPL-Pub-81-65-Vol-1; DOE/CS-50194/1) Avail: NTIS HC A10/MF A01 CSCL 21A

Federally-mandated emissions standards have led to major changes in automotive technology during the last decade. Efforts to satisfy the new standards were directed more toward the use of add-on devices, such as catalytic converters, turbochargers, and improved fuel metering, than toward complete engine redesign. The resulting changes are described and the improvement brought about by them in fuel economy and emissions levels are fully documented. Four specific categories of gasoline-powered internal combustion engines are covered, including subsystem and total engine development. Also included are the results of fuel economy and exhaust emissions tests performed on representative vehicles from each category. Author

CONVENTIONAL ENGINE TECHNOLOGY. VOLUME 2: STATUS OF DIESEL ENGINE TECHNOLOGY
H. W. Schneider 15 Dec. 1981 191 p refs
(Contracts NAS7-100; DE-AI01-80CS-50194)
(NASA-CR-168644; JPL-Pub-81-65-Vol-2; DOE/CS-50194/1) Avail: NTIS HC A09/MF A01 CSCL 21A

The engines of diesel cars marketed in the United States were examined. Prominent design features, performance characteristics, fuel economy and emissions data were compared. Specific problems, in particular those of NO and smoke emissions, the effects of increasing dieselization on diesel fuel price and availability, current R&D work and advanced diesel concepts are discussed. Diesel cars currently have a fuel economy advantage over gasoline engine powered cars. Diesel drawbacks (noise and odor) were reduced to a less objectionable level. An equivalent gasoline engine driveability was obtained with turbocharging. Diesel manufacturers see a growth in the diesel market for the next ten years. Uncertainties regarding future emission regulation may inhibit future diesel production investments. With spark ignition engine technology advancing in the direction of high compression ratios, the fuel economy advantages of the diesel car is expected to diminish. To return its fuel economy lead, the diesel's potential for future improvement must be used.

CONVENTIONAL ENGINE TECHNOLOGY. VOLUME 3: COMPARISONS AND FUTURE POTENTIAL
M. W. Dowdy 15 Dec. 1981 32 p ref
(Contracts NAS7-100; DE-AI01-80CS-50194)
(NASA-CR-168645; JPL-Pub-81-Vol-3; DOE/CS-50194/1)
Avail: NTIS HC A03/MF A01 CSCL 21A

The status of five conventional automobile engine technologies was assessed and the future potential for increasing fuel economy and reducing exhaust emission was discussed, using the 1980 EPA California emisions standards as a comparative basis. By 1986, the fuel economy of a uniform charge Otto engine with a three-way catalyst is expected to increase 10%, while vehicles with lean burn (fast burn) engines should show a 20% fuel economy increase. Although vehicles with stratified-charge engines and rotary engines are expected to improve, their fuel economy will remain inferior to the other engine types. When adequate NO emissions control methods are implemented to meet the EPA requirements, vehicles with prechamber diesel engines are expected to yield a fuel economy advantage of about 15%. While successful introduction of direct injection diesel engine technology will provide a fuel savings of 30 to 35%, the planned regulation of exhaust particulates could seriously hinder this technology, because it is expected that only the smallest diesel engine vehicles could meet the proposed particulate requirements. TUBE TO TUBESHEET WELDING BY ELECTRON BEAM FOR HEAT EXCHANGER APPLICATION
F. Noller and H. G. Mayer Jun. 1981 116 p refs In GERMAN; ENGLISH summary
(IKE-1-11; ISSN-0173-6892) Avail: NTIS HC A06/MF A01

The importance of tube to tubesheet welding and the choice of materials, by electron beam (EB) application, in the construction of steam generators was examined. The EB process was used to weld tubes into tubesheets even with materials sensitive to hot cracking. The range of qualified welding parameters is evaluated. A microcomputer controlled welding cycle using beam deflection, automatic seam tracking, beam current and focus control, is recommended. Results are adapted to specific conditions of mobile welding equipment with localized vacuums.

Thin lead film lubricants, radial thermal conductance, torque, and cage instabilities are discussed. A lead plating method with improved adhesion torque, and wear characteristics is presented. The effect of bearing size, load, speed, and lubricant on thermal conductance in vacuum is examined. A model which predicts frictional torque is assessed. The torque of ball bearings moving over very small angles, of relevance to attitude control and pointing, is treated. For individual titles, see N82-19548 through N82-19548.

ION-PLATED LEAD AS A FILM LUBRICANT FOR BEARINGS IN VACUUM
M. J. Todd and E. J. Robbins *In its* Selected ESTL Papers on Ball Bearings for Satellites Sep. 1980 p 1-13 refs Sponsored by ESA (For primary document see N82-19547 10-37)
Avail: NTIS HC A05/MF A01

A space qualified technique which produces adherent, good quality lead films on the raceways of ball bearings is described. After argon ion sputter cleaning, the lead is evaporated into a glow discharge maintained in an inert gas, usually argon. The atoms of vapor, some of which become ionized, then bombard a target cathode holding the specimens to be plated. The deposition rate during plating must exceed sputtering rate. Six pairs of ion plated bearings were torque tested at 2 million revolutions per pair, at low speed. The average torque is 0.002 Nm, well within the 0.028 Nm preset trip level. Steel wear is restricted to very mild pitting. Debris worn from the lead-bronze cage still represents the major source of torque noise, despite the large reduction in debris compared with vacuum-evaporated films. A lead-containing cage with a very much lower wear rate of the supporting matrix is needed for medium and high speed use. Author (ESA)

THE SUSPENSION SYSTEM OF THE CRYOGENIC GRAVITATIONAL ANTENNA OF THE ISTITUTO PLASMA SPAZIO [SISTEMA DI SOSPENSIONE DELL'ANTENNA GRAVITAZIONALE CRIOGENICA DEL'I.P.S.]
E. Coccia (Rome Univ.) and V. Iafolla Oct. 1981 35 p refs In ITALIAN
(IPS-81-14) Avail: NTIS HC A03/MF A01

The design of a two stage suspension system for a gravitational antenna is described. The antenna weighs 5 t and works in liquid helium, pumped at 4.2 K. The signals to be detected, mainly from supernova sources, are energy fluxes on the order of 0.0001 erg/cm sq. The amplitudes, induced in the fundamental vibration mode at 1796 Hz, are about 10 to the -18th power cm. The mechanical attenuation system was designed with a 3 Hz resonant frequency and 100 dB attenuation for the first stage and a 30 Hz frequency and 70 dB attenuation for the second stage. The measured value of attenuation is 120 dB, which is deemed satisfactory although lower than the 150 dB design value. The possible causes of this attenuation loss are discussed. Author (ESA)

(NASA-TM-82803; DOE/NASA/20320-38; E-1142) Avail: NTIS HC A02/MF A01 CSCL 14D

The SR&QA approach assures that the machine is not hazardous to the public or operating personnel, can operate unattended on a utility grid, demonstrates reliability operation, and helps establish the quality assurance and maintainability requirements for future wind turbine projects. The approach consisted of modified failure modes and effects analysis (FMEA) during the design phase, minimal hardware inspection during parts fabrication, and three simple documents to control activities during machine construction and operation. Five years experience shows that this low cost approach works well enough that it should be considered by others for similar projects. T.M.

A reliability improvement warranty (RIW) workshop was convened on 9 to 10 December 1980 at the MITRE Corporation, Bedford, Mass., to explore the feasibility of RIW for current and future production JTIDS (Joint Tactical Information Distribution System) contracts. In particular, RIW suitability for the Class 1 JTIDS production buy was discussed. The concensus of the group was that RIW is not appropriate for the Class 1 production buy, but that it can be useful on other programs including Class 2 JTIDS if certain conditions are met and the RIW contract is tailored to the program. A study to develop an economical test technique for Reliability Demonstration tests in accordance with MIL-STD-781C was undertaken. This has been accomplished by developing two different methods: Multiplex System - incorporates a reel-to-reel tape recorder that generates the desired synthesized random spectrum on one channel while the other channel incorporates a control programmer; and Microprocessor System - incorporates a desk top computer that is programmed to initiate, monitor and control a Reliability Demonstration test. Included with this system is a 'sound-on-sound' tape cassette recorder to generate the synthesized random spectrum and a printer to record the control signals and monitor data during the test. DYNAMICS OF A CHAIN OF FLEXIBLE BODIES Ph.D. Thesis
Ramendra P. Singh 1981 134 p
Avail: Univ. Microfilms Order No. 8128324

A mathematical modeling technique is developed for a space structure idealized as a collection of flexible bodies in a chain configuration. The methodology employed in the derivation does not require the presence of a rigid body in the chain. The contiguous bodies are permitted to undergo large relative rotations. The Lagrange's form of D'Alembert's principle is adopted to derive the equations of motion. The mathematical foundations of the quasicoordinates are explored an it is shown that they emerge naturally from a variational principle. A floating reference frame called the Tisserand frame or the mean axis frame is selected for the dynamic analysis. It is shown that the Tisserand frame follows the deformable body in an optimal manner. This frame has a well defined motion in an inertial reference frame and is suitable for use in conjunction with linear structural theory.

NUMERICAL SIMULATION OF REINFORCED CONCRETE SUBJECTED TO MULTIAXIAL STRESS CONDITIONS Ph.D. Thesis
Eugene Yu-Tze Chen 1981 197 p
Avail: Univ. Microfilms Order No. 8127563

Reinforced concrete is by far one of the most commonly used construction materials. This composite material demonstrates a highly nonlinear behavior caused by cracking, crushing, aggregate interlock, bond slip, dowel action, shrinkage and creep. Because the reinfored concrete involves so many nonlinear phenomena interacting with one another, the formulation of a 'complete' analytical model is very difficult. The focus of this study is cast on: (1) three dimensional nonlinear constitutive relations and failure criterion for concrete subjected to short term monotonic loading; (2) crack modeling in concrete; (3) interface and stiffness transfer across the crack; and (4) finite element implementation of the findings into an integrated program. Comparison of numerical results with actual test results are presented to verify this proposed algorithm.

PELLINI'S THEORY OF BRITTLE FRACTURE AND THE LIMITS OF ITS APPLICABILITY

K. Fromm and H. D. Schulze Oct. 1981 18 p refs Transl. into ENGLISH of Schneiden, (West Germany) v. 32, no. 10, 1980 p 416-420
(DRIC-T-6468; BR81312) Copyright. Avail: Issuing Activity

The development of Pellini's theory of brittle fracture is described. The correlation of the results of many cases of damage, and of extensive tests on components and large plates, with this theory led to the development of the fracture analysis diagram. The ability to apply the NDT temperature to the behavior of components explains the significance of the drop weight test in comparison with other strength testing methods. Problems in determining the NDT temperature are pointed out, e.g. the effect of notch shape on brittleness. Using the example of the failure behavior of cylindrical shots and pipes, the limits of the theory are shown: it does not account for system energy content, or impact strength. The failure behavior of these components does not however contradict theory. Author (ESA)

INVESTIGATION OF CREEP BY USE OF CLOSED LOOP SERVO-HYDRAULIC TEST SYSTEM

Han C. Wu and J. C. Yao 20 Nov. 1981 44 p refs
(Contract NsG-1499)
(NASA-CR-168613; G302-81-001) Avail: NTIS HC A03/MF A01 CSCL 20K

Creep tests were conducted by means of a closed loop servo-controlled materials test system. These tests are different from the conventional creep tests in that the strain history prior to creep may be carefully monitored. Tests were performed for aluminum alloy 6061-O at 150 C and monitored by a PDP 11/04 minicomputer at a preset constant plastic-strain rate prehistory. The results show that the plastic-strain rate prior to creep plays a significant role in creep behavior. The endochronic theory of viscoplasticity was applied to describe the observed creep curves. The concepts of intrinsic time and strain rate sensitivity function are employed and modified according to the present observation. Author

LARGE SCALE DYNAMICS OF LONG FLEXIBLE CABLES TOWED THROUGH AIR

Lasse K. Karlsen 1981 32 p refs
(KTH-Aero-TN-61) Avail: NTIS HC A03/MF A01

The full nonlinear equations of motion of a flexible cable in air are formulated together with the appropriate initial and boundary conditions at the cable ends. The properties of transverse waves are studied using a linearized amplitude equation. Numerical computations are carried out on the complete equations for the large scale motion. The longitudinal elastic equation is replaced by an inextensibility condition and a modified equation for the cable tensile force. Some typical cases of targets towed by an aircraft are considered. The response is computed for aircraft maneuvers such as acceleration - deceleration, climb - descent, and 180 deg. turns with short and long cables. S.L.

FATIGUE OF 2024-T351 AND 7075-T7351 Al-ALLOY LUGS WITH AND WITHOUT INTERFERENCE FIT UNDER MANEUVER SPECTRUM LOADING

A. Buch and A. Bercovits Apr. 1981 39 p refs
(TAE-440) Avail: NTIS HC A03/MF A01

Aircraft pin-lug joints with and without interference fit were tested under maneuver loading programs with random loading sequence. The effect of design load, lug material and interference fit on the spectrum fatigue life was investigated. The interference fit of 0.3% had a strong beneficial effect on the fatigue life for all loading programs, even when local tensile stress peaks exceeded the material yield stress. The spectrum fatigue life of 2024-T351 lug specimens was longer than that of 7075-T7351 specimens, with the exception of interference fit lugs at the highest design load. Test results are presented and compared with predictions based on Miner's Rule, the Relative Miner Rule, and a notch analysis method. A.R.H.

AN IMPROVED SCHEME TO DEVELOP MULTIDIMENSIONAL GENERALIZED YIELD AND FAILURE SURFACES FOR STRUCTURAL ELEMENTS

Margaret Cheney and Thomas A. Duffey (New Mexico Univ., Albuquerque) Apr. 1981 32 p refs

(Contract W-7405-eng-36)
(LA-8728-MS) Avail: NTIS HC A03/MF A01

Two dimensional convex generalized yield and failure curves for structural elements are combined to form lower bound, higher dimensional interaction surfaces. These higher dimensional surfaces are useful for predicting yielding or failure of structural elements when subjected to several simultaneously interacting generalized stresses at a given cross section. The geometrical version of the Hahn-Banach theorem, and Lagrange multipliers are used. Each method is illustrated by three and six dimensional examples, and the degree of conservatism of each is evaluated by comparison to exact multidimensional interaction surfaces.

ACOUSTIC FATIGUE ENDURANCE TEST OF USB FLAP STRUCTURE MODELS AT ELEVATED TEMPERATURE
Masaaki Sano, Yoshinori Fukimori, Soushiro Iida, Keiji Komatsu, and Koichi Egawa Oct. 1981 59 p refs In JAPANESE; ENGLISH summary
(NAL-TR-683) Avail: NTIS HC A04/MF A01

Five substructural models of upper surface blown flaps were tested to verify the safety of the flap structure during a planned flight evaluation of the NAL-STOL experimental aircraft. All models consisted of the face panel with stringers and ribs rivetted on the backside in shape. Four panels were flat; one had the same curvature as the actual flap structure. Three face panels and stiffeners were of Ti-6Al-4V the others were of 2024C-T3 alloy. Results of thermal buckling tests, resonant frequencies of all panels, the dynamic and the measurement of dynamic strain response are discussed. All structural models proved strong enough to resist both acoustic and thermal loading. No detectable damage was found on the panel face nor around the rivet holes. Estimated lives based on simulated and experimental strain histories suggest confirmation of the fatigue test results.

IMPLEMENTATION OF A POSTCRACKING MODEL FOR FINITE ELEMENT ANALYSIS OF REINFORCED CONCRETE Final Report, 1 Feb. - 31 Jul. 1981
Rafael Jimenez-Perez Sep. 1981 66 p refs
(Grant AF-AFOSR-0092-81; AF Proj. 2307)
(AD-A108984; AFOSR-81-0868TR) Avail: NTIS HC A04/MF A01 CSCL 11/2

A computer code was developed to model the nonlinear response of reinforced concrete elements subjected to plane strain, plane stress or axisymmetric loading conditions. The material subroutine includes the following sources of nonlinear behavior: (a) Nonlinear stress strain curve for concrete as represented by the endochronic model; (b) stress-strain curve for the reinforcement including the elastic, plastic and strain hardening stages; (c) concrete anisotropy caused by complex stress states and cracking; and (d) the postcracking shear transfer mechanisms. The computer code was checked with a very limited amount of experimental data for plain concrete and for an initially cracked reinforced concrete panel subjected to biaxial stress states. In general, the code predicts results that agree satisfactorily with the experimental data but needs to be further checked against additional test cases.

THE ROLE OF ENVIRONMENT ON TIME DEPENDENT CRACK GROWTH
R. E. Ricker and D. J. Duquette Dec. 1981 22 p refs
(Contracts N00014-67-A-0117-0012; N00014-75-C-0466; NR Proj. 036-093)
(AD-A109388) Avail: NTIS HC A02/MF A01 CSCL 11/6

Gaseous as well as aqueous environments are known to accelerate time dependent crack growth under either static loading (SCC or HE) or dynamic loading conditions. In some cases, the rate controlling processes of these phenomena have been related to surface controlled reactions, while in other cases bulk reactions such as diffusion appear to be rate limiting. It is not entirely clear that the mechanisms of time dependent crack growth are identical for different environment/alloy couples, or for different ranges of loading conditions. This paper will attempt to examine the chemical aspects of environment/alloy interactions and to correlate those aspects with observed crack propagation rates under a variety of loading conditions at or near room temperature. Additionally, a brief discussion of the role of environment on elevated temperature fatigue crack growth will be presented.

THE VALUE OF DYNAMIC FRACTURE TOUGHNESS AND ITS DEPENDENCE ON MATERIAL PROPERTIES AND LOADING CONDITIONS Final Report
George Herrmann Dec. 1981 6 p
(Grant DAAG29-78-G-0086)
(AD-A109151; ARO-14932.8-E) Avail: NTIS HC A02/MF A01 CSCL 13/13

Investigation of dynamic fracture of long brittle beams under different loading conditions was effected under ARO Grant DAAG29-78-G-0086. The work has proceeded in two distinct areas - the numerical solution of crack propagation problems using a finite difference code and the analytical solution of some beam fracture problems using several one dimensional theory formulations.

THE DEVELOPMENT OF A DYNAMIC ELASTOPLASTIC FINITE ELEMENT ANALYSIS FOR FAST FRACTURE UNDER IMPACT LOADING Interim Report
Jalees Ahmad, J. Jung, C. R. Barnes, and M. F. Kanninen Jun. 1981 29 p refs Presented at ASME/PVP Conf., Denver, 22-25 Jun. 1981
(Contract N00014-77-C0576)
(AD-A109323) Avail: NTIS HC A03/MF A01 CSCL 20/11

Recent evidence has pointed to the possible inadequacy of elastodynamic treatments of rapid crack propagation and crack arrest. This paper describes the development of a dynamic elastic-plastic finite element capability designed to address this concern by taking direct account of crack tip plasticity. Comparisons with known dynamic fracture mechanics solutions and with experimental data are made to demonstrate the fidelity of the approach. A comparison with an elastodynamic solution in an impact loaded 4340 steel bend specimen is also made. This result reveals that a significant effect of crack tip plasticity may exist even for high strength materials.

A finite element analysis of stationary and propagating cracks in the presence of inertia forces is presented. An extension of the J-integral approach is employed. To model a propagating crack, a conceptually simple yet effective technique has been

developed. The new crack propagation scheme eliminates the difficulties associated with the use of moving singular elements.

THE NUMERICAL SIMULATION OF CRACK GROWTH IN WELD-INDUCED RESIDUAL STRESS FIELDS Interim Report
M. F. Kanninen, F. W. Brust, Jalees Ahmad, and I. S. Abou-Sayed Jul. 1981 25 p refs Presented at 28th Army Sagamore Res. Conf., Lake Placid, N.Y., 13-17 Jul. 1981
(Contract N00014-77-C-0516)
(AD-A109321) Avail: NTIS HC A02/MF A01 CSCL 20/11

A marriage of elastic plastic fracture mechanics techniques with thermoplastic finite element analyses is developed to examine crack growth in the presence of weld-induced residual stresses. A hypothetical crack growth relation based on the crack tip opening displacement is used. Three problem areas are studied: stress corrosion cracking in a girth-welded pipe, fatigue crack growth under cyclic loading in a butt-welded plate, and dynamic crack propagation under impact loading in a butt-welded plate. Comparisons with computations carried out under conventional linear elastic assumptions are made. It is found that, in all three cases, neglect of the plastic deformation caused by the welding process appears to be anti-conservative. It is concluded that more realistic computations for crack growth in and around welds than are commonly used may be needed for realistic structural integrity assessments.

The development and evaluation of new theoretical and numerical approaches for strongly nonlinear finite element analysis are reported. The element technology uses interior nodes to create higher order in-plane displacement forms needed for nonlinear strain calculation. Several solution procedure types are discussed, based on an updated total Lagrangian formulation. Progress with this approach and current capability levels are discussed.

One of the many efforts undertaken to increase the life of gun tubes and/or increase their resistance to erosion involves the use of linears fabricated from different materials. A finite difference computer code for investigating the thermo-elastic-plastic response of gun tubes has been expanded to include multi-layered cylinder response to time dependent boundary conditions. Considered are both cyclic heat input and cyclic stress input. Response curves from inputs representative of repeated firing cycles are presented. The emphasis in this report is on the transient temperature response and on the thermo-elastic stresses and mechanical stresses in the layers. Author (GRA)

(AD-A108833; RDA-TR-113206-005; DNA-5738T) Avail: NTIS HC A03/MF A01 CSCL 12/1

As a check case for numerical studies of tensile cracking in nonlinear media, closed form solutions have been derived for the following problems. A finite slab of bilinear material is loaded on one face by a sharp-fronted triangular pressure pulse. Cracks are assumed to form in the first case when the stress exceeds a tensile limit for a finite time, i.e., the tensile impulse is finite. In both cases the stress reaches the tensile limit and a first crack forms shortly after the incident wavefront reflects from the free face of the slab. In the first case a continuously cracked zone develops under the action of a tensile spike caused by the first crack. In the second case, the tensile spike has no effect on cracking, and a sequence of discrete cracks form. Stress histories and stress profiles are plotted for both cases.

STRUCTURAL SYSTEM IDENTIFICATION TECHNOLOGY VERIFICATION Final Report
N. Giansante, A. Berman, W. G. Flannelly, and E. J. Nagy Ft. Eustis, Va. Army Research and Technology Labs. Nov. 1981 218 p refs
(Contract DAAK51-78-C-0017; DA Proj. 1L1-62209-AH-76)
(AD-A109181; R-1631; USAAVRADCOM-TR-81-D-28) Avail: NTIS HC A10/MF A01 CSCL 13/13

Structural system identification is the method of obtaining structural and dynamic mathematical models and improving existing mathematical models using ground vibration test data. The purpose of the subject program was to perform experimental, development, and research work to verify the concepts of structural system identification technology. To accomplish this, system identification techniques were applied to a U. S. Army AH-1G helicopter fuselage to create a mathematical model from ground vibration test data, to improve a reduced model of an existing NASTRAN model of the AH-1G using shake test data, and to test the effectiveness of these new mathematical models in predicting the effects of stiffness and mass changes to the airframe. The results of the program indicate that system identification is a viable and cost-effective technique for developing new models and for improving existing finite-element models of an airframe using ground vibration test data. TIME DEPENDENT INELASTIC BEHAVIOR OF MATERIALS Final Scientific Report, 1 Jul. 1980 - 30 Jun. 1981

Sol R. Bodner Jul. 1981 14 p Sponsored in part by the European Office of Aerospace Research and Development
(Grant AF-AFOSR-0214-80; AF Proj. 2307)
(AD-A109089; AFOSR-81-0855TR) Avail: NTIS HC A02/MF A01 CSCL 11/4

A period of a research program was devoted to solving problems of the inelastic response of composite elements under dynamic loading, examining wave propagation in rate dependent inelastic media, and studying the creep response of metals. The reference material representation was taken to be the constitutive equations of Bodner-Partom for elastic-viscoplastic work-hardening materials. In particular, a theory for the dynamic behavior of laminated slabs of elastic-viscoplastic materials was developed. In addition, the constitutive equations were shown to provide realistic characterization of the time dependent inelastic behavior of metals ranging from creep to wave propagation conditions. FURTHER STUDIES ON DYNAMIC CRACK CURVING

Y. J. Sun, M. Ramulu, A. S. Kobayashi, and B. S.-J. Kang Nov. 1981 21 p refs
(Contract N00014-76-C-0060; NR Proj. 64-478)
(AD-A109299; TR-42) Avail: NTIS HC A02/MF A01 CSCL 20/11

The elastodynamic stress field surrounding rapidly propagating cracks in thin polycarbonate, double edged crack tension specimens were analyzed by dynamic photoelasticity using a 16 spark gap Cranz-Schardin camera system. Crack curving was observed in two slanted double edged crack specimens and in two offset parallel double edged crack specimens. In another test, the crack ran straight between two symmetrically located twin cracks. Results of these five tests were used to verify the dynamic crack curving criterion by Ramulu, et al., in which a reference distance from the crack tip is incorporated into the maximum circumferential stress of minimum strain energy density criteria. The critical material property for crack curving in this thin polycarbonate sheet was found to be about r_o = 0.5 mm. GRA

FRACTURE AND FATIGUE CHARACTERIZATION OF AIRCRAFT STRUCTURAL MATERIALS UNDER BIAXIAL LOADING Final Scientific Report, 1 Oct. 1976 - 30 May 1980

D. L. Jones and J. Eftis Dec. 1981 204 p refs
(Grant AF-AFOSR-3096-76; AF Proj. 2307)
(AD-A109054; AFOSR-81-0856TR) Avail: NTIS HC A10/MF A01 CSCL 01/3

A general fracture mechanics analysis was performed to examine the influence of biaxial applied loads on the mechanical state of the body. The geometries examined were the single crack and two coplanar cracks with an arbitrary orientation and the cracked shear panel. It was found that the biaxial loads influenced all aspects of the mechanical state of the body, with the exception of the stress intensity factor for a crack oriented parallel to the biaxial load. The extent and nature of the biaxial effect on the crack-tip stress field, stress intensity factor, angle of initial crack extension, crack-tip displacements, elastic strain energy, fracture load and fatigue crack growth rates are all discussed. A biaxial test facility was developed and a considerable number of photoelastic, fracture toughness, and fatigue crack growth rate experiments were performed. Confirmation of the analytical predictions was obtained for the biaxial effects on the crack-tip stress field, the angle of initial crack extension, the fracture load, and the fatigue crack growth rates. The biaxial loads were seen to influence all of these parameters in varying degrees. GRA

SURFACE REACTIONS AND FATIGUE CRACK GROWTH

R. P. Wei and G. W. Simmons Aug. 1981 20 p refs
(Contract N00014-75-C-0543; NR Proj. 036-097)
(AD-A109296; IFSM-81-107; TR-11) Avail: NTIS HC A02/MF A01 CSCL 20/11

Recent fracture mechanics and surface chemistry studies of environment assisted crack growth in gaseous environments have shown that crack growth may be controlled in some systems by the rate of surface reactions and in others by the rate of transport of the aggressive environment to the crack tip. Based on considerations of surface reactions and gas transport, a model for surface reaction and transport controlled fatigue crack growth in single component gaseous environments was proposed and experimentally verified. In practice, however, there is usually more than one gas in a given environment. The various component gases can compete for surface reaction sites and therefore alter the fatigue crack growth response. In this paper, the development of the model for surface reaction and transport controlled fatigue crack growth in single component gaseous environments is briefly reviewed. Modeling of fatigue crack growth in a binary gas mixture, in which one of the components acts as an inhibitor, is described, and the model is applied to the consideration of the influence of oxygen on fatigue crack growth in humid air. SURFACE MODIFICATION IN CONTROL SiO_2 FIBER FRACTURE Final Technical Report, 22 Feb. 1979 - 22 Feb. 1981

Roy Kaplow Griffiss AFB, N.Y. RADC Oct. 1981 145 p refs
(Contract F19628-79-C-0055; AF Proj. 4600)
(AD-A108796; RADC-TR-81-292) Avail: NTIS HC A07/MF A01 CSCL 11/2

It is known that corrosion resistance can be imparted to various materials by carefully controlling the chemical environment to which newly formed and atomically clean surfaces are initially exposed. We take the view that the embrittlement of silica (SiO_2) is also a corrosion process, originating from the activated hydrolysis of siloxane (Si-O-Si) bonds by molecular water. Our approach considers that surface states of SiO_2 can be altered by the presence of absorbed or chemisorbed gases so as to increase the activation energy required for the absorption of water vapor or alternatively to impede the dissociation of molecular water on silica surfaces. Either of these mechanisms should raise the activation energy involved in hydrolyzing siloxane bonds and thus lower the susceptibility for crack propagation. Gases containing straight or branched chain hydrocarbons are expected to reduce the absorption potential for H_2O for the silica surface. Absorbed gases containing strong polar residues such as halogens are expected to establish a surface dipole layer which may repel the absorbing end of H_2O and prevent its dissociation on the silica surface. BASIS-CRACK: AN EVALUATION OF PERFORMANCE

Final Report
B. Palmberg 1981 36 p refs
(Contract FMV-F-FL-82223-78-003-21-001)
(FFA-TN-HU-2171) Avail: NTIS HC A03/MF A01

The BASIS-CRACK option, which can handle singularities in finite element shape functions thereby enabling the elements to be used for modeling cracks in a structure, is evaluated. The demands on the node grid and element size were investigated and the effects of varying the virtual crack extension or altering the crack growth direction were studied. Operation with different types of elements and mixture of different elements verifies the reliability and accuracy of the program. A combination of BASIS-CRACK and the SUPER-BASIS was tested successfuly. A crack tip element size of half the crack length is sufficient for an acceptable accuracy in the computed energy release rate.

DIFFERENCES BETWEEN THE GROWTH OF SMALL AND LARGE FATIGUE CRACKS. THE RELATION TO THRESHOLD K-VALUES
J. Schijve Jul. 1981 34 p refs Presented at Intern. Symp. on Fatigue Thresholds, Stockholm, 1-3 Jun. 1981
(VTH-LR-327) Avail: NTIS HC A03/MF A01

Differences in the behavior of small and large cracks, including microscopic and fractographic aspects, are analyzed. They are shown to be related to restraint on cyclic slip, the number of active slip systems, crack growth mechanics, and the irregularity of the crack front geometry at both micro and macro levels. A difference associated with residual plastic deformation in the wake of the crack is that large cracks are subject to more effective crack closure than small cracks. Illustrative crack growth data are presented. Nominal stress intensity factors are shown to be lower than actual in the case of small cracks, due to an underestimate of the stress severity at the crack tip. Threshold values of the stress intensity factor are not necessarily valid for small cracks. However, stress intensity factors can be used for small cracks for some (particularly high yield strength) materials.

THE STRESS INTENSITY FACTOR OF SMALL CRACKS AT NOTCHES
J. Schijve Jul. 1981 31 p refs
(VTH-LR-330) Avail: NTIS HC A03/MF A01

The effect of geometrical notches in a structure on fatigue crack propagation is investigated theoretically. Given that the stress distribution in the proximity of the notch is approximately the same for a variety of notches and stress concentration factors (Kt), if the peak stress at the notch (sigma peak) and root radius (rho) are the same, then small cracks occurring in similar stress fields have the same stress intensity factor (K): i.e., for small cracks K depends on sigma peak and rho only. Analysis of literature data confirms the similar concept that the geometry factor (C) in K = C sigma peak root pi 1, where 1 = crack length, depends on 1/rho.

SOME REAL VARIABLE EXPRESSIONS FOR STRESS DISTRIBUTIONS IN ORTHOTROPIC PLATES
G. J. Spies Sep. 1981 40 p refs
(VTH-LR-334) Avail: NTIS HC A03/MF A01

A number of solutions of Lekhnitskii's method for determining stress distributions in orthotropic plates are presented in a form containing only real variables. The expressions are exact solutions, giving stresses at the circular boundary as well as on the principal axes. The solutions are presented as an aid to the general designer of anisotropic structures requiring expressions which can be worked out on a pocket calculator. The general method yields simple expressions for stresses in several cases where a circular hole or a circular insert causes stress concentrations, but the formulas contain complex variables complicating their evaluation unless use can be made of a FORTRAN 4 programmed computer.

A NONLINEAR FINITE ELEMENT ANALYSIS OF RAPID CRACK GROWTH AT LARGE SCALE YIELDING
Lars Dahlberg Apr. 1980 33 p refs
(TRITA-HFL-0027; KTH-Publ-207; ISSN-0349-1234) Avail: NTIS HC A03/MF A01

Crack propagation experiments were performed on a highly loaded, single edge-notched rectangular sheet of cold rolled and hardened carbon steel. Crack lengths and signals from three strain gages were tape recorded. Results were analyzed with a finite element program, allowing for dynamic elastic-plastic calculations, using an elastic, linear, strain hardened plastic material model. Analysis, assuming purely linear elastic material behavior, was carried out for comparison. Values obtained in the elastic-plastic analysis were approximately half the corresponding values for purely elastic analysis, showing estimates of energy flow to the crack tip region to be influenced considerably by the introduction of plasticity into the analysis. Suitable models for the crack tip region are considered.

SENSITIVITY OF THE FRACTURE PROBABILITY IN A REACTOR VESSEL TO VARIATIONS IN DATA
Fred Nilsson and Stefan Palm May 1980 44 p refs
(TRITA-HFL-0028; KTH-Publ-208; SKI-B37/79) Avail: NTIS HC A03/MF A01

A theoretical probability model for fracture risk in nuclear reactor pressure vessels was developed. Input data based on theoretical estimates was selected, and variations about this basic set were performed. The resulting changes in total fracture probability were calculated in order to indicate the sensitivity of the total failure probability to changes in different parameters of the assumed input data. The method of linear elastic fracture mechanics was used to analyze failure risk. Fracture was assumed to occur when the stress intensity factor is greater than the fracture toughness of the material. Periodic inspection data from the fourth year onwards has little effect on predictions. Fracture probability is insensitive to length of working life, so calculating failure risk per vessel year can be highly misleading.

ON THE INFLUENCE OF MEAN LOAD ON CRACK OPENING AND FATIGUE CRACK GROWTH IN A SHIP HULL PLATE STEEL
Stig Waestberg Oct. 1980 19 p refs
(TRITA-HFL-0029; KTH-Publ-209) Avail: NTIS HC A02/MF A01

The influence of mean load on crack closure in a steel for which the crack growth rate is largely insensitive to mean load was studied. Fatigue crack growth rates were measured in LR-DH quality steel for different stress ratios R-values under sinusoidal loading. No significant influence of the R-values was found in the loading range investigated. Crack surface displacements were recorded in order to detect possible crack closure during the lower part of the loading cycle. Crack lengths were measured by traveling microscope. No crack closure was observed. The results are discussed in terms of toughness (ability to withstand local static fracture during the upper part of the loading cycle) and the amount of stable crack growth during the loading cycle. No significant influence of the R-values (R = 0.04 to 0.8) is found in the load range from 10 to 40 Mpa root m.

THE STRUCTURAL BEHAVIOUR OF INFLATED CYLINDRICAL CANTILEVER BEAMS B.S. Thesis
R. J. Oldfield and D. M. Pearson Jun. 1981 83 p refs
(BU-260) Avail: NTIS HC A05/MF A01

A wing structure, consisting of spanwise inflatable cylinders, was considered for remotely piloted vehicle applications. The behavior of isolated pressurized cylinders mounted as cantilevers and subjected to bending, torsion, and combined loadings was investigated experimentally and theoretically. It was found that, except in the case of pure torsion, the cylinders are able to withstand substantial loading even when in a partly wrinkled state. Theories derived for the behavior of the wrinkled cantilevers generally give reasonable predictions of the experimental results. An appraisal of a three cylinder combined structure leads to recommendations concerning the construction of such a wing structure. Author (ESA)

FATIGUE PERFORMANCE AND FASTENER FLEXIBILITY FOR SINGLE SHEAR ALUMINUM JOINT WITH DIFFERENT SPLICE PLATES Final Report
Bjoern Palmberg 1981 80 p refs Revised
(Contract FMV-F-FL-82223-78-00)
(FFA-TN-HU-2165) Avail: NTIS HC A05/MF A01

The influence of bending stiffness on secondary bending single shear double row joints was investigated. Countersunk steel bolts were installed in 6D10 holes. A load spectrum representing a fighter aircraft wing panel was used. It is shown that in fatigue life increases with increasing bending stiffness, and that secondary bending is decreased by a splice plate arrangement which has very low bending stiffness. The bolt flexibility is determined from measured values of splice plate elongation and the gap variation between the two base plates. It is found that different splice plates yield almost the same bolt flexibility and additional lubrication when torquing the simloc nuts increases fatigue life significantly. Author (ESA)

DURABILITY OF ADHESIVE BONDED STRUCTURES SUBJECTED TO ACOUSTIC LOADS
H. F. Wolfe (AFWAL, Wright-Patterson AFB, Ohio) and I. Holehouse (Rohr Industries, Chula Vista, Calif.) London Dec. 1981 16 p refs Presented at the 53rd Meeting of the AGARD Struct. and Mater. Panel, Noordwijkerhout, Netherlands, 27 Sep. - 2 Oct. 1981
(AGARD-R-701; ISBN-92-835-1409-2) Avail: NTIS HC A02/MF A01

Acoustic fatigue prediction techniques for weldbonded aluminum, adhesive bonded aluminum, an adhesive bonded graphite epoxy structures are summarized. Adequate performance under static loading did not guarantee adequate performance under dynamic loading. Some prediction methods were developed for certain failure modes in adhesive bonded aluminum and graphite epoxy bonded skin stiffened structures. Further investigations are needed to adequately predict the acoustic fatigue life of adhesive bonded aircraft structures. N.W.

RESOURCEFUL DECISIONS: LANDSAT IN MICHIGAN
Todd Anuskiewicz, Principal Investigator and Roy Meador [1982] 29 p Sponsored by NASA Original contains color imagery. Original photography may be purchased from the EROS Data Center, Sioux Falls, S.D. 57198. ERTS
(E82-10037; NASA-CR-164771) Avail: SOD HC CSCL 05B

The capabilities of LANDSAT and the continuous advantages the satellite offers in remote sensing are reviewed. The processing and application of data from the satellite to the study of resource and environmental needs in Michigan highlighted include: land use; classification of trophic states in lakes and the monitoring of water quality; prospecting for oil, gas, minerals, and water; identifying wetlands, wildlife habitats, and recreation areas; forest management; routing power lines; transportation planning; and surveying the Great Lakes Basin. The work of the Environmental Research Institute of Michigan in solving modern sensor technological problems and in gathering ground truth is reported as well as activities available through the University of Michigan remote sensing program. MODEL CHOICE: AN OPERATIONAL COMPARISON OF STOCHASTIC STREAMFLOW MODELS FOR DROUGHTS Ph.D. Thesis
William Robert James 1981 312 p
Avail: Univ. Microfilms Order No. 81213830

Five annual stochastic streamflow generation models are compared on their ability to preserve drought-related time series properties and annual statistics. Using Monte Carlo generation procedures and comparing the average generated statistics and drought or water supply properties, a basis is established to evaluate model performance on four different Utah study streams. A seasonal disaggregation model is applied to each of the generated annual model. The ARMA-Markov and ARMA models are judged to be the best overall models in terms of preserving the short and long term persistence statistics for the four historic time series studied. The broken line model is judged to be the best model in terms of minimizing the economic regret as determined by an agricultural crop production function. Dissert. Abstr.

Twenty years of progress in geodetic surveys, the use of artificial satellites and their practical applications are described. Gravimetric methods, astrogeodetic methods, statistical procedures in the physical geodesy, and geodetic problems in geodynamics are discussed. It is found that in the geometric reference system of deep geodynamic observations the axis of rotation of the Earth is a fundamental direction of reference which changes, whether it is in the universe or on terrestrial bodies. E.A.K.

Hellmut Schmid *In its* Helmut Wolf: On the Occasion of his 70th Birthday 1980 p 13-27 In GERMAN (For primary document see N82-19603 10-43)
Avail: Issuing Activity

The development of a mathematical model which is applied to interpret the measured variables and random variables with their characteristic random noise is discussed. It is posited that for typical geometric problems, as well as for geodetic and photogrammetric tasks it is possible to analyze specific geometrically established solvent algorithms quantitatively and qualitatively. Such a computing method is often advantageous, especially because it can be applied to practical engineering. E.A.K.

HYDROLOGICAL PROBLEMS OF SURFACE MINING
Peter A. Wood Sep. 1981 102 p refs
(ICTIS-TR-17; ISBN-92-9209-079-X) Copyright. Avail: Issuing Activity

The physical aspects of the relation between hydrology and the surface mining of coal are reviewed. Surface and ground water are considered at the planning, extraction and restoration phases of mining. Aspects covered include the collection and handling of hydrological data; the construction of river diversions; the control of runoff, erosion and sediment; problems of ground water and dewatering; and spoil bank hydrology. Mining hydrology interrelationships must be considered in order to ensure the efficient running of a surface mining operation while adequately protecting the environment. Author (ESA)

SATELLITE EARTH RESOURCES DATA, MODULE U-3

Jan. 1980 13 p Original contains color imagery. Original photography may be purchased from the EROS Data Center, Sioux Fals, S.D. 57198. ERTS
(E82-10035; NASA-TM-84130) Avail: NTIS HC A02/MF A01 CSCL 05B

Satellite data image products potentially useful in solving Earth resource and environmental problems are described. Sources for satellite data and user information are given. Recommendations for suitability of use of data from each satellite are presented. Satellite sources of Earth resources data are summarized for satellites launched since 1965 and those projected for launch through the late 1980s. The sensors of interest on each satellite, the wavelength or frequency of operation, and the resolution are given. Color ranges are illustrated and compared. The form and utility of aircraft and LANDSAT images are compared. Data from the Gemini-Apollo photography, Skylab, meteorological satellites, the Heat Capacity Mapping Mission, the Coastal Zone Color Scanner, Seasat, LANDSAT, and projected future satellites are briefly described J.D.H.

LANDSAT IMAGERY OF THE VENETIAN LAGOON: A MULTITEMPORAL ANALYSIS

L. Alberotanza and A. Zandonella, Principal Investigators (Telespazio S.p.A., Rome) 1980 9 p refs Sponsored by NASA ERTS
(E82-10036; NASA-CR-164772) Avail: NTIS HC A02/MF A01 CSCL 08H

The use of LANDSAT multispectral scanner images from 1975 to 1979 to determine pollution dispersion in the central basin of the lagoon under varying tidal conditions is described. Images taken during the late spring and representing both short and long range tidal dynamics were processed for partial haze removal and removal of residual striping. Selected spectral bands were correlated to different types of turbid water. The multitemporal data was calibrated, classified considering sea truth data, and evaluated. The classification differentiated tide diffusion, algae belts, and industrial, agricultural, and urban turbidity distributions. Pollution concentration is derived during the short time interval between inflow and outflow and from the distance between the two lagoon inlets and the industrial zones. Increasing pollution of the lagoon is indicated. J.D.H.

A COMPARISON OF UNSUPERVISED CLASSIFICATION PROCEDURES ON LANDSAT MSS DATA FOR AN AREA OF COMPLEX SURFACE CONDITIONS IN BASILICATA, SOUTHERN ITALY

Chris Justice and John Townshend, Principal Investigators Mar. 1981 40 p refs Submitted for publication Original contains imagery. Original photography may be purchased from the EROS Data Center, Sioux, Falls, S.D. 57198. ERTS
(E82-10038; NASA-TM-82098) Avail: NTIS HC A03/MF A01 CSCL 05B

Two unsupervised classification procedures were applied to ratioed and unratioed LANDSAT multispectral scanner data of an area of spatially complex vegetation and terrain. An objective accuracy assessment was undertaken on each classification and comparison was made of the classification accuracies. The two unsupervised procedures use the same clustering algorithm. By on procedure the entire area is clustered and by the other a representative sample of the area is clustered and the resulting statistics are extrapolated to the remaining area using a maximum likelihood classifier. Explanation is given of the major steps in the classification procedures including image preprocessing; classification; interpretation of cluster classes; and accuracy assessment. Of the four classifications undertaken, the monocluster block approach on the unratioed data gave the highest accuracy of 80% for five coarse cover classes. This accuracy was increased to 84% by applying a 3 x 3 contextual filter to the classified image. A detailed description and partial explanation is provided for the major misclassification. The classification of the unratioed data produced higher pecentage accuracies than for the ratioed data and the monocluster block approach gave higher accuracies than clustering the entire area. The moncluster block approach was additionally the most economical in terms of computing time. Author

AGRISTARS: FOREIGN COMMODITY PRODUCTION FORECASTING. MINUTES OF THE ANNUAL FORMAL PROJECT MANAGER'S REVIEW, INCLUDING PRELIMINARY TECHNICAL REVIEW REPORTS OF FY80 EXPERIMENTS

24 Sep. 1980 191 p Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior, and Agency for International Development
(Proj. AgRISTARS)
(E82-10039; NASA-TM-84050; FC-J0-00502; JSC-16823) Avail: NTIS HC A09/MF A01 CSCL 02C

The U.S./Canada wheat/barley exploratory experiment is discussed with emphasis on labeling, machine processing using P1A, and the crop calendar. Classification and the simulated aggregation test used in the U.S. corn/soybean exploratory experiment are also considered. Topics covered regarding the foreign commodity production forecasting project include: (1) the acquisition, handling, and processing of both U.S. and foreign agricultural data, as well as meteorological data. The accuracy assessment methodology, multicrop sampling and aggregation technology development, frame development, the yield project interface, and classification for area estimation are also examined. The HCMM transparency scenes for the available winter of 1978-1979 were evaluated; scenes were identified on processed magnetic tapes; other remote sensing information was identified; and a soil heat flux model with variable-depth thermal profile was developed. The Image 100 system was used to compare HCMM and GOES transparent images of surface thermal patterns. Excellent correspondence of patterns was found, with HCMM giving the greater resolution. One image shows details of thermal patterns in Florida that are attributable to difference in near surface water contents. The wide range of surface temperatures attributable to surface thermal inertia that exist in the relatively flat Florida topography is demonstrated. A.R.H.

EQUIVALENT SOURCE MODELING OF THE MAIN FIELD USING MAGSAT DATA Quarterly Report, 1 Apr. - 30 Jun. 1981

11 Aug. 1981 4 p ERTS
(Contract NAS5-26047)
(E82-10041; NASA-CR-164918; QR-6) Avail: NTIS HC A02/MF A01 CSCL 08G

Magsat dipole solution models were obtained with both 32 deg and 21 deg resolution based on a data set extending over 4 months. Time dependence was modeled using first time derivatives for the dipole magnetization vector components. This doubles the n total number of parameters in the solution. The solutions displayed a very slow convergence in time derivatives although at each iteration the conversion of the dipole parameters to spherical harmonic coefficients showed close agreement with the MGST (12/80) spherical harmonic model to degree 13 in the constant terms and 8 in the secular variation terms. The program error in the option to simultaneously estimate observatory anomaly biases was found and corrected. A 32 deg resolution dipole model was generated using the selected magnetic observatory data from 1960-1977 used in the GSFC (9/80) spherical harmonic model. A.R.H.

DELINEATION OF SOIL TEMPERATURE REGIMES FROM HCMM DATA Quarterly Report
Rick L. Day and Gary W. Petersen, Principal Investigators 30 Sep. 1981 3 p Sponsored by NASA HCMM
(E82-10042; NASA-CR-164919) Avail: NTIS HC A02/MF A01 CSCL 08M

Supplementary data including photographs as well as topographic, geologic, and soil maps were obtained and evaluated for ground truth purposes and control point selection. A study area (approximately 450 by 450 pixels) was subset from LANDSAT scene No. 2477-17142. Geometric corrections and scaling were performed. Initial enhancement techniques were initiated to aid control point selection and soils interpretation. The SUBSET program was modified to read HCMM tapes and HCMM data were reformated so that they are compatible with the ORSER system. Initial NMAP products of geometrically corrected and scaled raw data tapes (unregistered) of the study were produced. A.R.H.

ELECTROMAGNETIC DEEP-PROBING (100-1000 KMS) OF THE EARTH'S INTERIOR FROM ARTIFICIAL SATELLITES: CONSTRAINTS ON THE REGIONAL EMPLACEMENT OF CRUSTAL RESOURCES Quarterly Progress Report, 30 Jun. - 30 Sep. 1981
John F. Hermance, Principal Investigator 30 Sep. 1981 9 p refs ERTS
(Contract NAS5-26138)
(E82-10043; NASA-CR-164920; QPR-5) Avail: NTIS HC A02/MF A01 CSCL 08G

An algorithm was developed to address the problem of electromagnetic coupling of ionospheric current systems to both a homogeneous Earth having finite conductivity, and to an Earth having gross lateral variations in its conductivity structure, e.g., the ocean-land interface. Typical results from the model simulation for ionospheric currents flowing parallel to a representative geologic discontinuity are shown. Although the total magnetic field component at the satellite altitude is an order of magnitude smaller than at the Earth's surface (because of cancellation effects from the source current), the anomalous behavior of the satellite observations as the vehicle passes over the geologic contact is relatively more important pronounced. The results discriminate among gross lithospheric structures because of difference in electrical conductivity. A.R.H.

(NASA Order S-75406-B)
(E82-10046; NASA-CR-164923; QPR-3) Avail: NTIS HC A02/MF A01 CSCL 05B

The location and migration of cloud, land and water features were examined in spectral space (reflective VIS vs. emissive IR). Daytime HCMM data showed two distinct types of cloud affected pixels in the south Texas test area. High altitude cirrus and/or cirrostratus and 'subvisible cirrus' (SCi) reflected the same or only slightly more than land features. In the emissive band, the digital counts ranged from 1 to over 75 and overlapped land features. Pixels consisting of cumulus clouds, or of mixed cumulus and landscape, clustered in a different area of spectral space than the high altitude cloud pixels. Cumulus affected pixels were more reflective than land and water pixels. In August the high altitude clouds and SCi were more emissive than similar clouds were in July. Four-channel TIROS-N data were examined with the objective of developing a multispectral screening technique for removing SCi contaminated data. Author

INVESTIGATIONS OF MEDIUM WAVELENGTH MAGNETIC ANOMALIES IN THE EASTERN PACIFIC USING MAGSAT DATA Interim Report, Apr. - Jun. 1981
Christopher G. A. Harrison, Principal Investigator Jun. 1981 3 p Sponsored by NASA ERTS
(E82-10047; NASA-CR-164924) Avail: NTIS HC A02/MF A01 CSCL 08G

Processing continued on the data set covering the first three months of the mission. Orbits were selected over a specified range of longitude and latitude and those orbits falling within the geographical boundaries were stored on a disk and a listing made. To verify the quality of the data, plots were made showing altitude vs latitude, anomalous field vs latitude, and corrected anomalous field vs latitude. Results of the plotting showed that: (1) data from the first day of the mission are not usable because they are too noisy; (2) some orbits contain spikes, no doubt a processing error on the tape; (3) some orbits contain a 20 deg region in latitude, offset roughly 30 nT from the rest of the anomalous field profiles; and (4) the correlation between the adjacent orbits is poor. Even the new ring current coefficients provided with a later, corrected set of data tapes did not not yield the desired correlations. A.R.H.

USE OF MAGSAT ANOMALY DATA FOR CRUSTAL STRUCTURE AND MINERAL RESOURCES IN THE US MIDCONTINENT Quarterly Report, period ending 30 Sep. 1981
Robert S. Carmichael, Principal Investigator 28 Sep. 1981 10 p Original contains color illustrations ERTS
(Contract NAS5-26425)
(E82-10049; NASA-CR-164926; QR-3) Avail: NTIS HC A02/MF A01 CSCL 08G

Magnetic profiles on individual satellites tracks were examined to identify bad (nonterrestrially-based) data points r profiles. Anomaly profiles for the same satellite track, but at different passes were compared for parallel tracks and for tracks that cross. The selected and processed data were plotted and contoured to develop a preliminary magnetic anomaly map. The map is similar in general morphology to NASA's Magsat global scalar anomaly map, but has more detail which is related to crustal properties. Efforts have begun to interpret the satellite magnetic anomalies in terms of crustal character. The correlation of magnetics with crustal petrology may have a much larger tectonic implication. Th possibility of there being an ultramafic lower crust along one zone as a consequence of a continental collision/subduction which helped form the midcontinent craton in Precambrian times is being investigated. A.R.H.

STUDIES RELATED TO MAGSAT Progress Report, period ending Sep. 1981
David P. Stern, Principal Investigator 30 Sep. 1981 21 p ERTS
(E82-10050; NASA-TM-84129) Avail: NTIS HC A02/MF A01 CSCL 08G

The westward drift of the geomagnetic field was analyzed using models from Magsat which include secular variation. Two approaches were utilized. A straightforward covariance method gave large drift rates (0.25 degr./yr and up) and suggested that the drift was larger in the Southern Hemisphere than in the Northern, and was small near the poles. The drawback was a rather large noise level superimposed on a small signal. The other approach followed the method of A.D. Richmond and obtained drifts of the order of 0.1 deg/yr. The use of Magsat to study the Backus effect is explored. Particular attention is drawn to the comparison with resuls of general inverse analysis. A.R.H.

AGRISTARS: SOIL MOISTURE/EARLY WARNING AND CROP CONDITION ASSESSMENT. INTERFACE CONTROL DOCUMENT
Nov. 1980 13 p Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior, and Agency for International Development ERTS
(Proj. AgRISTARS)
(E82-10053; NASA-CR-161028; MU-JO-0101; JSC-16842) Avail: NTIS HC A02/MF A01 CSCL 02C

The interactions and support functions required between the early warning/crop condition assessment (EW/CCA) project and soil moisture (SM) project are defined. The EW Project aims to develop, test and evaluate techniques and procedures for adapting remote sensing technology to provide early warning of events and the timely assessment of those factors which affect the quality and quantity of production of economically important crops. Those techniques to augment and reinforce the current assessment activities are to be developed to improve the definition of the relationship between the plant(s) and its environment. This assessment and evaluation will certainly include the need for soil moisture measurement and estimation. The SM Project aims to develop, test, and evaluate techniques and procedures to measure or predict soil moisture in the root zone using both contact and remote sensors. A.R.H.

AGRISTARS: FOREIGN COMMODITY PRODUCTION FORECASTING. CORN/SOYBEAN DECISION LOGIC DEVELOPMENT AND TESTING
C. L. Dailey and K. M. Abotteen, Principal Investigators Oct. 1980 81 p refs Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior, and Agency for International Development
(Contract NAS9-15800; Proj. AgRISTARS)
(E82-10056; NASA-CR-161024; FC-LO-00480; LEMSCO-14811; JSC-16380) Avail: NTIS HC A05/MF A01 CSCL 02C

The development and testing of an analysis procedure which was developed to improve the consistency and objectively of crop identification using LANDSAT data is described. The procedure was developed to identify corn and soybean crops in the U.S. corn belt region. The procedure consists of a series of decision points arranged in a tree-like structure, the branches of which lead an analyst to crop labels. The specific decision logic is designed to maximize the objectively of the identification process and to promote the possibility of future automation. Significant results are summarized. J.D.H.

(Contract NAS9-15800; Proj. AgRISTARS)
(E82-10057; NASA-CR-161025; SM-LO-00463;
LEMSCO-14307; JSC-16366) Avail: NTIS HC A03/MF A01
CSCL 02C

Predictive procedures for developing soil hydrologic properties (i.e., relationships of soil water pressure and hydraulic conductivity to soil water content) are presented. Three models of the soil water pressure-water content relationship and one model of the hydraulic conductivity-water content relationship are discussed. Input requirements for the models are indicated, and computational procedures are outlined. Computed hydrologic properties for Keith silt loam, a soil typer near Colby, Kansas, on which the 1978 Agricultural Soil Moisture Experiment was conducted, are presented. A comparison of computed results with experimental data in the dry range shows that analytical models utilizing a few basic hydrophysical parameters can produce satisfactory data for large-scale applications. LEMSCO-14640; JSC-16830) Avail: NTIS HC A04/MF A01
CSCL 02C

Several of the projects in the AgRISTARS program require crop phenology information, including classification, acreage and yield estimation, and detection of episodal events. This study evaluates several crop calendar estimation techniques for their potential use in the program. The techniques, although generic in approach, were developed and tested on spring wheat data collected in 1978. There are three basic approaches to crop stage estimation: historical averages for an area (normal crop calendars), agrometeorological modeling of known crop-weather relationships agrometeorological (agromet) crop calendars, and interpretation of spectral signatures (spectral crop calendars). In all, 10 combinations of planting and biostage estimation models were evaluated. Dates of stage occurrence are estimated with biases between -4 and +4 days while root mean square errors range from 10 to 15 days. Results are inconclusive as to the superiority of any of the models and further evaluation of the models with the 1979 data set is recommended. Author

NOTES FOR BRAZIL SAMPLING FRAME EVALUATION TRIP

Technical Report, 1 - 19 Feb. 1981

Robert Horvath, Principal Investigator and David R. Hicks, comp. Aug. 1981 32 p ref Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior and Agency for International Development ERTS
(Contract NAS9-15476; Proj. AgRISTARS)
(E82-10060; NASA-CR-167420; SR-E1-04138;
ERIM-152400-7-T) Avail: NTIS HC A03/MF A01 CSCL 02C

Field notes describing a trip conducted in Brazil are presented. This trip was conducted for the purpose of evaluating a sample frame developed using LANDSAT full frame images by the USDA Economic and Statistics Service for the eventual purpose of cropland production estimation with LANDSAT by the Foreign Commodity Production Forecasting Project of the AgRISTARS program. Six areas were analyzed on the basis of land use, crop land in corn and soybean, field size and soil type. The analysis indicated generally successful use of LANDSAT images for purposes of remote large area land use stratification. Author

LONGWALL GUIDANCE AND CONTROL DEVELOPMENT

Final Report, 1974 - 1982

31 Jan. 1982 118 p refs
(Contract ET-75-I-01-9012)
(NASA-TM-82455) Avail: NTIS HC A06/MF A01 CSCL 08I

The longwall guidance and control (G&C) system was evaluated to determine which systems and subsystems lent themselves to automatic control in the mining of coal. The upper coal/shale interface was identified as the reference for a vertical G&C system, with two sensors (the natural backgound and the sensitized pick) being used to locate and track this boundary. In order to insure a relatively smooth recession surface (roof and floor of the excavated seam), a last and present cut measuring instrument (acoustic sensor) was used. Potentiometers were used to measure elevations of the shearer arms. The intergration of these components comprised the vertical control system (pitch control). Yaw and roll control were incorporated into a face alignment system which was designed to keep the coal face normal to its external boundaries. Numerous tests, in the laboratory and in the field, have confirmed the feasibility of automatic horizon control, as well as determining the face alignment. S.L.

METHODOLOGY OF THE INTERPRETATION OF REMOTE SENSING DATA AND APPLICATIONS IN GEOMORPHOLOGY
Tania Maria Sausen and Evlyn Marcia Leao deM. Novo Aug. 1981 42 p refs In PORTUGUESE; ENGLISH summary
(INPE-2209-MD/007) Avail: NTIS HC A03/MF A01

Remote sensing techniques not only permit the acquisition, in a short time, of a large volume of information about phenomena occurring at the Earth's surface, but also provide a constant flux of data showing variations in spatial distribution patterns, which is of value in predicting and controlling geomorphological events. The use of aerial panchromatic, color, and multispectral photography is discussed as well as the interpretation of radar and thermal infrared imagery. Methods for interpreting multispectral imagery from LANDSAT are examined. A.R.H.

CONTINENTAL SCIENTIFIC DRILLING PROGRAM CURATORIAL NEEDS
Grant Heiken and Sue Goff Feb. 1981 300 p refs
(Contract W-7405-eng-36)
(LA-8726-MS) Avail: NTIS HC A13/MF A01

To circulate and protect cores, cuttings, and other samples produced during the continental scientific drilling program (CSDP), a uniform policy of curation must be established that addresses who receives the samples, curator's responsibilities, and standard procedures of description and handling of samples. Investigation of state laws dealing with the preservation of rock materials concludes that 46 of the 50 states do not have any regulations that would hinder a CSDP program from removing core and placing it in a national repository. Two of the remaining states require that only one-quarter of the core length remain with the state, while the other two may request the core but usually only ask for a representative sample. It is recommended that regional repositories be established at existing facilities and that the budget for curation be about five per cent of the budget for the total program. A.R.H.

THE EFFECT OF FINITE FIELD SIZE ON CLASSIFICATION AND ATMOSPHERIC CORRECTION
Yoram J. Kaufman and Robert S. Fraser Sep. 1981 53 p refs
(NASA-TM-83818) Avail: NTIS HC A04/MF A01 CSCL 20F

The atmospheric effect on the upward radiance of sunlight scattered from the Earth-atmosphere system is strongly influenced by the contrasts between fields and their sizes. For a given atmospheric turbidity, the atmospheric effect on classification of surface features is much stronger for nonuniform surfaces than for uniform surfaces. Therefore, the classification accuracy of agricultural fields and urban areas is dependent not only on the optical characteristics of the atmosphere, but also on the size of the surface do not account for the nonuniformity of the surface have only a slight effect on the classification accuracy; in other cases the classification accuracy descreases. The radiances above finite fields were computed to simulate radiances measured by a satellite. A simulation case including 11 agricultural fields and four natural fields (water, soil, savanah, and forest) was used to test the effect of the size of the background reflectance and the optical thickness of the atmosphere on classification accuracy. It is concluded that new atmospheric correction methods, which take into account the finite size of the fields, have to be developed to improve significantly the classification accuracy. Author

GUIDELINES FOR SPACEBORNE MICROWAVE REMOTE SENSORS
Viqui Litman (Applied Media, Inc., Greenbelt, Md.) and John Nicholas Mar. 1982 87 p refs
(Contract NASw-3398)
(NASA-RP-1086) Avail: NTIS HC A05/MF A01 CSCL 14B

A handbook was developed to provide information and support to the spaceborne remote sensing and frequency management communities: to guide sensor developers in the choice of frequencies; to advise regulators on sensor technology needs and sharing potential; to present sharing analysis models and, through example, methods for determining sensor sharing feasibility; to introduce developers to the regulatory process; to create awareness of proper assignment procedures; to present sensor allocations; and to provide guidelines on the use and limitations of allocated bands. Controlling physical factors and user requirements and the regulatory environment are discussed. Sensor frequency allocation achievable performance and usefulness are reviewed. Procedures for national and international registration, the use of non-allocated bands and steps for obtaining new frequency allocations, and procedures for reporting interference are also discussed. M.D.K.

STUDY OF EARTH RESOURCES SATELLITE (ERS) DATA REDUCTION UNIT
C. J. Collins, comp., F. A. C. Burke, comp., J. W. Pengelly, comp., P. Redstone, comp. (Logica Ltd.), C. Burrows, comp. (Logica Ltd.), and N. McEvoy, comp. (Logica Ltd.) Paris ESA Aug. 1981 188 p refs
(Contract ESA-4415/80/NL-PP(SC))
(BAe-TP-7905; ESA-CR(P)-1478) Avail: NTIS HC A09/MF A01

Techniques for reducing onboard, by a factor of 4, the data rate from imaging instruments on Earth resources satellites, especially from the ocean color monitor on ERS 1, were examined. Theoretical analysis and simulation with real images allow algorithms to be defined for implementation assessment. A tradeoff based on performance and engineering criteria shows that spatial resolution degrading unit (SRDU) and a fixed weight spectral transform followed by a Rice Machine (FWST + RM2) meet reduction criteria within the mass and power constraints. Costs (two model program) are comparable, the greater complexity of FWST + RM2 being largely offset by more advanced technology in SRDU. Before either option is adopted, further simulation and breadboarding are recommended. Author (ESA)

SATELLITE SCATTEROMETER FEASIBILITY STUDY. VOLUME 1: TECHNICAL RESULTS Final Report
R. Anders, G. Bommas, W. Gieraths, W. Gilg, P. Hans, M. Haimerl, H. Hoelzl, A. Kuehnle, H. Schuessler, P. Stuerzenhofaecker et al Paris ESA Apr. 1981 194 p refs 2 Vol.
(Contract ESA-4367/80/F-DD(SC))
(ESA-CR(P)-1492-Vol-1) Avail: NTIS HC A09/MF A01

A scatterometer for ERS 1 is described. A wind sensor determines vector fields within a 400 km sweep parallel to satellite motion. Individual vectors are extractable from 50 X 50 km cells. Wind speeds between 4 and 24 m/sec are measured with an angular accuracy of + or - 20 deg. A wave sensor handles spectra between 100 and 1000 m wavelength. Measurements are taken with a spacing of 100 km or less along the satellite track. Data are extractable from 5 x 5 km resolution cells. Wind speed and wind direction measurements are derived from Seasat data and of two-dimensional ocean wave spectra measurement are derived from the synthetic aperture radar mode. Author (ESA)

STUDY OF A RADAR ALTIMETER FOR THE EUROPEAN REMOTE SENSING PROGRAM. VOLUME 1: EXECUTIVE SUMMARY
A. Thompson and S. J. Alexander Jun. 1981 90 p Prepared jointly with Dornier-Werke GmbH Friedrichshafen, West Germany
(Contract ESA-4427/80/F-DD(SC))
(Spar-R.1090-Issue-A; ESA-CR(P)-1502) Avail: NTIS HC A05/MF A01

Sea scattering, radar parameter selection, performance characteristics such as acquisition and tracking, and operation in rain and over land were studied in order to design a radar altimeter. Tradeoffs covering the antenna, microwave subsystem, signal processor, and altimeter controller were performed. A configuration consisting of a full deramp radar pulse compression system operating at 13.7 GHz, with a maximum likelihood estimator tracker/processor is chosen. The design meets the specification in all respects, has better performance and less weight than the Seasat altimeter, yet is fully redundant. A costed development plan completely compatible with the ERS 1 schedule is outlined. Author (ESA)

DEVELOPMENT OF A BREADBOARD COOLER FOR INFRARED REMOTE SENSING PAYLOADS, PHASE 1 Final Report
E. G. Overbosch and N. P. Enderberg Paris ESA 14 Mar.

1981 153 p
(Contract ESTEC-4484/80/NL-PP(SC))
(FOK-RV-R-81-064; ESA-CR(P)-1506) Avail: NTIS HC A08/MF A01

A multistage passive cryogenic cooler was designed for the ocean color monitor (OCM) for ERS 1. Mathematical models of thermal and mechanical behavior support the concept of a radiator located in a parabolic reflector. Technologically critical areas of the design are compared with corresponding components in the optical imaging instrument, i.e. the glass reinforced thermal insulation/suspension straps, the suspension system integrated in the cooler, the parabolic reflector, and the cold stage radiator. A set of critical components suitable for both coolers is feasible. A three stage breadboard cooler is described. The multilayer insulation (MLI) radiator cools the MLI support, the first stage cools the paraboloid. The second stage is the cold stage radiating its heat loads by the open faced honeycomb radiator to space. The suspension of the first stage consists of dummies representing the thermal behavior of the corresponding OCM straps. The outside mounting ring is sufficiently stiff to support the cooler, and is used for mounting the cooler in the test chamber. Author (ESA)

DATA RATE REDUCTION. IMPACT OF IMAGE DATA COMPRESSION ON END TO END DATA MANAGEMENT OF A MULTISPECTRAL PAYLOAD

G. E. Lowitz, J. M. Vivier, J. P. Camus, and B. H. Roy Paris ESA Jul. 1980 51 p refs
(Contract ESTEC-3749/78)
(Rept-44/130; ESA-CR(P)-1507) Avail: NTIS HC A04/MF A01

Satellite onboard data compression by clustering in the raw channels with a variable number of classes is discussed. The effect on the overall image chain is illustrated by land applications satellite system (LASS) data and LANDSAT ground stations processing and dissemination systems. Image quality, processing costs, software and hardware are considered. Onboard mechanization is efficient and the compression principles benefit user interpretation routines such as classification. Compressed data can be processed efficiently, yielding cost savings on the order of 100 to 1. A 512 X 512 pixel frame, including preprocessing, is treated in 5 min. The compressed imagery can be recognized, zones can be located and cloud cover can be assessed, making high quality quick looks possible. Author (ESA)

CASE STUDIES OF NATIONAL HYDROLOGICAL DATA BANKS (PLANNING, DEVELOPMENT AND ORGANIZATION)

1981 147 p refs
(WMO-576; OHR-17; ISBN-92-63-10576-6) Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 10

Contributions from 14 countries on the planning, development, and organization of national hydrological data banks are included, with information on developing data archives for specific elements and on the broader concept of coordinated data banks. For each country the type of data bank (centralized, coordinated, or limited) and the status of hydrological data collection systems are indicated. Contributions to the operation of the data bank and the role and requirements of users are listed. The structure and organization of the data bank, the nature and composition of the hydrological information received, and data processing and quality control procedures are described. Case studies are presented for Australia, Brazil, Canada, Columbia, Finland, France, the Federal Republic of Germany, Morocco, New Zealand, Norway, Portland, Switzerland, the United Kingdom, and the United States of America. ON THE ACCURACY OF THERMAL INERTIA MAPPING BY INFRARED IMAGERY

Sune R. J. Axelsson 1981 20 p refs
(SAAB-REPR-AE-10) Avail: NTIS HC A02/MF A01

The influence of different interfering parameters on the estimation of the thermal inertia of the ground from the diurnal variations of the surface temperature, using thermal infrared and albedo measuring imagery, was investigated. The strong influence of these parameters degrades the accuracy of the analysis and makes the interpretation complex. This influence was studied, starting from an improved analytic model of the surface temperature of a periodically heated ground surface. The errors in albedo and atmospheric heat exchange, and the limited accuracy of sensors and the model used in data processing, dominate the thermal inertia error. Further reductions of the accuracy are due to the translation of the thermal inertia map into user data like soil type, porosity and soil moisture. Upper bounds on the potential thermal inertia mapping accuracy are found by calculating the estimation error when the interfering parameters are known with specified accuracy. Author (ESA)

IMPROVED ST. CLAIR RIVER DYNAMICS FLOW MODELS AND COMPARISON ANALYSIS

J. A. Derecki and R. N. Kelly May 1981 49 p refs
(PB82-119272; NOAA-81072407; NOAA-TM-ERL-GLERL-34; GLERL-CONTRIB-260) Avail: NTIS HC A03/MF A01 CSCL 08H

The St. Clair River dynamic flow models, modified to provide better channel definition, to include additional discharge measurements for model calibration, and to incorporate wind stress effects on river flows, are described and compared for daily flow differences resulting from channel definition improvements, wind effects, time scale effects, and a combination of these factors. All the St. Clair River models are derived for the upper river channel, spanning approximately one-third of the river. The three available models can be operated on hourly or daily time scales, with and without surface wind stress effects. During the winter, ice may affect the accuracy of flow computations and model differences may exceed 15% of daily flow. GRA

WATER RESOURCES DATA FOR NEW HAMPSHIRE AND VERMONT, WATER YEAR 1980 Annual Report, 1 Oct. 1979 - 30 Sep. 1980

Jun. 1981 186 p
(PB82-110156; USGS/WRD/HD-81/073;
USGS-WDR-NH-VT-80-1) Avail: NTIS HC A09/MF A01 CSCL 08H

Water resources data for the 1980 water year for New Hampshire and Vermont are reported. Records of stage, discharge, and water quality of streams; stage and contents of lakes and reservoirs; and water levels and water quality of wells are presented. Discharge records for 77 gaging stations, stage records for 3 lakes, monthend contents for 25 lakes and reservoirs, water quality data for 4 gaging stations, and water levels for 40 observation wells are included. Also included are data for 4 crest-stage partial-record stations. Additional water data were collected at various sites, not part of the systematic data-collection program, and are published as miscellaneous measurements. A few pertinent stations (not included above) in bordering States and Province of Quebec are also included. GRA

WATER RESOURCES DATA FOR VIRGINIA, WATER YEAR 1980 Annual Water Data Report

Jun. 1981 609 p refs
(PB82-113416; USGS/WRD/HD-81-040;
USGS/WDR/VA-80-1) Avail: NTIS HC A99/MF A01 CSCL 08H

Records are presented for water discharge at 210 gaging stations, stage only at 1 gaging station, stage and contents at 10 lakes and reservoirs; water quality at 53 gaging stations and 120 wells; and water levels at 60 observation wells. Data are included for 63 crest stage partial record stations. Additional water data were collected at various sites not involved in the systematic data collection program. Discharge measurements were made at 142 coal monitoring partial record stations and at 67 low-flow partial record stations. Miscellaneous data were collected at 311 measuring sites and 186 water quality sampling sites. GRA

A MOBILE STREAM DIVERSION SYSTEM FOR HAZARDOUS MATERIALS SPILLS ISOLATION Final Report
James V. Zaccor Cincinnati EPA Sep. 1981 48 p
(Contract EPA-68-03-2458)
(PB82-109679; EPA-600/2-81-219) Avail: NTIS HC A03/MF A01 CSCL 08H

A prototype mobile system was designed and developed for quick diversion of a stream flow around a contaminated area. Spill scenarios were analyzed to stablish design criteria for a self contained, independent system that would maintain flow continuity around a region undergoing decontamination. Stock items available nationwide were used to provide easy maintenance and replaceability. The system was assembled as two independent units, mounted on trailers so that spills would be readily accessible via state or interstate highways. A quick unloading feature provides capability for air shipment to more distant locations. Once onsite, the system can be assembled and placed in operation by a crew of five in a matter of hours. Unit operation and ability to deliver a flow rate of 0.35 cu m/s a distance of 0.3 km over unprepared ground were evaluated in a shakedown test. GRA

WATER RESOURCES DATA FOR PENNSYLVANIA, WATER YEAR 1980: VOLUME 2: SUSQUEHANNA AND POTOMAC RIVER BASINS Annual Water-data Report, 1 Oct. 1979 - 30 Sep. 1980
Apr. 1981 363 p refs Prepared in cooperation with Pennsylvania Dept. of Environmental Resources
(PB82-115908; USGS/WRD/40-80/062; USGS/WDR/PA-80-2) Avail: NTIS HC A16/MF A01 CSCL 08H

Water resources data for the 1980 water year for Pennsylvania consist of records of discharge and water quality of streams; contents of lakes and reservoirs; and water levels of ground-water wells. Records for water discharge at 100 stations, contents at 13 lakes and reservoirs, water quality at 35 gaging stations, and water levels at 25 observation wells are included. Also included are data for 21 crest stage, 15 low-flow, and 129 water-quality partial-record stations. GRA

REVIEW OF THE UK TRANSPORT ENERGY OUTLOOK: AND POLICY RECOMMENDATIONS
1981 43 p refs
(EP-47; ACEC-Paper-11) Copyright. Avail: Issuing Activity; HMSO £4 + postage, PHI

Liquid fuel consumption for transport (excluding international bunkers for ships) in 1979 is analyzed and used to forecast the position at the end of the century. Car population is expected to increase by 6 million to over 20 million, but fuel saving designs mean that fuel consumption increases only slightly. Truck fuel consumption stays the same. Fuel consumption by UK airlines is expected to double. The proportion of a barrel of crude oil which is refined as transport fuel must be increased. Author (ESA)

ENERGY CONSERVATION IN THE PRODUCTION OF DOMESTIC HOT WATER
1981 23 p refs
(EP-48; ACEC-Paper-12) Copyright. Avail: Issuing Activity; HMSO £2.80 + postage, PHI

Improvements in energy efficiency in existing buildings and the construction of energy efficient buildings are discussed with emphasis on water heating. Cost effective measures proposed include fitting an 80-mm insulating jacket to the hot water storage cylinder, using time switches, fitting thermostatic control systems to boiler based central heating, and storing domestic hot water at a lower temperature. Research into the recovery of heat from waste water, the use of cold water detergents, and the use of heat pumps is urged. Author (ESA)

TIDAL POWER FROM THE SEVERN ESTUARY, VOLUME 1
1981 125 p refs Original contains color illustrations 2 Vol. (EP-46-Vol-1; ISBN-0-11-410916-8) Copyright. Avail: Issuing Activity; HMSO £9.80 + postage, PHI

Environmental, energy, and economic factors associated with building a tidal power barrage in the Bristol channel were studied. An ebb generation scheme is recommended since it minimizes the unit cost of electricity generation and has less effect on ports than flood or two way generation. The economic justification for a barrage depends on factors which are not known when the decision on whether to build is taken, e.g., the extent of nuclear generation, or the price of coal in the first third of the next century. Further study of the environmental consequences of the barrage is required. An inner barrage is recommended since the larger output of an outer barrage does not outweigh engineering, environmental and economic disadvantages. Author (ESA)

CHARACTERIZATION OF ASEC BSR 2 OHM-cm SILICON SOLAR CELLS WITH DIELECTRIC WRAPAROUND CONTACTS AS A FUNCTION OF TEMPERATURE AND INTENSITY

A. F. Whitaker and S. A. Little Dec. 1981 18 p refs
(NASA-TM-82456) Avail: NTIS HC A02/MF A01 CSCL 10A

Twenty high performance BSR 2 ohm-cm silicon solar cells manufactured by ASEC were evaluated at 1 AU conditions and at low temperature and low intensities representative of deep space. These cells showed evidence of series resistance of 1 AU conditions and approximately 50% had reduced power outputs under deep space conditions. Average efficiency of these cells was 12.4% of 1 AU conditions of 1 SC/+25 C. Author

MECHANISM AND MODELS FOR ZINC METAL MORPHOLOGY IN ALKALINE MEDIA

Charles E. May and Harold E. Kautz Dec. 1981 36 p refs
(NASA-TM-82768; E-1090) Avail: NTIS HC A03/MF A01 CSCL 10A

Based on experimental observations, a mechanism is presented to explain existence of the different morphologies of electrodeposited zinc in alkaline solution. The high current density dendrites appear to be due to more rapid growth on the nonbasal crystallographic planes than on the basal plane. The low current density moss apparently results from dissolution from the nonbasal planes at low cathodic voltages. Electrochemical models were sought which would produce such a phenomenon. The fundamental plating mechanism alone accounts only for different rates on different planes, not for zinc dissolution from a plane in the cathodic region. Fourteen models were explored; two models were in accord with the proposed mechanism. One involves rapid disproportionation of the zinc +1 species on the nonbasal planes. The other involves a redox reaction (corrosion) between the zinc-zincate and hydrogen-water systems. S.L.

PERFORMANCE AND OPERATIONAL ECONOMICS ESTIMATES FOR A COAL GASIFICATION COMBINED-CYCLE COGENERATION POWERPLANT

Joseph J. Nainiger, Raymond K. Burns, and Annie J. Easley Mar. 1982 32 p refs
(NASA-TM-82729; E-1032) Avail: NTIS HC A03/MF A01 CSCL 10B

A performance and operational economics analysis is presented for an integrated-gasifier, combined-cycle (IGCC) system to meet the steam and baseload electrical requirements. The effect of time variations in steam and electrial requirements is included. The amount and timing of electricity purchases from sales to the electric utility are determined. The resulting expenses for purchased electricity and revenues from electricity sales are estimated by using an assumed utility rate structure model. Cogeneration results for a range of potential IGCC cogeneration system sizes are compared with the fuel consumption and costs of natural gas and electricity to meet requirements without cogeneration. The results indicate that an IGCC cogeneration system could save about 10 percent of the total fuel energy presently required to supply steam and electrical requirements without cogeneration. Also for the assumed future fuel and electricity prices, an annual operating cost savings of 21 percent to 26 percent could be achieved with such a cogeneration system. An analysis of the effects of electricity price, fuel price, and system availability indicates that the IGCC cogeneration system has a good potential for economical operation over a wide range in these assumptions. R.J.F.

OPERATIONAL PERFORMANCE OF THE PHOTOVOLTAIC-POWERED GRAIN MILL AND WATER PUMP AT TANGAYE, UPPER VOLTA Summary Report, Mar. 1979 - Apr. 1981

James E. Martz, Anthony F. Ratajczak, and Richard DeLombard Feb. 1982 59 p refs Sponsored in part by Bureau for Development Support
(NASA-TM-82767; E-1089) Avail: NTIS HC A04/MF A01 CSCL 10B

The first two years of operation of a stand alone photovoltaic (PV) power system for the village of Tangaye, Upper Volta in West Africa are described. The purpose of the experiment was to demonstrate that PV systems could provide reliable electrical power for multiple use applications in remote areas where local technical expertise is limited. The 1.8 kW (peak) power system supplies 120-V (d.c.) electrical power to operate a grain mill, a water pump, and mill building lights for the village. The system was initially sized to pump a part of the village water requirements from an existing improved well, and to meet a portion of the village grain grinding requirements. The data, observations, experiences, and conclusions developed during the first two years of operation are discussed. Reports of tests of the mills used in the project are included. B.W.

THE GEOTHERMAL PROBABILISTIC COST MODEL WITH AN APPLICATION TO A GEOTHERMAL RESERVOIR AT HEBER, CALIFORNIA

Lowell H. Orren, G. Michael Ziman, and Sue Campbell Jones 15 Dec. 1981 70 p refs
(Contracts NAS7-100; DE-AI03-79ET-37116)
(NASA-CR-168641; DOE/ET-37116/1; JPL-Pub-81-117) Avail: NTIS HC A04/MF A01 CSCL 10A

A financial accounting model that incorporates physical and institutional uncertainties was developed for geothermal projects. Among the uncertainties it can handle are well depth, flow rate, fluid temperature, and permit and construction times. The outputs of the model are cumulative probability distributions of financial measures such as capital cost, levelized cost, and profit. These outputs are well suited for use in an investment decision incorporating risk. The model has the powerful feature that conditional probability distribution can be used to account for correlations among any of the input variables. The model has been applied to a geothermal reservoir at Heber, California, for a 45-MW binary electric plant. Under the assumptions made, the reservoir appears to be economically viable. Author

A REVIEW OF THE SALT-GRADIENT SOLAR POND TECHNOLOGY

E. I. H. Lin 30 Jan. 1982 60 p refs
(Contracts NAS7-100; DE-AI03-81SF-11552)
(NASA-CR-168635; JPL-Pub-81-116; JPL-5107-3; DOE/SF-11552/1) Avail: NTIS HC A04/MF A01 CSCL 10A

The state of the salt-gradient solar pond technology is reviewed. Highlights of findings and experiences from existing ponds to date are presented, and the behavior, energy yield, operational features, and economics of solar ponds are examined. It is concluded that salt-gradient solar ponds represent a technically feasible, environmentally benign, and economically attractive energy producing alternative. In order to bring this emerging technology to maturity, however, much research and development effort remains to be undertaken. Specific R&D areas requiring the attention and action of technical workers and decision-makers are discussed, both from the perspectives of smaller, thermally-oriented ponds and larger, electricity generating ponds. NEW BIOREACTORS FOR AEROBIC PROCESSES

K. Schuegerl 1982 44 p refs Transl. into ENGLISH from Chem. Ing. Tech., (West Germany), v. 52, no. 12, 1980 p 951-905 Presented at Dechema Ann. Meeting, Frankfurt am Main, 18 Jun. 1980
(ISSN-0077-5606; NRC/CNR-TT-2005) Avail: NTIS HC A03/MF A01

The best known bioreactors are classified into three types and described according to the method of introducing energy. All these reactors consist of few constructional units, of which only the dispersion systems will be considered. In all the dispersion units, gas dispersion in the range of interest in practice is by a turbulent mechanism. Thus the dispersion units can be compared directly with one another. It is shown that the efficiency of the dispersion units depends upon the properties of the turbulence generated thereby. B.W.

[EVALUATION OF CRYSTAL OSCILLATORS AND FREQUENCY DIVIDERS FOR HIGH TEMPERATURE OPERATION] Final Report

1 Jun. 1981 18 p refs Prepared for JPL
(NASA Order IC-727859)
(NASA-CR-168561; JPL-9950-554) Avail: NTIS HC A02/MF A01 CSCL 10A

Active and passive components of crystal oscillators and frequency dividers were tested to determine their performance at temperatures from 300 C to 350 C. The properties of GaAs JFETs were determined and their performance compared with that of silicon devices. Techniques for constructing breadboard circuits were assessed for operation in this temperature range. A Pierce oscillator and a multivibrator (Colorado crystal) oscillator were constructed and tested. Device failures are discussed. A.R.H.

A 'worksheet' approach is used in that the user may work through an example passive solar design by following the text in the report. Included are tables for heating degree days, solar heat gains, building R factors, orientation factors, roof overhang designs, etc. Performance is calculated on a monthly basis. The reports are presented for five geographical regions with content and text format similar, differing only in the appropriate regional factors. This volume gives appropriate designs for Navy installations in warm California climates. GRA

DESIGN OF MOBILE PHOTOVOLTAIC POWER SYSTEMS: 0.5-3kW Final Report

Roy D. Gibson 1 Oct. 1981 133 p
(Contract DAAK70-80-C-0147)
(AD-A108889) Avail: NTIS HC A07/MF A01 CSCL 10/2

This contract effort can be summarized by four technical tasks: Task 1 - Analysis of Engine-Generator Inventory and Use for a less than 5 kW system; Task 2 Parametric analysis of the Transportability of Photovoltaic System, i.e., the range of size and weight of transportable trailers and the associated PV generator size; Task 3 - Preliminary Cost Estimates for Photovoltaic Systems, and Task 4 - Preliminary Photovoltaic System Design. This report presents the results of Task 1 for the engine generator set planned inventory and characteristics. Task 1 also contained candidate photovoltaic system configurations which would be compared with the engine-generator characteristics identified in Task 1. A parametric study was made of sizing trade-offs between photovoltaic arrays and battery storage capacities which were capable of at least meeting the identified engine-generator characteristics and on structural designs for the photovoltaic array and storage battery for the two trailer configurations. The preliminary cost estimate support in Task 3 involved life cycle cost analysis for the system sizes studied in Task 1. The Task 4 preliminary system design support consisted of examining the results of Tasks 1, 2 and 3 and determining characteristics of transportable photovoltaic systems. GRA

DESIGN AND FABRICATION OF CONTAINMENT RINGS FOR USE IN TESTS OF SIX PROTOTYPE FLYWHEEL ROTORS

Anthony P. Coppa Feb. 1981 106 p refs
(DE81-030357; UCRL-15370) Avail: NTIS HC A06/MF A01

The design of containment rings for use in the prototype flywheel rotor test was examined. Rotor dynamics and failure characteristics were measured. Six designs for prototypes for containment rings are identified. The all metallic and kevlar overwrapped metallic linear containment designs are compared. E.A.K.

DEVELOPMENT OF SIMPLE SOLAR COLLECTORS Final Report

Wilmar Fuhse, Karl Jaeger, and Hans-Peter Kleinemeier Bonn Bundesministerium fuer Forschung und Technologie Nov. 1981 314 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-174; ISSN-0340-7608) Avail: NTIS HC A14/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 47,90

The feasibility of simplifying solar energy systems, and the production techniques of their components, for usage in developing countries was investigated. The emphasis in those countries should not be so much on efficiency. Simplicity of construction and minimal reliance on imported components should be emphasized rather than efficiency because of favorable radiation conditions and high ambient temperatures. Several systems were tested consisting only of collectors, heat storage and a simple flow control. The construction of the collectors was reviewed for materials, heat vector, efficiency, construction and assembly techniques, and the material resources and climate of individual countries. As a result, a prototype collector was built and tested, satisfying the requirements. Author (ESA)

PRODUCTION TECHNOLOGY OF AN OXYGEN ION CONDUCTIVE CERAMIC FOR HIGH TEMPERATURE FUEL CELLS AND HIGH TEMPERATURE WATER ELECTROLYSIS Final Report
Guenther Heimke, Helmut Mayer, and Arno Reckziegel Bonn Bundesministerium fuer Forschung und Technologie Oct. 1981 104 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-180; ISSN-0340-7608) Avail: NTIS HC A06/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 21,85

The cheap mass production of stabilized zirconia ceramic bodies with thin walls, suitable for high temperature fuel cell or water electrolysis applications is discussed. Chemical and thermal corrosion effects were laboratory tested. Such bodies sintered from YZO3-YbZO3 and YZO3 doped zirconia with high density, good electrical conductivity, small grain size, and 5 mm wall thickness can be produced by conventional methods at temperatures > 1700 C. Extremely fine grained structure ceramics of almost theoretical density can be produced at 1600 C using coprecipitated powders. These powders are, however, too expensive for mass production. EXAMINATION OF HEAT STORAGE IN SOIL Final Report, Dec. 1980
Fredy Jaeger, Juergen Reichert, and Hermann Herz Bonn Bundesministerium fuer Forschung und Technologie Nov. 1981 154 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-200; ISSN-0340-7608) Avail: NTIS HC A08/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 31,90

The performance of a heat storage system, based on soil storage by spherical temperature stratification, was assessed and compared to conventional hot water systems for usage in single family houses heated by solar energy. A heat conduction code was used in combination with a simulation model for solar room heating systems in order to evaluate the dependence of storage performance on soil materials, heat transfer parameters, and storage size. Results show that the initially suggested storage scheme should be supplemented with insulation in order to perform somewhat better than hot water storage. A more definite assessment requires further studies on transmission losses, heat capacity enlargement, and mechanical stability and aging properties of insulation materials. Author (ESA)

A PITCH CONTROL SYSTEM FOR LARGE SCALE WIND TURBINES
Brad S. Liebst 12 Jan. 1981 146 p refs Sponsored in cooperation with Aeronautical Research Foundation Prepared in cooperation with MIT
(Contract NE-5061-014)
(FFA-TN-HU-2262-Pt-6) Avail: NTIS HC A07/MF A01

A pitching blade segment control system, to alleviate problems associated with wind shear, tower shadow, and gravity, like shortened lifetime and noise generation was designed. The classical linear quadratic Gaussian optimal regulator approach is used in the control formulation. An aerodynamic analysis, incorporating wind shear and tower shadow, is performed. An equivalent hinge model describes the turbine structural dynamics. Pitch, flap and lag blade degrees of freedom and shaft torsion and generator dynamics are included. It is shown that the system reduces vibration and noise, provides a cleaner power signal, improves gust response, and increases annual energy output. Author (ESA)

ENERGY PROPERTIES IN URBAN BUILDING STOCK
Veikko Kanerva and Markku Lappalainen 1981 35 p refs Sponsored by Ministry of Trade and Industry and National Housing Board
(VTT-RR-1/81; ISBN-951-38-1236-7; ISSN-0358-5069) Avail: NTIS HC A03/MF A01

Buildings in urban areas were examined for energy consumption and energy conservation potential. Oil is 75% of heating fuel. Over 30% of the overall building volume heated is served by district or regional heating. The annual consumption of heating energy in buildings fluctuates between 30 and 140 kW hr/cu m. Function, size, and maintenance patterns affect energy consumption. Interior temperature levels and ventilation account for much of the dispersion in consumption values. Older buildings consume less energy per unit volume than those erected after 1960. Buildings constructed since 1975 consume over 10% less energy than the average. It is concluded that it is possible to reduce energy consumption within cost-effective limits in urban building stock by one third during the 1980's. Author (ESA)

THE TECHNIQUES, MAGNITUDES AND OPPORTUNITIES FOR DEVELOPMENT OF ENERGY STORAGE (UK)
F. M. Russell 1981 13 p
(PB82-120858; RL-80-087) Copyright. Avail: NTIS HC A02/MF A01 CSCL 10C

The development of energy storage techniques is discussed.

Opportunities for development of existing and new forms of energy storage are examined. The increase in energy transformation with increasing industrialization the need for efficient energy storage and recovery also grows. The large scale transformation of chemical energy stored in fossil fuels emphasizes the need for energy conversion. Techniques of energy storage, applications, and possible research and development areas are also discussed. GRA

DETRITAL EXCHANGE PROCESSES OF A DELAWARE SALT MARSH Ph.D. Thesis
Charles True Roman 1981 156 p
Avail: Univ. Microfilms Order No. 8128345

Quantitative and qualitative aspects of detrital exchange between the 190-hectare Canary Creek salt marsh and lower Delaware Bay were studied on a seasonal basis. An accurate assessment of water volume flux was obtained from detailed hydrographic measurements of cross-sectional velocity patterns. Hourly field collections over three consecutive tidal cycles revealed ebbtide concentrations of particulate organic carbon and nitrogen to be higher than flood during all seasons, except during winter icing conditions. Mean ebbtide dissolved organic carbon concentrations were greater than floodtide during all seasons. An equivalent of 16% of the aboveground primary production of this Spartina-dominated system was exported as particulate organic carbon, with 31% flushed to coastal waters as dissolved organic carbon. Meteorological events are undoubtedly dominant forces controlling marsh/estuarine material exchange processes. Dissert. Abstr.

THE EFFECTS OF SULFUR DIOXIDE AND ACID PRECIPITATION ON DECOMPOSITION AND NUTRIENT CYCLING PROCESSES Ph.D. Thesis
Marlin Ralph Gottschalk 1981 112 p refs
Avail: Univ. Microfilms Order No. 8129855

Terrestrial microcosms (intact soil cores) from an oak-hickory forest on the Piedmont Plateau in Georgia were used to ascertain the impact of sulfur dioxide and acid precipitation on decomposition and nutrient cycling processes. Changes in carbon dioxide efflux and soil leachate nutrient concentrations were measured to detect systems level functional responses to the experimental stresses. Nutrient export increased significantly over a 40 week calibration period because of increased decomposition and nitrification and subsequent soil acidification. Soil leachate concentrations of Ca, Mg, K and NO_3-N increased asymptotically from 1.4, 2.0, 3.9 and 0.3 mu g/ml (ppm), respectively, to 53.1, 33.5, 26.0 and 110.7 ppm after about 32 weeks. Ammonium N concentrations peaked at 5.0 ppm at week 18 and then declined significantly. Phosphate P concentrations remained relatively constant at 0.020 to 0.040 ppm. Leachate pH decreased from 5.0 to 4.0. Dissert. Abstr.

LIFE ON A WARMER EARTH: POSSIBLE CLIMATIC CONSEQUENCES OF MAN MADE GLOBAL WARMING
H. Flohn 1981 80 p refs
(ER-3) Copyright. Avail: Issuing Activity

The interaction between energy and climate is explored, including the impact on global climate of three main energy sources: solar, nuclear and fossil fuels. The global warming problem is introduced. Comprehensive analogies with warmer times are made. From the best models available, the future global average surface temperature is found and modified, describing the global warming effects caused by greenhouse effect caused by gases other than carbon dioxide, released into the atmosphere by man, i.e. nitrous oxide, methane, ammonia, and the chlorofluoromethanes. Paleoclimatic scenarios are reviewed, showing possible effects of global warming. An 800 to 1100 ppm CO_2 concentration causes irreversible Arctic melting, leading to displacement of present climatic zones by 400 to 800 km. Author (ESA)

THREE DIMENSIONAL NUMERICAL MODEL FOR ESTIMATION OF POLLUTANT CONCENTRATION M.S. Thesis - 12 Dec. 1980 [MODELO NUMERICO TRIDIMENSIONAL PARA ESTIMATIVA DE CONCENTRACAO DE POLUENTES]
Nelson Arai Aug. 1981 76 p refs In PORTUGUESE; ENGLISH summary
(INPE-2193-TDL/060) Avail: NTIS HC A05/MF A01

The pollution concentration in a region with wind velocities less than 1 m/s was studied by a three dimensional numerical dispersion model. The model calculates the three dimensional concentration distribution which results from emission of pollutant from a continuous source. The Gaussian Plume formulation is used to calculate wind velocities greater than 1 m/s. It is suggested that these models may be used as a first approximation to estimate pollutant concentration. PRELIMINARY RESULTS OF A STUDY OF MAPPING THERMAL DISCHARGE IN THE OCEAN, USING REMOTE SENSING DATA
Merritt Raymond Stevenson, Carlos Alberto Steffen, and Hector Manual Inostroza Villagra Sep. 1981 23 p refs In PORTUGUESE; ENGLISH summary Presented at 33d Ann. Meeting of SBPC, Salvador, 8-15 Jul. 1981
(INPE-2229-PRE/021) Avail: NTIS HC A02/MF A01

The spatial and temporal variations of the sea surface temperature, utilizing data obtained from sea surface, aircraft and satellite platforms were studied. The objective of the study is the evaluation and mapping of small scale variations in the sea surface temperature, caused by the thermal discharge from a nuclear power plant at Angra dos Reis, Brazil. Evaluation of data from ANGRA 01, the first experiment made on December 19, 1980, showed the surface temperature to be quite isothermal. Temperature from the aircraft and satellite radiometers were about 0.6 C and 5.0 C cooler, respectively, than the temperatures measured from the boat. These thermal offsets are readily accounted for by differences in emissivities of the sea surface and the intervening water vapor in the lower atmosphere. Author

BINARY MOSAICS AND POINT QUADRAT SAMPLING IN ECOLOGY M.S. Thesis
Cajo J. F. terBraak Sep. 1980 108 p refs
(A-80-ST-96-37) Avail: NTIS HC A06/MF A01

Point quadrat sampling, a method for estimating the proportional cover of a plant species over a planar region whereby the presence or absence of the species is recorded at each of N samples points is discussed. If n is the number of points at which the species is present, $p = n/N$ is unbiased for p. Expressions for the variance of circumflex p are given for a random sample of sample points independently and uniformly distributed over a region, a systematic sample of points in a rectangular lattice covering the region, and a frame sample of small randomly located frames, each with m points regularly spaced along a line or in a square lattice. The efficiency of systematic sampling and frame sampling with respect to random sampling is evaluated for two classes of underlying mosaic processes. A map showing the incidence of heather and the locations of pines on a 10m x 20m area in Central Sweden is analyzed to test for association between pine and heather. N.W.

EFFECTS OF REPETITION RATE AND IMPULSIVENESS OF SIMULATED HELICOPTER ROTOR NOISE ON ANNOYANCE

Clemans A. Powell and David A. McCurdy Feb. 1982 59 p refs

(NASA-TP-1969; L-14936) Avail: NTIS HC A04/MF A01 CSCL 20A

Annoyance judgements were obtained for computer generated stimuli simulative of helicopter impulsive rotor noise to investigate effects of repetition rate and impulsiveness. Each of the 82 different stimuli was judged at 3 sound pressure levels by 48 subjects. Impulse repetition rates covered a range from 10 Hz to 115 Hz; crest factors covered a range from 3.2 dB to 19.3 dB. Increases in annoyance with increases in repetition rate were found which were not predicted by common loudness or annoyance metrics and which were independent of noise level. The ability to predict effects of impulsiveness varied between the noise metrics and was found to be dependent on noise level. The ability to predict the effects of impulsiveness was not generally improved by any of several proposed impulsiveness corrections. Instead, the effects of impulsiveness were found to be systematically related to the frequency content of the stimuli. A modified frequency weighting was developed which offers improved annoyance prediction. Author

VEGETATIVE EROSION CONTROL STUDIES TENNESSEE-TOMBIGBEE WATERWAY Final Report, 3 Aug. 1976 - 30 Oct. 1980

Jeffrey V. Krans, Clifford Trammel, Richard Harrod, and Veronica Henning Jan. 1981 139 p

(Contract DACW62-76-C-0216)

(AD-A108318) Avail: NTIS HC A07/MF A01 CSCL 08/13

Vegetative erosion control studies of establishment, overseeding, and refertilization were conducted at two sites in Tishomingo CO., MS (Yellow Creek Port Site and Tennessee-Tombigbee Waterway Site) that were most representative of the Tenn-Tom Waterway slopes and spoil areas from August, 1976 thru October 1980. Primary objectives were focused on species selection, seeding rates, mulch evaluations, post-establishment fertilization and overseeding. Species shown to be well adaptive to site and soil conditions are given. Comparison of seeding rates, mixtures, and seed distribution methods were made. Overseeding was also performed. Cultivation practices of burning, discing, and clod-busting were evaluated with clod-busting being the most effective method. Regrowth of the established stand following overseeding and plant response to nitrogen fertilization were also evaluated. GRA

PRELIMINARY STUDY ON THE SUPPLY OF INDUSTRIAL WATER BY ADVANCED TREATMENT OF WASTE WATER DISCHARGED FROM A SEWAGE TREATMENT PLANT Final Report

Dietmar Wallisch Bonn Bundesministerium fuer Forschung und Technologie Nov. 1981 81 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie

(BMFT-FB-T-81-205; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 15,95

The reuse of waste water in closed circuit as industrial water after centralized treatment, but without passage through the soil, was studied for application in a newly developed industrial area which includes a sewage treatment plant. The quality of the water discharged from the sewage plant and the factors influencing it the requirements for industrial water and the economics of the processing were studied. Results show that, although the waste waters allow further cleaning, it is impossible to fix standards for industrial waters. In order to prove economic feasibility, a test on a semi-industrial scale is planned. Author (ESA)

SMALL SCALE RECLAMATION/DISPOSAL OF TOXIC PORCELAIN ENAMELING WASTE SLUDGES Final Report

Karl G. Voelkel Feb. 1981 69 p refs

(Grant NSF ISP-80-09922)

(PB82-101593; NSF/ISP-81013) Avail: NTIS HC A04/MF A01 CSCL 13B

The technical, economic, and legal feasibility of various onsite methods for reclaiming or disposing of wastes containing hazardous metals generated in the manufacture of porcelain enameled (PE) aluminum ware is determined. Results indicate that (1) PE waste stream pretreatment with polyelectrolyte polymers is advantageous in generating both sludges and clear supernatants that conform to current regulatory standards for normal disposal and subsequent treatment as nonhazardous wastes; and (2) commercial encapsulation methods are not economical for many PE ball room mill waste streams. Acid extraction of metals from sludges with subsequent metal salt recovery by ion exchange/distillation appears economically feasible for dry overspray sludges from the spray booth. Author (GRA)

THREE-DIMENSIONAL MIGRATION VELOCITY ANALYSIS IN THE SPACE-FREQUENCY DOMAIN Ph.D. Thesis
Thomas Richard Morgan 1981 133 p
Avail: Univ. Microfilms Order No. 8129730

Through the use of general techniques of image formation, two algorithms that yield both optimum velocity for migration, and strike and dip parameters is presented. The formation and evaluation of acoustic images is of prime importance to the methods employed. The particular images of interest are the source image for field gathers and the common reflection 'point' for common midpoint gathers. Through the use of two forms of the Rayleigh Sommerfield diffraction formula, acoustic images for these types of recordings are formed for a range of parameters (velocity, dip, and strike), the image of highest intensity corresponding to the 'best fit' set of trial parameters. Both algorithms operate in the temporal frequency domain and present new methods for frequency domain velocity and dip analysis and direct extraction or strike information. Dissert. Abstr.

ONE AND TWO DIMENSIONAL PHOTOCHEMICAL MODELING OF THE TWO CHEMICAL INTERACTIONS IN THE MIDDLE ATMOSPHERE (0-120 km) Ph.D. Thesis
Susan Solomon 1981 276 p
Avail: Univ. Microfilms Order No. 8200281

Photochemical modeling studies of the middle atmosphere are described, with particular emphasis on the photochemistry of the nitrogen oxides, their production in the lower thermosphere, and possible transport to the stratosphere. A one-dimensional photochemical model which treated the troposphere and stratosphere was extended to include the mesosphere and lower thermosphere. This model was used to study the ion and neutral chemistry of charged particle precipitation events. The production of NO and OH by such events and their effects on atmospheric ozone in the stratosphere and mesosphere are described. A two-dimensional model was also extended to treat the lower thermosphere and mesosphere, as well as the stratosphere and troposphere. The effect of this large additional source of stratospheric NO from upper atmospheric phenomena on both stratospheric ozone and NO was found to be substantial using presently accepted photochemistry. STRATOSPHERIC OZONE CONCENTRATION MEASUREMENTS AT SUNRISE AND AT SUNSET
P. Aimedieu 18 Mar. 1981 8 p refs Transl. into ENGLISH from Acad. of Sci., C.R., (Paris) no. 288, Ser. B p 89-92
(BLL-Trans-1499-(9022.552)) Avail: British Library Lending Div., Boston Spa, Engl.

In situ ozone measurements were taken at dawn and at dusk with a stratospheric ozonometer using gas phase chemiluminescence. Ozone is constant at the 19 and 5 mb (26 and 36 km) levels. At 2.5 mb (42 km) there is a rapid drop of about 5% at sunrise. In situ investigation of turbulent stratospheric transport

with the aid of the ozonometer employs Kolmogorov's theory, supposing, in particular, that the ozone concentration is locally stationary on the time-scale of the measurement. Evidence is provided that supports passive tracer for the low stratosphere on the time-scale of one day. It shows, however, that in the production regions rapid fluctuations are observed at sunrise.

GEOPHYSICAL EFFECTS ON THE LENGTH OF THE SIDERAL DAY
W. Rudloff 18 Dec. 1980 17 p refs Transl. into ENGLISH from Deut. Hydrogr. Z. (West Germany), v. 16, 1963 p 76-85
(BLL-Trans-1489-(9022.552)) Avail: British Library Lending Div., Boston Spa, Engl.

The monthly variation of the length of the day dl/dt = L was computed using the deviation of the length of the day L. The shearing forces, the atmospheric forces acting on the globe, solar radiation, the tropical atmospheric circulation, the sub-polar westerlies in the Southern Hemisphere, and the turning force of the roaring forhers are considered.

SOME ASPECTS OF THE SOLAR RADIATION INCIDENT AT THE TOP OF THE ATMOSPHERES OF MERCURY AND VENUS
E. vanHemelrijck and J. Vercheval 1981 35 p refs Submitted for publication
(Aeronomica-Acta-A-236-1981) Avail: Issuing Activity

A formalism was developed for the calculation of the insolation on the planets Mercury and Venus neglecting any atmospheric absorption. For Mercury, the instantaneous insolation curves are repeated in a two-tropical year cycle, the distribution of the solar radiation being perfectly symmetric between both hemispheres. In addition to latitudinal variations, a longitudinal effect expessed by different instantaneous insolation distributions during the course of time is observed; on the equator, the relative diurnal insolation variability may attain a factor of 3. The small obliquity of Venus results in a nearly symmetric solar radiation distribution with respect to the equator except at the poles where an important seasonal effect is found. No longitudinal dependence exists. The insolation curves are repeated in a nearly half year cycle.

THEORY OF THE AURORAL MAGNETOSPHERE
Michael Schulz, U. T. Chiu, and J. M. Cornwall 1981 18 p refs Presented at Auroral Workshop, Oulu, Finland, 17-20 Aug. 1980 Submitted for publication Co-sponsored by NSF and Belgian National Foundation for Scientific Research
(Contract NASW-3434)
(Aeronomica-Acta-A-237-1981) Avail: Issuing Activity

The boundary layer just inside the magnetospheric surface, which consists of magnetopause and neutral sheet, forms the auroral oval which is a region of reversal for the meridional component of the magnetospheric convection electric field. The parallel electric field produces upgoing ion beams and precipitating electron beams in the afternoon-evening sector of local time, and accounts for the polarity of Region 1 currents as a function of local time. Region 2 currents result from the need to conserve current despite the diminution of ionospheric electric field with decreasing latitude. The strength of the parallel electric field, and consequently of all related auroral phenomena, depends on the reconnection efficiency with which the interplanetary (solar wind) electric field penetrates into the magnetosphere.

SOLAR IRRADIANCE BETWEEN 120 AND 400 mm AND ITS VARIATIONS
Paul C. Simon 1981 41 p refs Presented at 14th ESLAB Symp., Scheveningen, Netherlands, 16-19 Sep. 1980 Submitted for publication
(Aeronomica-Acta-A-238-1981) Avail: Issuing Activity

The solar ultraviolet irradiance measurements in the wavelength range from 120 to 140 mm were compared. It is shown that important discrepancies exist between the irradiance values deduced from the most recent observations. The possible variations of the solar ultraviolet irradiance with the 27 day rotation period of the Sun and with the 11 year activity cycle are presented and discussed on the basis of the available irradiation fluxes obtained during the rising phase of solar cycle 21. It is found that the spectral features of both kinds of variation are related to the solar atmospheric layer from which the corresponding radiation is emitted.

IONOSPHERIC IRREGULARITIES IN LOW LATITUDES OF THE AMERICAN SECTOR Ph.D. Thesis
Yukitaka Nakamura Oct. 1981 124 p refs In PORTUGUESE; ENGLISH summary
(INPE-2243-TDL/065) Avail: NTIS HC A06/MF A01

The atomic oxygen airglow emission at the wavelength of 6300 A observed at Cachoeira Paulista with frequently occurring perturbations intensity which propagate from north to south and from west to east was analyzed. Irregularities originated in the ionospheric F region and occur essentially during the premidnight period. Perturbations occur frequently during spring and summer and are rare during winter and fall. The disturbances are correlated with range type spread F detected over Cachoeira Paulista, and have characteristics similar to equatorial ionospheric plasma bubbles. The evolution of the bubble as a function of the electron density profile and as a function of the amplitude of the initial density perturbation was studied. The bubble is assumed to be aligned with the earth magnetic field and extending from higher altitudes at the equatorial region down to the arbitrary height of 150 km. Airglow calculation show that as the bubble goes up, the disturbances in the airglow intensity propagate from north to south.

ASSOCIATION BETWEEN IRREGULARITIES CAUSED IONOSPHERIC BUBBLES AND AIRGLOW PERTURBATIONS IN LOW LATITUDES IN BRAZIL [ASSOCIACAO ENTRE IRREGULARIDADES CAUSADAS POR BOLHAS IONOSFERICAS E PERTURBACOES DE LUMINESCENCIA EM BAIXAS LATITUDES NO BRAZIL]
Jose Humberto A. Sobral, M. A. Abdu, C. J. Zamlutti, and I. S. Batista Jun. 1981 10 p refs In PORTUGUESE; ENGLISH summary Presented at 33rd Ann. Meeting of SBPC, Salvador-Bahia, Brazil, 8-15 Jul. 1981
(INPE-2122-RPE/346) Avail: NTIS HC A02/MF A01

Meridional profiles of OI 6300 A nightglow emission measured using a scanning photometer over Cachoeira Paulista, a low latitude station, often show propagating patches of airglow disturbances with north to south and west to east velocity components, occurring mostly in the premidnight period. Measurements carried out during a period of 26 months since January 1978, show significant seasonal dependence in the occurrence of these disturbances, with most of the events occurring in the spring-summer months and with very rare occurrence during the winter solstice. The north to south propagation velocities lie in the range of 150 to 350 m/s. A case by case comparison of the occurrences of these airglow disturbances with simultaneous ionograms over Cachoeira Paulista show that almost the totality of these disturbances are accompasied by strong range type echoes in the ionograms and vice versa. These results therefore support our earlier contention that these types of airglow disturbances might be manifestations of the equatorial plasma bubbles.

KINETIC RESPONSE OF IONOSPHERIC IONS TO ONSET OF AURORAL ELECTRIC FIELDS
Y. T. Chiu (Aerospace Corp., El Segundo) and J. R. Kan El Segundo, Calif. Aerospace Corp. 27 Jul. 1981 38 p refs
(Contract NASw-3434)
(NASA-CR-164799; ATR-81(7951)-3) Avail: NTIS HC A03/MF A01 CSCL 04A

By examining the exact analytic solution of a kinetic model of collisional interaction of ionospheric ions with atmospheric neutrals in the Bhatnagar-Gross-Krook approximation, we show that the onset of intense auroral electric fields in the topside ionosphere can produce the following kinetic effects: (1) heat the bulk ionospheric ions to approximately 2 eV, thus driving them up to higher altitudes where they can be subjected to collisionless plasma processes; (2) produce a non-Maxwellian superthermal tail in the distribution function; and (3) cause the ion distribution function to be anisotropic with respect to the magnetic field with the perpendicular average thermal energy exceeding the parallel thermal energy. CORRECTION FOR ATMOSPHERIC EFFECTS IN SATELLITE IMAGES [CORRECAO DE EFEITOS ATMOSFERICOS EM IMAGENS DE SATELITE]

Luiz Alberto Vieira Dias, Antonio Eduardo Costa Pereira, Gilberto Camara Neto, and Juan Jose Verdesio Bentancourt Nov. 1981 11 p refs In PORTUGUESE; ENGLISH summary Presented at the 4th Natl. Congr. on Appl. and Computational Math., Rio de Janeiro, 8-11 Sep. 1981 Submitted for publication
(INPE-2281-PRE/059) Avail: NTIS HC A02/MF A01

An algorithm to minimize the atmospheric effect on satellite images is presented. The equation L = L sub i x T + L sub p is used, where L, L sub i and L sub p are, respectively, the radiances: as measured by the satellite, intrinsic of the target, and that of the path; and T is the atmospheric transmittance. In the proposed method, the image is transformed to one for standard conditions, and T and L sub p are calculated a priori on tables. This makes the algorithm very fast and user friendly. M.G.

INTEGRATED AND SPECTRAL ENERGETICS OF THE GLAS GENERAL CIRCULATION MODEL

J. Tenenbaum [1982] 51 p refs Submitted for publication
(Grant NsG-5077)
(NASA-CR-166766) Avail: NTIS HC A04/MF A01 CSCL 04A

Integrated and spectral error energetics of the GLAS General circulation model are compared with observations for periods in January 1975, 1976, and 1977. For two cases the model shows significant skill in predicting integrated energetics quantities out to two weeks, and for all three cases, the integrated monthly mean energetics show qualitative improvements over previous versions of the model in eddy kinetic energy and barotropic conversions. Fundamental difficulties remain with leakage of energy to the stratospheric level, particularly above strong initial jet streams associated in part with regions of steep terrain. The spectral error growth study represents the first comparison of general circulation model spectral energetics predictions with the corresponding observational spectra on a day by day basis. The major conclusion is that eddy kinetics energy can be correct while significant errors occur in the kinetic energy of wavenumber 3. Both the model and observations show evidence of single wavenumber dominance in eddy kinetic energy and the correlation of spectral kinetics and potential energy. Author

ASSESSMENT OF THE FIRST RADIANCES RECEIVED FROM THE VSSR ATMOSPHERIC SOUNDER (VAS) INSTRUMENT

Dennis Chesters, Louis W. Uccellini, Harry Montgomery, Anthony Mostek (Computer Sciences Corp., Silver Spring, Md.), and Wayne Robinson (Computer Sciences Corp., Silver Spring, Md.) 10 Aug. 1981 134 p refs
(NASA-TM-83827) Avail: NTIS HC A07/MF A01 CSCL 04A

The first orderly, calibrated radiances from the VAS-D instrument on the GOES-4 satellite are examined for: image quality, radiometric precision, radiation transfer verification at clear air radiosonde sites, regression retrieval accuracy, and mesoscale analysis features. Postlaunch problems involving calibration and data processing irregularities of scientific or operational significance are included. The radiances provide good visual and relative radiometric data for empiricially conditioned retrievals of mesoscale temperature and moisture fields in clear air. S.L.

INFORMATION THEORY LATERAL DENSITY DISTRIBUTION FOR EARTH INFERRED FROM GLOBAL GRAVITY FIELD

David Parry Rubincam Oct. 1981 64 p refs Submitted for publication
(NASA-TM-83825) Avail: NTIS HC A04/MF A01 CSCL 08N

Information Theory Inference, better known as the Maximum Entropy Method, was used to infer the lateral density distribution inside the Earth. The approach assumed that the Earth consists of indistinguishable Maxwell-Boltzmann particles populating infinitesimal volume elements, and followed the standard methods of statistical mechanics (maximizing the entropy function). The GEM 10B spherical harmonic gravity field coefficients, complete to degree and order 36, were used as constraints on the lateral density distribution. The spherically symmetric part of the density distribution was assumed to be known. The lateral density variation was assumed to be small compared to the spherically symmetric part. The resulting information theory density distribution for the cases of no crust removed, 30 km of compensated crust removed, and 30 km of uncompensated crust removed all gave broad density anomalies extending deep into the mantle, but with the density contrasts being the greatest towards the surface (typically + or 0.004 g cm 3 in the first two cases and + or - 0.04 g cm 3 in the third). None of the density distributions resemble classical organized convection cells. The information theory approach may have use in choosing Standard Earth Models, but, the inclusion of seismic data into the approach appears difficult. Author

GRAVITY AND GEOID ANOMALIES OF THE PHILIPPINE SEA: EVIDENCE ON THE DEPTH OF COMPENSATION FOR THE NEGATIVE RESIDUAL WATER DEPTH ANOMALY

Carl Bowin [1982] 27 p refs
(Grant NAG5-18)
(NASA-CR-168639; WHOI-4931) Avail: NTIS HC A03/MF A01 CSCL 08G

A negative free-air gravity anomaly which occurs in the central part of the Philippine Sea was examined to determine the distribution and nature of possible regional mass excesses or deficiencies. Geoid anomalies from GEOS-3 observation were positive. A negative residual geoid anomaly consistent with the area of negative free-air gravity anomalies were found. Theoretical gravity-topography and geoid-topography admittance functions indicated that high density mantle at about 60 km dept could account for the magnitudes of the gravity and residual geoid anomaly and the 1 km residual water depth anomaly in the Philippine Sea. The negative residual depth anomaly may be compensated for by excess density in the uppermost mantle, but the residual geoid and regional free-air gravity anomalies and a slow surface wave velocity structure might result from low-density warm upper mantle material lying beneath the zone of high-density uppermost mantle. From a horizontal disk approximation, the depth of the low-density warm mantle was estimated to be on the order of 200 km. M.D.K.

UPPER MANTLE HETEROGENEITY: COMPARISONS OF REGIONS SOUTH OF AUSTRALIA WITH PHILIPPINE BASIN Final Technical Report

[1982] 16 p refs
(Grant NAG5-18; NAG5-8)
(NASA-CR-168646) Avail: NTIS HC A02/MF A01 CSCL 08G

The nature of mass anomalies that occur beneath the regions of negative residual depth anomalies were identified. Residual geoid anomalies with negative residual depth anomalies are identified in the Philippine Basin (negative) and in the region south of Australia (positive and negative). In the latter region the geoid anomalies are eastward and the depth anomaly is northeast. It is suggested that the negative depth anomaly and the compensating mass excess in the uppermost mantle developed in the Eocene as the lithosphere of the west Philippine basin formed. Heating of the deeper upper mantle which causes slow surface wave velocities and negative gravity and geoid anomal-

ies may be a younger phenomenon which is still in progress.

SAM 2 MEASUREMENTS OF THE POLAR STRATOSPHERIC AEROSOL. VOLUME 2. APRIL 1979 TO OCTOBER 1979
M. Patrick McCormick, Helen M. Steele (Systems and Applied Sciences Corp., Hampton, Va.), and Patrick Hamill (Systems and Applied Sciences Corp., Hampton, Va.) Mar. 1982 78 p refs
(NASA-RP-1088-Vol-2; L-15120) Avail: NTIS HC A05/MF A01 CSCL 04A

The Stratospheric Aerosol Measurement (SAM) II sensor is abroad the Earth orbiting Nimbus 7 spacecraft proving extinction measurements of the Antarctic and Arctic stratospheric aerosol with a vertical resolution of 1 km. Representative examples and weekly averages of aerosol data and corresponding temperature profiles for the time and place of each SAM II measurement (April 29, 1979, to October 27, 1979) is presented. Contours of aerosol extinction as a function of altitude and longitude or time were plotted and weekly aerosol optical depths were calculated. Seasonal variations and variations in space (altitude and longitude) for both polar regions are easily seen. Typical values of aerosol extinction at the SAM II wavelength of 1.0 micron for the time period were 1 to 3 × 10 to the -4th power km -1 in the main stratospheric aerosol layer. Optical depths for the stratosphere were about 0.002. Polar stratospheric clouds at altitudes between the tropopause and 20 km were observed during the Antarctic winter at various times and locations. A ready-to-use format containing a representative sample of the second 6 months of data to be used in atmospheric and climatic studies is presented.

A SIMULATION STUDY TO TEST THE PREDICTION OF 1 DEG TIMES 1 DEG MEAN GRAVITY ANOMALIES USING LEAST SQUARES COLLOCATION FROM THE GRAVSAT MISSION
Dhaneshwar P. Hajela Hanscom AFB, Mass. AFGL Sep. 1981 62 p refs
(Contract F19628-79-C-0027; AF Proj. 2309)
(AD-A108867; Rept-316; SCIENTIFIC-9; AFGL-TR-81-0302)
Avail: NTIS HC A04/MF A01 CSCL 08/5

The purpose of this simulation study was to test the accuracy of prediction of mean gravity anomalies from the GRAVSAT mission, to establish the resolution achievable in terms of anomaly block size, and to draw conclusions for the data requirement for economical processing in terms of computer time. It was found that though the estimates of the formal standard deviation of the predicted 1 deg anomalies were reduced with the increase in size of the data cap, and with the increase in the density of data inside the cap, there was little improvement in the predicted value of 1 deg anomalies by least squares collocation technique. Besides, there was a large increase in the computer time required for the processing of the increased data.

INVERSION OF SPIRE NO DATA
A. S. Zachor, R. D. Sharma, R. M. Nadile, and A. T. Stair, Jr. 20 Aug. 1981 36 p refs
(Contract F19628-79-C-0139; AF Proj. 7670)
(AD-A108866; SR-2; AFGL-TR-81-0325) Avail: NTIS HC A03/MF A01 CSCL 04/1

An algorithm was developed to invert spectrally resolved Earth limb radiance profiles. It is applicable in the nonequilibrium altitude regime for species/tangent heights that correspond to the optically thin condition. It was used to infer vertical distributions of temperature and excited NO density from data measured by SPIRE (the Spectral Infrared Rocket Experiment) in the NO fundamental band near 5.3 microns. The solution for excited NO density was used to compute atmospheric radiative cooling rates for the 5.3 microns band and the de-excitation rate constant kO for the reaction NO + O yields NO + O. The results are in good agreement with previously published values.

We have developed a borehole tiltmeter capable of operating for long periods of time at tidal sensitivity, and we have developed six of these tiltmeters at two sites near Boulder, Colorado. The data from the tiltmeters are recorded using a data acquisition and control system capable of recording the data from a large number of widely spaced instruments linked to a central site by means of telephone lines or radio links. We have also written analysis software to examine the power spectra of the tilt records, to extract the tidal admittance from time series and to evaluate the coherence between different instruments as a function of frequency. We have used our tilt array to measure the amplitude and phases of the major components of the earth tides, and we have examined the time dependence of the tidal admittance. We also have some preliminary estimates of the coherence between independent instruments at periods longer than one day.

A SURVEY OF ATMOSPHERIC TURBULENCE CHARACTERISTICS
Dorothy A. Stewart 19 Aug. 1981 35 p refs
(AD-A109306; DRSMI-RR-81-6) Avail: NTIS HC A03/MF A01 CSCL 04/1

Literature on atmospheric turbulence in the planetary boundary layer, with the main emphasis on the lowest tens of meters. A table summarizes 26 references which discuss variations in intensity of turbulence. This intensity tends to be greater over rough surfaces than over smooth surfaces. Intensity of turbulence normally decreases when either altitude or atmospheric stability increases. High wind speeds are more likely to be associated with nearly neutral stability than with very stable or very unstable conditions. This report also includes a discussion of the autocorrelation function for the three components of the wind vector.

EVENT STUDY ON PRE-SUBSTORM PHASES AND THEIR RELATION TO THE ENERGY COUPLING BETWEEN SOLAR WIND AND MAGNETOSPHERE

R. J. Pellinen (Finnish Meteorological Inst.), W. Baumjohann (Muenster Univ., West Germany), W. J. Heikkila, V. A. Sergeev (Leningrad Univ.), A. G. Yahnin, G. Marklund, and A. O. Melnikov (Academy of Sciences, USSR) Nov. 1981 50 p refs Submitted for publication Co-sponsored by Deutsche Forschungsgeimschaft, and Finnish-Soviet Committee on Co-operation in Science and Technology
(Grant NSF ATM-78-3603)
(TRITA-EPP-81-04; ISSN-0348-7539) Avail: NTIS HC A03/MF A01

A sudden southward turning of the interplanetary magnetic field, immediately followed by a worldwide intensification of convection, is documented. Observations within the auroral zone and polar cap show enhanced activity ending in a localized substorm. Large fluctuations in ionospheric parameters starting before the substorm onset, and subsequent high energy particle precipitation (recorded by balloon X-ray detectors), with changes in maximum ionospheric current density and in electrojet halfwidth and total electrojet current, are resolved together with the increase in auroral brightness prior to final breakup. Observations during this trigger phase are discussed. The energy coupling function correlates with the Joule heating rate at first, but subsequently increases as the heating rate decreases. This suggests that the start of the trigger phase is internally controlled while the length of the phase and onset of the final substorm are influenced by changes in the energy coupling function. DIFFUSE AND DISCRETE OPTICAL EMISSIONS AT THE POLEWARD BORDER OF THE MORNING AURORAL OVAL

K. Lassen, C. Danielsen, and V. Singh 1981 10 p refs Presented at 4th IAGA Scientific Assembly, Edinburgh Submitted for publication
(DMI-Geophis-Papers-R-66; ISBN 87-7478-201-0) Avail: NTIS HC A02/MF A01

A meridian scanning photometer was used to supplement all sky camera observations of high latitude morning auroras. A 5 to 10 deg wide area of diffuse light is recorded at the poleward edge of the morning to noon auroral oval. Discrete auroras known as high latitude morning auroras are embedded in the veil. Discrete as well as diffuse emissions are observed on practically every clear morning, both limited by a well defined border oriented along the geomagnetic meridian between 03 and 07 corrected geomagnetic time. The ratio I 6300A/I 5577A is greater in the diffuse background than in the discrete forms. The intensity of the diffuse emission has its maximum near 75 deg, coinciding with the oval. The intensity at this latitude generally increases 1 to 2 hr before the occurrence of the high latitude veil. Author (ESA)

IONOSPHERIC IONS IN THE NEAR EARTH GEOMAGNETIC TAIL PLASMA LOBES

Stefano Orsini, Maurizio Candidi, Hans Balsiger (Bern Univ.), and Arturo Ghielmetti (Bern Univ.) May 1981 21 p refs Submitted for publication
(Grant SNSF-2.467.79)
(IPS-81-7) Avail: NTIS HC A02/MF A01

By comparing data from the plasma experiment on ISEE-2 and from the ion mass spectrometer on ISEE-1, composition and plasma properties of tailward flowing ions in the magnetotail lobes is assessed. The ions beams consist mainly of protons and singly charged oxygen, flowing roughly along magnetic field lines. It is concluded that these ions are of mainly ionospheric origin. They are observed with the same velocity due to the E x B filter action of the magnetotail. Estimates of the E sub Z electric field components in the lobes are given. Author (ESA)

KELVIN-HELMHOLTZ INSTABILITY OF THE MAGNETOPAUSE BOUNDARY: COMPARISON WITH OBSERVED FLUCTUATIONS

E. Trussoni (CNR, Turin), M. Dobrowolny, and G. Mastrantonio Sep. 1981 30 p refs
(IPS-81-12) Avail: NTIS HC A03/MF A01

Results for the wavelength of the most unstable perturbations and corresponding phase velocities are derived, using realistic profiles for the magnetopause transition, and using the parameter values deduced from the analysis of the Voyager 1 multiple magnetopause crossings. A numerical stability analysis was employed. The calculations are in reasonable agreement with the observations made by Lepping and Burlaga. This agreement considerably strengthens the idea that the fluctuations of the discontinuity surface shown by the observations are a result of a Kelvin-Helmholtz instability driven by velocity shear. BAYESIAN GEOPHYSICAL MODEL FOR SEISMIC HAZARD

H. C. Shah and Martin W. McCann, Jr. May 1981 193 p refs
(Grant NSF ENV-77-17834)
(PB82-122391; NSF/CEE-81-36) Avail: NTIS HC A09/MF A01 CSCL 08K

The development of a methodology for modeling strong ground motion for application in seismic hazard analysis is presented. It is based on an event defined according to its size and seismotectonic properties. A Bayesian model is described that incorporates the information from empirical studies as well as theoretical seismological models into the estimate of future strong ground motion. The methodology defines what information is available and compares it to that currently being used. A theoretical seimological method is selected to provide additional input on strong ground motion into the Bayesian model. It is applied to the determination of the Fourier transform of acceleration and deterministic modeling of the Imperial Valley in southern California. A sensitivity study is presented which identifies the effects of various source parameters on the predicted strong motion. GRA

STRATIGRAPHY, PETROGRAPHY AND DEPOSITIONAL HISTORY OF THE HERTHA FORMATION (UPPER PENNSYLVANIAN), MIDCONTINENT NORTH AMERICA Ph.D. Thesis

Robert Lee Ravn 1981 293 p
Avail: Univ. Microfilms Order No. 8128452

The Hertha Formation (Missourian Stage, Upper Pennsylvanian Series) of the Western Interior Basin is less regular lithologically and stratigraphically than are most overlying Pennsylvanian marine cyclothems. Three members were delineated, in ascending order: Critzer Limestone, Mound City Shale, Sniabar Limestone. Through application of a eustatic sea level fluctuation model for Hertha deposition, the Critzer Limestone was regarded as a transgressive unit, the Mount City Shale as deposited during maximum marine inundation, and the Sniabar Limestone as regressive. Extension of the transgressive-regressive depositional model to other portions of the Hertha outcrop revealed a significant miscorrelation between the Hertha and strata assigned to the underlying Pleasanton Group in extreme southern Kansas. Beds historically considered Hertha in this area consist only of the regressive Sniabar Member. Dissert. Abstr.

MODELING THE LOWEST 1 Km OF THE ATMOSPHERE

W. S. Lewellen (Aeronautical Research Associates of Princeton, Inc.) Nov. 1981 89 p refs
(AGARD-AG-267; ISBN-92-835-1407-6) Avail: NTIS HC A05/MF A01

The interdependence between the turbulent transport of mass, momentum, and energy through the lower levels of the atmosphere, and the distribution of wind, temperature, and species within this layer were reviewed. Particular emphasis is placed on models, either analytical or numerical, which have a basic theoretical foundation in turbulent transport modeling. The results of example model solutions are used to discuss such micrometeorological problems as: wind shear and turbulence around airports; the prediction of low-level clouds and fog; the dispersion of industrial pollutants; the interaction of electromagnetic radiation with turbulent fluctuations in humidity and temperature; and the evolution of organized features within the boundary layer. A COMPUTATIONAL STUDY OF THE MODIFICATION OF RAINDROP SIZE DISTRIBUTIONS IN SUBCLOUD DOWNDRAFTS Ph.D. Thesis
Robert George Borchers 1981 156 p
Avail: Univ. Microfilms Order No. 8128876

A computational study is made of the variation of steady-state raindrop-size distributions (0.004 cm < or = radius < or = 0.40 cm) in adiabatic subcloud downdrafts of constant magnitude. The cloud base drop-size distribution is assumed to be Marshall-Palmer. The microphysical processes progressively introduced are evaporation, collision-coalescence, aerodynamic and collisional breakup of drops. Collision-coalescence and breakup are treated through a stochastic model. Thermodynamic and hydrometeoric variables of temperature, relative humidity, total liquid water, rainfall rate and radar reflectivity are computed as functions of height below cloud base along with the dropsize distributions. It is found that evaporation tends to deplete, as expected, the smaller members of the droplet population. Computed raindrop-size distributions agree quite well with measured maritime raindrop spectra. Dissert. Abstr.

MAXIMUM WIND SPEEDS IN THE NORTH PACIFIC (WITH SPECIAL REFERENCE TO OWS P, N AND V)
L. V. Gorbach 3 Jun. 1981 27 p refs Transl. into ENGLISH from Vses. Nauch.-Issled. Inst. Gidromet. Inf.-Mirov. Tsent. Danny. T. Vyp. (Moscow), v. 64, 1980 p 38-53
(BLL-Trans-1495-(9022.552)) Avail: British Library Lending Div., Boston Spa, Engl.

The different methods of computing maximum wind speeds (Vg) in the North Pacific are investigated. Comparison of computed and actual values of Vg indicates that in temperature latitudes all of the methods may be used. In tropical regions Vg must be computed from annual maximum wind speeds. An analysis is presented of maximum wind speeds at the locations of weather stations. B.W.

AREA PRECIPITATION MEASUREMENT BY WEATHER RADAR: PROBLEMS AND PRACTICAL EXPERIENCES
R. Aniol and J. Riedl 29 Oct. 1981 26 p refs Transl. into ENGLISH from Met. Rundsch. (Berlin), v. 32, 1979 p 116-127
(BLL-Trans-1458-(9022.552)) Copyright. Avail: British Library Lending Div., Boston Spa, Engl.

The data collection process and factors determining the accuracy of a radar system are described. Experience with different problems in the calculation of areal precipitation intensity is discussed with the aid of examples, namely correction using surface rain gauge readings, the effect of the Z/R ratio, the height of the freezing level, attenuation losses, sampling rate and screening in hilly terrain. Examples of problems still to be solved are the elimination of ground clutter, the detection of hail, the intersection of the melting layer and instances of snowfall or mixed precipitation. Author

REGIONAL CLASSIFICATION OF THE SPECTRAL VARIANCE OF LONG EUROPEAN TEMPERATURE SERIES AND ITS APPLICATION IN A STATISTICAL FILTER MODEL FOR FORECASTING IN THE REGION NORTH OF THE ALPS
C. D. Schoenwiese 24 Jun. 1981 22 p refs Transl. into ENGLISH from Met. Rundsch. (Berlin), vol. 33, 1980 p 167-174
(BLL-Trans-1514-(9022.552)) Avail: British Library Lending Div., Boston Spa, Engl.

A total of 35 long European temperature series were analysed with reference to spectral variance T > 1a (where T = period and a = year) and classified in the range 1a < T < 10a. It is demonstrated that variance components of particular periods dominate and that individual geographical regions of Europe have typical variance spectra. Using 6 series for the region north of the Alps whose annual means are closely correlated, a statistical model is developed based on a Gaussian lowpass filter, 66 cosine band-pass filters, and the results of spectral variance analysis. This model approximates the regional annual temperature means with a Pearson correlation coefficient of r = +0.95. The corresponding extrapolation for the next few years indicates moderately increasing temperatures up to about 1981, followed by moderately decreasing temperatures. Author

STATISTICAL STUDY OF FREEZING CLOUDS IN THE GINA 2-PAP, MARCH - APRIL 1979
J. F. Gayet 24 Jun. 1981 46 p refs Transl. into ENGLISH of Rept. Sci. 27 Clermont-Ferrand Univ., France, 1980 15 p
(BLL-Trans-1511-(9022.552)) Avail: British Library Lending Div., Boston Spa, Engl.

The progress of the GINA II-PAP measurement program carried out in Spain and an account of employed methods is reported. The microphysical characteristics of cumuliform and stratiform clouds at negative temperatures, and the meteorological conditions are described. The process of formation of precipitation process in which the ice phase played an important role is examined. It is hypotesized that particles with a mean size greater than 200 micro m are composed of ice. It is concluded that the large concentrations of this type of particle is due to ice multiplication processes. E.A.K.

THE APPLICABILITY OF PRESSURE MEASUREMENTS BY RADIOSONDES TO CALCULATING THE HEIGHT
G. Adrian and N. Witte 30 Apr. 1981 24 p refs Transl. into ENGLISH from Met. Rundsch., (Berlin), no. 33, 1980 p 107-116
(BLL-Trans-1505-(9022.552)) Avail: British Library Lending Div., Boston Spa, Engl.

Application of pressure measurements by radiosondes to calculate the height of the measured profiles of temperature and humidity in the lower troposphere is considered. Measurements made by radar or theodolite are compared. Considerable deviations are shown between the heights calculated barometrically and those resulting from radar or theodolite data, especially for sondes of the older type, as well as in decoding the pressure records. Deviations found by comparisons in a qualitative as well as a quantitative manner are interpreted. It is concluded that in the analysis of pressure records of the newer radiosonde the height can be computed barometrically with an accuracy of better than 2%. E.A.K.

METHODOLOGY FOR THE USE OF (FOREIGN) SYNOPTIC MESSAGES IN THE GENERALIZATION OF CLIMATOLOGICAL INFORMATION (DERIVATION OF CLIMATIC PARAMETERS)
Z. M. Makhover, L. A. Nudelman, and A. P. Penkov 3 Jun. 1981 18 p refs Transl. into ENGLISH from Vses. Nauch-Issled. Inst. Gidromet. Inf. Mirov. Tsent. Danny. (USSR), v. 65, 1979 p 31-45
(BLL-Trans-1506-(9022.552)) Avail: British Library Lending Div., Boston Spa, Engl.

The fundamentals of the methodology applied to processing synoptic data on cloud cover, visibility, and other weather phenomena are considered. Emphasis is placed on the processing of cloud cover from observations made at Soviet meteorological stations. The frequency of total and low cloud cover, the frequency of cloud forms the height of the lower cloud boundary are determined along with the frequency of fog, mist, haze, dust or sand storms, snow-storms, thunderstorms, hail, and glazed frost. Data observations for each of four synoptic hours, for each month, and for the entire year are included. Data are presented in tabular form. J.M.S.

THE CONTROL OF THE QUALITY OF SURFACE METEOROLOGICAL INFORMATION
M. Z. Shaymardanov et al 18 Mar. 1981 33 p refs Transl. into ENGLISH from Vses. Nauch.-Issled. Inst. Gidromet. Inf. Mirov. Tsent. Danny. (USSR), v. 67, 1980 p 30-45
(BLL-Trans-1503-(9022.552)) Avail: British Library Lending Div., Boston Spa, Engl.

Results of algorithms to control surface meteorological information applied in the system for processing meteorological data were analyzed. The various criteria did not operate effectively. The shortcomings which appeared and the failure to control a range of elements made it necessary to refine and supplement the algorithms and to devise new ones. It was necessary above all to exclude the control criteria based on the Lagrange interpolation formulas, because a polynomial of one and the same degree was used in all instances. N.W.

SOME CHARACTERISTICS OF THE VARIATION OF AIR TEMPERATURE IN THE NORTHERN HEMISPHERE DURING INDIVIDUAL MONTHS OF THE PERIOD 1881-1975
L. P. Spirina 3 Jun. 1981 15 p refs Transl. into ENGLISH from Glav. Geof. Obs. (USSR), v. 438, 1980 p 117-125
(BLL-Trans-1497-(9022.552)) Avail: British Library Lending Div., Boston Spa, Engl.

The variation of air temperature in the Northern Hemisphere during individual months of the years 1881 to 1975 is examined. It is found that there was a warming trend in recent years. However, the absence of sub-annual synchronicity in the temperature variation, and the large variability over the last 10 to 15 years, do not provide a basis for asserting that the observed mean annual tendency towards warming will be maintained in the future. R.J.F.

TURBULENCE WITHIN CUMULUS CLOUDS AND OUTSIDE THEM
V. I. Silayeva and S. M. Shmeter 30 Apr. 1981 12 p refs Transl. into ENGLISH from Tsent. Aerol. Obs. T. Vyp. (Moscow), v. 128, 1977 p 63-72
(BLL-Trans-1481-(9022.552)) Avail: British Library Lending Div., Boston Spa, Engl.

Within a cumulus cloud and in its environment the standard deviations of the speed of horizontal and vertical gusts are several times greater than the values of the gusts in the undisturbed portion of the atmosphere. The mean curve of the distribution of the horizontal and vertical gusts is described by a normal distribution. In individual cases the distributions of the horizontal and vertical gusts differ substantially from the normal. Within the Cu the values of vertical gusts increase with the thickness of the cloud. The degree of gustiness (vertical gusts and the mean vertical speed) by contrast, is on average inversely proportional to the cloud. Powerful convective currents are often pseudolaminar, while small currents are also very turbulent. S.L.

INVERSION LAYERS AND THEIR INTERACTION WITH CUMULUS CLOUDS BELOW

S. M. Rozhanets, A. I. Furman, and S. M. Shmeter 30 Apr. 1981 10 p refs Transl. into ENGLISH from Tsent. Aerol. Obs., T. Vyp. (Moscow), v. 128, 1977 p 73-79
(BLL-Trans-1482-(9022.549)) Avail: British Library Lending Div., Boston Spa, Engl.

Inversion and isothermal layers, which influence the development of cumulus clouds are discussed. Capping layers form frequently in the free atmosphere, and inversions are observed in all seasons and weather. The development of cumulus clouds is affected by: the height of the lower boundary of the retaining layer, thickness, temperature gradient, and humidity within above and below the layer. Data are presented for frequency, height of lower boundary and thickness for inversions in the troposphere during the summer. It is suggested that during Cu development stratification above the clouds undergoes marked variations. E.A.K.

AUTOMATIC MEASUREMENT OF AREAL PRECIPITATION USING C-BAND RADAR

W. Attmannspacher [1982] 7 p refs Transl. into ENGLISH from Offenbach a. M., D. Wetterd., Ann. Met. (Neue Folge), no. 13, 1977 p 167-169
(BLL-Trans-1378-(9022.552)) Avail: British Library Lending Div., Boston Spa, Engl.

The radar equipment, the digitalizing system of the video signal and the calculation of the measured data by aid of a connected electronic computer is described. Examples of the measurements are compared to a special rain guage network. These comparisons and some statistical treatments represent the quality of the radar measurements. Area precipitation means over a two month period are measured in a realistic way only by aid of the radar. S.L.

N82-19766 British Library Lending Div., Boston Spa (England). Meteorological Office.

THE PROBLEM OF PRECIPITATION MEASUREMENT BY ATTENUATION OF RADIO WAVES

M. D. Belaga 30 Apr. 1981 14 p refs Transl. into ENGLISH from Tsent. Aerol. Obs. T. Vyp. (Moscow), v. 135, 1979 p 64-69
(BLL-Trans-1475-(9022.549)) Avail: British Library Lending Div., Boston Spa, Engl.

A radar system which measures precipitation over small areas or paths and performs pluviometric measurements is presented. The radar unit is used to measure precipitation in mountain valleys, and to calibrate radar systems used in measuring precipitation over large areas. Phase modulating reflectors may be used to measure the intensity and amount of precipitation for attenuation in the centimetre band. The marked reduction in the variability of the coefficients in the equation and the increase in accuracy links the intensity of precipitation to produced attenuation. The obtained information may be applied to measuring small areas and in calibrating existing radar systems for the measurement of precipitative intensity of reflectivity over wide areas. E.A.K.

A FREE BOUNDARY VALUE PROBLEM ARISING IN CLIMATE DYNAMICS

C. Nicolis 1981 36 p refs Submitted for publication Sponsored in part by Inst. Internationaux de Physique et de Chimie
(Aeronomica-Acta-A-240-1981) Avail: Issuing Activity

A heat and mass transfer problem which involves coexisting phases was studied. The atmosphere hydrosphere cryosphere is the dynamical system wherein the spatial degrees of freedom along the vertical and longitudinal directions are lumped. The reduced one dimensional system is modelled by a yearly averaged, energy balance model, considering the coupling between the two phases present: the ice sheets and the ocean. A Stefan type of boundary condition is introduced at the interface. The balance equation is linearized and solved by mode truncation and Galerkin's method. The stability of the present day climatic regime with respect to small excursions of the ice boundary is analyzed. The thermodynamic aspects and the characteristic time scales of evolution are emphasized. Author (ESA)

OPTIMUM EMPLOYMENT OF SATELLITE INDIRECT SOUNDINGS AS NUMERICAL MODEL INPUT Final Report

Lyle H. Horn, John C. Derber, Thomas L. Koehler, and Brian D. Schmidt Dec. 1981 112 p refs
(Grant NsG-5252)
(NASA-CR-168509) Avail: NTIS HC A06/MF A01 CSCL 04B

The characteristics of satellite-derived temperature soundings that would significantly affect their use as input for numerical weather prediction models were examined. Independent evaluations of satellite soundings were emphasized to better define error characteristics. Results of a Nimbus-6 sounding study reveal an underestimation of the strength of synoptic scale troughs and ridges, and associated gradients in isobaric height and temperature fields. The most significant errors occurred near the Earth's surface and the tropopause. Soundings from the TIROS-N and NOAA-6 satellites were also evaluated. Results again showed an underestimation of upper level trough amplitudes leading to weaker thermal gradient depictions in satellite-only fields. These errors show a definite correlation to the synoptic flow patterns. In a satellite-only analysis used to initialize a numerical model forecast, it was found that these synoptically correlated errors were retained in the forecast sequence. For individual titles, see N82-19769 through N82-19771.

A CASE STUDY OF HEIGHT AND TEMPERATURE ANALYSES DERIVED FROM NIMBUS-6 SATELLITE SOUNDINGS

Thomas L. Koehler *In its* Optimum Employment of Satellite Indirect Soundings as Numerical Model Input Dec. 1981 p 1-50 refs (For primary document see N82-19768 10-47)
Avail: NTIS HC A06/MF A01 CSCL 04B

Height and temperature analyses were constructed on a subset of the LFM grid using only Nimbus-6 satellite temperature profiles from approximately 1800 GMT 22 Feb. 1976. Several experiments were performed to evaluate various features of these satellite derived analyses. Fields derived from the bracketing LFM analyses provide the verification data. The results indicate that Nimbus-6 soundings were able to correctly position the major troughs and ridges, but underestimate gradients in the analyses due primarily to the soundings being too warm in the troughs. No advantage could be found in using a set of satellite soundings with a greater horizontal resolution than the DST soundings. M.D.K.

N82-19770*# Wisconsin Univ. - Madison. Dept. of Meteorology.

EVALUATION OF TIROS-N AND NOAA-6 SATELLITE DATA: COMPARISONS OF COLOCATED SOUNDINGS AND ANALYSES FOR A JANUARY CASE

Brian D. Schmidt, Thomas L. Koehler, and Lyle H. Horn *In its* Optimum Employment of Satellite Indirect Soundings as Numerical Model Input Dec. 1981 p 51-81 refs (For primary document see N82-19768 10-47)
Avail: NTIS HC A06/MF A01 CSCL 04B

An early January 1980 synoptic situation was used in evaluating the performance of TIROS-N and NOAA-6 operational temperature soundings. Visual and statistical comparisons of temperature and thickness fields were employed to determine the effects of manual screening of the satellite soundings and measure the accuracy of both the satellite soundings and analyses derived from them. Comparisons between the performance of TIROS-N and NOAA-6 were emphasized. Both satellites were able to correctly position the major troughs and ridges. Gradients were underestimated though, with troughs markedly too warm and ridges slightly too cold. The poorest data occurred near the surface and tropopause as reflected by larger standard deviations in those layers. The performance of TIROS-N was slightly superior to that of NOAA-6. M.D.K.

N82-19771*# Wisconsin Univ. - Madison. Dept. of Meteorology.

A NUMERICAL EVALUATION OF TIROS-N AND NOAA-6 ANALYSES IN A HIGH RESOLUTION LIMITED AREA MODEL

John C. Derber, Thomas L. Koehler, and Lyle H. Horn *In its* Optimum Employment of Satellite Indirect Soundings as Numerical Model Input Dec. 1981 p 82-108 refs (For primary document see N82-19768 10-47)
Avail: NTIS HC A06/MF A01 CSCL 04B

Vertical temperature profiles derived from TIROS-N and NOAA-6 radiance measurements were used to create separate analyses for the period 0000 GMT 6 January to 0000 GMT 7 January 1980. The 0000 GMT 6 January satellite analyses and a conventional analysis were used to initialize and run the University of Wisconsin's version of the Australian Region Primitive Equations model. Forecasts based on conventional analyses were used to evaluate the forecasts based only on satellite upper air data. The forecasts based only on TIROS-N or NOAA-6 data did reasonably well in locating the main trough and ridge positions. The satellite initial analyses and forecasts revealed errors correlated to the synoptic situation. The trough in both TIROS-N and NOAA-6 forecasts which was initially too warm remained too warm as it propagated eastward during the forecast period. Thus, it is unlikely that the operational satellite data will improve forecasts in a data dense region. However, in regions of poor data coverage, the satellite data should have a beneficial effect on numerical forecasts. M.D.K.

FORECASTS OF PRECIPITATION IN THE NORTHEAST OF BRAZIL: DYNAMIC ASPECTS [PREVISAO DE PRECIPITACAO NO WORDESTE DO BRASIL: O ASPECTO DINAMICO]

Vernon Edgar Kousky and Antonio Divino Moura Oct. 1981 17 p refs In PORTUGUESE; ENGLISH summary Presented at the 4th Brazilian Symp. on Hydrol. and Hydrol. Resources, 15-19 Nov. 1981
(INPE-2244-PRE/029) Avail: NTIS HC A02/MF A01

Large scale atmospheric oceanic circulation changes in the North and South Atlantic are dynamically related to rainfall variability in Northeast Brazil. Above normal cyclonic activity near Newfoundland is associated with stronger than normal westerlies in the North Atlantic, a stronger than normal North Atlantic subtropical high and stronger than normal northeast trade winds at low latitudes. These features accompany a more southward than normal displacement of the intertropical convergence zone and wetter than normal conditions in Northeast Brazil. Drier than normal conditions occur when the opposite situation exists. The severest droughts occur in association with the simultaneous weakening of the North Atlantic high and strengthening of the South Atlantic high. These events are also found to occur in association with the simultaneous occurence of positive sea surface temperature anomalies in the north, and negative SST anomalies in the south Tropical Atlantic. Author

A STUDY ON THE DEVELOPMENT OF INTERMEDIATE SCALE DISTURBANCES WITH A MODEL OF PRIMITIVE EQUATIONS OF HIGH VERTICAL RESOLUTION Ph.D. Thesis

Prakki Satyamurty Sep. 1981 88 p refs In PORTUGUESE; ENGLISH summary
(INPE-2232-TDL/063) Avail: NTIS HC A05/MF A01

Linear stability of basic states in the vicinity of idealized weak thermal fronts was examined. Vertical profiles of the basic zonal wind and potential temperature are hyperbolic tangent. Even if the curvature in the lower levels is positive, intermediate scale unstable modes appear in smaller static stability and shear or vertical distribution of diabatic heating due to the liberation of latent heat in the lower troposphere. If the diabatic heating is not allowed for and the curvature is unfavorable inclusion of surface drag produces an additional growth rate peak in the intermediate scales. The amplitude of the most unstable intermediate scale wave is confined to the lower troposphere and its growth rate increases with the inclusion of diabatic heating. E.A.K.

VISSR ATMOSPHERIC SOUNDER (VAS) SIMULATION EXPERIMENT FOR A SEVERE STORM ENVIRONMENT

Dennis Chesters, Louis W. Uccellini, and Anthony Mostek Sep. 1981 50 p refs Submitted for publication
(NASA-TM-83822) Avail: NTIS HC A03/MF A01 CSCL 04B

Radiance fields were simulated for prethunderstorm environments in Oklahoma to demonstrate three points: (1) significant moisture gradients can be seen directly in images of the VISSIR Atmospheric Soundar (VAS) channels; (2) temperature and moisture profiles can be retrieved from VAS radiances with sufficient accuracy to be useful for mesoscale analysis of a severe storm environment; and (3) the quality of VAS mesoscale soundings improves with conditioning by local weather statistics. The results represent the optimum retrievability of mesoscale information from VAS radiance without the use of ancillary data. The simulations suggest that VAS data will yield the best soundings when a human being classifies the scene, picks relatively clear areas for retrieval, and applies a 'local' statistical data base to resolve the ambiguities of satellite observations in favor of the most probable atmospheric structure. A.R.H.

PREDICTABILITY OF THE TROPICAL ATMOSPHERE

J. Shukla Oct. 1981 57 p refs
(NASA-TM-83829) Avail: NTIS HC A04/MF A01 CSCL 04B

An examination of the deterministic predictability for tropics and middle-latitudes separately indicates that the theoretical upper limit of deterministic predictability for low latitudes is shorter than that for middle latitudes. Variability of time averages in low latitudes is mainly determined by the location and intensity of the large-scale Hadley and Walker circulations. Since these are largely influenced by the slowly varying boundary conditions of sea surface temperature and soil moisture, and since synoptic instabilities are not strong enough to change drastically the large scale flow, there is larger potential for predictability of monthly and seasonal means in low latitudes. It is conjectured that for short and medium range deterministic prediction, a prescribed diabatic heating field due to moist convection may be more useful than their explicit calculation from the evolving flow. A NUMERICAL MODEL FOR SIMULATION OF LOCAL CIRCULATION, APPLIED TO THE COASTAL REGION OF NORTHEASTERN BRAZIL [UN MODELO NUMERICO PARA SIMULACAO DAS CIRCULA COES LACAIS, APLICADO A REGIAO COSTEIRA DO NORDESTE DO BRASIL]

Sergio Henrique Franchito and Vernon Edgar Kousky Nov. 1981 69 p refs In PORTUGUESE; ENGLISH summary Submitted

for publication
(INPE-2270/PRE/051) Avail: NTIS HC A04/MF A01

A predictive, two-dimensional, nonlinear, primitive equation model was employed to study the land-sea breeze circulation in North-Northeast Brazil. The model considers dry air and involves boundary layer formulation. The surface temperature is determined by a forcing function applied to the Earth's surface. The time integration scheme utilized is that of Shuman-Brown-Campana. In order to study the seasonal variations of the circulation, under conditions of zero mean flow and flat terrain, the model is applied to several months, using different values of land and sea surface temperatures, corresponding to the time at the year. With the inclusion of elevated terrain, the circulation becomes more intense during both day and night. Under the influence of mean onshore flow (5 m/s) and considering flat terrain, the sea breeze becomes slightly weaker. In order to verify the influence of the atmospheric stability on the circulation, the model is initialized using different vertical temperature profiles. R.J.F.

STUDIES OF THE ENERGY AND THE FLUX OF WATER VAPOR IN THE ATMOSPHERE OVER NORTHEASTERN BRAZIL Ph.D. Thesis - 30 Jun. 1981 [ESTUDOS DA ENERGETICA E DO FLUXO DE VAPOR D'AGUA NA ATMOSFERA SOBRE O NORDESTE BRASILEIRO]

Valdo daSilva Marques Dec. 1981 174 p refs In PORTUGUESE; ENGLISH summary
(INPE-2288-TDL/068) Avail: NTIS HC A08/MF A01

The energetics and water vapor balance over Northeast Brazil are studied with the purpose of identifying interannual and seasonal variations. All the quantities are calculated for a cylinder, containing most of Northeast Brazil. Monthly mean data for a period of 8 years are used. Calculations are made separately for the dry season (September-October-November), wet season (March-April-May), wet season of 1976 (relatively dry) and 1974 (relatively wet). Evaluation of the mass budget revealed the following patterns: during the wet year/season, there is convergence in the lower troposphere and divergence in the upper troposphere causing rising motion in the lower atmosphere, thus favoring precipitation. On the other hand, during the dry year/season convergence is found in the middle troposphere with divergence above and below, inducing sinking motion in the lower levels. Such a situation provokes drought. Interannual and seasonal variations of water vapor flux are found to occur mainly in the North/Northwest and South/Southeast borders of the cylinder. S.L.

CONVERGENCE ZONES IN THE SOUTH ATLANTIC AND THEIR INFLUENCE ON THE PRECIPITATION REGIME IN NORTHEASTERN BRAZIL M.S. Thesis [ZONAS DE CONVERGENCIA NO ATLANTICO SUL E SUAS INFLUENCIAS NO REGIME DE PRECIPITACAO NO NORDESTE DO BRASIL]

Lucimar Luciano deOliveira Jan. 1982 125 p refs In PORTUGUESE; ENGLISH summary
(INPE-2307-TDL/074) Avail: NTIS HC A06/MF A01

The relationship between the convergence zones in the South Atlantic and the rainfall variability on Northeast Brazil was studied. Radiosonde data from the Posto Oceanografico da Ilha da Trindade, wind charts from the National Meteorological Center, USA, precipitation data of selected coastal stations and satellite imagery were utilized. Monthly and half-yearly brightness charts were constructed from such satellite imagery between the parallels of 10 degrees N and 55 degrees S and the meridians of 010 degrees E and 080 degrees W, for a dry and a rainy year. The results reveal that dry years correspond to the permanence of the Spring pattern of interaction between the intertropical convergence zone and the South Atlantic convergence zones, the Bolivian high (in 200 mb) being more developed; in such dry years a stronger and more regular Walker circulation seems to be present. MICROWAVE RADIOMETRIC OBSERVATIONS NEAR 19.35, 92 AND 183 GHz OF PRECIPITATION IN TROPICAL STORM CORA

T. T. Wilheit, A. T. Chang, J. L. King, E. B. Rodgers, R. A. Nieman, B. M. Krupp, A. S. Milman, J. S. Stratigos, and H. Siddalingaih [1982] 28 p refs Prepared in cooperation with Computer Sciences Corp., Silver Spring, Md. and Systems and Applied Sciences Corp., Riverdale, Md. and GIT and OAO Corp., Beltsville, Md. Submitted for publication
(NASA-TM-82164) Avail: NTIS HC A03/MF A01 CSCL 04B

Observations of rain cells in the remains of a decaying tropical storm were made by Airborne Microwave Radiometers at 19.35,92 and three frequencies near 183 GHz. Extremely low brightness temperatures, as low as 140 K were noted in the 92 and 183 GHz observations. These can be accounted for by the ice often associated with raindrop formation. Further, 183 GHz observations can be interpreted in terms of the height of the ice. The brightness temperatures observed suggest the presence of precipitation sized ice as high as 9 km or more. MONITORING TROPICAL CYCLONE INTENSITY USING WIND FIELDS DERIVED FROM SHORT-INTERVAL SATELLITE IMAGES

Edward B. Rodgers and R. Cecil Gentry Jul. 1981 51 p refs
(NASA-TM-82162) Avail: NTIS HC A04/MF A01 CSCL 04B

Rapid scan visible images from the Visible Infrared Spin Scan Radiometer sensor on board SMS-2 and GOES-1 were used to derive high resolution upper and lower tropospheric environmental wind fields around three western Atlantic tropical cyclones (1975-78). These wind fields were used to derive upper and lower tropospheric areal mean relative vorticity and their differences, the net relative angular momentum balance and upper tropospheric mass outflow. These kinematic parameters were shown by studies using composite rawinsonde data to be strongly related to tropical cyclone formation and intensity changes. Also, the role of forced synoptic scale subsidence in tropical cyclone formation was examined. The studies showed that satellite-derived lower and upper tropospheric wind fields can be used to monitor and possibly predict tropical cyclone formation and intensity changes. These kinematic analyses showed that future changes in tropical cyclone intensity are mainly related to the 'spin-up' of the storms by the net horizontal transport of relative angular momentum caused by convergence of cyclonic vorticity in the lower troposphere and to a lesser extent the divergence of anticyclone vorticity in the upper troposphere. ESTIMATING OCEAN-AIR HEAT FLUXES DURING COLD AIR OUTBREAKS BY SATELLITE

Shu-Hsien Chou and David Atlas Nov. 1981 52 p refs Submitted for publication Original contains color illustrations
(NASA-TM-83854) Avail: NTIS HC A04/MF A01 CSCL 04B

Nomograms of mean column heating due to surface sensible and latent heat fluxes were developed. Mean sensible heating of the cloud free region is related to the cloud free path (CFP, the distance from the shore to the first cloud formation) and the difference between land air and sea surface temperatures, theta sub 1 and theta sub 0, respectively. Mean latent heating is related to the CFP and the difference between land air and sea surface humidities q sub 1 and q sub 0 respectively. Results are also applicable to any path within the cloud free region. Corresponding heat fluxes may be obtained by multiplying the mean heating by the mean wind speed in the boundary layer. The sensible heating estimated by the present method is found to be in good agreement with that computed from the bulk transfer formula. The sensitivity of the solutions to the variations in the initial coastal soundings and large scale subsidence is also investigated. The results are not sensitive to divergence but are affected by the initial lapse rate of potential temperature; the greater the stability, the smaller the heating, other things being equal. Unless one knows the lapse rate at the shore, this requires another independent measurement. For this purpose the downwind slope of the square of the boundary layer height is used, the mean value of which is also directly proportional to the mean sensible heating. The height of the boundary layer should be measurable by future spaceborn lidar systems. B.W.

REPORT ON THE ANALYSIS OF DATA FROM THE NOAA/ALASKAN MST RADAR SYSTEM Interim Report
M. F. Larsen, M. C. Kelly, and D. T. Farley Nov. 1981 42 p refs
(Grant AF-AFOSR-0020-80; AF Proj. 2310)
(AD-A109056; AFOSR-81-0859TR) Avail: NTIS HC A03/MF A01 CSCL 04/2

During this period the investigation of mesoscale eddy spectra was completed as well as a study of objective analysis schemes using geostrophic wind adjustments. Both depend upon the continuous data of the NOAA MST radar at Poker Flat, Alaska. The atmospheric power spectral studies revealed a k to the minus 5/3 inertial subrange at time scales of hours. The implication in this essentially two dimensional eddy regime is a source of energy existing at spatial scales of less than 100 km, propagating energy up the spectrum toward lower wavenumbers. At smaller scales, in the fully 3-d turbulent spectrum, the classic Kolmogorov inertial spectrum is found with energy cascading towards smaller scales. Again, a source of energy is suggested on the scale of 10-100 km. The candidate is convection. In the study of objective analysis techniques, Cressman, and Gandin and other approaches are analyzed using the continuous radar data record. No significant differences were found between the Cressman and Gandin schemes. Knowing the character of the radar data with respect to these well-known analyses now permits comparison to more sophisticated and less trivial techniques and may lead to suggestions for entirely new concepts.

NUMERICAL DECONVOLUTION TO OBTAIN CLOUD SIGNATURES FROM SCATTERED LIGHT PULSES
James M. Supplee and Dennis W. McGuire Adelphi, Md. Harry Diamond Labs. Jul. 1981 44 p refs
(Contract DAAG29-76-D-0100)
(AD-A108806; HDL-CR-81-100-1) Avail: NTIS HC A03/MF A01 CSCL 20/6

The optical return pulse resulting from light reflected from a cloud is given by a convolution of the transmitted pulse with the system range response and the cloud signature. To calculate the cloud signature when everything else is known requires a deconvolution. Since this deconvolution enhances noise, it is very difficult to get better resolution in the cloud signature than the 1 to 2 m that is immediately available by dividing the return pulse by the range response. (This relatively good resolution is available in this way because the transmitted pulse is fairly short, being about 6 ns FWHM.) It is shown that modestly improved resolution is possible if the signal to noise ratio in the return pulse is greater than about 100 to 1. Author (GRA)

SYNOPTIC METEOROLOGY DURING THE SNOW-ONE FIELD EXPERIMENT
Michael A. Bilello Nov. 1981 60 p refs
(DA Proj. 4A7-62730-AT-42)
(AD-A109080; CRREL-SR-81-27) Avail: NTIS HC A04/MF A01 CSCL 04/2

The daily atmospheric pressure systems and weather fronts that traversed the northeastern United States during the SNOW-ONE Field Experiment from 11 January through 20 February 1981 are summarized. This experiment is the first in a planned series of measurements to study the influence of atmospheric obscurants on electro-optical system performance. The analysis of the large-scale synoptic patterns that developed during the field test period constitutes a critical component of the research program. The weather during the measurement period included nine new daily high temperature records. January was one of the driest and February was one of the wettest ever observed. These conditions were caused in part by two high pressure cells and two major low pressure systems that crossed the region. One of these lows brought warm air and heavy rain to New England, and the other produced significant snowfall in northern Vermont. GRA

AIRCRAFT MEASUREMENTS OF THE FREQUENCY OF TURBULENCE ENCOUNTERS IN AUSTRALIA. A REVIEW AND ASSESSMENT
Douglas J. Sherman Mar. 1981 35 p refs
(AD-A108923; ARL/Struc-Note-471) Copyright. Avail: Issuing Activity CSCL 01/1

All available aircraft V-g-h measurements of turbulence encounters during routine flying in Australia have been summarised on a common basis. The data are insufficient to determine the Australian gust environment although they are not incompatible with the Royal Aeronautical Society data item ESDU 69023. There are, however, indications that at high altitudes (30,000 ft and above) gusts are encountered more frequently than the data item predicts. This is particularly so for the stronger gusts.

SPECIFICATION OF CLOUD AMOUNT OVER LOCAL AREAS FROM GOES VISUAL IMAGERY Environmental Research Papers
Thomas J. Keegan 28 May 1981 60 p refs
(AD-A109325; AFGL-TR-81-0153; AFGL-ERP-743) Avail: NTIS HC A04/MF A01 CSCL 04/2

Albedos derived from GOES visual imagery data are compared with the cloud cover reported at seven sites in the northeastern United States in the spring through autumn of 1977 and 1978. The data sample was closely edited to remove all cases containing unexplainable inconsistencies between the satellite and surface data. Statistics were generated for the aggregate of stations for spring/summer and autumn periods separately, as well as the two years separately. The seasonal data were further divided into those cases that contained predominantly ice crystal clouds or water clouds. The characteristics of the satellite data were computed for a 9 by 9 one-mile pixel box and were the average, maximum and minimum albedos, the range of albedo, and the texture. Detailed attention was given to the relationship between average albedo and cloud amounts. Equations were generated for each station for each year for the water droplet clouds during the spring/summer season. There were not sufficient cases to do the same for the autumn of the ice crystal cloud cases. There is a logical, consistent variation in the equations from station to station despite noisy data and a serious shortage of data throughout most of the scattered and broken cloud cover ranges. A multivariate analysis including infrared characteristics is indicated. Author (GRA)

SPRING AND FALL MEASUREMENTS OF EUROPEAN VERY LOW ALTITUDE VOLUME SCATTERING COEFFICIENTS Interim Report
Richard W. Johnson Aug. 1981 22 p refs
(Contract F19628-78-C-0200; AF Proj. 7670)
(AD-A108879; SIO-REF-81-33; SRI-17; AFGL-TR-81-0237) Avail: NTIS HC A02/MF A01 CSCL 04/2

This report presents measurements of atmospheric volume scattering coefficients collected during 25 low altitude flights made mostly during the spring and fall seasons of 1976 and 1977 at four different European locations. The measurements were conducted during an instrumented aircraft's final approach and landing at its staging airbase. The measurements were made using a pseudophotopic spectral response and thus are suitable for comparison with data associated with standard visual determinations of airfield visibility. The data illustrate that in 22 of 25 cases, there was little or no significant variation in the value of scattering coefficient as the aircraft approached the surface from an altitude of several hundred meters.

THE DEVELOPMENT AND TESTING OF METHODS TO

INFER MIDLATITUDE PRECIPITATION INTENSITY FROM GEOSYNCHRONOUS SATELLITE INFRARED DATA

John V. Zapotocny, Donald R. Johnson, and Thomas M. Whittaker Hanscom AFB, Mass. AFGL 31 Jul. 1981 90 p refs
(Contract F19628-78-C-0137; AF Proj. 6670)
(AD-A108881; SCIENTIFIC-3; AFGL-TR-81-0252) Avail: NTIS HC A05/MF A01 CSCL 04/2

In an attempt to aid development of simple techniques applicable in middle latitudes, this study addresses the inference of precipitation intensity and its temporal change associated with imbedded convective activity at a location in areas of continuous stratiform precipitation from Geosynchronous Operational Environmental Satellite (GOES) IR digital data. Imbedded convective activity is easily identified in high resolution visible GOES imagery if high cloud layers are not present to obscure the convection. At low Sun angles with the shadowing effect of the convective towers, details of these convective areas are especially enhanced. However, with the need for these methods to be applicable during both daytime and nighttime hours, only the IR 11 micron channel data were used in this study which was based on several synoptic cases. In each of the cases examined, visible and IR imagery and loops were used to help pinpoint optimum areas for study. GRA

STUDIES OF THE STRATOSPHERIC AND MESOSPHERIC WIND SYSTEM AND TEMPERATURE DISTRIBUTION FROM OBSERVATIONS OF INFRASONIC WAVES GENERATED DURING REGULAR CONCORDE FLIGHTS

Ludwik Liszka Sep. 1981 16 p refs Presented at Intern. Symp. on Acoustic Remote Sensing of Atmosphere and Oceans, Calgary, Canada, 22-25 Jun. 1981
(KGI-176; ISSN-0347-6405) Avail: NTIS HC A02/MF A01

The applications of infrasonic recording to atmospheric studies are discussed and results from Concorde flight observations at four recording stations are presented. The Concorde aircraft is considered as an infrasonic source located at a known distance, strong enough to be recorded at distances of up to 5000 km. It is assumed that the direction of propagation of the infrasound produced by the aircraft is determined by the Mach cone, i.e. basic principles of geometrical acoustics are applied. At each station, azimuth and horizontal phase velocity of the arriving signal were recorded as a function of time. As the propagation of infrasound in the atmosphere is strongly influenced by wind and temperature profiles, Concorde recordings in the infrasonic range provide information about the atmosphere-horizontal wind and temperature variations. Variations in propagation time, angle of arrival and phase velocity of recorded infrasonic signals are interpreted in terms of temporal and spatial variations of the wind system. Author (ESA)

PRECIPITATION ASSESSMENT FROM ENVIRONMENTAL SATELLITE DATA FOR NORTHWEST LIBYA INCLUDING THE GEFARA PLAN

A. vanDijk 1981 50 p refs
(RSC-4) Avail: NTIS HC A04/MF A01

The FAO precipitation assessment technique (satellite imagery combined with rain gage data) was applied to NW Libya to improve precipitation monitoring in this data sparse region. A 21 day period containing a few dry days, a heavy rainstorm, then a few more dry days was chosen. Rain gages reported 3 days of heavy rainfall, but failed to detect 2 further days with rain indicated by satellite data. The FAO rainfall maps appear more reliable than rain gage ones. The application of the technique to the whole of Libya, using Meteosat 2, and 10 reliable, well distributed rain gages, in combination with selected rain gages in South Italy, Tunisia and West Egypt is suggested. THERMODYNAMIC FEATURES AFFECTING CONVECTIVE CLOUD GROWTH AND DYNAMIC SEEDING: A COMPARATIVE SUMMARY OF HIPLEX SOUNDINGS, 1975 TO 1977 Thermodynamic Cloud Model Analyses

David A. Matthews Jul. 1981 207 p refs
(PB82-123423) Avail: NTIS HC A10/MF A01 CSCL 04B

The summary is based primarily on rawinsonde data observed at Miles City, MT., Goodland, KS., and Big Spring, TX., during the summer months of 1975-77, as part of HIPLEX (High Plains Cooperative Program). Data were stratified according to the occurrence or nonoccurence of convective clouds and, when clouds occurred, according to cloud type as seen in geosynchronous satellite imagery. Geographic comparisons show significant variations from north to south over the high plains--the most intense convection occurring in the central and southern plains, the least intense in the north. Large annual variations were noted in mean values of the thermodynamic features at each site among the three summers. GRA

THE TWENTY YEAR AVERAGE ATMOSPHERIC STRUCTURE AT LIMA, PERU M.S. Thesis

Jay Anthony Albrecht Jun. 1981 92 p refs
(Grant NSF ATM-78-10814)
(PB82-114216; NSF/IDOE-81-43; FSU-MET-STU-81/1) Avail: NTIS HC A05/MF A01 CSCL 04B

Rawinsonde observations taken at Lima, Peru are used to calculate twenty year average soundings and deviations from them. The average soundings are used to document the seasonal variations in the atmospheric structure at Lima. Five millibar average soundings are compared to fifty millibar average soundings to show that higher vertical resolutions are necessary when studying the mean atmospheric structure at locations where day to day variations are small and strong, persistent subsidence inversions are present much of the time. Temperature anomalies in the lower marine layer are found to be approximately equal to the sea surface temperature anomalies. Author

MONTE CARLO STUDIES OF OCEAN WIND VECTOR MEASUREMENTS BY SCATT: OBJECTIVE CRITERIA AND MAXIMUM LIKELIHOOD ESTIMATES FOR REMOVAL OF ALIASES, AND EFFECTS OF CELL SIZE ON ACCURACY OF VECTOR WINDS Final Report
Willard J. Pierson Feb. 1982 344 p refs
(Contract NAS1-15669)
(NASA-CR-165837-1) Avail: NTIS HC A15/MF A01 CSCL 08C

The scatterometer on the National Oceanic Satellite System (NOSS) is studied by means of Monte Carlo techniques so as to determine the effect of two additional antennas for alias (or ambiguity) removal by means of an objective criteria technique and a normalized maximum likelihood estimator. Cells nominally 10 km by 10 km, 10 km by 50 km, and 50 km by 50 km are simulated for winds of 4, 8, 12 and 24 m/s and incidence angles of 29, 39, 47, and 53.5 deg for 15 deg changes in direction. The normalized maximum likelihood estimate (MLE) is correct a large part of the time, but the objective criterion technique is recommended as a reserve, and more quickly computed, procedure. Both methods for alias removal depend on the differences in the present model function at upwind and downwind. For 10 km by 10 km cells, it is found that the MLE method introduces a correlation between wind speed errors and aspect angle (wind direction) errors that can be as high as 0.8 or 0.9 and that the wind direction errors are unacceptably large, compared to those obtained for the SASS for similar assumptions. WAVE SPECTRA OF A SHOALING WAVE FIELD: A COMPARISON OF EXPERIMENTAL AND SIMULATED RESULTS
W. D. Morris, C. E. Grosch (Old Dominion Univ.), and L. R. Poole Jan. 1982 33 p refs
(NASA-TM-83211) Avail: NTIS HC A03/MF A01 CSCL 08C

Wave profile measurements made from an aircraft crossing the North Carolina continental shelf after passage of Tropical Storm Amy in 1975 are used to compute a series of wave energy spectra for comparison with simulated spectra. Results indicate that the observed wave field experiences refraction and shoaling effects causing statistically significant changes in the spectral density levels. A modeling technique is used to simulate the spectral density levels. Total energy levels of the simulated spectra are within 20 percent of those of the observed wave field. The results represent a successful attempt to theoretically simulate, at oceanic scales, the decay of a wave field which contains significant wave energies from deepwater through shoaling conditions. AN AERIAL SURVEY OF WATER TURBIDITY AND LASER DEPTH SOUNDING PERFORMANCE ALONG THE QUEENSLAND COAST
D. M. Phillips and R. H. Abbot Apr. 1981 29 p refs
(AD-A109050; ERL-0192-TR) Avail: NTIS HC A03/MF A01 CSCL 08/10

The performance of the WRELADS laser airborne depth sounder has been assessed in North Queensland coastal waters from Townsville to Torres Strait. This was achieved by recording water turbidity and maximum sounding depth in the aircraft along the flight path. The parameter used in the aerial survey as a measure of water turbidity was related to beam attenuation coefficient measured from a boat in a joint aircraft and boat trial. Data relating the statistical distribution of turbidity to water depth were obtained and compared with the observed performance characteristic in order to indicate the proportion of Queensland coastal waters suitable for sounding with an airborne laser sounder. THE SACLANTCEN OCEANOGRAPHIC DATA BASE. VOLUME 2: ACCESS, INTERROGATION AND DISPLAY
Richard F. J. Winterburn 15 Jun. 1981 58 p refs
(AD-A109417; SACLANTCEN-SM-151) Avail: NTIS HC A04/MF A01 CSCL 05/2

An oceanographic data base established at SACLANTCEN on an 'in-house' UNIVAC 1106 computer system is described.

Volume I discusses the design criteria used in setting up the data base, lists its structure and content, and explains how acquired data, either from outside institutions or from SACLANTCEN experiments are re-formatted and entered. Volume II describes how data are accessed, interrogated, and displayed, including the plotting of charts with coastlines and of contoured data.

PREDICTION OF SURF ZONE CHARACTERISTICS Final Report, 1979-1981

Joseph N. Suhayda and Gerald F. McHugh 4 Jul. 1981 70 p refs
(Contract N00014-79-C-0342; NR Proj. 388-152)
(AD-A108759) Avail: NTIS HC A04/MF A01 CSCL 20/4

This report presents the results of the development and testing of predictive models for computing surf zone characteristics from wave measurements made outside the surf zone. The surf zone characteristics predicted are average breaker height, maximum breaker height, average breaker position, maximum breaker position, breaker type, average longshore current and maximum longshore current. Preliminary field tests indicate breaker height prediction was within + or - 10% for wave heights of about 1 meter.

BIOCHEMICAL, PHYSIOLOGICAL AND ECOLOGICAL ASPECTS OF AMMONIUM REGENERATION BY MARINE CRUSTACEANS Ph.D. Thesis

Robert Richard Bidigare 1981 122 p
Avail: Univ. Microfilms Order No. 8128874

Laboratory investigations were carried out with the marine mysid, Praunus flexuosus, to assess the degree of coupling between glutamate dehydrogenase (GDH) activity and the rate of whole animal ammonium excretion. A strong correlation between GDH activity and rate of ammonium excretion by this mysid confirmed that ammonium excretion rates could be accurately predicted by employing the enzyme assay presented here. GDH activity surveyed in different taxa of marine crustaceans was higher in muscle tissue extracts than in gill tissue extracts or in a whole animal homogenate. Zooplankton excretion experiments conducted during austral spring and summer in the Scotia Sea, Antarctica, showed that weight-specific ammonium excretion increased both with increasing ambient temperature and with decreasing body size. The GDH assay appears useful as an alternative method to the traditional time-course, animal-in-a-jar experiments for quantifying zooplankton excretion impacts in the world oceans. Used in conjunction with the ETS assay, the GDH assay is a sensitive tool for surveying depths of maximal grazing and/or predation.

LIFE SCIENCES PASSIVE GN2 FREEZER THERMAL PERFORMANCE TEST Summary Report

G. W. Belshaw 13 Nov. 1981 79 p
(Contract NAS9-15629)
(NASA-CR-167546) Avail: NTIS HC A05/MF A01 CSCL 06C

Thermal performance tests that were conducted on the life sciences passive GN2 freezer project are summarized as well as the improvements to the freezers to improve the thermal performance of the containers. Procedures were developed, based upon these tests, to initially charge the freezers with LN2 and verify that the freezer performance is adequate for the mission duration. Improvements were made to the corvac sample tube to limit the amount of breakage due to thermal expansion of the liquid during freezing. A method of verifying the freezer vacuum insulative integrity was defined as well as a procedure for refurbishment of the internal vacuum level. Freezer modifications were made to ease the reevacuation of the containers. The orientation of the freezer in a 1-G environment, after being charged, had to remain in a vertical position. The LN2 boiloff rate increased significantly in a horizontal position. This resulted in a stowage definition in the spacecraft prior to launch. Functional testing, using the SL-1 mission timeline showed that the freezer will maintain samples in the frozen state for the duration of the mission.

STUDY OF THE KINETICS OF OXYGEN SATURATION OF FLUOROCARBON EMULSIONS

Yu. D. Aprosin, V. K. Alekseeva, and N. I. Afonin 1982 20 p refs Transl. into ENGLISH from Vop. Med. Khim. (Russia), v. 26, no. 6, 1980 p 793-799
(ISSN-0077-5606; NRC/CNR-TT-2007) Avail: NTIS HC A02/MF A01

The use of fluorocarbon emulsions as blood substitutes is addressed. Specifically, the mechanism of oxygen absorption by perfluorotributyl amine (PFTBA) emulsions is examined. The functional dependence of the absorption constant on various parameters (viscosity, temperature, and concentration of PFTBA in the emulsion) was established, and a comparative analysis of the efficiency of gas transport by the emulsion and by blood was carried out.

NUMERICAL AND EXPERIMENTAL STUDIES OF ELECTROMAGNETIC NEAR-FIELD ENERGY ABSORPTION IN MODELS OF MAN Ph.D. Thesis
Indira Chatterjee 1981 156 p
Avail: Univ. Microfilms Order No. 8125898

The Plane Wave Spectrum approach was used to numerically evaluate the electromagnetic fields and energy absorption in models of man subjected to near-zone leakage fields. Three models were considered: a homogeneous semi-infinite slab model, a layered slab model, and an inhomogeneous 180 cell block model. The numerical results show the strong dependence of energy absorption on the characteristics of the prescribed leakage fields. Results are presented, both for plane waves at various angles of incidence and for near-zone leakage fields. The importance of phase and amplitude variations in the prescribed leakage field is evaluated. A highlight of this work is the considerably reduced energy absorption for near-field partial-body exposures as compared to that obtained for far-field exposure conditions. Experimental results supporting the validity of the empirical relationships are presented. Dissert. Abstr.

CATECHOLAMINE LEVELS IN FIT AND NONFIT MALES WHEN EXPOSED TO AN EMOTIONAL STRESS Ph.D. Thesis
Camille Jeanette Bunting 1981 123 p
Avail: Univ. Microfilms Order No. 8128877

The difference in catecholamine (CA) excretion levels and perceived anxiety levels between physically fit and nonfit human subjects when exposed to an emotional stress was studied. The differences in heart rate responses between physically fit and nonfit subjects, as well as the difference in CA excretion levels and perceived anxiety levels between individuals classified as introverts and extraverts were also studied. Rock climbing was selected as the experimental stress factor. The results of the analysis for the fit and nonfit classifications indicated significant differences in epinephrine (E) excretion levels and responses on the Spielberger State Anxiety Inventory (SSAI) between treatments, as well as significant groups x treatments interaction for norepinephrine (NE) excretion levels. Significant groups x treatments x times and treatments x times x activities interactions were found for heart rate. Analysis for the introvert and extravert classifications revealed significant differences in NE excretion levels and SSAI responses between treatments, as well as a significant groups x treatments interaction for E excretion levels. Dissert. Abstr.

ANALYSIS OF EVAPORATIVE WATER LOSS IN THE SKYLAB ASTRONAUTS
J. I. Leonard 19 Dec. 1977 77 p refs
(Contract NAS9-14523)
(NASA-CR-167462) Avail: NTIS HC A05/MF A01 CSCL 06P

Daily evaporative water losses (EWL) during the three Skylab missions were measured using the indirect mass and water balance techniques. A mean inflight EWL of 860 ml/day-m 2 was obtained for nine men who averaged one hour of daily exercise. Although it was expected the EWL would increase in the hypobaric environment of Skylab (1/3 atmosphere), an average decrease from preflight sea level conditions of 11 percent was measured. The results suggest that weightlessness may have been a factor in modifying EWL primarily by decreasing sweat losses during exercise and possibly by reducing insensible skin losses as well. The weightless environment apparently promotes the formation of a sweat film on the skin surface both directly, by reducing heat and mass convective flow and sweat drippage, and perhaps indirectly by inducing measurable biochemical changes resulting in high initial sweating rates. It is proposed that these high levels of skin wettedness favor sweat suppression by a previously described mechanism. Author

EVALUATION OF MATERIALS PROPOSED FOR USE IN SPACE FLIGHT Final Report
W. Christopher Duncan Aug. 1981 4 p
(Contract NAS9-16358)
(NASA-CR-167537) Avail: NTIS HC A02/MF A01 CSCL 06Q

The cutaneous primary irritancy and allergenicity potential of cotton shirts/fabrics treated with flame retardants were evaluated in order to establish their suitability for spacecraft crew use. Twenty-five volunteer human subjects were patch tested on the back utilizing standard methodology, with both treated and untreated cotton fabric. The fabric was treated with tetrakis (hydroxymethyl) phosphonium hydroxide and subsequently cured with gaseous ammonia. The final treatment comprised adding on dicyandiamine phosphoric acid. None of the individuals experienced primary irritant or allergic reactions attributable to the fabric during induction or challenge patch testing. Likewise, there were no reactions to treated or untreated fabric patches placed on ten subjects of the usage panel at the conclusion of the study. R.J.F.

REVIEW OF HEALTH AND SAFETY ASPECTS OF VIDEO DISPLAY TERMINALS
W. C. Treurniet Feb. 1982 39 p refs
(CRC-TN-712-E) Avail: NTIS HC A03/MF A01

The factors that contribute to worker complaints when video display terminals (VDT) are introduced into the workplace are investigated. Survey data from field experiments indicate that a number of ergonomic factors and job characteristics can contribute to reports of discomfort from VDT users. Specifically, reports of visual discomfort are related to improper ambient lighting (which can cause bothersome reflections and contrast glare), poor display quality, and ophthalmological deficiencies. Reports of muscle pain and fatigue are related to poor workstation design such as improper heights of chair, keyboard, and display screen, and absence of source document holder, and no support for the forearms and wrists. It is noted that the frequency of such complaints is influenced by the worker's attitude regarding the job. A negative attitude arising from performing a meaningless, routine task, or from having no opportunities for career advancement, will result in more complaints due to ergonomic shortcomings. The issue of electromagnetic emissions from television displays is also considered. B.W.

HUMAN CARDIOVASCULAR ADAPTATION TO ZERO GRAVITY
F. Bonde-Petersen, ed., B. Battrick, comp., and J. Mort, comp. Jan. 1981 64 p refs Proceedings of Symp., Copenhagen, 20-21 Apr. 1981. Sponsored in cooperation with Copenhagen Univ.
(ESA-SP-1033; ISSN-0379-6566) Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

Methods for investigating the effects of weightlessness on the human body are presented, and the physiological problems caused by zero gravity are discussed. Cardiovascular and hormonal responses, incuding hemodynamic effects and posture influence, are considered. Vestibular, brain and masticatory functions are investigated. Rebreathing techniques are assessed. For individual titles, see N82-19818 through N82-19832.

CURRENT VIEWS AND FUTURE PROGRAMS IN CARDIOVASCULAR PHYSIOLOGY IN SPACE
K. Kirsch *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 3-5 refs (For primary document see N82-19817 10-52)
Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

A microplethysmographic method which charts fluid shifts such as those caused by sudden exposure to zero gravity is described. An ultrasonic probe, calibrated in human tissue layer thickness, measures areas where the underlying bone provides good echos. Tissue volume is calculated from the depth of the tissue cylinder between the skin surface and the bone. Measurements on subjects undergoing tilting confirm that edema occurs preferentially in the lower third of the tibia close to the ankle. Tilting the subject from a slight head down position into the upright position is followed by a decrease of tissue layer thickness above heart level, whereas below heart level the opposite occurs. The effects are reversible. Author (ESA)

N82-19819# Texas Univ. Health Science Center, Dallas.
ADAPTATION TO ZERO GRAVITY AS SIMULATED BY HEAD-DOWN TILT
C. G. Blomqvist, J. V. Nixon, R. L. Johnson, and J. H. Mitchell *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 6-7 refs (For primary document see N82-19817 10-52)
Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

The accuracy of the head down tilt model of adaptation to zero gravity is assessed by comparing test results of subjects undergoing a 24 hr 5 deg tilt with measurements of heart rate, plasma volume, urine production, etc., obtained during and after space flight. The magnitude of the changes in body fluid distribution and the degree of post-tilt cardiovascular dysfunction closely resemble space results. Results indicate that the cardiovascular system adapts rapidly and efficiently to the central fluid shift that occurs early during exposure to zero gravity. Hemodynamic changes are transient with a nearly complete return to the control state within 6 hrs. The adaptation is achieved primarily by a diuresis and a decrease in blood volume, mediated by ADH, renin, and aldosterone inhibition. Author (ESA)

CARDIOVASCULAR REFLEXES DURING UPRIGHT POSITION
O. Henriksen *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 10-12 refs (For primary document see N82-19817 10-52)
Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

Control systems involved in compensatory changes in vascular conductance in response to postural changes are described. Studies of blood flow regulation in subcutaneous limb tissue during changes of vascular transmural pressure are cited. Evidence suggests that constriction of the vessels in the skin contributes to the decrease in total vascular conductance in upright position. Both remote sympathetic reflex mechanisms elicited by a decrease in baroreceptor activity, and local sympathetic (axon) reflex mechanisms elicited by venous distension participate in pressure regulation during upright position. Author (ESA)

N82-19822# Technische Univ., Berlin (West Germany).
VOLUME REGULATING HORMONES AND THEIR ROLE IN THE CARDIOVASCULAR ADAPTATION TO ZERO GRAVITY
L. Roecker *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 18-20 refs (For primary document see N82-19817 10-52)
Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

Neurohormonal control of plasma volume is postulated. A change in blood volume is sensed by cardiovascular receptors which transmit this information up to the central nervous system. From there two main routes are involved, the antidiuretic hormone (ADH) mechanism for the water, and the sympathetic renin-angiotensin-aldosterone-system for sodium control. Diuresis measurements during water immersion, negative pressure breathing, and prolonged bed rest support this concept. Evidence suggests that ADH is the key to volume control of the circulation system, but the low physiological concentrations of ADH, especially under weightless conditions, make detection difficult. Thermal dehydration tests indicate that factors other than osmolality control ADH secretion under long term negative water balance. Author (ESA)

CARDIOVASCULAR RESPONSES TO ISOMETRIC EXERCISE IN SITTING AND LYING POSITION
T. Sadamoto, F. Bonde-Petersen, and Y. Suzuki *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 21-24 refs (For primary document see N82-19817 10-52)
Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

Cardiovascular responses to static exercises in the sitting and lying positions, which simulated 1 g and 0 g, were studied. Subjects were investigated during and after 2 min of sustained isometric exercise performed as knee extension, plantar flexion or handgrip at a tension of 40% of maximum voluntary contraction. Heart rate, arterial pressure, and blood flow were recorded. In the two positions, where the force of gravity was varied but where the conditions in the exercising muscles were identical, there was a significant difference in mean arterial pressure (MAP). The effect of isometric exercise on MAP is reduced in the lying position due to the decreased sympathetic nervous activity (SNA). Increments in forearm blood flow and forearm vascular resistance indicate that the baroreceptors are active in both cases. Lower heart rate, MAP and forearm vascular resistance as well as increased forearm blood flow during rest in the lying as compared to the sitting position are attributed to differences in SNA. HEMODYNAMIC EFFECTS OF LOWER BODY POSITIVE PRESSURE
F. A. Gaffney, E. R. Thal, W. F. Taylor, B. C. Bastian, J. A. Weigelt, J. M. Atkins, and C. G. Blomqvist *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 25-26 ref (For primary document see N82-19817 10-52)
Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

The way in which medical antishock trousers increase arterial pressure is examined. Supine and 60 deg head up tilt blood pressure, heart rate, forearm muscle flow, cardiac output and stroke volume measurements on healthy adults in garments with 10 and 100 mm Hg pressures are presented. Results show that the garment acts as a local, effective, nonpharmacologic, vasoconstrictor. In supine normovolemic subjects it raises pressure by increased afterload. During head up tilt, venous pooling in

the legs decreases stroke volume and cardiac output.

CARDIOVASCULAR REACTIONS TO TILT AND LOWER BODY POSITIVE PRESSURE (LBPP)

F. Bonde-Petersen, Y. Suzuki, T. Sadamoto, and T. Staehr-Johansen *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 27-29 refs (For primary document see N82-19817 10-52)

Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

The difference in the reaction of the heart towards increasing total peripheral resistance passively, as during lower body positive pressure (LBPP), and actively, as during head up tilt, is examined. Standard measures were taken of subjects tilted at 25 deg (head up, head down) and in anti-g suits inflated to 60 or 120 mm Hg. For passive increase, a substantial increase in afterload does not affect cardiac output (CO). For active increase, CO is decreased without any significant increase in afterload, due to the decreased venous return. For LBPP applied in the sitting position (where venous return also is reduced) there is no increase in venous return and CO, although mean arterial pressure rises, probably due to the mechanical compression of the vascular beds in the legs.

MEASUREMENTS OF VESTIBULAR FUNCTION

S. Vesterhauge and K. Zilstorff *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 33-34 (For primary document see N82-19817 10-52)

Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

Vestibular reflexes used for measuring vestibular function are discussed, including vestibular sensations, vestibular vegetative vestibulo-spinal, and vestibulo-ocular reflexes. Most human displacements consist of linear accelerations/decelerations, which stimulate otolith organs, but angular accelerations provoked by rotatory movements which stimulate the semicircular canals, give rise to more compensations, so it is on these that clinical interest centers. Understanding of the interactions between the semicircular canal otolith functions and the rest of the system is hampered by the difficulty of isolating the effect of the peripheral sense organs, since the system adapts well to defects in sensory input. Zero gravity experiments are a step towards developing more sensitive measurement techniques for vestibular functions.

CEREBRAL HEMODYNAMICS AT ZERO GRAVITY

J. Olesen *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 35-36 refs (For primary document see N82-19817 10-52)

Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

Investigations on the effects of weightlessness and increased gravity on cerebral pressure autoregulation in man and animals are reviewed. Mean arterial blood pressure (MABP) was altered by vasoactive drugs, by a pneumatic cuff, and by posture changes. Test pilots' medical histories and the reactions of patients subjected to extirpation of external and internal jugular veins during bilateral radical dissection for neck carcinoma are considered. Artificial spinal fluid was infused into animals in order to increase intracranial pressure. Results show that cerebral blood flow is unchanged between perfusion pressures of 60 to 150 mm Hg MABP, and that substantial increases in cerebral venous pressure do not impair intellectual capacity. Therefore high g forces during ascent and weightlessness do not overload the autoregulation mechanism.

N82-19828# Royal Dental Coll., Copenhagen (Denmark).

THE ETIOLOGY OF FACIAL PAIN AS RELATED TO MASTICATORY MUSCLES

E. Moeller *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 37-41 refs (For primary document see N82-19817 10-52)

Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

The link between chewing and facial pain in subjects with functional disorders of the masticatory system was tested. Blood flow in mandibular elevators was assessed by local isotope clearance using Xenon 133. Intercuspal biting at 25% or more of full effort for 90 sec causes obstruction or impairment of blood flow in the muscles. Deliberate unilateral mastication for 90 sec in a normal subject produces post exercise hyperemia in the most vigorously acting muscles. Since the degree of activity exerted by the elevators during mastication typically exceeds 50% of full effort, only pauses between the bursts of activity in the opening movement are available for blood flow. During part of these periods stretching of the elevators limits the capacity for circulation. This suggests that impaired blood flow due to contraction is the source of the pain.

MEASUREMENTS OF INTRA AND EXTRACELLULAR WATER SPACES AND ELECTROLYTE CONCENTRATIONS IN HUMAN SKELETAL MUSCLE

G. Sjoegaard *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 43-44 refs (For primary document see N82-19817 10-52)

Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

A method for measuring the extracellular space in small muscle biopsies was developed. For each 70 kg body weight, 2 mCi of sup 3H inulin is injected. Extracellar water content (H2Oe) is calculated from: H2Oe ml/100 g d.w. muscle tissue = (sup 3H activity/100 g d.w. muscle tissue)/(sup 3H activity/ml plasma H2O). The magnitude of H2Oe in the soleus (high % slow twitch fibers) triceps brachii (high % fast twitch) and vastus lateralis (equal number slow and fast twitch) was calculated. The total water content was 318 (298-342) ml/100 g d.w. for the three muscles. This indicates that factors other than fiber composition, e.g., the hydrostatic effect, are responsible for H2Oe magnitude differences. The method can measure reductions in muscle water spacing in the lower body caused by adaptation to zero gravity, and whether this is accompanied by electrolyte concentration changes.

USE OF ACETYLENE REBREATHING METHOD FOR MEASURING CARDIAC OUTPUT DURING PHYSIOLOGICAL AND CLINICAL STUDIES

C. G. Blomqvist *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 45-46 refs (For primary document see N82-19817 10-52)

Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

A modification of the acetylene rebreathing method, suitable for complex or prolonged experiments which require multiple sessions, is presented. A mixture containing 0.5% C2H2, 10% He, 30% O2 with a balance of N2 for a total bag volume of 1.5 to 2.5 l is used. Six ml of C18O is added for pulmonary diffusion capacity determination. Instantaneous C2H2 concentrations are normalized with respect to He, which is not absorbed. Comparison with the standard indocyanine green indicator dilution technique reveals no systematic error. Experimentally induced stroke volume and cardiac output differences of + or - 10% to 15% can be established by standard statistical methods in groups of 5 to 10 subjects.

A COMPARISON BETWEEN ACETYLENE AND FREON REBREATHING FOR MEASURING CARDIAC OUTPUT DURING EXERCISE

P. Norsk, F. Bonde-Petersen, and Y. Suzuki *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan. 1981 p 47-49 refs (For primary document see N82-19817 10-52)

Avail: NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

The suitability of freon rebreathing as a noninvasive measurement method in spaceborne microgravity cardiac output tests was examined. Cardiac output, oxygen uptake, blood pressure, and heart rate were measured for subjects with spontaneous, and subjects with forced respiratory rates during rebreathing. Comparison of their results shows that freon can replace acetylene

if a spontaneous breathing rate is used, and if the end tidal gas fractions are corrected for changes in rebreathing volume. Inadequate mixing can be avoided by using an inert, insoluble gas.

ON-LINE, REAL-TIME DETERMINATIONS OF BREATH-TO-BREATH GAS EXCHANGE
J S Lundsgaard and J Groenlund *In* ESA Human Cardiovascular Adaptation to Zero Gravity Jan 1981 p 50-53 refs (For primary document see N82-19817 10-52)
Avail NTIS HC A04/MF A01; ESA, Paris FF 55 Member States, AU, CN, and NO (+20% others)

A real-time on-line system which measures respiratory gas uptake and release in noninvasive investigations of cardiac output is described. For respiration, a hot-wire anemometer connected to the computer measures true mass gas flow. The nonlinear relation between flow rate and flow signal, which differs between gases, is accounted for by a calibration table in the computer program. Another flowmeter, which measures inspiration, is connected to the first by an alternating switch. A mass spectrometer samples 20 cu cm/min flow in order to measure partial pressures.

CHEMICAL AND MOLECULAR BIOLOGICAL ASPECTS ALKYLHYDRAZINE-INDUCED CARCINOGENESIS IN HUMAN CELLS IN VITRO Interim Report, 1 Sep. 1980 - 31 Aug. 1981
Donald T. Witiak Sep. 1981 20 p refs
(Contract F49620-80-C-0086; AF Proj. 2312)
(AD-A109088; AFOSR-81-0864TR) Avail: NTIS HC A02/MF A01 CSCL 06/20

Carbon-14 labeled 1,1-DMH and 1,2-DMH of high specific activity were prepared and utilized, along with 14C-labeled MMH, to study alkylation of DNA and proteins in low passage human neonatal foreskin derived fibroblasts. When human fibroblasts were treated under conditions which would be expected to lead to a negligible number of transformation events, i.e. cells labeled were in a non-growing environment and the dose of methylhydrazine (1.6 microgram/ml) was well below the ED50 value (62-100 microgram/ml), significant differences in DNA and protein methylation were observed. For both protein and DNA, 1,2-DMH produced a higher degree of methylation than 1,1-DMH, with MMH demonstrating the lowest level. The data suggests that in these cells there are significant differences in the metabolic and/or chemical transformation of the methylhydrazines in the proposed active metabolite, methyl diazonium ion.

NONAUDITORY EFFECTS OF HIGH INTENSITY NOISE ON GROUND CREWS AT A NAVAL AIR STATION Interim Report
David J. Hord and M. A. Coultas 1981 19 p refs
(MF58524002)
(AD-A108996; NAVHLTHRSCHC-81-27) Avail: NTIS HC A02/MF A01 CSCL 06/19

Physiological, behavioral and subjective data were obtained from 14 ground crew considered possibly to be at risk for nonauditory effects of intense noise while working around jet aircraft. Fourteen matched control subjects working in normal noise environments were given the same test protocol. Brain stem evoked potentials, eye tracking behavior, balance, and nystagmus were compared between the groups and found to be nondiscriminating. In addition, subjective mood and perceived illness were compared and found to be the same in the two groups. It was concluded that ground crew wearing the required ear protection devices do not show nonauditory effects of intense noise encountered on their jobs, and that within the confines of the variables studied, no evidence exists that current safety measures and standards are inadequate.

THE EFFECT OF VISUAL INFORMATION ON THE MANUAL APPROACH AND LANDING
P. H. Wewerinke 16 May 1980 72 p refs
(Contract NIVR-1857)
(NLR-TR-80055-U) Avail: NTIS HC A04/MF A01

The effect of visual information combined with a basic display information on manual approach performance on the manual approach and landing task was studied. A pre-experimental, theoretical analysis in terms of the optimal control model for pilot/aircraft was performed, yielding approach performance predictions which could be compared with the experimental results of a moving base simulator program. The model provides a description of the visual perception process involved in the complex manual approach task, with predictive capability. The complex interaction of a variety of task variables is examined.

SIX DEGREE OF FREEDOM MANUAL CONTROLS STUDY REPORT Final Report
G. M. McKinnon, A. Lippay, and M. L. King [1982] 65 p
(Contract NAS9-15939)
(NASA-CR-167532) Avail: NTIS HC A04/MF A01 CSCL 05H

The feasibility of using degree of freedom manual controls in space in an on orbit environment was determined. Several six degree of freedom controls were tested in a laboratory environment, and replica controls were used to control robot arms. The selection of six degrees of freedom as a design goal was based on the fact that six degrees are sufficient to define the location and orientation of a rigid body in space.

(Contract NAS2-10143; SRI Proj. 8134)
(NASA-CR-168611) Avail: NTIS HC A10/MF A01 CSCL 05H

The feasibility of a miniature versatile portable speech prosthesis (VPSP) was analyzed and information on its potential users and on other similar devices was collected. The VPSP is a device that incorporates speech synthesis technology. The objective is to provide sufficient information to decide whether there is valuable technology to contribute to the miniaturization of the VPSP. The needs of potential users are identified, the development status of technologies similar or related to those used in the VPSP are evaluated. The VPSP, a computer based speech synthesis system fits on a wheelchair. The purpose was to produce a device that provides communication assistance in educational, vocational, and social situations to speech impaired individuals. It is expected that the VPSP can be a valuable aid for persons who are also motor impaired, which explains the placement of the system on a wheelchair. E.A.K.

HUMAN FACTORS AND THE REAL WORLD

Bengt Bergstroem *In its* Human Factors in System Develop.: Experiences and Trends Jun. 1981 p 7-13 refs (For primary document see N82-19839 10-54)
Avail: NTIS HC A08/MF A01

The integration of human factors in systems design and development is considered. The role of the ergonomist as an integral member of the design team is depicted. Real world limitations which sometimes prevent optimal systems from being realized are pointed out. These can be technical and economical, or political and legal constraints on design engineers. Limitations may also arise from the planning process or from scientific uncertainty as to the solvability of a problem. Common systems language and systems design criteria improve communication between specialists on the human side and on the hardware side. The identification of systems related tasks and functions has a direct influence on human performance in systems operation and determines their efficiency. Author (ESA)

HUMAN FACTORS IN SYSTEM DEVELOPMENT: STATUS AND EVALUATION

David Meister *In* Research Inst. of National Defence Human Factors in System Develop.: Experiences and Trends Jun. 1981 p 15-76 refs (For primary document see N82-19839 10-54)
Avail: NTIS HC A08/MF A01

Human factors in system development as it is presently performed in the U.S. is described. What is achieved and remaining problems are discussed, indicating research requirements and how human factors research does or does not satisfy these requirements. The way in which the developmental human factors engineer performs and the kinds of information needed are determined by circumstances under which the work is done. These circumstances make demands for supporting human factors research which to a large extent are not now being satisfied. As a consequence, the developmental human factors engineer's ability to perform system development tasks is severely impaired. Author (ESA)

ERGONOMIC CONSIDERATIONS IN PRODUCT DESIGN AND EVALUATION

Toni Ivergaard *In* Research Inst. of National Defence Human Factors in System Develop.: Experiences and Trends Jun. 1981 p 77-95 (For primary document see N82-19839 10-54)
Avail: NTIS HC A08/MF A01

The influence of free market competition, particularly advertising and marketing constraints, on product development is assessed. The need for an ecological approach is stressed while an ergonomic design procedure is outlined. The marketing of products which are offered to consumers, including industrial users, is in some respects good and fulfills useful functions for the consumers. Still, there are many products which are potentially dangerous, unhealthy, uncomfortable, wearing or difficult to use. Ergonomics in product evaluation can help identify these problems. In many countries, the authorities feel obliged to control development in different ways. The extent and direction of these controls depends on the companies themselves investing in ergonomics as part of product development. Author (ESA)

HUMAN FACTORS FOR THE FUTURE: TRENDS AND SPECULATIONS

David Meister *In* Research Inst. of National Defence Human Factors in System Develop.: Experiences and Trends Jun. 1981 p 137-155 refs (For primary document see N82-19839 10-54)
Avail: NTIS HC A08/MF A01

Two possible scenarios for human factors (HF) utilization in the next 20 years are projected. The worst case scenario is one of status quo; it suggests that no fundamental changes in HF research and practice will occur because of the continuing inability of the HF practitioner (the developmental human factors engineer) to apply research to systems development. The best case scenario assumes that the current gap between HF research and practice will be bridged and that consequently the developmental engineer's ability to analyze, evaluate and predict will be significantly increased. SAM: A CONFIGURABLE EXPERIMENTAL TEXT EDITOR FOR INVESTIGATING HUMAN FACTORS ISSUES IN TEXT PROCESSING AND UNDERSTANDING

Roger W. Ehrich Sep. 1981 38 p
(Contract N00014-81-K-0143)
(AD-A109331; CSIE-81-3) Avail: NTIS HC A03/MF A01 CSCL 09/2

There are numerous behavioral issues involving human-machine communications that are exemplified by text editing applications. Examples include scanning mechanisms and information location techniques, command language design, effect of language syntax on productivity and accuracy, and the relationship of syntax to the user task model. In general, there

exist little data to support design goals, and in order to formulate studies of these issues, a flexible text editing system is required. This report describes SAM, a reasonably sophisticated text editor that has table driven command language and syntax that allows reasonably easy reconfiguration for special experiments. In particular, it is straightforward to insert the metering procedures required to measure specific aspects of human performance.

TRANSMISSION OF SINUSOIDALLY CHANGING VERTICAL SPECIFIC FORCE TO THE HEADS OF SEATED MEN MEASURED IN A FLIGHT SIMULATOR
R. A. A. Reutlinger and J. C. vanderVaart May 1981 34 p refs
(VTH-LR-319) Avail: NTIS HC A03/MF A01

Modulus and phase lag of the transmission of vertical specific force between a flight simulator moving base and the heads of 10 male seated subjects were measured over a frequency range of 0.1 to 9 Hz. Subjects were seated unrestrained in a normal relaxed position in a pilot seat with or without seat cushions. Although there is scatter among subjects, prominent peaks at around 1.5, 6, and 10 Hz are found for the case without seat cushions. The presence of seat cushions tends to cause a single larger peak in the modulus at around 4 to 5 Hz, and a larger phase lag at higher frequencies. A modulus close to unity and no phase lag are found both with and without seat cushions at frequencies below 1 Hz. It is difficult to read cockpit instruments in the frequency range 4 to 8 Hz.

INTERACTIONS BETWEEN HELMET MOUNTED SIGHT DISPLAY AND SENSOR PLATFORM UNDER THE INFLUENCE OF A HUMAN PILOT
Erhard Danneberg, Ernst Kohnen, Helmut Stein, and Ulrich Stolzke Jun. 1981 182 p refs In GERMAN; ENGLISH summary Report will also be announced as translation (ESA-TT-746)
(DFVLR-FB-81-30) Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 37,90

For low altitude flight of helicopters at night and with poor visibility, the interaction of a helmet mounted sight display (HMS/D), a moving sensor platform and a human pilot as system user was investigated by means of laboratory, moving simulator, and flight tests. The technical potential of the HMS/D in the laboratory, the tracking accuracy achieved by the pilot on the moving simulator, and the practical application under real flight conditions are considered. Considerable improvements are possible compared to head down displays if the layout of the instrument readings and their combination with an environmental picture are favorable.

PROGRAMMABLE PRINTING TERMINAL M.S. Thesis [TERMINAL IMPRESSOR PROGRAMAVEL]
Luiz Carlos Perondini Corato May 1981 104 p refs In PORTUGUESE; ENGLISH summary
(INPE-2082-TDL/056) Avail: NTIS HC A06/MF A01

A functional model of a Programmable Printing Terminal is proposed in this work. This terminal utilizes an electric typewriter as a printer. Besides the common functions of programmable terminals, this model offers the capability of being configured as a 'terminal concentrator', as well as associated with a cassette-type mass memory. The hardware that implements the proposed model is described at a block diagram level. The operating functions, including a text editor, as well as the software structure that implements them, are described at fluxogram level. Some simulation processes intended to validate selected programming modules are presented. A critical evaluation of the model, as well as some considerations on the possible ways of upgrading it, are made.

PROGRAMMABLE PRINTING TERMINAL [TERMINAL IMPRESSOR PROGRAMAVEL]
Luiz Carlos Perondini Corato Jun. 1981 10 p refs In PORTUGUESE; ENGLISH summary Presented at the 2nd Natl. Meeting on Automation, Salvador, Brazil, Jul. 1981
(INPE-2096-RPE/326) Avail: NTIS HC A02/MF A01

A programmable printing data terminal is described which utilizes an electric typewriter as a printer. An electromechanical set makes this conversion possible with no need for access to the mechanism of the typewriter. The electronic circuit is based on a microprocessor which controls the conversion set and implements the terminal functions. A text editor, adapted to the particularities of the typewriter, is part of the operational program of the terminal.

HC A11/MF A01 CSCL 09/2

DIAM, The Data Independent Accessing Model, is a theory for describing the various ways in which information can be represented in a computer. This report uses a relational model of data to define the information resources of a collection of data archives, and the details of how it is stored to the extent necessary to extract it. Access begins by asking a question of the Relational Model (which cuts across sources in combination). The DIAM model then makes it possible to decompose the question into parts so small that no more than one source is needed to answer each part, translate each part to correspond to the representation used by the source, and recompose the translated parts into the largest possible pieces, each of which corresponds to a common source. These requests are then transmitted to the required sources and the returned information is decomposed and recomposed in precisely the opposite way that the question was, yielding the originally sought answer. The report concludes that it is now both feasible and justified to develop a prototype data base access compiler for experimental testing in existing networks. Author (GRA)

OVERVIEW OF THE CHiP COMPUTER Interim Technical Report
Lawrence Snyder 19 Aug. 1981 13 p refs
(Contracts N00014-80-K-0816; N00014-80-K-0360; NR Proj. SR0-100)
(AD-A109293; CSD-TR-377) Avail: NTIS HC A02/MF A01 CSCL 09/2

The main question under study is how wide the corridor width should be for the switch lattice of the Configurable, Highly Parallel (CHiP) computer. (The CHiP computer family is introduced and its use for parallel algorithm composition is motivated.) It is argued on the basis asymptotic analysis that a constant corridor width is preferred even though such lattices cannot make full use of the processor elements for most complex interconnection patterns, e.g., universal interconnection structures like the cube connected cycles and shuffle exchange, and for certain 'simple' ones, e.g., certain planar graphs. NATURAL LANGUAGE ACCESS TO DATABASES: INTERPRETING UPDATE REQUESTS
Jim Davidson and S. Jerrold Kaplan 30 Sep. 1981 24 p refs
(Grant N00039-80-G-0132)
(AD-A109183) Avail: NTIS HC A02/MF A01 CSCL 09/2

For natural language database systems to operate effectively in practical domains, they must have the capabilities required by real applications. One such capability is understanding and performing update requests. The processing of natural language updates raises problems not encountered in the processing of queries. These difficulties stem from the fact that the user will naturally phrase requests with respect to his conception of the domain, which may be a considerable simplification of the actual underlying database structure. Updates which are meaningful and unambiguous from the user's standpoint may not translate into reasonable changes to the underlying database. Update requests may be impossible (cannot be performed in any way), ambiguous (can be performed in several ways), or pathological (can be performed only in ways which cause undesirable side effects). Drawing on work in Linguistics and Philosophy of Language, we have developed a domain-transparent approach to identifying and performing 'reasonable' changes in response to a user's update request, using only knowledge sources typically present in existing database systems. A simple notion of 'user model' and explanation with respect to the user's state of knowledge are central to the design. This paper describes a system PIQUE (Program for Interpreatation of Query/Update in English), which implements this approach. Author (GRA)

This report has documented the functional design that was developed for an AN/GYQ-21(V) hardware monitor. The report provides a concept of monitoring to place the development of the hybrid monitor in its proper perspective. The report defines the measurement set the monitor will measure. The functional design includes both the software and hardware components with the rationale for their use to be able to monitor the measurement set selected. The software specifications include tasks such as coordination between the host processor and monitor, measurements, and measurement reporting. Foremost in the designer's mind has been the ease of user interface with the monitor. The hardware/specifications include such areas as packaging, power requirements, EMI/RFI emissions, Qualifier Logic, and special modules. The report includes a theory of operations that references the design and specifications and provides an insight into functional breakout by measurement requirements. Author (GRA)

BEST AVAILABLE TECHNOLOGIES (BATS) FOR COMPUTER SECURITY Interim Report
Carl E. Landwehr 21 Dec. 1981 27 p refs
(RR0140941)
(AD-A109189; NRL-8554) Avail: NTIS HC A03/MF A01 CSCL 09/2

Over more than a decade, government, industry, and academic centers have invested substantial resources in techniques for developing secure computer systems. The major projects to develop such systems are surveyed from the perspective of a system developer about to undertake the design and implementation of a secure software system. Experience with specific techniques and applications is summarized, and recommendations are given. Suggested approaches to each phase of the system life cycle are provided. The principal recommendations to developers are that they consider the security requirements of each system as part of its functional requirements, rather than as a separate set of requirements, that they continue to think about security throughout the design and implementation of the system; and that they use the best available software engineering technology. STUDY AND EXPERIMENTATION OF HORIZONTAL MICROPROCESSOR MACHINE DESCRIPTION TECHNIQUES Final Report, Apr. - Nov. 1981
John L. Gieser and Robert J. Sheraga 1 Nov. 1981 69 p refs
(Contract DAAG29-81-C-0018)
(AD-A109136; ARO-18012.1-S-EL) Avail: NTIS HC A04/MF A01 CSCL 09/2

This document reports on the research and investigation aspects of microarchitecture description methodologies. Its primary objectives are: (1) to identify the methodology that appears to have the most promise for use in an automatic microcode generation system; and (2) to define the means for developing the necessary tools and techniques needed for further evaluating this methodology. In automatically generating microcode from a high level source language, a significant issue is the description of the target microengine architecture. The techniques and methodologies used to accomplish this must address the practical issues of: (1) a detailed description of all microprogrammed controlled hardware elements of the microengine, the microinstruction, the rules for valid use of all microprogrammed features, and the behavior of microprogrammed operations; and (2) the use of this description to interpret and decode higher level source intermediate language to form microoperations and ultimately microinstructions. This work is a step in conceptually defining the techniques and methodologies for microarchitecture descriptions to accomplish the above. Author (GRA)

A REMOTE TERMINAL EMULATOR FOR PRIME COMPUTERS
Daniel H. Forsyth, Jr. Aug. 1981 34 p refs
(Contract N00014-79-C-0873; GIT Proj. G36-643)
(AD-A108818; GIT-ICS-81/12) Avail: NTIS HC A03/MF A01 CSCL 09/2

A remote terminal emulator is a device that emulates sources of on-line input to a computer system, and is one of the most reliable tools for measuring the performance of time-shared computer systems. The remote terminal emulator described in this report provides simultaneous emulation for a number of communication lines as well as the software necessary for the preparation of scripts (a sequence of actions to be performed by the emulator) the setup and control of test sessions, and the analysis of test results. INITIAL EXPERIENCE WITH A LOCAL NETWORK: NET/ONE BY UNGERMANN-BASS, INCORPORATED
Philip H. Enslow, Jr., Paul D. Manno, and Jeannette T. Myers 1 Oct. 1981 26 p refs
(Contracts N00014-79-C-0873; F30602-78-C-0120; GIT Proj. G36-643; GIT Proj. G36-649)
(AD-A108817; GIT-ICS-81/11) Avail: NTIS HC A03/MF A01 CSCL 09/2

Net/One, the local area network produced by Ungermann-Bass, has been installed and operated in the Georgia Tech Fully Distributed Processing System's (FDPS) testbed. Currently Net/One interfaces with Prime 400, Prime 550, and PDP 11/45 computers which are located in the computer lab and several different types and brands of ASCII, asynchronous terminals. This report includes a description of the design and operation of the various Net/One components, a discussion of the rationale for the selection of Net/One for installation in the FDPS testbed, our initial experiences with Net/One including problems encountered and their solutions, and concludes with a description of the plans for future enhancements to its operation. PERFORMANCE OF DISTRIBUTED AND DECENTRALIZED CONTROL MODELS FOR FULLY DISTRIBUTED PROCESSING SYSTEMS. INITIAL SIMULATION STUDIES Final Technical Report, 1 Jul. 1980 - 30 Jun. 1981
Phillip H. Enslow, Jr. and Timothy G. Saponas Jul. 1981 103 p refs
(Contract F30602-78-C-0120; GIT Proj. G36-654)
(AD-A108974; GIT-ICS-81/09) Avail: NTIS HC A06/MF A01 CSCL 09/2

An essential component of a Fully Distributed Processing System (FDPS) is the distributed and decentralized control. This component unifies the management of the resources of the FDPS and provides system transparency to the user. In a previous study, the problems of distributed and decentralized control were analyzed resulting in the specification of several control models. This study continues that work by further specifying the control models defined in the first report and comparing the performance of these models in various environments. This performance analysis is accomplished by means of simulation experiments. The results of the experiments indicate that the control message traffic generated by the distributed and decentralized control is much less than expected and probably does not present a barrier to the implementation of FDPSs. Comparison of the results of the simulation of a uniprocessor and that of an FDPS indicate that little or no loss of performance is experienced by the FDPS. An important limitation of these initial performance studies is the fact that user traffic is not included in this series of tests. Author (GRA)

ON THE POWER OF PROBABILISTIC CHOICE IN SYNCHRONOUS PARALLEL COMPUTATIONS
John H. Reif Nov. 1981 32 p refs
(Contract N00014-80-C-0674; Grant NSF MCS-79-21024)
(AD-A109047; TR-30-81) Avail: NTIS HC A03/MF A01 CSCL 09/2

This paper introduces probabilistic choice to synchronous parallel machine models; in particular parallel RAMs. The power of probabilistic choice in parallel computations is illustrated by O(log n) time algorithms for connectivity and recognizing bipartite graphs and O(log n) squared time algorithms for testing if a graph has a perfect matching, testing in time O(n) irreducibility of polynomials over finite fields. We characterize the computational complexity of time, space, and processor bounded probabilistic sequential RAMs. We show that parallelism uniformly speeds up time bounded probabilistic, sequential RAM computations by nearly a quadratic factor. We also show that probabilistic choice can be eliminated from parallel computations by introducing nonuniformity. Author (GRA)

SYNTHESIS OF COMMUNICATING PROCESSES FROM TEMPORAL LOGIC SPECIFICATIONS
Zohar Manna (The Wiezmann Inst., Rehovoth, Israel) and Pierre Wolper Sep. 1981 29 p refs Presented at the Workshop on Logics of Programs, Yorktown-Heights, N.Y., 1981
(Contract N00014-76-C-0687; Grants AF-AFOSR-0014-81; NSF MCS-80-06930)
(AD-A109853; SU-STAN-CS-81-872) Avail: NTIS HC A03/MF A01 CSCL 09/2

In this paper, we apply Propositional Temporal Logic (PTL) to the specification and synthesis of the synchronization part of communicating processes. To specify a process, we give a PTL formula that describes its sequence of communications. The synthesis is done by constructing a model of the given specifications using a tableau-like satisfiability algorithm for PTL. This model can then be interpreted as a program. Author (GRA)

MICROPROCESSOR AIDED CONTROL AND SIGNAL PROCESSING SYSTEM FOR A LASER-TWO-FOCUS VELOCIMETER IN TURBOMACHINERY RESEARCH Final Report, Sep. 1980
Helmut Selbach Bonn Bundesministerium fuer Forschung und Technologie Nov. 1981 52 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-190; ISSN-340-7608) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 10,90

A control and signal processing system for a time of flight velocimeter for measurement of velocity and turbulence in the rotating components of turbomachinery and for other applications was developed. The signal processor is based on pulse air timing techniques and multichannel analysis. An electronic shaft angle encoder measures the velocity distributions at up to 16 positions between successive rotor blades by tagging each time interval measurement with the proper angular position of the blade rows. The control functions are carried out by microprocessors. Author (ESA)

FAST PROCESSOR FOR SPECTRAL ANALYSIS (ORAS)
P. Gilles Aug. 1981 21 p Presented at 20th URSI General Assembly on Telecomunications and Digital Signal Processing, Washington, D.C., 11 Aug. 1981
(CRPE-NT-106) Avail: NTIS HC A02/MF A01

A digital peripheral for a minicomputer, microprogrammed and macroprogrammable, dedicated to geophysical measurements signal analysis is presented. Processing capabilities include linear/vectorial functions, real/complex functions, and auto/cross spectra of an adjustable number of channels. The ORAS gives a HP 1000 F computer the capability of quickly calculating and integrating the spectral matrices of VLF satellite data with nine, or fewer, components. The complex Fourier transform with summation takes 20 msec for 1024 samples. The computer software controls the sequence of operations and the data transfers up to 1 M w/sec. Author (ESA)

COMPUTATIONALLY FAST ALGORITHMS FOR ARMA SPECTRAL ESTIMATION Ph.D. Thesis
Koji Ogino 1981 187 p
Avail: Univ. Microfilms Order No. 8126278

The high performance method for obtaining an ARMA model spectral estimate of a wide-sense stationary time series was found to provide typically superior performance when compared to such contemporary approaches as the Box-Jenkins and maximum entropy methods. Fast recursive algorithmic implementations of the high performance method are developed. They are recursive in the sense that as a new element of the time series is observed, the parameters characterizing an ARMA spectral estimate are algorithmically updated. The number of multiplications and additions required at each recursive stage are of the order p with p being the number of denominator coefficients of the ARMA model. Methods of modification of the data are applied to achieve a significant computational improvement. The development is predicated on utilization of various projection operators. Dissert. Abstr.

The development of a mathematical algorithm together with a data processing system, in the area of linear programming is studied with the purpose of finding several alternatives related to the demands of maritime transportation. The modeling of the theory used for the solution of transportation problems is presented, emphasizing the decomposition technique idealized by Dantzig-Wolfe. The mathematical selected (Mathematical Programming System), is discussed. Finally, a practical application of a typical problem related to Navy operations is presented, generating a model whose data approximate the reality within the dimensions of naval problems encountered. A short discussion of the theme presented, together with a synopsis of suggestions that may influence future studies and developments of the topic are presented.

PRACTICAL ISSUES IN HAVING A USABLE LIBRARY OF SOFTWARE SPECIFICATIONS Interim Technical Report
Ralph M. Weischedel Mar. 1981 40 p refs
(Contract F49620-79-C-0131; Grants AF-AFOSR-3539-78; AF-AFOSR-0190-80; AF Proj. 2304)
(AD-A108656; AFOSR-81-0799TR) Avail: NTIS HC A03/MF A01 CSCL 09/2

Though formal specifications of software modules offer much toward the design problems of large software systems, creating formal specifications is very difficult, requiring much upfront effort. This paper examines a common idea for dealing with the high cost of software, but in the context of specification. That idea is a pool or 'library' of specifications, so that it is easy to build on the work of others. Unlike other efforts that have concentrated on technical problems in having such a library, this paper identifies and studies several common sense requirements on such a library being effectively used. Such issues are closer related to human factors than to technical problems; yet these are clearly as critical in use as technical issues. Our conclusions have arisen from two studies. In one, we wrote several module specifications in the form that might appear in a library. The module varied in complexity from a stack to the kernel of a text editor; the text editor specifications ranged in length from 9 to 28 pages including copious comments as in-line documentation. The second study compared portions of the English and formal specifications of KSOS (Ford Aerospace, 1978), the Kernelized Secure Operating System. The paper may be viewed as rather tutorial about writing correct, understandable formal specifications for others to use in their system design.

PREREQUISITES TO DERIVING FORMAL SPECIFICATIONS FROM NATURAL LANGUAGE REQUIREMENTS Final Report, 1 Jul. 1980 - 31 Aug. 1981
Ralph M. Weischedel Oct. 1981 21 p refs
(Grant AF-AFOSR-0190-80; AF Proj. 2304)
(AD-A108612; AFOSR-81-0798TR) Avail: NTIS HC A02/MF A01 CSCL 05/2

Since English specifications and formal specifications of modules are complementary and since formal specifications require so much effort to write, our work is investigating application of artificial intelligence techniques to aid in the software specification process. The first area studied is comparing English descriptions with formal specifications of the same software module. This work is now complete; however, some of the examples will continue to serve as a guide to the software tool being constructed. The second area is suggesting modifications to formal specification languages, which would make them more understandable. In particular, we have been suggesting alternatives to logical quantifiers. The third and fourth areas deal with the syntactic and semantic components of an experimental software tool. Its purpose is to test our solutions to a handful of problems in transforming English descriptions to formal specifications under significant user assistance. In dealing with syntactic ambiguity, one of the solutions that many have speculated about is the use of a semantic component to reject anomolous parses; we intend to test its effectiveness using the RUS grammar. When ambiguity is not resolved, questions must be presented to the user for his/her selection of the intended interpretation. Partial heuristics for this are part of the results of this year's effort. In addition, modification of the RUS parser and dictionary for the domain of software specification will continue during the next year.

THE SOFTWARE ACQUISITION RESOURCE EXPENDITURE (SARE) METHODOLOGY, DATA REQUIREMENTS AND DATA UTILIZATION
W. E. Byrne 7 Oct. 1981 20 p Presented at the 16th Ann. DOD Cost Anal. Symp., Arlington, Va., 4-7 Oct. 1981
(AD-A109372) Avail: NTIS HC A02/MF A01 CSCL 09/2

SARE reporting is a data collection methodology used to collect software-unique financial data plus technical data that make the financial data meaningful. The data can be used to monitor the progress of software development work on the contract in which the data is collected. Also, the data is to be submitted to a multiproject Air Force Systems Command (AFSC) software data base. The data base will help formulate, calibrate, and validate software cost/schedule estimation methods. GRA

METAPHOR: AN INESCAPABLE PHENOMENON IN NATURAL LANGUAGE COMPREHENSION Interim Report

Jaime G. Carbonell 4 May 1981 25 p refs
(Contracts N00014-79-C-0661; F33615-78-C-1551; ARPA Order 3597)
(AD-A109026; CMU-CS-81-115) Avail: NTIS HC A02/MF A01 CSCL 09/2

Interpreting metaphors is an integral and inescapable process in human understanding of natural language. This paper discusses a method of analyzing metaphors based on the existence of a small number of generalized metaphor mappings. Each generalized metaphor contains a recognition network, a basic mapping, additional transfer mappings, and an implicit intention component. It is argued that this method reduces metaphor interpretation from a reconstruction to a recognition task. Steps towards automating certain aspects of language learning are also discussed. Part II analyzes analogical mappings underlying metaphors and implications for inference and memory organization. Regularities have been observed indicating that certain types of conceptual relations are much more apt to remain invariant in analogical mappings than other relations, resulting in an induced invariance hierarchy. The central thesis is that human inference processes are governed by the same analogical mappings manifest as metaphors in language. GRA

(Contract F49620-79-C-0099; SRI Proj. 8752; AF Proj. 2304)
(AD-A108979; AFOSR-81-0853TR) Avail: NTIS HC A06/MF A01 CSCL 09/2

This report covers progress on a 2-year research effort toward the development of new theorem-proving methods for program verification, and the empirical investigation of these methods in actual verification systems. The research conducted during the course of the project focused on methods for simplifying formulas of the kind that arise frequently in the verification of programs. The importance of simplification methods, as opposed to pure proof methods, was pointed up by verification work conducted under a previous AFOSR contract. Perhaps the most significant outcome of the project is the development of an experimental theorem prover that has been used extensively in the proof of correctness of the design of a fault-tolerant operating system developed under NASA support. We believe that the technology embodied in this experimental system could be successfully applied to the development of a production verification system. Author (GRA)

GPRINT: A LISP PRETTY PRINTER PROVIDING EXTENSIVE USER FORMAT-CONTROL MECHANISM

Richard C. Waters Oct. 1981 23 p refs
(Contracts N00014-80-C-0505; N00014-75-C-0643)
(AD-A109031; AI-M-611) Avail: NTIS HC A02/MF A01 CSCL 09/2

A pretty printer is presented which makes it easy for a user to control the format of the output produced. The printer can be used as a general mechanism for printing, data structures as well as programs. It is divided into two parts: a set of formatting functions, and an output routine. Each formatting function creates a sequence of directions which specify how an object is to be formatted if it can fit on one line and how it is to be formatted if it must be broken up across multiple lines. Based on the line length available, the output routines decides what structures have to be broken up across multiple lines and produces the actual output following the directions created by the formatting functions. The directions passed from the formatting functions to the output routine form a well defined interface: a language for specifying formatting options. Three levels of user format-control are provided. A simple template mechanism makes it easy for a user to control certain aspects of the format produced. A user can exercise much more complete control over how a particular type of object is formatted by writing a special formatting function for it. He can make global changes in format by modifying the formatting process as a whole. Author (GRA)

AN EVALUATION OF ESTIMATORS FOR RECEIVER DETECTION PROHABILITIES AND UNKNOWN SIGNAL POPULATION SIZE M.S. Thesis

David Scott Hendrickx Sep. 1981 70 p refs
(AD-A109536) Avail: NTIS HC A04/MF A01 CSCL 12/1

Imagine a signal acquisition system composed of a number of receivers or sensors concurrently scanning the same domain for signals. It is reasonable to expect that different signals will each be detected by a different subset of receivers over the scanning period. Using the data collected from the receivers, it is possible to estimate the total signal population size including those signals not detected by any receiver. Additionally, it is possible to estimate the probability each individual receiver detects signals. Several estimators are developed for these quantities in the context of a model designed to represent the signal detection process. This model forms the basis for a simulation conducted to analyze the behavior of the estimators over a variety of conditions. Author (GRA)

THE USE OF A NONQUADRATIC MODEL IN A CONJUGATE GRADIENT METHOD OF OPTIMIZATION WITH INEXACT LINE SEARCHES

A. Tassopoulos and C. Storey May 1981 19 p refs
(MATHS-Res-157) Avail: NTIS HC A02/MF A01

Conjugate gradient methods in optimization were studied. The traditional search method exhibits finite termination when applied to quadratic problems if exact line searches are used. The use of these, however, can cause excessive computational effort and consequently conjugate gradient methods, using inexact line searches, are suggested. Using a rational model (nonquadratic), different standard test functions were tried in various dimensions in order to examine the effectiveness of three methods: (1) function minimization by conjugate gradients, i.e., standard method; (2) conjugate gradient optimization method invariant to nonlinear scaling; and (3) conjugate direction method. Numerical results show the performance of the three methods, tested on a variety of updating formulas for the search directions and line search accuracy parameters. Author (ESA)

STUDY ON THE EXTENSION OF THE STROBOSCOPIC METHOD TO THE SECOND ORDER

J.-P. Halbritter Paris ESA Apr. 1981 147 p refs
(Contract ESOC-3856/79/D-JS(SC))
(ESA-CR(P)-1488) Avail: NTIS HC A07/MF A01

The second order effects of the second coefficient considered in gravity field expansion of planets in zonal spherical harmonics (J2) are calculated by an algebraic processor which exploits the structure of the one revolution solution. The stroboscopic method is outlined. Computer programs are given. Sample runs show the expected increase in accuracy. Results for one revolution are given for two inclinations and eccentricities from 0.1 to 0.9. The method is applied to long-term evolution over 1000 revolutions. The graphs show no deterioration of accuracy compared with precise stable numerical integration of the orbital elements. The processor can handle other perturbations after minor modifications. PSICON: A SIMULATION PACKAGE FOR THE DESIGN OF DIGITALLY CONTROLLED SYSTEMS

D. A. Linkens, L. S. Gray, M. Menad, and N. Mort (Royal Naval Engineering College) Oct. 1981 29 p refs
(RR-162) Avail: NTIS HC A03/MF A01

A simulation language based on a block oriented continuous systems simulator (PSI) is described. Using the message transfer capability of the multitasking operating system of a minicomputer, external digital control algorithms can be developed rapidly in FORTRAN, while retaining the advantages of a flow chart based and precompiled structure of the continuous simulation language. The use of the package is illustrated by (1) an anesthetics problem where time delay dynamics are controlled, using an external FORTRAN program comprising a Smith predictor plus a PID regulator; and (2) a self tuning adaptive autopilot for ship steering. The package gives fast simulation and good interactive properties, with the external controller segments giving the required flexibility for a wide range of uses. Author (ESA)

IMPROVEMENTS OF THE ALGORITHMS USED FOR MONTE-CARLO DIRECT SIMULATION COMPUTATIONS

M. N. Macrossan Oct. 1981 20 p refs
(Contract AT/2037/084; Grant SRC-GR/B/67025)
(IC-Aero-81-03) Avail: NTIS HC A02/MF A01

Errors arising from the searching scheme used in the Monte Carlo direct simulation of gas flow program are identified. The calculation of cell volumes is clarified and the errors in using the four point searching scheme are examined. An error which results in the smearing of local surface coefficients and another which reduces these coefficients near the axis of the flow are overcome by a procedure which checks surface collisions. A plotting program produces a drawing of the cell boundaries from the Monte Carlo program input data in order to verify the arrangement of cells in the flow field. For a curved body surface, surface segment length is varied gradually. The requirements that cell sizes and time interval be small reduce errors.

SIMULATION OF LINEAR MULTI-INPUT/MULTI-OUTPUT SYSTEMS BY PIECEWISE CONTINUOUS INPUT FUNCTIONS AND VARIOUS OPTIONS FOR THE GRAPHICAL REPRESENTATION OF RESULTS

Josef Petry Sep. 1981 129 p refs In GERMAN; ENGLISH summary Report will also be announced as translation (ESA-TT-749)
(DFVLR-Mitt-81-23) Avail: NTIS HC A07/MF A01; DFVLR, Cologne DM 27

A FORTRAN program for the simulation of linear continuous systems with multiple inputs and outputs is presented for regulation analysis. The input functions should be treatable as trajectories of ordinary homogeneous linear differential equation systems with constant coefficients. The program flow chart is discussed with emphasis on the initialization phase and the integration over the successive continuity intervals. Subprograms are provided for numerical or graphical presentation of the computed trajectories. The implementation and usage of the program is illustrated in several examples. Author (ESA)

PROGRAMMING PROCESSOR INTERCONNECTION STRUCTURES Interim Technical Report

Lawrence Snyder Oct. 1981 28 p refs
(Contracts N00014-80-K-0816; N00014-80-K-0360; Proj. Blue CHiP)
(AD-A109294; CSD-TR-381) Avail: NTIS HC A03/MF A01 CSCL 09/2

Parallel computer architecture complicates the already difficult task of parallel programming in many ways, e.g., by a rigid interconnection structure, addressing complexity, and the shape and size mismatches. The CHiP computer is a new architecture that reduces these complications by permitting the processor interconnection structure to be programmed. This new kind of

programming is explained. Algorithms are presented for several interconnection patterns including the torus and the complete binary tree and general embedding strategies are identified.

DEVELOPMENT OF A COMPUTER CONSULTING SYSTEM USING DECISION RULES [DESENVOLVIMENTO DE UM SISTEMA DE CONSULTA, USANDO REGRAS OF DECISAO]
Edson Luiz Franca Senne and Paulo Ouvera Simoni Jan. 1982 28 p refs In PORTUGUESE; ENGLISH summary Presented at the 33rd Ann. Meeting of SBPC, Salvador, Brazil, 8-15 Jul. 1981
(INPE-2296-PRE/068) Avail: NTIS HC A03/MF A01

A computer consultation system is developed using artificial intelligence techniques and decision rules as a means for knowledge representation. The system consists of three main subsystems: the rule acquisition system, the diagnosis system, and the explanation system. The knowledge acquisition subsystem was designed as an interactive program in order to simplify the task of transferring knowledge to the system. This process occurs in two levels: enlarging or modifying the knowledge bank introducing new decision rules or changing existing ones; and acquiring new primitive concepts with which the rules are built up. The independence between the acquisition mechanism and the knowledge domain was given special consideration during the acquisition system design phase. Details are given on the acquisition system implementation, as well as on the diagnosis and explanation systems data structures. S.L.

A system to lay out custom circuits that recognize regular languages can be a useful VLSI design automation tool. This paper describes the algorithms used in an implementation of a regular expression compiler. Layouts that use a network of programmable logic arrays (PLA's) have smaller areas than those of some other methods, but there are the problems of partitioning the circuit and then placing the individual PLA's. Regular expressions have a structure which allows a novel solution to these problems: dynamic programming can be used to find layouts which are in some sense optimal. Various search pruning heuristics have been used to increase the speed of the compiler, and the experience with these is reported in the conclusions.

A MULTIVARIABLE FEEDBACK CONTROL PROBLEM WITH APPLICATION TO STRIP BASE CONTROL FOR SENDZIMIR MILLS
D. H. Owens Jul. 1981 14 p refs
(RR-153) Avail: NTIS HC A02/MF A01

The design of feedback controllers for a plant with transfer function matrix G(s)=diag [g sub i(s)]G sub m, where G sub m is a square and constant matrix and g sub i(s) is a scalar transfer function, 1< or = i < or = m is considered. The case when g sub i(s) = g(s), 1< or = i < or = m, and G sub m is singular or almost singular is emphasized. The robustness of the design with respect to errors in G sub m is represented in terms of a system of strict inequalities. This case is amenable to analysis in the standard, nonstandard and robustness sense.

THE RECEDING HORIZON PRINCIPLE FOR DISTRIBUTED SYSTEMS
S. P. Banks Dec. 1981 26 p refs Presented at J. Franklin Inst. Conf. on Control of Distributed Systems, Penn.
(RR-167) Avail: NTIS HC A03/MF A01

A nonlinear control law which improves on the classical linear quadratic solution is obtained by generalizing the receding horizon principle to wave and diffusion type distributed parameter systems. If the system operator (A or B) generates a group, the generalization is straightforward. In a system defined by a semigroup, spaces H sub 1 (-t) and H sub 2 (-t) are introduced. When A is self-adjoint with discrete spectral resolution the feedback control can be found explicity. Bounded B is assumed. Wave and heat equation examples show that the control reacts more quickly than the linear quadratic solution to large error states, but more slowly to small disturbances. Author (ESA)

OPTIMAL RENDEZVOUS BETWEEN CLOSE CIRCULAR ORBITS Ph.D. Thesis
Larry Douglas Plexico 1981 157 p
Avail: Univ. Microfilms Order No. 8128323

Optimal fixed time rendezvous trajectories between close circular orbits are determined. The scheme utilizes necessary conditions applied to equations of motion linearized about a point moving on a nearby reference orbit. Trajectories involving two, three, and four impulses are discussed. In the two impulse case, direct comparisons are made between linear solutions and those derived using classical conic equations. The choice of reference orbit radius is critical in developing an accurate linear model. The development of a reference orbit whose radius depends on boundary conditions is described, and its advantages are discussed. Finally, a method for arriving at a nonlinear solution is described. Selected parameters from the linear solution are applied to classical conic equations, and a series of Lambert problems are solved. Dissert. Abstr.

STOCHASTIC CONVERGENCE OF RANDOMLY WEIGHTED SUMS Ph.D. Thesis

Carol Ann Calhoun 1981 71 p

Avail: Univ. Microfilms Order No. 8129445

The stochastic convergence of randomly weighted sums S sub n is investigated. To obtain convergence of weighted sums involving Banach space valued random variables, some geometric conditions must be placed on the Banach space. The classical strong law of large numbers holds only in Banach spaces of type p. Direct analogs of results for random weights were obtained by placing certain independence conditions on the weights and by assuming the Banach space of type p. However, in obtaining an analog of the result, a more restrictive condition is needed on the Banach space, namely that of p smoothability due to the possible lack of independence of the special weights under consideration. Also, an example shows that if the weights and the Banach space valued random variables are dependent, then S sub n may not converge almost surely or in probability. Hence, the correlation between the weights and the Banach space valued random variables must be considered. Dissert. Abstr.

AN EXAMINATION OF STABILITY CRITERIA FOR ITERATIVE NUMERICAL SCHEMES USED IN SOLVING DIFFERENTIAL EQUATIONS

Katherine Moore Jul. 1981 35 p refs

(RAE-TR-81081; RAE-Aero-3508; BR81080) Copyright. Avail: Issuing Activity

The stability of numerical schemes for solving algebraic finite difference equations, resulting from finite difference approximations to differential equations, is discussed. It is suggested that the von Neumann method together with its stability criterion provides a reasonably simple way of determining stability. However, there are limitations in its applicability, which are indicated. The method is tested in two examples. How best to treat first and mixed derivative terms, occurring in differential equations, is indicated. Author (ESA)

ASYMPTOTIC PROPERTIES OF UNKNOWN SYSTEMS

D. H. Owens Sep. 1981 6 p refs Presented at I.E.E.E. Conf. CDC, San Diego, California, 1981

(RR-156) Avail: Issuing Activity

Controller design for multivariable systems with uncertain dynamics, and the difficulty of making precise theoretical predictions based on uncertain data, is discussed. Formalization of this problem and description of how asymptotic analysis which plays an important role in the presence of severe plant uncertainty was examined by differential sensitivity methods and, by adaptive and self tuning control. Low gain and high gain theories are considered. Asymptotic analysis for root loci and singular perturbations is cited. The framework for a systematic design tool is presented. A theorem is proven for the typical structure, providing existence and parameterization of stabilizing controllers, along with an asymptotic characterization of performance. Author (ESA)

CONSERVATIVE SUPRA-CHARACTERISTICS METHOD FOR SPLITTING THE HYPERBOLIC SYSTEMS OF GASDYNAMICS FOR REAL AND PERFECT GASES Progress Report, 1 Jul. 1980 - 31 Sep. 1981

C. K. Lombard Jan. 1982 37 p refs

(Contract NAS2-10744)

(NASA-CR-166307) Avail: NTIS HC A03/MF A01 CSCL 12A

A conservative flux difference splitting is presented for the hyperbolic systems of gasdynamics. The stable robust method is suitable for wide application in a variety of schemes, explicit or implicit, iterative or direct, for marching in either time or space. The splitting is modeled on the local quasi one dimensional characteristics system for multi-dimensional flow similar to Chakravarthy's nonconservative split coefficient matrix method; but, as the result of maintaining global conservation, the method is able to capture sharp shocks correctly. The embedded characteristics formulation is cast in a primitive variable the volumetric internal energy (rather than the pressure) that is effective for treating real as well as perfect gases. Finally the relationship of the splitting to characteristics boundary conditions is discussed and the associated conservative matrix formulation for a computed blown wall boundary condition is developed as an example. The theoretical development employs and extends the notion of Roe of constructing stable upwind difference formulas by sending split simple one sided flux difference pieces to appropriate mesh sites. The developments are also believed to have the potential for aiding in the analysis of both existing and new conservative difference schemes. M.G.

FUZZY INFERENCE USING A MODIFIED MODUS PONENS RULE [INTERENCIA NEBULOSA UTILIZANDO O MODUS PONENS MODIFICADO]

deOliveira Orion Silva and Celso de Renna Esouza Sep. 1981 29 p refs In PORTUGUESE; ENGLISH summary Presented at 33rd Reuniao Ann. da SBPC, Salvador-Bahia, Brazil, 8-15 Jul. 1981

(INPE-2224-PRE/020) Avail: NTIS HC A03/MF A01

The modus ponens inference rule for fuzzy premises and conclusion can be described as follows: If x is P, then y is Q (represented by (x,y) is (Bar-P'+ Bar-Q); x is R; therefore, y is Ro (Bar-P'+ Bar-Q); where P' is the complement of P,Bar-P' is the cylindrical extension of P' over the universe of Q,Bar-Q is the cylindrical extension of Q over the universe of P, and + is the bounded sum operation. It follows that is R = P, all values of the tribution Po (Bar-P'+ Bar-Q) are greater than or equal to the corresponding ones from Q. The results that the values are > or = Q is due to a certain information loss in the application of +. Another binary operation is proposed, improving the result obtained when R = P. Moreover, the association of a degree of belief in the interval (0.1) to the implication is allowed, thus generalizing the fuzzy modus ponens rule. M.G.

ACCELERATION OF CONVERGENCE OF A VECTOR SEQUENCE BY REDUCED RANK EXTRAPOLATION Final Report, 1975 - 1980

Robert P. Eddy Nov. 1981 60 p refs Presented at the 1st Ann. Workshop on the Inform. Linkage Between Appl. Math. and Ind., Monterey, Calif., 23-25 Feb. 1978 Submitted for publication
(AD-A108765; DTNSRDC-81-084) Avail: NTIS HC A04/MF A01 CSCL 12/1

A new family of methods, called reduced rank extrapolation, is developed for accelerating convergence of the sequence of vectors generated during the iterative solution of a system of m linear algebraic equations in m unknowns. Large systems of this kind arise, for example, in the finite difference or finite element solution of partial differential equations. Reduced rank extrapolation is derived from full rank extrapolation, which is a straightforward generalization to vector space of the well known Aitken delta sq.-shanks e sub 1, scalar extrapolation. It is applicable when the iteration has reached a point where only a few, say r, eigenvalues dominate the situation and hence only r difference vectors can be linearly independent to specified tolerance. The rank, r, is determined during the solution of an auxiliary problem of best approximation in vector space, i.e., 'best' in the sense of minimizing some specified vector norm. Least squares theory, corresponding to the Euclidean norm, is developed in detail herein. Application to Laplace's equation in a square and in a cube yielded reduction in computation time by a factor ranging between 2.4 and 4.7, and reduction in iteration count by a factor ranging between 3.6 and 5.4. COMMENTS ON THE DOUBLY ASYMPTOTIC APPROXMATION. 2: A SIMPLE APPROXIMATION FOR CUTOFF VELOCITY Final Report, Jan. - Jun. 1981

David W. Nicholson and Martin H. Marcus 15 Sep. 1981 14 p refs
(AD-A108926; NSWC/TR-81-329-2) Avail: NTIS HC A02/MF A01 CSCL 19/4

A model problem is used to examine the error of a simple approximation, obviating the calculation of relief pressures used in the Doubly Asymptotic Approximation. The error is a function of a quantity which may be interpreted as the ratio of structural response times to fluid pressure decay times. The greatest relative error is about 27% and usually is somewhat less, suggesting the use of a simple 'correction factor' for cutoff velocity. Author (GRA)

ACCELERATED CONVERGENCE OF STRUCTURED BANDED SYSTEMS USING CONSTRAINED CORRECTIONS Final Report, Oct. 1980 - Aug. 1981

Karl Kneile AEDC Dec. 1981 22 p
(AD-A108805; AEDC-TR-81-22) Avail: NTIS HC A02/MF A01 CSCL 12/1

Descretization of fluid flow equations results in a structured banded system of equations. Interative methods used to solve such a system transfer information rapidly between neighboring points but exhibit slow global communication when the system is large. This phenomenon results in a slow convergence with the asymptotic stages showing a spatially smooth behavior for the errors, iterative corrections, and residuals. This smooth behavior is exploited by approximating the error and corrections with an interpolation over a selected subset of the grid. A variational form is used to compress the original system of equations into a smaller system. This compression is repeated through several levels of grid sizes to obtain a dramatic improvement in convergence rate. A relaxation parameter is dynamically calculated at each step with a negligible increase in computational effort. Although the method was developed for solving full potential flow using a variational principle, it is applicable to other problems with the structured banded property. Author (GRA)

K-CONNECTIVITY IN RANDOM UNDIRECTED GRAPHS

John H. Reif and Paul G. Spirakis 1981 19 p refs
(Contract N00014-80-C-0674; Grant NSF MCS-79-21024)
(AD-A108826; TR-19-81) Avail: NTIS HC A02/MF A01 CSCL 12/1

This paper concerns vertex connectivity in random graphs. We present results bounding the cardinality of the biggest k-block in random graphs of the G sub n,p model, for any constant value of k. These results generalize those of (Erdos, Renyi, 60) and (Karp, Tarjan, 80) for k = 1 and 2. We furthermore prove here that the cardinality of the biggest k-block is > or = n-logn with probability > or = 1/n-squared for p > or = c1(k)/n and c1(k) > k + 2. We also show that if p > or = c(k)(logn)/n with c(k) > 32 k-squared then the graph G sub n,p is k-connected with probability > or = 1-2n to the -d'(k) power, d'(k) > 1. GRA

STRONG K-CONNECTIVITY IN DIGRAPHS AND RANDOM DIGRAPHS

John H. Reif and Paul G. Spirakis Oct. 1981 31 p refs
(Contract N00014-80-C-0674; Grant NSF MCS-79-21024)
(AD-A109034; TR-25-81) Avail: NTIS HC A03/MF A01 CSCL 12/1

This paper concerns an extension of the strong connectivity notion in directed graphs. A digraph D is k-strongly connected if, for each x,y vertices of D, there exist > or = k vertex disjoint paths from x to y and also > or = k vertex disjoint paths from y to x. A k-strong block of a digraph D is a maximal k-strongly connected subgraph of D. We show here how many results about the k-blocks in undirected graphs extend to k-strong blocks in digraphs. (Separation lemma, overlapping of k-strong blocks, number of them.) We prove, for example, that the maximum number of k-strong blocks for all k > or = 1 in any n-vertex graph is ((2n-1)/3). We also prove that two k-strong blocks cannot have more than k-1 vertices in common. We furthermore present results bounding the cardinality of the biggest k-strong block in random digraphs of the D(n,p) model. This work generalizes previous work on random undirected graphs. GRA

ROTATIONALLY SYMMETRIC OPERATORS FOR SURFACE INTERPOLATION

Michael Brady and Berthold K. P. Horn Nov. 1981 38 p refs
(Contract N00014-80-C-0505)
(AD-A109032; AI-M-654) Avail: NTIS HC A03/MF A01 CSCL 12/1

The use of rotationally symmetric operators in vision is reviewed and conditions for rotational symmetry are derived for linear and quadratic forms in the first and second partial directional derivatives of a function f(x, y). Surface interpolation is considered to be the process of computing the most conservative solution consistent with boundary conditions. The 'most conservative' solution is modelled using the calculus of variations to find the minimum function that satisfies a given performance index. To guarantee the existence of a minimum function, Grimson has recently suggested that the performance index should be a seminorm. It is shown that all quadratic forms in the second partial derivatives of the surface satisfy this criterion. The seminorms that are, in addition, rotationally symmetric form a vector space whose basis is the square Laplacian and the quadratic variation. Whereas both seminorms give rise to the same Euler condition in the interior, the quadratic variation offers the tighter constraint at the boundary and is to be preferred for surface interpolation. COMPUTATIONAL ADVANCES IN LARGE-SCALE NONLINEAR OPTIMIZATION M.S. Thesis

Dennis Ross Dean Sep. 1981 135 p refs
(AD-A109528) Avail: NTIS HC A07/MF A01 CSCL 12/1

This is a comparison of two state-of-the-art large-scale nonlinear optimization systems exhibiting unprecedented problem solution capabilities both in size of problem handled and method of solution. These codes are MINOS, developed by B.A. Murtagh and M.A. Saunders, and XS, developed by G. G. Brown and G. W. Graves. The codes are evaluated with respect to their problem solving capabilities and potential for practical application by analysts. Computational results are presented for thirteen nonlinear and nonlinear mixed integer test problems with from two to 793 variables (12 to 100 integer variables) and one to 401 constraints. Portions of this work were presented at the CORS/ORSA/TIMS joint meeting in Toronto, May 1981. Author (GRA)

ALGORITHM FOR THE CALCULATION OF THE LARGEST INTEGER IN THE SQUARE ROOT OF A NATURAL NUMBER [EIN ALGORITHMUS ZUR BERECHNUNG DER GROESSTEN GANZEN AUS WURZEL D]

Heinz Lueneburg 1980 6 p ref In GERMAN
(Preprint-11) Avail: NTIS HC A02/MF A01

The preparation of algorithms to calculate the square root of a natural number (d) for a computer program is outlined. The total of the first-n odd number equals n-square. The PASCAL program calculates (square root-d) for d Epsilon N. Different auxiliary theorems are demonstrated to calculate square root-d. It is concluded that the instructions for the repeat curve of this program are more complicated than the instructions for the while curve of the first program in which the number of steps is much smaller, and the total gain is considerable.

ON PYTHAGOREAN TRIANGLES AND COPRIME LATTICE POINTS

P. Shiu Oct. 1980 16 p ref
(MATHS-Res-154) Avail: NTIS HC A02/MF A01

Topics in number theory are discussed. By a Pythagorean triangle, a triangle with coprime positive integer sides X, Y, Z, satisfying X squared + y squared = z squared, is meant. For N > or = 1, F(N) denotes the number of Pythagorean triangles that have hypotenuse N. By a lattice point (X, Y), a point with integer coordinates X, Y is meant. If X, Y are nonzero coprime integers, then (X, Y) is a coprime lattice point. The number of ways of writing N as a sum of two squares of integers, or the number of lattice points on the circle a squared + b squared = N, is set. For N > or = 1, let F(N) = the summation, for 1 < or = N < or = N, of F(N). A heuristic argument, then a formal proof, which show that F(N) has the average value 1/pi and that F(N) is zero for almost all N, are given. More precisely, the theorem that as N tends to infinity, F(N) = (N/pi) + 0 (square root of N) is developed. Author (ESA)

A VARIABLE METRIC METHOD USING A NON-QUADRATIC MODEL

A. Tassopoulos and C. Storey Jun. 1981 17 p refs
(MATHS-Res-158) Avail: NTIS HC A02/MF A01

The problem of finding an unconstrained local minimizer X of a continuously differentiable function F(X) with X an element of R sup N is dealt with. A model for the variable metric method is proposed and tested, using an updating formula that generates a sequence (brackets X sub K), K = 0, 1, 2, ... of approximations to a local minimizer of F(X). Finite termination can be proved for the variable metric method, using the proposed model and applied to several standard test functions of different dimensionality. Numerical results show that the proposed model behaves as efficiently as the currently used model in general and is more efficient for problems of higher dimensionality. Author (ESA)

CALCULATION OF EQUIVALENT FORCES AT NODES. SOME EXAMPLES IN ACTUAL PRACTICE FOR CALCULATIONS WITH THE FEM METHOD [ALLOKERING AV NODKRAFTER. NAAGRA PRAKTISKA EXEMPEL FOER BERAEKNING MED FEM]

Kjell Eriksson 1980 59 p ref In SWEDISH
(KTH-Publ-212) Avail: NTIS HC A04/MF A01

The finite element method is introduced and its use in calculating discrete forces, e.g. distributed loads found in constructions such as frames, is outlined. Basic functional analysis theory is presented along with coordinate transformation calculation from local to global coordinates. Twenty-six equivalent force calculations are given, including rectangular, trapezoidal, triangular, and nonsymmetric curved edge structures. The variable load problem is also discussed. Author (ESA)

SPINOR GENERA OF ORDERS AND QUADRATIC FORMS

J. Brzezinski 1981 38 p refs
(CTH-Math-1981-20) Avail: NTIS HC A03/MF A01

A group of spinor genera of orders in central simple algebras over fields of quotients of Dedekind rings is defined and computed in particular cases. As an application to the theory of integral quadratic forms, a necessary and sufficient condition is given for a genus of ternary semi-Bass quadratic forms to consist of only one spinor genus. As a consequence of this, a generalization of classical results about genera of indefinite ternary quadratic forms, consisting of only one class, is obtained. Author (ESA)

APPLICATIONS OF A GENERAL COMPARISON THEORY

FOR CONVOLUTION INTEGRALS
Joergen Loefstroem 1981 41 p refs
(CTH-Math-1981-21) Avail: NTIS HC A03/MF A01

Some Tauberian theorems with applications to approximation theory are extended. Let X be a Banach space and B a Banach algebra of tempered distributions on R sup d. For F belongs to B put F sub (lambda) (x) = (lambda sup d) F (lambda X). The space of all test functions such that (double modulus F sub (lambda) * test function; Omega) sub X = the convolution integral of (lambda to the minus s power) as lambda tends to infinity is characterized when Omega is all of R sup d or a bounded subset of R sup d. The proofs are based on the Shapiro comparison theorem. Author (ESA)

NORM BOUNDS FOR LINEAR SYSTEMS USING STEP RESPONSE DATA
D. H. Owens and A. Chotai Sep. 1981 24 p refs
(Contract SERC-GR/B/23250)
(RR-159) Avail: NTIS HC A02/MF A01

Norms for operators which pertain to the stability and approximation theory of linear and nonlinear systems are considered. How certain induced operator norms can be bounded for continuous and discrete systems, using plant step response data only, is described. For continuous systems, a stable m-output/l-input, linear time-invariant system is associated with a mapping L of the Banach space C sup l (zero, infinity) of bounded continuous mappings. The mapping L is represented by a convolution integral equation. The approach taken is to reduce the evaluation of the double modulus of L to the evaluation of single-input/single-output systems. To do this, the system is decomposed into a l-input/single-output stable system. Relations between the norms are identified and proven, relating the norm of L to the impulse response matrix H(+). Given the impulse response data H(+) and D, the double modulus of L can be computed, or bounded. The result shows that only a countable (and, in many cases, finite) amount of step response data is needed to evaluate the double modulus of L. The results carry over with little change to the analysis of a stable, l-input/m-output, linear, time-invariant discrete system. Examples are given. Author (ESA)

ON THE COMPENSATION OF OPTIMAL SYSTEM ASYMPTOTIC ROOT-LOCI
D. H. Owens Nov. 1981 11 p refs Revised Previously announced as RR-101
(Contract SERC-GR/B/79455)
(RR-163; RR-101) Avail: NTIS HC A02/MF A01

A procedure for manipulating the free parameters of the asymptotes of the optimal closed-loop poles of a time invariant linear regulator as the weight of the input in the performance criterion approaches zero by suitable choice of weighting matrices Q and R is described. A systematic method for choosing Q and/or R in order to produce arbitrary, specified values of the parameters lambda sub jr, l < or = r < or = d sub j, l < or = j < or = q is indicated. A duality between Q and R is outlined and used to reduce the problem to that of developing procedures for the choice of R. Results are presented as an algorithm. The choice of Q and R such that they produce specified values for the free parameters of the system asymptotes, is achieved, but the choice of lambda sub jr can not be achieved theoretically. CONTOUR RECOGNITION AND MEASUREMENTS USING FOURIER TRANSFORMATION
Klaus Arbter Sep. 1981 34 p refs In GERMAN; ENGLISH summary Report will also be announced as translation (ESA-TT-745)
(DFVLR-Mitt-81-22; ESA-TT-745) Avail: NTIS HC A03/MF A01; DFVLR, Cologne DM 8,80

By means of Fourier transformation, a number of features characterizing a given contour are derived, called Fourier descriptors, and which by their invariance to translation, rotation and size, are particularly suited for contour recognition such as required in TV tracking systems. The descriptors are shown to be unique, insensitive to random contour errors and to represent complex contours by few complex numbers. Formulas for contour measurement and for numerical Fourier transformation of line scanned contours are given. The properties of the proposed method are illustrated in several examples. Author (ESA)

ON A LOCALLY OPTIMAL PROCEDURE BASED ON RANKS FOR COMPARISON OF TREATMENTS WITH A CONTROL
Deng-Yuan Huang and S. Panchapakesan Jul. 1981 10 p refs
(Contract N00014-75-C-0455)
(AD-A109283; MMS-81-30) Avail: NTIS HC A02/MF A01 CSCL 12/1

Let Phi sub 1,...,Phi sub k be independent populations representing k experimental treatments and let Phi sub O be the control treatment. Let f(x,Theta sub i denote the density of Phi sub i, i = O,1,...,k, satisfying certain regularity conditions. Any population Phi sub i is said to be superior to the control if Theta sub i > Theta sub O, and inferior otherwise. We assume that the value of Theta sub O is unknown but a good upper bound Theta sub O* is known. We are interested in selecting a subset (possibly empty) of the k experimental treatments consisting of the ones that are superior to the control. Though the functional form of f(x,Theta) is assumed to be known, we derive a procedure based on ranks in view of the usual considerations of robustness against possible deviations from the model. In deriving the rule, we control the error probabilities and maximize the ability to detect a superior population in a certain local sense. The rule is based on the ranks of the obvservations in a pooled sample of (k+1)n (n from each population) observations. In the special case of logistic density, this rule is expressed in terms of the rank-sum statistics. Author (GRA)

ASYMPTOTIC NORMALITY OF AUTOREGRESSIVE PARAMETER ESTIMATES FOR MIXED TIME SERIES
D. F. Gingras Sep. 1981 16 p refs
(AD-A108781; NOSC/TR-733) Avail: NTIS HC A02/MF A01 CSCL 12/1

In this report it is shown for mixed time series, a series

generated by an autoregressive moving-average (ARMA) process or by an autoregressive process observed in additive white noise (AR+N), that estimates of the autogressive (AR) parameters are asymptotically multivariate jointly normal with zero mean and finite covariance matrix. The structure of the asymptotic covariance matrix is evaluated for both types of mixed time series.

ESTIMATION OF THE OPERATING CHARACTERISTICS WHEN THE TEST INFORMATION OF THE OLD TEST IS NOT CONSTANT. 2: SIMPLE SUM PROCEDURE OF THE CONDITIONAL P.D.F. APPROACH/NORMAL APPROACH METHOD USING THREE SUBTESTS OF THE COLD TEST, NUMBER 2

Fumiko Samejima Jul. 1981 136 p refs
(Contract N00014-77-C-0360)
(AD-A109112; RR-81-2) Avail: NTIS HC A07/MF A01 CSCL 12/1

This is a continuation of a previous study reported as RR-80-4, 'Estimation of the Operating Characteristics When the Test Information of the Old Test Is Not Constant II: Simple Sum Procedure of the Conditional P.D.F. Approach/Normal Approach Method Using Three Subtests of the Old Test'. In that study, a new method of estimating the operating characteristics of discrete item responses based upon an Old Test, which has a non-constant test information function, was tested upon each of two subtests of the original Old Test, Subtests 1 and 2. The results turned out to be quite successful. In the present study, Subtest 3, which contains as small a number of test items as fifteen, was used as the Old Test. Unlike the previous study, we have an additional challenge of handling negative and positive infinities of the maximum likelihood estimate obtained upon Subtest 3.

PROBABILISTIC ANALYSIS OF RANDOM EXTENSION-ROTATION ALGORITHMS

John H. Reif and Paul G. Spirakis Oct. 1981 55 p refs
(Contract N00014-80-C-0674; Grant NSF MCS-79-21024)
(AD-A109035; TR-28-81) Avail: NTIS HC A04/MF A01 CSCL 12/1

We introduce a new random structure generalizing matroids. The random independence systems (RIS) allow us to develop general techniques for solving hard combinatorial optimization problems with random inputs. We describe a randomized algorithm for efficiently constructing an independent set of fixed size in an instance of a random independence system. We provide a general method of analysis of the performance of this algorithm, which allows us to derive bounds on the mean, variance and all the moments of the time complexity of the algorithm.

A K-SAMPLE EXTENSION OF TUKEY'S 2-SAMPLE QUICK TEST

E. Ioannou Oct. 1981 24 p refs
(MATHS-Res-159) Avail: NTIS HC A02/MF A01

Exact null and asymptotic null distributions of the test statistic are derived; tables of critical values and tail probabilities are presented. A Monte Carlo study, comparing the power of the test with other K-sample tests, is also included. The performance of the test is evaluated and its treatment of ties is discussed. The main advantage of the quick test is that it does not involve the tedious arithmetic usually necessary in parametric tests nor the ranging of all the data as required by most nonparametric tests.

SHARING COSTS FAIRLY: A PRACTICAL INTRODUCTION TO COOPERATIVE GAME THEORY

H. Peyton Young, N. Okada, and T. Hashimoto Sep. 1981 33 p ref
(ER-5) Copyright. Avail: Issuing Activity

Traditional methods of allocating costs of water facilities are compared with more recently developed methods, involving game theory, in order to show how these methods work in actual use and to give a pratical introduction to game theory. The problem of sharing the costs of a joint water supply facility between cities is explained. Eight ways of dealing with this problem are outlined and evaluated. Popular game theory methods of cost allocation have significant advantages over naive methods. However, in actual applications, it may be unrealistic to expect the kind of information and technical understanding that game theory requires. There are cases where using a single numerical criterion for costing, such as apportioning costs by population or by demand, are preferable to more complicated methods.

A MODEL FOR DIMENSIONING A CORRECTIVE MAINTENANCE SYSTEM M.S. Thesis - 17 Nov. 1980 [UM MODELO PARA DIMENSIONAMENTO DE UM SISTEMA DE MANUTENCAO CORRETIVA]

Fernando Manoel Athayde Reis Sep. 1981 208 p refs In PORTUGUESE; ENGLISH summary
(INPE-2233-TDL/064) Avail: NTIS HC A10/ A01

The design of an auxiliary tool to be used in systems planning, the objective of which is to maintain other systems, is discussed. The planner's task may be defined as the minimization of the relationship between the total cost of the maintenance system and the operating system availability, subjected to the restrictions of minimal acceptable availability and reliability for the operating system and a given budget. A simulation model is developed; interactions between the two systems and component supply are observed. The maintenance and repair tasks are reproduced. The simulation output consists of estimates for availability, total cost, and other statistics. This output allows the planner to evaluate changes in the objective function caused by variations in the maintenance system parameters. M.G.

SYMMETRIC COMPLEMENTATION, REVISION

John H. Reif 1981 47 p refs
(Contract N00014-80-C-0647; Grant NSF MCS-79-21024)
(AD-A108823; TR-07-81-Rev) Avail: NTIS HC A03/MF A01 CSCL 12/1

This paper introduces a class of 1 player games of perfect information, which we call complementing games; the player is allowed moves which complement the value of successive plays. A complementing game is symmetric if all noncomplement moves are reversible (i.e., form a symmetric relation). These games are naturally related to a class of machines we call symmetric complementing machines. Symmetric nondeterministic machines were studied in (Lewis and Papadimitriou, 801); they are identical to our symmetric complementing machines with complement moves allowed only on termination. (A companion paper to appear will describe the computational complexity of symmetric complementing and alternating machines.) Of particular interest is the complexity class Sum *CSYMLOG, which contains the outcome problem of symmetric complementing games with constant complement bound with game positions encoded in log space, and next move relations computable in log space. We show that the decision problem for a restricted quantified Boolean logic Sum *QBF sum is complete in Sum *CSYMLOG. We also show that Sum *CSYMLOG contains many well-known and common combinatiorial problems: minimum spanning forests; k-connectivity and k-connected components, and also the recognition problems for many classes of graphs: planar graphs of valence 3; chordal graphs; comparability graphs; interval graphs; split graphs, and permutation graphs. STANDARD CONSTRUCTIONS IN ABELIAN GROUP THEORY Ph.D. Thesis
Anthony John Giovannitti 1981 107 p
Avail: Univ. Microfilms Order No. 8129387

The use of standard constructions in abelian group theory is examined. The definition of exactness in abelian categories is extended to pointed categories in a manner that does not lose the desirable properties of exactness. Properties of standard constructions on preabelian categories are explored and the properties needed to guarantee that the class of sequences exactly relative to a cotriple or triple, respectively, forms a proper class are specified. This is done by first showing that the intersection of the class of stable exact sequences and the class of sequences exactly relative to a standard construction is a proper class. Theorems generalizing some of the results for preabelian categories are presented. Several examples are given of standard constructions in categories that have proven important in abelian group theory. They by no means exhaust the known examples, but are meant to give some indication of the use of the theory developed here. Dissert. Abstr.

ON THE UNIFORM BOUNDEDNESS OF A FAMILY OF MATRICES AND THE APPLICATIONS TO ONE-LEG AND LINEAR MULTISTEP METHODS
Germund Dahlquist, Huang Mingyou, and Randall LeVeque (Stanford Univ., California) 1981 14 p refs Sponsored by People's Republic of China's Ministry of Education, Swedish Natural Research Council and NSF
(TRITA-NA-8101) Avail: NTIS HC A02/MF A01

In applications of multistep methods to stiff systems, e.g., to partial differential equations by the method of lines, the uniformity of the stability results obtained by analysis of the scalar linear test equation y' = lambda y with respect to the parameter q = lambda h is questioned. Results of this type are easily obtained by contractivity analysis. A simple proof of a complete answer to this question is found by proving a more general result through the use of the resolvent criterion of Kreiss. Let F be a set of matrices of bounded order with the properties: (1) individual power-boundedness, i.e., for each A belonging to F, m(A) is congruent to sup N (double modulus (A sup N) < infinity for N = 1,2...; (2) A belongs to F has no multiple eigenvalue of unit modulus; and (3) F is closed and bounded. Then F is uniformly power-bounded in the sense that there is a finite constant (m vector product) such that m(A) < or = (M vector product), for any A belonging to F. Author (ESA)

COURSE-OF-VALUES RECURSION ON LISTS IN INTUITIONIST TYPE THEORY
Jan Smith Sep. 1981 26 p refs
(CTH-Math-1981-19) Avail: NTIS HC A03/MF A01

A formalization of constructive analysis, intuitionist type theory, is considered for use as a programming language. In intuitionist type theory only primitive recursion is allowed. Since general recursion is extensively used in functional programming, alternative methods of constructing programs must be developed for type theory. It is shown how to reduce a useful scheme of course-of-values recursion on lists to primitive recursion, using a higher-order function. As an example, the method is used to construct a program in type theory for the sorting algorithm QUICKSORT. Author (ESA)

VARIABLE STRUCTURE SYSTEMS AND SYSTEM ZEROS
O. M. E. El-Ghezawi, S. A. Billings, and A. S. I. Zinober Sep. 1981 15 p refs
(RR-157) Avail: NTIS HC A02/MF A01

Variable structure system (VSS) theory is used to derive a method for computing the zeros of a linear, time invariant multivariable system. The system zeros are the eigenvalues of a reduced order matrix which arises naturally in VSS design. The properties of the algorithm are investigated by decomposing the state space. The algorithm proves valuable when determining the state and input zero directions since the calculation of the (n+m) dimensional null space of system matrix P(s) is avoided. The algorithm is computationally fast and easy to implement. Author (ESA)

EXPANSION OF LINEAR AND SEMI-LINEAR SYSTEMS AND THE POPOV CRITERION
S. P. Banks Oct. 1981 30 p refs
(RR-158) Avail: NTIS HC A03/MF A01

The extension of linear systems in order to reveal properties which are not apparent in the contracted form is introduced. The extension of the state vectors for a linear system leads to a definition of generalized extensions via expansive resolutions. The concept is widened in order to include semilinear systems, where Anderson's generalization of the Popov criterion can be extended by removing the condition that the complete linear part generates the positive real matrix pi sub o(s), and replacing it by the weaker condition that diagonal submatrices of the extended linear part have corresponding real matrices pi sub o sup i(s). SOME APPLICATIONS OF THE PERTURBED DIRECTIONAL CORRELATION TECHNIQUE IN NUCLEAR PHYSICS, SOLID STATE PHYSICS AND RADIO CHEMISTRY Ph.D. Thesis
Robert Wilhelmus Hollander 11 Mar. 1981 174 p refs
(ISBN-90-6231-084-2) Avail: NTIS HC A08/MF A01

The 'perturbed directional correlation technique' for nuclear physics experiments is the linking factor of the described experiments, which differ considerably in subject. The interaction between magnetic dipole and electric quadrupole moments of excited nuclear states and 'perturbing' extranuclear magnetic fields and electric field gradients are used in order to extract nuclear information, if the perturbing fields are known, or to obtain informaion about the external fields, if the relevant nuclear properties are known. The measuring technique is the same for the different experiments, however, the experiment set-ups are not. Some aspects of a set-up for the determination of the nuclear g factor of short lived nuclear states are described. S.L.

EFFECT OF FACILITY VARIATION ON THE ACOUSTIC CHARACTERISTICS OF THREE SINGLE STREAM NOZZLES

Orlando A. Gutierrez 1980 38 p refs Presented at the 100th Meeting of the Acoust. Soc. of Am., Los Angeles, 17-21 Nov. 1980
(NASA-TM-81635; E-646) Avail: NTIS HC A03/MF A01 CSCL 20A

The characteristics of the jet noise produced by three single stream nozzles were investigated statistically at the NASA-Lewis Research Center outdoor jet acoustic facility. The nozzles consisted of a 7.6 cm diameter convergent conical, a 10.2 cm diameter convergent conical and an 8-lobe daisy nozzle with 7.6 cm equivalent diameter flow area. The same nozzles were tested previously at cold flow conditions in other facilities such as the Royal Aircraft Establishment (RAE) 7.3 m acoustic wind tunnel. The acoustic experiments at NASA covered pressure ratios from 1.4 to 2.5 at total temperatures of 811 K and ambient. The data obtained with four different microphone arrays are compared. The results are also compared with data taken at the RAE facility and with a NASA prediction procedure. Author

ACOUSTIC MICROSCOPY AT CRYOGENIC TEMPERATURES Annual Summary Report, 1 Jul. 1980 - 30 Jun. 1981

C. F. Quate and J. Heiserman Nov. 1981 13 p refs
(Contract N00014-77-C-0412; NR Proj. 384-924)
(AD-A109271; SU-GL-3369) Avail: NTIS HC A02/MF A01 CSCL 20/1

This report summarizes our progress in a research program devoted to high resolution acoustic microscopy and cryogenic temperatures. During the past year we have studied the acoustic properties of two cryogenic fluids - liquid argon and liquid 4He below the temperature of 0.5 degrees K. In argon we have determined that nonlinear effects provide us with a dramatic increase in resolving power for focused acoustic beams. In liquid helium we have measured the attenuation versus temperature of sound at 1 GHz where the wavelength is less than 2500 A. The predicted behavior below 0.5 degrees K where the attenuation varies as the fourth power of temperature is confirmed for the first time at these small wavelengths. It gives us further confidence in our program to realize an instrument that will permit us to examine our specimens with an acoustic probe that is less than 1000 A in diameter. GRA

SPHERICAL ACOUSTIC BROADBAND RECEIVER Final Report, Fiscal Year 1981

W. James Trott 16 Dec. 1981 42 p refs
(AD-A109273; NRL-MR-4633) Avail: NTIS HC A03/MF A01 CSCL 17/1

The development of a hydrophone array for determining signal bearing in three dimensions is described in theory and experiment. The array of omnidirectional elements, on a spherical surface is shaded in amplitude to produce a frequency-independent directional response. Design of omnidirectional elements is discussed. ALGORITHMS FOR TRACKING A SOUND SOURCE USING FREQUENCY AND BEARINGS

C. Kent Sep. 1981 66 p refs
(AD-A109276; DREV-R-4199/81) Avail: NTIS HC A04/MF A01 CSCL 20/1

This report develops some of the analytical support for algorithms designed to permit one or more mobile searchers to track a sound source moving in a straight line. The searchers measure bearing and received frequency to infer range, the true frequency and velocity components. The measurements of bearing and frequency are subject to random errors. Author (GRA)

A FINITE ELEMENT METHOD FOR COMPUTING SOUND PROPAGATION IN DUCTS CONTAINING FLOW Final Technical Report, Dec. 1975 - May 1981

Dennis W. Quinn Sep. 1981 31 p refs
(AD-A108836; AFWAL-TR-81-3087) Avail: NTIS HC A03/MF A01 CSCL 20/1

Solutions for equations which describe sound propagation in nonuniform ducts containing flow are computed with a finite element approach. A least squares approach is considered and compared to a Galerkin approach. The least squares problem is solved using an iterative method and compared with results obtained using direct Gaussian elimination. The accuracy of linear basis functions on triangles, bilinear basis functions on rectangles, and biquadratic basis functions on rectangles are compared. The biquadratics permit good approximation of curved boundaries and better convergence than the bilinear basis functions. The finite element solution space consists of piecewise biquadratics defined on the finite element discretization of the geometry of the duct. Acoustic fields within uniform ducts both with and without flow were computed. For nonuniform ducts without flow, the computed acoustic fields also compare well with exact or other computed solutions. For the case of two-dimensional flow within nonuniform ducts, sample calculations favorably compare with other solutions or limiting cases. GRA

ACOUSTIC MEASUREMENTS OF F100-PW-100 ENGINE OPERATING IN HUSH HOUSE NSN 4920-02-070-2721 Final Report, May - Sep. 1981

Vincent R. Miller, G. A. Pizak, and J. M. Chinn Sep. 1981 58 p refs
(AD-A108814; AFWAL-TM-81-133-FIBE) Avail: NTIS HC A04/MF A01 CSCL 20/1

The purpose of this test program was to measure the acoustic environment in the hush house facility located at Kelly AFB Texas during operation of the F100-PW-100 engine to ensure that engine structural acoustic design limits were not exceeded. The acoustic measurements showed that no sonic fatigue problems are anticipated with the F100-PW-100 engine structure during operation in the hush house. The measured acoustic levels were less than those measured in an existing F100-PW-100 engine wet-cooled noise suppressor, but were increased over that measured during operation on an open test stand. It was recommended that the acoustic load increases measured in this program should be specified in the structural design criteria for engines which will be subjected to hush house operation or defining requirements for associated equipment. INVESTIGATION OF SHALLOW BULK ACOUSTIC WAVES Final Report, 1 Oct. 1978 - 19 Sep. 1981

K. H. Yen, R. S. Kagiwada, K. F. Lau, and R. B. Stokes 12 Nov. 1981 53 p refs
(Contract DAAG26-78-C-0043)
(AD-A109028; ARO-15367.7-EL) Avail: NTIS HC A04/MF A01 CSCL 20/1

This final report summarizes the most important results of the Investigation of Shallow Bulk Acoustic Waves (SBAW) program. This program was conceived on the principle that SBAW technology could lead to devices that are superior to those presently available for frequency filtering and control. The primary objective was to establish whether this technology could provide devices that were as stable as the low frequency bulk wave resonators and yet operate at frequencies higher than the surface acoustic wave devices. The investigations have shown that SBAW devices can be built with excellent temperature stability, low spurious modes and at frequencies higher than those of SAW devices and bulk wave resonators. GUIDELINES FOR THE DESIGN OF INHERENTLY QUIET AIRLOOPS FOR MANNED SPACECRAFT

Achille Carbone Paris ESA Dec. 1980 270 p refs
(Contract ESTEC-3840/79/NL-PP(SC))
(ACUN-8006; ESA-CR(P)-1477) Avail: NTIS HC A12/MF A01

Acoustic factors in spacecraft cabin design are treated. Criteria for setting interior noise requirements and the response of crew members to the noise environment experienced during missions are reviewed. Typical noise sources of environmental control systems, methods available for noise control, acoustical optimization of system and procedures for assessment of component target noise are presented. Fan noise and the techniques available for its reduction at source are analyzed with methods for prediction and testing. Noise generation caused by interaction of flow with system components, like valves, heat exchangers, and CO2 control assemblies, is addressed. The principles of noise transmission with air flow and in the structure are discussed. A procedure for duct lining design and attenuation prediction is given. Acoustic material impedance models and testing techniques for linings and reactive mufflers are presented. Principles underlying the application of antivibration mounts and of damping materials are outlined. Author (ESA)

DETECTION OF PERIODICALLY FLUCTUATING NOISE [DETEKTERING AV PERIODISKT FLUKTUERANDE BRUS]

A. Gjaerdman and L. Goetherstroem Jun. 1981 17 p refs In SWEDISH
(FOA-C-30223-E1) Avail: NTIS HC A02/MF A01

A method which identifies ships by their high frequency noise characteristics is presented. Noise modulated by the periodic cavitation from the propeller is analyzed after demodulation. The signal to noise ratio (S/N) is directly proportional to the quotient of the predetector filter bandwidth to the postdetector filter bandwidth, multiplied by the square of the degree of modulation for low S/N on the input side of the detector. AN EXPERIMENTAL STUDY OF THE EFFECTS OF AN INLET FLOW CONDITIONER ON THE NOISE OF A LOW SPEED AXIAL FLOW FAN

J. Scoles and J. B. Ollerhead Jan. 1981 92 p refs
(Contract AT/2170/049/XR)
(TT-8101) Avail: NTIS HC A05/MF A01

The effects of inflow condition on the noise generated by a 40kW, 560mm diameter, seven blade ducted fan at speeds up to 5000rpm in an anechoic chamber were measured. A 1.25m diameter hemispherical honeycomb flow conditioner (HFC) which could be fitted with an internal gauze liner was used. Fan entry flow was measured by static and rotating hot-wire anemometers. Noise levels in the first few harmonics of blade passing frequency are very sensitive to inflow condition, but the HFC reduces them to a residual level independent of upstream disturbance levels. Broadband noise is reduced (by a smaller amount) at high blade angles and flow rates. No systematic effect of the gauze liner is detected. Experimental difficulties are caused by unsteadiness in the chamber airflow which causes harmonic level fluctuations with amplitudes of up to 10dB. Although the inlet flow conditioner reduces these fluctuations markedly, long term variations reduce confidence in the data. Author (ESA)

NOISE MEASUREMENTS ON THE HELICOPTER BK 117 DESIGN. WEIGHTED NOISE LEVELS AND INFLUENCE OF AIRSPEED

Wolf R. Splettstoesser, Klaus P. Anders, and Karl-Heinz Spiegel Aug. 1981 93 p refs In GERMAN; ENGLISH summary. Report will also be announced as translation (ESA-TT-748)
(DFVLR-Mitt-81-18) Avail: NTIS HC A05/MF A01; DFVLR, Cologne DM 22,95

Noise measurements on the prototype helicopter BK 117 were performed in strict compliance with the proposed International Civil Aviation Organization regulations for noise certification of helicopters. Measurement procedure, noise data acquisition, analysis and reduction as well as applied correction procedures are described. Effective perceived noise levels (EPNL) and other noise descriptors were evaluated and related to the proposed noise limits. Additional level flyover tests with variable airspeed were conducted to investigate the resulting effect on the EPNL and other noise measures. Author (ESA)

COLLECTION AND EVALUATION OF PROPELLER AIRCRAFT NOISE CERTIFICATION DATA

Manfred Ahlswede and Klaus Peter Anders Aug. 1981 87 p refs In GERMAN; ENGLISH summary

(DFVLR-Mitt-81-20) Avail: NTIS HC A05/MF A01; DFVLR, Cologne DM 25.20

More than 300 individual noise certification levels were measured for propeller driven airplanes up to 5700 kg takeoff weight and for powered gliders in accordance with the rules and regulations as set forth in International Civil Aviation Organization Annex 16. Information on the airplanes, the engines and the propellers is provided as well as on the prevailing meteorological parameters and the operational parameters together with acoustic data. Of the latter, the measured A-weighted levels with their 90% confidence limit are listed, the performance correction is given and the certification level as well as the noise-limit are provided. Data are evaluated by plotting the measured A-weighted levels versus the helical blade tip Mach number. Author (ESA)

THE EVALUATION OF CHARGE TRANSFER MATRIX ELEMENTS IN LIGHT ION COLLISIONS WITH NON-RELATIVISTIC ATOMS Ph.D. Thesis

Shensheng Ann Chang Fitchard 1981 138 p

Avail: Univ. Microfilms Order No. 8128889

Charge transfer is the process in which an orbital electron is transferred between two colliding atoms or ions. The projectile ion is assumed to follow a straight line classical trajectory. As the projectile approaches the target, it provides a time dependent perturbation of the electrons which are attached to the target. The resulting time dependent Schroedinger equation is solved by expanding the wave function in a truncated set of Hilbert states centered on the target, or on the projectile, with coefficients which are found from a variational principle. The infinite rank operators which appear in the Schroedinger equation are thus replaced by finite matrices. The elements of these matrices are called charge transfer matrix elements. A technique is derived which allows a completely analytic evaluation of these elements. A computer program to calculate the elements was written. The resulting matrix elements are checked against approximate analytic expressions, and against a charge transfer code.

ON NUCLEAR KOETHE SPACES DEFINED BY DRAGILEV FUNCTIONS Ph.D. Thesis

Hannu Ahonen 18 Nov. 1981 61 p refs

(ISSN-0355-0087; ISBN-951-41-0431-5) Copyright. Avail: Issuing Activity

The class of nuclear Frechet spaces studied consists of the spaces L sub f(alpha,r). Here f is a real valued function of a real variable with certain convexity properties; this is a Dragilev function. The letter alpha stands for an increasing sequence (alpha sub j) of real numbers with lim sub j approaches limit of infinity alpha sub j = + infinity. The parameter r belongs to the set R U/+ infinity/. In the special case of so called slowly increasing Dragilev functions f all the spaces L sub f(alpha,r) are isomorphic to the power series spaces; otherwise they are isomorphic to one of the spaces L sub f(beta,-1), L sub f(beta,o), L sub f (beta,1), L sub f(beta,infinity) with some sequence beta. MEASUREMENTS OF THE ELECTRON-POSITRON ANNIHILATION LINE AT 511 KeV EMITTED FROM THE GALACTIC CENTER

Jeronimo Osvaldo Dias Jardim, Maria Virginia Alves Jardim, John Louis Benson, and Inacio Malmonge Martin Sep. 1981 14 p refs In PORTUGUESE; ENGLISH summary

(INPE-2222-PRE/018) Avail: NTIS HC A02/MF A01

The detection of the electron-positron annihilation line flux coming from the Galactic Center as a means to estimate the rate of positron production is examined. The results of the measurements of the 511 KeV line flux made with a gamma ray experiment in the energy interval 0.3 to 3 MeV, on-board a stratospheric Balloon are presented. The detector field of view looked at the galactic longitudinal interval -31 deg < L(II) < +41 deg. The observed flux is (6.70 + or - 0.85) x 0.001 photons/sq cm/s, which is in good agreement with the expected flux when assuming that the Galactic Center is a line source emitting uniformly. Some likely sources of positrons are also discussed. M.G.

ANOTHER SELF-SIMILAR BLAST WAVE: EARLY TIME ASYMPTOTE WITH SHOCK HEATED ELECTRONS AND HIGH THERMAL CONDUCTIVITY

Donald P. Cox and Richard J. Edgar 1982 29 p refs

(Grant NGL-50-002-044)

(NASA-CR-168562) Avail: NTIS HC A03/MF A01 CSCL 20H

Accurate approximations are presented for the self-similar structures of nonradiating blast waves with adiabatic ions, isothermal electrons, and equation ion and electron temperatures at the shock. The cases considered evolve in cavities with power law ambient densities (including the uniform density case) and have negligible external pressure. The results provide the early time asymptote for systems with shock heating of electrons and strong thermal conduction. In addition, they provide analytical results against which two fluid numerical hydrodynamic codes can be checked. Author

THE DEVELOPMENT OF HIGH-INTENSITY NEGATIVE ION SOURCES AND BEAMS IN THE USSR

Nikita Wells Sep. 1981 81 p refs

(Contract MDA903-78-C-0189; ARPA Order 3520)

(AD-A108935; RAND/R-2816-ARPA) Avail: NTIS HC A05/MF A01 CSCL 20/7

This report reviews Soviet R and D of (1) high-intensity negative ion sources and (2) transport and focusing of negative ion beams, using Soviet open literature of the past ten years, and correlates this data with data on Soviet institutes responsible for negative ion beam development. The Soviets are developing intense negative ion beams as the basis for creating neutral beams for injection into mirror traps and tokamaks, for inertial confinement fusion, and possibly for exoatmospheric beam weapon applications. The report focuses specifically on surface-plasma-type ion sources, which were first developed in the USSR and which show great promise for creating beams of high intensity, high brightness, and low emittance. Mechanisms for optimum negative ion beam transport are also discussed. GRA

HIGH-ENERGY ION IMPLANTATION FOR MULTIGIGABIT-RATE GaAs INTEGRATED CIRCUITS Final Report, 1 May 1978 - 30 Jun. 1981
S. G. Liu, E. C. Douglas, C. P. Wu, C. W. Magee, and S. Y. Narayan Oct. 1981 166 p refs
(Contract N00014-78-C-0367; NR Proj. 383-046; RF54582001)
(AD-A108777; PRRL-81-CR-32) Avail: NTIS HC A08/MF A01 CSCL 07/4

The objectives of the program are to: (1) investigate high-energy ion implantation of donors into GaAs for multigigabit-rate GaAs integrated-circuit (IC) development and (2) to study the use of high-power lasers and other techniques for removing lattice damage and activating implanted species. GaAs ICs require the selective definition of n-layers in semi-insulating (SI) GaAs for the fabrication of active devices such as FETs, TELDs, and Schottky-barrier diodes. In order to fabricate such device elements, a capability for realizing n-layers with doping ranging from 10 to the 16th power to 5 x 10 to the 18th power/cc and thicknesses from 1 to 0.15 micrometer is required. Until the inception of this program, the major effort on ion implantation into GaAs has been at energies less than 500 keV, which limits the implant depth to typically less than several hundred nanometers. During this program, high-energy implantation of Si into SI GaAs at energies of 30 to 1200 keV has been investigated. Projected ranges and straggles have been measured by secondary ion-mass spectrometry (SIMS). Based on these measurements, we have produced up to approx. 1-micrometer-thick n-type GaAs layers at doping levels of approx. 5 x 10 to the 16th power to 1 x 10 to the 18th power/cc by multiple-energy Si implantation.

RESONANCE STUDIES OF HYDROGEN ATOMS INTERACTING WITH VERY COLD SURFACES Annual Summary Report, 1 Mar. 1981 - 28 Feb. 1982
Stuart B. Crampton 16 Dec. 1981 8 p
(Contracts N00014-80-C-0240; JPL-955441; Grant NSF PHY-79-10967)
(AD-A109040; SBCONR2) Avail: NTIS HC A02/MF A01 CSCL 07/4

Experimental techniques and theoretical methods of analysis for the study of hydrogen atoms stored in containers having very cold surfaces are developed. The temperature dependence of the probability of adsorption and average time of adsorption of hydrogen atoms on frozen molecular hydrogen surfaces is measured. Recombination and other relaxations while adsorbed are studied. A high intensity state-selected hydrogen atom beam with thermal speeds at 6 K is developed and applied to atomic hydrogen maser development.

MEASUREMENT OF INTEGRAL SCATTERING CROSS SECTIONS OF HYDROGEN ATOM-MOLECULAR SYSTEMS IN THE SUBTHERMAL RANGE Ph.D. Thesis - Georg-August Univ. [MESSUNGEN INTEGRALER STREUQUERSCHNITTE VON H-ATOM - MOLEKUELSYSTEMEN IM SUBTHERMISCHEN BEREICH]
Ulrich Schwalm Mar. 1981 129 p refs In GERMAN
(MPIS-5/1981; ISSN-0436-1199) Avail: NTIS HC A06/MF A01; Fachinformationszentrum, Karlsruhe, West Germany GM 22,35

Three groups of hydrogen atom molecular systems with high energy disintegration to relative integral total scattering profiles were measured. Orbiting resonances in each group were observed. The H-atom of hydrogen halide compounds shows clear van der Waal reactions. The measuring methods are applied to weak anisotropic yet reactive scattering systems. Scatter profile measurements of the systems provide information on occurrences of orbiting resonances in strong anisotropic potentials. Experimental determination of orbiting resonances are important in the recombination of gas phase reactions when stabilization occurs through a further burst with a third particle. Transl. by E.A.K.

THE NUCLEON EXCHANGE MECHANISM IN COMPOSITE NUCLEI INTERACTION
G. Ciangaru (New York State Univ., Stony Brook) 15 May 1981 87 p refs
(ISS-R-81/4; ISSN-0390-6477) Avail: NTIS HC A05/MF A01

Nucleon exchange density matrices are introduced as a means of reducing the calculations involved in theoretical determinations of integral kernels. The matrices provide analytic expressions for nucleon exchange processes within the resonating group method framework. Nuclear shapes are assumed to be spherical. Mutual polarization of nucleon orbits is not considered. Only interactions leaving the nuclei in their ground states are treated. The method is exact when both nuclei are very light, both are heavy, or one is much heavier than the other. No approximation is achieved with two medium masses.

(NASA-TM-83209) Avail: NTIS HC A02/MF A01 CSCL 03B

A preliminary analysis shows that radiation dose equivalent to 30 years in the geosynchronous environment can be accumulated in a typical composite material exposed to space for 2 years or less onboard a spacecraft orbiting from perigee of 300 km out to the peak of the inner electron belt (approximately 2750 km). Future work to determine spacecraft orbits better tailored to materials accelerated testing is indicated. It is predicted that a range of 10 to the 9th power to 10 to the 10th power rads would be accumulated in 3-6 mil thick epoxy/graphite exposed by a test spacecraft orbiting in the inner electron belt. This dose is equivalent to the accumulated dose that this material would be expected to have after 30 years in a geosynchronous orbit. It is anticipated that material specimens would be brought back to Earth after 2 years in the radiation environment so that space radiation effects on materials could be analyzed by laboratory methods.

NATURAL REPOSITORY ANALOGUE PROGRAM Progress

Report, 1 Oct. - 31 Dec. 1980
David B. Curtis, comp. Mar. 1981 19 p refs
(LA-8743-PR; Rept-1) Avail: NTIS HC A02/MF A01

One fission product, molybdenum, was found in rocks which were taken at distances between 1 and 40 meters from reactor zones. It is concluded that this element was mobilized in the nearby zones of criticality, transported over distances up to a few tens of meters and redeposited in these rocks. In contrast, the same samples contain undetectable quantities of both fissiogenic ruthenium or of the U-235 depleted reactor fuel. The redistribution processes enriched molybdenum by several orders of magnitude relative to ruthenium and uranium. Ores peripheral to reactor zones are, on the average, deficient in one half of the radiogenic lead. Rocks from the conglomerate underlying the mineralized stratum contain, on the average, 6000 ppm of excess lead. One sample contains a remarkable 34,000 ppm of unsupported radiogenic lead. This basal conglomerate must have been a major transport path and repository for lead lost from the ores. A.R.H.

APPLICATIONS OF INTEGRATED OPTICS TO SIGNAL PROCESSING AND PATTERN RECOGNITION Ph.D. Thesis
Arthur Onyekwere Anyiwo 1981 105 p
Avail: Univ. Microfilms Order No. 8129334

The problem of preprocessing remotely sensed data to achieve high data rate reduction is addressed. Two distance measure optical processors that operate on the principle of interferometry are proposed. Processing algorithms (parametric and nonparametric) that take full advantage of the statistical dependence of the sensed data on their neighbors as well as the high processing speed of the optical processors are developed. System performance is evaluated and it is shown that intensity fluctuations of the optical source (laser) can have an adverse effect on the entire system. A second problem which involves the detection of electromagnetic interference sources in computer subsystems is solved as a two-class pattern recognition problem. A hybrid optical/digital system for implementation is developed. An integrated optical time-integrating correlator is interfaced with other analog and digital subsystems to yield compact test equipment. The effects of first-order sources of degradations on the correlator output and on the processing algorithms are investigated. It is shown that the processing algorithm is invariant under the degrading effects on the correlator output.

LIGHT SCATTERING FROM MACROMOLECULAR SYSTEMS: MOLECULAR CRYSTALS AND POLYMERS Final Technical Report
Elliot R. Bernstein Nov. 1981 32 p refs
(Grant AF-AFOSR-3317-77; AF Proj. 2303)
(AD-A109086; AFOSR-81-0861TR) Avail: NTIS HC A03/MF A01 CSCL 07/4

The research objectives were to: (1) characterize phase transitions theoretically and experimentally in molecular crystal systems; (2) use the above understanding gained by light scattering studies and theoretical interpretation to apply to the more complex system of lyotropic liquid crystals, and (3) then apply knowledge gained on the model systems of increasing complexity to polymer liquid crystals and solid polymers as observed by laser light scattering techniques. Systems experimentally and theoretically discussed are: trioxane, triazine, benzil, and chloranil. Studies of lyotropic liquid crystals (sodium decyl sulfate, sodium sulfate, decanol, water) have progressed. The major findings are: a number of phase transitions occur between 20 and 60 C; these transitions evidence strong critical behavior and long correlation times for fluctuations; and liquid crystals can be studied by light scattering. Spectra of solid powders, ribbons, and liquid crystals of PBT and solid PBO were obtained. GRA

Atmospheric clouds can adversely affect the operation of military electro-optical systems. Probing of clouds by the lidar technique, is attractive for two reasons. First, it is a remote sensing technique, and measurements at ranges of several kilometers are possible. Second, it can give a two dimensional picture of the cloud and trace its time development. Unfortunately, in some cases meaningful information from a lidar backscatter signal is hard to obtain. In this report a linear relation between the volume extinction coefficient and backscatter coefficient of atmospheric cloud at visible and near infrared wavelengths is derived. The relation is in good agreement with Mie calculations of extinction and backscatter coefficients based on 156 measurements of cloud droplet spectra in cumulus and stratus type clouds. The relation suggests that visible or near infrared extinction coefficients in a cloud of unknown type could be inferred from lidar backscatter measurements alone. No similar size distribution independent relation between backscatter coefficient and liquid water content of cloud was found. GRA

POLARIZATION-INDEPENDENT OPTICAL WAVEGUIDE SWITCH Final Report, 12 Sep. 1980 - 12 Sep. 1981
O. G. Ramer Oct. 1981 70 p refs
(Contract N00173-80-C-0439)
(AD-A108764) Avail: NTIS HC A04/MF A01 CSCL 20/6

This highly successful program has resulted in the demonstration of an electrically activated planar waveguide polarization independent switch, one of the key components required to implement signal processing components. These switches operate at a wavelength of 0.83 micron and have optical crosstalk values of less than 20 dB. The switch is based on the delta beta-reversal directional coupler switch. The polarization independence is incorporated in the delta beta reversal switch by tapering the coupling strength of the directional coupler, and by fabricating the waveguides so that the integrated coupling coefficients for TE and TM modes are nearly identical. AIRCRAFT-BORNE MEASUREMENT OF INFRARED SOURCES AND BACKGROUNDS Final Report, 21 Oct. 1977 - 30 Jun. 1981

Ronald J. Huppi 30 Jun. 1981 61 p refs
(Contract F19628-78-C-0018; AF Proj. 7670; ARPA Order 2656)
(AD-A108871; EDL-SRL-81-3; AFGL-TR-81-0199) Avail: NTIS HC A04/MF A01 CSCL 20/6

Instruments for infrared measurements of natural and man produced infrared sources are described and measurements were planned, performed, and analyzed. The measured or analyzed data included the following: Measurements of aircraft emissions and reflections in fixed spectral bands between 2.5 and 7.5 micrometer; analyses of near infrared auroral and airglow emissions in the 1.7 micrometer and 2.8 micrometer region; and quantitative measurements and analyses of the spatial emissions and backgrounds in the 2 to 15 micrometer region. The measurements were taken with the radiometric instruments described and by spectrometers, and spatial mappers which were operated on AFGL's NKC-135 aircraft. The instruments were periodically inspected, maintained and kept in a state of readiness. Studies and recommendations were made indicating that the reliability of many future measurements could be improved using cryogenically cooled radiometers and interferometer-spectrometers. ACCURACY OF PARAMETER ESTIMATES FOR CLOSELY SPACED OPTICAL TARGETS USING MULTIPLE DETECTORS

Keh-Ping Dunn 23 Oct. 1981 57 p refs
(Contract F19628-80-C-0002)
(AD-A109185; TR-589; ESD-TR-81-292) Avail: NTIS HC A04/MF A01 CSCL 17/8

In order to obtain the cross-scan position of an optical target, more than one scanning detector is used. As expected, the cross-scan position estimation performance degrades when two nearby optical targets interfere with each other. Theoretical bounds on the two-dimensional parameter estimation performance for two closely spaced optical targets are found. Two particular classes of scanning detector arrays, namely, the crow's foot and the brickwall (or mosaic) patterns, are considered. Author (GRA)

OPTICAL IMAGING INSTRUMENTS FOR THE LAND APPLICATION SATELLITE SYSTEM. PHASE A STUDY. VOLUME 1 Final Report

Paris ESA 15 Sep. 1980 283 p refs Prepared in cooperation with Technische Physische Dienst TNO-TH and Royal Netherlands Aircraft Factories Fokker 2 Vol.
(Contract ESA-4167/79/F-CG(SC))
(Rept-60/1023-Vol-1; ESA-CB(P)-1480-Vol-1) Avail: NTIS HC A11/MF A01

System analysis and configuration tradeoffs were performed for a pushbroom imager operating in four visible bands and two reflected IR bands with a ground resolution of 30 m and a noise equivalent albedo of 0.5%. Results show that separate instruments are required for the visible and the IR bands. The visible band camera is designed around a pure dioptric 590 mm f/6.2 lens. A quasi-diffraction limited resolution is obtained over a 14 deg field of view for all spectral channels. A multichroic beam splitter is used for channel separation. The IR camera has a pure dioptric 590 mm f/2.95 lens. A Petzval system consisting of two convergent groups plus a divergent field corrector is adopted. Since the passive cooling of the detectors requires that the focal plane be parallel to the side of the spacecraft which does not receive sunlight, a flat folding mirror is placed between the last convergent group and the field corrector. Reliability of both cameras is 0.8 for two years in orbit. Author (ESA)

In order to improve the optical characteristics of twisted nematic cells, the cell and material parameters necessary for optimal cell performance were evaluated and a variant of this cell type was characterized. For the development of liquid crystal mixtures with the respective properties, material investigations were carried out with a substantially increased accuracy. Further improvements of the fluorescence activated display allowed the construction of a prototype ready for production. The structure of the defects occurring in cholesteric layers was discovered in the case of homeotropic boundary alignment. Additionally, the contrast limits and optical merit factors of reflective dichroic cells were calculated, taking into account various optical interference factors. Author (ESA)

The influence of different environmental, target and observa-

tional parameters on the maximum detection range of aircraft was studied in an outdoor test, using a dark green Do-27 airplane. The environmental parameters include the degree of turbidity of the atmosphere, background, direction of observation, flight altitude, and brightness. Size and color were considered as target parameters, whereas the observation conditions were differentiated according to naked eye or field glasses observations. Graphs showing these various dependencies are given. Although the observations were made from the ground, the results are shown to apply equally well to air to air observations.

THE SIMULATION OF PLASMA DOUBLE LAYER STRUCTURES IN TWO DIMENSIONS Ph.D. Thesis
Joseph Eric Borovsky 1981 203 p
Avail: Univ. Microfilms Order No. 8128373

Electrostatic plasma double layers are numerically simulated using a 21/2-dimensional particle-in-cell method. The system is represented by a two-dimensional grid, periodic in one direction and bounded by reservoirs of Maxwellian plasma in the other. The investigations concentrated on double-layer formation, stability, scaling, and morphology, on particle trajectories, and on electrostatic plasma waves. The temporal modulation of accelerated beams is also investigated; the possibilities of the double-layer production of ion conics and of ion precipitation are hypothesized; and the consequences of electrostatic plasma-wave excitement are discussed. Auroral double-layer simulations including the atmospheric backscattering of electrons which predict the presence of an ionospheric sheath which acts to confined ionospheric electrons and to accelerate ionospheric ions upward are also discussed.

A NUMERICAL METHOD FOR SOLVING THE VLASOV EQUATION
Nobuyuki Satofuka (Kyoto Technical Univ.) Feb. 1982 23 p refs
(NASA-TM-81339; A-8794) Avail: NTIS HC A02/MF A01 CSCL 20I

A numerical procedure is derived for the solution of the Vlasov-Poisson system of equations in two phase-space variables. Derivatives with respect to the phase-space variables are approximated by a weighted sum of the values of the distribution function at property chosen neighboring points. The resulting set of ordinary differential equations is then solved by using an appropriate time intergration scheme. The accuracy of the proposed method is tested with some simple model problems. The results for the free streaming case, linear Landau damping, and nonlinear Landau damping are investigated and compared with those of the splitting scheme. The proposed method is found to be very accurate and efficient.

LEVEL SHIFTS AND INELASTIC ELECTRON SCATTERING IN DENSE PLASMAS Interim Report
J. Davis and M. Blaha 10 Dec. 1981 35 p refs
(RR0110941)
(AD-A108799; NRL-MR-4689) Avail: NTIS HC A03/MF A01 CSCL 20/9

A completely quantum mechanical formalism has been developed to describe the high density plasma effects on fundamental atomic parameters. Both the bound and free electrons are treated by a method which in principle is similar to Hartree's self-consistent field method. The free plasma electrons' wavefunction is obtained from the Schrodinger equation with the effective potential representing the spherically averaged Coulomb interaction with bound and free electrons. Results are given for level shifts, coefficients of transition probabilities, and electron collision cross sections of Ne(9+) for temperature and 200 and 500 eV for an electron density range of 1 - 6 x 10 to the 24th power/cc, and of Ar(17+) for temperatures of 1000 and 2000 eV and electron densities from 2 x 10 to the 25th power to 8 x 10 to the 25th power/cc. In the low-density region, level shifts are obtained for H and He+.

THE CAVITY Q FOR ERGODIC EIGENMODES Interim Report
Edward Ott and Wallace M. Manheimer 22 Dec. 1981 8 p
(AD-A109041; NRL-MR-4641) Avail: NTIS HC A02/MF A01 CSCL 14/2

The problem of calculating the Q of a very overmoded, irregularly shaped resonant cavity due to absorption of the electromagnetic radiation at the walls is considered. It is assumed that the volume inside the cavity can be either vacuum, or else partially filled with anisotropic inhomogeneous dielectric or plasma. Both the scale length of the dielectric and the radius of curvature of the walls are assumed much larger than the radiation wavelength. However, near the cavity walls, a vacuum is assumed. Focus is on applications concerning magnetically confined plasmas.

AN APPENDIX TO THE PAPER PLASMA ELECTRON TEMPERATURE DETERMINATION IN LOW-DENSITY PLASMAS FROM THE HELIUM I 3889 A AND 5016 A LINE INTENSITIES
Nils Brenning 6 Oct. 1981 10 p refs Sponsored by Swedish Natural Science Research Council
(TRITA-EPP-81-03; ISSN-0348-7539) Avail: NTIS HC A02/MF A01

The use of the 3889 A line for measurements of plasma electron temperature is discussed, with comments on the requirement of optical thinness of the plasma against the 3889 A line radiation. The reduction in line intensity due to absorption is calculated and a useful range of parameters is determined within which plasma electron temperature determination is uninfluenced by the effects of absorption.

SCALING LAWS OF THE MULTICOMPONENT COOL PLASMA MANTLE Research and Training Programme on Controlled Thermonuclear Fusion and Plasma Physics (EUR-NE)
J. R. Drake, A. Kuthy, and M. Tendler Nov. 1981 14 p refs
(TRITA-PFU-81-04; ISSN-0348-7644) Avail: NTIS HC A02/MF A01

The two component plasma mantle was investigated theoretically and experimentally. In the case of classical transport, the plasma density is shown to vary as the cube root of the main neutral density at the wall. The impurity neutral density is shown to vary with the product of the square of the impurity ion density and the main neutral density in the diffusive regime, and as the product of the impurity ion density and the square

of the main neutral density for the convective regime. This latter was observed experimentally for plasma parameters corresponding to the convective regime, where the penetration of neutral helium into a cold and dense, but fully ionized, hydrogen plasma was compared with hydrogen penetration in the same plasma.

ON OPTIMAL CONTROL OF PLASMA CONFINEMENT
S. P. Banks and S. A. Mousavi-Khalkhali (Univ. of Manchester Inst. of Technology, England) 1981 25 p refs
(RR-155) Avail: NTIS HC A02/MF A01

Feedback control of plasmas is considered by treating them as distributed parameter systems and using the lowest order approximation to Liouvilles equation as the state equation, given by the linearized Vlasov equation for a collisionless plasma. A control term is introduced into the Vlasov equation, which allows the plasma dynamics to be written in standard state space form. A quadratic cost functional is constructed on a Hilbert space. Optimal control is obtained in a standard way via the Riccati equation. Methods for obtaining finite-dimensional approximations to the solution are indicated.

GROWTH AND CHARACTERIZATION OF LIQUID PHASE EPITAXIALLY GROWN SPINEL FERRITE FILMS Ph.D. Thesis
Petrus Johannus Maria vanderStraten 7 Nov. 1980 102 p refs
Avail: NTIS HC A06/MF A01

The characteristics of ferrimagnetic and ferromagnetic materials are reviewed with particular emphasis on the uniaxial magnetic anisotropy which may be presented in liquid phase epitaxy (LPE) grown in spinel ferrite films. The properties of spinel ferrites are explored and the preparation of substrates for the growth of ferrite films are considered. The LPE growth procedure as well as methods for characterizing film thickness and film lattice parameters, composition, and saturation magnetization are described as well as magnetic anisotropies, the magnetic domain configuration and uniaxial anisotropy. The growth of indium substituted magnesium ferrite films, LPE growth of lithium ferrite-alluminate films, LPE growth of copper ferrite films, stress induced anisotropy in LPE grown Ni(Fe, Al)2O4 films, and the LPE growth of Mn, Ni, and Al-substituted copper ferrite films are discussed.

ELECTROTRANSPORT IN THIN FILMS Final Report, 1 Jan. 1976 - 31 Dec. 1980
R. E. Hummel and R. T. DeHoff 27 Oct. 1981 61 p refs
(Grant AF-AFOSR-2963-76; AF Proj. 2306)
(AD-A108421; AFOSR-81-0708TR) Avail: NTIS HC A04/MF A01 CSCL 09/1

The objective of this research was to develop a scientific perspective that forms a foundation for understanding the processes that lead to the development of holes in thin film metal strips. This understanding allows the prediction and control of hole formation in thin film connectors that are in integral part of all microelectronic devices, thus extending their design lifetime, and improving their reliability. This project focused upon the effects of dopants on the behavior of thin films subject to high current densities, and upon the relative contributions of the several mass transport processes that may contribute to changes in the structure of film strips. Specifically, in addition to electrotransport, which may involve both electron wind and electrolysis effects, grain boundary grooving, driven by surface tension forces, and thermotransport, driven by temperature gradients, was found to significantly alter the structure of the strip. Experimental strategies have been developed which emphasize each of these contributions, permitting assessment of their relative roles in the overall process.

THE ELECTRONIC AND ATOMIC STRUCTURE OF DIAMOND SURFACE AND EFFECTS OF HYDROGEN TERMINATION Final Report, 1 Jul. 1978 - 30 Jun. 1981

B. B. Pate, P. J. Jupiter, I. Lindau, and W. E. Spicer 2 Nov. 1981 21 p refs
(Grant DAAG29-78-G-0130)
(AD-A109142; ARO-15878.3-P) Avail: NTIS HC A02/MF A01 CSCL 20/12

The electronic and atomic structure of the diamond (111) surface and the effects of hydrogen termination are studied using photoemission, photon stimulated desorption, low energy electron diffraction, and Auger electron spectroscopy. Hydrogen termination results in a 1 x 1 surface with no filled surface states in or near the band gap region. A high temperature anneal (approx. 1000 degrees C) removes the hydrogen and results in a 2 x 2/2 x 1 surface structure. Author (GRA)

SIMS STUDIES ON ANOMALOUS BEHAVIOR OF PHOSPHORUS AND OTHER IMPLANTS IN SILICON Interim Technical Report

Paul K. Chu, Dachang Zhu (Fudan univ., Shanghai), and George H. Morrison 17 Dec. 1981 22 p refs Sponsored in part by NSF
(Contract N00014-80-C-0538; NR Proj. 051-736)
(AD-A108870; TR-6) Avail: NTIS HC A02/MF A01 CSCL 07/4

A phosphorus implant in p-type silicon was analyzed by SIMS, and both the implant profile and the matrix signal were observed to exhibit some anomalous behavior. Further studies revealed the same behavior in other implants. This phenomenon was observed when an n-type dopant was implanted into a p-type matrix, or vice versa. However, some exceptions arose, making the interpretation difficult. The use of matrix signal normalization was adopted and found to improve the results. Author (GRA)

ELECTRICAL CHARACTERIZATION OF SUPER SCHOTTKY Final Technical Report

R. A. Lawrence Griffiss AFB, N.Y. RADC Jul. 1981 229 p
(Contract F30602-80-C-0068; AF Proj. 2338)
(AD-A108766; RADC-TR-81-194) Avail: NTIS HC A11/MF A01 CSCL 09/1

State-of-the-art bipolar logic technology has advanced with the recent introduction of 'Super Schottky' and 'Low Power Super Schottky' product lines by two semiconductor manufacturers. Texas Instruments (T.I.) and Fairchild Semiconductor have utilized advances in processing techniques such as oxide isolation and refinements in the resolution of photolithographic equipment to enhance the speed and reduce the power of present day Schottky (S) and Low Power Schottky (LS) technologies. This report provides results obtained from the electrical characterization over the military temperature range (-55 CT$_j$ to +125 CT$_j$) of gate and flip-flop samples of three new transistor Transistor Logic (TTL) technologies: Advanced Schottky (AS), Advanced Low Power Schottky (ALS), and Fairchild Advanced Schottky (TTL) (FAST). This report shows that each technology offers the system designer unique advantages in terms of improved performance, power reductions, and space savings derived from functional design complexity. The performance improvements obtained by these new logic technologies, however, present implicit new application and testing considerations that could previously be ignored by the military system designer. An ultimate method for the unambiguous identification of donors in epitaxial GaAs and related compounds has been devised and demonstrated. A specimen is grown by means of the molecular beam epitaxy technique and is lightly doped with a single donor element during growth so as to render the specimen n-type. The far infrared photoconductivity method of spectroscopy is used to determine the energy difference between the electron ground state and the next higher excited state (2p, m = -1) at low temperature and in high intensity magnetic fields. A 'signature curve' of energy vs. magnetic field intensity is generated for various values of applied magnetic field intensity. Thereafter, any time that this particular element is present as a residual donor in any other specimen, a single measurement at any field will yield a point which must lie on the signature curve of the particular donor element. By this means any residual donor can be identified without ambiguity. We have generated and published signature curves for Sn, Se, Si, Ge and sulfur. Author (GRA)

TRANSITION ELECTRON MICROSCOPE (TEM) IN-SITU STRAINING AND BULK STUDIES OF THE SELECTION OF GLIDE SYSTEMS IN FACE CENTERED CUBIC (FFC) CRYSTALS Ph.D. Thesis - Delft Univ. of Technologie

H. J. Kolkman Jun. 1980 116 p refs
(NLR-TR-80041-U) Avail: NTIS HC A06/MF A01

Plastic deformation of FCC metals was studied during straining experiments with a TEM on single Cu and Al crystals in order to ascertain whether the thin specimens used in TEM straining experiments give information on the plastic deformation process representative of bulk behavior. In situ TEM straining experiments on copper single crystalline foils with an area transparent to electrons and with four different foil plane normals were performed. The experimental procedure is described. In bulk crystals, and in thin foil specimens with the same orientation, the same nonprimary systems were observed, demonstrating that the choice of glide systems is governed not only by their resolved shear stresses, but also by the crystallographic orientation of the surface. Results are compared with published results for body centered cubic crystals and recommendations for future studies are given. Author (ESA)

ANALYSIS OF DEEP DEFECTS IN III-V SEMICONDUCTORS Final Report, Mar. 1981

Juergen Schneider, Ulrich Kaufmann, Helmut Ennen, and Rico Woerner Bonn Bundesministerium fuer Forschung und Technology Nov. 1981 61 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technology
(BMFT-FB-T-81-197; ISSN-0340-7608) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 13

Special point defects in GaP and GaAs by electron spin resonance (ESR) and optical spectroscopy are reported in order to establish the influence of deep defects in III-V semiconductors. Stoicheometric defects assessed by ESR in GaP are the antisite defect, P sub Ga, and the isolated gallium vacancy, V sub Ga. Results show that P sub Ga is an intrinsic defect characteristic for light emitting crystal GaP which may act as a center for nonradiative Auger recombination. An important group of extrinsic defects formed by ubiquitous three dimensional transition metal impurities was identified: (1) double acceptor behavior of Fe, Ni, and Cr in GaP and of Ni in GaAs; (2) hole trapping of Cr in GaP and GaAs; and (3) strong association tendency of Ni with donors in GaP. The importance of these results for GaP-LED efficiency optimization and for GaAs-FET performance is stressed. Author (ESA)

PREPARATION OF COMPOUNDS WITH NEW STRUCTURES FOR SUPERCONDUCTOR INVESTIGATIONS Final Report, Dec. 1980
Eberhard Amberger Bonn Bundesministerium fuer Forschung und Technology Nov. 1981 21 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-203; ISSN-0340-7608) Avail: NTIS HC A02/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 4.60

The relation between the superconductive and the structural properties of superconductors was confirmed by comparing the X-ray structures of five classes of compounds, involving metal clusters, with their superconductive properties. The various substances were prepared following a common recipe: (1) clusters with small metal distance; (2) large metal-metal distance between clusters; and (3) cluster interconnection by means of a different atom type. The results confirm the cluster theory of superconductive compounds. Author (ESA)

SPECIAL APPLICATIONS OF IRREVERSIBLE THERMODYNAMICS Ph.D. Thesis
Yakov Michael Zilberberg 1981 321 p refs
Avail: Univ. Microfilms Order No. 8129272

The main irreversible phenomena that occur in thermoviscoelastic solids and fluids, namely, the absorption and propagation of the sound waves and the influence of thermal energy conduction and dissipation within the said media upon the phenomena are evaluated and analyzed. The theoretical methods of such analysis, specifically those of evaluation of the spatial attenuations of the sound wave propagating through a thermoviscoelastic media (solid or fluid) contain a substantially incomplete and very restricted in its validity procedure which is based upon a dimensional modification of the temporal attenuations. Specifically, the sound absorption coefficient, gamma, defined as the ratio of the mean value of the mechanical energy dissipation to twice the mean energy flux of the wave, is dimensionally modified by dividing it by the transverse or longitudinal velocities of sound in a given media, which procedure formally permits to obtain a dimensionally consistent result. IMPURITIES IN QUASI ONE-DIMENSIONAL SYSTEMS. A STUDY ON SOME THERMODYNAMIC PROPERTIES Ph.D. Thesis
Joseph Christophorus Schouten 20 Jan. 1981 140 p refs
Avail: NTIS HC A07/MF A01

The effect of impurity in a magnetic system depends on the character of the impurity (magnetic or nonmagnetic) as well as on the dimensionality of the system. Amorphous and random magnetic systems are defined and the theoretical methods used to compute the behavior of quasi-one dimensional mixed magnetic systems with anisotropic interactions are presented. Various Mn (++) systems mixed with Cu or Cd are described. As well as the magnetic properties of the quasis one dimensional system (CH3)2NH2MnCl3. Quasi one dimensional systems Co(++) systems, mixed with Cu are discussed as well as the mixed CsMn (Cl sub(1-x) Br sub x)3 H2O. A.R.H.

THE ANISOTROPIC CLASSICAL CHAIN. THERMODYNAMIC PROPERTIES AND PHASE DIAGRAMS Ph.D. Thesis
Frans Boersma 3 Feb. 1981 135 p refs
Avail: NTIS HC A07/MF A01

The Hamiltonian for the classical model of a one dimensional system containing orthorhombic anisotropy in an external magnetic field is defined, the transfer matrix formalism and the theory of the eigenvalue problem are discussed, and the accuracy of the numerical approach presented is evaluated. Magnetic response functions, correlations, and other thermodynamic variables are considered and experimental results are examined. The chemical and magnetic properties of quasi-one dimensional manganese compounds built up of more or less linear chains of Mn (++) ions were determined and phase diagrams plotted. It is shown that the classical model including orthorhombic anisotropy describes the experimental phase diagrams correctly for all three directions of the magnetic field. A.R.H.

SOME ASPECTS OF TWO-PHASE FLOW, HEAT TRANSFER AND DYNAMIC INSTABILITIES IN MEDIUM AND HIGH PRESSURE STEAM GENERATORS Ph.D. Thesis
Huseyin Cetin Unal 18 Mar. 1981 249 p refs
Avail: NTIS HC A11/MF A01

Experimental data for void fraction, incipient point of boiling, initial point of net vapor generation, bubble dynamics, dryout, two-phase flow pressure drop and density-wave oscillations were obtained in long, sodium heated steam generator tubes of different geometries for a wide range of operating conditions and at medium and high pressures. These data and data from literature taken in sodium and electrically heated steam generator tubes were correlated. Aspects of two-phase flow, heat transfer and density-wave oscillations in these steam generators disclosed include the distribution factor in small- and medium-size diameter steam generator tubes, the characteristic of the transitions at the incipient point of boiling and initial point of net vapor generation, bubble growth during subcooled nucleate flow boiling, the importance of the equivalent length for dryout in non-uniformly heated steam generator tubes and the mechanisms of density-wave oscillations in once-through steam generator tubes. AN INVESTIGATION OF THE LAG BETWEEN THE START OF RESEARCH AND THE DEVELOPMENT OF NEW TECHNOLOGY Final Report
Steven E. Glass Feb. 1982 31 p refs
(Contract NASw-3204)
(NASA-CR-168583; Rept-40) Avail: NTIS HC A03/MF A01 CSCL 05A

The lag which occurs between the start of NASA-sponsored research and the development of new technology is addressed. A possible common gestation period is examined. The lags vary from one to zero years. The observed lag as it relates to patent applications is shorter than the lag as it relates to invention disclosures. The sequential hypothesis testing showed that invention disclosures correlated better to the measures of research effort used then did patent applications. N.W.

AN APPROACH FOR GROSS DESIGN OF OPERATIONS MANAGEMENT SYSTEMS Ph.D. Thesis
Eero Eloranta 1981 120 p refs
(ISBN-951-752-308-4; ISSN-0356-5068) Avail: NTIS HC A06/MF A01

The control aspect of management systems is studied. Subtasks of management planning, directing and montoring are closely related to those of control, defined as recepting, effecting and informing or sensing, selecting and effecting. Management is considered the control of an organization by one of more of its parts. The redesign of management systems implies an improvement in effectiveness or in efficiency, measured of just estimated by tangible or intangible benefits. Effectiveness is to do the right thing while efficiency is to do the thing right. A change in effectiveness rather than a change in efficiency is emphasized. The very first stage of the design process start from a vague problem identification and end at a project proposal for detailed design of improvement. The gross design of operations management systems is introduced. S.L.

PLANNING STUDY TO ESTABLISH DOD MANUFACTURING TECHNOLOGY INFORMATION ANALYSIS CENTER Final Technical Report, May 1980 - Jan. 1981
Jan. 1981 191 p refs
(Contract DAAG46-80-C-0026)
(AD-A108925; GE80TMP-43) Avail: NTIS HC A09/MF A01 CSCL 05/1

Based on the results of the planning study, it is recommended that the DoD sponsor and initiate administrative procedures to establish an MTIAC within 2 years with the mission of improving the diffusion of DoD Manufacturing Technology (MT) program results by serving as a focal point between defense-related industries and the Military Services. It is also recommended that the MTIAC be: (1) Operated and staffed by one of several qualified nongovernment, DoD contractor organizations; (2) Administered by DLA and technically monitored by a Military Services agency such as AMMRC; and (3) Initially funded (by OSD and the Military Services) at an annual level ranging from $400,000 to $700,000 with a growth not to exceed $1,000,000 in 5 years. MODELING THE DATA SYSTEMS ROLE OF THE SCIENTIST (FOR THE NEEDS COMMAND AND CONTROL TASK)
Donald J. Hei, Jr., William J. Winter, Jr. (Sigma Data Services Corp.), Robert Brookes (Sigma Data Services Corp.), and Maureen Locke (Sigma Data Services Corp.) Sep. 1981 75 p
(NASA-TM-84028; NSSDC/WDC-A-R&S-81-04) Avail: NTIS HC A04/MF A01 CSCL 05B

Research was conducted into the command and control activities of the scientists for five space missions: International Ultraviolet Explorer, Solar Maximum Mission, International Sun-Earth Explorer, High-Energy Astronomy Observatory 1, and Atmospheric Explorer 5. A basis for developing a generalized description of the scientists' activities was obtained. Because of this characteristic, it was decided that a series of flowcharts would be used. This set of flowcharts constitutes a model of the scientists' activities within the total data system. The model was developed through three levels of detail. The first is general and provides a conceptual framework for discussing the system. The second identifies major functions and should provide a fundamental understanding of the scientists' command and control activities. The third level expands the major functions into a more detailed description. N.W.

We have a way to go in compiling the data needed to accomplish various cost estimating and analysis tasks. Data currently exists to answer most questions that arise and that for the most part it is partitionable to the extent required for particular applications. The real issue is one of obtaining the data in a timely manner and of reducing the redundant data collection effort needed every time a cost effectiveness question arises in the decision making arena. The security kernel technology has provided the technical foundation for highly reliable protection of computerized information. However, the operating system implementations face two significant challenges: providing (1) adequate computational resources for applications tasks, and (2) a clean, straightforward structure whose correctness can be easily reviewed. This paper presents the experience on an ongoing security kernel implementation using the Advanced Micro Devices 4116 single-board computer based on the Z8002 microprocessor. The performance issues of process switching, domain changing, and multiprocessor bus contention are explicitly addressed. The strictly hierarchical (i.e., loop-free) structure provides a series of increasingly capable, separately usable operating system subsets. Security enforcement is structured in two layers: the basic kernel rigorously enforces a non-discretionary (viz., lattice model) policy, while an upper layer provides the access refinements for a discretionary policy. COBALT: EFFECTIVENESS OF ALTERNATIVE US POLICIES TO REDUCE THE COSTS OF A SUPPLY DISRUPTION
Elizabeth Abbe, Robert Adams, Julius Chang, Thomas Doyle, Ron Hurdelbri, Stan Miller, David Quick, and Ted Tupper Aug. 1981 100 p
(PB82-110560; DOI/OMPRA-81/01) Avail: NTIS
HC A05/MF A01 CSCL 05C

During the 1980-90 period there is a low probability of a severe disruption in cobalt exports from Zaire and Zambia and a high probability of several smaller disruptions in 1985 and 1986. Since cobalt has few good substitutes and often constitutes a small proportion of the total cost of a product, large cobalt price increases do not result in significant losses in consumption. Effective U.S. policies tend to be supply oriented and stockpile oriented rather than demand oriented. The effectiveness of tested policies depends on the timing, costs and severity of the supply disruption expected. The maximum social cost to the United

States of a cobalt supply disruption is estimated based on a market analysis and on an interindustry model. Strategic Stockpile releases alone or in combination with a domestic production price guarantee are an effective policy for moderating economic impacts for all disruptions analyzed. GRA

FUTURE FUELS AND ENGINES FOR RAILROAD LOCOMOTIVES. VOLUME 1: SUMMARY

S. G. Liddie, B. B. Bonzo, G. P. Purohit, and J. A. Stallkamp 1 Nov. 1981 41 p

(Contracts NAS7-100; DE-AI01-78CS-55151)

(NASA-CR-168642; JPL-Pub-81-101-Vol-1) Avail: NTIS HC A03/MF A01 CSCL 13F

The potential for reducing the dependence of railroads on petroleum fuel, particularly Diesel No. 2 was investigated. Two approaches are studied: (1) to determine how the use of Diesel No. 2 can be reduced through increased efficiency and conservation, and (2) to use fuels other than Diesel No. 2 both in Diesel and other types of engines. Because synthetic hydrocarbon fuels are particularly suited to medium speed diesel engines, the first commercial application of these fuels may be by the railroad industry. B.W.

MODELS OF PROJECTION AND LOCALIZATION OF URBAN POPULATION USING SIMULATION TECHNIQUES

Maria Suelena Santiago Barros, Damaceno Dal Bianco, and Odwaldo Bueno Netto, Jr. Aug. 1981 25 p refs In PORTUGUESE; ENGLISH summary Presented at 33d Ann. Meeting of SBPC, Salvador, 8-15 Jul. 1981

(INPE-2207-PRE/013) Avail: NTIS HC A02/MF A01

A method for the projection and location of urban population is presented using multivariate simulation of the supply and demand of urban space, applying Monte Carlo technique. The calibration of this model is attained by stratified sampling in homogenaous occupation zones, defined through remote sensing, from which results a considerable reduction of the sample size for the same precision and confidence level. The total future population of the city is an exogenous variable, which is then distributed through simulation over the urban area. Addressing the demand for urban space the model proceeds to reproduce the households' site selection process through simulation of the decision variables values in the following sequence: income, construction standards and the neighborhood urbanization level. TECHNOLOGY ASSESSMENT AND FORECAST REPORT, 10TH

Nov. 1981 175 p

(Rept-10) Avail: NTIS HC A08/MF A01

Patent and Trademark Office subclasses that are very active or predominantly of foreign origin are examined as an aid to identifying technologies having such characteristics. The 50 most active subclasses in chemical, electrical, and mechanical disciplines are presented showing highest growth, highest growth rate, and highest foreign resident inventor share. The influence in the U.S. technology market of five European and five Japanese corporations owning and/or controlling the most U.S. Patents for the period 1969-1980 is assessed. Patenting in computer software related technologies is analyzed with focus on the present status of the law in this field and the effects of laws on seismic data processing. Applications for and patents granted in aerospace technology are discussed with particular emphasis on the uses of patent information for historical review, as a research tool, and as a bibliographical data source. URBAN TRAFFIC SIGNAL CONTROL FOR FUEL ECONOMY. PART 2: EXTENSION TO SMALL CARS

G. S. Messenger Nov. 1981 13 p refs

(AD-A109393; DME-ME-249; NRC-19846) Avail: NTIS HC A02/MF A01 CSCL 13/6

Use of a small car's characteristics in a simulation program utilizing velocity profiles obtained in a traffic study by the Metropolitan Toronto Roads and Traffic Department and the Engine Laboratory at the National Research Council Canada has shown that trends shown in fuel consumption in NRC, Division of Mechanical Engineering Report No. ME-247 are similar for a small-engined vehicle. NRC, DME Report No. ME-247 showed that under the TRANSYT timing plan vehicles encountered fewer stops, saved time and used a slightly smaller amount of fuel than under the existing timing plan. In the above mentioned report, a large vehicle's fuel consumption was calculated using a computer model of the vehicle which used velocity profiles obtained from an instrumented floating car. GRA

WARD-LEONARD CHARACTERISTICS FROM NONLINEARLY-CONTROLLED SERIES MOTOR DRIVES

J. B. Edwards, K. Pacey (Chloride Legg Ltd., Wolverhampton, England), and T. A. Al-Fileyeh Nov. 1981 29 p refs Submitted for publication

(RR-165) Avail: NTIS HC A03/MF A01

Improving the maneuverability of fork lift trucks driven by chopper controlled series motors is discussed. Computerized simulation shows nonlinear feedforward cancellation of one system state (speed) to be unstable. Analytical solution of the system equations confirms this. The instability results from neglect of field inductive effects in the feedforward model. Simulation shows that a method which employs synthesized torque and transient velocity estimates derived purely from armature current feedback is highly tolerant of uncertainty in the vehicle and drive parameter estimates. It produces overall control characteristics resembling those of Ward-Leonard drives. The manual handling of the truck on a variable gradient test track shows a considerable improvement on conventional linear current control systems. Author (ESA)

APPLICATION OF THE EMPIRICAL KINETIC MODELING APPROACH TO URBAN AREAS. VOLUME 2: TULSA

G. Z. Whitten, H. Hogo, and S. D. Reynolds Research Triangle Park, N.C. EPA May 1981 194 p refs
(Contract EPA-68-02-3376)
(PB82-114224; Rept-49B-81-EF-81-116; EPA-450/4-81-0058) Avail: NTIS HC A09/MF A01 CSCL 13B

The EKMA was evaluated using applications in the Tulsa area primarily by comparing the trajectory model that forms the basis of the EKMA (OZIPP) with other more sophisticated models. The study was carried out at several levels, beginning with evaluation of OZIPP and ending with an evaluation of the control strategy predictions that result from employing the EKMA isopleth methodology. The OZIPP trajectory model was compared with the SAI airshed model and the SAI trajectory model, as well as with some modified versions of the original OZIPP model. The basic OZIPP model is a simple moving air parcel, or trajectory, model that uses a detailed chemical mechanism for the surrogate propylene and butane hydrocarbons.

PLASMA ASTROPHYSICS

T. D. Guyenne, ed. and G. Levy, ed. Nov. 1981 571 p refs Proceedings of Intern. School of Plasma Phys. Course and Workshop, Varenna, Italy, 27 Aug. - 7 Sep. 1981; sponsored by CNR, CNES, ESA, Milan Univ., Regione Lombardia, Italy, Camera di Commercio di Como, Italy, Cassa di Risparmio delle Provincie Lombarde, Italy and Gilardoni S.p.A.
(ESA-SP-161; ISSN-0379-6566) Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

Plasmas in the universe, plasma processes, the Sun and heliosphere, and galaxies and radiogalaxies are discussed. X-ray astronomy and the physics of collapsed objects are covered. Other subjects treated are particle acceleration, accretion, collective phenomena, and cosmic rays. The correlation between plasma physics and astrophysics as well as solar and interplanetary processes were also dealt with. For individual titles, see N82-20031 through N82-20086.

THE NEW PARADIGM IN COSMIC PLASMA PHYSICS c90

H. Alfven *In* ESA Plasma Astrophys. Nov. 1981 p 3-10 Sponsored in cooperation with Royal Inst. of Tech., Stockholm (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

A transition in accepted cosmic theory from a magnetic field description to an electric current description is propounded. The change in paradigm in cosmic plasma physics was surveyed. Particle description often gives a better picture than a hydromagnetic one. A frozen-in field line model is sometimes useful, although often erroneous because of boundary condition mistakes. The inhomogeneous structure (cellular structure) of space plasmas is emphasized in opposition to homogeneous models. Electric circuits offer a good first approximation. While the evolution of the solar system continues to be explained almost exclusively by mechanical forces, plasma effects seem essential for the formation and evolution of interstellar clouds, for band structure, and for cosmogonic shadow effects.

THE VOYAGER 1 SATURN ENCOUNTER AND THE COSMOGONIC SHADOW EFFECT c91

H. Alfven *In* ESA Plasma Astrophys. Nov. 1981 p 11-21 refs Prepared in cooperation with California State Univ., San Diego (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

The cosmogonic shadow effect is described, considering charged particles (electrons, ions, charged dust) in an axisymmetric dipole field around a gravitating, rotating body. The medium is two-thirds supported by centrifugal force and one-third by electromagnetic forces under the condition that the magnetic field is strong enough to control the motion. If the electromagnetic forces disappear, e.g., by deionization of the dusty plasma, the medium contracts to two-thirds its original central distance. The Voyager 1 Saturn results demonstrate that the macrostructure of the Saturnian ring system can be explained as a result of this effect at the formation of the system. A similar analysis of the asteroidal belt shows that its macrostructure can also be explained by the cosmogonic shadow effect. The observational results show that during their formation both the Saturnian rings and the asteroidal belt passed a plasma state dominated by electromagnetic effects.

THE MAGNETOHYDRODYNAMIC DYNAMO c90

E. N. Parker *In* ESA Plasma Astrophys. Nov. 1981 p 23-29 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

A mechanism for the maintenance of the magnetic fields of planets, stars, and galaxies is postulated. It appears that cyclonic convection and nonuniform rotation within the liquid metal cores of planets, the convective zones of stars, and the gaseous disks of galaxies provide an efficient dynamo mechanism for the production of these fields. The dominant field within the body is azimuthal, produced by nonuniform rotation from the poloidal field. The interaction of cyclonic convection within the azimuthal field produces loops of flux in meridional planes whose net effect is a meridional circulation of field in the same sense as the original poloidal field. Both stationary and oscillatory fields can be generated in this way.

THE NONEQUILIBRIUM OF MAGNETIC FIELDS c90

E. N. Parker *In* ESA Plasma Astrophys. Nov. 1981 p 31-35 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

The more subtle properties of magnetic fields which create nonequilibrium and lead to vigorous activity in otherwise sluggish gas-field systems are evaluated for gross hydromagnetic effects. The gentle manipulation of magnetic fields on a large scale leads to the production of small scale variations and discontinuities, providing intense dissipation of magnetic field in a large scale system. A magnetic field embedded in a conducting fluid possesses a static equilibrium only if the topology of the lines of force is suitably invariant along the direction of the field. When the field does not possess the necessary invariance, it is subject to internal neutral point reconnection. The magnetic fields of most stars suffer such nonequilibrium, and consequent enhanced dissipation, providing an important source of heat in their outer atmospheres.

INTERSTELLAR MATTER c90

S. Hayakawa *In* ESA Plasma Astrophys. Nov. 1981 p 37-42 refs (For primary document see N82-20030 10-88)

Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

Several components of the interstellar medium were demonstrated to coexist by thermal balance and/or pressure balance. The two phase stability is explained by the temperature and density dependencies of the heating and cooling rates. Cooling rates are given for a thin hot plasma under ionization equilibrium for the interstellar media of solar abundances and of metal depleted abundances. Thermal instabilities are discussed with regard to the temperature dependence of the cooling rate. A deviation from ionization equilibrium and from electron-ion equipartition may take place in a tenuous plasma. Numerical examples of the nonsteady behavior are shown. The generation of a hot plasma by supernova blast waves is discussed on the basis of evolution models of the supernova remnant. Obervational results, indicating the distribution of the hot plasma component are presented in reference to soft X-ray and nonthermal radio maps. Author (ESA)

MODULATIONAL INSTABILITIES IN ASTROPHYSICS c75
D. terHaar *In* ESA Plasma Astrophys. Nov. 1981 p 45-49 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

The occurrence of modulational instabilities in an isotropic, unmagnetized plasma is discussed and an extension of the theory to magnetized plasmas is considered. The basic equations were derived, following a two fluid description of the plasma. Application to the theory of type 1 solar bursts is proposed. Type 3 solar bursts, auroral kilometric radiation, and pulsar radiation are also dealt with. Galactic density waves are another manifestation of modulational instabilities in astrophysics. STABILITY OF THE EQUILIBRIUM STATES OF THE INTERSTELLAR GAS AND FIELD SYSTEM c90
Catherine J. Cesarsky *In* ESA Plasma Astrophys. Nov. 1981 p 51-59 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

Possible static equilibrium configurations of the interstellar gas-fields system (including cosmic rays) are described and were tested for stability. The simplest equilibrium configurations, with horizontal magnetic fields and with equal scale heights for the three components (stratified equilibrium), are unstable if the polytropic index of the gas is larger than a critical value. The perturbations that grow most rapidly have wavelengths equivalent to several 100 parsecs along the field and very short wavelengths across the field. The stability of two dimensional curved equilibria, where the magnetic field lines lie in planes orthogonal to the galactic plane, can be tested using the MHD energy principle. It is found that any state connected through flux freezing with an initially unstable horizontal state is also unstable to perturbations with a short transverse wavelength. Author (ESA)

PLASMA EMISSION MECHANISMS AND ACCELERATION OF RELATIVISTIC PARTICLES IN COSMIC PLASMAS c90
V. N. Tsytovich *In* ESA Plasma Astrophys. Nov. 1981 p 61-75 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

Recent theory in plasma physics was reviewed, and the emission mechanism for relativistic particles in space was analyzed. The difference between the synchrotron emission mechanism and emission in random small-scale magnetic fields is clarified. It is emphasized that often in space, relativistic particles have a power-law energy distribution. Cosmic emission also has a power-law frequency dependence. For a synchrotron emission mechanism, there exists a universal relation between gamma and mu, i.e., mu = 1/2 (gamma - 1). Whether this relation is indeed universal is discussed. Results show under which circumstances the relation is not valid and what kind of relation should be used in the case of relativistic particle emission, e.g., in a small-scale random field or in strong turbulence. WEAK TURBULENCE THEORY OF ENHANCED GAS IONIZATION BY PLASMA FLOW c75
A. A. Galeev *In* ESA Plasma Astrophys. Nov. 1981 p 77-82 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

A quasilinear theory of collisionless energy transfer from a counterstreaming plasma-gas flow to electrons is presented. The critical ionization velocity was reexamined. It is recognized that this phenomenon requires enhanced heating of electrons, via some hypothetical collisionless interaction between plasma species, that can be studied by a well developed weak plasma turbulence theory. Since a plasma cannot interact collisionlessly with a neutral gas, it is assumed that, in astrophysical situations, some seed ionized atoms are produced in the plasma flow by external ionization sources, e.g., stellar ultraviolet radiation. The orbits of newly ionized atoms are such that they form an unstable distribution in a velocity space. Although the branch of plasma modes excited by an instability is the same in a wide range of plasma and field parameters, the driving term has a different form in two limiting cases, which are considered. PLASMA LASERS (A STRONG SOURCE OF COHERENT RADIATION IN ASTROPHYSICS) c36
K. Papadopoulos *In* ESA Plasma Astrophys. Nov. 1981 p 89-95 refs (For primary document see N82-20030 10-88)
(Contracts NAGw-81; N00014-79-C-0665)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others) CSCL 20E

The generation of electromagnetic radiation from the free energy available in electron streams is discussed. The fundamental principles involved in a particular class of coherent plasma radiation sources, i.e., plasma lasers, are reviewed, focusing on three wave coupling, nonlinear parametric instabilities, and negative energy waves. The simplest case of plasma lasers, that of an unmagnetized plasma containing a finite level of density fluctuations and electrons streaming with respect to the ions, is dealt with. A much more complicated application of plasma lasers to the case of auroral kilometric radiation is then examined. The concept of free electron lasers, including the role of relativistic scattering, is elucidated. Important problems involving the escape of the excited radiation from its generation region, effects due to plasma shielding and nonlinear limits, are brought out. Author (ESA)

RADIATION PROCESSES IN ACTIVE GALACTIC NUCLEI c93
A. Cavaliere *In* ESA Plasma Astrophys. Nov. 1981 p 97-103 refs Sponsored by CNR (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

The peculiar conditions of the plasma filling the emission regions of the powerful continuum radiation from active galactic nuclei and quasars are discussed. The plasma is energized by gravitation; it is radiation dominated, out of thermal equilibrium, at least weakly relativistic, and it is likely to comprise a large number of positrons. Specific tenets of plasma physics are called into question. Author (ESA)

PARTICLE ACCELERATION c93

Russell M. Kulsrud *In* ESA Plasma Astrophys. Nov. 1981 p 105-109 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

The general theory of particle acceleration is illustrated by three particular types of acceleration. These are Fermi acceleration, acceleration by strong electromagnetic waves such as those assumed to be produced by pulsars, and acceleration by collisionless shocks. The physical processes involved as well as the amount of acceleration produced in each case are discussed. Fermi acceleration is entirely stochastic. Pulsar acceleration is entirely coherent. Shock acceleration is a mixture of the two in which stochastic acceleration is organized by the shock in such a way as to yield a good power spectrum. Author (ESA)

HEATING PROCESSES OF THE SOLAR CORONA c92

M. Kuperus *In* ESA Plasma Astrophys. Nov. 1981 p 113-128 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

Coronal heating processes are discussed in the context of the magnetic structure of the solar corona. Existing theories are divided into acoustic theories, where the magnetic field plays a passive role, and electrodynamic theories where the magnetic field plays an active role in the sense that transversal waves are possible. The dissipation mechanisms are shock wave dissipation in the acoustic theory and viscous and Joule dissipation of Alfven waves in the electrodynamic theory. The dissipation of Alfven waves appears to be much more effective in a structured medium than in a homogeneous medium. Anomalous Joule heating is likely to be important as a steady heating mechanism. PLASMA DYNAMICS IN THE RAPIDLY ROTATING MAGNETOSPHERE OF JUPITER c91

John W. Belcher *In* ESA Plasma Astrophys. Nov. 1981 p 129-134 refs (For primary document see N82-20030 10-88)
(Contract JPL-953733; Grant NGR-22-009-015)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others) CSCL 03B

The major Voyager findings concerning the low energy plasma in the Jovian magnetosphere are reviewed. The magnetosphere of Jupiter is unique in the solar system because of its large extent and rapid rotation, and because of the prodigious source of plasma provided by the satellite Io. Io injects > 10 to the 29th power AMU/sec of freshly ionized material into the Jovian magnetosphere, producing a plasma dominated by heavy ions which are mostly various ionization states of oxygen and sulfur. This injected material is the source for the Io plasma torus, which is centered at Io's L-shell with a scale height of 1 Jovian radii and a mass of approximately 10 to the 36th power AMU. Ninety percent of the injected plasma diffuses outward, forming the Jovian magnetodisk. Io interacts with the plasma torus via the generation of an Alfven wave which propagates from Io into the ionosphere of Jupiter, carrying an energy flux of approximately 10 to the 12th power watts. INFERENCES ABOUT THE SOLAR WIND DYNAMICS FROM OBSERVED DISTRIBUTIONS OF ELECTRONS AND IONS c92

Stanislaw Olbert *In* ESA Plasma Astrophys. Nov. 1981 p 135-143 refs (For primary document see N82-20030 10-88)
(Grant NGR-22-009-015)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+ 20% others) CSCL 03B

Recent measurements, mostly from Helios and Voyager, were reviewed. The observational material was compiled into a series of radial profiles for various macroscopic plasma parameters. Several examples for experimentally determined three-dimensional distribution functions of protons are shown. The physical properties of the solar wind electrons were surveyed. The still unresolved question of the driving mechanism of the solar wind is considered. The problem of the energy balance in pure, high velocity streams emanating from solar coronal holes was outlined. It is suggested that the suprathermal electrons may play an important role in driving the wind. Numerical estimates, referring to the lower corona, are offered in support of this hypothesis. Author (ESA)

PLASMA PROCESSES AT COLLISIONLESS SHOCK WAVES c75

V. Formisano *In* ESA Plasma Astrophys. Nov. 1981 p 145-165 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

The importance of the curvature of the Earth bow shock surface for particle acceleration is discussed. Plasma quantities at collisionless shock waves obey the generalized Rankine-Hugoniot relations. Four parameters are considered: the magnetosonic Mach number, the angle between the shock normal and the upstream magnetic field direction, the ratio of particle pressure to magnetic pressure, and the electron to ion temperature ratio. At low Mach number (M < or = 3), the shock is resistive. Between M = 3 and M = 5, viscosity is needed to dissipate the solar wind energy. Above M = 5, ion gyration becomes important with the dissipation length on the order of one or several ion gyroradii. Both electromagnetic and electrostatic turbulence were observed. Two processes for accelerating particles seem to be working at the Earth bow shock: one based essentially on the electric field tangent to the shock seen by particles trying to move upstream, the other working on particles already accelerated with the previous mechanism, being a Fermi-like mechanism and operating in front of quasi-parallel shocks. Author (ESA)

THE INTERNATIONAL SOLAR POLAR MISSION (ISPM) c92

R. G. Marsden and K.-P. Wenzel *In* ESA Plasma Astrophys. Nov. 1981 p167-175 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

The scientific objectives of the instrumentation chosen to carry out the exploratory investigations of ISPM are reviewed, including mission time-lines and trajectory. The ISPM will allow exploration of the heliosphere within a few astronomical units of the Sun over the full range of heliographic latitudes. The prime mission objective is to study, as a function of solar latitude, the properties of the interplanetary medium and solar corona. The ISPM is a cooperative mission carried out jointly by ESA and NASA, to be launched in the mid-1980's and utilizing a Jupiter gravity assist to achieve a high solar latitude trajectory. The scientific instrumentation was designed to explore, in the third heliospheric dimension, the properties of the solar corona, the solar wind, the Sun-wind interface, the heliospheric magnetic field, solar radio bursts and plasma waves, solar and galactic cosmic rays, and interplanetary/interstellar neutral dust and gas. Author (ESA)

ORIGIN OF THE LARGE-SCALE STRUCTURE OF THE UNIVERSE c90

I. D. Novikov *In* ESA Plasma Astrophys. Nov. 1981 p 179-189 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

The problems in galaxy formation theory associated with plasma astrophysics and plasma theory were related to a theory of origin for the large-scale structure of the universe. Gravitational stability of an expanding relativistic plasma and the evolution of relic neutrino perturbations were considered. The gravitational forces of neutrino perturbations influence the growth of density perturbations in a photon plasma. The nonlinear stage in the kinetic evolution of inhomogeneities due to free gravitating particles in an expanding gravitational medium was numerically simulated. Results for a one dimensional and for a two dimensional gravitational instability are presented. A cosmology of primordial sound waves is hypothesized. Author (ESA)

N82-20050# Massachusetts Inst. of Tech., Cambridge.
GALACTIC DYNAMICS AND GRAVITATIONAL PLASMAS c90
C. C. Lin and G. Bertin *In* ESA Plasma Astrophys. Nov. 1981 p 191-205 refs Sponsored by CNR and NSF (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF Member States, AU, CN, and NO (+20% others)

Phenomena associated with the collective behavior of stellar systems are discussed, focusing on the problem of spiral structure of galaxies. The density wave theory in a relatively complete form makes it possible to formulate a dynamical classification of spiral galaxies. Realistic galaxy models were found to support discrete unstable spiral modes. Modes can be unstable or stable and they can be either normal spiral modes or barred spiral modes, depending on the properties of tha equilibrium model. A tentative proposal is that these modes correspond to normal spiral galaxies and transition barred galaxies along with some barred galaxies. Issues related to such a proposal are addressed. Author (ESA)

N82-20051# California Inst. of Tech., Pasadena.
EXTRAGALACTIC RADIO SOURCES c93
R. D. Blandford *In* ESA Plasma Astrophys. Nov. 1981 p 207-214 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

Recent observational and theoretical developments in the study of extragalactic radio sources are reviewed. Over 70 radio sources possess jets (narrow features that appear to link the main radio emitting regions with the nuclei of the associated galaxies or quasars). It is argued that these jets are conduits along which flow mass, momentum, energy and magnetic flux. Particular attention is paid to symmetric sources, magnetic collimation and instabilities. These observations are interpreted with a unified theory of active extragalactic objects. Author (ESA)

N82-20052# Cornell Univ., Ithaca, N. Y. Dept. of Applied Physics.
EXTRAGALACTIC DOUBLE RADIO SOURCES c93
R. V. E. Lovelace and H. A. Scott *In* ESA Plasma Astrophys. Nov. 1981 p 215-221 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

A unified model of double radio sources in which the accretion disk of a massive black hole acts as a unipolar induction dynamo, producing oppositely directed beams of relativistic particles is discussed. The hydrodynamics of accretion flow with angular momentum are considered. The empty vortex funnels which are found to occur are essential both in providing a path of easy egress for the outward propagation of beams and in collimating the beams. Hydrodynamic jets are found under some conditions and these may be relevant to mass outflow from active galactic nuclei. The factors which determine the axial magnetic field strength near the inner edge of the accretion disk of the black hole are treated. Author (ESA)

EVOLUTION OF X-RAY ASTRONOMY c89
Bruno Rossi *In* ESA Plasma Astrophys. Nov. 1981 p 225-249 refs (For primary document see N82-20030 10-88)
(Contract NAS5-24441)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others) CSCL 03A

The development of X-ray astronomy, stopping short of recent observations by grazing incidence telescope, is surveyed. The discovery in 1962 of an extrasolar X-ray source, Sco X-1, with orders of magnitude stronger than astronomers believed might exist is recounted. It turned out to belong to a class of previously unknown galactic objects, the X-ray stars. The identification of a strong X-ray source with the Crab Nebula and the identification of Sco X-1 with a faint, peculiar optical object soon followed. The demonstration that X-ray stars are binary systems, each consisting of a collapsed object (a neutron star, occasionally a black hole) accreting matter from an ordinary star, and the discovery of X-ray bursts are further milestones. The discovery of exceedingly strong X-ray emission from active galaxies, quasars and clusters of galaxies and the demonstration that in these the principal X-ray source is a hot gas filling the space between galaxies sum up results. Author (ESA)

N82-20054# Tokyo Univ. (Japan).
DIAGNOSIS OF THE NEUTRON STAR AND ITS ENVIRONMENT WITH X-RAY ASTRONOMY c89
Minoru Oda *In* ESA Plasma Astrophys. Nov. 1981 p 251-263 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

The physics of the neutron star, its atmosphere and its environment are discussed, relating to observational results from X-ray astronomy. The behavior of an X-ray pulsar, Vela X-1, observed with the X-ray astronomy satellite Hakucho, is considered in relation to the nature of the neutron star and its interaction with an accretion disk. X-ray bursts, also observed with the satellite, are a rich source of information for physics of the atmosphere and the plasma environment of the neutron star. The hard X-ray imaging of the Crab Nebula undertaken by balloon observation reveals the internal structure of the Crab Nebula. Author (ESA)

PRODUCTION AND PROPAGATION OF JETS c93
Martin J. Rees *In* ESA Plasma Astrophys. Nov. 1981 p 267-271 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

The processes in active galactic nuclei which give rise to the large-scale jet structures in radio galaxies are dealt with. The physical conditions in beam plasma and the initial collimation are treated. Collimated jets are set up within a few parsecs of a massive black hole. Jet physics show that the large-scale radio structures are influenced by the galactic and extragalactic environment. The energy densities are low; the speeds are probably not relativistic. Even though the physics is not extreme, large-scale source morphology is comparable to computational meteorology for complexity. Primary energy production seems easier to understand, even though it entails more extreme conditions, e.g., relativistic flows, black holes. The crucial processes may be quite symmetric and thus more amenable to serious modelling. Author (ESA)

PULSAR THEORY: PARTICLE ACCELERATION AND PHOTON EMISSION IN THE POLAR FLUX TUBE c90
Jonathon Arons *In* ESA Plasma Astrophys. Nov. 1981 p 273-289 refs (For primary document see N82-20030 10-88) (Grant NSF AST-79-23243)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

Particle acceleration and photon emission in the polar field lines of a pulsar are considered. Observations of pulsar pulse, subpulse and micropulse morphology, spectra and polarization, as well as high frequency radiation are reviewed and used to suggest a steady streaming model with pair creation as the seat of the emission phenomenon. The energetics of polar beam flow are described with emphasis on acceleration in a slot gap. A possible global model of the magnetosphere is outlined. The plasma content of the flow is described, then used to discuss several transfer processes which may be associated with subpulse morphology and polarization and with the formation of micropulses. Various ideas about possible emission processes are discussed with emphasis on emission from shear flows in the boundary layers of the pair plasma flow. A model of the origin of marching subpulses is suggested, involving a rotating drift wave over the polar cap. Author (ESA)

SUPERNOVA HYDRODYNAMICS c90
Stirling A. Colgate *In* ESA Plasma Astrophys. Nov. 1981 p 291-296 refs Sponsored by California Univ. and NSF Prepared in cooperation with New Mexico Inst. of Mining and Technology (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+ 20% others)

The physics as well as astrophysics of the supernova (SN) phenomenon are illustrated with the appropriate numbers. The explosion of a star, a supernova, occurs at the end of its evolution when the nuclear fuel in its core is almost, or completely, consumed. The star may explode due to a small residual thermonuclear detonation, type I SN, or it may collapse, type I and type II SN, leaving a neutron star remnant. The type I progenitor is thought to be an old accreting white dwarf, 1.4 interior mass, with a close companion star. A type II SN is thought to be a massive young star, 6 to 10 interior mass. The mechanism of explosion is still a challange to model, being the most extreme conditions of matter and hydrodynamics that occur presently and excessively in the universe. Author (ESA)

Transrelativistic plasma, where the mean energy per particle may be > or equivalent to (m sub e) c squared, is considered. In the deep potential well around a compact object, plasma can retain thermal energies of 1 to 100 Mev per particle, even if it is gravitationally bound. The radiative losses are then likely to be due to synchrotron/Compton emission. Pair production may be so prolific that positrons greatly outnumber the ions; the ion and electron temperatures would be unequal unless there are strong collective effects which couple them. These processes, important in determining the radiative and dynamical properties of galactic nuclei, are described. Author (ESA)

ON THE POSSIBILITY OF EXISTENCE OF LARGE AMPLITUDE WAVES AROUND PULSARS c90
Estelle Asseo *In* ESA Plasma Astrophys. Nov. 1981 p 309-312 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+ 20% others)

Possible acceleration of particles is related to the properties of propagation and stability of large amplitude waves. Radiative damping effects compete with Weibel instability to prevent the propagation of large amplitude, low frequency, linearly polarized plasma waves. These inhibition phenomena are important for understanding the eventual acceleration of particles in the strong waves emitted by pulsars beyond the light cylinder distance. Due to the electric field induced by the rotation of a star, electromagnetic forces in the direction of the magnetic field lines dominate gravitational ones. Charged particles cannot remain bounded to the neutron star surface; they form a plasma which flows along closed and open magnetic field lines, fills the pulsar magnetosphere, and reaches regions beyond the light cylinder. The large amplitude radiated wave propagates through this plasma. Realistic models have to include simultaneously the electromagnetic wave emission and the relativistic plasma outflow. Author (ESA)

HIGH ENERGY COSMIC RAY ACCELERATION BY DIFFUSIVE SHOCKS c93
P. O. Lagage and C. J. Cesarsky *In* ESA Plasma Astrophys. Nov. 1981 p 317-318 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+ 20% others)

Difficulties with the mechanism of acceleration of cosmic rays by shock waves are addressed. One of the problems is that shock waves cannot accelerate particles to very high energies. This is because the mean time between shock crossings is long for high energy particles so that the acceleration process is slow. A derivation of the mean crossing time is presented which has the advantage of being readily generalized when the diffusion coefficient is space dependent. The upper limit to the energy that can be attained for a supernova shock, and for a stellar wind terminal shock, is evaluated. Author (ESA)

COSMIC RAY ACCELERATION BY STELLAR WINDS AND SELF-CONFINEMENT IN GIANT H2 REGIONS c93
T. Montmerle and C. J. Cesarsky *In* ESA Plasma Astrophys. Nov. 1981 p 319-322 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+ 20% others)

An idealized model of galactic cosmic ray acceleration by stellar winds is explained. The region behind the stellar wind shock, filled with a hot, tenuous gas, forms a bubble which expands gradually into the interstellar medium. Acceleration by a plane wave is considered; all the acceleration takes place in the low density regions on both sides of the shock. The cosmic rays are accelerated at the shock boundary of the stellar winds and are partially confined in the H2 region and in the molecular cloud. The cosmic ray density near the acceleration region is high. However, the associated pressure remains low with respect to the gas pressure and its effect on the shock structure is negligible. If the particles accelerated by this mechanism are extracted from the wind, implied injection rate is very low. Author (ESA)

Astronomical phenomena associated with the accretion of matter onto stars and galaxies are surveyed. The standard disk model from plasma physics is introduced and its modification by X-ray irradiation is discussed. Properties of the accretion disk formed around neutron stars are found from observations of the absorption of X-rays by the accretion disk, radiation emitted from the disk, and the change of the spin periods of X-ray pulsars. The standard model is constructed for the stationary disk, while nonstationary disks can be responsible for transient phenomena including X-ray and gamma-ray bursts. Author (ESA)

The kinetic equations that describe the time evolution of the distribution of nondegenerate nonrelativistic electrons interacting with isotropic thermal photons via Compton scattering are derived. Two cases, when the electrons are isotropic and when the electron motion is restricted to one spatial dimension due to strong magnetic field, are considered. The latter case is relevant to radiative transfer in the atmosphere of neutron stars with magnetic field of order 10 to the 12th power G. The time scales associated with various competing processes in the system are compared and the applicability of these equations is discussed. Explicit calculation results for the entropy gain show that these equations satisfy Boltzmann's H theorem for the coupled electron-photon system as a whole. Author (ESA)

PULSAR MAGNETOSPHERE POTENTIAL STRUCTURE c90
Dean F. Smith, Lorant A. Muth, and Jonathan Arons (California Univ., Berkeley) *In* ESA Plasma Astrophys. Nov. 1981 p 333-335 refs Sponsored by NSF (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

The electric fields in the polar cap region of the magnetosphere of a pairless orthogonal rotator are calculated, using a modified Poisson equation for the potential, Phi. This is the first step in determining whether return currents are formed in these models and the resulting global current flow patterns. The potential was calculated from 0.1 to 5 R sub L, where R sub L is the light cylinder radius, using known results for Phi at 0.1 R sub L with an inner last closed magnetic field line corresponding to that of a point dipole. The potential distribution indicates that return currents should be formed. Author (ESA)

Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

Despite their impressive outputs of power, it is suggested that quasars probably do not provide diagnostics of any exotic relativistic physics. It is argued that radio galaxies may be cleaner laboratories which give a direct view of purely nonthermal electrodynamic processes occurring near black holes. Quasar and radio galaxy observations are reviewed. How inadequate cooling and particle coupling can give rise to a pressure supported accretion torus is described. Its structure in the absence of large scale magnetic fields and how it can be modified to extract sufficient energy from a rotating black hole to power a double radio source are discussed. Relevant plasma parameters are postulated. Author (ESA)

A DOUGHNUT MODEL OF QUASARS c90
P. M. Allan *In* ESA Plasma Astrophys. Nov. 1981 p 349-350 refs Sponsored by SERC (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

A model for quasars, which overcomes the problem with accretion disks of not knowing the correct viscosity, is proposed. One of the most studied scenarios involves an accretion disk in which the gas is heated by viscous processes so that it radiates energy and spirals slowly into the black hole as a result of the loss of energy and angular momentum. An alternative scenario in which the viscosity is small enough that viscous evolution does not occur and where the accreted gas has the same component of angular momentum along the rotation axis at all points in space, so that the gas forms a ring around the black hole, is described. The infalling gas deposits its energy in the ring, which then radiates predominantly in the near ultraviolet, and may result in the thermal peak which is well observed in 3C273 as well as in other quasars. A single model that explains the jets seen in radio galaxies and SS433, in which gas is accelerated by radiation pressure from a doughnut, is proposed. It has long been suspected that the extended lobes of double radio sources are powered by beams of material being ejected from the central galaxy. It is suggested that in cases where the viscosity is small, a doughnut or torus of gas may form in orbit around a compact body (neutron star or black hole) and that this can provide an alternative to accretion disks in explaining the energy requirements of quasars. This model seems to indicate what to expect from gas flows off standard alpha disks. General validity is implied in application to axisymmetric accretion systems. Author (ESA)

LARGE SCALE KELVIN-HELMHOLTZ INSTABILITIES IN EXTRAGALACTIC RADIO JETS c93
A. Ferrari and E. Trussoni *In* ESA Plasma Astrophys. Nov. 1981 p 353-357 refs Prepared in cooperation with CNR, Turin (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

The relation of the morphological features detected in radio jets from active galactic nuclei with the development of large scale Kelvin-Helmholtz instabilities in supersonic flows is discussed. In particular, it is pointed out that, depending on the Mach number and the beam velocity, different damping processes are expected to occur which dissipate the unstable modes and saturate their nonlinear evolution. Applications of this theoretical scheme to peculiar radio jets are described. Author (ESA)

SECOND-ORDER NONLINEAR CONDUCTIVITY TENSOR FOR AN UNMAGNETIZED RELATIVISTIC TURBULENT PLASMA c75
Howard E. Brandt *In* ESA Plasma Astrophys. Nov. 1981 p 361-364 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

The symmetry properties of the second-order nonlinear conductivity tensor for an unmagnetized, relativistic, weakly turbulent plasma are considered in the analysis of collective Bremsstrahlung instability. This tensor has an exact symmetry which, if resonant wave-particle interactions are neglected, becomes the widely known symmetry related to the Manley-Rowe relations, crossing symmetry, and the nondissipative nature of the nonlinear current. Using the well-known expression for the conductivity from plasma turbulence theory, a polynomial representation for the tensor is obtained in which all derivatives are removed and the pole structure is clearly exhibited. The exact symmetry can be obtained by a lengthy algebraic reduction using this representation. It can also be obtained much more simply and directly by using a coordinate-free differential geometric formulation. Author (ESA)

COLLECTIVE GRAVITATIONAL EFFECTS c46
Gerald E. Tauber *In* ESA Plasma Astrophys. Nov. 1981

p 365-368 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

A covariant statistical mechanics which underlies a microscopic description of particles moving under the influence of gravitational forces is established. The internal state of large masses, e.g., a gravitating gas, must be described by the general theory of relativity, applied not only to the gravitational field, but also to the motion of matter that generates the field that acts on it. Even if the mass concentration is not high, relativistic effects are important, such as in the case of high temperatures or degenerate matter distributions. The situation becomes more complicated when deviations from thermal equilibrium, or particles interacting via some given force law, are considered. An 8N-dimensional phase space is constructed for which Liouville's equation can be written down. The BBGKY hierarchy of equations is then obtained by defining a reduced distribution function and integrating over an appropriate sub-space. The resulting equation contains the collective effects due to particle interaction.

The consequences of cosmic ray production by a supernova in a molecular cloud are discussed. Self-trapping problems for a higher flux of cosmic rays in a molecular cloud are focused on. The column density of molecular clouds is probably too high to explain the majority of galactic cosmic ray sources, even allowing for fortuitous asymmetry in the placement of the supernova in the cloud, however, measurements of antiproton flux suggest that some cosmic ray sources do have a high column density. The large predicted gamma-ray luminosity of such a cloud invites comparison with COS-B sources. Author (ESA)

CERTAIN ASPECTS OF PRIMARY COSMIC RAYS COMPOSITION AT ENERGIES OF 10 TO THE 14TH POWER TO 10 TO THE 15TH POWER eV c93
J. Kempa *In* ESA Plasma Astrophys. Nov. 1981 p 375-376 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

Indications that the chemical composition of primary cosmic rays at energies from 10 to the 14th power to 10 to the 15th power eV consists of heavier particles than in the energy domain 10 to the 12th power eV are examined. From analysis of high energy hadrons, in extensive air showers, the pure proton composition of the primary cosmic radiation can be excluded. The comparison of various components shows that the average atomic weight of the primary particles is about 10 to 15.

FORMATION OF ION CONICS AND LOWER HYBRID ACCELERATION IN THE SUPRAURORAL REGION c90
Tom Chang and Bruno Coppi *In* ESA Plasma Astrophys. Nov. 1981 p 379-381 refs Sponsored by AFGL (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

It is argued that broadband lower hybrid waves generated by energetic electron beams can be quite efficient in accelerating ions of ionospheric origin (H+ and O+). Throughout the lower altitudes of the suprauroral region, satellite measurements detected plasma waves dominated by broadband lower hybrid modes. How ions of ionospheric origin can be energized perpendicularly to the geomagnetic field lines by resonant interactions with these modes is shown. The added influence of the Earth's magnetic field geometry can lead the energized portion of the ions to evolve into conic distributions. The calculated pitch angles of the ions cluster around 90 to 140 deg. Pitch angles < 90 deg can also occur, since the ions can drift towards the ionosphere initially. Author (ESA)

ON THE EXISTENCE OF THE ION TEARING MODE c93
H. Goldstein *In* ESA Plasma Astrophys. Nov. 1981 p 383-384 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

An ion tearing mode is suggested as a possible onset mechanism for magnetospheric substorms. Earlier work, based on a WKB approximation where the wavelength of the mode along the tail had to be restricted to values much smaller than the characteristic length for magnetic field variation in that direction, indicated that the ion tearing instability may not exist in the magnetotail. In the present theory the WKB method is abandoned and the exact energy principle for the (two-dimensional) Vlasov theory is used instead. The tail equilibrium is represented by two-dimensional self-consistent solutions. The computed minimizing modes have the shape of tearing modes. The characteristic length is by order of magnitude the length scale for the magnetic field variation. Results show that the ion tearing instability does in fact occur in the long wavelength regime and therefore is a possible onset mechanism.

DOUBLE LAYER AND POTENTIAL JUMP: A REVIEW OF LABORATORY EXPERIMENTAL EVIDENCE c75
M. Guyot, C. Hollenstein, and M. Tran *In* ESA Plasma Astrophys. Nov. 1981 p 391-393 refs Sponsored by Swiss National Science Foundation and Euratom (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

Double layers, potential differences which occur in plasma, are characterized. Double layers are collisionless with a transition region of a few tens Debye length. They are created when the electron drift velocity is greater than the thermal velocity. Aside from this class of potential structure, another type of potential structure was discovered recently for which the preceding criteria concerning collisionality and the electron drift velocity are violated, i.e., the potential jump. The conditions under which the potential jump occurs are outlined. Author (ESA)

QUASISTATIC EVOLUTION OF PREFLARE EQUILIBRIA c92
Wolfgang Zwingmann *In* ESA Plasma Astrophys. Nov. 1981 p 297-400 refs Sponsored by Deutsche Forschungsgemeinschaft (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

A special type of solar preflare equilibria, the newly-emerging-Flux model, is considered. This model describes the quasistatic evolution occurring before the onset of a solar eruptive process (e.g., flare) as the formation of a new magnetic structure within an otherwise stationary equilibrium. The model is analyzed

quantitatively in the framework of two-dimensional magnetohydrostatic theory. It is shown that the equilibrium ceases to exist when the newly emerging flux exceeds a critical field strength; this point is regarded as the onset of an eruptive process. The equilibrium and the onset criterion are discussed quantitatively.

LARGE LOOP THERMAL MODELS OF SOLAR HARD X-RAY BURSTS **c92**

Dean F. Smith and D. W. Harmony *In* ESA Plasma Astrophys. Nov. 1981 p 401-404 refs Co-sponsored with NSF (For primary document see N82-20030 10-88)
(Grant NsG-7505)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others) CSCL 03B

Results for small loop thermal models of hard X-ray bursts are extended to large loops. In this model a magnetic arch with a coronal length of 45,000 km has the electrons near the top heated to temperatures above 1 billion K. The resulting conduction fronts which form are dominated by collisionless processes and travel down the arch to the transition region and chromosphere where they evaporate off part of the latter. This relatively cool material travels back up the loop and eventually quenches the source for energy injection times of order 10 sec. Most of the X-ray emission comes from the footpoints of the arch over most of the source lifetime and the spectrum is a power law with a typical spectral index of 3.0. Even though the efficiency gain in this model is only 2.8, it is much easier from the point of view of plasma physics to heat all the electrons in a plasma than to accelerate a substantial fraction of them.

COMMENTS ON HIGH MACH NUMBER MAGNETOSONIC SHOCKS **c72**

K. Papadopoulos *In* ESA Plasma Asrophys. Nov. 1981 p 409-411 refs (For primary document see N82-20030 10-88)
(Grant NAGw-81; Contract N00014-79-C-0665)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others) CSCL 20H

It is shown that the ion thermalization process required by the Hugoniot conditions for high Mach number magnetosonic shocks is controlled by loss cone type distributions, i.e., (partial differentiation of the ion distribution function/partial differentiation of the ion distribution energy component) > zero, formed by a combination of ion reflection and gyration downstream. The thermalization length corresponds to few ion gyroradii, while the final distribution deviates substantially from Maxwellian. The results are applied to the Earth bow shock.

IDENTIFICATION OF THE DISCONTINUITIES AT THE MAGNETOPAUSE **c46**

Zhou Guo-cheng *In* ESA Plasma Astrophys. Nov. 1981 p 413-414 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

Different magnetopause discontinuities were identified by characterizing these in terms of the magnetic fields, the bulk flow velocity and other thermodynamic parameters. This total-parameter method is independent of the normal direction of the magnetopause. The measurements of the magnetic field and the plasma during the IMP-6, and ISEE 1 and 2 magnetopause crossings showed that the sum of the thermal pressure and magnetic pressure of the plasma remained nearly constant while other parameters changed at a different rate. Based on these observed data, the discontinuity equations for an ideal MHD fluid in which the pressure was assumed to be isotropic were solved. Solutions include the tangential discontinuities (twelve sets), the rotational discontinuity, the transitional discontinuities between tangential and rotational discontinuities (two sets), and the transitional discontinuities between a tangential discontinuity and a slow shock wave (nine sets).

A PLASMA CURRENT SHEET STUDIED BY MEANS OF THE PARTICLE MOTION **c75**

Xu Rong-lan *In* ESA Plasma Astrophys. Nov. 1981 p 417-419 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

A one dimensional plasma current sheet is modeled as the regular pattern of motion of charged particles moving in a neutral sheet magnetic field. A guiding center theorem similar to that of Alfven is used. The '8' shaped motion in the nonperturbation region (where the magnetic field is small or equal to zero) is divided into two circular motions. Since each circular motion is equivalent to a magnet, the 8 shaped motion is equivalent to two magnets in opposite direction. The electric plasma current is derived with the plasma distribution function a funcion of constant motion. Results show that the current sheet is mainly due to the inverse drift motion in the nonperturbation region. A self-consistent magnetic field is also derived from the relation between charged particle motions and the magnetic field.

THE ANALYTICAL TRAJECTORY OF THE CHARGED PARTICLE MOVING IN A NEUTRAL SHEET MAGNETIC FIELD **c90**

Xu Rong-lan *In* ESA Plasma Astrophys. Nov. 1980 p 421-423 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

The trajectory of a charged particle, moving in a neutral magnetic field, is derived analytically. The solution of the equation of motion is written as: Referents of a relation (+) = Referents of a relation sub c + Referents prime of a relation (+), where Referents of a relation sub c is the position of the center of the trajectory and Referents prime of a relation (+) is a closed oscillatory motion. The results are essentially the same as with numerical trajectory evaluation. The trajectory of a particle in a neutral sheet magnetic field, including the region where the magnetic field is equal to zero, can be expressed as two motions. One is along a closed oscillatory trajectory in the plane perpendicular to the magnetic field; its center drifts in a direction parallel to the neutral line. The other follows the magnetic line with a constant velocity. In the perturbation region, the closed oscillatory motion is circular, while in the nonperturbation region it is 8 shaped. In the nonperturbation region, its center drifts in the opposite direction to that in the perturbation region and its drift velocity is very large.

ACCELERATION OF COSMIC RAYS BY SHOCK WAVES **c93**

W. I. Axford *In* ESA Plasma Astrophys. Nov. 1981 p 425-449 refs (For primary document see N82-20030 10-88)
Avail: NTIS HC A24/MF A01; ESA, Paris FF 125 Member States, AU, CN, and NO (+20% others)

The problem of the origin of galactic cosmic rays is reviewed. The observed properties of galactic cosmic rays and the interferences that can be drawn from them are summarized.

The basic properties of the interstellar medium are included. Scatter-free acceleration of energetic particles by shock waves is outlined. The acceleration mechanism is then extended, taking into account scattering. Modifications associated with time dependence and losses due to interaction with the background medium are described along with effects of nonplanar geometry. The possibility that galactic cosmic rays are accelerated by supernova shocks is discussed. Difficulties encountered with the shock acceleration theory indicate that a completely nonlinear treatment is necessary. This must comprehend the generation amplification and damping of hydromagnetic waves in a medium with strong supersonic turbulence and streaming cosmic ray fluxes. Author (ESA)

THE DIFFERENTIAL EMISSION MEASURE OF DYNAMIC CORONAL LOOPS

Spiro K. Antiochos Dec. 1981 10 p refs
(Grants NGL-05-020-272; NAGw-92; Contract N00014-75-C-0673)
(NASA-CR-168638; SU-SUIPR-863) Avail: NTIS HC A02/MF A01 CSCL 03A

The effects of time dependent phenomena, such as flare energization and decay, on the temperature and density structure of the transition region and, in particular, on the form of the differential emission measure are studied. It is found that unlike the case of the static models, the form of the differential emission measure can be used to determine the important physical mechanisms in the dynamic models. B.W.

DOCUMENTATION FOR THE MACHINE-READABLE VERSION OF THE CATALOGUE OF STARS WITHIN 25 PARSECS OF THE SUN

Wayne H. Warren, Jr. Jan. 1982 17 p refs
(NASA-TM-84039; NSSDC/WDC-A-R&S-82-03) Avail: NTIS HC A02/MF A01 CSCL 03A

The machine-readable version of the Catalogue of Stars within twenty-five parsecs of the Sun contains essentially all information given in Table Ia of the published catalog, plus positional data and all cross references to other catalog numbers given in Table IIa. Not included from Table Ia are the flags (asterisks appended to catalog numbers) indicating notes in the published catalog, nor are the notes in machine-readable form. Omitted from Table IIa are the finding chart identifiers (Lowell G numbers or notes reference) and miscellaneous cross identifications to other names and catalog identifiers. The machine-readable version of the subject catalog is currently available on magnetic tape from the Astronomical Data Center. A.R.H.

DATA ANNOUNCEMENT BULLETIN: THE ARIEL V SSI 3A X-RAY CATALOGUE

Dec. 1981 1 p
(NASA-TM-84029; NSSDC/WDC-A-R&S-81-13) Avail: NTIS HC A02/MF A01 CSCL 03A

The catalog covers the galactic plane in low latitudes (b2 < 10) and high galactic X-ray sources. It is based on the complete 5 1/2 year data base of the sky survey instrument on the Ariel 5 satellite. Source identifications, error boxes and fluxes are included. The low latitude portion contains 109 X-ray sources. The high latitude revision contains 142 sources. S.L.

SPECTRAL AND TEMPORAL BEHAVIOR OF THE X-RAY BINARY STARS Cgy X-1 IN THE HARD X-RAY DOMAIN [DAS SPEKTRALE UND ZEITLICHE VERNALTEN DES VARIABLEN ROENTGENDOPPELSTERNS Cyg X-1 IM HARTEN ROENTGENBEREICH]

Helmut Steinle Jun. 1981 138 p refs In GERMAN
(MPI-PAE/Extraterr-166; ISSN-0340-8922) Avail: NTIS HC A07/MF A01

The X-ray spectrum of binary stars within the energy range of 15 to 160 keV was measured. The Compton scattering of low energy photons in hot plasma is described and is adjusted to the binary star Cyg X-1 spectrum. The radiation intensity burst in the 15 to 150 keV shows large fluctuation within seconds. The chronological sequence of registered Cyg X-1 photons shows statistical dissipation and maximum three events take place in 5 msec. E.A.K.

THE MASS SPECTRUM OF STELLAR ORIGIN [DAS MASSENSPEKTRUM BEI DER STERNENTSTEHUNG]

Hans Zinnecker Aug. 1981 297 p refs In GERMAN
(MPI-PAE-Extraterr-167; ISSN-0340) Avail: NTIS HC A13/MF A01

The distribution function of stellar masses (mass spectra) in stellar formation was investigated. Two fundamentally different models of mass spectra are presented. The mass spectrum models are established on direct fragmentation and hierarchical fragmentation. The kinetic theory is linear in both cases. The model remains linear because the number of original protostars remains the same. The accretion model examines quantitatively the effect of accretion on the shape of the mass spectra. The model shows that variations in the mass spectra of the field star in other galaxies depend on fast dispersion of interstellar gases in the average interstellar magnetic fields. It is found that direct fragmentation is more likely to be the exception and that hierarchical fragmentation is more likely to be the rule. E.A.K.

POLARIZATION PROPERTIES OF MAIN-LINE OH MASER EMISSION FROM CIRCUMSTELLAR SHELLS OF LATE TYPE VARIABLE STARS Ph.D. Thesis

Mark J. Claussen 1981 114 p
Avail: Univ. Microfilms Order No. 8128380

Main line OH emission was observed in all four Stokes parameters in seven late type variable stars and the F8 supergiant IRC + 10420. The late type stars are WX Psc, IK Tau, U Her, UX Cyg, R Leo, R LMI, and U Ori. Those sources whose spectra are 'prototypical' of standard expanding shell models (the emission occurring in two well defined velocity ranges) had either no polarization or very weak circular polarization in their spectra. The spectrum of WX Psc, the 'prototype', was unpolarized. In sources with no systematic spectral structure, moderate to strong (>30%) circular and sometimes linear polarization was observed in UX Cyg, U Ori, and IRC + 10420 at 1665 MHz. The linear features in UX Cyg and IRC + 10420, when combined with associated circularly polarized features are suggestive of Zeeman patterns. Dissert. Abstr.

HEAO 1 MEASUREMENTS OF THE GALACTIC RIDGE

D. M. Worrall (Maryland Univ., College Park), F. E. Marshall, E. A. Boldt, and Jean H. Swank Oct. 1981 38 p refs Submitted for publication
(NASA-TM-83844) Avail: NTIS HC A03/MF A01 CSCL 03B

The HEAO A2 experiment data was systematically searched for unresolved galactic disc emission. Although there were suggestions of non-uniformities in the emission, the data were consistent with a disc of half-thickness 241 + 22 pc and surface emissivity (2-10 keV) at galactic radius R(kpc) of 2.2 10 to the minus 7th power exp(-R/3.5) erg/sq cm to the (-2)power/s (R > 7.8 kpc) giving a luminosity of approximately 4.4 10 to the 37th power erg S to the (-1) power. If the model is extrapolated to radii less than 7.8 kpc, the unresolved disc emission is approximately 1.4 10 to the 38th power erg S to the (-1) power (2-10 keV) i.e., a few percent of the luminosity of the galaxy in resolved sources. the disc emission has a spectrum which is significantly softer than that of the high galactic latitude diffuse X-ray background and it is most probably of discrete source origin. ASTROPHYSICAL TESTS FOR RADIATIVE DECAY OF NEUTRINOS AND FUNDAMENTAL PHYSICS IMPLICATIONS

F. W. Stecker and R. W. Brown (Case Western Reserve Univ.) Dec. 1981 31 p refs Submitted for publication
(NASA-TM-83873) Avail: NTIS HC A03/MF A01 CSCL 03B

The radiative lifetime tau for the decay of massious neutrinos was calculated using various physical models for neutrino decay. The results were then related to the astrophysical problem of the detectability of the decay photons from cosmic neutrinos. Conversely, the astrophysical data were used to place lower limits on tau. These limits are all well below predicted values. However, an observed feature at approximately 1700 A in the ultraviolet background radiation at high galactic latitudes may be from the decay of neutrinos with mass approximately 14 eV. This would require a decay rate much larger than the predictions of standard models but could be indicative of a decay rate possible in composite models or other new physics. Thus an important test for substructure in leptons and quarks or other physics beyond the standard electroweak model may have been found. Author

ROUTINE DATA PROCESSING AND PHYSICAL INTERPRETATION OF DATA OBTAINED BY THE FLUXGATE AND SEARCH COIL MAGNETOMETER EXPERIMENTS ON BOARD HELIOS 1 AND 2 Final Report, Jun. 1981

Fritz Manfred Newbauer, Henning Barnstorf, Hans-Juergen Beinroth, Kurt Ulrich Denskat, Guenter Musmann, Hinrich Rupprecht, and Peter Volkmer Bonn Bundesministerium fuer Forschung und Technologie Nov. 1981 107 p refs In GERMAN; ENGLISH summary Co-sponsored by Bundesministerium fuer Forschung und Technologie and DFVLR
(BMFT-FB-W-81-039; ISSN-0170-1339) Avail: NTIS HC A06/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 22,70

The processing and interpretation of data collected by Helios 1 and Helios 2 showed discontinuities and wave characteristics in the solar and interplanetary magnetic fields are described. The fluxgate measurements are corrected for filter phase shifts, zero shifting by variable spacecraft fields, magnetometer zeroes and misalignment angles. The treatment of the spectral data of the search coil magnetometer involves the application of the calibration factors whereas for the waveform data, corrections for the stray magnetic field B/sub d/ and its time derivative are required. Results obtained on the macrostructure of the interplanetary magnetic field, on the microstructure of discontinuities and shock wave, and on MHD and whistler waves in the interplanetary magnetoplasma are considered. THE ROLE OF EPISODIC BOMBARDMENT IN GEOPHYSICS

S. V. M. Clube and W. M. Napier Nov. 1981 26 p refs Submitted for publication
Avail: NTIS HC A03/MF A01

The effects of cometary or asteroidal impacts on the boundary conditions at the core, outer mantle and atmosphere of the Earth are discussed through the literature. Impact episodes occur following the capture or orbital disturbance of these bodies as the solar system passes through the spiral arms of the galaxy. There is thus a tendency for magnetic field reversals, principal plate movements, ice ages and mass extinctions to be correlated and to recur on time scales dictated by galactic processes. Major geophysical phenomena can thus be synthesized in a purely astronomical theory. Knowledge of the continuous state of the galaxy then becomes a prerequisite for the understanding of terrestrial history. Author (ESA)

SPIRAL ARMS, COMETS AND TERRESTRIAL CATASTROPHISM
S. V. M. Clube and W. M. Napier Nov. 1981 45 p refs
Submitted for publication
Avail: NTIS HC A03/MF A01

A hypothesis of terrestrial catastrophism in which comets grow in molecular clouds and are captured by the Sun as it passes through the spiral arms of the galaxy is reviewed. Assuming that comets are a major supplier of the Earth crossing (Apollo) asteroid population, the latter fluctuates correspondingly and leads to episodes of magnetic field reversal and tectonic activity, while surface phenomena lead to ice ages and mass extinctions. An episodic geophysical history with an interstellar connection is thus implied. If comets in spiral arms are necessary intermediaries in the process of star formation, the theory also sheds light on early solar system history and galactic chemistry. Author (ESA)

THE TROPOSPHERIC GAS COMPOSITION OF JUPITER'S NORTH EQUATORIAL BELT (NH3, PH3, CH3D, GeH4, H2O) AND THE JOVIAN D/H ISOTROPIC RATIO
V. Kunde, R. Hanel, W. Maguire, D. Gautier, J. P. Baluteau, A. Marten, A. Chedin, N. Husson, and N. Scott Feb. 1982 70 p refs Prepared in cooperation with Observatoire de Paris-Meudon and Ecole Polytechniques, Palaiseau Submitted for publication
(NASA-TM-83891) Avail: NTIS HC A04/MF A01 CSCL 03B

The gas composition of the troposphere of Jupiter in the clearest regions of the North Equatorial Belt (NEB) was derived from the Voyager 1 IRIS data. The infrared spectrum for this homogeneous cloud free region was modeled to infer altitude profiles for NH3, PH3, GeH4 and H2O. The Profiles for NH3 and PH3 were found to be depleted in the upper tropsphere but otherwise in agreement with their solar values at the 1 bar level. The mole fraction for CH3D was determined to be 3.5(+1.0 or -1.3) x 10 to the minus 7th power. The GeH4 mole fraction of 7+ or -2 x 10 to the minus 10th power at the 2 to 3 bar level is a factor of 10 lower than the solar value. The H2O mole fraction is approximately 1 x 0.00001 at the 2.5 bar level and is increasing to approximately 3 x 0.00001 at 4 bars where it is a factor of 30 lower than solar. Using IRIS infrared values for the mole fractions of CH3D and CH4 a value of D/H = 3.6(+1.0 or -1.4)x 0.00001 is derived. Assuming this Jovian D/H ratio is representative of the protosolar nebula, and correcting for chemical galactic evolution, yields a value of 5.5 - 9.0 x 0.00001 for the primordial D/H ratio and an upper limit of 1.8 to 2.4 x 10 to the minus 31st power cu cm for the present day baryon density. EVIDENCE FOR SOLAR WIND CONTROL OF SATURN RADIO EMISSION
Michael D. Desch Feb. 1982 22 p refs Submitted for publication
(NASA-TM-83889) Avail: NTIS HC A02/MF A01 CSCL 03B

Using data collected by the Voyager 1 and 2 spacecraft in 1980 and 1981, strong evidence is presented for a direct correlation between variations in the solar wind at Saturn and the level of activity of Saturn's nonthermal radio emission. Correlation coefficients of 57 to 58% are reached at lag times of 0 to 1 days between the arrival at Saturn of high pressure solar wind streams and the onset of increased radio emission. The radio emission exhibits a long-term periodicity of 25 days, identical to the periodicity seen in the solar wind at this time and consistent with the solar rotation period. The energy coupling efficiency between the solar wind with the Saturn radio emission is estimated and compared with that for Earth. R.J.F.

MAGNETIC FIELD MEASUREMENTS AT JUPITER BY VOYAGERS 1 AND 2: DAILY PLOTS OF 48 SECOND AVERAGES
Ronald P. Lepping, Mark J. Silverstein, and Norman F. Ness Nov. 1981 82 p refs
(NASA-TM-83864) Avail: NTIS HC A05/MF A01 CSCL 03B

A series of 24 hour summary plots of the magnetic field, in 48-s average form, measured in the vicinity of Jupiter by the magnetometers onboard Voyagers 1 and 2 are presented. The Voyager 1 data cover the period from 27 February 1979 (day = 58) to 23 March (day = 82) inclusive, and the Voyager 2 data cover the period from 2 July 1979 (day = 183) to 14 August (day = 226) inclusive. Closest approach to the planet occurred on days 64 (AT 1205 UT) and 190 (AT 2230 UT) for Voyagers 1 and 2, respectively. Also included are: a description of the characteristics of the magnetometers, a brief description of the near-planet trajectories of the two spacecraft, a listing of the bow shock and magnetopause crossing times, and a bibliography containing Voyager-Jupiter related papers and reports. B.W.

ACCRETION DISK CORONAE

N. E. White (Maryland Univ., College Park) and S. S. Holt Oct. 1981 60 p refs Submitted for publication

(NASA-TM-83840) Avail: NTIS HC A04/MF A01 CSCL 03B

Recent observations of partial X-ray eclipses from 4U1822-37 have shown that the central X-ray source in this system is diffused by a large Compton-thick accretion disk corona (ADC). Another binary, 4U2129-47, also displays a partial eclipse and contains an ADC. The possible origin of an ADC is discussed and a simple hydrostatic evaporated ADC model is developed which, when applied to 4U1822-37, 4U2129+47 and Cyg X-3, can explain their temporal and spectral properties. The quasi-sinusoidal modulation of all three sources can be reconciled with the partial occultation of the ADC by a bulge at the edge of the accretion disk which is caused by the inflowing material. The height of this bulge is an order of magnitude larger than the hydrostatic disk height and is the result of turbulence in the outer region of the disk. The spectral properties of all three sources can be understood in terms of Compton scattering of the original source spectrum by the ADC. Spectral variations with epoch in Cyg X-3 are probably caused by changes in the optical depth of the corona. A consequence of our model is that any accreting neutron star X-ray source in a semi-detached binary system which is close to its Eddington limit most likely contains an optically thick ADC. Author

EXTRAGALACTIC GAMMA RADIATION: USE OF GALAXY COUNTS AS A GALACTIC TRACER

D. J. Thompson and C. E. Fichtel Feb. 1982 13 p refs Submitted for publication

(NASA-TM-83901) Avail: NTIS HC A02/MF A01 CSCL 03B

A derivation of the extragalactic diffuse gamma radiation with energies above 35 MeV was carried out using galaxy counts as a tracer of galactic matter. The extragalactic radiation has a differential photon number spectrum which may be expressed as a power law with index 2.35 (+0.4, -0.3) and an intensity above 35 MeV of (5.5 + or - 1.3) 0.00001 photons sq cm/s/ster, consistent with previous derivations. Use of a 1/sin of the absolute value of b expression of the galactic component produces a poorer fit, suggesting that the high-latitude galactic gamma-ray production may be dominated by cosmic ray interactions with matter rather than by Compton interactions of cosmic rays with photon fields. ON THE THEORY OF GAMMA RAY AMPLIFICATION THROUGH STIMULATED ANNIHILATION RADIATION (GRASAR)

R. Ramaty, J. M. McKinley (Oakland Univ.), and F. C. Jones Nov. 1981 36 p refs Submitted for publication

(NASA-TM-83857) Avail: NTIS HC A03/MF A01 CSCL 03B

The theory of photon emission, absorption, and scattering in a relativistic plasma of positrons, electrons, and photon was studied. Expressions for the emissivities and absorption coefficients of pair annihilation, pair production, and Compton scattering are given and evaluated numerically. The conditions for negative absorption were investigated. In a system of photons and e(+) - e(-) pairs, an emission line at at approximately 0.43 MeV can be produced by grasar action provided that the pair chemical potential exceeds approximately 1 MeV. At a temperature of approximately 10 to the 9th power. This requires a pair density > approximately 10 to the 30th power cm to the (-3) power a value much larger than the thermodynamic equilbrium pair density at this temperature. This emission line could account without a gravitational redshift for the observed lines at this energy from gamma ray bursts. Author

Since the Ranger series in the 1960s the DSN evolved to a highly sophisticated telecommunications and data acquisition network. The 26 meter antennas were converted to 34 meters, and 64 meter antennas were built at all complexes. The L-band systems were changed to S-band, with X-band now also being used on Voyager and Pioneer 12. Ranging systems were developed and are used along with other techniques to determine exact spacecraft locations. Each mission is summarized and the launch date, objective, and results are presented. MAGNETIC REFRIGERATION FOR MASER AMPLIFIER COOLING c36
D. L. Johnson *In its* The Telecommun. and Data Acquisition Rept. 15 Feb. 1982 p 29-38 refs (For primary document see N82-20113 10-99)
Avail: NTIS HC A07/MF A01 CSCL 20E

The development of a multifrequency upconverter-maser system for the DSN has created the need to develop a closed-cycle refrigerator (CCR) capable of providing more than 3 watts of refrigeration capability at 4.5 K. In addition, operating concerns such as the high cost of electrical power consumption and the loss of maser operation due to CCR failures require that improvements be made to increase the efficiency and reliability of the CCR. One refrigeration method considered is the replacement of the Joule-Thomson expansion circuit with a magnetic refrigeration. Magnetic refrigerators can provide potentially reliable and highly efficient refrigeration at a variety of temperature ranges and cooling power. The concept of magnetic refrigeration is summarized and a literature review of existing magnetic refrigerator designs which have been built and tested and that may also be considered as possibilities as a 4 K to 15 K magnetic refrigeration stage for the DSN closed-cycle refrigerator is provided. T.M.

SIDEBAND-AIDED RECEIVER ARRAYING c32

S. A. Butman, L. J. Deutsch, R. G. Lipes, and R. L. Miller *In its* The Telecommun. and Data Acquisition Rept. 15 Feb. 1982 p 39-54 refs (For primary document see N82-20113 10-99)

Avail: NTIS HC A07/MF A01 CSCL 17B

Efforts to increase the amount of data that can be received from outer planet missions by coherently combining signals from ground antennas in such a way as to increase the total effective aperture of the receiving system are discussed. As these signals become weaker, the baseband arraying technique in current use degrades somewhat due to carrier jitter. One solution to this problem is Sideband-Aided Receiver Arraying (SARA). In SARA, sidebands demodulated to baseband in a master receiver at the largest antenna are used to allow slave receivers in the other antennas to track the sideband power in the signal rather than the carrier power. The already existing receivers can be used in the slaves to track and demodulate the signals in either a residual carrier or a suppressed carrier environment. The resultant baseband signals from all the antennas can then be combined using existing baseband combining equiment. Computer simulations of SARA show increases in throughput (measured in data bits per second) over baseband-only combining 17 percent at Voyager 2 Uranum encounter and 31 percent at Neptune for a four-element antenna array and (7, 1/2) convolutional coding. ON THE GROUP DELAY EFFECT OF DSN MICROWAVE COMPONENTS ON MULTIMEGABIT TELEMETRY c17

P. J. Lee *In its* The Telecommun. and Data Acquisition Rept. 15 Feb. 1982 p 59-65 ref (For primary document see N82-20113 10-99)

Avail: NTIS HC A07/MF A01 CSCL 09F

When the gain and phase shift characteristics of the overall system between the modulator and demodulator are given, the group delay effect for the intended data rate can be assessed by examining the equation for the recovered signal for several rectangular pulse inputs with different duty cycles. For example, the group delay loss of 30 Mbit/sec telemetry with only a Block II X-band maser is less than 0.2 dB even with a 10-MHz center frequency offset. Author

A technique for displaying the information needed by DSN operators for monitoring station performance is described. Known as a 'qualitative monitor,' it presents continuous variables in quasi-analog form on a digital cathode ray tube (CRT) display. Color changes, field reverses and blinking symbols assist the operator in identifying variables that are within acceptable limits and in performing corrective action when needed. Author

MASTER TIMING SYSTEM MEASUREMENTS c35

E. F. Endsley *In its* The Telecommun. and Data Acquisition Rept. 15 Feb. 1982 p 70-74 (For primary document see N82-20113 10-99)

Avail: NTIS HC A07/MF A01 CSCL 14B

The test results indicate that the system performs within the specifications established. The overall system appears to be well designed and built to a good commercial grade. The triple redundant time code generators, whose outputs are majority voted, performed adequately as far as could be determined on an operational situation. T.M.

OPTIMUM EQUIPMENT MAINTENANCE/REPLACEMENT POLICY. PART 2: MARKOV DECISION APPROACH c38

T. Charng *In its* The Telecommun. and Data Acquisition Rept. 15 Feb. 1982 p 75-89 refs (For primary document see N82-20113 10-99)

Avail: NTIS HC A07/MF A01 CSCL 14D

Dynamic programming was utilized as an alternative optimization technique to determine an optimal policy over a given time period. According to a joint effect of the probabilistic transition of states and the sequence of decision making, the optimal policy is sought such that a set of decisions optimizes the long-run expected average cost (or profit) per unit time. Provision of an alternative measure for the expected long-run total discounted costs is also considered. A computer program based on the concept of the Markov Decision Process was developed and tested. The program code listing, the statement of a sample problem, and the computed results are presented. GLOBAL POSITIONING SYSTEM TIMING RECEIVERS IN THE DSN c04

P. A. Clements *In its* The Telecommun. and Data Acquisition Rept. 15 Feb. 1982 p 90-99 refs (For primary document see N82-20113 10-99)

Avail: NTIS HC A07/MF A01 CSCL 17G

The system (GPS) is a worldwide navigation system using a constellation of Earth satellites with onboard clocks. The GPS is also usable to transfer time and frequency. Preliminary tests with the breadboard receiver at NBS produced precision in time and frequency transfer between the United States Naval Observatory (USNO) and NBS. JPL's plans to install receivers in the DSN to demonstrate their ability to transfer time and frequency within the DSN and between the DSN and outside agencies are discussed. T.M.

NOISE TEMPERATURE AND NOISE FIGURE CONCEPTS: DC TO LIGHT c32

C. T. Stelzried *In its* The Telecommun. and Data Acquisition Rept. 15 Feb. 1982 p 100-111 refs (For primary document see N82-20113 10-99)

Avail: NTIS HC A07/MF A01 CSCL 20N

The Deep Space Network is investigating the use of higher operational frequencies for improved performance. Noise temperature and noise figure concepts are used to describe the noise performance of these receiving systems. It is proposed to modify present noise temperature definitions for linear amplifiers so they will be valid over the range $(hf/kT) < 1 < (hf/kT)$. This is important for systems operating at high frequencies and low noise temperatures, or systems requiring very accurate calibrations. The suggested definitions are such that for an ideal amplifier, T sub e = (hg/k) = T sub q and F = 1. These definitions revert to the present definition for $(hf/kT) < < 1$. Noise temperature calibrations are illustrated with a detailed example. These concepts are applied to system signal-to-noise analysis. The fundamental limit to a receiving system sensitivity is determined by the thermal noise of the source and the quantum noise limit of the receiver. The sensitivity of a receiving system consisting of an ideal linear amplifier with a 2.7 K source, degrades significantly at higher frequencies. Author

MAINTENANCE AND OPERATIONS TASKS ACCOMPLISHED AT DSS 12 DURING THE ANTENNA PANEL REPLACEMENT DOWNTIME c38

L. Butcher, T. Jonas, and W. Wood *In its* The Telecommun. and Data Acquisition Rept. 15 Feb. 1982 p 127-128 (For primary document see N82-20113 10-99)
Avail: NTIS HC A07/MF A01 CSCL 14D

The heavy schedule of tracking activities at the Echo Deep Space Station (DSS 12) prevents some time-consuming maintenance tasks from being performed. Careful coordination prior to and during a mandatory task (antenna panel replacement) made it possible to do a large number of unrelated tasks that ordinarily would have to be deferred. The maintenance and operations tasks accomplished during the downtime are described.

THEORETICAL AND EXPERIMENTAL DETERMINATION OF A COMPRESSOR TRANSFER FUNCTION c02

J. Fabri and J. Paulon *In its* La Rech. Aerospatiale, Bi-monthly Bull. No. 1981-4, Jul. - Aug. 1981 (ESA-TT-722) Nov. 1981 p 1-8 refs Transl. into ENGLISH of La Rech. Aerospatiale, Bull. Bimestriel (Paris), No. 1981-4, Jul. - Aug. 1981 p 223-231 (For primary document see N82-20131 10-99)
Avail: NTIS HC A04/MF A01; original report in FRENCH available at ONERA, Paris FF 45

The physical meaning of compressor transfer functions proposed in the technical literature was examined. None of them correctly explains the transient phenomena observed during transient tests of a single stage compressor submitted to a pressure step. Measurement of the evolutions of wall pressure on an axial compressor submitted to a flow step demonstrated a certain number of facts which have to be taken into account when studying the operation of compressors under transient conditions. An analysis of the equations of momentum and continuity through the compressor, which allows for the action of the blades on the fluid, gives a theoretical scheme that is closer to the experimental results. The best theoretical/experimental cross checks are obtained assuming that the acceleration of the fluid under the effect of volume forces satisfies a relaxation equation involving the history (memory) of the phenomenon. Avail: NTIS HC A04/MF A01; original report in FRENCH available at ONERA, Paris FF 45

Optical measurements of velocity by laser velocimetry, and temperature by infrared pyrometry were performed in a combustion chamber in which a premixed air-methane flow was ignited by a parallel flow of hot gases. The mean velocity and velocity fluctuation profiles show the influence of inlet turbulence and velocity ratio on flame development. The velocity probability density functions reveal various zones in the flow: fresh mixture, mixing and combustion zone, and burnt gases. The temperature histograms obtained give similar results. AIRCRAFT INFRARED RADIATION MODELING c74

G. Gauffre *In its* La Rech. Aerospatiale, Bi-monthly Bull. No. 1981-4, Jul. - Aug. 1981 (ESA-TT-722) Nov. 1981 p 21-41 refs Transl. into ENGLISH of La Rech. Aerospatiale, Bull. Bimestriel (Paris), No. 1981-4, Jul. - Aug. 1981 p 245-265 (For primary document see N82-20131 10-99)
Avail: NTIS HC A04/MF A01; original report in FRENCH available at ONERA, Paris FF 45

Numerical modeling of aircraft IR emission comprised two phases: research of the main physical phenomena which are involved, and the development of calculation techniques capable of numerically resolving the problems which were identified. A software package is offered. The major processes taken into account are heating sources, geometrical representation and obscuration, plume description, infrared emittance of solids and gases, atmospheric transmission, and background. The input data are geometrical description of target, flight parameters and observation system. The code states the origin of radiation and the spectral distribution. The results can be exploited as an intensity function of range or polar diagrams. Author (ESA)

SIMULATION USING COMPUTER-PILOTED POINT EXCITATIONS OF VIBRATIONS INDUCED ON A STRUCTURE BY AN ACOUSTIC ENVIRONMENT c71

P. Monteil *In its* La Rech. Aerospatiale, Bi-monthly Bull. No. 1981-4, Jul. - Aug. 1981 (ESA-TT-722) Nov. 1981 p 43-49 Transl. into ENGLISH of La Rech. Aerospatiale, Bull. Bimestriel (Paris), No. 1981-4, Jul. - Aug. 1981 p 267-273 (For primary document see N82-20131 10-99)
Avail: NTIS HC A04/MF A01; original report in FRENCH available at ONERA, Paris FF 45

Computation of the overall levels and spectral densities of the responses measured on a launcher skin, the fairing for instance, merged into a random acoustic environment during take off, was studied. The analysis of transmission of these vibrations to the payload required the simulation of these responses by a shaker control system, using a small number of distributed shakers. Results show that this closed loop computerized digital system

allows the acquisition of auto and cross spectral densities equal to those of the responses previously computed. However, wider application is sought, e.g., road and runway profiles. The problems of multiple input-output system identification, multiple true random signal generation, and real time programming are evoked. The system should allow for the control of four shakers.

REYNOLDS STRESS EQUATIONS MODELING IN A ROTATING REFERENCE SYSTEM c39

J. Cousteix and B. Aupoix *In its* La Rech. Aerospatiale, Bi-monthly Bull. No. 1981-4, Jul. - Aug. 1981 (ESA-TT-722) Nov. 1981 p 51-60 refs Transl. into ENGLISH of La Rech. Aerospatiale, Bull. Bimestriel (Paris), No. 1981-4, Jul. - Aug. 1981 p 275-285 (For primary document see N82-20131 10-99)
Avail: NTIS HC A04/MF A01; original report in FRENCH available at ONERA, Paris FF 45

Simplifying hypotheses for analyzing the effect of rotation on the behavior of turbulent stresses are introduced. Two particular cases are considered: (1) a two dimensional boundary layer rotating around a flow with its axis perpendicular to the plane of the flow and (2) a three dimensional boundary layer rotating around an axis perpendicular to the wall. In the first case, stabilization or destabilization of the turbulence appears to depend on the direction of rotation. In the second, the effect of rotation is a misalignment between the turbulent shearing stress and the derivative of the mean velocity, following the coordinate normal to the wall.

TWO-STEP IMPLICIT SCHEMES FOR THE SOLUTION OF A CONSERVATION EQUATION c64

H. Hollanders and R. Peyret *In its* La Rech. Aerospatiale, Bi-monthly Bull. No. 1981-4, Jul. - Aug. 1981 (ESA-TT-722) Nov. 1981 p 61-67 refs Transl. into ENGLISH of La Rech. Aerospatiale Bull. Bimestriel (Paris), No. 1981-4, Jul. - Aug. 1981 p 287-294 (For primary document see N82-20131 10-99)
Avail: NTIS HC A04/MF A01; original report in FRENCH available at ONERA, Paris FF 45

A class of two-step implicit schemes, generalizing an implicit predictor-corrector type scheme to solve evolution equations with application to Navier-Stokes equations for compressible fluids, is considered. The class is constructed on the basis of two-step explicit (S beta alpha) schemes which are explicit at the first step, implicit at the second in the centered case alpha = beta = 1/2. MacCormack implicit schemes, alpha = 1 and beta = 0 or beta = 1, are emphasized. These schemes are applied to the solution of a hyperbolic equation. The dispersive and dissipative properties of these schemes are deduced from a study of the equivalent equation. Numerical experiments are carried out, relating to the problem of the propagation of a discontinuity. Results show that the MacCormak bidiagonal resolution scheme, and the centered scheme based on the optimal explicit alpha = 1 + the square root of 5/2 and on an implicit operator, deduced either from a subclass of explicit-implicit schemes or from Lerat's one-step scheme are interest for representing discontinuity.

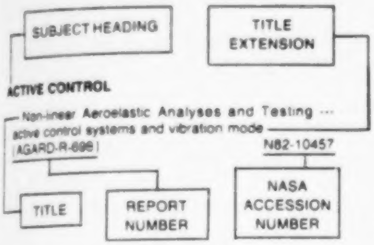
SUBJECT INDEX

Typical Subject Index Listing



The subject heading is the key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension has been added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The NASA accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus* (NASA SP-7050).

[ESA-SP-1012-VOL-2] N82-19244

AEROSPACE SYSTEMS

Space activities in the 80's: The programs and the industry. Part 4: Outlook of space industry outside Europe (1981)
[ESA-SP-1012-VOL-3] N82-19245

AEROTHERMODYNAMICS

Historical perspectives on thermostructural research at the NACA Langley Aeronautical Laboratory from 1948 to 1958
[NASA-TM-83266] N82-19498

AFTERBODIES

RAXJET: A computer program for predicting transonic, axisymmetric flow over nozzle afterbodies with supersonic jet exhausts
[NASA-TM-83235] N82-19175

AGRICULTURE

Taxonomic classification of world map units in crop producing areas of Argentina and Brazil with representative US soil series and major land resource areas in which they occur
[E82-10058] N82-19633

Preliminary evaluation of spectral, normal and meteorological crop stage estimation approaches
[E82-10059] N82-19634

Notes for Brazil sampling frame evaluation trip
[E82-10060] N82-19635

Segment-level evaluation of the simulated aggregation test: US corn and soybean exploratory experiment
[E82-10061] N82-19636

AGRISTARS PROJECT

AgRISTARS: Foreign commodity production forecasting. Minutes of the annual formal project manager's review, including preliminary technical review reports of FY80 experiments --- wheat/barley and corn/soybean experiments
[E82-10039] N82-19614

AGROMETEOROLOGY

Preliminary evaluation of spectral, normal and meteorological crop stage estimation approaches
[E82-10059] N82-19634

AIR DUCTS

Guidelines for the design of inherently quiet airloops for manned spacecraft
[ACUN-8006] N82-19954

AIR FLOW

An investigation of wall pressure fluctuations behind a sudden enlargement of the cross sectional area of a round pipe
[DFVLR-FB-81-35] N82-19510

AIR NAVIGATION

FAA/FCC coordination procedures for FM broadcast stations N82-19423

AIR POLLUTION

Integrated devices of semiconductor metal-oxides in conjunction with silicon for solid-state gas sensors
[DE82-000397] N82-19477

Remote sensing of sulfur dioxide effects on vegetation. Volume 1: Summary
[PB82-115122] N82-19715

Remote sensing of sulfur dioxide effects on vegetation. Volume 2: Data
[PB82-115130] N82-19716

Determination of the effects of material from alternate energy sources on the upper respiratory tract clearance mechanism. Part 1: In vitro exposure to particulate pollutants. Part 2: In vivo exposure to ozone
[PB82-117037] N82-19811

AIR QUALITY

Three dimensional numerical model for estimation of pollutant concentration
[INPE-2193-TDL/060] N82-19703

AIR TRAFFIC

Report of the Air Traffic Forecasting Working Party, 1981 N82-19195

FAA statistical handbook of aviation
[AD-A109289] N82-19198

AIR TRAFFIC CONTROL

National Airspace Data Interchange Network (NADIN) support of Remote Maintenance Monitoring System (RMMS)
[AD-A109125] N82-19160

FAA statistical handbook of aviation
[AD-A109289] N82-19198

Air traffic control en route computer system
[GPO-89-008] N82-19202

AIR TRANSPORTATION

Report of the Air Traffic Forecasting Working Party, 1981 N82-19195

AIR WATER INTERACTIONS

Activities report of the Hydraulics Laboratory
N82-19489

Estimating ocean-air heat fluxes during cold air outbreaks by satellite
[NASA-TM-83854] N82-19781

AIRBORNE EQUIPMENT

FM broadcast interference related to airborne ILS, VOR and VHF communications
[RTCA/DO-176] N82-19419

Aircraft-borne measurement of infrared sources and backgrounds
[AD-A108871] N82-19977

AIRCRAFT ACCIDENTS

An assessment of the crash fire hazard of liquid hydrogen fueled aircraft
[NASA-CR-165526] N82-19196

Aircraft collision avoidance systems
[GPO-79-431] N82-19201

AIRCRAFT ANTENNAS

Assessment of aircraft capacitive circuit medium wave antennas according to their efficiency
N82-19453

AIRCRAFT CARRIERS

Descent-rate cuing for carrier landings: Effects of display gain, display noise and aircraft type
[AD-A108801] N82-19206

AIRCRAFT COMMUNICATION

Investigation of the effects of airborne installation factors on receiver interference N82-19422

FAA/FCC coordination procedures for FM broadcast stations N82-19423

AIRCRAFT CONSTRUCTION MATERIALS

Accession of titanium as an aircraft material: A current view
[ARL/MAT-NOTE-129] N82-19361

AIRCRAFT CONTROL

Multivariable aircraft control by maneuver commands: An application to air to surface gunnery
N82-19154

Transport aircraft cockpit standardization (Federal Aviation regulations part 25)
[AD-A108924] N82-19207

A method for applying linear optimal control theory to the design of a regulator for a flexible aircraft --- improving riding quality in fighter aircraft
[NLR-TR-80032-U] N82-19212

AIRCRAFT DESIGN

Electric Flight Systems
[NASA-CP-2209] N82-19134

Electric flight systems, overview N82-19135

The 400-Hertz constant-speed electrical generation systems N82-19139

Engine technology N82-19145
Power systems N82-19146
Environmental control systems N82-19147
Electromechanical actuators N82-19148
Aeronautical Research Laboratories Structures Division
[AD-A109049] N82-19161
Practical applications of fracture mechanics
[AGARD-AG-257] N82-19571

AIRCRAFT DETECTION
Aircraft-borne measurement of infrared sources and backgrounds
[AD-A108871] N82-19977
The visible detection of aerial targets as a function of environmental, target and observation parameters for surface to air or air to air observation.
[BMVG-FBWT-81-12] N82-19983
Aircraft infrared radiation modeling N82-20134

AIRCRAFT ENGINES
Electric Flight Systems
[NASA-CP-2209] N82-19134
Electric flight systems, overview N82-19135
A propulsion view of the all-electric airplane
N82-19136
Potential propulsion considerations and study areas for all-electric aircraft N82-19137
A look into the future: The potential of the all-electric secondary power system for the energy efficient transport N82-19138
The 400-Hertz constant-speed electrical generation systems N82-19139
Electric ECS N82-19140
Environmental Control Systems N82-19141
Overview of Honeywell electromechanical actuation programs N82-19142
Digital flight controls N82-19143
Electric flight systems N82-19144
Engine technology N82-19145
Power systems N82-19146
Environmental control systems N82-19147
Electromechanical actuators N82-19148
Digital flight controls N82-19149
Electric flight systems integration N82-19150
Practical applications of fracture mechanics
[AGARD-AG-257] N82-19571
An experimental study of the effects of an inlet flow conditioner on the noise of a low speed axial flow fan — in an aircraft engine
[TT-8101] N82-19956

AIRCRAFT FUELS
An assessment of the crash fire hazard of liquid hydrogen fueled aircraft
[NASA-CR-165526] N82-19196

AIRCRAFT HAZARDS
An assessment of the crash fire hazard of liquid hydrogen fueled aircraft
[NASA-CR-165526] N82-19196
Simulator study of vortex encounters by a twin-engine, commercial, jet transport airplane
[NASA-TP-1966] N82-19225
Workshop on Mathematical Fire Modeling
[AD-A108876] N82-19343
The use of weather radar in the civil aviation weather service
[BLL-TRANS-1456-(9022.552)] N82-19763

AIRCRAFT INDUSTRY
Experience during the development of the German-Japanese helicopter BK 117
[MBB-UD-318-81-O] N82-19210

AIRCRAFT INSTRUMENTS
Transport aircraft cockpit standardization (Federal Aviation regulations part 25)
[AD-A108924] N82-19207
Aircraft measurements of the frequency of turbulence encounters in Australia. A review and assessment
[AD-A108923] N82-19785
Coastal upwelling ecosystems analysis. Atlas of the JOINT I aircraft winds for the 500 foot level
[PB82-114703] N82-19796

AIRCRAFT LANDING
Optimal aircraft landing patterns for minimal noise impact N82-19200
Descent-rate cuing for carrier landings: Effects of display gain, display noise and aircraft type
[AD-A108801] N82-19206
The effect of visual information on the manual approach and landing
[NLR-TR-80055-U] N82-19836

AIRCRAFT MANEUVERS
Multivariable aircraft control by maneuver commands: An application to air to surface gunnery
N82-19154

AIRCRAFT MODELS
Design study into a high endurance mini-rotorcraft
[BU-265] N82-19216
Structural system identification technology verification
[AD-A109181] N82-19583

AIRCRAFT NOISE
Optimal aircraft landing patterns for minimal noise impact N82-19200
Airport related residential accoustical insulation demonstration project: Report 1720
[PB82-100777] N82-19396
Effects of repetition rate and impulsiveness of simulated helicopter rotor noise on annoyance
[NASA-TP-1969] N82-19707
Aircraft noise prediction program theoretical manual, part 1
[NASA-TM-83199-PT-1] N82-19946
Aircraft noise prediction program theoretical manual, part 2
[NASA-TM-83199-PT-2] N82-19947
Noise measurements on the helicopter BK 117 design. Weighted noise levels and influence of airspeed
[DFVLR-MITT-81-18] N82-19957
Collection and evaluation of propeller aircraft noise certification data
[DFVLR-MITT-81-20] N82-19958

AIRCRAFT PERFORMANCE
A computer program for wing subsonic aerodynamic performance estimates including attainable thrust and vortex lift effects
[NASA-CR-3515] N82-19151
Taped random spectra for reliability demonstration testing
[AD-A108803] N82-19552

AIRCRAFT RELIABILITY
Aeronautical Research Laboratories Structures Division
[AD-A109049] N82-19161

AIRCRAFT SAFETY
Electrical ground testing of aircraft antistatic protection N82-19156
Disengagement of safety harness buckles - CT4
[AD-A109048] N82-19199
Active Beacon Collision Avoidance System (BCAS) logic performance during operational flight tests
[AD-A108893] N82-19203
Workshop on Mathematical Fire Modeling
[AD-A108876] N82-19343

AIRCRAFT SPIN
A criterion for the prediction of the recovery characteristics of spinning aircraft
[RAE-TN-AERO-2251] N82-19223
An experimental study of the effect of tail configuration on the spinning characteristics of general aviation aircraft — static wind tunnel force measurements
[NASA-CR-168578] N82-19224

AIRCRAFT STRUCTURES
Aeronautical Research Laboratories Structures Division
[AD-A109049] N82-19161
The European Airbus: A challenge to the American commercial aircraft industry
[MBB-UH-01-81-O] N82-19162
Practical applications of fracture mechanics
[AGARD-AG-257] N82-19571
Structural system identification technology verification
[AD-A109181] N82-19583

AIRCRAFT WAKES
Simulator study of vortex encounters by a twin-engine, commercial, jet transport airplane
[NASA-TP-1966] N82-19225

AIRFOIL FENCES
Experimental study of delta wing leading-edge devices for drag reduction at high lift
[NASA-CR-165846] N82-19165

AIRFOIL PROFILES
Strong matching method for computing transonic viscous flows including wakes and separations: Lifting airfoils N82-19155
Inverse transonic airfoil design methods including boundary layer and viscous interaction effects
[NASA-CR-168579] N82-19168
Characteristics of von Karman-Trefftz profiles
[VTH-LR-323] N82-19189
On the design of some airfoils for sailplane application — additions to existing wings for inflight testing
[VTH-LR-326] N82-19213

AIRFOILS
An experimental investigation of flow surrounding an airfoil with a jet exhausting from the lower surface
[NASA-CR-166131] N82-19133
Numerical study of incompressible slightly viscous flow past blunt bodies and airfoils N82-19163
Application of an airfoil stall flutter computer prediction program to a three-dimensional wing. Prediction versus experiment
[NASA-CR-168586] N82-19169
Some observations of surface pressures and the near wake of a blunt trailing edge airfoil
[NASA-CR-168563] N82-19174
High speed aerodynamic characteristics of the GAFOPH aerofoil
[AD-A108922] N82-19183
Additional results of a study of unsteady airfoil surface pressures and turbulent boundary layers
[AD-A108978] N82-19184

AIRFRAME MATERIALS
Fracture and fatigue characterization of aircraft structural materials under biaxial loading
[AD-A109054] N82-19587

AIRFRAMES
Evaluation of superplastic forming and co-diffusion bonding of Ti-6Al-4V titanium alloy expanded sandwich structures
[NASA-CR-165827] N82-19358

AIRGLOW
Ionospheric irregularities in low latitudes of the American sector
[INPE-2243-TDL/065] N82-19725
Association between irregularities caused ionospheric bubbles and airglow perturbations in low latitudes in Brazil
[INPE-2122-RPE/346] N82-19726

AIRLINE OPERATIONS
Report of the Air Traffic Forecasting Working Party, 1981 N82-19195

AIRPORTS
FAA statistical handbook of aviation
[AD-A109289] N82-19198

AIRSPEED
Noise measurements on the helicopter BK 117 design. Weighted noise levels and influence of airspeed
[DFVLR-MITT-81-18] N82-19957

ALBEDO
Specification of cloud amount over local areas from GOES visual imagery
[AD-A109325] N82-19786

ALBUMINS
Static and hydrodynamic studies of the conformation of adsorbed macromolecules at the solid/liquid interface N82-19488

ALDOSTERONE
Clinical physiology of the renin-angiotensin-aldosterone system N82-19820

ALGOL
ALGOL-MS, a language for the development of multiprogrammed small systems
[INPE-2282-TDL/067] N82-19875
A system for implantation of data banks in Burroughs series B7000/B6000 computers
[INPE-2299-TDL/070] N82-19876

ALGORITHMS
A subspace iteration algorithm for spinning structure vibration mode computation N82-19157
Modeling beam patterns of linear antennas
N82-19458
Mathematical and stochastic models in photogrammetry relating to Helmut Wolf's work
N82-19605
An information adaptive system study report and development plan
[NASA-CR-166768] N82-19644
Seismic discrimination
[AD-A109184] N82-19739
The control of the quality of surface meteorological information
[BLL-TRANS-1503-(9022.552)] N82-19759
Synthesis of communicating processes from temporal logic specifications
[AD-A109653] N82-19866

Computationally fast algorithms for ARMA spectral estimation N82-19671
Computational advances in large-scale nonlinear optimization
[AD-A109526] N82-19917
Algorithm for the calculation of the largest integer in the quare root of a natural number
[PREPRINT-11] N82-19918
A variable metric method using a non-quadratic model
[MATHS-RES-158] N82-19920
Probabilistic analysis of random extension-rotation algorithms
[AD-A109035] N82-19932
Algorithms for tracking a sound source using frequency and bearings
[AD-A109276] N82-19950
Methods of image compression without information loss
[INPE-2274-PRE/054] N82-20013

ALIGNMENT
Angular momentum alignment in nozzle expansions of gas mixtures N82-19329

ALKALINE BATTERIES
Mechanism and models for zinc metal morphology in alkaline media
[NASA-TM-82768] N82-19671

ALLOCATIONS
Sharing costs fairly: A practical introduction to cooperative game theory -- costs of water facilities
[ER-5] N82-19934

ALLOWANCES
On the compensation of optimal system asymptotic root-loci
[RR-163] N82-19925

ALLOYS
The role of environment on time dependent crack growth
[AD-A109388] N82-19573

ALTITUDE
Analysis of a nonlinear altitude tracking method
[AD-A108878] N82-19197
Optimum employment of satellite indirect soundings as numerical model input
[NASA-CR-168509] N82-19768
A case study of height and temperature analyses derived from Nimbus-6 satellite soundings N82-19769

ALUMINUM
A new fatigue resistant material: Aramide Reinforced Aluminum Laminate (ARALL)
[VTH-LR-322] N82-19326
Environmental durability of electroplated black chromium
[NASA-TM-82454] N82-19357
Fatigue performance and fastener flexibility for single shear aluminum joint with different splice plates
[FFA-TN-HU-2165] N82-19599
Durability of adhesive bonded structures subjected to acoustic loads
[AGARD-R-701] N82-19600
Detrital exchange processes of a Delaware salt marsh N82-19699

ALUMINUM ALLOYS
The effect of surface coatings on the fatigue strength of aluminum alloys
[AD-A108889] N82-19363
Fatigue crack growth in aluminum alloys
[VTH-LR-324] N82-19367
Investigation of creep by use of closed loop servo-hydraulic test system
[NASA-CR-168613] N82-19566
Fatigue of 2024-T351 and 7075-T7351 Al-alloy lugs with and without interference fit under maneuver spectrum loading
[TAE-440] N82-19568

AMIDES
Environmental and health aspects of acrylamide: A comprehensive bibliography of published literature
[PB82-110123] N82-19835

AMMONIA
Biochemical, physiological and ecological aspects of ammonium regeneration by marine crustaceans N82-19808

AMPLIFICATION
Modeling beam patterns of linear antennas N82-19458
A microwave FET oscillator design approach and its application in an injection locked oscillator
[CRC-1347] N82-19472

AMPLIFIERS
Spherical acoustic broadband receiver
[AD-A109273] N82-19949
Magnetic refrigeration for maser amplifier cooling N82-20119

AMPLITUDE DISTRIBUTION ANALYSIS
Decreasing DG and direction dispersion of main maximum of beam pattern of sectional traveling wave antenna N82-19449

AMPLITUDES
On the possibility of existence of large amplitude waves around pulsars N82-20059

ANALOG DATA
Ground station digital interface
[ARL/MECH-ENG-REPT-158] N82-19401

ANGLE OF ATTACK
Aerodynamic design manual for tactical weapons
[AD-A109180] N82-19290

ANGULAR MOMENTUM
Angular momentum alignment in nozzle expansions of gas mixtures N82-19329

ANIK 2
ANIK-B program delivery pilot project. A 12 month performance assessment
[CRC-1349] N82-19426

ANIONS
The development of high-intensity negative ion sources and beams in the USSR
[AD-A108935] N82-19964

ANISOTROPIC MEDIA
Wave propagation problems in certain elastic anisotropic half spaces N82-19454

ANISOTROPY
The anisotropic classical chain. Thermodynamic properties and phase diagrams N82-20003

ANNEALING
Ion implantation and laser processing of 3-5 compound semiconductors with applications to the fabrication of microwave devices
[AD-A109033] N82-19993

ANNIHILATION REACTIONS
On the theory of Gamma Ray Amplification through Stimulated Annihilation Radiation (GRASAR)
[NASA-TM-83857] N82-20111

ANNUAL VARIATIONS
SAM 2 Measurements of the Polar Stratospheric Aerosol, volume 2. April 1979 to October 1979
[NASA-RP-1088-VOL-2] N82-19734
Studies of the energy and the flux of water vapor in the atmosphere over northeastern Brazil
[INPE-2288-TDL/068] N82-19777
Specification of cloud amount over local areas from GOES visual imagery
[AD-A109325] N82-19786
Thermodynamic features affecting convective cloud growth and dynamic seeding: A comparative summary of HIPLEX soundings, 1975 to 1977
[PB82-123423] N82-19791

ANOMALIES
Upper mantle heterogeneity: Comparisons of regions south of Australia with Philippine Basin
[NASA-CR-168646] N82-19733
Introduction to celestial mechanics
[INPE-2126-RPE/350] N82-20096

ANTARCTIC REGIONS
SAM 2 Measurements of the Polar Stratospheric Aerosol, volume 2. April 1979 to October 1979
[NASA-RP-1088-VOL-2] N82-19734

ANTENNA ARRAYS
Electro-optical system for remote position measurements in real time N82-19272
Analysis of multipath interference for APATS
[AD-A108797] N82-19305
Antenna (selected articles)
[AD-A108204] N82-19413
Compensation for direct and reverse interconnection in an infinite emitter array N82-19414
Simultaneous compensation of direct and reverse interconnection in an infinite emitter array N82-19415
Antenna (selected articles)
[AD-A108175] N82-19416
Coordination of a linear phase array of waveguide radiators with wide-angle scanning in the E plane N82-19417
Calculation of the radiation characteristics of highly directional arc antennas N82-19418
Antenna (selected articles)
[AD-A108174] N82-19448
Analysis of the properties of connected vibrator structures N82-19452
Sideband-aided receiver arraying N82-20120

ANTENNA COMPONENTS
Maintenance and operations tasks accomplished at DSS 12 during the antenna panel replacement downtime N82-20130

ANTENNA COUPLERS
Computer models for conducting surfaces
[AD-A108763] N82-19435

ANTENNA DESIGN
Large Space Systems Technology, part 2, 1981
[NASA-CP-2215-PT-2] N82-19257
JPL antenna technology development N82-19258
Offset wrap rib antenna concept development N82-19259
Summary of antenna technology development at the Langley Research Center N82-19262
Maypole (Hoop/Column) concept development program N82-19263
Radio frequency verification tasks related to a multiple aperture reflector system N82-19264
RF verification tasks underway at the Harris Corporation for multiple aperture reflector system N82-19267
Design for the installation of a system of antennas for stratospheric balloon mobile tracking stations
[INPE-2306-PRE/073] N82-19424
Antenna (selected articles)
[AD-A108174] N82-19448
Decreasing DG and direction dispersion of main maximum of beam pattern of sectional traveling wave antenna N82-19449

ANTENNA FEEDS
Antenna (selected articles)
[AD-A108204] N82-19413
Simultaneous compensation of direct and reverse interconnection in an infinite emitter array N82-19415

ANTENNA RADIATION PATTERNS
Preliminary experimental test results using 35 GHz offset fed reflector simulating surface pillows and aperture cables N82-19265
Near field testing of LARC multiple beam antenna N82-19273
Analysis of multipath interference for APATS
[AD-A108797] N82-19305
Antenna (selected articles)
[AD-A108175] N82-19416
Calculation of the radiation characteristics of highly directional arc antennas N82-19418
Fresnel-region fields and antenna noise-temperature calculations for advanced microwave sounding units
[NASA-TM-83813] N82-19428
Antenna (selected articles)
[AD-A108174] N82-19448
Statistics of the field of focused systems N82-19450
Broad-directional lens antennas made of an inhomogeneous dielectric N82-19457
Modeling beam patterns of linear antennas N82-19458

ANTENNAS
Large Space Systems Technology, part 2, 1981
[NASA-CP-2215-PT-2] N82-19257
Analytical performance prediction for large antennas N82-19260
Summary of antenna technology development at the Langley Research Center N82-19262
Preliminary analytical results using surface current integration for predicting effects of surface pillows on RF performance N82-19266
RF verification tasks underway at the Harris Corporation for multiple aperture reflector system N82-19267
Distorted reflector antenna performance prediction technique N82-19268
Near field testing of LARC multiple beam antenna N82-19273
Electrostatic membrane antenna concept testing N82-19274
Conceptual design of electrostatic antenna N82-19275
Antenna subsystem requirements N82-19276
Configuration development of the Land Mobile Satellite System (LMSS) Spacecraft N82-19277
Configuration development of the Land Mobile Satellite System (LMSS) Spacecraft: Conclusions N82-19278

Land Mobile Satellite Systems (LMSS): Single aperture system design N82-19279

Quad aperture RF definition N82-19280

Attitude control subsystem study for the Land Mobile Satellite System Spacecraft N82-19281

Decreasing DG and direction dispersion of main maximum of beam pattern of sectional traveling wave antenna N82-19449

Statistics of the field of focused systems N82-19450

Efficiency and input impedance of planar emitter placed near the interface N82-19451

Assessment of aircraft capacitive circuit medium wave antennas according to their efficiency N82-19453

ANTIMISSILE DEFENSE

Perspectives for Controlled Weapons Technology: Report of the 90th Helicopter Forum
[MBB-UA-532-80-O] N82-19211

ANTIOXIDANTS

Corrosion of carbon steel at high temperature in reducing chemical conditions
[CISE-1699] N82-19368

APERTURES

Compensation for direct and reverse interconnection in an infinite emitter array N82-19414

Simultaneous compensation of direct and reverse interconnection in an infinite emitter array N82-19415

Calculation of the radiation characteristics of highly directional arc antennas N82-19418

APPROACH

The effect of visual information on the manual approach and landing
[NLR-TR-80055-U] N82-19836

APPROXIMATION

Comments on the doubly asymptotic approxmation. 2: A simple approximation for cutoff velocity --- fluid-structure interaction in cases involving acoustic shock waves impinging on underwater structures
[AD-A108926] N82-19911

Applications of a general comparison theory for convolution integrals
[CTH-MATH-1981-21] N82-19923

Another self-similar blast wave: Early time asymptote with shock heated electrons and high thermal conductivity
[NASA-CR-168562] N82-19962

AQUEOUS SOLUTIONS

Solute-gas equilibria in multi-organic aqueous systems
[AD-A109082] N82-19318

ARCHITECTURE

Airport related residential accoustical insulation demonstration project: Report 1720
[PB82-100777] N82-19396

Study and experimentation of horizontal microprocessor machine description techniques
[AD-A109136] N82-19860

ARCHITECTURE (COMPUTERS)

Design of a versatile LSI module for the simple configuration of high-throughput real-time polyprocessor systems N82-19466

Overview of the CHiP computer
[AD-A109293] N82-19853

SASS hardware architecture and development monitor
[AD-A109552] N82-20015

ARCTIC REGIONS

Diffuse and discrete optical emissions at the poleward border of the morning auroral oval
[DMI-GEOPHIS-PAPERS-R-66] N82-19742

ARGENTINA

Taxonomic classification of world map units in crop producing areas of Argentina and Brazil with representative US soil series and major land resource areas in which they occur
[E82-10058] N82-19633

ARGON

Week and strong ignition. 2: Sensitivity of the hydrogen-oxygen system
[AD-A108843] N82-19342

ARGON LASERS

Laser journal (selected articles)
[AD-A108173] N82-19535

Properties of steady discharge in Ar-Kr-F2 gas mixture N82-19536

ARIANE LAUNCH VEHICLE

Definition study on multishakers for vibration testing --- Ariane payloads
[SOPEMEA-ET-17004] N82-19526

ARITHMETIC

Arithmetic manipulation of variables and data base contents by a simple dialog oriented language with structured elements
[IKE-4-104] N82-19669

ARRAYS

Sophisticated jammers and adaptive arrays
[AD-A109300] N82-19430

Mathematical and graphical tools for the creation of computational arrays N82-19464

Spherical acoustic broadband receiver
[AD-A109273] N82-19949

ARROW WINGS

Transonic pressure measurements and comparison of theory to experiment for three arrow-wing configurations
[NASA-CR-3434] N82-19177

ARTIFICIAL CLOUDS

Helicopter Icing Spray System (HISS) nozzle improvement evaluation
[AD-A109405] N82-19208

ARTIFICIAL INTELLIGENCE

Prerequisites to deriving formal specifications from natural language requirements
[AD-A108612] N82-19878

Development of a computer consulting system using decision rules
[INPE-2296-PRE/068] N82-19894

European Scientific Notes, volume 35, number 11
[AD-A109387] N82-20136

ARTIFICIAL SATELLITES

Ranging and sychronization between nominally co-orbital satellites
[AD-A109272] N82-19289

Developments in geodesy within the scope of Helmut Wolf's work N82-19604

ASPECT RATIO

Performance of single-stage axial-flow transonic compressor with rotor and stator aspect ratios of 1.63 and 1.78, respectively, and with design pressure ratio of 1.82
[NASA-TP-1974] N82-19222

ASPHALT

Asphalt recycling technology: Literature review and research plan
[AD-A108199] N82-19392

ASSURANCE

Experience with modified aerospace reliability and quality assurance method for wind turbines
[NASA-TM-82803] N82-19550

ASTEROID BELTS

The Voyager 1 Saturn encounter and the cosmogonic shadow effect N82-20032

ASTEROID CAPTURE

The role of episodic bombardment in geophysics N82-20100

ASTRODYNAMICS

Instabilities in inhomogeneous collision-free self-gravitating stellar systems --- elliptical galaxies N82-20077

ASTRONAUTS

Analysis of evaporative water loss in the Skylab astronauts
[NASA-CR-167462] N82-19814

ASTRONOMICAL CATALOGS

Documentation for the machine-readable version of the catalogue of stars within 25 parsecs of the Sun
[NASA-TM-84039] N82-20088

Data announcement bulletin: The Ariel V SSI 3A X-ray Catalogue
[NASA-TM-84029] N82-20089

ASTRONOMICAL MAPS

EXUV. Phase A study. Volume 2A: Satellite system conceptual design --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-2A] N82-19293

ASTRONOMICAL MODELS

Plasma Astrophysics --- conference proceedings, Varenna, Italy, 27 Aug. - 7 Sep. 1981
[ESA-SP-161] N82-20030

Particle acceleration --- cosmic rays N82-20043

HEAO 1 measurements of the galactic ridge
[NASA-TM-83844] N82-20097

Astrophysical tests for radiative decay of neutrinos and fundamental physics implications
[NASA-TM-83873] N82-20096

ASTROPHYSICS

Plasma Astrophysics --- conference proceedings, Varenna, Italy, 27 Aug. - 7 Sep. 1981
[ESA-SP-161] N82-20030

Modulational instabilities in astrophysics N82-20036

Plasma lasers (a strong source of coherent radiation in astrophysics) N82-20041

Activities report of the Institute for Astronomy and Astrophysics --- stars, star systems and X-ray astronomy
[TUB-IAA-MITT-1] N82-20093

Astrophysical tests for radiative decay of neutrinos and fundamental physics implications
[NASA-TM-83873] N82-20098

ASYMPTOTES

On the compensation of optimal system asymptotic root-loci
[RR-163] N82-19925

Asymptotic normality of autoregressive parameter estimates for mixed time series
[AD-A108781] N82-19929

Another self-similar blast wave: Early time asymptote with shock heated electrons and high thermal conductivity
[NASA-CR-168562] N82-19962

ASYMPTOTIC METHODS

Asymptotic properties of unknown systems --- and controller design problems
[RR-156] N82-19903

Comments on the doubly asymptotic approxmation. 2: A simple approximation for cutoff velocity --- fluid-structure interaction in cases involving acoustic shock waves impinging on underwater structures
[AD-A108926] N82-19911

ASYMPTOTIC SERIES

Underwater shock analysis of nonlinear structures, a reference manual for the USA-STAGS code, version 3
[AD-A108911] N82-19584

ATLANTIC OCEAN

United States Coast Pilot 2. Atlantic Coast: Cape Cod to Sandy Hook, 16th edition
[PB82-109505] N82-19204

Classification of the fields of anomaly in monthly water temperature of the North Atlantic during the cold half-year
[BLL-TRANS-1509-(9022.552)] N82-19756

Convergence zones in the South Atlantic and their influence on the precipitation regime in Northeastern Brazil
[INPE-2307-TDL/074] N82-19778

Detection range probabilities of passive infrared systems for the North Atlantic
[AD-A108812] N82-19974

ATMOSPHERIC ATTENUATION

Study of the availability of satellite telecommunication links subject to attenuation by rain
[INPE-2239-PRE/025] N82-19411

Variations in propagation attenuation at the frequencies 11, 18 and 36 GHz
[FOA-A-30028-E2] N82-19438

Detection range probabilities of passive infrared systems for the North Atlantic
[AD-A108812] N82-19974

ATMOSPHERIC CHEMISTRY

One and two dimensional photochemical modeling of the two chemical interactions in the middle atmosphere (0-120 km) N82-19719

Stratospheric ozone concentration measurements at sunrise and at sunset
[BLL-TRANS-1499-(9022.552)] N82-19720

Inversion of spire NO data
[AD-A108866] N82-19736

ATMOSPHERIC CIRCULATION

Geophysical effects on the length of the sideral day
[BLL-TRANS-1489-(9022.552)] N82-19721

Integrated and spectral energetics of the GLAS general circulation model
[NASA-CR-166766] N82-19729

The computation of the ground surface temperature for simulation of the general atmospheric circulation
[BLL-TRANS-1521-(9022.552)] N82-19751

Forecasts of precipitation in the Northeast of Brazil: Dynamic aspects
[INPE-2244-PRE/029] N82-19772

Predictability of the tropical atmosphere
[NASA-TM-83829] N82-19775

A numerical model for simulation of local circulation, applied to the coastal region of Northeastern Brazil
[INPE-2270/PRE/061] N82-19776

Monitoring tropical cyclone intensity using wind fields derived from short-interval satellite images
[NASA-TM-82162] N82-19780

The twenty year average atmospheric structure at Lima, Peru
[PB82-114216] N82-19795

ATMOSPHERIC COMPOSITION

The twenty year average atmospheric structure at Lima, Peru
[PB82-114216] N82-19795

The tropospheric gas composition of Jupiter's north equatorial belt (NH3, PH3, CH3D, GeH4, H2O) and the Jovian D/H isotropic ratio
[NASA-TM-83891] N82-20103

ATMOSPHERIC EFFECTS

Correction for atmospheric effects in satellite images
[INPE-2281-PRE/059] N82-19728

ATMOSPHERIC ELECTRICITY

Instruments and methods for studying atmospheric electricity
[BLL-TRANS-1487-(9022.556)] N82-19753

ATMOSPHERIC MODELS

The effect of finite field size on classification and atmospheric correction
[NASA-TM-83818] N82-19645

One and two dimensional photochemical modeling of the two chemical interactions in the middle atmosphere (0-120 km) N82-19719

Integrated and spectral energetics of the GLAS general circulation model
[NASA-CR-166766] N82-19729

Modeling the lowest 1 km of the atmosphere
[AGARD-AG-267] N82-19747

The computation of the ground surface temperature for simulation of the general atmospheric circulation
[BLL-TRANS-1521-(9022.552)] N82-19751

Optimum employment of satellite indirect soundings as numerical model input
[NASA-CR-166509] N82-19768

Evaluation of TIROS-N and NOAA-6 satellite data: Comparisons of colocated soundings and analyses for a January case N82-19770

A numerical evaluation of TIROS-N and NOAA-6 analyses in a high resolution limited area model
N82-19771

Microwave radiometric observations near 19.35, 92 and 183 GHz of precipitation in tropical storm Cora
[NASA-TM-82164] N82-19779

Application of the empirical kinetic modeling approach to urban areas. Volume 2: Tulsa
[PB82-114224] N82-20029

ATMOSPHERIC PHYSICS

A survey of atmospheric turbulence characteristics
[AD-A109306] N82-19736

ATMOSPHERIC PRESSURE

Synoptic meteorology during the SNOW-ONE field experiment
[AD-A109060] N82-19784

ATMOSPHERIC SCATTERING

The effect of finite field size on classification and atmospheric correction
[NASA-TM-83818] N82-19645

ATMOSPHERIC SOUNDING

VISSR Atmospheric Sounder (VAS) simulation experiment for a severe storm environment
[NASA-TM-83822] N82-19774

Studies of the stratospheric and mesospheric wind system and temperature distribution from observations of infrasonic waves generated during regular Concorde flights
[KGI-176] N82-19789

The twenty year average atmospheric structure at Lima, Peru
[PB82-114216] N82-19795

ATMOSPHERIC TEMPERATURE

Regional classification of the spectral variance of long European temperature series and its application in a statistical filter model for forecasting in the region north of the alps
[BLL-TRANS-1514-(9022.552)] N82-19752

Some characteristics of the variation of air temperature in the northern hemisphere during individual months of the period 1881-1975
[BLL-TRANS-1497-(9022.552)] N82-19761

ATMOSPHERIC TURBULENCE

A survey of atmospheric turbulence characteristics
[AD-A109306] N82-19736

Turbulence within cumulus clouds and outside them
[BLL-TRANS-1481-(9022.552)] N82-19762

Report on the analysis of data from the NOAA/Alaskan MST radar system
[AD-A109056] N82-19782

Aircraft measurements of the frequency of turbulence encounters in Australia. A review and assessment
[AD-A108923] N82-19785

Turbulence statistics for design of wind turbine generators
[PB82-112939] N82-19792

ATOMIC CLOCKS

Lightweight hydrogen maser
[AD-A108626] N82-19530

ATOMIC COLLISIONS

Integral total collision and ionization cross sections for the interaction of excited He in the (2/super 1/S, 2/super 3/S) state with Ar in the thermal energy range
[MPIS-32/1980] N82-19350

The evaluation of charge transfer matrix elements in light ion collisions with non-relativistic atoms
N82-19959

Resonance studies of hydrogen atoms interacting with very cold surfaces
[AD-A109040] N82-19966

ATOMIC RECOMBINATION

Resonance studies of hydrogen atoms interacting with very cold surfaces
[AD-A109040] N82-19966

ATOMIC STRUCTURE

Measurement of integral scattering cross sections of hydrogen atom-molecular systems in the subthermal range
[MPIS-5/1981] N82-19967

The electronic and atomic structure of diamond surface and effects of hydrogen termination
[AD-A109142] N82-19994

ATTENUATION

Study of the availability of satellite telecommunication networks subject to rain attenuation
[INPE-2300-TDL/071] N82-19425

ATTENUATION COEFFICIENTS

The problem of precipitation measurement by attenuation of radio waves
[BLL-TRANS-1475-(9022.549)] N82-19766

ATTITUDE (INCLINATION)

A measurement of long term tilt in Colorado and Wyoming
[AD-A108665] N82-19737

ATTITUDE CONTROL

Attitude control subsystem study for the Land Mobile Satellite System Spacecraft N82-19281

AURORAL ABSORPTION

Diffuse and discrete optical emissions at the poleward border of the morning auroral oval
[DMI-GEOPHIS-PAPERS-R-66] N82-19742

AURORAL ARCS

Kinetic response of ionospheric ions to onset of auroral electric fields
[NASA-CR-164799] N82-19727

AURORAL ZONES

Formation of ion conics and lower hybrid acceleration in the suprauroral region N82-20075

AURORAS

Theory of the auroral magnetosphere
[AERONOMICA-ACTA-A-237-1981] N82-19723

AUSTENITE

Influence of fabrication conditions and stability of austenite on the forming behavior of austenitic stainless steels
[BMFT-FB-T-81-192] N82-19366

AUSTENITIC STAINLESS STEELS

Influence of fabrication conditions and stability of austenite on the forming behavior of austenitic stainless steels
[BMFT-FB-T-81-192] N82-19366

AUSTRALIA

Upper mantle heterogeneity: Comparisons of regions south of Australia with Philippine Basin
[NASA-CR-168646] N82-19733

AUTOMATIC CONTROL

Teleoperation and automation: A survey of European expertise applicable to docking and assembly in space
[MP/PR/4905] N82-19240

Contactless optoelectronic position sensing
[BMFT-FB-T-81-191] N82-19481

Longwall Guidance and Control Development
[NASA-TM-82455] N82-19637

AUTOMATIC TEST EQUIPMENT

Taped random spectra for reliability demonstration testing
[AD-A108803] N82-19552

AUTOMATIC TYPEWRITERS

Programmable printing terminal
[INPE-2096-RPE/326] N82-19851

AUTOMOBILE ENGINES

Conventional engine technology. Volume 1: Status of OTTO cycle engine technology
[NASA-CR-168643] N82-19542

Conventional engine technology. Volume 3: Comparisons and future potential
[NASA-CR-168645] N82-19544

AUTOMOBILE FUELS

Conventional engine technology. Volume 1: Status of OTTO cycle engine technology
[NASA-CR-168643] N82-19542

AUTOMOBILES

Urban traffic signal control for fuel economy. Part 2: Extension to small cars
[AD-A109393] N82-20025

Consumer behavior towards fuel efficient vehicles. Volume 1: Executive summary
[PB82-103300] N82-20027

Braking force coefficients of worn tyres
[PB82-122698] N82-20028

AUTOREGRESSIVE PROCESSES

Computationally fast algorithms for ARMA spectral estimation N82-19871

Asymptotic normality of autoregressive parameter estimates for mixed time series
[AD-A108781] N82-19929

AUXILIARY POWER SOURCES

Electric Flight Systems
[NASA-CP-2209] N82-19134

Electric flight systems, overview N82-19135

Electric ECS N82-19140

Electric flight systems integration N82-19150

AVIONICS

Assessment of Avionic Equipment Field Reliability and Maintainability as Functions of Unit Cost
[AD-A109373] N82-19218

AXES OF ROTATION

Results of continuous synchronous orbit testing of sealed nickel-cadmium cells
[NASA-CR-168564] N82-19678

AXIAL FLOW

Search for large-scale coherent structures in the nearly self-preserving region of a turbulent axisymmetric jet
[AD-A108334] N82-19501

AXIAL FLOW TURBINES

An experimental study of the effects of an inlet flow conditioner on the noise of a low speed axial flow fan --- in an aircraft engine
[TT-8101] N82-19956

AXIAL LOADS

Chain and belt drives, a review N82-19556

Fracture and fatigue characterization of aircraft structural materials under biaxial loading
[AD-A109054] N82-19567

AXISYMMETRIC BODIES

Computation of transonic potential flow about 3 dimensional inlets, ducts, and bodies
[NASA-CR-3514] N82-19179

AXISYMMETRIC FLOW

Search for large-scale coherent structures in the nearly self-preserving region of a turbulent axisymmetric jet
[AD-A108334] N82-19501

Numerical calculation of steady two-dimensional axi-symmetrical turbulent boundary layer of a compressible fluid N82-19514

AZIMUTH

Measurements of azimuth and distance using arbitrary configurations of sensors with unknown coordinates in two dimensions --- for radar or sonar systems
[REPT-7/81] N82-19403

B

BACKGROUND RADIATION

Aircraft-borne measurement of infrared sources and backgrounds
[AD-A108871] N82-19977

BACKSCATTERING

Atlas of the global distribution of the total ozone concentration according to satellite measurements
[MITT-28] N82-19740

Backscatter and extinction in water clouds
[AD-A109277] N82-19975

BALL BEARINGS

Selected European Space Tribology Laboratory (ESTL) papers on ball bearings for satellites
[ESA-TRIB-1] N82-19547

BANDPASS FILTERS

Regional classification of the spectral variance of long European temperature series and its application in a statistical filter model for forecasting in the region north of the alps
[BLL-TRANS-1514-(9022.552)] N82-19752

BARLEY

AgRISTARS: Foreign commodity production forecasting. Minutes of the annual formal project manager's review, including preliminary technical review reports of FY80 experiments --- wheat/barley and corn/soybean experiments
[E82-10039] N82-19614

BAROCLINIC WAVES

A study on the development of intermediate scale disturbances with a model of primitive equations of high vertical resolution
[INPE-2232-TDL/063] N82-19773

BAROMETERS

The applicability of pressure measurements by radiosondes to calculating the height
[BLL-TRANS-1505-(9022.552)] N82-19755

BARRELS

Thermo-elastic-plastic stresses in multilayered cylinders
[AD-A109320] N82-19570

BATHYMETERS

Products from two computer programs which process digital bathymetric data
[AD-A106757] N82-19681

BAYES THEOREM

Bayesian geophysical model for seismic hazard
[PB82-122391] N82-19745

BEACON COLLISION AVOIDANCE SYSTEM

Analysis of a nonlinear altitude tracking method
[AD-A106878] N82-19197

Active Beacon Collision Avoidance System (BCAS) logic performance during operational flight tests
[AD-A108893] N82-19203

BEAM CURRENTS

Production and propagation of jets --- narrow features in the structure of extragalactic radio sources N82-20055

BEAM SPLITTERS

Optical imaging instruments for the Land Application Satellite System. Phase A study. Volume 1
[REPT-60/1023-VOL-1] N82-19979

BEAM WAVEGUIDES

A 12 GHz mixer with planar circuits in a waveguide
[INPE-2149-RPE/370] N82-19467

BEAMS (RADIATION)

Decreasing DG and direction dispersion of main maximum of beam pattern of sectional traveling wave antenna N82-19449

Statistics of the field of focused systems
N82-19450

Analysis of the properties of connected vibrator structures N82-19452

BEAMS (SUPPORTS)

Galvanic charging in air and space flight
[MBB-BB-485-O] N82-19478

The value of dynamic fracture toughness and its dependence on material properties and loading conditions
[AD-A109151] N82-19574

BEARING (DIRECTION)

Algorithms for tracking a sound source using frequency and bearings
[AD-A109276] N82-19950

BENDING

The Shock and Vibration Digest, volume 13, no. 12
[AD-A109583] N82-19562

Finite-element modeling of layered, anisotropic composite plates and shells: A review of recent research N82-19563

The value of dynamic fracture toughness and its dependence on material properties and loading conditions
[AD-A109151] N82-19574

BENDING FATIGUE

Fatigue performance and fastener flexibility for single shear aluminum joint with different splice plates
[FFA-TN-HU-2165] N82-19599

BENDING MOMENTS

A method for applying linear optimal control theory to the design of a regulator for a flexible aircraft --- improving riding quality in fighter aircraft
[NLR-TR-80032-U] N82-19212

Thermoelastic deformation in cylindrical shells of great length
[INPE-2268-PRE/049] N82-19286

BENZENE

Electron exchange between Bis (eta meson-6-Arene) Chromium (I) and Bis (eta meson-6-Arene) Chromium (0). Comparisons between experimental and calculated kinetics parameters
[AD-A109051] N82-19348

BIBLIOGRAPHIES

Aeronautical Engineering: A continuing bibliography (supplement 143)
[NASA-SP-7037(143)] N82-19131

Bibliography of NASA published reports on general aviation, 1975 to 1981
[NASA-TM-83307] N82-19132

Microwave tubes. Literature study number 2 relating to the year 1980
[FOA-C-30247-E] N82-19479

A compilation of unsteady turbulent boundary layer experimental data
[AGARD-AG-265] N82-19519

Literature study of the biodegradability of chemicals in water. Volume 2: Permutated index of chemicals, microbial populations, and wastewater treatment systems with bibliography
[PB82-100850] N82-19712

Water pollution from highways and urban areas: An annotated bibliography (supplement)
[PB82-113317] N82-19714

Environmental and health aspects of acrylamide: A comprehensive bibliography of published literature
[PB82-110123] N82-19835

BIG BANG COSMOLOGY

Origin of the large-scale structure of the universe
N82-20049

BINARY INTEGRATION

Analysis and synthesis of binary sequences
N82-19463

BINARY STARS

Evolution of X-ray astronomy --- spaceborne observations of extragalactic X-ray sources
N82-20053

Spectral and temporal behavior of the X-ray binary stars Cgy X-1 in the hard X-ray domain
[MPI-PAE/EXTRATERR-166] N82-20091

BIOASTRONAUTICS

Analysis of evaporative water loss in the Skylab astronauts
[NASA-CR-167462] N82-19814

BIOCHEMISTRY

New bioreactors for aerobic processes
[ISSN-0077-5606] N82-19679

BIODEGRADABILITY

The synthesis of biodegradable block copolymers containing amylose and polyester oligomeric blocks
N82-19371

Literature study of the biodegradability of chemicals in water. Volume 1: Biodegradability prediction, advances in chemical interferences with wastewater treatment
[PB82-100843] N82-19711

Literature study of the biodegradability of chemicals in water. Volume 2: Permutated index of chemicals, microbial populations, and wastewater treatment systems with bibliography
[PB82-100850] N82-19712

BIOGRAPHY

Helmut Wolf: On the occasion of his 70th birthday
[SER-E-18] N82-19603

BIOINSTRUMENTATION

Measurements of intra and extracellular water spaces and electrolyte concentrations in human skeletal muscle N82-19829

BIOLOGICAL EFFECTS

Numerical and experimental studies of electromagnetic near-field energy absorption in models of man N82-19812

BIOSPHERE

Social and Environmental Consequences of Natural Resources Policies with Special Emphasis on Biosphere Reserves
[PB82-113937] N82-19860

BIPOLAR TRANSISTORS

Electrical characterization of super Schottky
[AD-A108766] N82-19996

BLACK HOLES (ASTRONOMY)

Extragalactic double radio sources --- unified model with a massive black hole acting as unipolar induction dynamo N82-20052

Production and propagation of jets --- narrow features in the structure of extragalactic radio sources N82-20055

BLAST LOADS

Laboratory verification of blast-induced liquefaction mechanism
[AD-A109000] N82-19393

BLOOD

Study of the kinetics of oxygen saturation of fluorocarbon emulsions --- blood substitutes
[ISSN-0077-5606] N82-19810

BLOWDOWN WIND TUNNELS

Induction driven transonic wind tunnel T2: Operation at room temperature and cryogenic adaptation
N82-19158

BLUFF BODIES

The unsteady aerodynamics of certain bluff shapes --- wind tunnel measurement
[BU-264] N82-19192

BLUNT BODIES

Numerical study of incompressible slightly viscous flow past blunt bodies and airfoils N82-19163

Calculation of supersonic three-dimensional flow about blunt-nosed bodies
[AD-A108808] N82-19187

BODIES OF REVOLUTION

Dynamics of a chain of flexible bodies
N82-19553

BODY FLUIDS

Analysis of evaporative water loss in the Skylab astronauts
[NASA-CR-167462] N82-19814

Current views and future programs in cardiovascular physiology in space --- plethysmography
N82-19818

BODY-WING AND TAIL CONFIGURATIONS

An investigation into wing-canard interaction for a model with forward swept wings --- wind tunnel measurement
[BU-261] N82-19191

Aerodynamic design manual for tactical weapons
[AD-A109180] N82-19290

BODY-WING CONFIGURATIONS

Transonic perturbation analysis of wing-fuselage-nacelle-pylon configurations with powered jet exhausts
[NASA-CR-165852] N82-19167

Transonic pressure measurements and comparison of theory to experiment for three arrow-wing configurations
[NASA-CR-3434] N82-19177

BOILERS

Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, volume 1
[PB82-100868] N82-19384

Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, appendices A, B, C and D, volume 2
[PB82-100876] N82-19385

Tube to tubesheet welding by electron beam for heat exchanger application
[IKE-1-11] N82-19546

Some aspects of two-phase flow, heat transfer and dynamic instabilities in medium and high pressure steam generators N82-20004

BOLTS

Bolt clampup relaxation in a graphite/epoxy laminate
[NASA-TM-83268] N82-19320

BOLZA PROBLEMS
Solution of problems with time as an independent variable, using the finite element method
[INPE-2269-PRE/050] N82-19908

BOMBARDMENT
The role of episodic bombardment in geophysics
N82-20100

BOMBS (ORDNANCE)
Computational aerodynamics at weapons systems research laboratory
[WSRL-0236-TM] N82-19176

BOOLEAN ALGEBRA
Symmetric complementation, revision
[AD-A108823] N82-19936

BOREHOLES
Continental scientific drilling program curatorial needs --- specimen handling
[LA-8726-MS] N82-19643
In Situ Mining Research. Proceedings of Bureau of Mines Technology Seminar
[PB82-104753] N82-19663
A measurement of long term tilt in Colorado and Wyoming
[AD-A108865] N82-19737

BOUNDARY LAYER EQUATIONS
Surface layer orientation coordination for boundary layer calculations on general configurations
[MBB-FE-122/S/PUB/41] N82-19507
Acta Mechanica Sinica (selected articles)
[AD-A108208] N82-19513
Numerical calculation of steady two-dimensional axi-symmetrical turbulent boundary layer of a compressible fluid N82-19514
Laminar heat transfer with mass injection and chemical reaction N82-19515

BOUNDARY LAYER FLOW
Inverse transonic airfoil design methods including boundary layer and viscous interaction effects
[NASA-CR-168579] N82-19168
Some observations of surface pressures and the near wake of a blunt trailing edge airfoil
[NASA-CR-168563] N82-19174
Characteristic aerodynamic coefficients at high Reynolds numbers
[AD-A109313] N82-19186
Shock tube determination of the heat conductivity of non-ionized and partially ionized argon
N82-19497
The investigation of the propagation mechanism of pressure fluctuation in turbulent flow
[AD-A108496] N82-19502
On the Neumann problem for the pressure in a Navier-Stokes model --- of boundary layer flow
[PUBL-257] N82-19511
Numerical calculation of steady two-dimensional axi-symmetrical turbulent boundary layer of a compressible fluid N82-19514

BOUNDARY LAYER SEPARATION
Strong matching method for computing transonic viscous flows including wakes and separations: Lifting airfoils N82-19155
Characteristic aerodynamic coefficients at high Reynolds numbers
[AD-A109313] N82-19186

BOUNDARY LAYER TRANSITION
Laminar flow transition: A large-eddy simulation approach
[NASA-CR-3518] N82-19499

BOUNDARY LAYERS
A survey of atmospheric turbulence characteristics
[AD-A109306] N82-19738
Kelvin-Helmholtz instability of the magnetopause boundary: Comparison with observed fluctuations
[IPS-81-12] N82-19744

BOUNDARY VALUE PROBLEMS
Theoretical investigation of the flow of a supersonic free jet from a slit
[MPIS-25/1980] N82-19182
Wave propagation problems in certain elastic anisotropic half spaces N82-19454
Finite elements for fluid dynamics. Supercritical design
[AD-A108983] N82-19506
A free boundary value problem arising in climate dynamics
[AERONOMICA-ACTA-A-240-1981] N82-19767
Solution of problems with time as an independent variable, using the finite element method
[INPE-2269-PRE/050] N82-19908

BOUSSINESQ APPROXIMATION
A study on the development of intermediate scale disturbances with a model of primitive equations of high vertical resolution
[INPE-2232-TDL/063] N82-19773

BOW WAVES
Plasma processes at collisionless shock waves
N82-20047

BOXES (CONTAINERS)
Safety demonstration study on proposed biorack glove box --- for Spacelab
[ESA-CR(P)-1482] N82-19239

BRAKING
Braking force coefficients of worn tyres
[PB82-122698] N82-20028

BRASSES
Magnetic properties of copper alloys
[DRIC-T-6498] N82-19356

BRAZIL
Taxonomic classification of world map units in crop producing areas of Argentina and Brazil with representative US soil series and major land resource areas in which they occur
[E82-10058] N82-19633
Notes for Brazil sampling frame evaluation trip
[E82-10060] N82-19635
Utilization of Aerochrome 2443 film for identification and estimating wheat growing areas --- Rio Grande do Sul, Brazil
[INPE-2197-PRE/006] N82-19639
Association between irregularities caused ionospheric bubbles and airglow perturbations in low latitudes in Brazil
[INPE-2122-RPE/346] N82-19726
Studies of the energy and the flux of water vapor in the atmosphere over northeastern Brazil
[INPE-2288-TDL/068] N82-19777

BRIGHTNESS TEMPERATURE
Microwave radiometric observations near 19.35, 92 and 183 GHz of precipitation in tropical storm Cora
[NASA-TM-82164] N82-19779

BRITTLE MATERIALS
Pellini's theory of brittle fracture and the limits of its applicability
[DRIC-T-6468] N82-19565

BRITTLENESS
The value of dynamic fracture toughness and its dependence on material properties and loading conditions
[AD-A109151] N82-19574

BROADBAND
Spherical acoustic broadband receiver
[AD-A109273] N82-19949

BROADCASTING
FM broadcast interference related to airborne ILS, VOR and VHF communications
[RTCA/DO-176] N82-19419
Investigation of technical requirements
N82-19420
Television services in Europe in the age of direct satellite television
[ESA-CR(P)-1503] N82-19439
Proposed techniques for adding FM broadcast stations in a major market, part 2
[PB82-114240] N82-19447

BRONZES
Magnetic properties of copper alloys
[DRIC-T-6498] N82-19356

BUCKET BRIGADE DEVICES
Analogue SAR signal processing: Device evaluation and radiation tests --- video integrator, binary-analog correlator
[REPT-3972-ISSUE-1] N82-19440

BUFFETING
High speed aerodynamic characteristics of the GAFOPH aerofoil
[AD-A108922] N82-19183

BULK ACOUSTIC WAVE DEVICES
Investigation of shallow bulk acoustic waves
[AD-A109028] N82-19953

BURSTS
Large loop thermal models of solar hard X-ray bursts N82-20080

BUTANES
Application of the empirical kinetic modeling approach to urban areas. Volume 2: Tulsa
[PB82-114224] N82-20029

BUTT JOINTS
The numerical simulation of crack growth in weld-induced residual stress fields
[AD-A109321] N82-19577

BYPASS RATIO
NASA Redox cell stack shunt current, pumping power, and cell performance tradeoffs
[NASA-TM-82686] N82-19330

BYPASSES
A microwave FET oscillator design approach and its application in an injection locked oscillator
[CRC-1347] N82-19472
A mobile stream diversion system for hazardous materials spills isolation
[PB82-109679] N82-19661

C

C BAND
Planning of a C-band pulse Doppler radar with polarization diversity for atmospheric research in the mesoscale range
[DFVLR-MITT-81-28] N82-19445
Automatic measurement of areal precipitation using C-band radar
[BLL-TRANS-1378-(9022.552)] N82-19765

CABIN ATMOSPHERES
Environmental Control Systems N82-19141
Environmental control systems N82-19147

CABLES (ROPES)
Preliminary experimental test results using 35 GHz offset fed reflector simulating surface pillows and aperture cables N82-19265
Chain and belt drives, a review N82-19556

CADMIUM TELLURIDES
Radiation and temperature tests of cadmium telluride detectors
[AD-A108774] N82-19522

CALCIUM CHLORIDES
Investigation of a CaCl molecular jet by means of laser induced fluorescence
[MPIS-29/1980] N82-19337

CALIBRATING
SAR calibration technology review
[NASA-CR-167534] N82-19407

CALIFORNIA
Design calculation procedure for passive solar houses at Navy installations in warm California climates, volume 5
[AD-A108386] N82-19687

CAMBERED WINGS
A computer program for wing subsonic aerodynamic performance estimates including attainable thrust and vortex lift effects
[NASA-CR-3515] N82-19151
Transonic pressure measurements and comparison of theory to experiment for three arrow-wing configurations
[NASA-CR-3434] N82-19177

CAMERA SHUTTERS
Digital time control for camera shutters
[PB82-116328] N82-19529

CANADIAN SPACE PROGRAMS
Space activities in the 80's: The programs and the industry. Part 4: Outlook of space industry outside Europe (1981)
[ESA-SP-1012-VOL-3] N82-19245

CANARD CONFIGURATIONS
An investigation into wing-canard interaction for a model with forward swept wings --- wind tunnel measurement
[BU-261] N82-19191

CANOPIES (VEGETATION)
Binary mosaics and point quadrat sampling in ecology
[A-80-ST-96-37] N82-19705

CANTILEVER BEAMS
The structural behaviour of inflated cylindrical cantilever beams --- under load
[BU-260] N82-19597

CAPACITANCE
Assessment of aircraft capacitive circuit medium wave antennas according to their efficiency
N82-19453
Ultra high speed image processing techniques --- electronic packaging techniques
[NASA-CR-166771] N82-19466

CAPACITORS
Instruments and methods for studying atmospheric electricity
[BLL-TRANS-1487-(9022.552)] N82-19753

CARBON DIOXIDE LASERS
Recognition of, and damages caused to a radar antenna by a carbon dioxide laser
[FOA-C-30244-E1] N82-19441

CARBON FIBER REINFORCED PLASTICS
Improvement of the X-ray procedure for the detection of defective adhesions in fiber composites by adding contrast substances to the adhesives
[BMVG-FBWT-81-11] N82-19324
Design and function of an experimental wing box using carbon fiber reinforced epoxy VATLIT-C'85
[VTH-LR-318] N82-19325
The significance of defects on the failure of fibre composites
[AGARD-R-690] N82-19328

CARBON STEELS
Corrosion of carbon steel at high temperature in reducing chemical conditions
[CISE-1699] N82-19368

CARBON-CARBON COMPOSITES
Performance Technology Program (PTP-S 2). Volume 9: Evaluation of reentry vehicle nosetip transition and heat transfer in the AEDC hyperballistics track G
[AD-A108848] N82-19505

CARBONYL COMPOUNDS
Study of the magnetic phase dependence of the Ni-CO reaction rate
[AD-A108422] N82-19338

CARCINOGENS
Chemical and molecular biological aspects alkylhydrazine-induced carcinogenesis in human cells in vitro
[AD-A109088] N82-19833

CARDIOVASCULAR SYSTEM
Current views and future programs in cardiovascular physiology in space --- plethysmography
N82-19818
Adaptation to zero gravity as simulated by head-down tilt N82-19819
Clinical physiology of the renin-angiotensin-aldosterone system N82-19820
Cardiovascular reflexes during upright position
N82-19821
Volume regulating hormones and their role in the cardiovascular adaptation to zero gravity
N82-19822
Cardiovascular responses to isometric exercise in sitting and lying position N82-19823
Cardiovascular reactions to tilt and lower body positive pressure (LBPP) N82-19825
Cerebral hemodynamics at zero gravity
N82-19827
Use of acetylene rebreathing method for measuring cardiac output during physiological and clinical studies N82-19830
A comparison between acetylene and freon rebreathing for measuring cardiac output during exercise --- in space N82-19831

CARRIER TO NOISE RATIOS
Study of the availability of satellite telecommunication networks subject to rain attenuation
[INPE-2300-TDL/071] N82-19425

CASTINGS
Precast concrete pavements
[AD-A108802] N82-19395

CATALOGS (PUBLICATIONS)
AgRISTARS: Interim catalog ground data summary, data acquisition year 1979
[E82-10032] N82-19608
Publications and reports of the Institute of Oceanographic Sciences 1973-1978
[IOS-R-122] N82-19798
Catalogue of ESA publications in 1980
[ESA-SP-1037] N82-20017

CATECHOLAMINE
Catecholamine levels in fit and nonfit males when exposed to an emotional stress N82-19813

CATHODIC COATINGS
Relative effects of a graphite fiber reinforced epoxy composite and nickel-aluminum bronze on a cathodic protection system in seawater
[AD-A109078] N82-19321

Mechanism and models for zinc metal morphology in alkaline media
[NASA-TM-82768] N82-19671

CAVITY RESONATORS
Superconducting niobium-tin resonators --- X band resonators
[BMFT-FB-T-81-188] N82-19480
High stability coplanar oscillators
[CISE-1720] N82-19486
Lightweight hydrogen maser
[AD-A108628] N82-19530
The cavity Q for ergodic eigenmodes
[AD-A109041] N82-19967

CDC COMPUTERS
Los Alamos Scientific Laboratory computer benchmark performance 1979
[LA-8689-MS] N82-19849

CELESTIAL BODIES
Origin of the large-scale structure of the universe
N82-20049

CELESTIAL MECHANICS
Introduction to celestial mechanics
[INPE-2128-RPE/350] N82-20096

CENTAUR LAUNCH VEHICLE
Upper stage alternatives for the shuttle era
[NASA-TM-84137] N82-19303

CENTAUR PROJECT
Development of STS/Centaur failure probabilities liftoff to Centaur separation
[NASA-CR-167549] N82-19255

CENTER OF GRAVITY
A study of flight control requirements for advanced, winged, earth-to-orbit vehicles with far-aft center-of-gravity locations
[NASA-CR-3491] N82-19226

CENTRIFUGAL FORCE
A high resolution spectroscopic study of the v sub 2 band of hydrogen sulfide and the 1-0 band of hydrogen iodide
[NASA-TM-83852] N82-19336

CERAMICS
The science and engineering of materials
[INPE-2138-RPE/361] N82-19316
The polarized infrared reflection spectroscopic characterization and aqueous durability of lithia-disilicate glass ceramics N82-19369
Fracture mechanics and failure predictions for glass, glass-ceramic, ceramic systems N82-19370
Surface-strengthening mechanisms in reaction-bonded Sisub3Nsub4 and subcritical-crack growth behavior in ceramics
[AD-A109087] N82-19582
Production technology of an oxygen ion conductive ceramic for high temperature fuel cells and high temperature water electrolysis
[BMFT-FB-T-81-180] N82-19691

CEREBRAL CORTEX
Cerebral hemodynamics at zero gravity
N82-19827

CERTIFICATION
Collection and evaluation of propeller aircraft noise certification data
[DFVLR-MITT-81-20] N82-19958

CHAINS
Chain and belt drives, a review N82-19556

CHANNEL CAPACITY
Capacity limit of the noiseless, energy-efficient optical PPM channel N82-20121

CHANNEL FLOW
Radiative heat transfer in turbulent MHD channel flow N82-19487
Activities report of the Hydraulics Laboratory
N82-19489

CHARGE COUPLED DEVICES
Analogue SAR signal processing: Device evaluation and radiation tests --- video integrator, binary-analog correlator
[REPT-3972-ISSUE-1] N82-19440
Optical imaging instruments for the Land Application Satellite System, phase A study, volume 2
[REPT-60/1023-VOL-2] N82-19980

CHARGE TRANSFER
The evaluation of charge transfer matrix elements in light ion collisions with non-relativistic atoms
N82-19959

CHEMICAL ANALYSIS
Inorganic analyses in water quality control programs: Instructor's guide
[PB82-111378] N82-19353

CHEMICAL COMPOSITION
Grain-coarsening resistance and the stability of second-phase dispersions in rapidly solidified steels
[AD-A109152] N82-19364
Certain aspects of primary cosmic rays composition at energies of 10 to the 14th power to 10 to the 15th power eV N82-20074

CHEMICAL EQUILIBRIUM
Solute-gas equilibria in multi-organic aqueous systems
[AD-A109082] N82-19318
Laminar heat transfer with mass injection and chemical reaction N82-19515

CHEMICAL PROPERTIES
Accession of titanium as an aircraft material. A current view
[ARL/MAT-NOTE-129] N82-19361
Molybdenum disulphide lubrication. A continuation survey: 1977/78
[ESA-TRIB-4] N82-19379

CHEMICAL REACTIONS
Effect of nuclear spin on chemical reactions and internal molecular rotation N82-19330
Surface chemistry and wear behavior of single-crystal silicon carbide sliding against iron at temperatures to 1500 C in vacuum
[NASA-TP-1947] N82-19374

CHEMICAL REACTORS
On the control of cocurrent tubular chemical reactors
[RR-160] N82-19352
New bioreactors for aerobic processes
[ISSN-0077-5606] N82-19679

CHESAPEAKE BAY (US)
Upper Chesapeake Bay salinity study
[PB82-116641] N82-19717

CHIPS (ELECTRONICS)
Development and characterization of the flip-chip diode N82-19462
Good layouts for pattern recognizers
[AD-A109324] N82-19897

CHLOROCARBONS
Solute-gas equilibria in multi-organic aqueous systems
[AD-A109082] N82-19318

CHOLESTEROL
Electrooptical effects for application in liquid crystal displays --- twisted nematic cells
[BMFT-FB-T-81-170] N82-19962

CHROMIUM COMPOUNDS
Electron exchange between Bis (eta meson-6-Arene) Chromium (I) and Bis (eta meson-6-Arene) Chromium (0). Comparisons between experimental and calculated kinetics parameters
[AD-A109051] N82-19348

CIRCUIT DIAGRAMS
The 10 MHz crystal filter for SCPC Earth stations
[INPE-2286-PRE/062] N82-19470

CIRCUITS
A 12 GHz mixer with planar circuits in a waveguide
[INPE-2149-RPE/370] N82-19467
Digital time control for camera shutters
[PB82-116328] N82-19529
Instruments and methods for studying atmospheric electricity
[BLL-TRANS-1487-(9022.552)] N82-19753

CIRCULAR CYLINDERS
Effect of location in an array on heat transfer to a cylinder in crossflow
[NASA-TM-82797] N82-19493
Least squares finite element analysis of steady high subsonic plane potential flows N82-19517
The Shock and Vibration Digest, volume 13, no. 12
[AD-A109583] N82-19562
Vortex shedding from cylinders and the resulting unsteady forces and flow phenomena, part 2
N82-19564

CIRCULAR ORBITS
Optimal rendezvous between close circular orbits
N82-19900

CIRCULAR POLARIZATION
Polarization properties of main-line OH maser emission from circumstellar shells of late type variable stars N82-20095

CIRCULAR TUBES
Free-wave propagation in fluid-loaded thick-walled circular pipes
[AMTE-N-TM-81903] N82-19491

CIRCULATORS (PHASE SHIFT CIRCUITS)
Y-circulator with dielectric filler
[AD-A109175] N82-19475
CITIES
Impediments to energy and materials recovery facilities for municipal solid waste
[PB82-102302] N82-19383
The effect of finite field size on classification and atmospheric correction
[NASA-TM-83816] N82-19645
Energy properties in urban building stock --- in Finland
[VTT-RR-1/B1] N82-19696
Water pollution from highways and urban areas: An annotated bibliography (supplement)
[PB82-113317] N82-19714
Urban traffic signal control for fuel economy. Part 2: Extension to small cars
[AD-A109393] N82-20025
Application of the empirical kinetic modeling approach to urban areas. Volume 2: Tulsa
[PB82-114224] N82-20029
CIVIL AVIATION
Bibliography of NASA published reports on general aviation, 1975 to 1981
[NASA-TM-83307] N82-19132
FAA statistical handbook of aviation
[AD-A109289] N82-19198
CLASSIFICATIONS
A comparison of unsupervised classification procedures on LANDSAT MSS data for an area of complex surface conditions in Basilicata, Southern Italy
[E82-10038] N82-19613
Taxonomic classification of world map units in crop producing areas of Argentina and Brazil with representative US soil series and major land resource areas in which they occur
[E82-10058] N82-19633
CLIMATE
Life on a warmer Earth: Possible climatic consequences of man made global warming
[ER-3] N82-19701
Integrated and spectral energetics of the GLAS general circulation model
[NASA-CR-166766] N82-19729
A free boundary value problem arising in climate dynamics
[AERONOMICA-ACTA-A-240-1981] N82-19767
Climate Analysis Center Users Conference
[PB82-113325] N82-19793
CLIMATOLOGY
Methodology for the use of (foreign) synoptic messages in the generalization of climatological information (derivation of climatic parameters)
[BLL-TRANS-1506-(9022.552)] N82-19757
Some characteristics of the variation of air temperature in the northern hemisphere during individual months of the period 1881-1975
[BLL-TRANS-1497-(9022.552)] N82-19761
CLINICAL MEDICINE
European Scientific Notes, volume 35, number 11
[AD-A109387] N82-20138
CLOCKS
Master timing system measurements N82-20124
Global positioning system timing receivers in the DSN N82-20126
CLOUD COVER
Methodology for the use of (foreign) synoptic messages in the generalization of climatological information (derivation of climatic parameters)
[BLL-TRANS-1506-(9022.552)] N82-19757
Specification of cloud amount over local areas from GOES visual imagery
[AD-A109325] N82-19786
CLOUD GLACIATION
Statistical study of freezing clouds in the GINA 2-PAP, March - April 1979
[BLL-TRANS-1511-(9022.552)] N82-19754
CLOUD PHYSICS
Planning of a C-band pulse Doppler radar with polarization diversity for atmospheric research in the mesoscale range
[DFVLR-MITT-81-28] N82-19445
Thermodynamic features affecting convective cloud growth and dynamic seeding: A comparative summary of HIPLEX soundings, 1975 to 1977
[PB82-123423] N82-19791
CLOUD SEEDING
Thermodynamic features affecting convective cloud growth and dynamic seeding: A comparative summary of HIPLEX soundings, 1975 to 1977
[PB82-123423] N82-19791
CLOUDS
Monitoring tropical cyclone intensity using wind fields derived from short-interval satellite images
[NASA-TM-82162] N82-19780
Backscatter and extinction in water clouds
[AD-A109277] N82-19975
CLOUDS (METEOROLOGY)
Methods of editing cloud and atmospheric layer affected pixels from satellite data
[E82-10046] N82-19621
A computational study of the modification of raindrop size distributions in subcloud downdrafts
N82-19748
Statistical study of freezing clouds in the GINA 2-PAP, March - April 1979
[BLL-TRANS-1511-(9022.552)] N82-19754
Numerical deconvolution to obtain cloud signatures from scattered light pulses
[AD-A108806] N82-19783
CLUMPS
Preparation of compounds with new structures for superconductor investigations --- based on metal clusters
[BMFT-FB-T-81-203] N82-20000
CLUTTER
Target/clutter discrimination techniques for laser semi-active missile systems N82-19253
COAL
Chemical desulphurisation of coal
[ICTIS-TR-15] N82-19332
Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, volume 1
[PB82-100868] N82-19384
Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, appendices A, B, C and D, volume 2
[PB82-100876] N82-19385
Hydrological problems of surface mining --- of coal
[ICTIS-TR-17] N82-19606
Longwall Guidance and Control Development
[NASA-TM-82455] N82-19637
COAL GASIFICATION
Performance and operational economics estimates for a coal gasification combined-cycle cogeneration powerplant
[NASA-TM-82729] N82-19672
COARSENESS
Grain-coarsening resistance and the stability of second-phase dispersions in rapidly solidified steels
[AD-A109152] N82-19364
COASTS
United States Coast Pilot 2. Atlantic Coast: Cape Cod to Sandy Hook, 16th edition
[PB82-109505] N82-19204
A numerical model for simulation of local circulation, applied to the coastal region of Northeastern Brazil
[INPE-2270/PRE/051] N82-19776
COAXIAL FLOW
Mass and momentum turbulent transport experiments with confined coaxial jets
[NASA-CR-165574] N82-19496
COBALT
COBALT: Effectiveness of alternative US policies to reduce the costs of a supply disruption
[PB82-110560] N82-20021
COBOL
A system for implantation of data banks in Burroughs series B7000/B6000 computers
[INPE-2299-TDL/070] N82-19876
COCKPIT SIMULATORS
Transmission of sinusoidally changing vertical specific force to the heads of seated men measured in a flight simulator
[VTH-LR-319] N82-19847
COCKPITS
Transport aircraft cockpit standardization (Federal Aviation regulations part 25)
[AD-A108924] N82-19207
CODERS
British Aerodynamics Group (BAE) solar-array drive mechanism: Life test, stripdown and optical encoder examination
[ESA-TRIB-2] N82-19483
CODING
A new meteorological code for 1 January 1982
[BLL-TRANS-1510-(9022.552)] N82-19758
COEFFICIENTS
Acta Polytechnica Scandinavica. Oxygen-metal (Ag, Au, Bi, Cu, In, Ni, Sb, Sn, Te) interactions in dilute molten lead alloys
[ISBN-951-666-137-3] N82-19359
COGENERATION
Performance and operational economics estimates for a coal gasification combined-cycle cogeneration powerplant
[NASA-TM-82729] N82-19672
COHERENT ELECTROMAGNETIC RADIATION
Plasma lasers (a strong source of coherent radiation in astrophysics) N82-20041
COLD PLASMAS
Scaling laws of the multicomponent cool plasma mantle
[TRITA-PFU-81-04] N82-19989
COLD SURFACES
Resonance studies of hydrogen atoms interacting with very cold surfaces
[AD-A109040] N82-19966
COLD WEATHER
Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida
[E82-10040] N82-19615
COLD WORKING
Influence of fabrication conditions and stability of austenite on the forming behavior of austenitic stainless steels
[BMFT-FB-T-81-192] N82-19366
COLLINEARITY
Study of problems of ill-conditioned regression or with multicolinearity
[INPE-2234-PRE/022] N82-19906
COLLISION AVOIDANCE
Aircraft collision avoidance systems
[GPO-79-431] N82-19201
COLLISIONLESS PLASMAS
Kinetic response of ionospheric ions to onset of auroral electric fields
[NASA-CR-164799] N82-19727
COLLISIONS
Spiral arms, comets and terrestrial catastrophism
N82-20101
COLLOCATION
A simulation study to test the prediction of 1 deg times 1 deg mean gravity anomalies using least squares collocation from the GRAVSAT mission
[AD-A108867] N82-19735
COLOR CODING
NASA Facts: Images of Saturn from Voyager 2
[NASA-NF-132/10-81] N82-20102
COLORADO RIVER (NORTH AMERICA)
Water assessment for the Lower Colorado River region-emerging energy technology development
[PB82-110107] N82-19398
COMBINATORIAL ANALYSIS
Synchronization patterns and related problems in combinatorial analysis and graph theory
[AD-A108888] N82-19913
K-connectivity in random undirected graphs
[AD-A108826] N82-19914
Strong K-connectivity in digraphs and random digraphs
[AD-A109034] N82-19915
Random independence systems
[AD-A109046] N82-19931
Probabilistic analysis of random extension-rotation algorithms
[AD-A109035] N82-19932
Symmetric complementation, revision
[AD-A108823] N82-19936
COMBINED CYCLE POWER GENERATION
Performance and operational economics estimates for a coal gasification combined-cycle cogeneration powerplant
[NASA-TM-82729] N82-19672
COMBUSTIBLE FLOW
Laminar heat transfer with mass injection and chemical reaction N82-19515

COMBUSTION CHAMBERS
Dilution jet behavior in the turn section of a reverse flow combuster
[NASA-TM-82776] N82-19220
A study of liquid hydrogen cooled LO-2/LH-2 rocket combustor with slotted wall liner
[NAL-TR-679] N82-19314
Investigations of flowfields found in typical combustor geometries
[NASA-CR-168585] N82-19495
COMBUSTION EFFICIENCY
Conventional engine technology. Volume 2: Status of diesel engine technology
[NASA-CR-168644] N82-19543
COMBUSTION PHYSICS
The DAEDUT/PMLTNO hybrid rocket motor facilities
[VTH-LR-321] N82-19315
Multiangular scanning absorption-emission techniques for three-dimensional combustion diagnostics
[AD-A109060] N82-19346
On the disruptive vaporization and burning of emulsified and multicomponent fuel droplets
N82-19354
COMBUSTION TEMPERATURE
Experimental determination of temperature/velocity probability density functions in a turbulent flame
N82-20133
COMETS
The role of episodic bombardment in geophysics
N82-20100
Spiral arms, comets and terrestrial catastrophism
N82-20101
COMMAND AND CONTROL
Modeling the data systems role of the scientist (for the NEEDS Command and Control Task)
[NASA-TM-84028] N82-20012
COMMERCIAL AIRCRAFT
Bibliography of NASA published reports on general aviation, 1975 to 1981
[NASA-TM-83307] N82-19132
FAA statistical handbook of aviation
[AD-A109289] N82-19198
Simulator study of vortex encounters by a twin-engine, commercial, jet transport airplane
[NASA-TP-1966] N82-19225
COMMUNICATION
Configuration development of the Land Mobile Satellite System (LMSS) Spacecraft N82-19277
Configuration development of the Land Mobile Satellite System (LMSS) Spacecraft: Conclusions
N82-19278
Land Mobile Satellite Systems (LMSS): Single aperture system design N82-19279
Quad aperture RF definition N82-19280
Attitude control subsystem study for the Land Mobile Satellite System Spacecraft N82-19281
COMMUNICATION NETWORKS
National Airspace Data Interchange Network (NADIN) support of Remote Maintenance Monitoring System (RMMS)
[AD-A109125] N82-19160
Study of the availability of satellite telecommunication networks subject to rain attenuation
[INPE-2300-TDL/071] N82-19425
SATNET development and operation. Pluribus satellite IMP development. Remote site maintenance. Internet operations and maintenance. Mobile access terminal network. TCP for the HP3000. TCP-TAC. TCP for VAX-UNIX. Combined quarterly technical report
[AD-A108783] N82-19432
Unbounded speed variability in distributed communications systems
[AD-A108824] N82-19437
Synthesis of communicating processes from temporal logic specifications
[AD-A109853] N82-19866
COMMUNICATION SATELLITES
ANIK-B program delivery pilot project. A 12 month performance assessment
[CRC-1349] N82-19426
Direct broadcast satellites: Policies, prospects, and potential competition
[PB82-110164] N82-19446
COMPARISON
Application of an airfoil stall flutter computer prediction program to a three-dimensional wing: Prediction versus experiment
[NASA-CR-168586] N82-19169
Applications of a general comparison theory for convolution integrals
[CTH-MATH-1981-21] N82-19923
COMPILERS
Los Alamos Scientific Laboratory computer benchmark performance 1979
[LA-8689-MS] N82-19849
ALGOL-MS, a language for the development of multiprogrammed small systems
[INPE-2282-TDL/067] N82-19875
COMPLEX NUMBERS
Computational advances in large-scale nonlinear optimization
[AD-A109528] N82-19917
COMPOSITE MATERIALS
The science and engineering of materials
[INPE-2138-RPE/361] N82-19316
Percolation and conduction phenomena in disordered composite media N82-19331
Numerical simulation of reinforced concrete subjected to multiaxial stress conditions N82-19554
Time dependent inelastic behavior of materials
[AD-A109089] N82-19585
Preliminary analysis of accelerated space flight ionizing radiation testing
[NASA-TM-83209] N82-19969
COMPRESSIBILITY EFFECTS
Laboratory verification of blast-induced liquefaction mechanism
[AD-A109000] N82-19393
COMPRESSIBLE FLOW
Least squares finite element analysis of steady high subsonic plane potential flows N82-19517
COMPRESSIBLE FLUIDS
Numerical calculation of steady two-dimensional axi-symmetrical turbulent boundary layer of a compressible fluid N82-19514
Two-step implicit schemes for the solution of a conservation equation N82-20137
COMPRESSOR BLADES
Performance of single-stage axial-flow transonic compressor with rotor and stator aspect ratios of 1.63 and 1.78, respectively, and with design pressure ratio of 1.82
[NASA-TP-1974] N82-19222
COMPRESSOR ROTORS
Performance of single-stage axial-flow transonic compressor with rotor and stator aspect ratios of 1.63 and 1.78, respectively, and with design pressure ratio of 1.82
[NASA-TP-1974] N82-19222
High-speed laser anemometer system for intrarotor flow mapping in turbomachinery
[NASA-TP-1663] N82-19521
COMPRESSORS
Foundations for computer simulation of a low pressure oil flooded single screw air compressor
[AD-A108230] N82-19391
COMPTON EFFECT
Hot plasmas in active galactic nuclei --- radiative processes N82-20058
Electron kinetic equations in comptonization by isotropic photons N82-20065
Spectral and temporal behavior of the X-ray binary stars Cgy X-1 in the hard X-ray domain
[MPI-PAE/EXTRATERR-166] N82-20091
HEAO 1 measurements of the galactic ridge
[NASA-TM-83844] N82-20097
On the theory of Gamma Ray Amplification through Stimulated Annihilation Radiation (GRASAR)
[NASA-TM-83857] N82-20111
COMPUTATION
Mathematical and graphical tools for the creation of computational arrays N82-19464
A computational study of the modification of raindrop size distributions in subcloud downdrafts
N82-19748
Maximum wind speeds in the North Pacific (with special reference to OWS P, N and V)
[BLL-TRANS-1495-(9022.552)] N82-19749
Overview of the CHiP computer
[AD-A109293] N82-19853
On the power of probabilistic choice in synchronous parallel computations
[AD-A109047] N82-19865
Computationally fast algorithms for ARMA spectral estimation N82-19871
COMPUTATIONAL FLUID DYNAMICS
La Recherche Aerospatiale, Bimonthly Bulletin number 1981-3, May - June 1981 --- aerospace research and development
[ESA-TT-714] N82-19152
Rolling up of vortex sheets from the edges of lifting surfaces N82-19153
Strong matching method for computing transonic viscous flows including wakes and separations: Lifting airfoils N82-19155
Numerical study of incompressible slightly viscous flow past blunt bodies and airfoils N82-19163
Inverse transonic airfoil design methods including boundary layer and viscous interaction effects
[NASA-CR-168579] N82-19168
Manufacturing in space: Fluid dynamics numerical analysis
[NASA-CR-168610] N82-19236
Conservative supra-characteristics method for splitting the hyperbolic systems of gasdynamics for real and perfect gases
[NASA-CR-166307] N82-19904
La Recherche Aerospatiale, Bi-monthly Bulletin number 1981-4, July - August 1981 --- aerospace R and D
[ESA-TT-722] N82-20131
COMPUTER COMPONENTS
A remote terminal emulator for prime computers
[AD-A108818] N82-19862
COMPUTER DESIGN
Overview of the CHiP computer
[AD-A109293] N82-19853
Study and experimentation of horizontal microprocessor machine description techniques
[AD-A109136] N82-19860
COMPUTER GRAPHICS
The SACLANTCEN oceanographic data base. Volume 2: Access, interrogation and display
[AD-A109417] N82-19803
Syntactic visual image generation system feasibility study
[AD-A109334] N82-19858
A two-dimensional core graphics system for research in human-computer interfaces
[AD-A109280] N82-19861
Comparison of some irregular methods for level plotting interpolation
[FOA-C-20433-D8] N82-19887
NASA Facts: Images of Saturn from Voyager 2
[NASA-NF-132/10-81] N82-20102
COMPUTER INFORMATION SECURITY
Trusted computer systems. Glossary
[AD-A108829] N82-19856
Best Available Technologies (BATs) for computer security
[AD-A109189] N82-19857
SASS hardware architecture and development monitor
[AD-A109552] N82-20015
The Naval postgraduate school SECURE ARCHIVAL STORAGE SYSTEM. Part 2: Segment and process management implementation
[AD-A109553] N82-20016
COMPUTER NETWORKS
A remote terminal emulator for prime computers
[AD-A108818] N82-19862
Initial experience with a local network: Net/One by Ungermann-Bass, Incorporated
[AD-A108817] N82-19863
Performance of distributed and decentralized control models for fully distributed processing systems. Initial simulation studies
[AD-A108974] N82-19864
Synthesis of communicating processes from temporal logic specifications
[AD-A109853] N82-19866
COMPUTER PROGRAM INTEGRITY
Trusted computer systems. Glossary
[AD-A108829] N82-19856
COMPUTER PROGRAMMING
Best Available Technologies (BATs) for computer security
[AD-A109189] N82-19857
Practical issues in having a usable library of software specifications
[AD-A108656] N82-19877

The Software Acquisition Resource Expenditure (SARE) methodology, data requirements and data utilization
[AD-A109372] N82-19879
Course-of-values recursion on lists in intuitionist type theory
[CTH-MATH-1981-19] N82-19939

COMPUTER PROGRAMS
A computer program for wing subsonic aerodynamic performance estimates including attainable thrust and vortex lift effects
[NASA-CR-3515] N82-19151
Application of an airfoil stall flutter computer prediction program to a three-dimensional wing: Prediction versus experiment
[NASA-CR-168586] N82-19169
Computation of transonic potential flow about 3 dimensional inlets, ducts, and bodies
[NASA-CR-3514] N82-19179
Transport aircraft cockpit standardization (Federal Aviation regulations part 25)
[AD-A108924] N82-19207
Manufacturing in space: Fluid dynamics numerical analysis
[NASA-CR-168610] N82-19236
On the design of missile models for static force measurements in wind tunnels --- aided by computer programming
[DFVLR-MITT-81-21] N82-19297
Investigations of flowfields found in typical combustor geometries
[NASA-CR-168585] N82-19495
BASIS-CRACK: An evaluation of performance --- finite element computer program verification
[FFA-TN-HU-2171] N82-19590
A computer program for cycle-by-cycle crack growth computation
[FFA-TN-HU-2048] N82-19598
The control of the quality of surface meteorological information
[BLL-TRANS-1503-(9022.552)] N82-19759
Programmable printing terminal
[INPE-2082-TDL/056] N82-19850
Analysis of the illumination of areas covered by a satellite in a heliosynchronous circular orbit
[INPE-2208-RPE/398] N82-19872
A system for implantation of data banks in Burroughs series B7000/B6000 computers
[INPE-2299-TDL/070] N82-19876
The Software Acquisition Resource Expenditure (SARE) methodology, data requirements and data utilization
[AD-A109372] N82-19879
Arithmetic manipulation of variables and data base contents by a simple dialog oriented language with structured elements
[IKE-4-104] N82-19869
Simulation of linear multi-input/multi-output systems by piecewise continuous input functions and various options for the graphical representation of results --- in regulation analysis
[DFVLR-MITT-81-23] N82-19892
Methods of image compression without information loss
[INPE-2274-PRE/054] N82-20013
SASS hardware architecture and development monitor
[AD-A109552] N82-20015

COMPUTER STORAGE DEVICES
Methods of image compression without information loss
[INPE-2274-PRE/054] N82-20013
SASS hardware architecture and development monitor
[AD-A109552] N82-20015

COMPUTER SYSTEMS DESIGN
MICAD: An interactive computer for the design of microwave circuits
[LEOK-TR-1980-06] N82-19473
Trusted computer systems. Glossary
[AD-A108629] N82-19856
Performance of distributed and decentralized control models for fully distributed processing systems. Initial simulation studies
[AD-A108974] N82-19864
Programming processor interconnection structures
[AD-A109294] N82-19893
Development of a computer consulting system using decision rules
[INPE-2296-PRE/068] N82-19894

COMPUTER SYSTEMS PERFORMANCE
Intelligence Processor Performance Analysis (IPPA)
[AD-A108794] N82-19855
A remote terminal emulator for prime computers
[AD-A108818] N82-19862
Performance of distributed and decentralized control models for fully distributed processing systems. Initial simulation studies
[AD-A108974] N82-19864
Space telescope observatory management system preliminary test and verification plan
[NASA-CR-168587] N82-20090

COMPUTER SYSTEMS PROGRAMS
Practical issues in having a usable library of software specifications
[AD-A108656] N82-19877

COMPUTER SYSTEMS SIMULATION
Study and experimentation of horizontal microprocessor machine description techniques
[AD-A109136] N82-19860

COMPUTER TECHNIQUES
The optimal planning of computerized manufacturing systems
[PB82-110644] N82-19397
An ASCII FORTRAN subroutine for computing the electromagnetic radiation scattered by a sphere
[AD-A108772] N82-19433
Taped random spectra for reliability demonstration testing
[AD-A108803] N82-19552
The periodical management system
[PB82-116518] N82-20019

COMPUTER VISION
Rotationally symmetric operators for surface interpolation
[AD-A109032] N82-19916

COMPUTERIZED DESIGN
Computational aerodynamics at weapons systems research laboratory
[WSRL-0236-TM] N82-19176
MICAD: An interactive computer for the design of microwave circuits
[LEOK-TR-1980-06] N82-19473
PSICON: A simulation package for the design of digitally controlled systems
[RR-162] N82-19890
Good layouts for pattern recognizers
[AD-A109324] N82-19897

COMPUTERIZED SIMULATION
Manufacturing in space: Fluid dynamics numerical analysis
[NASA-CR-168610] N82-19236
Workshop on Mathematical Fire Modeling
[AD-A108876] N82-19343
Foundations for computer simulation of a low pressure oil flooded single screw air compressor
[AD-A108230] N82-19391
The optimal planning of computerized manufacturing systems
[PB82-110644] N82-19397
Digital audio. Recursive digital filtering for high quality audio signals
[BBC-RD-1981/10] N82-19400
Mathematical modeling and SAR simulation multifunction SAR technology efforts
[NASA-CR-167535] N82-19408
VLFACM program description and operational manual
[AD-A109003] N82-19434
Modeling beam patterns of linear antennas
N82-19458
Finite-element analysis for design of classical and electronically operated machines N82-19461
Laminar flow transition: A large-eddy simulation approach
[NASA-CR-3518] N82-19499
TRANSID: A computer program for the analysis of hydraulic transients in condenser cooling circuits
[CISE-1722] N82-19512
The numerical simulation of crack growth in weld-induced residual stress fields
[AD-A109321] N82-19577
Program for nonlinear structural analysis
[AD-A108975] N82-19578
Satellite scatterometer feasibility study. Volume 2: Data extraction algorithm and error simulation for wind sensor --- Earth Resources Satellite (ERS 1)
[ESA-CR(P)-1492-VOL-2] N82-19651
A simulation study to test the prediction of 1 deg times 1 deg mean gravity anomalies using least squares collocation from the GRAVSAT mission
[AD-A108867] N82-19735
A numerical model for simulation of local circulation, applied to the coastal region of Northeastern Brazil
[INPE-2270/PRE/051] N82-19776
Distribution of personnel, vehicles, and supplies by ship: A model applied to the Brazilian Navy
[INPE-2305-TDL/073] N82-19874
PSICON: A simulation package for the design of digitally controlled systems
[RR-162] N82-19890
Simulation of linear multi-input/multi-output systems by piecewise continuous input functions and various options for the graphical representation of results --- in regulation analysis
[DFVLR-MITT-81-23] N82-19892
TIGER reliability analysis in the DSN N82-20128
Simulation using computer-piloted point excitations of vibrations induced on a structure by an acoustic environment N82-20135

COMPUTERS
A system for implantation of data banks in Burroughs series B7000/B6000 computers
[INPE-2299-TDL/070] N82-19876

CONCORDE AIRCRAFT
Studies of the stratospheric and mesospheric wind system and temperature distribution from observations of infrasonic waves generated during regular Concorde flights
[KGI-176] N82-19789

CONCRETES
Asphalt recycling technology: Literature review and research plan
[AD-A108199] N82-19392
Abrasion-erosion resistance of fiber reinforced concrete
[AD-A108968] N82-19394
Precast concrete pavements
[AD-A108802] N82-19395
Numerical simulation of reinforced concrete subjected to multiaxial stress conditions N82-19554
Implementation of a postcracking model for finite element analysis of reinforced concrete
[AD-A108984] N82-19572

CONDENSERS (LIQUIFIERS)
TRANSID: A computer program for the analysis of hydraulic transients in condenser cooling circuits
[CISE-1722] N82-19512

CONDUCTIVE HEAT TRANSFER
Retrospective analysis of satellite thermal systems
[INPE-2295-TDL/069] N82-19287
Thermal investigation of unstable substances, including a comparison of different thermal analytical techniques N82-19335
Shock tube determination of the heat conductivity of non-ionized and partially ionized argon
N82-19497

CONDUCTORS
Computer models for conducting surfaces
[AD-A108763] N82-19436
Instruments and methods for studying atmospheric electricity
[BLL-TRANS-1487-(9022.552)] N82-19753

CONFERENCES
NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 3: Aerodynamics and Structures Session
[NASA-TM-84147] N82-19172
Recent advances in space structure design-verification techniques --- conference proceedings
[ESA-SP-1036] N82-19308
AgRISTARS: Foreign commodity production forecasting. Minutes of the annual formal project manager's review, including preliminary technical review reports of FY80 experiments --- wheat/barley and corn/soybean experiments
[E82-10039] N82-19614
In Situ Mining Research. Proceedings of Bureau of Mines Technology Seminar
[PB82-104753] N82-19663
Climate Analysis Center Users Conference
[PB82-113325] N82-19793
Human Factors in System Development: Experiences and Trends --- conference proceedings
[FOA-A-56003-H9] N82-19839

Plasma Astrophysics — conference proceedings, Varenna, Italy, 27 Aug. - 7 Sep. 1981
[ESA-SP-161] N82-20030

CONFIGURATION INTERACTION
An investigation into wing-canard interaction for a model with forward swept wings --- wind tunnel measurement
[BU-261] N82-19191

CONGRESSIONAL REPORTS
Aircraft collision avoidance systems
[GPO-79-431] N82-19201
Air traffic control en route computer system
[GPO-89-008] N82-19202
Future space programs, 1981
[GPO-86-913] N82-19234
Space Shuttle operations
[GPO-89-661] N82-19300
United States-Canadian relations and acid rain
[GPO-80-995] N82-19706

CONICAL BODIES
The measurements of the static and dynamic stability derivatives of conical models in the shock tunnel
N82-19516

CONICAL FLOW
Formation of ion conics and lower hybrid acceleration in the suprauroral region N82-20075

CONIFERS
Binary mosaics and point quadrat sampling in ecology
[A-80-ST-96-37] N82-19705

CONJUGATES
The use of a nonquadratic model in a conjugate gradient method of optimization with inexact line searches
[MATHS-RES-157] N82-19885

CONSERVATION
Social and Environmental Consequences of Natural Resources Policies with Special Emphasis on Biosphere Reserves
[PB82-113937] N82-19660

CONSERVATION EQUATIONS
Two-step implicit schemes for the solution of a conservation equation N82-20137

CONSOLES
Review of health and safety aspects of video display terminals
[CRC-TN-712-E] N82-19816

CONSTRUCTION
Structural assembly demonstration experiment
N82-19282
Structural Assembly Demonstration Experiment (SADE) experiment design N82-19283
Large Space Shuttle Flight Experiment
N82-19285
The science and engineering of materials
[INPE-2138-RPE/361] N82-19316
Standard constructions in Abelian group theory
N82-19937

CONSTRUCTION MATERIALS
A solar high temperature kiln — for baking ceramic building materials in developing countries
[BMFT-FB-T-81-181] N82-19692

CONSUMERS
Consumer behavior towards fuel efficient vehicles. Volume 1: Executive summary
[PB82-103300] N82-20027

CONTACT DERMATITIS
Evaluation of materials proposed for use in space flight
[NASA-CR-167537] N82-19815

CONTACT POTENTIALS
Characterization of ASEC BSR 2 ohm-cm silicon solar cells with dielectric wraparound contacts as a function of temperature and intensity
[NASA-TM-82456] N82-19568

CONTAINMENT
Design and fabrication of containment rings for use in tests of six prototype flywheel rotors
[DE81-030357] N82-19689

CONTAMINANTS
Determination of the effects of material from alternate energy sources on the upper respiratory tract clearance mechanism. Part 1: In vitro exposure to particulate pollutants. Part 2: In vivo exposure to ozone
[PB82-117037] N82-19811

CONTOURS
Contour recognition and measurements using Fourier transformation
[DFVLR-MITT-81-22] N82-19926

CONTROL CONFIGURED VEHICLES
A study of flight control requirements for advanced, winged, earth-to-orbit vehicles with far-aft center-of-gravity locations
[NASA-CR-3491] N82-19226

CONTROL EQUIPMENT
Longwall Guidance and Control Development
[NASA-TM-82455] N82-19637

CONTROL STABILITY
Expansion of linear and semi-linear systems and the Popov criterion
[RR-158] N82-19941

CONTROL THEORY
System identification for multivariable control
N82-19389
Performance of distributed and decentralized control models for fully distributed processing systems. Initial simulation studies
[AD-A108974] N82-19864
Simulation of linear multi-input/multi-output systems by piecewise continuous input functions and various options for the graphical representation of results --- in regulation analysis
[DFVLR-MITT-81-23] N82-19892
Proceedings of the 3rd Meeting of the Coordinating Group on Modern Control Theory, part 1
[AD-A109124] N82-19896
A multivariable feedback control problem with application to strip base control for Sendzimir mills
[RR-153] N82-19898
The receding horizon principle for distributed systems --- control
[RR-167] N82-19899
Variable structure systems and system zeros
[RR-157] N82-19940

CONTROLLABILITY
An approach for gross design of operations management systems
[ISBN-951-752-308-4] N82-20007

CONTROLLERS
Six degree of freedom manual controls study report
[NASA-CR-167532] N82-19837
Asymptotic properties of unknown systems --- and controller design problems
[RR-156] N82-19903

CONVECTION CLOUDS
Thermodynamic features affecting convective cloud growth and dynamic seeding: A comparative summary of HIPLEX soundings, 1975 to 1977
[PB82-123423] N82-19791

CONVECTION CURRENTS
The development and testing of methods to infer midlatitude precipitation intensity from geosynchronous satellite infrared data
[AD-A108881] N82-19788

CONVECTIVE FLOW
Mixed convection in molten metals
[BLL-RISLEY-TR-4385-(9091.9F)] N82-19355

CONVECTIVE HEAT TRANSFER
Mixed convection in molten metals
[BLL-RISLEY-TR-4385-(9091.9F)] N82-19355

CONVERGENCE
Convergence zones in the South Atlantic and their influence on the precipitation regime in Northeastern Brazil
[INPE-2307-TDL/074] N82-19778
Stochastic convergence of randomly weighted sums N82-19901
Acceleration of convergence of a vector sequence by reduced rank extrapolation
[AD-A108765] N82-19910
Accelerated convergence of structured banded systems using constrained corrections
[AD-A108805] N82-19912

CONVERGENT-DIVERGENT NOZZLES
Testing ventilated nozzle models with supersonic primary flow N82-19159

CONVEXITY
An improved scheme to develop multidimensional generalized yield and failure surfaces for structural elements
[LA-8728-MS] N82-19569

CONVOLUTION INTEGRALS
Analysis and synthesis of binary sequences
N82-19463
Applications of a general comparison theory for convolution integrals
[CTH-MATH-1981-21] N82-19923

COOLERS
Development of a breadboard cooler for infrared remote sensing payloads, phase 1 — Earth Resources Satellite ERS 1
[FOK-RV-R-81-064] N82-19653
Optical imaging instruments for the Land Application Satellite System, phase A study, volume 2
[REPT-60/1023-VOL-2] N82-19980

COOLING SYSTEMS
TRANSID: A computer program for the analysis of hydraulic transients in condenser cooling circuits
[CISE-1722] N82-19512

COORDINATE TRANSFORMATIONS
Calculation of equivalent forces at nodes. Some examples in actual practice for calculations with the FEM method
[KTH-PUBL-212] N82-19921

COORDINATES
Scattering of a spherical wave on truncated revolution bodies N82-19456

COORDINATION
FAA/FCC coordination procedures for FM broadcast stations N82-19423

COPLANARITY
High stability coplanar oscillators
[CISE-1720] N82-19485

COPOLYMERS
The synthesis of biodegradable block copolymers containing amylose and polyester oligomeric blocks
N82-19371

CORE SAMPLING
Continental scientific drilling program curatorial needs — specimen handling
[LA-8726-MS] N82-19643

CORN
Recommended data sets, corn segments and spring wheat segments, for use in program development
[E82-10034] N82-19610
AgRISTARS: Foreign commodity production forecasting. Minutes of the annual formal project manager's review, including preliminary technical review reports of FY80 experiments — wheat/barley and corn/soybean experiments
[E82-10039] N82-19614
AgRISTARS: Foreign commodity production forecasting. Corn/soybean decision logic development and testing
[E82-10056] N82-19631
Notes for Brazil sampling frame evaluation trip
[E82-10060] N82-19635
Segment-level evaluation of the simulated aggregation test: US corn and soybean exploratory experiment
[E82-10061] N82-19636

CORONAL HOLES
Solar-geophysical data number 443. Part 1: (Prompt reports). Data for June 1981, May 1981
[PB82-113853] N82-20107

CORONAL LOOPS
Large loop thermal models of solar hard X-ray bursts N82-20080
The differential emission measure of dynamic coronal loops
[NASA-CR-168638] N82-20087

CORRELATION
Evaluation of TIROS-N and NOAA-6 satellite data: Comparisons of colocated soundings and analyses for a January case N82-19770
Some applications of the perturbed directional correlation technique in nuclear physics, solid state physics and radio chemistry
[ISBN-90-6231-084-2] N82-19942

CORRELATION COEFFICIENTS
Study of problems of ill-conditioned regression or with multicolinearity
[INPE-2234-PRE/022] N82-19906

CORRELATION DETECTION
Comparative studies of correlation techniques in the sidelobe canceller in the presence of pulse-type jamming signals — for electronic countermeasures
[REPT-3/81] N82-19402

CORROSION
Accession of titanium as an aircraft material: A current view
[ARL/MAT-NOTE-129] N82-19361
The polarized infrared reflection spectroscopic characterization and aqueous durability of lithia-disilicate glass ceramics N82-19369

CORROSION RESISTANCE

Relative effects of a graphite fiber reinforced epoxy composite and nickel-aluminum bronze on a cathodic protection system in seawater
[AD-A109078] N82-19321

Environmental durability of electroplated black chromium
[NASA-TM-82454] N82-19357

Surface modification in control SiO2 fiber fracture
[AD-A108796] N82-19589

CORROSION TEST LOOPS

Corrosion of carbon steel at high temperature in reducing chemical conditions
[CISE-1699] N82-19368

COSMIC PLASMA

The new paradigm in cosmic plasma physics — magnetic fields versus electric currents N82-20031

The Voyager 1 Saturn encounter and the cosmogonic shadow effect N82-20032

Plasma emission mechanisms and acceleration of relativistic particles in cosmic plasmas N82-20038

Evolution of X-ray astronomy — spaceborne observations of extragalactic X-ray sources
N82-20053

COSMIC RAYS

High energy cosmic ray acceleration by diffusive shocks N82-20061

Confinement of cosmic rays in molecular clouds
N82-20073

Acceleration of cosmic rays by shock waves
N82-20086

COSMIC X RAYS

Data announcement bulletin: The Ariel V SSI 3A X-ray Catalogue
[NASA-TM-84029] N82-20089

COSMOLOGY

Plasma Astrophysics — conference proceedings, Varenna, Italy, 27 Aug. - 7 Sep. 1981
[ESA-SP-161] N82-20030

The new paradigm in cosmic plasma physics — magnetic fields versus electric currents N82-20031

The Voyager 1 Saturn encounter and the cosmogonic shadow effect N82-20032

COST ANALYSIS

Assessment of Avionic Equipment Field Reliability and Maintainability as Functions of Unit Cost
[AD-A109373] N82-19218

Cost analysis of NEDU's helium reclaimer
[AD-A108409] N82-19230

The geothermal probabilistic cost model with an application to a geothermal reservoir at Heber, California
[NASA-CR-168641] N82-19674

Cost estimates in connection with the selection of a system for long-term storage of hydrometeorological data
[BLL-TRANS-1502-(9022.552)] N82-19760

The Software Acquisition Resource Expenditure (SARE) methodology, data requirements and data utilization
[AD-A109372] N82-19879

Cost data base development: A twelve-year perspective
[AD-A109371] N82-20014

COST EFFECTIVENESS

Energy properties in urban building stock — in Finland
[VTT-RR-1/81] N82-19696

COST ESTIMATES

Sharing costs fairly: A practical introduction to cooperative game theory — costs of water facilities
[ER-5] N82-19934

COBALT: Effectiveness of alternative US policies to reduce the costs of a supply disruption
[PB82-110560] N82-20021

COSTS

Products from two computer programs which process digital bathymetric data
[AD-A108757] N82-19881

COTTON FIBERS

Evaluation of materials proposed for use in space flight
[NASA-CR-167537] N82-19615

COUNTER-ROTATING WHEELS

Life-size quantitative tests on a simple counterspun flywheel nutation damper
[BAE-NUTDAM-11] N82-19541

COUPLED MODES

Analytical performance prediction for large antennas N82-19260

COUPLING

A further study of helicopter rotor pitch-flap-phase coupling
[BU-259] N82-19214

COUPLING COEFFICIENTS

Compensation for direct and reverse interconnection in an infinite emitter array N82-19414

COVARIANCE

COVFILS: A 30-group covariance library based on ENDF/B-V
[LA-8733-MS] N82-19873

CRAB NEBULA

Diagnosis of the neutron star and its environment with X-ray astronomy N82-20054

CRACK GEOMETRY

Parametric study of propellant crack combustion
[AD-A108769] N82-19381

Further studies on dynamic crack curving
[AD-A109299] N82-19586

Differences between the growth of small and large fatigue cracks. The relation to threshold K-values
[VTH-LR-327] N82-19591

CRACK PROPAGATION

Fatigue crack growth in aluminum alloys
[VTH-LR-324] N82-19367

Study of near-threshold fatigue crack propagation in pipeline steels in high pressure environments
[NASA-CR-166295] N82-19388

The role of environment on time dependent crack growth
[AD-A109388] N82-19573

The value of dynamic fracture toughness and its dependence on material properties and loading conditions
[AD-A109151] N82-19574

The development of a dynamic elastoplastic finite element analysis for fast fracture under impact loading
[AD-A109323] N82-19575

Finite element analysis of dynamic crack propagation
[AD-A109322] N82-19576

The numerical simulation of crack growth in weld-induced residual stress fields
[AD-A109321] N82-19577

Surface-strengthening mechanisms in reaction-bonded Sisub3Nsub4 and subcritical-crack growth behavior in ceramics
[AD-A109087] N82-19582

Further studies on dynamic crack curving
[AD-A109299] N82-19586

Fracture and fatigue characterization of aircraft structural materials under biaxial loading
[AD-A109054] N82-19587

Surface reactions and fatigue crack growth
[AD-A109296] N82-19588

BASIS-CRACK: An evaluation of performance — finite element computer program verification
[FFA-TN-HU-2171] N82-19590

Differences between the growth of small and large fatigue cracks. The relation to threshold K-values
[VTH-LR-327] N82-19591

A nonlinear finite element analysis of rapid crack growth at large scale yielding
[TRITA-HFL-0027] N82-19594

On the influence of mean load on crack opening and fatigue crack growth in a ship hull plate steel
[TRITA-HFL-0029] N82-19596

A computer program for cycle-by-cycle crack growth computation
[FFA-TN-HU-2048] N82-19598

CRACKING (FRACTURING)

Numerical simulation of reinforced concrete subjected to multiaxial stress conditions N82-19554

Implementation of a postcracking model for finite element analysis of reinforced concrete
[AD-A108984] N82-19572

The role of environment on time dependent crack growth
[AD-A109388] N82-19573

Stress intensity and fatigue crack growth in multiply-cracked, pressurized, partially autofrettaged thick cylinders
[AD-A109081] N82-19580

Stress pulsed reflection and tensile cracking in a one-dimensional bilinear material
[AD-A108833] N82-19581

Further studies on dynamic crack curving
[AD-A109299] N82-19586

Surface reactions and fatigue crack growth
[AD-A109296] N82-19588

CRACKS

The stress intensity factor of small cracks at notches
[VTH-LR-330] N82-19592

CRASH LANDING

Disengagement of safety harness buckles - CT4
[AD-A109048] N82-19199

CRASHES

An assessment of the crash fire hazard of liquid hydrogen fueled aircraft
[NASA-CR-165526] N82-19196

CREEP STRENGTH

Numerical simulation of reinforced concrete subjected to multiaxial stress conditions N82-19554

CREEP TESTS

Investigation of creep by use of closed loop servo-hydraulic test system
[NASA-CR-168613] N82-19566

CRITICAL PRESSURE

Conception of an apparatus for pressure, density, and temperature measurements in the critical region of pure fluids in Spacelab
[BMFT-FB-W-81-026] N82-19527

CRITICAL TEMPERATURE

Conception of an apparatus for pressure, density, and temperature measurements in the critical region of pure fluids in Spacelab
[BMFT-FB-W-81-026] N82-19527

CROP CALENDARS

Wheat stress indicator model, Crop Condition Assessment Division (CCAD) data base interface driver, user's manual
[E82-10031] N82-19607

AgRISTARS: Foreign commodity production forecasting. Minutes of the annual formal project manager's review, including preliminary technical review reports of FY80 experiments — wheat/barley and corn/soybean experiments
[E82-10039] N82-19614

Preliminary evaluation of spectral, normal and meteorological crop stage estimation approaches
[E82-10059] N82-19634

CROP GROWTH

Segment-level evaluation of the simulated aggregation test: US corn and soybean exploratory experiment
[E82-10061] N82-19636

CROP IDENTIFICATION

AgRISTARS: Foreign commodity production forecasting. Corn/soybean decision logic development and testing
[E82-10056] N82-19631

CROP INVENTORIES

AgRISTARS: Interim catalog ground data summary, data acquisition year 1979
[E82-10032] N82-19608

Recommended data sets, corn segments and spring wheat segments, for use in program development
[E82-10034] N82-19610

AgRISTARS: Foreign commodity production forecasting. Minutes of the annual formal project manager's review, including preliminary technical review reports of FY80 experiments — wheat/barley and corn/soybean experiments
[E82-10039] N82-19614

Notes for Brazil sampling frame evaluation trip
[E82-10060] N82-19635

Utilization of Aerochrome 2443 film for identification and estimating wheat growing areas — Rio Grande do Sul, Brazil
[INPE-2197-PRE/006] N82-19639

CROP VIGOR

AgRISTARS: Soil moisture/early warning and crop condition assessment. Interface control document
[E82-10053] N82-19628

CROSS FLOW

An experimental investigation of flow surrounding an airfoil with a jet exhausting from the lower surface
[NASA-CR-166131] N82-19133

The Shock and Vibration Digest, volume 13, no. 12
[AD-A109583] N82-19562

Vortex shedding from cylinders and the resulting unsteady forces and flow phenomena, part 2
N82-19564

CRYOGENIC COOLING
Cryogenically cooled infrared interferometric spectrometers
[AD-A108868] N82-19525
Development of a breadboard cooler for infrared remote sensing payloads, phase 1 --- Earth Resources Satellite ERS 1
[FOK-RV-R-81-064] N82-19653
CRYOGENIC EQUIPMENT
Follow-on development of small cryogenic heat pipes: Phase 2 report
[SABCA-JPM/LN/HO5/N11-VOL-2] N82-19509
The suspension system of the cryogenic gravitational antenna of the Istituto Plasma Spazio
[IPS-81-14] N82-19549
Acoustic microscopy at cryogenic temperatures
[AD-A109271] N82-19948
CRYOGENIC FLUIDS
Acoustic microscopy at cryogenic temperatures
[AD-A109271] N82-19948
CRYOGENIC WIND TUNNELS
Induction driven transonic wind tunnel T2: Operation at room temperature and cryogenic adaptation
N82-19158
CRYOGENICS
Resonance studies of hydrogen atoms interacting with very cold surfaces
[AD-A109040] N82-19966
CRYSTAL DEFECTS
Impurity and defect characterization in epitaxial GaAs, InP and the ternary and quaternary compound semiconductors
[AD-A109052] N82-19997
CRYSTAL FILTERS
The 10 MHz crystal filter for SCPC Earth stations
[INPE-2286-PRE/062] N82-19470
CRYSTAL GROWTH
Materials processing in Space/Spacelab. FES/VCGS payload critical design review
N82-19235
Manufacturing in space: Fluid dynamics numerical analysis
[NASA-CR-168610] N82-19236
Interaction of microsegregation and coarsening during dendritic nickel-base alloy monocrystal growth
[AD-A108980] N82-19362
Ga (As, P): N - LED's for monochromatic illumination --- with improved light emission efficiency
[BMFT-FB-T-81-198] N82-19482
CRYSTAL OSCILLATORS
Modeling of the influence of static acceleration on surface wave (quartz) oscillator
[ESA-TT-726] N82-19444
Evaluation of crystal oscillators and frequency dividers for high temperature operation
[NASA-CR-168561] N82-19682
CRYSTAL STRUCTURE
Mechanism and models for zinc metal morphology in alkaline media
[NASA-TM-82768] N82-19671
Light scattering from macromolecular systems: Molecular crystals and polymers
[AD-A109066] N82-19973
Preparation of compounds with new structures for superconductor investigations --- based on metal clusters
[BMFT-FB-T-81-203] N82-20000
CRYSTALS
Research on the effects of hydrostatic pressure on the electronic states of impurities
[AD-A108403] N82-19503
Light scattering from macromolecular systems: Molecular crystals and polymers
[AD-A109066] N82-19973
CUMULUS CLOUDS
Statistical study of freezing clouds in the GINA 2-PAP, March - April 1979
[BLL-TRANS-1511-(9022.552)] N82-19754
Turbulence within cumulus clouds and outside them
[BLL-TRANS-1481-(9022.552)] N82-19762
Inversion layers and their interaction with cumulus clouds below
[BLL-TRANS-1482-(9022.549)] N82-19764
CURRENT DISTRIBUTION
Efficiency and input impedance of planar emitter placed near the interface N82-19451
CURRENT SHEETS
A plasma current sheet studied by means of the particle motion N82-20064
CURVATURE
Surface measurement system development
N82-19261
CYCLES
The effects of sulfur dioxide and acid precipitation on decomposition and nutrient cycling processes
N82-19700
CYCLIC LOADS
Thermo-elastic-plastic stresses in multilayered cylinders
[AD-A109320] N82-19579
CYCLONES
Monitoring tropical cyclone intensity using wind fields derived from short-interval satellite images
[NASA-TM-82162] N82-19780
Australian tropical cyclones Kerry and Rosa, February - March 1979
[PB82-114182] N82-19794
CYCLOTRON RESONANCE
Wave heating and acceleration of solar wind ions by cyclotron resonance N82-20061
CYLINDRICAL BODIES
The structural behaviour of inflated cylindrical cantilever beams --- under load
[BU-260] N82-19597
CYLINDRICAL SHELLS
Thermoelastic deformation in cylindrical shells of great length
[INPE-2268-PRE/049] N82-19286

D

DAMAGE ASSESSMENT
Recognition of, and damages caused to a radar antenna by a carbon dioxide laser
[FOA-C-30244-E1] N82-19441
DAMS
Tidal power from the Severn estuary, volume 1
[EP-46-VOL-1] N82-19666
Tidal power from the Severn estuary. Volume 2: Analysis, studies, reports and evaluations
[EP-46-VOL-2] N82-19667
DATA ACQUISITION
Electronics for data acquisition of laser gyroscope measurements
[DFVLR-MITT-81-16] N82-19534
Tidal power from the Severn estuary. Volume 2: Analysis, studies, reports and evaluations
[EP-46-VOL-2] N82-19667
A measurement of long term tilt in Colorado and Wyoming
[AD-A108865] N82-19737
Precipitation assessment from environmental satellite data for northwest Libya including the Gefara plan
[RSC-4] N82-19790
On-line, real-time determinations of breath-to-breath gas exchange N82-19832
The Software Acquisition Resource Expenditure (SARE) methodology, data requirements and data utilization
[AD-A109372] N82-19879
The telecommunications and data acquisition report
[NASA-CR-168577] N82-20113
The DSN radio science system Mark 3, 1980
N82-20115
Sideband-aided receiver arraying N82-20120
DATA BASE MANAGEMENT SYSTEMS
Data independent accessing methodology distributed access
[AD-A108645] N82-19852
Formatting and documenting multidisciplinary data
[PB82-122862] N82-20018
DATA BASES
Case studies of national hydrological data banks (planning, development and organization)
[WMO-576] N82-19655
The SACLANTCEN oceanographic data base. Volume 2: Access, interrogation and display
[AD-A109417] N82-19803
Natural language access to databases: Interpreting update requests
[AD-A109183] N82-19854
A system for implantation of data banks in Burroughs series B7000/B6000 computers
[INPE-2299-TDL/070] N82-19876
Arithmetic manipulation of variables and data base contents by a simple dialog oriented language with structured elements
[IKE-4-104] N82-19889
Collection and evaluation of propeller aircraft noise certification data
[DFVLR-MITT-81-20] N82-19958
Planning study to establish DOD manufacturing technology information analysis center
[AD-A108925] N82-20008
Methods of image compression without information loss
[INPE-2274-PRE/054] N82-20013
Cost data base development: A twelve-year perspective
[AD-A109371] N82-20014
DATA COLLECTION PLATFORMS
Data collection platforms: Applications to hydrology
[INPE-2246-PRE/030] N82-19304
DATA COMPRESSION
Study of Earth Resources Satellite (ERS) data reduction unit
[BAE-TP-7905] N82-19649
Data rate reduction. Impact of image data compression on end to end data management of a multispectral payload --- for satellite imagery
[REPT-44/130] N82-19654
Methods of image compression without information loss
[INPE-2274-PRE/054] N82-20013
DATA CONVERSION ROUTINES
MICAD: An interactive computer for the design of microwave circuits
[LEOK-TR-1980-06] N82-19473
DATA CORRELATION
LANDSAT imagery of the Venetian Lagoon: A multitemporal analysis
[E82-10036] N82-19612
DATA LINKS
SATNET development and operation. Pluribus satellite IMP development. Remote site maintenance. Internet operations and maintenance. Mobile access terminal network. TCP for the HP3000. TCP-TAC. TCP for VAX-UNIX. Combined quarterly technical report
[AD-A108783] N82-19432
DATA MANAGEMENT
AgRISTARS: Interim catalog ground data summary, data acquisition year 1979
[E82-10032] N82-19606
Data rate reduction. Impact of image data compression on end to end data management of a multispectral payload --- for satellite imagery
[REPT-44/130] N82-19654
Data independent accessing methodology distributed access
[AD-A108645] N82-19852
Natural language access to databases: Interpreting update requests
[AD-A109183] N82-19854
Cost data base development: A twelve-year perspective
[AD-A109371] N82-20014
DATA PROCESSING
Ground station digital interface
[ARL/MECH-ENG-REPT-158] N82-19401
Signal analysis using the maximum entropy method --- aeroelasticity of wind turbines
[VTH-LR-318] N82-19443
Magsat science investigations
[E82-10045] N82-19620
Investigations of medium wavelength magnetic anomalies in the Eastern Pacific using Magsat data
[E82-10047] N82-19622
Report on the analysis of data from the NOAA/Alaskan MST radar system
[AD-A109056] N82-19782
SAM: A configurable experimental text editor for investigating human factors issues in text processing and understanding
[AD-A109331] N82-19846
Products from two computer programs which process digital bathymetric data
[AD-A108757] N82-19881
The Naval postgraduate school SECURE ARCHIVAL STORAGE SYSTEM. Part 2: Segment and process management implementation
[AD-A109553] N82-20016

Formatting and documenting multidisciplinary data
[PB82-122862] N82-20018
Routine data processing and physical interpretation of data obtained by the fluxgate and search coil magnetometer experiments on board Helios 1 and 2 --- on interplanetary and solar magnetic fields
[BMFT-FB-W-81-039] N82-20099

DATA PROCESSING EQUIPMENT
Air traffic control en route computer system
[GPO-89-008] N82-19202
AgRISTARS: Early warning and crop condition assessment. Patch image processor user's manual
[E82-10055] N82-19630

DATA PROCESSING TERMINALS
Data communication for minicomputers
[FOA-C-30226-E2] N82-19867

DATA RECORDERS
Follow on study on Fluid Physics Module (PM). Part 1: Independent operating Fluid Physics Module (FPM)
[REPT-79-RV-0] N82-19241
Taped random spectra for reliability demonstration testing
[AD-A108603] N82-19552

DATA REDUCTION
Studies related to Magsat --- Backus effect and the westward drift
[E82-10050] N82-19625
Improved definition of crustal anomalies for Magsat data
[E82-10051] N82-19626
A simulation study to test the prediction of 1 deg times 1 deg mean gravity anomalies using least squares collocation from the GRAVSAT mission
[AD-A108867] N82-19735
User's guide to noise data acquisition and analysis programs for HP9845: Nicolet analyzers
[NASA-TM-83256] N82-19943

DATA SAMPLING
Binary mosaics and point quadrat sampling in ecology
[A-80-ST-96-37] N82-19705
A K-sample extension of Tukey's 2-sample quick test
[MATHS-RES-159] N82-19933

DATA STORAGE
Cost estimates in connection with the selection of a system for long-term storage of hydrometeorological data
[BLL-TRANS-1502-(9022.552)] N82-19760
Methods of image compression without information loes
[INPE-2274-PRE/054] N82-20013

DATA SYSTEMS
A new meteorological code for 1 January 1982
[BLL-TRANS-1510-(9022.552)] N82-19758

DATA TRANSMISSION
Universal documentation system handbook. Supplement 2: Procedures for the electronic transmission and processing of level 1, 2, and 3 test requirements and support information
[AD-A108901] N82-19251
Data collection platforms: Applications to hydrology
[INPE-2246-PRE/030] N82-19304
A new meteorological code for 1 January 1982
[BLL-TRANS-1510-(9022.552)] N82-19758
Data communication for minicomputers
[FOA-C-30226-E2] N82-19867
Space telescope observatory management system preliminay test and verification plan
[NASA-CR-166587] N82-20090

DECISION MAKING
Development of a computer consulting system using decision rules
[INPE-2296-PRE/068] N82-19894
Cost data base development: A twelve-year perspective
[AD-A109371] N82-20014
Optimum equipment maintenance/replacement policy. Part 2: Markov decision approach
N82-20125

DECISION THEORY
Symmetric complementation, revision
[AD-A108823] N82-19936

DEEP SPACE NETWORK
The telecommunications and data acquisition report
[NASA-CR-168577] N82-20113
The DSN radio science system Mark 3, 1980
N82-20115
A summary of space flight missions supported by the Deep Space Network N82-20116
Helios Mission support N82-20117
On the group delay effect of DSN microwave components on multimegabit telemetry N82-20122
TIGER reliability analysis in the DSN N82-20128

DEER
Application of remote sensing to state and regional problems — mississippi
[E82-10033] N82-19609

DEFECTS
The significance of defects on the failure of fibre composites
[AGARD-R-690] N82-19328

DEGRADATION
Environmental durability of electroplated black chromium
[NASA-TM-82454] N82-19357

DEGREES OF FREEDOM
Six degree of freedom manual controls study report
[NASA-CR-167532] N82-19837

DELAWARE BAY (US)
Detrital exchange processes of a Delaware salt marsh N82-19699

DELAY
On the group delay effect of DSN microwave components on multimegabit telemetry N82-20122

DELTA WINGS
Experimental study of delta wing leading-edge devices for drag reduction at high lift
[NASA-CR-165846] N82-19165

DEMAND (ECONOMICS)
Review of the UK transport energy outlook: And policy recommendations
[EP-47] N82-19664

DENDRITIC CRYSTALS
Interaction of microsegregation and coarsening during dendritic nickel-base alloy monocrystal growth
[AD-A108980] N82-19362

DENSE PLASMAS
Level shifts and inelastic electron scattering in dense plasmas
[AD-A108799] N82-19986
Scaling laws of the multicomponent cool plasma mantle
[TRITA-PFU-81-04] N82-19989

DENSITY DISTRIBUTION
Influence of velocity shear on the Rayleigh-Taylor instability
[AD-A108800] N82-19504
Information theory lateral density distribution for Earth inferred from global gravity field
[NASA-TM-83825] N82-19731

DENSITY MEASUREMENT
Dielectric properties of snow
[NASA-CR-166764] N82-19638

DEPOLARIZATION
Variations in propagation attenuation at the frequencies 11, 18 and 36 GHz
[FOA-A-30026-E2] N82-19438

DEPTH MEASUREMENT
Contactless optoelectronic position sensing
[BMFT-FB-T-81-191] N82-19481
An aerial survey of water turbidity and laser depth sounding performance along the Queensland Coast
[AD-A109050] N82-19882

DESCENT
Descent-rate cuing for carrier landings: Effects of display gain, display noise and aircraft type
[AD-A108801] N82-19206

DESCRIPTIONS
Work paradigms in human factors research
N82-19844

DESIGN ANALYSIS
A design study of the Marshal --- lightweight twin-engined aircraft
[BU-262] N82-19215
Cooled variable-area radial turbine technology program
[NASA-CR-165408] N82-19221
Electrostatic membrane antenna concept testing
N82-19274
Conceptual design of electrostatic antenna
N82-19275
Antenna subsystem requirements N82-19276
On the design of missile models for static force measurements in wind tunnels --- aided by computer programming
[DFVLR-MITT-81-21] N82-19297
Introduction to problems of structural dynamics verification --- dynamic coupling between launch vehicle and payload N82-19309
Development of a synthetic aperture radar design approach for wide-swath implementation
[NASA-CR-167536] N82-19409
Ergonomic considerations in product design and evaluation --- product adaptation to man and his real needs and abilities N82-19842
Development of an Optical Scanning Mechanism Assembly (OSMA)
[PS-1450] N82-19981

DESTRUCTIVE TESTS
Pellini's theory of brittle fracture and the limits of its applicability
[DRIC-T-6468] N82-19565

DESULFURIZING
Chemical desulphurisation of coal
[ICTIS-TR-15] N82-19332

DETECTION
Detection of periodically fluctuating noise --- from ships
[FOA-C-30223-E1] N82-19955

DETONATION
Initiation, combustion and transition to detonation in homogeneous and heterogeneous reactive mixtures: A summary
[AD-A109057] N82-19347

DEUTERIUM
Deuterium hydrogen isotope ratios in organic matter, mineral oils, and natural gases --- oil exploration
[BMFT-FB-T-81-204] N82-19319

DEUTERIUM COMPOUNDS
Configurational effects in the adsorption of HD on ZnO
[AD-A109368] N82-19341

DEVELOPING NATIONS
Development of simple solar collectors --- for usage in developing countries
[BMFT-FB-T-81-174] N82-19690

DIAMONDS
The electronic and atomic structure of diamond surface and effects of hydrogen termination
[AD-A109142] N82-19994

DICTIONARIES
A glossary of range terminology
[AD-A108894] N82-19250

DIELECTRIC PROPERTIES
Dielectric properties of snow
[NASA-CR-166764] N82-19638

DIELECTRICS
Antenna (selected articles)
[AD-A109174] N82-19455
Broad-directional lens antennas made of an inhomogeneous dielectric N82-19457
Y-circulator with dielectric filler
[AD-A109175] N82-19475
Characterization of ASEC BSR 2 ohm-cm silicon solar cells with dielectric wraparound contacts as a function of temperature and intensity
[NASA-TM-82456] N82-19668

DIESEL ENGINES
Laboratory evaluation of multiviscosity-grade engine oils in US Army diesel engines
[AD-A108890] N82-19375
Conventional engine technology. Volume 2: Status of diesel engine technology
[NASA-CR-168644] N82-19543
Conventional engine technology. Volume 3: Comparisons and future potential
[NASA-CR-168645] N82-19544
Performance of industrial-type engines in military equipment using synthetic crankcase oils
[AD-A109023] N82-19545
Future fuels and engines for railroad locomotives. Volume 1: Summary
[NASA-CR-168642] N82-20022

DIFFERENCE EQUATIONS
Conservative supra-characteristics method for splitting the hyperbolic systems of gasdynamics for real and perfect gases
[NASA-CR-166307] N82-19904

DIFFERENTIAL EQUATIONS
An examination of stability criteria for iterative numerical schemes used in solving differential equations
[RAE-TR-81081] N82-19902
DIFFERENTIAL THERMAL ANALYSIS
The applicability of pressure measurements by radiosondes to calculating the height
[BLL TRANS-1505-(9022.552)] N82-19755
DIFFUSE RADIATION
Diffuse and discrete optical emissions at the poleward border of the morning auroral oval
[DMI-GEOPHIS-PAPERS-R-66] N82-19742
DIFFUSION WAVES
High energy cosmic ray acceleration by diffusive shocks N82-20061
DIFFUSION WELDING
Evaluation of superplastic forming and co-diffusion bonding of Ti-6Al-4V titanium alloy expanded sandwich structures
[NASA-CR-165827] N82-19358
DIGITAL COMMAND SYSTEMS
PSICON: A simulation package for the design of digitally controlled systems
[RR-162] N82-19690
DIGITAL COMPUTERS
Ground station digital interface
[ARL/MECH-ENG-REPT-158] N82-19401
DIGITAL DATA
Ground station digital interface
[ARL/MECH-ENG-REPT-158] N82-19401
Products from two computer programs which process digital bathymetric data
[AD-A108757] N82-19881
Methods of image compression without information loss
[INPE-2274-PRE/054] N82-20013
DIGITAL FILTERS
Digital audio. Recursive digital filtering for high quality audio signals
[BBC-RD-1981/10] N82-19400
Multi-dimensional signal-processing research program
[AD-A108641] N82-19429
DIGITAL INTEGRATORS
Digital time control for camera shutters
[PB82-116328] N82-19529
DIGITAL SIMULATION
Aircraft infrared radiation modeling N82-20134
DIGITAL SYSTEMS
Digital flight controls N82-19143
Digital flight controls N82-19149
Evaluation of parameters of the oscillatory motion of digital servo system in a steady-state mode
[AD-A109314] N82-19476
DIGITAL TECHNIQUES
Two dimensional filters for digital processing of images: Design and implementation techniques
[INPE-2273-PRE/053] N82-19469
User's guide to noise data acquisition and analysis programs for HP9845: Nicolet analyzers
[NASA-TM-83256] N82-19943
DIGITAL TO ANALOG CONVERTERS
Analogue SAR signal processing: Device evaluation and radiation tests — video integrator, binary-analog correlator
[REPT-3972-ISSUE-1] N82-19440
DILUTION
Dilution jet behavior in the turn section of a reverse flow combuster
[NASA-TM-82776] N82-19220
DIMETHYLHYDRAZINES
Chemical and molecular biological aspects alkylhydrazine-induced carcinogenesis in human cells in vitro
[AD-A109088] N82-19833
DISCONTINUITY
Identification of the discontinuities at the magnetopause N82-20083
DISCRETE FUNCTIONS
Calculation of equivalent forces at nodes. Some examples in actual practice for calculations with the FEM method
[KTH-PUBL-212] N82-19921
DISCRIMINATION
Target/clutter discrimination techniques for laser semi-active missile systems N82-19253
DISK GALAXIES
Observable properties of accretion disks — X-ray astronomy N82-20083
DISLOCATIONS (MATERIALS)
A study of dislocation density and phase elongation as a function of deformation in sintered tungsten composites
[FOA-C-20428-D4] N82-19365
DISPERSIONS
New bioreactors for aerobic processes
[ISSN-0077-5606] N82-19679
Three dimensional numerical model for estimation of pollutant concentration
[INPE-2193-TDL/060] N82-19703
DISPLAY DEVICES
Descent-rate cuing for carrier landings: Effects of display gain, display noise and aircraft type
[AD-A108801] N82-19206
Transport aircraft cockpit standardization (Federal Aviation regulations part 25)
[AD-A108924] N82-19207
Review of health and safety aspects of video display terminals
[CRC-TN-712-E] N82-19616
Electrooptical effects for application in liquid crystal displays — twisted nematic cells
[BMFT-FB-T-81-170] N82-19962
Improving the computer-human interface: The qualitative monitor display N82-20123
DISTANCE
Millstone hill radar satellite tracking system
[AD-A109279] N82-19252
Detection range probabilities of passive infrared systems for the North Atlantic
[AD-A108812] N82-19974
DISTRIBUTED PARAMETER SYSTEMS
A multivariable feedback control problem with application to strip base control for Sendzimir mills
[RR-153] N82-19698
The receding horizon principle for distributed systems — control
[RR-167] N82-19699
Variable structure systems and system zeros
[RR-157] N82-19940
DISTRIBUTING
Distribution of personnel, vehicles, and supplies by ship: A model applied to the Brazilian Navy
[INPE-2305-TDL/073] N82-19674
DISTRIBUTION FUNCTIONS
A numerical method for solving the Vlasov equation
[NASA-TM-81339] N82-19985
DIURNAL VARIATIONS
Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida
[E82-10040] N82-19615
On the accuracy of thermal inertia mapping by infrared imagery
[SAAB-REPR-AE-10] N82-19656
Geophysical effects on the length of the sideral day
[BLL-TRANS-1489-(9022.552)] N82-19721
DIVING (UNDERWATER)
Improvements to speech quality from a diving helmet
[BBC-RD-1981/9] N82-19399
DOCUMENTATION
Universal documentation system handbook. Supplement 2: Procedures for the electronic transmission and processing of level 1, 2, and 3 test requirements and support information
[AD-A108901] N82-19251
Formatting and documenting multidisciplinary data
[PB82-122882] N82-20018
DOCUMENTS
Catalogue of ESA publications in 1980
[ESA-SP-1037] N82-20017
DOMESTIC ENERGY
Energy conservation in the production of domestic hot water
[EP-48] N82-19665
US energy for the rest of the century
[PB82-115866] N82-19697
DOPPLER EFFECT
Determination of the velocity and the distance of a moving CW source by exploiting the Doppler effect on the reverberation signal — of the sonar signal
[REPT-6/81] N82-19404
Algorithms for tracking a sound source using frequency and bearings
[AD-A109276] N82-19950
DOWN-CONVERTERS
SETI downconverter N82-20114
DOWNTIME
Maintenance and operations tasks accomplished at DSS 12 during the antenna panel replacement downtime N82-20130
DRAFT (GAS FLOW)
A computational study of the modification of raindrop size distributions in subcloud downdrafts
N82-19748
DRAG REDUCTION
Experimental study of delta wing leading-edge devices for drag reduction at high lift
[NASA-CR-165846] N82-19165
On the design of some airfoils for sailplane application — additions to existing wings for inflight testing
[VTH-LR-326] N82-19213
DRAINAGE
Water resources data for New Hampshire and Vermont, water year 1980
[PB82-110156] N82-19658
Water pollution from highways and urban areas: An annotated bibliography (supplement)
[PB82-113317] N82-19714
DRAINAGE PATTERNS
Methodology of the interpretation of remote sensing data and applications in pedology
[INPE-2211-MD/008] N82-19641
Improved St. Clair River dynamics flow models and comparison analysis
[PB82-119272] N82-19657
DRIFT RATE
Double layer and potential jump: A review of laboratory experimental evidence N82-20078
DROP SIZE
Hydrodynamic and aerodynamic breakup of liquid sheets
[NASA-TM-82800] N82-19494
DROPS (LIQUIDS)
On the disruptive vaporization and burning of emulsified and multicomponent fuel droplets
N82-19354
DROUGHT
Model choice: An operational comparison of stochastic streamflow models for droughts
N82-19602
DUCT GEOMETRY
Computation of transonic potential flow about 3 dimensional inlets, ducts, and bodies
[NASA-CR-3514] N82-19179
DUCTED FANS
An experimental study of the effects of an inlet flow conditioner on the noise of a low speed axial flow fan — in an aircraft engine
[TT-8101] N82-19956
DUCTED FLOW
A finite element method for computing sound propagation in ducts containing flow
[AD-A108836] N82-19951
DUCTILITY
Composite seal for turbomachinery
[NASA-CASE-LEW-12131-3] N82-19540
DUCTS
A finite element method for computing sound propagation in ducts containing flow
[AD-A108836] N82-19951
DUMMIES
Numerical and experimental studies of electromagnetic near-field energy absorption in models of man N82-19812
DURABILITY
Abrasion-erosion resistance of fiber reinforced concrete
[AD-A108988] N82-19394
Thermo-elastic-plastic stresses in multilayered cylinders
[AD-A109320] N82-19579
DYE LASERS
Investigation of a CaCl molecular jet by means of laser induced fluorescence
[MPIS-29/1980] N82-19337
DYES
Free volume theory of diffusion into polymers. Part 1: Method of predicting activation energies of diffusion for gases into elastomers. Part 2: Diffusion of non-ionic dyes into semi-crystalline poly (ethylene terephthalate) films. Part 3: Relationship between glass-transition and dyeing-transition temperatures N82-19372
DYNAMIC CHARACTERISTICS
Dynamics of a chain of flexible bodies
N82-19553

DYNAMIC CONTROL

On the control of cocurrent tubular chemical reactors [RR-160] N82-19352

DYNAMIC LOADS

Structural dynamic analysis of the Space Shuttle Main Engine [NASA-CR-161945] N82-19302

Chain and belt drives, a review N82-19556

Durability of adhesive bonded structures subjected to acoustic loads [AGARD-R-701] N82-19600

DYNAMIC MODELS

Testing ventilated nozzle models with supersonic primary flow N82-19159

DYNAMIC PROGRAMMING

Optimum equipment maintenance/replacement policy. Part 2: Markov decision approach N82-20125

DYNAMIC RESPONSE

A criterion for the prediction of the recovery characteristics of spinning aircraft [RAE-TN-AERO-2251] N82-19223

The Shock and vibration Digest, volume 13, no. 5 [AD-A099477] N82-19555

Response of nonlinear mechanical systems to random excitation. Part 2: Equivalent linearization and other methods N82-19557

Large scale dynamics of long flexible cables towed through air [KTH-AERO-TN-61] N82-19567

Acoustic fatigue endurance test of USB flap structure models at elevated temperature [NAL-TR-663] N82-19570

Norm bounds for linear systems using step response data [RR-159] N82-19924

Simulation using computer-piloted point excitations of vibrations induced on a structure by an acoustic environment N82-20135

DYNAMIC STABILITY

Some aspects of two-phase flow, heat transfer and dynamic instabilities in medium and high pressure steam generators N82-20004

Instabilities in inhomogeneous collision-free self-gravitating stellar systems --- elliptical galaxies N82-20077

DYNAMIC STRUCTURAL ANALYSIS

Structural dynamic analysis of the Space Shuttle Main Engine [NASA-CR-161945] N82-19302

Recent advances in space structure design-verification techniques, --- conference proceedings [ESA-SP-1036] N82-19308

Introduction to problems of structural dynamics verification --- dynamic coupling between launch vehicle and payload N82-19309

Dynamic analysis and modeling of electrodynamic vibration test facilities applied to the AIBG 160 kN system N82-19310

Achievements in multi-axes testing using servohydraulic vibration system N82-19312

The Shock and vibration Digest, volume 13, no. 5 [AD-A099477] N82-19555

Response of nonlinear mechanical systems to random excitation. Part 2: Equivalent linearization and other methods N82-19557

DYNAMIC TESTS

The value of dynamic fracture toughness and its dependence on material properties and loading conditions [AD-A109151] N82-19574

E

EARTH (PLANET)

The role of episodic bombardment in geophysics N82-20100

Spiral arms, comets and terrestrial catastrophism N82-20101

EARTH ATMOSPHERE

Correction for atmospheric effects in satellite images [INPE-2281-PRE/059] N82-19728

A free boundary value problem arising in climate dynamics [AERONOMICA-ACTA-A-240-1981] N82-19767

EARTH AXIS

Developments in geodesy within the scope of Helmut Wolf's work N82-19604

EARTH CORE

Information theory lateral density distribution for Earth inferred from global gravity field [NASA-TM-83825] N82-19731

Gravity and geoid anomalies of the Philippine Sea: Evidence on the depth of compensation for the negative residual water depth anomaly [NASA-CR-168639] N82-19732

EARTH CRUST

Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites: Constraints on the regional emplacement of crustal resources [E82-10043] N82-19618

Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites: Constraints on the regional emplacement of crustal resources [E82-10044] N82-19619

Use of Magsat anomaly data for crustal structure and mineral resources in the US midcontinent [E82-10049] N82-19624

Information theory lateral density distribution for Earth inferred from global gravity field [NASA-TM-83825] N82-19731

Gravity and geoid anomalies of the Philippine Sea: Evidence on the depth of compensation for the negative residual water depth anomaly [NASA-CR-168639] N82-19732

A measurement of long term tilt in Colorado and Wyoming [AD-A108665] N82-19737

EARTH HYDROSPHERE

A free boundary value problem arising in climate dynamics [AERONOMICA-ACTA-A-240-1981] N82-19767

EARTH MANTLE

Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites: Constraints on the regional emplacement of crustal resources [E82-10044] N82-19619

Information theory lateral density distribution for Earth inferred from global gravity field [NASA-TM-83825] N82-19731

Gravity and geoid anomalies of the Philippine Sea: Evidence on the depth of compensation for the negative residual water depth anomaly [NASA-CR-168639] N82-19732

Upper mantle hetbrogeneity: Comparisons of regions south of Australia with Philippine Basin [NASA-CR-168646] N82-19733

EARTH MOVEMENTS

Bayesian geophysical model for seismic hazard [PB82-122391] N82-19745

EARTH OBSERVATIONS (FROM SPACE)

Satellite Earth resources data, module U-3 [E82-10035] N82-19611

EARTH ROTATION

Geophysical effects on the length of the sideral day [BLL-TRANS-1489-(9022.552)] N82-19721

EARTH SURFACE

On the accuracy of thermal inertia mapping by infrared imagery [SAAB-REPR-AE-10] N82-19656

EARTH TIDES

A measurement of long term tilt in Colorado and Wyoming [AD-A108865] N82-19737

EARTHQUAKES

Seismic discrimination [AD-A109184] N82-19739

Bayesian geophysical model for seismic hazard [PB82-122391] N82-19745

ECLIPSING BINARY STARS

Accretion disk coronae [NASA-TM-83840] N82-20106

ECOLOGY

Biochemical, physiological and ecological aspects of ammonium regeneration by marine crustaceans N82-19808

ECONOMIC ANALYSIS

Socioeconomic impact of photovoltaic power at Schuchuli, Arizona [NASA-CR-165551] N82-19669

Performance and operational economics estimates for a coal gasification combined-cycle cogeneration powerplant [NASA-TM-82729] N82-19672

COBALT: Effectiveness of alternative US policies to reduce the costs of a supply disruption [PB82-110560] N82-20021

ECONOMIC DEVELOPMENT

Direct broadcast satellites: Policies, prospects, and potential competition [PB82-110164] N82-19446

ECONOMIC FACTORS

Local and national impact of aerospace research and technology [NASA-TM-82775] N82-20006

ECONOMIC IMPACT

Socioeconomic impact of photovoltaic power at Schuchuli, Arizona [NASA-CR-165551] N82-19669

The economic impact of an operational European meteorological satellite program in the 1980's --- Meteosat network [ESA-BR-03] N82-20020

ECOSYSTEMS

Estuarine community dynamics benthic program, Patuxent River Estuary, preliminary data report [PB82-108689] N82-19806

EDITING

Methods of editing cloud and atmospheric layer affected pixels from satellite data [E82-10046] N82-19621

EDITING ROUTINES (COMPUTERS)

SAM: A configurable experimental text editor for investigating human factors issues in text processing and understanding [AD-A109331] N82-19846

EFFICIENCY

Human factors in system development: Status and evaluation N82-19841

Consumer behavior towards fuel efficient vehicles. Volume 1: Executive summary [PB82-103300] N82-20027

EFFLUENTS

New bioreactors for aerobic processes [ISSN-0077-5606] N82-19679

An inexpensive biologic method of upgrading Lagoon effluent, phase 1: Small business innovative research program [PB82-101072] N82-19713

EJECTION SEATS

The unsteady aerodynamics of certain bluff shapes — wind tunnel measurement [BU-264] N82-19[illegible]32

ELASTIC DEFORMATION

Thermoelastic deformation in cylindrical shells of great length [INPE-2268-PRE/049] N82-19286

ELASTIC PROPERTIES

Time dependent inelastic behavior of materials [AD-A109069] N82-19585

ELASTIC WAVES

Modeling of the influence of static acceleration on surface wave (quartz) oscillator [ESA-TT-726] N82-19444

ELASTOMETERS

Free volume theory of diffusion into polymers. Part 1: Method of predicting activation energies of diffusion for gases into elastomers. Part 2: Diffusion of non-ionic dyes into semi-crystalline poly (ethylene terephthalate) films. Part 3: Relationship between glass-transition and dyeing-transition temperatures N82-19372

ELASTOPLASTICITY

The development of a dynamic elastoplastic finite element analysis for fast fracture under impact loading [AD-A109323] N82-19575

ELECTRIC AUTOMOBILES

Vehicle test report: Battronic pickup truck [NASA-CR-168637] N82-19205

ELECTRIC CONNECTORS

Electrotransport in thin films [AD-A108421] N82-19992

ELECTRIC CURRENT

The response of a two-wire transmission line to incident field and voltage excitation, including the effects of higher order modes [AD-A108780] N82-19431

ELECTRIC ENERGY STORAGE

A low-power photovoltaic system with energy storage for radio communications: Description and design methodology [NASA-CR-168640] N82-19677

ELECTRIC FIELDS
The response of a two-wire transmission line to incident field and voltage excitation, including the effects of higher order modes
[AD-A108780] N82-19431
Kinetic response of ionospheric ions to onset of auroral electric fields
[NASA-CR-164799] N82-19727

ELECTRIC GENERATORS
Electric Flight Systems
[NASA-CP-2209] N82-19134
A propulsion view of the all-electric airplane N82-19136
Potential propulsion considerations and study areas for all-electric aircraft N82-19137
A look into the future: The potential of the all-electric secondary power system for the energy efficient transport N82-19138
The 400-Hertz constant-speed electrical generation systems N82-19139

ELECTRIC MOTORS
Electric Flight Systems
[NASA-CP-2209] N82-19134
Electric flight systems, overview N82-19135
A propulsion view of the all-electric airplane N82-19136
Potential propulsion considerations and study areas for all-electric aircraft N82-19137
A look into the future: The potential of the all-electric secondary power system for the energy efficient transport N82-19138
Electric ECS N82-19140
Environmental Control Systems N82-19141
Overview of Honeywell electromechanical actuation programs N82-19142
Digital flight controls N82-19143
Electric flight systems N82-19144
Engine technology N82-19145
Power systems N82-19146
Environmental control systems N82-19147
Electromechanical actuators N82-19148
Digital flight controls N82-19149
Electric flight systems integration N82-19150
Ward-Leonard characteristics from nonlinearly-controlled series motor drives — fork lift trucks
[RR-165] N82-20026

ELECTRIC POTENTIAL
Pulsar magnetosphere potential structure N82-20066

ELECTRIC POWER PLANTS
Performance and operational economics estimates for a coal gasification combined-cycle cogeneration powerplant
[NASA-TM-82729] N82-19672
The geothermal probabilistic cost model with an application to a geothermal reservoir at Heber, California
[NASA-CR-168641] N82-19674
Remote sensing of sulfur dioxide effects on vegetation. Volume 1: Summary
[PB82-115122] N82-19715
Remote sensing of sulfur dioxide effects on vegetation. Volume 2: Data
[PB82-115130] N82-19716

ELECTRIC POWER SUPPLIES
Design of mobile photovoltaic power systems: 0.5-3kW
[AD-A108889] N82-19688

ELECTRIC WIRE
The response of a two-wire transmission line to incident field and voltage excitation, including the effects of higher order modes
[AD-A108780] N82-19431

ELECTRICAL INSULATION
Electrical ground testing of aircraft antistatic protection N82-19156

ELECTRICAL PROPERTIES
Percolation and conduction phenomena in disordered composite media N82-19331

ELECTRICAL RESISTIVITY
Electrical ground testing of aircraft antistatic protection N82-19156
Percolation and conduction phenomena in disordered composite media N82-19331
Radiative heat transfer in turbulent MHD channel flow N82-19487
Electrotransport in thin films
[AD-A108421] N82-19992

ELECTRIFICATION
Socioeconomic impact of photovoltaic power at Schuchuli, Arizona
[NASA-CR-165551] N82-19669

ELECTRO-OPTICS
Electro-optical system for remote position measurements in real time N82-19272
Multiangular scanning absorption-emission techniques for three-dimensional combustion diagnostics
[AD-A109060] N82-19346
Contactless optoelectronic position sensing
[BMFT-FB-T-81-191] N82-19481
Synoptic meteorology during the SNOW-ONE field experiment
[AD-A109080] N82-19784
Electrooptical effects for application in liquid crystal displays — twisted nematic cells
[BMFT-FB-T-81-170] N82-19982

ELECTRODEPOSITION
Mechanism and models for zinc metal morphology in alkaline media
[NASA-TM-82768] N82-19671

ELECTRODES
Electrostatic membrane antenna concept testing N82-19274

ELECTRODYNAMICS
Heating processes of the solar corona N82-20044

ELECTROHYDRODYNAMICS
The new paradigm in cosmic plasma physics --- magnetic fields versus electric currents N82-20031

ELECTROLYTES
Measurements of intra and extracellular water spaces and electrolyte concentrations in human skeletal muscle N82-19629

ELECTROLYTIC CELLS
Galvanic charging in air and space flight
[MBB-BB-485-O] N82-19478

ELECTROMAGNETIC ABSORPTION
The cavity Q for ergodic eigenmodes
[AD-A109041] N82-19987

ELECTROMAGNETIC FIELDS
Numerical and experimental studies of electromagnetic near-field energy absorption in models of man N82-19812

ELECTROMAGNETIC MEASUREMENT
Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites: Constraints on the regional emplacement of crustal resources
[E82-10043] N82-19618
Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites: Constraints on the regional emplacement of crustal resources
[E82-10044] N82-19619

ELECTROMAGNETIC NOISE
Fresnel-region fields and antenna noise-temperature calculations for advanced microwave sounding units
[NASA-TM-83813] N82-19428

ELECTROMAGNETIC NOISE MEASUREMENT
Fresnel-region fields and antenna noise-temperature calculations for advanced microwave sounding units
[NASA-TM-83813] N82-19428

ELECTROMAGNETIC RADIATION
Compensation for direct and reverse interconnection in an infinite emitter array N82-19414
Simultaneous compensation of direct and reverse interconnection in an infinite emitter array N82-19415
Numerical and experimental studies of electromagnetic near-field energy absorption in models of man N82-19812
Spectral and temporal behavior of the X-ray binary stars Cgy X-1 in the hard X-ray domain
[MPI-PAE/EXTRATERR-166] N82-20091

ELECTROMAGNETISM
The Voyager 1 Saturn encounter and the cosmogonic shadow effect N82-20032

ELECTROMECHANICAL DEVICES
Overview of Honeywell electromechanical actuation programs N82-19142
Electric flight systems N82-19144
Electromechanical actuators N82-19148
Finite-element analysis for design of classical and electronically operated machines N82-19461

ELECTROMETERS
Instruments and methods for studying atmospheric electricity
[BLL-TRANS-1487-(9022.552)] N82-19753

ELECTRON BEAM WELDING
Tube to tubesheet welding by electron beam for heat exchanger application
[IKE-1-11] N82-19546

ELECTRON BEAMS
Tube to tubesheet welding by electron beam for heat exchanger application
[IKE-1-11] N82-19546
Formation of ion conics and lower hybrid acceleration in the suprauroral region N82-20075

ELECTRON DENSITY PROFILES
Inferences about the solar wind dynamics from observed distributions of electrons and ions --- Voyager and Helios observations N82-20046

ELECTRON ENERGY
Another self-similar blast wave: Early time asymptote with shock heated electrons and high thermal conductivity
[NASA-CR-168562] N82-19962
Electron acceleration in magnetosonic shock fronts N82-20060

ELECTRON MICROSCOPY
Transition Electron Microscope (TEM) in-situ straining and bulk studies of the selection of glide systems in Face Centered Cubic (FFC) crystals
[NLR-TR-80041-U] N82-19998

ELECTRON MOBILITY
Electron transmission through and reflection by an arbitrary set of square potential steps
[AD-A108630] N82-19474
Electrotransport in thin films
[AD-A108421] N82-19992

ELECTRON PARAMAGNETIC RESONANCE
Electron exchange between Bis (eta meson-6-Arene) Chromium (I) and Bis (eta meson-6-Arene) Chromium (0). Comparisons between experimental and calculated kinetics parameters
[AD-A109051] N82-19348

ELECTRON PRECIPITATION
Theory of the auroral magnetosphere
[AERONOMICA-ACTA-A-237-1981] N82-19723

ELECTRON SCATTERING
Electronically induced phase transformations
[AD-A108982] N82-19380
Level shifts and inelastic electron scattering in dense plasmas
[AD-A108799] N82-19986

ELECTRON STATES
Electronically induced phase transformations
[AD-A108982] N82-19380
Research on the effects of hydrostatic pressure on the electronic states of impurities
[AD-A108403] N82-19503

ELECTRON TRANSFER
Electron exchange between Bis (eta meson-6-Arene) Chromium (I) and Bis (eta meson-6-Arene) Chromium (0). Comparisons between experimental and calculated kinetics parameters
[AD-A109051] N82-19348
Electron transmission through and reflection by an arbitrary set of square potential steps
[AD-A108630] N82-19474

ELECTRON TRANSITIONS
Measurement of the differential scattering cross sections of electron excited sodium by argon
[MPIS-31/1980] N82-19349

ELECTRON TUBES
A review of millimetre wave devices --- technology assessment of electron tubes and solid state power sources
[RSRE-MEMO-3372] N82-19465

ELECTRON TUNNELING
Electron transmission through and reflection by an arbitrary set of square potential steps
[AD-A108630] N82-19474

ELECTRONIC COUNTERMEASURES
Comparative studies of correlation techniques in the sidelobe canceller in the presence of pulse-type jamming signals --- for electronic countermeasures
[REPT-3/81] N82-19402

ELECTRONIC EQUIPMENT TESTS
Investigation of airborne VHF communication and navigation equipment N82-19421

ELECTRONIC MODULES
Design of a versatile LSI module for the simple configuration of high-throughput real-time polyprocessor systems N82-19468

ELECTRONIC PACKAGING
Ultra high speed image processing techniques --- electronic packaging techniques
[NASA-CR-166771] N82-19466
Electronics for data acquisition of laser gyroscope measurements
[DFVLR-MITT-81-16] N82-19534

ELECTROSTATIC CHARGE
Electrical ground testing of aircraft antistatic protection N82-19156

ELECTROSTATIC WAVES
The simulation of plasma double layer structures in two dimensions N82-19984

ELECTROSTATICS
Electrostatic membrane antenna concept testing N82-19274
Conceptual design of electrostatic antenna N82-19275

ELLIPTICAL GALAXIES
instabilities in inhomogeneous collision-free self-gravitating stellar systems --- elliptical galaxies N82-20077

ELONGATION
A study of dislocation density and phase elongation as a function of deformation in sintered tungsten composites
[FOA-C-20428-D4] N82-19365

EMBRITTLEMENT
Surface modification in control SiO2 fiber fracture
[AD-A106796] N82-19589

EMISSION
The differential emission measure of dynamic coronal loops
[NASA-CR-168638] N82-20087

EMISSION SPECTRA
Multiangular scanning absorption-emission techniques for three-dimensional combustion diagnostics
[AD-A109060] N82-19346
Radiation processes in active galactic nuclei N82-20042
HEAO 1 measurements of the galactic ridge
[NASA-TM-83844] N82-20097
On the theory of Gamma Ray Amplification through Stimulated Annihilation Radiation (GRASAR)
[NASA-TM-83857] N82-20111
Aircraft infrared radiation modeling N82-20134

EMISSIVITY
Measurement of losses of mesh membrane material for reflector applications with an S-band radiometer N82-19269

EMITTERS
Antenna (selected articles)
[AD-A108204] N82-19413
Compensation for direct and reverse interconnection in an infinite emitter array N82-19414
Simultaneous compensation of direct and reverse interconnection in an infinite emitter array N82-19415
Antenna (selected articles)
[AD-A108174] N82-19448
Efficiency and input impedance of planar emitter placed near the interface N82-19451
Analysis of the properties of connected vibrator structures N82-19452

EMOTIONAL FACTORS
Catecholamine levels in fit and nonfit males when exposed to an emotional stress N82-19813

EMULSIONS
On the disruptive vaporization and burning of emulsified and multicomponent fuel droplets N82-19354
Study of the kinetics of oxygen saturation of fluorocarbon emulsions --- blood substitutes
[ISSN-0077-5606] N82-19810

ENAMELS
Small scale reclamation/disposal of toxic porcelain enameling waste sludges
[PB82-101593] N82-19710

ENCAPSULATING
Vacuum lamination of photovoltaic modules
[NASA-CR-168634] N82-19676

ENERGETIC PARTICLES
Particle acceleration --- cosmic rays N82-20043
Formation of ion conics and lower hybrid acceleration in the supraauroral region N82-20075

ENERGY ABSORPTION
Numerical and experimental studies of electromagnetic near-field energy absorption in models of man N82-19812

ENERGY BANDS
Morphology of the polystyrene/poly(vinyl methyl ether) blend as studied by excimer fluorescence
[AD-A109143] N82-19378

ENERGY CONSERVATION
Energy conservation in the production of domestic hot water
[EP-48] N82-19665
Urban traffic signal control for fuel economy. Part 2: Extension to small cars
[AD-A109393] N82-20025

ENERGY CONSUMPTION
Energy properties in urban building stock --- in Finland
[VTT-RR-1/B1] N82-19696
US energy for the rest of the century
[PB82-115866] N82-19697

ENERGY CONVERSION
Phosphoric acid fuel cell technology status
[NASA-TM-82791] N82-19670
A review of the salt-gradient solar pond technology
[NASA-CR-168635] N82-19675

ENERGY DISSIPATION
The nonequilibrium of magnetic fields N82-20034

ENERGY POLICY
Social and Environmental Consequences of Natural Resources Policies with Special Emphasis on Biosphere Reserves
[PB82-113937] N82-19680
Review of the UK transport energy outlook: And policy recommendations
[EP-47] N82-19664
Energy conservation in the production of domestic hot water
[EP-48] N82-19665
Energy properties in urban building stock — in Finland
[VTT-RR-1/B1] N82-19696

ENERGY REQUIREMENTS
US energy for the rest of the century
[PB82-115866] N82-19697

ENERGY SPECTRA
Wave spectra of a shoaling wave field: A comparison of experimental and simulated results
[NASA-TM-83211] N82-19800

ENERGY STORAGE
The techniques, magnitudes and opportunities for development of energy storage (UK)
[PB82-120858] N82-19698

ENERGY TECHNOLOGY
Water assessment for the Lower Colorado River region-emerging energy technology development
[PB82-110107] N82-19398
Design and fabrication of containment rings for use in tests of six prototype flywheel rotors
[DE81-030357] N82-19689
Joint Indian-German program on solar energy: Phase 2 --- village energy supply
[BMFT-FB-T-81-182] N82-19693
The techniques, magnitudes and opportunities for development of energy storage (UK)
[PB82-120858] N82-19698
European Scientific Notes, volume 35, number 11
[AD-A109387] N82-20138

ENERGY TRANSFER
Research on the effects of hydrostatic pressure on the electronic states of impurities
[AD-A108403] N82-19503
On the synergistic effects of laser/phonon-stimulated processes: A master equation approach
[AD-A109025] N82-19531
Theory of the auroral magnetosphere
[AERONOMICA-ACTA-A-237-1981] N82-19723

ENGINE DESIGN
Cooled variable-area radial turbine technology program
[NASA-CR-165408] N82-19221
A study of liquid hydrogen cooled LO-2/LH-2 rocket combustor with slotted wall liner
[NAL-TR-679] N82-19314
Conventional engine technology. Volume 1: Status of OTTO cycle engine technology
[NASA-CR-168643] N82-19542
Conventional engine technology. Volume 2: Status of diesel engine technology
[NASA-CR-168644] N82-19543

ENGINE NOISE
Evaluation and control of the exhaust noise of reciprocating I.C. engines N82-19559
Aerodynamic noise generated by jet wing/flap interactions of the external USB configuration of STOL aircraft. Part 2: Full scale model experiment using FJR710 turbofan engine
[NAL-TR-687T-PT-2] N82-19945

ENGINE TESTS
The DAEDUT/PMLTNO hybrid rocket motor facilities
[VTH-LR-321] N82-19315
Conventional engine technology. Volume 1: Status of OTTO cycle engine technology
[NASA-CR-168643] N82-19542

ENGLISH LANGUAGE
Prerequisites to deriving formal specifications from natural language requirements
[AD-A108612] N82-19878

ENTROPY
Weak and strong ignition. 2: Sensitivity of the hydrogen-oxygen system
[AD-A108843] N82-19342

ENVIRONMENT EFFECTS
Life on a warmer Earth: Possible climatic consequences of man made global warming
[ER-3] N82-19701
Environmental and health aspects of acrylamide: A comprehensive bibliography of published literature
[PB82-110123] N82-19635

ENVIRONMENT POLLUTION
United States-Canadian relations and acid rain
[GPO-80-995] N82-19706

ENVIRONMENT PROTECTION
A mobile stream diversion system for hazardous materials spills isolation
[PB82-109679] N82-19661

ENVIRONMENT SIMULATION
Helicopter Icing Spray System (HISS) nozzle improvement evaluation
[AD-A109405] N82-19206

ENVIRONMENTAL CONTROL
Electric Flight Systems
[NASA-CP-2209] N82-19134
Electric ECS N82-19140
Environmental Control Systems N82-19141
Environmental control systems N82-19147
Electric flight systems integration N82-19150

ENVIRONMENTAL MONITORING
General configuration and internal disposition of equipment in a satellite for collecting environmental data
[INPE-2240-PRE/026] N82-19256
Resourceful decisions: LANDSAT in Michigan
[E82-10037] N82-19601

ENVIRONMENTAL TESTS
Environmental durability of electroplated black chromium
[NASA-TM-82454] N82-19357
Fatigue crack growth in aluminum alloys
[VTH-LR-324] N82-19367
Taped random spectra for reliability demonstration testing
[AD-A108803] N82-19552

ENZYMES
Clinical physiology of the renin-angiotensin-aldosterone system N82-19820

EPITAXY
Impurity and defect characterization in epitaxial GaAs, InP and the ternary and quaternary compound semiconductors
[AD-A109052] N82-19997

EPOXY MATRIX COMPOSITES
Development of manufacturing technology for fabrication of a composite helicopter main rotor spar by tubular braiding
[AD-A109377] N82-19209

EPOXY RESINS
Moisture and thermal expansion of composite materials
[AD-A109131] N82-19323

EQUALIZERS (CIRCUITS)
Digital audio. Recursive digital filtering for high quality audio signals
[BBC-RD-1981/10] N82-19400

EQUATIONS
On the Neumann problem for the pressure in a Navier-Stokes model --- of boundary layer flow
[PUBL-257] N82-19511

EQUATIONS OF MOTION
Laminar flow transition: A large-eddy simulation approach
[NASA-CR-3518] N82-19499

EQUATIONS OF STATE
Stability of the equilibrium states of the interstellar gas and field system N82-20037

EQUATORIAL ATMOSPHERE
The tropospheric gas composition of Jupiter's north equatorial belt (NH3, PH3, CH3D, GeH4, H2O) and the Jovian D/H isotropic ratio
[NASA-TM-83891] N82-20103

EQUILIBRIUM EQUATIONS
Stability of the equilibrium states of the interstellar gas and field system N82-20037

EQUIPMENT SPECIFICATIONS
Report on a study of the maintenance in readiness of on-ground spacecraft systems for operational application programs
[MBB-80-162/150] N82-19242
Satellite scatterometer feasibility study. Volume 1: Technical results --- Earth Resources Satellite (ERS 1)
[ESA-CR(P)-1492-VOL-1] N82-19650
Instruments and methods for studying atmospheric electricity
[BLL-TRANS-1487-(9022.552)] N82-19753

EQUIVALENT CIRCUITS
The generation of pseudorandom binary sequences in parallel --- frequency reduction
[FUB-9-1981] N82-19486

EROSION
Abrasion-erosion resistance of fiber reinforced concrete
[AD-A108988] N82-19394
Activities report of the Hydraulics Laboratory
N82-19489
Detrital exchange processes of a Delaware salt marsh N82-19699

ERROR ANALYSIS
System identification for multivariable control
N82-19389
Round-off error analysis of descent methods for solving linear equations N82-19907
Precise source location of the anomalous 1979 March 5 gamma ray transient
[NASA-TM-83884] N82-20110

ERS-1 (ESA SATELLITE)
Study of Earth Resources Satellite (ERS) data reduction unit
[BAE-TP-7905] N82-19649
Study of a radar altimeter for the European remote sensing program. Volume 1: Executive summary --- Earth Resources Satellite (ERS 1)
[SPAR-R.1090-ISSUE-A] N82-19652
Development of a breadboard cooler for infrared remote sensing payloads, phase 1 --- Earth Resources Satellite ERS 1
[FOK-RV-R-81-064] N82-19653

ESA SATELLITES
Study of a COMSS high accuracy positioning system: High Accuracy Positioning System (HASP)
[CNES-85.55.00] N82-19307
Satellite scatterometer feasibility study. Volume 1: Technical results --- Earth Resources Satellite (ERS 1)
[ESA-CR(P)-1492-VOL-1] N82-19650
Satellite scatterometer feasibility study. Volume 2: Data extraction algorithm and error simulation for wind sensor --- Earth Resources Satellite (ERS 1)
[ESA-CR(P)-1492-VOL-2] N82-19651
Study of a radar altimeter for the European remote sensing program. Volume 1: Executive summary --- Earth Resources Satellite (ERS 1)
[SPAR-R.1090-ISSUE-A] N82-19652

ESTIMATING
A computer program for wing subsonic aerodynamic performance estimates including attainable thrust and vortex lift effects
[NASA-CR-3515] N82-19151
Preliminary evaluation of spectral, normal and meteorological crop stage estimation approaches
[E82-10059] N82-19634
Segment-level evaluation of the simulated aggregation test: US corn and soybean exploratory experiment
[E82-10061] N82-19636
Estimating ocean-air heat fluxes during cold air outbreaks by satellite
[NASA-TM-83854] N82-19781
Computationally fast algorithms for ARMA spectral estimation N82-19871
Comparison of the bioptimal curve for two robust estimates
[AD-A109132] N82-19909
Estimation of the operating characteristics when the test information of the old test is not constant. 2: Simple sum procedure of the conditional p.d.f. approach/normal approach method using three subtests of the cold test, number 2
[AD-A109112] N82-19930

ESTUARIES
Tidal power from the Severn estuary, volume 1
[EP-46-VOL-1] N82-19666
Tidal power from the Severn estuary. Volume 2: Analysis, studies, reports and evaluations
[EP-46-VOL-2] N82-19667
Detrital exchange processes of a Delaware salt marsh N82-19699
Upper Chesapeake Bay salinity study
[PB82-116641] N82-19717
Estuarine community dynamics benthic program, Patuxent River Estuary, preliminary data report
[PB82-108689] N82-19806

ETIOLOGY
The etiology of facial pain as related to masticatory muscles N82-19828

EULER-LAGRANGE EQUATION
Dynamics of a chain of flexible bodies
N82-19553
The control of the quality of surface meteorological information
[BLL-TRANS-1503-(9022.552)] N82-19759
Introduction to celestial mechanics
[INPE-2126-RPE/350] N82-20096

EUROPEAN AIRBUS
The European Airbus: A challenge to the American commercial aircraft industry
[MBB-UH-01-81-O] N82-19162
Active gust and maneuver load control concepts with the example of the Airbus A300. Part 1: Explanation of a regular in the time zone of wind gust load decrease and examination of its effectiveness in stochastic gusts
[MBB-FE-172/S/PUB/39-PT-1] N82-19228

EUROPEAN SPACE AGENCY
Space activities in the 80's: The programs and the industry. Parts 1 and 2: Survey of space programs (1975 to 1980); survey of the capabilities and experience of the European space industry
[ESA-SP-1012-VOL-1] N82-19243
Catalogue of ESA publications in 1980
[ESA-SP-1037] N82-20017

EUROPEAN SPACE PROGRAMS
Space activities in the 80's: The programs and the industry. Parts 1 and 2: Survey of space programs (1975 to 1980); survey of the capabilities and experience of the European space industry
[ESA-SP-1012-VOL-1] N82-19243
Space activities in the 80's: The programs and the industry. Part 3: Detailed presentation of the European space industry (1981)
[ESA-SP-1012-VOL-2] N82-19244
Recommendations on the development of space science in the 1980's --- in Europe
[ESA-SP-1015] N82-19246
Giotto Comet Halley mission, phase A study. Volume 1: Spacecraft design
[ESS/SS/1000] N82-19313
The economic impact of an operational European meteorological satellite program in the 1980's --- Meteosat network
[ESA-BR-03] N82-20020

EUTECTIC COMPOSITES
A study of dislocation density and phase elongation as a function of deformation in sintered tungsten composites
[FOA-C-20428-D4] N82-19365

EVALUATION
ANIK-B program delivery pilot project. A 12 month performance assessment
[CRC-1349] N82-19426

EVAPORATION
Analysis of evaporative water loss in the Skylab astronauts
[NASA-CR-167462] N82-19814

EXCHANGING
The nucleon exchange mechanism in composite nuclei interaction
[ISS-R-81/4] N82-19968

EXCIMER LASERS
Laser journal (selected articles)
[AD-A108173] N82-19535
UV-preionized ArF and KrF excimer lasers
N82-19537

EXCIMERS
Morphology of the polystyrene/poly(vinyl methyl ether) blend as studied by excimer fluorescence
[AD-A109143] N82-19378

EXCITATION
Research on the effects of hydrostatic pressure on the electronic states of impurities
[AD-A108403] N82-19503

EXCITONS
Research on the effects of hydrostatic pressure on the electronic states of impurities
[AD-A108403] N82-19503

EXCRETION
Biochemical, physiological and ecological aspects of ammonium regeneration by marine crustaceans
N82-19808

EXHAUST EMISSION
Conventional engine technology. Volume 1: Status of OTTO cycle engine technology
[NASA-CR-168643] N82-19542

EXHAUST GASES
Multiangular scanning absorption-emission techniques for three-dimensional combustion diagnostics
[AD-A109060] N82-19346
Conventional engine technology. Volume 2: Status of diesel engine technology
[NASA-CR-168644] N82-19543
Conventional engine technology. Volume 3: Comparisons and future potential
[NASA-CR-168645] N82-19544

EXHAUST NOZZLES
Effects of installation of F101 DFE exhaust nozzles on the afterbody-nozzle characteristics of the F-14 airplane
[NASA-TM-83250] N82-19181

EXHAUST SYSTEMS
Theoretical investigation of the flow of a supersonic free jet from a slit
[MPIS-25/1980] N82-19182
Evaluation and control of the exhaust noise of reciprocating I.C. engines N82-19559

EXISTENCE THEOREMS
Asymptotic properties of unknown systems --- and controller design problems
[RR-156] N82-19903

EXPERIMENTAL DESIGN
Structural assembly demonstration experiment
N82-19282
Structural Assembly Demonstration Experiment (SADE) experiment design N82-19283
Solar Array Flight Experiment (SAFE) N82-19284
Asphalt recycling technology: Literature review and research plan
[AD-A108199] N82-19392
Historical perspectives on thermostructural research at the NACA Langley Aeronautical Laboratory from 1948 to 1958
[NASA-TM-83266] N82-19498
Design calculation procedure for passive solar houses at Navy installations in regions with cold climate, volume 1
[AD-A108382] N82-19683
Design calculation procedure for passive solar houses at Navy installations in East Coast regions with temperate climate, volume 2
[AD-A108383] N82-19684
Design calculation procedure for passive solar houses at Navy installations in regions with warm, humid climate, volume 3
[AD-A108384] N82-19685
Design calculation procedure for passive solar houses at Navy installations in the Pacific Northwest, volume 4
[AD-A108385] N82-19686
Design calculation procedure for passive solar houses at Navy installations in warm California climates, volume 5
[AD-A108386] N82-19687

EXPERIMENTATION
Effect of location in an array on heat transfer to a cylinder in crossflow
[NASA-TM-82797] N82-19493

EXPLORER SATELLITES
Modeling the data systems role of the scientist (for the NEEDS Command and Control Task)
[NASA-TM-84028] N82-20012
EXTERNAL STORES
Computational aerodynamics at weapons systems research laboratory
[WSRL-0236-TM] N82-19176
EXTERNALLY BLOWN FLAPS
Acoustic fatigue endurance test of USB flap structure models at elevated temperature
[NAL-TR-683] N82-19570
EXTINCTION
SAM 2 Measurements of the Polar Stratospheric Aerosol, volume 2. April 1979 to October 1979
[NASA-RP-1088-VOL-2] N82-19734
Detection range probabilities of passive infrared systems for the North Atlantic
[AD-A108812] N82-19974
Backscatter and extinction in water clouds
[AD-A109277] N82-19975
EXTRAGALACTIC RADIO SOURCES
Extragalactic radio sources --- observation of narrow features (jets) in galactic structure N82-20051
Extragalactic double radio sources --- unified model with a massive black hole acting as unipolar induction dynamo N82-20052
Production and propagation of jets --- narrow features in the structure of extragalactic radio sources N82-20055
Large scale Kelvin-Helmholtz instabilities in extragalactic radio jets N82-20070
EXTRAPOLATION
Acceleration of convergence of a vector sequence by reduced rank extrapolation
[AD-A108765] N82-19910
EXTRATERRESTRIAL RADIATION
Preliminary analysis of accelerated space flight ionizing radiation testing
[NASA-TM-83209] N82-19969
Extragalactic gamma radiation: Use of galaxy counts as a galactic tracer
[NASA-TM-83901] N82-20109
EXTREME ULTRAVIOLET RADIATION
EXUV. Phase A study. Volume 1: Executive summary --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-1] N82-19292
EXUV. Phase A study. Volume 2A: Satellite system conceptual design --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-2A] N82-19293
EXUV. Phase A study. Volume 2B: Satellite system conceptual design --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-2B] N82-19294
EXUV. Phase A report. Volume 3: Preliminary payload interface specification --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-3] N82-19295

F

F REGION
Ionospheric irregularities in low latitudes of the American sector
[INPE-2243-TDL/065] N82-19725
F-14 AIRCRAFT
Effects of installation of F101 DFE exhaust nozzles on the afterbody-nozzle characteristics of the F-14 airplane
[NASA-TM-83250] N82-19181
F-100 AIRCRAFT
Acoustic measurements of F100-PW-100 engine operating in hush house NSN 4920-02-070-2721
[AD-A108814] N82-19952
FABRICATION
Development of manufacturing technology for fabrication of a composite helicopter main rotor spar by tubular braiding
[AD-A109377] N82-19209
Mathematical and graphical tools for the creation of computational arrays N82-19464
FACE (ANATOMY)
The etiology of facial pain as related to masticatory muscles N82-19828
FACE CENTERED CUBIC LATTICES
Transition Electron Microscope (TEM) in-situ straining and bulk studies of the selection of glide systems in Face Centered Cubic (FFC) crystals
[NLR-TR-80041-U] N82-19998
FAILURE
The significance of defects on the failure of fibre composites
[AGARD-R-690] N82-19328
Fracture mechanics and failure predictions for glass, glass-ceramic, ceramic systems N82-19370
FAILURE ANALYSIS
Disengagement of safety harness buckles - CT4
[AD-A109048] N82-19199
Development of STS/Centaur failure probabilities liftoff to Centaur separation
[NASA-CR-167549] N82-19255
The significance of defects on the failure of fibre composites
[AGARD-R-690] N82-19328
The Shock and Vibration Digest, volume 13, no. 1
[AD-A095594] N82-19558
The control of the quality of surface meteorological information
[BLL-TRANS-1503-(9022.552)] N82-19759
FAR FIELDS
Near field testing of LARC multiple beam antenna N82-19273
Fresnel-region fields and antenna noise-temperature calculations for advanced microwave sounding units
[NASA-TM-83813] N82-19428
FARADAY EFFECT
Helios Mission support N82-20117
FARM CROPS
AgRISTARS: Yield model development/soil moisture. interface control document
[E82-10054] N82-19629
FARMLANDS
AgRISTARS: Foreign commodity production forecasting. Corn/soybean decision logic development and testing
[E82-10056] N82-19631
Taxonomic classification of world map units in crop producing areas of Argentina and Brazil with representative US soil series and major land resource areas in which they occur
[E82-10058] N82-19633
Notes for Brazil,sampling frame evaluation trip
[E82-10060] N82-19635
The effect of finite field size on classification and atmospheric correction
[NASA-TM-83818] N82-19645
FASTENERS
Disengagement of safety harness buckles - CT4
[AD-A109048] N82-19199
FATIGUE (MATERIALS)
The effect of surface coatings on the fatigue strength of aluminum alloys
[AD-A108869] N82-19363
Fracture mechanics and failure predictions for glass, glass-ceramic, ceramic systems N82-19370
Study of near-threshold fatigue crack propagation in pipeline steels in high pressure environments
[NASA-CR-166295] N82-19388
Numerical simulation of reinforced concrete subjected to multiaxial stress conditions N82-19554
Implementation of a postcracking model for finite element analysis of reinforced concrete
[AD-A108984] N82-19572
Fracture and fatigue characterization of aircraft structural materials under biaxial loading
[AD-A109054] N82-19587
The stress intensity factor of small cracks at notches
[VTH-LR-330] N82-19592
FATIGUE LIFE
Fatigue of 2024-T351 and 7075-T7351 Al-alloy lugs with and without interference fit under maneuver spectrum loading
[TAE-440] N82-19568
Acoustic fatigue endurance test of USB flap structure models at elevated temperature
[NAL-TR-683] N82-19570
FATIGUE TESTS
A new fatigue resistant material: Aramide Reinforced Aluminum Laminate (ARALL)
[VTH-LR-322] N82-19326
Fatigue crack growth in aluminum alloys
[VTH-LR-324] N82-19367
FEASIBILITY ANALYSIS
Satellite scatterometer feasibility study. Volume 1: Technical results --- Earth Resources Satellite (ERS 1)
[ESA-CR(P)-1492-VOL-1] N82-19650
Satellite scatterometer feasibility study. Volume 2: Data extraction algorithm and error simulation for wind sensor --- Earth Resources Satellite (ERS 1)
[ESA-CR(P)-1492-VOL-2] N82-19651
Feasibility study on a low power vertical axis wind-powered generator
[AEL-0039-TR] N82-19681
Small scale reclamation/disposal of toxic porcelain enameling waste sludges
[PB82-101593] N82-19710
FEEDBACK AMPLIFIERS
A microwave FET oscillator design approach and its application in an injection locked oscillator
[CRC-1347] N82-19472
FEEDBACK CONTROL
QPSK demodulator
[INPE-2164-RPE/382] N82-19412
A new feedback controlled current stabilized power supply for gas laser N82-19539
A multivariable feedback control problem with application to strip base control for Sendzimir mills
[RR-153] N82-19898
On the compensation of optimal system asymptotic root-loci
[RR-163] N82-19925
On optimal control of plasma confinement
[RR-155] N82-19990
Ward-Leonard characteristics from nonlinearly-controlled series motor drives --- fork lift trucks
[RR-165] N82-20026
FERRIMAGNETIC MATERIALS
Growth and characterization of liquid phase epitaxially grown spinel ferrite films N82-19991
FERRITES
Y-circulator with dielectric filler
[AD-A109175] N82-19475
Growth and characterization of liquid phase epitaxially grown spinel ferrite films N82-19991
FERROMAGNETIC FILMS
Growth and characterization of liquid phase epitaxially grown spinel ferrite films N82-19991
FERROMAGNETISM
Impurities in quasi one-dimensional systems. A study on some thermodynamic properties N82-20002
The anisotropic classical chain. Thermodynamic properties and phase diagrams N82-20003
FIBER REINFORCED COMPOSITES
Relative effects of a graphite fiber reinforced epoxy composite and nickel-aluminum bronze on a cathodic protection system in seawater
[AD-A109078] N82-19321
A new fatigue resistant material: Aramide Reinforced Aluminum Laminate (ARALL)
[VTH-LR-322] N82-19326
Abrasion-erosion resistance of fiber reinforced concrete
[AD-A108988] N82-19394
FIBROBLASTS
Chemical and molecular biological aspects alkylhydrazine-induced carcinogenesis in human cells in vitro
[AD-A109068] N82-19833
FIELD EFFECT TRANSISTORS
A microwave FET oscillator design approach and its application in an injection locked oscillator
[CRC-1347] N82-19472
Analysis of deep defects in III-V semiconductors --- for LED and FET applications
[BMFT-FB-T-81-197] N82-19999
FIELD EMISSION
Plasma emission mechanisms and acceleration of relativistic particles in cosmic plasmas N82-20038
FIELD STRENGTH
VLFACM program description and operational manual
[AD-A109003] N82-19434
Variations in propagation attenuation at the frequencies 11, 18 and 36 GHz
[FOA-A-30028-E2] N82-19438
FIGHTER AIRCRAFT
Experimental study of delta wing leading-edge devices for drag reduction at high lift
[NASA-CR-165846] N82-19165

FILAMENT WINDING

Development of manufacturing technology for fabrication of a composite helicopter main rotor spar by tubular braiding
[AD-A109377] N82-19209

FILE MAINTENANCE (COMPUTERS)

IMIK A routine library for image input/output files on DEC-10. Directions for use
[FOA-C-30228-E1] N82-19886

FILM THICKNESS

Growth and characterization of liquid phase epitaxially grown spinel ferrite films N82-19991

FINANCE

Financial assessment of the Space Operations Center as a Private Business Venture
[NASA-CR-168636] N82-19248

FINANCIAL MANAGEMENT

Financial assessment of the Space Operations Center as a Private Business Venture
[NASA-CR-168636] N82-19248

The Software Acquisition Resource Expenditure (SARE) methodology, data requirements and data utilization
[AD-A109372] N82-19879

FINITE DIFFERENCE THEORY

The value of dynamic fracture toughness and its dependence on material properties and loading conditions
[AD-A109151] N82-19574

Conservative supra-characteristics method for splitting the hyperbolic systems of gasdynamics for real and perfect gases
[NASA-CR-166307] N82-19904

FINITE ELEMENT METHOD

Finite-element analysis for design of classical and electronically operated machines N82-19461

Finite elements for fluid dynamics. Supercritical design
[AD-A108983] N82-19506

Least squares finite element analysis of steady high subsonic plane potential flows N82-19517

The development of a dynamic elastoplastic finite element analysis for fast fracture under impact loading
[AD-A109323] N82-19575

Finite element analysis of dynamic crack propagation
[AD-A109322] N82-19576

Program for nonlinear structural analysis
[AD-A108975] N82-19578

BASIS-CRACK: An evaluation of performance --- finite element computer program verification
[FFA-TN-HU-2171] N82-19590

A nonlinear finite element analysis of rapid crack growth at large scale yielding
[TRITA-HFL-0027] N82-19594

Solution of problems with time as an independent variable, using the finite element method
[INPE-2269-PRE/050] N82-19903

Calculation of equivalent forces at nodes. Some examples in actual practice for calculations with the FEM method
[KTH-PUBL-212] N82-19921

FIR FILTERS

Two dimensional filters for digital processing of images: Design and implementation techniques
[INPE-2273-PRE/053] N82-19469

FIRE CONTROL

Multivariable aircraft control by maneuver commands: An application to air to surface gunnery N82-19154

Proceedings of the 3rd Meeting of the Coordinating Group on Modern Control Theory, part 1
[AD-A109124] N82-19896

FIRE DAMAGE

Workshop on Mathematical Fire Modeling
[AD-A108876] N82-19343

FIRE PREVENTION

An assessment of the crash fire hazard of liquid hydrogen fueled aircraft
[NASA-CR-165526] N82-19196

Workshop on Mathematical Fire Modeling
[AD-A108876] N82-19343

FITNESS

Catecholamine levels in fit and nonfit males when exposed to an emotional stress N82-19813

FITTING

Fatigue of 2024-T351 and 7075-T7351 Al-alloy lugs with and without interference fit under maneuver spectrum loading
[TAE-440] N82-19568

FLAME PROPAGATION

La Recherche Aerospatiale, Bi-monthly Bulletin number 1981-4, July - August 1981 --- aerospace R and D
[ESA-TT-722] N82-20131

Experimental determination of temperature/velocity probability density functions in a turbulent flame N82-20133

FLAME RETARDANTS

Evaluation of materials proposed for use in space flight
[NASA-CR-167537] N82-19815

FLAMES

Initiation, combustion and transition to detonation in homogeneous and heterogeneous reactive mixtures: A summary
[AD-A109057] N82-19347

FLAPPING

A further study of helicopter rotor pitch-flap-phase coupling
[BU-259] N82-19214

FLAT SURFACES

Transonic pressure measurements and comparison of theory to experiment for three arrow-wing configurations
[NASA-CR-3434] N82-19177

FLEXIBILITY

Fatigue performance and fastener flexibility for single shear aluminum joint with different splice plates
[FFA-TN-HU-2165] N82-19599

FLEXIBLE BODIES

Dynamics of a chain of flexible bodies N82-19553

FLEXIBLE WINGS

A method for applying linear optimal control theory to the design of a regulator for a flexible aircraft --- improving riding quality in fighter aircraft
[NLR-TR-80032-U] N82-19212

FLEXING

Vibration control with viscoelastic materials, 2 N82-19560

FLIGHT CLOTHING

Evaluation of materials proposed for use in space flight
[NASA-CR-167537] N82-19815

FLIGHT CONDITIONS

Coastal upwelling ecosystems analysis. Atlas of the JOINT I aircraft winds for the 500 foot level
[PB82-114703] N82-19796

FLIGHT CONTROL

Electric Flight Systems
[NASA-CP-2209] N82-19134

Overview of Honeywell electromechanical actuation programs N82-19142

Digital flight controls N82-19143

Digital flight controls N82-19149

Electric flight systems integration N82-19150

Multivariable aircraft control by maneuver commands: An application to air to surface gunnery N82-19154

A study of flight control requirements for advanced, winged, earth-to-orbit vehicles with far-aft center-of-gravity locations
[NASA-CR-3491] N82-19226

FLIGHT PATHS

Optimal aircraft landing patterns for minimal noise impact N82-19200

A concept for a fuel efficient flight planning aid for general aviation
[NASA-CR-3533] N82-19217

FLIGHT PLANS

A concept for a fuel efficient flight planning aid for general aviation
[NASA-CR-3533] N82-19217

Mission support plan STS-2
[NASA-CR-167435] N82-19249

FLIGHT SAFETY

Active Beacon Collision Avoidance System (BCAS) logic performance during operational flight tests
[AD-A108893] N82-19203

The use of weather radar in the civil aviation weather service
[BLL-TRANS-1456-(9022.552)] N82-19763

FLIGHT SIMULATION

Simulator study of vortex encounters by a twin-engine, commercial, jet transport airplane
[NASA-TP-1966] N82-19225

FLIGHT SIMULATORS

Equipment for testing and measuring a 'helmet mounted sight and display' system with a coupled movable TV camera in the flight simulator for research of the DFVLR
[ESA-TT-675] N82-19219

FLIGHT TESTS

Active Beacon Collision Avoidance System (BCAS) logic performance during operational flight tests
[AD-A108893] N82-19203

Solar Array Flight Experiment (SAFE) N82-19284

FLIP-FLOPS

Electrical characterization of super Schottky
[AD-A108766] N82-19996

FLORIDA

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida
[E82-10040] N82-19615

FLOW CHARACTERISTICS

Calculation of supersonic three-dimensional flow about blunt-nosed bodies
[AD-A108808] N82-19187

Acta Mechanica Sinica (selected articles)
[AD-A108208] N82-19513

Improved St. Clair River dynamics flow models and comparison analysis
[PB82-119272] N82-19657

FLOW DISTRIBUTION

An experimental investigation of flow surrounding an airfoil with a jet exhausting from the lower surface
[NASA-CR-166131] N82-19133

Some observations of surface pressures and the near wake of a blunt trailing edge airfoil
[NASA-CR-168563] N82-19174

A method of characteristic surfaces: The approximate solution of three-dimensional supersonic flow fields, from the near field up to the sonic boom region
[VTH-LR-331] N82-19190

Simulator study of vortex encounters by a twin-engine, commercial, jet transport airplane
[NASA-TP-1966] N82-13225

The pressure signature method for blockage corrections, and its applications to the industrial wind tunnel
[BU-263] N82-19231

Investigations of flowfields found in typical combustor geometries
[NASA-CR-168585] N82-19495

The investigation of the propagation mechanism of pressure fluctuation in turbulent flow
[AD-A108498] N82-19502

Surface layer orientation coordination for boundary layer calculations on general configurations
[MBB-FE-122/S/PUB/41] N82-19507

Acta Mechanica Sinica (selected articles)
[AD-A108208] N82-19513

Least squares finite element analysis of steady high subsonic plane potential flows N82-19517

The aerodynamical analysis of body in hypersonic source flow field N82-19518

FLOW EQUATIONS

Conservative supra-characteristics method for splitting the hyperbolic systems of gasdynamics for real and perfect gases
[NASA-CR-168307] N82-19904

Accelerated convergence of structured banded systems using constrained corrections
[AD-A108805] N82-19912

FLOW GEOMETRY

A method of characteristic surfaces: The approximate solution of three-dimensional supersonic flow fields, from the near field up to the sonic boom region
[VTH-LR-331] N82-19190

FLOW STABILITY

Influence of velocity shear on the Rayleigh-Taylor instability
[AD-A108800] N82-19504

FLOW VELOCITY

Testing ventilated nozzle models with supersonic primary flow N82-19159

Spanwise loading distribution and wake velocity surveys of a semi-span wing
[NASA-TM-84213] N82-19184

NASA Redox cell stack shunt current, pumping power, and cell performance tradeoffs
[NASA-TM-82686] N82-19333
High-speed laser anemometer system for intrarotor flow mapping in turbomachinery
[NASA-TP-1663] N82-19521

FLUID DYNAMICS
Follow on study on Fluid Physics Module (PM). Part 1: Independent operating Fluid Physics Module (FPM)
[REPT-79-RV-0] N82-19241
Effect of location in an array on heat transfer to a cylinder in crossflow
[NASA-TM-82797] N82-19493
Finite elements for fluid dynamics. Supercritical design
[AD-A108983] N82-19506

FLUID FLOW
Investigations of flowfields found in typical combustor geometries
[NASA-CR-168585] N82-19495
Accelerated convergence of structured banded systems using constrained corrections
[AD-A108805] N82 19912

FLUID MECHANICS
Rolling up of vortex sheets from the edges of lifting surfaces N82-19153

FLUIDS
Conception of an apparatus for pressure, density, and temperature measurements in the critical region of pure fluids in Spacelab
[BMFT-FB-W-81-026] N82-19527

FLUORESCENCE
Morphology of the polystyrene/poly(vinyl methyl ether) blend as studied by excimer fluorescence
[AD-A109143] N82-19378

FLUORIDES
Kinetic investigations of the reactions of UFG in the gaseous phase
[MPIS-1/1981] N82-19351

FLUOROCARBONS
Study of the kinetics of oxygen saturation of fluorocarbon emulsions --- blood substitutes
[ISSN-0077-5606] N82-19810

FLUTTER
Flutter and time response analyses of three degree of freedom airfoils in transonic flow
[AD-A108987] N82-19227
Active gust and maneuver load control concepts with the example of the Airbus A300. Part 1: Explanation of a regular in the time zone of wind gust load decrease and examination of its effectiveness in stochastic gusts
[MBB-FE-172/S/PUB/39-PT-1] N82-19228

FLUX DENSITY
Studies of the energy and the flux of water vapor in the atmosphere over northeastern Brazil
[INPE-2288-TDL/068] N82-19777

FLUX PUMPS
Pulsar theory: Particle acceleration and photon emission in the polar flux tube N82-20056

FLYBY MISSIONS
Giotto Comet Halley mission, phase A study. Volume 1: Spacecraft design
[ESS/SS/1000] N82-19313
A summary of space flight missions supported by the Deep Space Network N82-20116

FLYWHEELS
Life-size quantitative tests on a simple counterspun flywheel nutation damper
[BAE-NUTDAM-11] N82-19541
Design and fabrication of containment rings for use in tests of six prototype flywheel rotors
[DE81-030357] N82-19689

FORCE DISTRIBUTION
A study of the effects of leading-edge slats on the performance of slender wings --- wind tunnel measurement
[BU-266] N82-19193

FORCED CONVECTION
Mixed convection in molten metals
[BLL-RISLEY-TR-4385-(9091.9F)] N82-19355

FORCED VIBRATION
Transmission of sinusoidally changing vertical specific force to the heads of seated men measured in a flight simulator
[VTH-LR-319] N82-19847

FORECASTING
Report of the Air Traffic Forecasting Working Party, 1981 N82-19195
Review of the UK transport energy outlook: And policy recommendations
[EP-47] N82-19664
US energy for the rest of the century
[PB82-115866] N82-19697
Prediction of surf zone characteristics
[AD-A108759] N82-19804
Models of projection and localization of urban population using simulation techniques
[INPE-2207-PRE/013] N82-20023

FOREST MANAGEMENT
Method of interpretation of remote sensing data and applications to vegetation
[INPE-2215-MD/010] N82-19640

FORESTS
The effect of finite field size on classification and atmospheric correction
[NASA-TM-83818] N82-19645
The effects of sulfur dioxide and acid precipitation on decomposition and nutrient cycling processes N82-19700

FORGING
Practical applications of fracture mechanics
[AGARD-AG-257] N82-19571

FORMALISM
Course-of-values recursion on lists in intuitionist type theory
[CTH-MATH-1981-19] N82-19939

FORMAT
Universal documentation system handbook. Supplement 2: Procedures for the electronic transmission and processing of level 1, 2, and 3 test requirements and support information
[AD-A108901] N82-19251
GPRINT: A LISP pretty printer providing extensive user format-control mechanism
[AD-A109031] N82-19883

FORMING TECHNIQUES
Evaluation of superplastic forming and co-diffusion bonding of Ti-6Al-4V titanium alloy expanded sandwich structures
[NASA-CR-165827] N82-19358

FORTRAN
An ASCII FORTRAN subroutine for computing the electromagnetic radiation scattered by a sphere
[AD-A108772] N82-19433

FOURIER ANALYSIS
On the control, of cocurrent tubular chemical reactors
[RR-160] N82-19352

FOURIER TRANSFORMATION
Contour recognition and measurements using Fourier transformation
[DFVLR-MITT-81-22] N82-19926

FRACTURE MECHANICS
Fatigue crack growth in aluminum alloys
[VTH-LR-324] N82-19367
Fracture mechanics and failure predictions for glass, glass-ceramic, ceramic systems N82-19370
Pellini's theory of brittle fracture and the limits of its applicability
[DRIC-T-6468] N82-19565
Practical applications of fracture mechanics
[AGARD-AG-257] N82-19571
Surface-strengthening mechanisms in reaction-bonded Sisub3Nsub4 and subcritical-crack growth behavior in ceramics
[AD-A109087] N82-19582
Further studies on dynamic crack curving
[AD-A109299] N82-19586
Fracture and fatigue characterization of aircraft structural materials under biaxial loading
[AD-A109054] N82-19587
Sensitivity of the fracture probability in a reactor vessel to variations in data
[TRITA-HFL-0028] N82-19595

FRACTURE STRENGTH
A new fatigue resistant material: Aramide Reinforced Aluminum Laminate (ARALL)
[VTH-LR-322] N82-19326

FRACTURES (MATERIALS)
The value of dynamic fracture toughness and its dependence on material properties and loading conditions
[AD-A109151] N82-19574

FRACTURING
The development of a dynamic elastoplastic finite element analysis for fast fracture under impact loading
[AD-A109323] N82-19575
Surface modification in control SiO2 fiber fracture
[AD-A108796] N82-19589

FREE FLOW
Search for large-scale coherent structures in the nearly self-preserving region of a turbulent axisymmetric jet
[AD-A108334] N82-19501
The aerodynamical analysis of body in hypersonic source flow field N82-19518

FREE JETS
Theoretical investigation of the flow of a supersonic free jet from a slit
[MPIS-25/1980] N82-19182
Singularities of the solution of the problem of a weakly perturbed supersonic free jet with rotational symmetry
[MPIS-6/1980] N82-19188

FREE VIBRATION
The Shock and Vibration Digest, volume 13, no. 12
[AD-A109583] N82-19562
Finite-element modeling of layered, anisotropic composite plates and shells: A review of recent research N82-19563

FREEZING
Life sciences passive GN2 freezer thermal performance test
[NASA-CR-167546] N82-19809

FREON
A comparison between acetylene and freon rebreathing for measuring cardiac output during exercise --- in space N82-19831

FREQUENCIES
Guidelines for spaceborne microwave remote sensors
[NASA-RP-1086] N82-19647

FREQUENCY ASSIGNMENT
Guidelines for spaceborne microwave remote sensors
[NASA-RP-1086] N82-19647

FREQUENCY CONTROL
Investigation of shallow bulk acoustic waves
[AD-A109028] N82-19953

FREQUENCY CONVERTERS
A 12 GHz mixer with planar circuits in a waveguide
[INPE-2149-RPE/370] N82-19467

FREQUENCY DIVIDERS
Study of the availability of satellite telecommunication links subject to attenuation by rain
[INPE-2239-PRE/025] N82-19411
The generation of pseudorandom binary sequences in parallel --- frequency reduction
[FUB-9-1981] N82-19486
Evaluation of crystal oscillators and frequency dividers for high temperature operation
[NASA-CR-168561] N82-19682
SETI downconverter N82-20114

FREQUENCY MEASUREMENT
Regional classification of the spectral variance of long European temperature series and its application in a statistical filter model for forecasting in the region north of the alps
[BLL-TRANS-1514-(9022.552)] N82-19752

FREQUENCY RANGES
Two dimensional filters for digital processing of images: Design and implementation techniques
[INPE-2273-PRE/053] N82-19469
Dielectric properties of snow
[NASA-CR-166764] N82-19638
Three-dimensional migration velocity analysis in the space-frequency domain N82-19718

FREQUENCY SHIFT
Algorithms for tracking a sound source using frequency and bearings
[AD-A109276] N82-19950

FREQUENCY STANDARDS
Global positioning system timing receivers in the DSN N82-20126

FRESH WATER
Upper Chesapeake Bay salinity study
[PB82-116641] N82-19717

FRESNEL LENSES
Descent-rate cuing for carrier landings: Effects of display gain, display noise and aircraft type
[AD-A108801] N82-19206

FRESNEL REGION
Fresnel-region fields and antenna noise-temperature calculations for advanced microwave sounding units
[NASA-TM-83813] N82-19428

FRICTION

Tribological properties at 25 C of seven polyimide films bonded to 440 C high-temperature stainless steel
[NASA-TP-1944] N82-19373

FROZEN EQUILIBRIUM FLOW

Ideal MHD fluids N82-20040

FUEL CELL POWER PLANTS

Phosphoric acid fuel cell technology status
[NASA-TM-82791] N82-19670

FUEL CELLS

Production technology of an oxygen ion conductive ceramic for high temperature fuel cells and high temperature water electrolysis
[BMFT-FB-T-81-180] N82-19691

FUEL COMBUSTION

Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, volume 1
[PB82-100868] N82-19384

Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, appendices A, B, C and D, volume 2
[PB82-100876] N82-19385

FUEL CONSUMPTION

A concept for a fuel efficient flight planning aid for general aviation
[NASA-CR-3533] N82-19217

Conventional engine technology. Volume 1: Status of OTTO cycle engine technology
[NASA-CR-168643] N82-19542

Conventional engine technology. Volume 2: Status of diesel engine technology
[NASA-CR-168644] N82-19543

Conventional engine technology. Volume 3: Comparisons and future potential
[NASA-CR-168645] N82-19544

Review of the UK transport energy outlook: And policy recommendations
[EP-47] N82-19664

Urban traffic signal control for fuel economy. Part 2: Extension to small cars
[AD-A109393] N82-20025

Consumer behavior towards fuel efficient vehicles. Volume 1: Executive summary
[PB82-103300] N82-20027

FUEL-AIR RATIO

Initiation, combustion and transition to detonation in homogeneous and heterogeneous reactive mixtures: A summary
[AD-A109057] N82-19347

FUELS

On the disruptive vaporization and burning of emulsified and multicomponent fuel droplets
N82-19354

FULL SCALE TESTS

Life-size quantitative tests on a simple counterspun flywheel nutation damper
[BAE-NUTDAM-11] N82-19541

FUNCTIONAL ANALYSIS

Calculation of equivalent forces at nodes. Some examples in actual practice for calculations with the FEM method
[KTH-PUBL-212] N82-19921

On nuclear Koethe spaces defined by Dragilev functions
[ISSN-0355-0087] N82-19960

FUSELAGES

Structural system identification technology verification
[AD-A109181] N82-19583

FUZZY SYSTEMS

Fuzzy inference using a modified Modus Ponens rule
[INPE-2224-PRE/020] N82-19905

G

GALACTIC EVOLUTION

Origin of the large-scale structure of the universe
N82-20049

Galactic dynamics and gravitational plasmas --- spiral structure of galaxies N82-20050

GALACTIC NUCLEI

Measurements of the electron-positron annihilation line at 511 KeV emitted from the galactic center
[INPE-2222-PRE/018] N82-19961

Radiation processes in active galactic nuclei
N82-20042

Extragalactic radio sources --- observation of narrow features (jets) in galactic structure N82-20051

Hot plasmas in active galactic nuclei --- radiative processes N82-20058

GALACTIC RADIATION

Measurements of the electron-positron annihilation line at 511 KeV emitted from the galactic center
[INPE-2222-PRE/018] N82-19961

Acceleration of cosmic rays by shock waves
N82-20066

Data announcement bulletin: The Ariel V SSI 3A X-ray Catalogue
[NASA-TM-84029] N82-20089

HEAO 1 measurements of the galactic ridge
[NASA-TM-83844] N82-20097

GALACTIC STRUCTURE

Extragalactic radio sources --- observation of narrow features (jets) in galactic structure N82-20051

Production and propagation of jets --- narrow features in the structure of extragalactic radio sources N82-20055

HEAO 1 measurements of the galactic ridge
[NASA-TM-83844] N82-20097

Extragalactic gamma radiation: Use of galaxy counts as a galactic tracer
[NASA-TM-83901] N82-20109

GALILEO PROBE

Hypervelocity track tests of the NASA Galileo probe heatshield
[AD-A109042] N82-19291

GALLIUM ARSENIDES

Ga (As, P): N - LED's for monochromatic illumination --- with improved light emission efficiency
[BMFT-FB-T-81-198] N82-19482

High-energy ion implantation for multigigabit-rate GaAs integrated circuits
[AD-A108777] N82-19965

Impurity and defect characterization in epitaxial GaAs, InP and the ternary and quaternary compound semiconductors
[AD-A109052] N82-19997

GALLIUM COMPOUNDS

The attempted syntheses of low oxidation state, organometallic derivatives of aluminum, gallium and indium, a new synthesis Al(CH2SiMe3)3
[AD-A109333] N82-19317

GAME THEORY

Sharing costs fairly: A practical introduction to cooperative game theory --- costs of water facilities
[ER-5] N82-19934

Symmetric complementation, revision
[AD-A108823] N82-19936

GAMMA RAY ASTRONOMY

Goddard Contributions to the Workshop on Gamma Ray Transients
[NASA-TM-83816] N82-20112

GAMMA RAY BURSTS

Cosmic ray acceleration by stellar winds and self-confinement in giant H2 regions --- idealized model N82-20062

Precise source location of the anomalous 1979 March 5 gamma ray transient
[NASA-TM-83884] N82-20110

On the theory of Gamma Ray Amplification through Stimulated Annihilation Radiation (GRASAR)
[NASA-TM-83857] N82-20111

Goddard Contributions to the Workshop on Gamma Ray Transients
[NASA-TM-83816] N82-20112

GAMMA RAY SPECTRA

Goddard Contributions to the Workshop on Gamma Ray Transients
[NASA-TM-83816] N82-20112

GAMMA RAYS

Radiation and temperature tests of cadmium telluride detectors
[AD-A108774] N82-19522

Extragalactic gamma radiation: Use of galaxy counts as a galactic tracer
[NASA-TM-83901] N82-20109

GAS ANALYSIS

Integrated devices of semiconductor metal-oxides in conjunction with silicon for solid-state gas sensors
[DE82-000397] N82-19477

GAS COMPOSITION

The tropospheric gas composition of Jupiter's north equatorial belt (NH3, PH3, CH3D, GeH4, H2O) and the Jovian D/H isotropic ratio
[NASA-TM-83891] N82-20103

GAS DENSITY

Effect of vacuum processing on outgassing within an orbiting molecular shield
[NASA-TP-1980] N82-19390

GAS DISSOCIATION

Thermally dissociated chlorine and bromine molecular jets
[MPIS-26/1980] N82-19963

The development of a magnetically enhanced hydrogen gas dissociation N82-20118

GAS DYNAMICS

Conservative supra-characteristics method for splitting the hyperbolic systems of gasdynamics for real and perfect gases
[NASA-CR-166307] N82-19904

GAS EXCHANGE

On-line, real-time determinations of breath-to-breath gas exchange N82-19832

GAS EXPANSION

Angular momentum alignment in nozzle expansions of gas mixtures N82-19329

GAS FLOW

Laminar heat transfer with mass injection and chemical reaction N82-19615

Improvements of the algorithms used for Monte-Carlo direct simulation computations
[IC-AERO-81-03] N82-19891

GAS IONIZATION

Integral total collision and ionization cross sections for the interaction of excited He in the (2/super 1/S, 2/super 3/S) state with Ar in the thermal energy range
[MPIS-32/1980] N82-19350

Weak turbulence theory of enhanced gas ionization by plasma flow N82-20039

GAS LASERS

Materials processing in Space/Spacelab. FES/VCGS payload critical design review
N82-19235

Laser journal (selected articles)
[AD-A108173] N82-19535

A new feedback controlled current stabilized power supply for gas laser N82-19539

GAS MIXTURES

Properties of steady discharge in Ar-Kr-F2 gas mixture N82-19536

GAS RECOVERY

Cost analysis of NEDU's helium reclaimer
[AD-A108409] N82-19230

GAS STREAMS

Dilution jet behavior in the turn section of a reverse flow combuster
[NASA-TM-82776] N82-19220

GAS TRANSPORT

Surface reactions and fatigue crack growth
[AD-A109296] N82-19588

Study of the kinetics of oxygen saturation of fluorocarbon emulsions --- blood substitutes
[ISSN-0077-5606] N82-19810

GAS TURBINE ENGINES

Dilution jet behavior in the turn section of a reverse flow combuster
[NASA-TM-82776] N82-19220

Cooled variable-area radial turbine technology program
[NASA-CR-165408] N82-19221

GAS TURBINES

Tailored plasma sprayed MCrAlY coatings for aircraft gas turbine applications
[NASA-CR-165234] N82-19360

Hydrodynamic and aerodynamic breakup of liquid sheets
[NASA-TM-82800] N82-19494

GAS VISCOSITY

A doughnut model of quasars --- where viscous evolution does not occur N82-20068

GAS-GAS INTERACTIONS

Kinetic investigations of the reactions of UFG in the gaseous phase
[MPIS-1/1981] N82-19351

GAS-METAL INTERACTIONS

Acta Polytechnica Scandinavica. Oxygen-metal (Ag, Au, Bi, Cu, In, Ni, Sb, Sn, Te) interactions in dilute molten lead alloys
[ISBN-951-666-137-3] N82-19359

GASEOUS DIFFUSION
Free volume theory of diffusion into polymers. Part 1: Method of predicting activation energies of diffusion for gases into elastomers. Part 2: Diffusion of non-ionic dyes into semi-crystalline poly (ethylene terephthalate) films. Part 3: Relationship between glass-transition and dyeing-transition temperatures N82-19372
GATES (CIRCUITS)
Electrical characterization of super Schottky
[AD-A108736] N82-19996
GAUSS EQUATION
Three dimensional numerical model for estimation of pollutant concentration
[INPE-2193-TDL/060] N82-19703
GENERAL AVIATION AIRCRAFT
Bibliography of NASA published reports on general aviation, 1975 to 1981
[NASA-TM-83307] N82-19132
A design study of the Marshal — lightweight twin-engined aircraft
[BU-262] N82-19215
A concept for a fuel efficient flight planning aid for general aviation
[NASA-CR-3533] N82-19217
An experimental study of the effect of tail configuration on the spinning characteristics of general aviation aircraft — static wind tunnel force measurements
[NASA-CR-168578] N82-19224
GEOCORONAL EMISSIONS
Ionospheric irregularities in low latitudes of the American sector
[INPE-2243-TDL/065] N82-19725
GEODESY
Special activity utilization of GDSCC antennas during 1981 N82-20129
GEODETIC COORDINATES
Developments in geodesy within the scope of Helmut Wolf's work N82-19604
Mathematical and stochastic models in photogrammetry relating to Helmut Wolf's work N82-19605
The diagnosis settlement 1980 of the German main triangulation network. Part 2: Trajectories
[SER-B-253-MITT-159-PT-2] N82-19648
GEODETIC SATELLITES
Developments in geodesy within the scope of Helmut Wolf's work N82-19604
GEODETIC SURVEYS
Helmut Wolf: On the occasion of his 70th birthday
[SER-E-18] N82-19603
Developments in geodesy within the scope of Helmut Wolf's work N82-19604
Mathematical and stochastic models in photogrammetry relating to Helmut Wolf's work N82-19605
The diagnosis settlement 1980 of the German main triangulation network. Part 2: Trajectories
[SER-B-253-MITT-159-PT-2] N82-19648
GEOIDS
Gravity and geoid anomalies of the Philippine Sea: Evidence on the depth of compensation for the negative residual water depth anomaly
[NASA-CR-168639] N82-19732
Upper mantle heterogeneity: Comparisons of regions south of Australia with Philippine Basin
[NASA-CR-168646] N82-19733
GEOLOGICAL SURVEYS
Resourceful decisions: LANDSAT in Michigan
[E82-10037] N82-19601
Use of Magsat anomaly data for crustal structure and mineral resources in the US midcontinent
[E82-10049] N82-19624
GEOMAGNETIC HOLLOW
Upper mantle heterogeneity: Comparisons of regions south of Australia with Philippine Basin
[NASA-CR-168646] N82-19733
GEOMAGNETIC TAIL
Ionospheric ions in the near Earth geomagnetic tail plasma lobes
[IPS-81-7] N82-19743
GEOMAGNETISM
Equivalent source modeling of the main field using Magsat data
[E82-10041] N82-19616
Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites: Constraints on the regional emplacement of crustal resources
[E82-10043] N82-19618
Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites: Constraints on the regional emplacement of crustal resources
[E82-10044] N82-19619
Magsat science investigations
[E82-10045] N82-19620
Investigations of medium wavelength magnetic anomalies in the Eastern Pacific using Magsat data
[E82-10047] N82-19622
Studies related to Magsat — Backus effect and the westward drift
[E82-10050] N82-19625
Improved definition of crustal anomalies for Magsat data
[E82-10051] N82-19626
GEOMORPHOLOGY
Methodology of the interpretation of remote sensing data and applications in geomorphology
[INPE-2209-MD/007] N82-19642
GEOPHYSICS
The role of episodic bombardment in geophysics N82-20100
Spiral arms, comets and terrestrial catastrophism N82-20101
GEOPOTENTIAL
Geopotential harmonics of order 29, 30 and 31 from analysis of resonant orbits
[RAE-TR-81109] N82-19247
GEOSTROPHIC WIND
A study on the development of intermediate scale disturbances with a model of primitive equations of high vertical resolution
[INPE-2232-TDL/063] N82-19773
GEOTHERMAL ENERGY UTILIZATION
The geothermal probabilistic cost model with an application to a geothermal reservoir at Heber, California
[NASA-CR-168641] N82-19674
GEOTHERMAL RESOURCES
The geothermal probabilistic cost model with an application to a geothermal reservoir at Heber, California
[NASA-CR-168641] N82-19674
GLASS
The science and engineering of materials
[INPE-2138-RPE/361] N82-19316
The polarized infrared reflection spectroscopic characterization 'and aqueous durability of lithia-disilicate glass ceramics N82-19369
Fracture mechanics and failure predictions for glass, glass-ceramic, ceramic systems N82-19370
GLASS FIBER REINFORCED PLASTICS
Shear diffusion in sandwich specimens having glass reinforced plastic face plates with paper honeycomb cores
[BU-270] N82-19327
The significance of defects on the failure of fibre composites
[AGARD-R-690] N82-19326
GLASS FIBERS
Moisture and thermal expansion of composite materials
[AD-A109131] N82-19323
GLIDERS
On the design of some airfoils for sailplane application — additions to existing wings for inflight testing
[VTH-LR-326] N82-19213
GLOBAL POSITIONING SYSTEM
Global positioning system timing receivers in the DSN N82-20126
GOODNESS OF FIT
Binary mosaics and point quadrat sampling in ecology
[A-80-ST-96-37] N82-19705
GOVERNMENT PROCUREMENT
Remote sensing procurement package: A management report for state and local governments
[E82-10052] N82-19627
GOVERNMENT/INDUSTRY RELATIONS
Financial assessment of the Space Operations Center as a Private Business Venture
[NASA-CR-168636] N82-19248
GRADIENTS
The use of a nonquadratic model in a conjugate gradient method of optimization with inexact line searches
[MATHS-RES-157] N82-19885
GRAIN BOUNDARIES
Grain-coarsening resistance and the stability of second-phase dispersions in rapidly solidified steels
[AD-A109152] N82-19364
GRAINS (FOOD)
Operational performance of the photovoltaic-powered grain mill and water pump at Tangaye, Upper Volta
[NASA-TM-82767] N82-19673
GRAPH THEORY
Synchronization patterns and related problems in combinatorial analysis and graph theory
[AD-A108888] N82-19913
K-connectivity in random undirected graphs
[AD-A108826] N82-19914
Strong K-connectivity in digraphs and random digraphs
[AD-A109034] N82-19915
GRAPHITE-EPOXY COMPOSITES
Bolt clampup relaxation in a graphite/epoxy laminate
[NASA-TM-83268] N82-19320
Relative effects of a graphite fiber reinforced epoxy composite and nickel-aluminum bronze on a cathodic protection system in seawater
[AD-A109078] N82-19321
The development of a low velocity impact methodology for hybrid material systems
[AD-A109282] N82-19322
Moisture and thermal expansion of composite materials
[AD-A109131] N82-19323
Durability of adhesive bonded structures subjected to acoustic loads
[AGARD-R-701] N82-19600
GRASSLANDS
The effect of finite field size on classification and atmospheric correction
[NASA-TM-83818] N82-19645
GRAVITATIONAL EFFECTS
Collective gravitational effects — on particle motion N82-20072
GRAVITATIONAL FIELDS
Geopotential harmonics of order 29, 30 and 31 from analysis of resonant orbits
[RAE-TR-81109] N82-19247
GRAVITATIONAL WAVE ANTENNAS
The suspension system of the cryogenic gravitational antenna of the Istituto Plasma Spazio
[IPS-81-14] N82-19549
GRAVITATIONAL WAVES
Galactic dynamics and gravitational plasmas — spiral structure of galaxies N82-20050
GRAVITY ANOMALIES
Gravity and geoid anomalies of the Philippine Sea: Evidence on the depth of compensation for the negative residual water depth anomaly
[NASA-CR-168639] N82-19732
A simulation study to test the prediction of 1 deg times 1 deg mean gravity anomalies using least squares collocation from the GRAVSAT mission
[AD-A108867] N82-19735
GREENHOUSE EFFECT
Life on a warmer Earth: Possible climatic consequences of man made global warming
[ER-3] N82-19701
GROUND CREWS
Nonauditory effects of high intensity noise on ground crews at a naval air station
[AD-A108996] N82-19834
GROUND STATIONS
Mission support plan STS-2
[NASA-CR-167435] N82-19249
The 10 MHz crystal filter for SCPC Earth stations
[INPE-2286-PRE/062] N82-19470
GROUND SUPPORT SYSTEMS
Mission support plan STS-2
[NASA-CR-167435] N82-19249
Space telescope observatory management system preliminary test and verification plan
[NASA-CR-168587] N82-20090
GROUND TESTS
Electrical ground testing of aircraft antistatic protection N82-19156
GROUND TRUTH
AgRISTARS: Interim catalog ground data summary, data acquisition year 1979
[E82-10032] N82-19608

Recommended data sets, corn segments and spring wheat segments, for use in program development
[E82-10034] N82-19610

Agricultural soil moisture experiment, Colby, Kansas 1978: Measured and predicted hydrological properties of the soil
[E82-10057] N82-19632

Preliminary evaluation of spectral, normal and meteorological crop stage estimation approaches
[E82-10059] N82-19634

Notes for Brazil sampling frame evaluation trip
[E82-10060] N82-19635

Segment-level evaluation of the simulated aggregation test: US corn and soybean exploratory experiment
[E82-10061] N82-19636

GROUND WATER

Water resources data for New Hampshire and Vermont, water year 1980
[PB82-110156] N82-19658

Water resources data for Virginia, water year 1980
[PB82-113416] N82-19659

GROUND WIND

Active gust and maneuver load control concepts with the example of the Airbus A300. Part 1: Explanation of a regular in the time zone of wind gust load decrease and examination of its effectiveness in stochastic gusts
[MBB-FE-172/S/PUB/39-PT-1] N82-19228

GROUP THEORY

Spinor genera of orders and quadratic forms
[CTH-MATH-1981-20] N82-19922

Standard constructions in Abelian group theory
N82-19937

GUIDANCE SENSORS

OAO-3 end of mission tests report
[NASA-TM-83824] N82-19288

Longwall Guidance and Control Development
[NASA-TM-82455] N82-19637

GUNS (ORDNANCE)

Thermo-elastic-plastic stresses in multilayered cylinders
[AD-A109320] N82-19579

Stress intensity and fatigue crack growth in multiply-cracked, pressurized, partially autofrettaged thick cylinders
[AD-A109081] N82-19580

GUST ALLEVIATORS

A method for applying linear optimal control theory to the design of a regulator for a flexible aircraft --- improving riding quality in fighter aircraft
[NLR-TR-80032-U] N82-19212

GUSTS

Turbulence within cumulus clouds and outside them
[BLL-TRANS-1481-(9022.552)] N82-19762

Aircraft measurements of the frequency of turbulence encounters in Australia. A review and assessment
[AD-A108923] N82-19785

GYROSCOPIC STABILITY

Vibrations and stability of mechanical systems: 2
N82-19561

H

HABITATS

Application of remote sensing to state and regional problems --- mississippi
[E82-10033] N82-19609

HAILSTORMS

The use of weather radar in the civil aviation weather service
[BLL-TRANS-1456-(9022.552)] N82-19763

HALF SPACES

Wave propagation problems in certain elastic anisotropic half spaces N82-19454

HALIDES

Kinetic investigations of the reactions of UFG in the gaseous phase
[MPIS-1/1981] N82-19351

Measurement of integral scattering cross sections of hydrogen atom-molecular systems in the subthermal range
[MPIS-5/1981] N82-19967

HALLEY'S COMET

Giotto Comet Halley mission, phase A study. Volume 1: Spacecraft design
[ESS/SS/1000] N82-19313

HARNESSES

Disengagement of safety harness buckles - CT4
[AD-A109048] N82-19199

HAZARDS

A mobile stream diversion system for hazardous materials spills isolation
[PB82-109679] N82-19661

Nonauditory effects of high intensity noise on ground crews at a naval air station
[AD-A108996] N82-19834

HEAO 1

Modeling the data systems role of the scientist (for the NEEDS Command and Control Task)
[NASA-TM-84028] N82-20012

HEAO 2

HEAO 1 measurements of the galactic ridge
[NASA-TM-83844] N82-20097

HEART FUNCTION

Use of acetylene rebreathing method for measuring cardiac output during physiological and clinical studies N82-19830

A comparison between acetylene and freon rebreathing for measuring cardiac output during exercise --- in space N82-19631

HEAT CAPACITY MAPPING MISSION

Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements
[E82-10048] N82-19623

HEAT FLUX

Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements
[E82-10048] N82-19623

Estimating ocean-air heat fluxes during cold air outbreaks by satellite
[NASA-TM-83854] N82-19781

HEAT OF SOLUTION

Measurement of the differential scattering cross sections of electron excited sodium by argon
[MPIS-31/1980] N82-19349

HEAT PIPES

OAO-3 end of mission tests report
[NASA-TM-83824] N82-19288

High performance Variable Conductance Heat Pipe (VCHP) follow-on development: Phase 2
[SABCA-JPM/LN/HO5/NO144-VOL-1] N82-19508

Follow-on development of small cryogenic heat pipes: Phase 2 report
[SABCA-JPM/LN/HO5/N11-VOL-2] N82-19509

HEAT SHIELDING

Hypervelocity track tests of the NASA Galileo probe heatshield
[AD-A109042] N82-19291

HEAT STORAGE

Examination of heat storage in soil --- for low temperature heat from solar panels
[BMFT-FB-T-81-200] N82-19694

HEAT TRANSFER

A study of liquid hydrogen cooled LO-2/LH-2 rocket combustor with slotted wall liner
[NAL-TR-679] N82-19314

Effect of location in an array on heat transfer to a cylinder in crossflow
[NASA-TM-82797] N82-19493

Performance Technology Program (PTP-S 2). Volume 9: Evaluation of reentry vehicle nosetip transition and heat transfer in the AEDC hyperballistics track G
[AD-A108848] N82-19505

Acta Mechanica Sinica (selected articles)
[AD-A106208] N82-19513

Laminar heat transfer with mass injection and chemical reaction N82-19515

A review of the salt-gradient solar pond technology
[NASA-CR-168635] N82-19675

A free boundary value problem arising in climate dynamics
[AERONOMICA-ACTA-A-240-1981] N82-19767

Some aspects of two-phase flow, heat transfer and dynamic instabilities in medium and high pressure steam generators N82-20004

HEAT TRANSFER COEFFICIENTS

Retrospective analysis of satellite thermal systems
[INPE-2295-TDL/069] N82-19287

HEATING EQUIPMENT

Energy conservation in the production of domestic hot water
[EP-48] N82-19665

HEISENBERG THEORY

The anisotropic classical chain. Thermodynamic properties and phase diagrams N82-20003

HELICAL ANTENNAS

Design for the installation of a system of antennas for stratospheric balloon mobile tracking stations
[INPE-2306-PRE/073] N82-19424

HELICOPTER CONTROL

Interactions between helmet mounted sight display and sensor platform under the influence of a human pilot --- helicopter low altitude flights
[DFVLR-FB-81-30] N82-19648

HELICOPTER DESIGN

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 1: Executive Summary
[NASA-TM-84149] N82-19170

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 2: Operators' Views
[NASA-TM-84148] N82-19171

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 4: Flight Control Avionics Systems and Human Factors
[NASA-TM-84146] N82-19173

Experience during the development of the German-Japanese helicopter BK 117
[MBB-UD-318-81-O] N82-19210

Design study into a high endurance mini-rotorcraft
[BU-265] N82-19216

HELICOPTER ENGINES

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 1: Executive Summary
[NASA-TM-84149] N82-19170

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 2: Operators' Views
[NASA-TM-84148] N82-19171

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 4: Flight Control Avionics Systems and Human Factors
[NASA-TM-84146] N82-19173

HELICOPTER PERFORMANCE

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 1: Executive Summary
[NASA-TM-84149] N82-19170

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 2: Operators' Views
[NASA-TM-84148] N82-19171

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 4: Flight Control Avionics Systems and Human Factors
[NASA-TM-84146] N82-19173

HELICOPTERS

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 1: Executive Summary
[NASA-TM-84149] N82-19170

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 2: Operators' Views
[NASA-TM-84148] N82-19171

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 3: Aerodynamics and Structures Session
[NASA-TM-84147] N82-19172

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 4: Flight Control Avionics Systems and Human Factors
[NASA-TM-84146] N82-19173

Structural system identification technology verification
[AD-A109181] N82-19583

Effects of repetition rate and impulsiveness of simulated helicopter rotor noise on annoyance
[NASA-TP-1969] N82-19707

Noise measurements on the helicopter BK 117 design. Weighted noise levels and influence of airspeed
[DFVLR-MITT-81-18] N82-19957

HELIOS PROJECT

Routine data processing and physical interpretation of data obtained by the fluxgate and search coil magnetometer experiments on board Helios 1 and 2 --- on interplanetary and solar magnetic fields
[BMFT-FB-W-81-039] N82-20099

HELIOS SATELLITES

Inferences about the solar wind dynamics from observed distributions of electrons and ions --- Voyager and Helios observations N82-20046

HELIOS 1
Helios Mission support N82-20117
HELIOSPHERE
The International Solar Polar Mission (ISPM) N82-20048
HELIUM
Cost analysis of NEDU's helium reclaimer
[AD-A108409] N82-19230
HELIUM PLASMA
An appendix to the paper Plasma Electron Temperature Determination in Low-Density Plasmas from the Helium I 3889 A and 5016 A Line intensities
[TRITA-EPP-81-03] N82-19986
Scaling laws of the multicomponent cool plasma mantle
[TRITA-PFU-81-04] N82-19989
HELMET MOUNTED DISPLAYS
Equipment for testing and measuring a 'helmet mounted sight and display' system with a coupled movable TV camera in the flight simulator for research of the DFVLR
[ESA-TT-675] N82-19219
Interactions between helmet mounted sight display and sensor platform under the influence of a human pilot — helicopter low altitude flights
[DFVLR-FB-81-30] N82-19848
HELMETS
Improvements to speech quality from a diving helmet
[BBC-RD-1981/9] N82-19399
HEMODYNAMIC RESPONSES
Hemodynamic effects of lower body positive pressure N82-19824
Cerebral hemodynamics at zero gravity N82-19827
HEWLETT-PACKARD COMPUTERS
Fast processor for spectral analysis (ORAS)
[CRPE-NT-106] N82-19870
HF LASERS
Kinetic investigations of the reactions of UFG in the gaseous phase
[MPIS-1/1981] N82-19351
HIERARCHIES
The Naval postgraduate school SECURE ARCHIVAL STORAGE SYSTEM. Part 2: Segment and process management implementation
[AD-A109553] N82-20016
HIGH ALTITUDE
Aircraft measurements of the frequency of turbulence encounters in Australia. A review and assessment
[AD-A108923] N82-19785
HIGH ENERGY INTERACTIONS
Certain aspects of primary cosmic rays composition at energies of 10 to the 14th power to 10 to the 15th power eV N82-20074
HIGH ENERGY PROPELLANTS
High energy propellants containing magnesium
[FOA-C-20432-D1] N82-19382
HIGH FREQUENCIES
A method of measuring and recording. The impulse response of the ionospheric channel
[CRC-1352] N82-19427
Detection of periodically fluctuating noise — from ships
[FOA-C-30223-E1] N82-19955
HIGH PRESSURE
Laboratory verification of blast-induced liquefaction mechanism
[AD-A109000] N82-19393
HIGH SPEED
Ultra high speed image processing techniques — electronic packaging techniques
[NASA-CR-166771] N82-19466
HIGH STRENGTH STEELS
Study of near-threshold fatigue crack propagation in pipeline steels in high pressure environments
[NASA-CR-166295] N82-19388
HIGH TEMPERATURE
Tribological properties at 25 C of seven polyimide films bonded to 440 C high-temperature stainless steel
[NASA-TP-1944] N82-19373
HIGH TEMPERATURE ENVIRONMENTS
Evaluation of crystal oscillators and frequency dividers for high temperature operation
[NASA-CR-168561] N82-19682
HIGH TEMPERATURE LUBRICANTS
Ion-plated lead as a film lubricant for bearings in vacuum N82-19546
HIGH TEMPERATURE PLASMAS
Interstellar matter — thermal and pressure balance N82-20035
Hot plasmas in active galactic nuclei — radiative processes N82-20059
HIGHWAYS
Water pollution from highways and urban areas: An annotated bibliography (supplement)
[PB82-113317] N82-19714
HISTORIES
Astronautics: Kepler and Hohmann
[TUM-RT-KB-80/1] N82-19238
HOLOGRAPHY
Materials processing in Space/Spacelab. FES/VCGS payload critical design review N82-19235
Space-variant optical systems
[AD-A109083] N82 19524
HOMEOSTASIS
Volume regulating hormones and their role in the cardiovascular adaptation to zero gravity N82-19822
HOMING DEVICES
Target/clutter discrimination techniques for laser semi-active missile systems N82-19253
HONEYCOMB CORES
Shear diffusion in sandwich specimens having glass reinforced plastic face plates with paper honeycomb cores
[BU-270] N82-19327
HORIZONTAL ORIENTATION
Turbulence within cumulus clouds and outside them
[BLL-TRANS-1481-(9022.552)] N82-19762
HORMONES
Volume regulating hormones and their role in the cardiovascular adaptation to zero gravity N82-19822
HORN ANTENNAS
The suitability of mesh membrane material for radiometer reflector applications N82-19270
HOT CORROSION
Corrosion of carbon steel at high temperature in reducing chemical conditions
[CISE-1699] N82-19368
HOT-WIRE FLOWMETERS
Investigations of flowfields found in typical combustor geometries
[NASA-CR-168585] N82-19495
HTPB PROPELLANTS
High energy propellants containing magnesium
[FOA-C-20432-D1] N82-19382
HULLS (STRUCTURES)
Underwater shock analysis of nonlinear structures, a reference manual for the USA-STAGS code, version 3
[AD-A108911] N82-19584
HUMAN BODY
Hemodynamic effects of lower body positive pressure N82-19824
Transmission of sinusoidally changing vertical specific force to the heads of seated men measured in a flight simulator
[VTH-LR-319] N82-19847
HUMAN FACTORS ENGINEERING
Structural assembly demonstration experiment N82-19282
Structural Assembly Demonstration Experiment (SADE) experiment design N82-19283
Large Space Shuttle Flight Experiment N82-19285
Review of health and safety aspects of video display terminals
[CRC-TN-712-E] N82-19816
Human Factors in System Development: Experiences and Trends — conference proceedings
[FOA-A-56003-H9] N82-19839
Human factors and the real world — limitations on the man machine systems design process N82-19840
Human factors in system development: Status and evaluation N82-19841
Ergonomic considerations in product design and evaluation — product adaptation to man and his real needs and abilities N82-19842
Human factors and safety in nuclear power plant operation N82-19843
Work paradigms in human factors research N82-19844
Human factors for the future: Trends and speculations N82-19845
SAM: A configurable experimental text editor for investigating human factors issues in text processing and understanding
[AD-A109331] N82-19848
A two-dimensional core graphics system for research in human-computer interfaces
[AD-A109280] N82-19861
Guidelines for the design of inherently quiet airlocks for manned spacecraft
[ACUN-8006] N82-19954
HUMAN REACTIONS
Catecholamine levels in fit and nonfit males when exposed to an emotional stress N82-19813
HUMIDITY
Design calculation procedure for passive solar houses at Navy installations in regions with warm, humid climate, volume 3
[AD-A108384] N82-19665
HYBRID PROPELLANT ROCKET ENGINES
The DAEDUT/PMLTNO hybrid rocket motor facilities
[VTH-LR-321] N82-19315
HYBRID STRUCTURES
The development of a low velocity impact methodology for hybrid material systems
[AD-A109282] N82-19322
HYDRAULIC EQUIPMENT
TRANSID: A computer program for the analysis of hydraulic transients in condenser cooling circuits
[CISE-1722] N82-19512
HYDRAULICS
Activities report of the Hydraulics Laboratory N82-19489
HYDRAZINES
Study of liquid slosh in the tracking and data relay satellite hydrazine tanks
[NASA-CR-166745] N82-19492
HYDRODYNAMICS
Hydrodynamic and aerodynamic breakup of liquid sheets
[NASA-TM-82800] N82-19494
HYDROGEN
Deuterium hydrogen isotope ratios in organic matter, mineral oils, and natural gases — oil exploration
[BMFT-FB-T-81-204] N82-19319
Configurational effects in the adsorption of HD on ZnO
[AD-A109368] N82-19341
Weak and strong ignition. 2: Sensitivity of the hydrogen-oxygen system
[AD-A108843] N82-19342
Effect of vacuum processing on outgassing within an orbiting molecular shield
[NASA-TP-1980] N82-19390
HYDROGEN ATOMS
Resonance studies of hydrogen atoms interacting with very cold surfaces
[AD-A109040] N82-19966
Measurement of integral scattering cross sections of hydrogen atom-molecular systems in the subthermal range
[MPIS-5/1981] N82-19967
HYDROGEN BONDS
Configurational effects in the adsorption of HD on ZnO
[AD-A109368] N82-19341
The electronic and atomic structure of diamond surface and effects of hydrogen termination
[AD-A109142] N82-19994
HYDROGEN FUELS
Ignition, combustion, detonation and heat addition to established flows
[AD-A108580] N82-19339
HYDROGEN MASERS
Lightweight hydrogen maser
[AD-A108628] N82-19530
The development of a magnetically enhanced hydrogen gas dissociation N82-20118
HYDROGEN PLASMA
Scaling laws of the multicomponent cool plasma mantle
[TRITA-PFU-81-04] N82-19989

HYDROGEN SULFIDE
A high resolution spectroscopic study of the v sub 2 band of hydrogen sulfide and the 1-0 band of hydrogen iodide
[NASA-TM-83852] N82-19336
HYDROLOGY
Data collection platforms: Applications to hydrology
[INPE-2246-PRE/030] N82-19304
Model choice: An operational comparison of stochastic streamflow models for droughts
N82-19602
Hydrological problems of surface mining --- of coal
[ICTIS-TR-17] N82-19606
Agricultural soil moisture experiment, Colby, Kansas 1978: Measured and predicted hydrological properties of the soil
[E82-10057] N82-19632
Case studies of national hydrological data banks (planning, development and organization)
[WMO-576] N82-19655
Cost estimates in connection with the selection of a system for long-term storage of hydrometeorological data
[BLL-TRANS-1502-(9022.552)] N82-19760
HYDROLOGY MODELS
Improved St. Clair River dynamics flow models and comparison analysis
[PB82-119272] N82-19657
HYDROPHONES
Spherical acoustic broadband receiver
[AD-A109273] N82-19949
HYDROSTATIC PRESSURE
Maintenance of hydrostatic transmissions
[DRIC-T-6497] N82-19490
Research on the effects of hydrostatic pressure on the electronic states of impurities
[AD-A108403] N82-19503
HYDROTHERMAL SYSTEMS
A review of the salt-gradient solar pond technology
[NASA-CR-168635] N82-19675
HYPERBARIC CHAMBERS
Cost analysis of NEDU's helium reclaimer
[AD-A108409] N82-19230
HYPERBOLIC DIFFERENTIAL EQUATIONS
Conservative supra-characteristics method for splitting the hyperbolic systems of gasdynamics for real and perfect gases
[NASA-CR-166307] N82-19904
HYPERBOLIC FUNCTIONS
Two-step implicit schemes for the solution of a conservation equation N82-20137
HYPERFINE STRUCTURE
A high resolution spectroscopic study of the v sub 2 band of hydrogen sulfide and the 1-0 band of hydrogen iodide
[NASA-TM-83852] N82-19336
HYPERSONIC FLOW
The measurements of the static and dynamic stability derivatives of conical models in the shock tunnel
N82-19516
The aerodynamical analysis of body in hypersonic source flow field N82-19518
HYPOTHESES
An investigation of the lag between the start of research and the development of new technology
[NASA-CR-168583] N82-20005

I

IBM COMPUTERS
Los Alamos Scientific Laboratory computer benchmark performance 1979
[LA-8689-MS] N82-19849
ICE FORMATION
Helicopter Icing Spray System (HISS) nozzle improvement evaluation
[AD-A109405] N82-19208
Statistical study of freezing clouds in the GINA 2-PAP, March - April 1979
[BLL-TRANS-1511-(9022.552)] N82-19754
Microwave radiometric observations near 19.35, 92 and 183 GHz of precipitation in tropical storm Cora
[NASA-TM-82164] N82-19779
ICE MAPPING
Sea ice movements from synthetic aperture radar
[AD-A109002] N82-19435
ICEBERGS
European Scientific Notes, volume 35, number 11
[AD-A109387] N82-20138
IDEAL FLUIDS
Ideal MHD fluids N82-20040
IDENTIFYING
Microprocessor controlled stamping unit with needle printer
[BMFT-FB-T-81-189] N82-19868
IGNITION
Propulsion system ignition overpressure for the Space Shuttle
[NASA-TM-82458] N82-19299
Weak and strong ignition. 2: Sensitivity of the hydrogen-oxygen system
[AD-A108843] N82-19342
Initiation, combustion and transition to detonation in homogeneous and heterogeneous reactive mixtures: A summary
[AD-A109057] N82-19347
ILLUMINANCE
Analysis of the illumination of areas covered by a satellite in a heliosynchronous circular orbit
[INPE-2208-RPE/398] N82-19872
IMAGE CONTRAST
Improvement of the X-ray procedure for the detection of defective adhesions in fiber composites by adding contrast substances to the adhesives
[BMVG-FBWT-81-11] N82-19324
IMAGE FILTERS
Structural pattern recognition
[INPE-2098-RPE/328] N82-19895
IMAGE PROCESSING
Multi-dimensional signal-processing research program
[AD-A108641] N82-19429
Ultra high speed image processing techniques --- electronic packaging techniques
[NASA-CR-166771] N82-19466
Two dimensional filters for digital processing of images: Design and implementation techniques
[INPE-2273-PRE/053] N82-19469
Automatic analysis of multispectral images
[INPE-2212-MD/009] N82-19520
Catoptric X-ray optical system for use in laser-fusion diagnostics
[AD-A109037] N82-19532
LANDSAT imagery of the Venetian Lagoon: A multitemporal analysis
[E82-10036] N82-19612
Delineation of soil temperature regimes from HCMM data
[E82-10042] N82-19617
AgRISTARS: Early warning and crop condition assessment. Patch image processor user's manual
[E82-10055] N82-19630
Study of Earth Resources Satellite (ERS) data reduction unit
[BAE-TP-7905] N82-19649
Data rate reduction. Impact of image data compression on end to end data management of a multispectral payload --- for satellite imagery
[REPT-44/130] N82-19654
Binary mosaics and point quadrat sampling in ecology
[A-80-ST-96-37] N82-19705
Correction for atmospheric effects in satellite images
[INPE-2281-PRE/059] N82-19728
IMIO: A routine library for image input/output files on DEC-10. Directions for use
[FOA-C-30228-E1] N82-19888
Selection of attributes applied to multispectral images
[INPE-2303-TDL/072] N82-19927
Methods of image compression without information loss
[INPE-2274-PRE/054] N82-20013
IMAGE RESOLUTION
Comparison of some irregular methods for level plotting interpolation
[FOA-C-20433-D8] N82-19887
IMAGERY
NASA Facts: Images of Saturn from Voyager 2
[NASA-NF-132/10-81] N82-20102
IMAGING TECHNIQUES
Syntactic visual image generation system feasibility study
[AD-A109334] N82-19858
IMPACT TESTS
The development of a low velocity impact methodology for hybrid material systems
[AD-A109282] N82-19322
Impact response characteristics of polymeric materials
[AD-A109281] N82-19377
IMPEDANCE
Antenna (selected articles)
[AD-A109174] N82-19455
Input impedance of system made of intersecting low-set vibrators N82-19460
The 10 MHz crystal filter for SCPC Earth stations
[INPE-2286-PRE/062] N82-19470
IMPEDANCE MEASUREMENT
Antenna (selected articles)
[AD-A108174] N82-19448
Efficiency and input impedance of planar emitter placed near the interface N82-19451
IMPLANTATION
A system for implantation of data banks in Burroughs series B7000/B6000 computers
[INPE-2299-TDL/070] N82-19876
IMPURITIES
Impurities in quasi one-dimensional systems. A study on some thermodynamic properties N82-20002
INCIDENCE
High speed aerodynamic characteristics of the GAFOPH aerofoil
[AD-A108922] N82-19183
INCOMPRESSIBLE FLOW
Numerical study of incompressible slightly viscous flow past blunt bodies and airfoils N82-19163
Subsonic panel method for the efficient analysis of multiple geometry perturbations
[NASA-CR-3528] N82-19180
On the Neumann problem for the pressure in a Navier-Stokes model --- of boundary layer flow
[PUBL-257] N82-19511
INDEPENDENT VARIABLES
Introduction to celestial mechanics
[INPE-2126-RPE/350] N82-20096
INDEXES (DOCUMENTATION)
Literature study of the biodegradability of chemicals in water. Volume 1: Biodegradability prediction, advances in chemical interferences with wastewater treatment
[PB82-100843] N82-19711
Literature study of the biodegradability of chemicals in water. Volume 2: Permutated index of chemicals, microbial populations, and wastewater treatment systems with bibliography
[PB82-100850] N82-19712
INDIA
Joint Indian-German program on solar energy: Phase 2 --- village energy supply
[BMFT-FB-T-81-182] N82-19693
INDIAN OCEAN
The TOCIND experiment --- relation between surface isotherms and ocean currents
[CTAMN/81/R/10] N82-19805
INDIAN SPACE PROGRAM
Space activities in the 80's: The programs and the industry. Part 4: Outlook of space industry outside Europe (1981)
[ESA-SP-1012-VOL-3] N82-19245
INDIANA
Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements
[E82-10048] N82-19623
INDUSTRIAL AREAS
Preliminary study on the supply of industrial water by advanced treatment of waste water discharged from a sewage treatment plant
[BMFT-FB-T-81-205] N82-19709
INDUSTRIAL ENERGY
Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, volume 1
[PB82-100868] N82-19384
Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, appendices A, B, C and D, volume 2
[PB82-100876] N82-19385
The techniques, magnitudes and opportunities for development of energy storage (UK)
[PB82-120858] N82-19696

INDUSTRIAL WASTES
Small scale reclamation/disposal of toxic porcelain enameling waste sludges
[PB82-101983] N82-19710
INDUSTRIES
Experience during the development of the German-Japanese helicopter BK 117
[MBB-UD-318-81-O] N82-19210
INELASTIC SCATTERING
Level shifts and inelastic electron scattering in dense plasmas
[AD-A109799] N82-19986
INERTIA
Large scale dynamics of long flexible cables towed through air
[KTH-AERO-TN-61] N82-19567
INERTIAL REFERENCE SYSTEMS
CAO-3 end of mission tests report
[NASA-TM-83824] N82-19288
INERTIAL UPPER STAGE
Upper stage alternatives for the shuttle era
[NASA-TM-84137] N82-19303
INFERENCE
Fuzzy inference using a modified Modus Ponens rule
[INPE-2224-PRE/020] N82-19905
INFLATABLE STRUCTURES
The structural behaviour of inflated cylindrical cantilever beams — under load
[BU-260] N82-19597
INFORMATION ADAPTIVE SYSTEM
An information adaptive system study report and development plan
[NASA-CR-166786] N82-19844
INFORMATION DISSEMINATION
Experience during the development of the German-Japanese helicopter BK 117
[MBB-UD-318-81-O] N82-19210
Columbia carries astronomy experiments on third test flight
[NASA-NEWS-RELEASE-82-29] N82-19298
RIW workshop report
[AD-A108798] N82-19551
AgRISTARS: Soil moisture/early warning and crop condition assessment. Interface control document
[E82-10053] N82-19628
INFORMATION FLOW
Improving communication in organization operation: Preparing communication resources in a large enterprise
[MBB-BB-499-81-O] N82-20010
INFORMATION MANAGEMENT
Case studies of national hydrological data banks (planning, development and organization)
[WMO-576] N82-19655
Improving communication in organization operation: Preparing communication resources in a large enterprise
[MBB-BB-499-81-O] N82-20010
INFORMATION RETRIEVAL
Literature study of the biodegradability of chemicals in water. Volume 2: Permutated index of chemicals, microbial populations, and wastewater treatment systems with bibliography
[PB82-100850] N82-19712
Methods of image compression without information loss
[INPE-2274-PRE/054] N82-20013
INFORMATION SYSTEMS
Universal documentation system handbook. Supplement 2: Procedures for the electronic transmission and processing of level 1, 2, and 3 test requirements and support information
[AD-A108901] N82-19251
Cost estimates in connection with the selection of a system for long-term storage of hydrometeorological data
[BLL-TRANS-1502-(9022.552)] N82-19760
Climate Analysis Center Users Conference
[PB82-113326] N82-19793
The SACLANTCEN oceanographic data base. Volume 2: Access, interrogation and display
[AD-A109417] N82-19803
Formatting and documenting multidisciplinary data
[PB82-122862] N82-20018
The periodical management system
[PB82-119518] N82-20019
INFORMATION THEORY
Information theory lateral density distribution for Earth inferred from global gravity field
[NASA-TM-83825] N82-19731
Data independent accessing methodology distributed access
[AD-A108645] N82-19852
Methods of image compression without information loss
[INPE-2274-PRE/054] N82-20013
INFRARED IMAGERY
On the accuracy of thermal inertia mapping by infrared imagery
[SAAB-REPR-AE-10] N82-19656
INFRARED INTERFEROMETERS
Aircraft-borne measurement of infrared sources and backgrounds
[AD-A108871] N82-19977
INFRARED LASERS
Laser journal (selected articles)
[AD-A108173] N82-19535
Nd:YAG pulsed laser output at 1.064, 1.073, 1.061 and 1.052 micrometers singlet spectral lines
N82-19538
INFRARED PHOTOGRAPHY
Remote sensing of sulfur dioxide effects on vegetation. Volume 1: Summary
[PB82-115122] N82-19715
Remote sensing of sulfur dioxide effects on vegetation. Volume 2: Data
[PB82-115130] N82-19716
Optical imaging instruments for the Land Application Satellite System. Phase A study. Volume 1
[REPT-80/1023-VOL-1] N82-19979
INFRARED RADIATION
Aircraft infrared radiation modeling N82-20134
INFRARED RADIOMETERS
Monitoring tropical cyclone intensity using wind fields derived from short-interval satellite images
[NASA-TM-82162] N82-19780
Aircraft-borne measurement of infrared sources and backgrounds
[AD-A108871] N82-19977
INFRARED SCANNERS
Development of a breadboard cooler for infrared remote sensing payloads, phase 1 — Earth Resources Satellite ERS 1
[FOK-RV-R-81-064] N82-19653
VISSR Atmospheric Sounder (VAS) simulation experiment for a severe storm environment
[NASA-TM-83822] N82-19774
INFRARED SPECTRA
Laser journal (selected articles)
[AD-A108173] N82-19535
Nd:YAG pulsed laser output at 1.064, 1.073, 1.061 and 1.052 micrometers singlet spectral lines
N82-19538
The tropospheric gas composition of Jupiter's north equatorial belt (NH3, PH3, CH3D, GeH4, H2O) and the Jovian D/H isotropic ratio
[NASA-TM-83891] N82-20103
INFRARED SPECTROMETERS
Cryogenically cooled infrared interferometric spectrometers
[AD-A108868] N82-19525
INFRARED SPECTROSCOPY
The polarized infrared reflection spectroscopic characterization and aqueous durability of lithia-disilicate glass ceramics N82-19369
INFRARED WINDOWS
Detection range probabilities of passive infrared systems for the North Atlantic
[AD-A108812] N82-19974
INFRASONIC FREQUENCIES
Studies of the stratospheric and mesospheric wind system and temperature distribution from observations of infrasonic waves generated during regular Concorde flights
[KGI-176] N82-19789
INJECTORS
Structural dynamic analysis of the Space Shuttle Main Engine
[NASA-CR-161945] N82-19302
INLAND WATERS
Vegetative erosion control studies Tennessee-Tombigbee Waterway
[AD-A108318] N82-19708
INLET FLOW
An experimental study of the effects of an inlet flow conditioner on the noise of a low speed axial flow fan — in an aircraft engine
[TT-8101] N82-19956
INORGANIC COMPOUNDS
European Scientific Notes, volume 35, number 11
[AD-A109367] N82-20138
INPUT/OUTPUT ROUTINES
PRINTR: A text and graph plotting system with expanded capabilities
[AD-A109045] N82-19859
IMIO: A routine library for image input/output files on DEC-10. Directions for use
[FOA-C-30228-E1] N82-19866
INSOLATION
Some aspects of the solar radiation incident at the top of the atmospheres of Mercury and Venus
[AERONOMICA-ACTA-A-236-1981] N82-19722
INSTRUMENT LANDING SYSTEMS
Descent-rate cuing for carrier landings: Effects of display gain, display noise and aircraft type
[AD-A108801] N82-19206
FM broadcast interference related to airborne ILS, VOR and VHF communications
[RTCA/DO-176] N82-19419
Investigation of technical requirements
N82-19420
Investigation of airborne VHF communication and navigation equipment N82-19421
INTAKE SYSTEMS
Computation of transonic potential flow about 3 dimensional inlets, ducts, and bodies
[NASA-CR-3514] N82-19179
Performance of single-stage axial-flow transonic compressor with rotor and stator aspect ratios of 1.63 and 1.78, respectively, and with design pressure ratio of 1.82
[NASA-TP-1974] N82-19222
INTEGERS
Computational advances in large-scale nonlinear optimization
[AD-A109528] N82-19917
Algorithm for the calculation of the largest integer in the quare root of a natural number
[PREPRINT-11] N82-19918
INTEGRATED CIRCUITS
High stability coplanar oscillators
[CISE-1720] N82-19485
Evaluation of crystal oscillators and frequency dividers for high temperature operation
[NASA-CR-168561] N82-19662
Good layouts for pattern recognizers
[AD-A109324] N82-19897
High-energy ion implantation for multigigabit-rate GaAs integrated circuits
[AD-A108777] N82-19965
INTELLIGENCE
Intelligence Processor Performance Analysis (IPPA)
[AD-A108794] N82-19855
INTERATOMIC FORCES
Measurement of integral scattering cross sections of hydrogen atom-molecular systems in the subthermal range
[MPIS-5/1981] N82-19987
INTERFACES
Efficiency and input impedance of planar emitter placed near the interface N82-19451
Static and hydrodynamic studies of the conformation of adsorbed macromolecules at the solid/liquid interface N82-19488
INTERFEROMETRY
Cryogenically cooled infrared interferometric spectrometers
[AD-A108868] N82-19525
INTERGALACTIC MEDIA
Evolution of X-ray astronomy — spaceborne observations of extragalactic X-ray sources
N82-20053
Extragalactic gamma radiation: Use of galaxy counts as a galactic tracer
[NASA-TM-83901] N82-20109
INTERMODULATION
Investigation of the effects of airborne installation factors on receiver interference N82-19422
INTERNAL COMBUSTION ENGINES
Evaluation and control of the exhaust noise of reciprocating I.C. engines N82-19559

INTERNATIONAL COOPERATION

The European Airbus: A challenge to the American commercial aircraft industry
[MBB-UH-01-81-O] N82-19162

Experience during the development of the German-Japanese helicopter BK 117
[MBB-UD-318-81-O] N82-19210

Joint Indian-German program on solar energy: Phase 2 — village energy supply
[BMFT-FB-T-81-182] N82-19693

INTERNATIONAL RELATIONS

United States-Canadian relations and acid rain
[GPO-80-995] N82-19706

INTERNATIONAL SOLAR POLAR MISSION

The International Solar Polar Mission (ISPM)
N82-20048

INTERNATIONAL SUN EARTH EXPLORERS

Modeling the data systems role of the scientist (for the NEEDS Command and Control Task)
[NASA-TM-84028] N82-20012

INTERPLANETARY MAGNETIC FIELDS

Event study on pre-substorm phases and their relation to the energy coupling between solar wind and magnetosphere — sudden change in interplanetary magnetic field followed by intensification of convection
[TRITA-EPP-81-04] N82-19741

Routine data processing and physical interpretation of data obtained by the fluxgate and search coil magnetometer experiments on board Helios 1 and 2 — on interplanetary and solar magnetic fields
[BMFT-FB-W-81-039] N82-20099

Solar-geophysical data number 443. Part 1: (Prompt reports). Data for June 1981, May 1981
[PB82-113853] N82-20107

INTERPLANETARY MEDIUM

The International Solar Polar Mission (ISPM)
N82-20048

INTERPOLATION

Comparison of some irregular methods for level plotting interpolation
[FOA-C-20433-D8] N82-19867

Accelerated convergence of structured banded systems using constrained corrections
[AD-A108805] N82-19912

Rotationally symmetric operators for surface interpolation
[AD-A109032] N82-19916

INTERPROCESSOR COMMUNICATION

Initial experience with a local network: Net/One by Ungermann-Bass, Incorporated
[AD-A108817] N82-19863

Programming processor interconnection structures
[AD-A109294] N82-19893

INTERSTELLAR GAS

Stability of the equilibrium states of the interstellar gas and field system N82-20037

Bondi accretion — stellar accretion from interstellar matter through which the star moves slowly
N82-20064

A doughnut model of quasars — where viscous evolution does not occur N82-20068

The mass spectrum of stellar origin
[MPI-PAE-EXTRATERR-167] N82-20092

INTERSTELLAR MAGNETIC FIELDS

The magnetohydrodynamic dynamo — of planetary, stellar, and galactic magnetic fields N82-20033

Stability of the equilibrium states of the interstellar gas and field system N82-20037

INTERSTELLAR MASERS

Polarization properties of main-line OH maser emission from circumstellar shells of late type variable stars N82-20095

INTERSTELLAR MATTER

Interstellar matter — thermal and pressure balance
N82-20035

Cosmic ray acceleration by stellar winds and self-confinement in giant H2 regions — idealized model N82-20062

Activities report of the Institue for Astronomy and Astrophysics — stars, interstellar matter, star systems, and X-ray astronomy
[TUB-IAA-MITT-2] N82-20094

INTRACRANIAL PRESSURE

Cerebral hemodynamics at zero gravity
N82-19827

INVENTIONS

An investigation of the lag between the start of research and the development of new technology
[NASA-CR-168583] N82-20005

Technology assessment and forecast report, 10th — patent policy
[REPT-10] N82-20024

INVENTORY MANAGEMENT

Continental scientific drilling program curatorial needs — specimen handling
[LA-8726-MS] N82-19643

INVERSIONS

Inversion layers and their interaction with cumulus clouds below
[BLL-TRANS-1482-(9022.549)] N82-19764

INVISCID FLOW

RAXJET: A computer program for predicting transonic, axisymmetric flow over nozzle afterbodies with supersonic jet exhausts
[NASA-TM-83235] N82-19175

IODIDES

A high resolution spectroscopic study of the v sub 2 band of hydrogen sulfide and the 1-0 band of hydrogen iodide
[NASA-TM-83852] N82-19336

ION BEAMS

Ionospheric ions in the near Earth geomagnetic tail plasma lobes
[IPS-81-7] N82-19743

The development of high-intensity negative ion sources and beams in the USSR
[AD-A108935] N82-19964

ION CYCLOTRON RADIATION

Wave heating and acceleration of solar wind ions by cyclotron resonance N82-20081

ION DISTRIBUTION

Formation of ion conics and lower hybrid acceleration in the suprauroral region N82-20075

Comments on high Mach number magnetosonic shocks — ion thermalization N82-20082

ION IMPLANTATION

High-energy ion implantation for multigigabit-rate GaAs integrated circuits
[AD-A108777] N82-19965

SIMS studies on anomalous behavior of phosphorus and other implants in silicon
[AD-A108870] N82-19995

ION MOTION

Integral total collision and ionization cross sections for the interaction of excited He in the (2/super 1/S, 2/super 3/S) state with Ar in the thermal energy range
[MPIS-32/1980] N82-19350

ION PLATING

Ion-plated lead as a film lubricant for bearings in vacuum N82-19548

ION SOURCES

The development of high-intensity negative ion sources and beams in the USSR
[AD-A108935] N82-19964

IONIC COLLISIONS

The evaluation of charge transfer matrix elements in light ion collisions with non-relativistic atoms
N82-19959

IONIZATION CROSS SECTIONS

Integral total collision and ionization cross sections for the interaction of excited He in the (2/super 1/S, 2/super 3/S) state with Ar in the thermal energy range
[MPIS-32/1980] N82-19350

IONIZED GASES

Shock tube determination of the heat conductivity of non-ionized and partially ionized argon
N82-19497

IONIZING RADIATION

Preliminary analysis of accelerated space flight ionizing radiation testing
[NASA-TM-83209] N82-19969

IONOGRAMS

Association between irregularities caused ionospheric bubbles and airglow perturbations in low latitudes in Brazil
[INPE-2122-RPE/346] N82-19726

IONOSPHERE

Instruments and methods for studying atmospheric electricity
[BLL-TRANS-1487-(9022.552)] N82-19753

IONOSPHERIC CURRENTS

Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites: Constraints on the regional emplacement of crustal resources
[E82-10043] N82-19618

Theory of the auroral magnetosphere
[AERONOMICA-ACTA-A-237-1981] N82-19723

IONOSPHERIC DISTURBANCES

Association between irregularities caused ionospheric bubbles and airglow perturbations in low latitudes in Brazil
[INPE-2122-RPE/346] N82-19726

Solar-geophysical data number 443. Part 1: (Prompt reports). Data for June 1981, May 1981
[PB82-113853] N82-20107

IONOSPHERIC ELECTRON DENSITY

Phase perturbation measurements through a heated ionosphere
[NASA-CR-167550] N82-19406

IONOSPHERIC PROPAGATION

A method of measuring and recording. The impulse response of the ionospheric channel
[CRC-1352] N82-19427

IONOSPHERIC STORMS

Kinetic response of ionospheric ions to onset of auroral electric fields
[NASA-CR-164799] N82-19727

IRON

Surface chemistry and wear behavior of single-crystal silicon carbide sliding against iron at temperatures to 1500 C in vacuum
[NASA-TP-1947] N82-19374

IRRADIANCE

Solar irradiance retween 120 and 400 mm and its variations — variations with the Sun's rotation period and activity cycle
[AERONOMICA-ACTA-A-238-1981] N82-19724

IRRADIATION

Scattering of a spherical wave on truncated revolution bodies N82-19456

IRREVERSIBLE PROCESSES

Special applications of irreversible thermodynamics N82-20001

ISOCHORIC PROCESSES

Conception of an apparatus for pressure, density, and temperature measurements in the critical region of pure fluids in Spacelab
[BMFT-FB-W-81-026] N82-19527

ISOMORPHISM

On nuclear Koethe spaces defined by Dragilev functions
[ISSN-0355-0087] N82-19960

ISOTHERMAL LAYERS

Inversion layers and their interaction with cumulus clouds below
[BLL-TRANS-1482-(9022.549)] N82-19764

ISOTHERMS

The TOCIND experiment — relation between surface isotherms and ocean currents
[CTAMN/81/R/10] N82-19805

ISOTOPE EFFECT

Configurational effects in the adsorption of HD on ZnO
[AD-A109368] N82-19341

ISOTOPIC LABELING

Deuterium hydrogen isotope ratios in organic matter, mineral oils, and natural gases — oil exploration
[BMFT-FB-T-81-204] N82-19319

ITALY

LANDSAT imagery of the Venetian Lagoon: A multitemporal analysis
[E82-10036] N82-19612

A comparison of unsupervised classification procedures on LANDSAT MSS data for an area of complex surface conditions in Basilicata, Southern Italy
[E82-10038] N82-19613

ITERATIVE SOLUTION

A subspace iteration algorithm for spinning structure vibration mode computation N82-19157

The use of a nonquadratic model in a conjugate gradient method of optimization with inexact line searches
[MATHS-RES-157] N82-19885

An examination of stability criteria for iterative numerical schemes used in solving differential equations
[RAE-TR-81061] N82-19902

Round-off error analysis of descent methods for solving linear equations N82-19907

A variable metric method using a non-quadratic model
[MATHS-RES-158] N82-19920

IUE

Modeling the data systems role of the scientist (for the NEEDS Command and Control Task)
[NASA-TM-84028] N82-20012

J

JAMMING

Comparative studies of correlation techniques in the sidelobe canceller in the presence of pulse-type jamming signals — for electronic countermeasures
[REPT-3/81] N82-19402

Sophisticated jammers and adaptive arrays
[AD-A109300] N82-19430

JAPANESE SPACE PROGRAM

Space activities in the 80's: The programs and the industry. Part 4: Outlook of space industry outside Europe (1981)
[ESA-SP-1012-VOL-3] N82-19245

Diagnosis of the neutron star and its environment with X-ray astronomy N82-20054

JET AIRCRAFT NOISE

Nonauditory effects of high intensity noise on ground crews at a naval air station
[AD-A108996] N82-19834

Effect of facility variation on the acoustic characteristics of three single stream nozzles
[NASA-TM-81635] N82-19944

A finite element method for computing sound propagation in ducts containing flow
[AD-A108836] N82-19951

Acoustic measurements of F100-PW-100 engine operating in hush house NSN 4920-02-070-2721
[AD-A108814] N82-19952

JET BOUNDARIES

Theoretical investigation of the flow of a supersonic free jet from a slit
[MPIS-25/1980] N82-19182

Singularities of the solution of the problem of a weakly perturbed supersonic free jet with rotational symmetry
[MPIS-6/1980] N82-19188

JET ENGINE FUELS

An assessment of the crash fire hazard of liquid hydrogen fueled aircraft
[NASA-CR-165526] N82-19196

JET ENGINES

A finite element method for computing sound propagation in ducts containing flow
[AD-A108836] N82-19951

Acoustic measurements of F100-PW-100 engine operating in hush house NSN 4920-02-070-2721
[AD-A108814] N82-19952

JET FLOW

An experimental investigation of flow surrounding an airfoil with a jet exhausting from the lower surface
[NASA-CR-166131] N82-19133

Dilution jet behavior in the turn section of a reverse flow combuster
[NASA-TM-82776] N82-19220

Mass and momentum turbulent transport experiments with confined coaxial jets
[NASA-CR-165574] N82-19496

Search for large-scale coherent structures in the nearly self-preserving region of a turbulent axisymmetric jet
[AD-A108334] N82-19501

JET LIFT

An experimental investigation of flow surrounding an airfoil with a jet exhausting from the lower surface
[NASA-CR-166131] N82-19133

JET NOZZLES

Investigation of a CaCl molecular jet by means of laser induced fluorescence
[MPIS-29/1980] N82-19337

JETS

Evaluation of crystal oscillators and frequency dividers for high temperature operation
[NASA-CR-168561] N82-19682

JOINTS (JUNCTIONS)

Practical applications of fracture mechanics
[AGARD-AG-257] N82-19571

JUPITER (PLANET)

Magnetic field measurements at Jupiter by Voyagers 1 and 2: Daily plots of 48 second averages
[NASA-TM-83864] N82-20105

JUPITER ATMOSPHERE

Plasma dynamics in the rapidly rotating magnetosphere of Jupiter — Voyager observations N82-20045

The tropospheric gas composition of Jupiter's north equatorial belt (NH3, PH3, CH3D, GeH4, H2O) and the Jovian D/H isotropic ratio
[NASA-TM-83891] N82-20103

K

KANSAS

Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements
[E82-10048] N82-19623

Agricultural soil moisture experiment, Colby, Kansas 1978: Measured and predicted hydrological properties of the soil
[E82-10057] N82-19632

KELVIN-HELMHOLTZ INSTABILITY

Kelvin-Helmholtz instability of the magnetopause boundary: Comparison with observed fluctuations
[IPS-81-12] N82-19744

Large scale Kelvin-Helmholtz instabilities in extragalactic radio jets N82-20070

KEPLER LAWS

Astronautics: Kepler and Hohmann
[TUM-RT-KB-80/1] N82-19238

KEVLAR (TRADEMARK)

Development of manufacturing technology for fabrication of a composite helicopter main rotor spar by tubular braiding
[AD-A109377] N82-19209

KINETIC ENERGY

Measurement of the differential scattering cross sections of electron excited sodium by argon
[MPIS-31/1980] N82-19349

KINETIC EQUATIONS

Electron kinetic equations in comptonization by isotropic photons N82-20065

KRYPTON FLUORIDE LASERS

Laser journal (selected articles)
[AD-A108173] N82-19535

Properties of steady discharge in Ar-Kr-F2 gas mixture N82-19536

UV-preionized ArF and KrF excimer lasers N82-19537

L

LABORATORIES

The aerospace technology laboratory (a perspective, then and now)
[NASA-TM-82754] N82-19229

LABORATORY EQUIPMENT

Safety demonstration study on proposed biorack glove box — for Spacelab
[ESA-CR(P)-1482] N82-19239

Follow on study on Fluid Physics Module (PM). Part 1: Independent operating Fluid Physics Module (FPM)
[REPT-79-RV-0] N82-19241

LAGOONS

LANDSAT imagery of the Venetian Lagoon: A multitemporal analysis
[E82-10036] N82-19612

An inexpensive biologic method of upgrading Lagoon effluent, phase 1: Small business innovative research program
[PB82-101072] N82-19713

LAKES

Resourceful decisions: LANDSAT in Michigan
[E82-10037] N82-19601

Water resources data for Pennsylvania, water year 1980. Volume 2: Susquehanna and Potomac River Basins
[PB82-115906] N82-19662

LAMINAR BOUNDARY LAYER

Inversion layers and their interaction with cumulus clouds below
[BLL-TRANS-1482-(9022.549)] N82-19764

LAMINAR FLOW

The compressible laminar two-dimensional wake with arbitrary initial asymmetry
[AD-A109084] N82-19185

Laminar flow transition: A large-eddy simulation approach
[NASA-CR-3518] N82-19499

Laminar heat transfer with mass injection and chemical reaction N82-19515

LAMINAR WAKES

The compressible laminar two-dimensional wake with arbitrary initial asymmetry
[AD-A109084] N82-19185

LAMINATES

Bolt clampup relaxation in a graphite/epoxy laminate
[NASA-TM-83268] N82-19320

A new fatigue resistant material: Aramide Reinforced Aluminum Laminate (ARALL)
[VTH-LR-322] N82-19326

Time dependent inelastic behavior of materials
[AD-A109089] N82-19585

Vacuum lamination of photovoltaic modules
[NASA-CR-168634] N82-19676

LAND MOBILE SATELLITE SERVICE

Configuration development of the Land Mobile Satellite System (LMSS) Spacecraft N82-19277

Configuration development of the Land Mobile Satellite System (LMSS) Spacecraft: Conclusions N82-19278

Land Mobile Satellite Systems (LMSS): Single aperture system design N82-19279

Quad aperture RF definition N82-19280

Attitude control subsystem study for the Land Mobile Satellite System Spacecraft N82-19281

LAND USE

Resourceful decisions: LANDSAT in Michigan
[E82-10037] N82-19601

Application of remote sensing to state and regional problems — mississippi
[E82-10033] N82-19609

Notes for Brazil sampling frame evaluation trip
[E82-10060] N82-19635

LANDAU DAMPING

On the possibility of existence of large amplitude waves around pulsars N82-20059

LAP JOINTS

Bolt clampup relaxation in a graphite/epoxy laminate
[NASA-TM-83268] N82-19320

LARGE AREA CROP INVENTORY EXPERIMENT

Recommended data sets, corn segments and spring wheat segments, for use in program development
[E82-10034] N82-19610

LARGE SCALE INTEGRATION

Mathematical and graphical tools for the creation of computational arrays N82-19484

Ultra high speed image processing techniques — electronic packaging techniques
[NASA-CR-166771] N82-19486

Design of a versatile LSI module for the simple configuration of high-throughput real-time polyprocessor systems N82-19488

Good layouts for pattern recognizers
[AD-A109324] N82-19897

LARGE SPACE STRUCTURES

Large Space Systems Technology, part 2, 1981
[NASA-CP-2215-PT-2] N82-19257

JPL antenna technology development N82-19258

Offset wrap rib antenna concept development N82-19259

Analytical performance prediction for large antennas N82-19260

Summary of antenna technology development at the Langley Research Center N82-19262

Maypole (Hoop/Column) concept development program N82-19263

Radio frequency verification tasks related to a multiple aperture reflector system N82-19264

Preliminary analytical results using surface current integration for predicting effects of surface pillows on RF performance N82-19266

RF verification tasks underway at the Harris Corporation for multiple aperture reflector system N82-19267

Measurement of losses of mesh membrane material for reflector applications with an S-band radiometer N82-19269

Concepted design of a surface measurement system for large deployable space antennas N82-19271

Electro-optical system for remote position measurements in real time N82-19272

Near field testing of LARC multiple beam antenna N82-19273

Electrostatic membrane antenna concept testing N82-19274

Conceptual design of electrostatic antenna N82-19275

Antenna subsystem requirements N82-19276

Configuration development of the Land Mobile Satellite System (LMSS) Spacecraft N82-19277

Configuration development of the Land Mobile Satellite System (LMSS) Spacecraft: Conclusions
N82-19278
Land Mobile Satellite Systems (LMSS): Single aperture system design N82-19279
Quad aperture RF definition N82-19280
Attitude control subsystem study for the Land Mobile Satellite System Spacecraft N82-19281
Structural assembly demonstration experiment
N82-19282
Structural Assembly Demonstration Experiment (SADE) experiment design N82-19283
Solar Array Flight Experiment (SAFE) N82-19284
Large Space Shuttle Flight Experiment
N82-19285

LARGE SPACE TELESCOPE
Space telescope observatory management system preliminary test and verification plan
[NASA-CR-168587] N82-20090

LASER ANEMOMETERS
High-speed laser anemometer system for intrarotor flow mapping in turbomachinery
[NASA-TP-1663] N82-19521

LASER APPLICATIONS
Development of a novel laser material for miniaturized laser systems
[AD-A109129] N82-19533
An aerial survey of water turbidity and laser depth sounding performance along the Queensland Coast
[AD-A109050] N82-19602
High-energy ion implantation for multigigabit-rate GaAs integrated circuits
[AD-A108777] N82-19965
Ion implantation and laser processing of 3-5 compound semiconductors with applications to the fabrication of microwave devices
[AD-A109033] N82-19993

LASER DAMAGE
Recognition of, and damages caused to a radar antenna by a carbon dioxide laser
[FOA-C-30244-E1] N82-19441

LASER DOPPLER VELOCIMETERS
Microprocessor aided control and signal processing system for a laser-two-focus velocimeter in turbomachinery research
[BMFT-FB-T-81-190] N82-19869

LASER FUSION
Catoptric X-ray optical system for use in laser-fusion diagnostics
[AD-A109037] N82-19532

LASER GYROSCOPES
Electronics for data acquisition of laser gyroscope measurements
[DFVLR-MITT-81-16] N82-19534

LASER MATERIALS
Development of a novel laser material for miniaturized laser systems
[AD-A109129] N82-19533

LASER OUTPUTS
Properties of steady discharge in Ar-Kr-F2 gas mixture N82-19536
UV-preionized ArF and KrF excimer lasers
N82-19537
Nd:YAG pulsed laser output at 1.064, 1.073, 1.061 and 1.052 micrometers singlet spectral lines
N82-19538
A new feedback controlled current stabilized power supply for gas laser N82-19539

LASER STABILITY
A new feedback controlled current stabilized power supply for gas laser N82-19539

LASER TARGET DESIGNATORS
Target/clutter discrimination techniques for laser semi-active missile systems N82-13253

LASERS
On the synergistic effects of laser/phonon-stimulated processes: A master equation approach
[AD-A109025] N82-19531

LATEX
Mission operation report. MLR flight equipment installed in the Orbiter cabin
[NASA-TM-84153] N82-19233

LATTICE PARAMETERS
Impurities in quasi one-dimensional systems. A study on some thermodynamic properties N82-20002

LATTICES (MATHEMATICS)
On Pythagorean triangles and coprime lattice points
[MATHS-RES-154] N82-19919

LAUNCH VEHICLE CONFIGURATIONS
Introduction to problems of structural dynamics verification --- dynamic coupling between launch vehicle and payload N82-19309

LEACHING
In Situ Mining Research. Proceedings of Bureau of Mines Technology Seminar
[PB82-104753] N82-19663
Natural repository analogue program
[LA-8743-PR] N82-19970

LEAD (METAL)
Acta Polytechnica Scandinavica. Oxygen-metal (Ag, Au, Bi, Cu, In, Ni, Sb, Sn, Te) interactions in dilute molten lead alloys
[ISBN-951-666-137-3] N82 19359
Ion-plated lead as a film lubricant for bearings in vacuum N82-19548

LEAD ACID BATTERIES
Vehicle test report: Battronic pickup truck
[NASA-CR-168637] N82-19205

LEADING EDGE SLATS
A study of the effects of leading-edge slats on the performance of slender wings — wind tunnel measurement
[BU-266] N82-19193

LEADING EDGES
A vortex-filament and core model for wings with edge vortex separation
[NASA-CR-165847] N82-19166

LEAKAGE
Compensation for direct and reverse interconnection in an infinite emitter array N82-19414

LEAST SQUARES METHOD
Least squares finite element analysis of steady high subsonic plane potential flows N82-19517
A simulation study to test the prediction of 1 deg times 1 deg mean gravity anomalies using least squares collocation from the GRAVSAT mission
[AD-A108867] N82-19735

LENS ANTENNAS
Antenna (selected articles)
[AD-A109174] N82-19455
Broad-directional lens antennas made of an inhomogeneous dielectric N82-19457

LIBRARIES
The periodical management system
[PB82-116518] N82-20019

LIFE (DURABILITY)
Environmental durability of electroplated black chromium
[NASA-TM-82454] N82-19357

LIFE SCIENCES
Life sciences passive GN2 freezer thermal performance test
[NASA-CR-167546] N82-19809

LIFT
A computer program for wing subsonic aerodynamic performance estimates including attainable thrust and vortex lift effects
[NASA-CR-3515] N82-19151
Experimental study of delta wing leading-edge devices for drag reduction at high lift
[NASA-CR-165846] N82-19165
A study of the effects of leading-edge slats on the performance of slender wings --- wind tunnel measurement
[BU-266] N82-19193

LIFT DEVICES
Rolling up of vortex sheets from the edges of lifting surfaces N82-19153

LIFT FANS
Aerodynamic noise generated by jet wing/flap interactions of the external USB configuration of STOL aircraft. Part 2: Full scale model experiment using FJR710 turbofan engine
[NAL-TR-687T-PT-2] N82-19945

LIFTING ROTORS
A further study of helicopter rotor pitch-flap-phase coupling
[BU-259] N82-19214

LIGHT EMISSION
Diffuse and discrete optical emissions at the poleward border of the morning auroral oval
[DMI-GEOPHIS-PAPERS-R-66] N82-19742
Pulsar theory: Particle acceleration and photon emission in the polar flux tube N82-20056

LIGHT EMITTING DIODES
Ga (As, P): N - LED's for monochromatic illumination --- with improved light emission efficiency
[BMFT-FB-T-81-196] N82-19482
Analysis of deep defects in III-V semiconductors --- for LED and FET applications
[BMFT-FB-T-81-197] N82-19999

LIGHT SCATTERING
Numerical deconvolution to obtain cloud signatures from scattered light pulses
[AD-A108806] N82-19783
Spring and Fall measurements of European very low altitude volume scattering coefficients
[AD-A108879] N82-19787
Light scattering from macromolecular systems: Molecular crystals and polymers
[AD-A109066] N82-19973

LIGHT TRANSMISSION
Spring and Fall measurements of European very low altitude volume scattering coefficients
[AD-A108879] N82-19787

LIGNITE
Application of remote sensing to state and regional problems --- mississippi
[E82-10033] N82-19609

LIMESTONE
Stratigraphy, petrography and depositional history of the Hertha Formation (Upper Pennsylvanian), midcontinent North America N82-19746

LIMITS (MATHEMATICS)
On the uniform boundedness of a family of matrices and the applications to one-leg and linear multistep methods
[TRITA-NA-8101] N82-19938

LINE SPECTRA
A high resolution spectroscopic study of the v sub 2 band of hydrogen sulfide and the 1-0 band of hydrogen iodide
[NASA-TM-83852] N82-19336
Nd:YAG pulsed laser output at 1.064, 1.073, 1.061 and 1.052 micrometers singlet spectral lines
N82-19538
An appendix to the paper Plasma Electron Temperature Determination in Low-Density Plasmas from the Helium I 3889 A and 5016 A Line Intensities
[TRITA-EPP-81-03] N82-19988

LINEAR AMPLIFIERS
Noise temperature and noise figure concepts: DC to light N82-20127

LINEAR ARRAYS
Antenna (selected articles)
[AD-A109174] N82-19455

LINEAR EQUATIONS
Singularities of the solution of the problem of a weakly perturbed supersonic free jet with rotational symmetry
[MPIS-6/1980] N82-19186
Round-off error analysis of descent methods for solving linear equations N82-19907
On the uniform boundedness of a family of matrices and the applications to one-leg and linear multistep methods
[TRITA-NA-8101] N82-19938

LINEAR POLARIZATION
Polarization properties of main-line OH maser emission from circumstellar shells of late type variable stars N82-20095

LINEAR PROGRAMMING
Distribution of personnel, vehicles, and supplies by ship: A model applied to the Brazilian Navy
[INPE-2305-TDL/073] N82-19674

LINEAR SYSTEMS
Vibrations and stability of mechanical systems: 2
N82-19561
Simulation of linear multi-input/multi-output systems by piecewise continuous input functions and various options for the graphical representation of results --- in regulation analysis
[DFVLR-MITT-81-23] N82-19892
Norm bounds for linear systems using step response data
[RR-159] N82-19924
Variable structure systems and system zeros
[RR-157] N82-19940
Expansion of linear and semi-linear systems and the Popov criterion
[RR-158] N82-19941

LINEAR VIBRATION
The Shock and Vibration Digest, volume 13, no. 1
[AD-A095594] N82-19558
Vibrations and stability of mechanical systems: 2
N82-19561

LINING PROCESSES
Design and fabrication of containment rings for use in tests of six prototype flywheel rotors
[DE81-030357] N82-19689

LIQUEFACTION
Laboratory verification of blast-induced liquefaction mechanism
[AD-A109000] N82-19393

LIQUID CRYSTALS
Light scattering from macromolecular systems: Molecular crystals and polymers
[AD-A109066] N82-19973
Electrooptical effects for application in liquid crystal displays --- twisted nematic cells
[BMFT-FB-T-81-170] N82-19982

LIQUID HYDROGEN
An assessment of the crash fire hazard of liquid hydrogen fueled aircraft
[NASA-CR-165526] N82-19196

LIQUID LEVELS
Water resources data for New Hampshire and Vermont, water year 1980
[PB82-110156] N82-19658

LIQUID METALS
Mixed convection in molten metals
[BLL-RISLEY-TR-4385-(9091.9F)] N82-19355
Acta Polytechnica Scandinavica. Oxygen-metal (Ag, Au, Bi, Cu, In, Ni, Sb, Sn, Te) interactions in dilute molten lead alloys
[ISBN-951-666-137-3] N82-19359

LIQUID OXYGEN
Structural dynamic analysis of the Space Shuttle Main Engine
[NASA-CR-161945] N82-19302

LIQUID PHASE EPITAXY
Growth and characterization of liquid phase epitaxially grown spinel ferrite films N82-19991

LIQUID PHASES
Static and hydrodynamic studies of the conformation of adsorbed macromolecules at the solid/liquid interface N82-19488

LIQUID SLOSHING
Study of liquid slosh in the tracking and data relay satellite hydrazine tanks
[NASA-CR-166745] N82-19492

LIQUID SURFACES
Hydrodynamic and aerodynamic breakup of liquid sheets
[NASA-TM-82800] N82-19494

LISP (PROGRAMMING LANGUAGE)
GPRINT: A LISP pretty printer providing extensive user format-control mechanism
[AD-A109031] N82-19883

LISTS
Course-of-values recursion on lists in intuitionist type theory
[CTH-MATH-1981-19] N82-19939

LITHOGRAPHY
Space-variant optical systems
[AD-A109083] N82-19524

LITHOSPHERE
Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites: Constraints on the regional emplacement of crustal resources
[E82-10043] N82-19618

LIXISCOPES
Characterization of low intensity X-ray imaging devices (Lixiscope)
[NASA-CR-168564] N82-19972

LOAD DISTRIBUTION (FORCES)
Spanwise loading distribution and wake velocity surveys of a semi-span wing
[NASA-TM-84213] N82-19164

LOAD TESTS
On the influence of mean load on crack opening and fatigue crack growth in a ship hull plate steel
[TRITA-HFL-0029] N82-19596
The structural behaviour of inflated cylindrical cantilever beams --- under load
[BU-260] N82-19597

LOADS (FORCES)
The value of dynamic fracture toughness and its dependence on material properties and loading conditions
[AD-A109151] N82-19574

LOCI
On the compensation of optimal system asymptotic root-loci
[RR-163] N82-19925

LOCOMOTIVES
Future fuels and engines for railroad locomotives. Volume 1: Summary
[NASA-CR-168642] N82-20022

LOGIC CIRCUITS
Synthesis of communicating processes from temporal logic specifications
[AD-A109853] N82-19866

LOGIC DESIGN
Synthesis of communicating processes from temporal logic specifications
[AD-A109853] N82-19866
Good layouts for pattern recognizers
[AD-A109324] N82-19897

LOGISTICS
A model for dimensioning a corrective maintenance system
[INPE-2233-TDL/064] N82-19935

LOGISTICS MANAGEMENT
Report on a study of the maintenance in readiness of on-ground spacecraft systems for operational application programs
[MBB-80-162/150] N82-19242
The telecommunications and data acquisition report
[NASA-CR-168577] N82-20113
TIGER reliability analysis in the DSN N82-20128

LONG DURATION SPACE FLIGHT
Mission operation report. Space Shuttle program STS-3 launch
[NASA-TM-84154] N82-19301

LONG RANGE WEATHER FORECASTING
Classification of the fields of anomaly in monthly water temperature of the North Atlantic during the cold half-year
[BLL-TRANS-1509-(9022.552)] N82-19756

LONGITUDINAL CONTROL
A pitch control system for large scale wind turbines
[FFA-TN-HU-2262-PT-6] N82-19695

LOW ALTITUDE
Input impedance of system made of intersecting low-set vibrators N82-19460
Spring and Fall measurements of European very low altitude volume scattering coefficients
[AD-A108879] N82-19787
Interactions between helmet mounted sight display and sensor platform under the influence of a human pilot --- helicopter low altitude flights
[DFVLR-FB-81-30] N82-19848

LOW ASPECT RATIO WINGS
A vortex-filament and core model for wings with edge vortex separation
[NASA-CR-165847] N82-19166

LOW DENSITY RESEARCH
An appendix to the paper Plasma Electron Temperature Determination in Low-Density Plasmas from the Helium I 3889 A and 5016 A Line Intensities
[TRITA-EPP-81-03] N82-19988

LOW TEMPERATURE TESTS
Characterization of ASEC BSR 2 ohm-cm silicon solar cells with dielectric wraparound contacts as a function of temperature and intensity
[NASA-TM-82456] N82-19668

LOW VOLTAGE
A low-power photovoltaic system with energy storage for radio communications: Description and design methodology
[NASA-CR-168640] N82-19677

LOWER ATMOSPHERE
Modeling the lowest 1 km of the atmosphere
[AGARD-AG-267] N82-19747

LUBRICANT TESTS
Laboratory evaluation of multiviscosity-grade engine oils in US Army diesel engines
[AD-A108890] N82-19375

LUBRICANTS
Selected European Space Tribology Laboratory (ESTL) papers on ball bearings for satellites
[ESA-TRIB-1] N82-19547

LUBRICATING OILS
Laboratory evaluation of multiviscosity-grade engine oils in US Army diesel engines
[AD-A108890] N82-19375
Performance of industrial-type engines in military equipment using synthetic crankcase oils
[AD-A109023] N82-19545

LUBRICATION
Molybdenum disulphide lubrication. A continuation survey: 1977/78
[ESA-TRIB-4] N82-19379

LUGS
Fatigue of 2024-T351 and 7075-T7351 Al-alloy lugs with and without interference fit under maneuver spectrum loading
[TAE-440] N82-19568

LUMINESCENCE
Research on the effects of hydrostatic pressure on the electronic states of impurities
[AD-A108403] N82-19503

M

MACH CONES
Comments on high Mach number magnetosonic shocks --- ion thermalization N82-20082

MACH NUMBER
High speed aerodynamic characteristics of the GAFOPH aerofoil
[AD-A108922] N82-19183
Aerodynamic design manual for tactical weapons
[AD-A109180] N82-19290
Comments on high Mach number magnetosonic shocks --- ion thermalization N82-20082

MAGNESIUM
High energy propellants containing magnesium
[FOA-C-20432-D1] N82-19382

MAGNETIC ANOMALIES
Equivalent source modeling of the main field using Magsat data
[E82-10041] N82-19616
Magsat science investigations
[E82-10045] N82-19620
Investigations of medium wavelength magnetic anomalies in the Eastern Pacific using Magsat data
[E82-10047] N82-19622
Use of Magsat anomaly data for crustal structure and mineral resources in the US midcontinent
[E82-10049] N82-19624
Improved definition of crustal anomalies for Magsat data
[E82-10051] N82-19626

MAGNETIC COOLING
Magnetic refrigeration for maser amplifier cooling N82-20119

MAGNETIC DIPOLES
Equivalent source modeling of the main field using Magsat data
[E82-10041] N82-19616
Some applications of the perturbed directional correlation technique in nuclear physics, solid state physics and radio chemistry
[ISBN-90-6231-084-2] N82-19942

MAGNETIC DISTURBANCES
Event study on pre-substorm phases and their relation to the energy coupling between solar wind and magnetosphere --- sudden change in interplanetary magnetic field followed by intensification of convection
[TRITA-EPP-81-04] N82-19741

MAGNETIC FIELD CONFIGURATIONS
Ionospheric ions in the near Earth geomagnetic tail plasma lobes
[IPS-81-7] N82-19743

MAGNETIC FIELDS
Finite-element analysis for design of classical and electronically operated machines N82-19461
Kinetic response of ionospheric ions to onset of auroral electric fields
[NASA-CR-164799] N82-19727
The analytical trajectory of the charged particle moving in a neutral sheet magnetic field N82-20085

MAGNETIC FLUX
The nonequilibrium of magnetic fields N82-20034
Magnetic field measurements at Jupiter by Voyagers 1 and 2: Daily plots of 48 second averages
[NASA-TM-83864] N82-20105

MAGNETIC INDUCTION
Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites: Constraints on the regional emplacement of crustal resources
[E82-10044] N82-19619
Extragalactic double radio sources --- unified model with a massive black hole acting as unipolar induction dynamo N82-20052

MAGNETIC MATERIALS
Impurities in quasi one-dimensional systems. A study on some thermodynamic properties N82-20002
MAGNETIC MONOPOLES
Extragalactic double radio sources — unified model with a massive black hole acting as unipolar induction dynamo N82-20052
MAGNETIC PROPERTIES
Study of the magnetic phase dependence of the Ni-CO reaction rate [AD-A108422] N82-19338
Magnetic properties of copper alloys [DRIC-T-6496] N82-19356
Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites: Constraints on the regional emplacement of crustal resources [E82-10043] N82-19618
MAGNETIC STORMS
On the existence of the ion tearing mode N82-20076
MAGNETIC SURVEYS
Improved definition of crustal anomalies for Magsat data [E82-10051] N82-19626
MAGNETIC TAPES
Ground station digital interface [ARL/MECH-ENG-REPT-158] N82-19401
Cost estimates in connection with the selection of a system for long-term storage of hydrometeorological data [BLL-TRANS-1502-(9022.552)] N82-19760
Documentation for the machine-readable version of the catalogue of stars within 25 parsecs of the Sun [NASA-TM-84039] N82-20088
MAGNETIC VARIATIONS
Studies related to Magsat — Backus effect and the westward drift [E82-10050] N82-19625
MAGNETICALLY TRAPPED PARTICLES
The cavity Q for ergodic eigenmodes [AD-A109041] N82-19987
MAGNETIZATION
Magsat science investigations [E82-10045] N82-19620
MAGNETOHYDRODYNAMIC FLOW
Weak turbulence theory of enhanced gas ionization by plasma flow N82-20039
Ideal MHD fluids N82-20040
Pulsar theory: Particle acceleration and photon emission in the polar flux tube N82-20056
MAGNETOHYDRODYNAMIC GENERATORS
Radiative heat transfer in turbulent MHD channel flow N82-19487
MAGNETOHYDRODYNAMIC SHEAR HEATING
Heating processes of the solar corona N82-20044
Wave heating and acceleration of solar wind ions by cyclotron resonance N82-20081
MAGNETOHYDRODYNAMIC STABILITY
Kelvin-Helmholtz instability of the magnetopause boundary: Comparison with observed fluctuations [IPS-81-12] N82-19744
Modulational instabilities in astrophysics N82-20036
Supernova hydrodynamics N82-20057
MAGNETOHYDRODYNAMICS
The new paradigm in cosmic plasma physics — magnetic fields versus electric currents N82-20031
The magnetohydrodynamic dynamo — of planetary, stellar, and galactic magnetic fields N82-20033
MAGNETOHYDROSTATICS
Quasistatic evolution of preflare equilibria — solar flares N82-20079
MAGNETOPAUSE
Kelvin-Helmholtz instability of the magnetopause boundary: Comparison with observed fluctuations [IPS-81-12] N82-19744
Identification of the discontinuities at the magnetopause N82-20083
MAGNETOSONIC RESONANCE
Electron acceleration in magnetosonic shock fronts N82-20080
Comments on high Mach number magnetosonic shocks — ion thermalization N82-20082
MAGNETOSPHERE
Theory of the auroral magnetosphere [AERONOMICA-ACTA-A-237-1981] N82-19723
Event study on pre-substorm phases and their relation to the energy coupling between solar wind and magnetosphere — sudden change in interplanetary magnetic field followed by intensification of convection [TRITA-EPP-81-04] N82-19741
Plasma dynamics in the rapidly rotating magnetosphere of Jupiter — Voyager observations N82-20045
MAGNETOSPHERIC INSTABILITY
Kelvin-Helmholtz instability of the magnetopause boundary: Comparison with observed fluctuations [IPS-81-12] N82-19744
On the existence of the ion tearing mode N82-20076
MAINTAINABILITY
Assessment of Avionic Equipment Field Reliability and Maintainability as Functions of Unit Cost [AD-A109373] N82-19218
MAINTENANCE
Report on a study of the maintenance in readiness of on-ground spacecraft systems for operational application programs [MBB-80-162/150] N82-19242
Asphalt recycling technology: Literature review and research plan [AD-A108199] N82-19392
Maintenance of hydrostatic transmissions [DRIC-T-6497] N82-19490
A model for dimensioning a corrective maintenance system [INPE-2233-TDL/064] N82-19935
Optimum equipment maintenance/replacement policy. Part 2: Markov decision approach N82-20125
Maintenance and operations tasks accomplished at DSS 12 during the antenna panel replacement downtime N82-20130
MALES
Catecholamine levels in fit and nonfit males when exposed to an emotional stress N82-19813
MAN ENVIRONMENT INTERACTIONS
Life on a warmer Earth: Possible climatic consequences of man made global warming [ER-3] N82-19701
MAN MACHINE SYSTEMS
The effect of visual information on the manual approach and landing [NLR-TR-80055-U] N82-19836
Human factors and the real world — limitations on the man machine systems design process N82-19840
SAM: A configurable experimental text editor for investigating human factors issues in text processing and understanding [AD-A109331] N82-19846
Interactions between helmet mounted sight display and sensor platform under the influence of a human pilot — helicopter low altitude flights [DFVLR-FB-81-30] N82-19848
A two-dimensional core graphics system for research in human-computer interfaces [AD-A109280] N82-19861
Improving the computer-human interface: The qualitative monitor display N82-20123
MANAGEMENT INFORMATION SYSTEMS
National Airspace Data Interchange Network (NADIN) support of Remote Maintenance Monitoring System (RMMS) [AD-A109125] N82-19160
RIW workshop report [AD [illegible]98] N82-19551
Planning study to establish DOD manufacturing technology information analysis center [AD-A108925] N82-20008
Improving communication in organization operation: Preparing communication resources in a large enterprise [MBB-BB-499-81-O] N82-20010
MANAGEMENT METHODS
Improving communication in organization operation: Preparing communication resources in a large enterprise [MBB-BB-499-81-O] N82-20010
Transfer of aerospace project management to the development of technical series production [MBB-UR-482-81-O] N82-20011
The periodical management system [PB82-116518] N82-20019
MANAGEMENT PLANNING
Compressed television transmission: A market survey [NASA-CR-168614] N82-19410
An approach for gross design of operations management systems [ISBN-951-752-308-4] N82-20007
Transfer of aerospace project management to the development of technical series production [MBB-UR-482-81-O] N82-20011
Cost data base development: A twelve-year perspective [AD-A109371] N82-20014
Space telescope observatory management system preliminary test and verification plan [NASA-CR-168587] N82-20090
MANAGEMENT SYSTEMS
The optimal planning of computerized manufacturing systems [PB82-110644] N82-19397
An approach for gross design of operations management systems [ISBN-951-752-308-4] N82-20007
MANIPULATORS
Six degree of freedom manual controls study report [NASA-CR-167532] N82-19837
MANUAL CONTROL
The effect of visual information on the manual approach and landing [NLR-TR-80055-U] N82-19836
Six degree of freedom manual controls study report [NASA-CR-167532] N82-19837
MANUALS
Inorganic analyses in water quality control programs: Instructor's guide [PB82-111378] N82-19353
The NASA standard 20 ampere hour nickel-cadmium battery manual [NASA-CR-166700] N82-19680
MANUFACTURING
The optimal planning of computerized manufacturing systems [PB82-110644] N82-19397
New bioreactors for aerobic processes [ISSN-0077-5606] N82-19679
Planning study to establish DOD manufacturing technology information analysis center [AD-A108925] N82-20008
MAPPING
Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data [INPE-2229-PRE/021] N82-19704
Binary mosaics and point quadrat sampling in ecology [A-80-ST-96-37] N82-19705
MAPS
Taxonomic classification of world map units in crop producing areas of Argentina and Brazil with representative US soil series and major land resource areas in which they occur [E82-10058] N82-19633
MARINE METEOROLOGY
A new meteorological code for 1 January 1982 [BLL-TRANS-1510-(9022.552)] N82-19758
Coastal upwelling ecosystems analysis. Atlas of the JOINT I aircraft winds for the 500 foot level [PB82-114703] N82-19796
MARINE RESOURCES
Biochemical, physiological and ecological aspects of ammonium regeneration by marine crustaceans N82-19808
MARINE TRANSPORTATION
Distribution of personnel, vehicles, and supplies by ship: A model applied to the Brazilian Navy [INPE-2305-TDL/073] N82-19874
MARKET RESEARCH
Market analysis of seismic security systems [NASA-CR-168612] N82-19387
Compressed television transmission: A market survey [NASA-CR-168614] N82-19410
Television services in Europe in the age of direct satellite television [ESA-CR(P)-1503] N82-19439
Direct broadcast satellites: Policies, prospects, and potential competition [PB82-110164] N82-19446

An MDI model and an algorithm for composite hypotheses testing and estimation in marketing
[AD-A109147] N82-20009
Consumer behavior towards fuel efficient vehicles. Volume 1: Executive summary
[PB82-103300] N82-20027

MARKETING
The European Airbus: A challenge to the American commercial aircraft industry
[MBB-UH-01-81-O] N82-19162
Proposed techniques for adding FM broadcast stations in a major market, part 2
[PB82-114240] N82-19447

MARKING
AgRISTARS: Foreign commodity production forecasting. Corn/soybean decision logic development and testing
[E82-10056] N82-19631
Microprocessor controlled stamping unit with needle printer
[BMFT-FB-T-81-189] N82-19668

MARKOV PROCESSES
Response of nonlinear mechanical systems to random excitation. Part 2: Equivalent linearization and other methods N82-19557
Optimum equipment maintenance/replacement policy. Part 2: Markov decision approach N82-20125

MARSHLANDS
Detrital exchange processes of a Delaware salt marsh N82-19699

MASERS
Magnetic refrigeration for maser amplifier cooling N82-20119

MASS DISTRIBUTION
Gravity and geoid anomalies of the Philippine Sea: Evidence on the depth of compensation for the negative residual water depth anomaly
[NASA-CR-168639] N82-19732

MASS SPECTRA
Kinetic investigations of the reactions of UFG in the gaseous phase
[MPIS-1/1981] N82-19351
The mass spectrum of stellar origin
[MPI-PAE-EXTRATERR-167] N82-20092

MASS SPECTROSCOPY
SIMS studies on anomalous behavior of phosphorus and other implants in silicon
[AD-A108870] N82-19995

MASS TRANSFER
Mass and momentum turbulent transport experiments with confined coaxial jets
[NASA-CR-165574] N82-19496
A free boundary value problem arising in climate dynamics
[AERONOMICA-ACTA-A-240-1981] N82-19767

MATERIALS RECOVERY
Impediments to energy and materials recovery facilities for municipal solid waste
[PB82-102302] N82-19383

MATHEMATICAL LOGIC
Techniques for automatic deduction
[AD-A108979] N82-19882
Fuzzy inference using a modified Modus Ponens rule
[INPE-2224-PRE/020] N82-19905

MATHEMATICAL MODELS
A vortex-filament and core model for wings with edge vortex separation
[NASA-CR-165847] N82-19166
Transonic perturbation analysis of wing-fuselage,nacelle-pylon configurations with powered jet exhausts
[NASA-CR-165852] N82-19167
Dynamic analysis and modeling of electrodynamic vibration test facilities applied to the AIBG 160 kN system N82-19310
Workshop on Mathematical Fire Modeling
[AD-A108876] N82-19343
Mathematical modeling and SAR simulation multifunction SAR technology efforts
[NASA-CR-167535] N82-19408
Computer models for conducting surfaces
[AD-A108763] N82-19436
Modeling of the influence of static acceleration on surface wave (quartz) oscillator
[ESA-TT-726] N82-19444
Mathematical and graphical tools for the creation of computational arrays N82-19464
Study of liquid slosh in the tracking and data relay satellite hydrazine tanks
[NASA-CR-166745] N82-19492
Finite-element modeling of layered, anisotropic composite plates and shells: A review of recent research N82-19563
Wheat stress indicator model, Crop Condition Assessment Division (CCAD) data base interface driver, user's manual
[E82-10031] N82-19607
Equivalent source modeling of the main field using Magsat data
[E82-10041] N82-19616
A numerical model for simulation of local circulation, applied to the coastal region of Northeastern Brazil
[INPE-2270/PRE/051] N82-19776
Distribution of personnel, vehicles, and supplies by ship: A model applied to the Brazilian Navy
[INPE-2305-TDL/073] N82-19874
Aircraft noise prediction program theoretical manual, part 1
[NASA-TM-83199-PT-1] N82-19946
Aircraft noise prediction program theoretical manual, part 2
[NASA-TM-83199-PT-2] N82-19947
Detection of periodically fluctuating noise --- from ships
[FOA-C-30223-E1] N82-19955
La Recrerche Aerospatiale, Bi-monthly Bulletin number 1981-4, July - August 1981 --- aerospace R and D
[ESA-TT-722] N82-20131
Aircraft infrared radiation modeling N82-20134
Reynolds stress equations modeling in a rotating reference system N82-20136

MATHEMATICAL PROGRAMMING
An MDI model and an algorithm for composite hypotheses testing and estimation in marketing
[AD-A109147] N82-20009

MATRICES (MATHEMATICS)
Study of problems of ill-conditioned regression or with multicolinearity
[INPE-2234-PRE/022] N82-19906
Norm bounds for linear systems using step response data
[RR-159] N82-19924
On the uniform boundedness of a family of matrices and the applications to one-leg and linear multistep methods
[TRITA-NA-8101] N82-19938
The nucleon exchange mechanism in composite nuclei interaction
[ISS-R-81/4] N82-19968

MATRIX THEORY
On the uniform boundedness of a family of matrices and the applications to one-leg and linear multistep methods
[TRITA-NA-8101] N82-19938

MAXIMUM ENTROPY METHOD
Signal analysis using the maximum entropy method --- aeroelasticity of wind turbines
[VTH-LR-316] N82-19443
Information theory lateral density distribution for Earth inferred from global gravity field
[NASA-TM-83825] N82-19731
Computationally fast algorithms for ARMA spectral estimation N82-19871

MAXIMUM LIKELIHOOD ESTIMATES
Estimation of the operating characteristics when the test information of the old test is not constant. 2: Simple sum procedure of the conditional p.d.f. approach/normal approach method using three subtests of the cold test, number 2
[AD-A109112] N82-19930

MAYPOLE ANTENNAS
Maypole (Hoop/Column) concept development program N82-19263
Radio frequency verification tasks related to a multiple aperture reflector system N82-19264
Preliminary experimental test results using 35 GHz offset fed reflector simulating surface pillows and aperture cables N82-19265
Concepted design of a surface measurement system for large deployable space antennas N82-19271

MECHANICAL DRIVES
British Aerodynamics Group (BAE) solar-array drive mechanism: Life test, stripdown and optical encoder examination
[ESA-TRIB-2] N82-19483
Thermal vacuum real-life test of an Marconi Space and Defence Systems (MSDS) solar-array drive mechanism (MSDS 002). First four years of operation
[ESA-TRIB-3] N82-19484
Chain and belt drives, a review N82-19556

MECHANICAL ENGINEERING
Development of an Optical Scanning Mechanism Assembly (OSMA)
[PS-1450] N82-19981

MECHANICAL PROPERTIES
Accession of titanium as an aircraft material: A current view
[ARL/MAT-NOTE-129] N82-19361
The effect of surface coatings on the fatigue strength of aluminum alloys
[AD-A108869] N82-19363
Investigation of creep by use of closed loop servo-hydraulic test system
[NASA-CR-168613] N82-19566
The value of dynamic fracture toughness and its dependence on material properties and loading conditions
[AD-A109151] N82-19574

MECHANICAL SHOCK
The Shock and vibration Digest, volume 13, no. 5
[AD-A099477] N82-19555
The Shock and Vibration Digest, volume 13, no. 1
[AD-A095594] N82-19558
Vibrations and stability of mechanical systems: 2 N82-19561

MEDICAL EQUIPMENT
Compressed television transmission: A market survey
[NASA-CR-168614] N82-19410

MELTING POINTS
Accession of titanium as an aircraft material: A current view
[ARL/MAT-NOTE-129] N82-19361

MEMBRANES
Measurement of losses of mesh membrane material for reflector applications with an S-band radiometer N82-19269
The suitability of mesh membrane material for radiometer reflector applications N82-19270
Electrostatic membrane antenna concept testing N82-19274
Conceptual design of electrostatic antenna N82-19275

MERCURY (PLANET)
Some aspects of the solar radiation incident at the top of the atmospheres of Mercury and Venus
[AERONOMICA-ACTA-A-236-1981] N82-19722

MESH
Measurement of losses of mesh membrane material for reflector applications with an S-band radiometer N82-19269
The suitability of mesh membrane material for radiometer reflector applications N82-19270

MESOSCALE PHENOMENA
Planning of a C-band pulse Doppler radar with polarization diversity for atmospheric research in the mesoscale range
[DFVLR-MITT-81-26] N82-19445
VISSR Atmospheric Sounder (VAS) simulation experiment for a severe storm environment
[NASA-TM-83822] N82-19774
Report on the analysis of data from the NOAA/Alaskan MST radar system
[AD-A109056] N82-19762

METAL FATIGUE
Fatigue crack growth in aluminum alloys
[VTH-LR-324] N82-19367
Differences between the growth of small and large fatigue cracks. The relation to threshold K-values
[VTH-LR-327] N82-19591
On the influence of mean load on crack opening and fatigue crack growth in a ship hull plate steel
[TRITA-HFL-0029] N82-19596

METAL FILMS
Ion-plated lead as a film lubricant for bearings in vacuum N82-19548
Electrotransport in thin films
[AD-A108421] N82-19992

METAL FOILS
Transition Electron Microscope (TEM) in-situ straining and bulk studies of the selection of glide systems in Face Centered Cubic (FFC) crystals
[NLR-TR-80041-U] N82-19998

METAL OXIDE SEMICONDUCTORS
Photoassisted reactions on doped metal oxide particles
[AD-A109383] N82-19344

METAL PLATES
On the influence of mean load on crack opening and fatigue crack growth in a ship hull plate steel
[TRITA-HFL-0029] N82-19596
Fatigue performance and fastener flexibility for single shear aluminum joint with different splice plates
[FFA-TN-HU-2165] N82-19599

METAL PROPELLANTS
Determination of the combustion mechanisms of aluminized propellants
[AD-A109058] N82-19340

METAL STRIPS
Electrotransport in thin films
[AD-A108421] N82-19992

METALS
Small scale reclamation/disposal of toxic porcelain enameling waste sludges
[PB82-101593] N82-19710

METEOROLOGICAL FLIGHT
Coastal upwelling ecosystems analysis. Atlas of the JOINT I aircraft winds for the 500 foot level
[PB82-114703] N82-19796

METEOROLOGICAL PARAMETERS
Active microwave investigation of snowpacks: Experimental documentation, Colorado 1979-1980
[NASA-CR-166727] N82-19646
Guidelines for spaceborne microwave remote sensors
[NASA-RP-1086] N82-19647
Cost estimates in connection with the selection of a system for long-term storage of hydrometeorological data
[BLL-TRANS-1502-(9022.552)] N82-19760
Studies of the energy and the flux of water vapor in the atmosphere over northeastern Brazil
[INPE-2286-TDL/066] N82-19777
Convergence zones in the South Atlantic and their influence on the precipitation regime in Northeastern Brazil
[INPE-2307-TDL/074] N82-19778
Australian tropical cyclones Kerry and Rosa, February - March 1979
[PB82-114182] N82-19794

METEOROLOGICAL RADAR
Area precipitation measurement by weather radar: Problems and practical experiences
[BLL-TRANS-1456-(9022.552)] N82-19750
The problem of precipitation measurement by attenuation of radio waves
[BLL-TRANS-1475-(9022.549)] N82-19766
Report on the analysis of data from the NOAA/Alaskan MST radar system
[AD-A109056] N82-19782

METEOROLOGICAL SATELLITES
Methods of image compression without information loss
[INPE-2274-PRE/054] N82-20013

METEOROLOGICAL SERVICES
A new meteorological code for 1 January 1982
[BLL-TRANS-1510-(9022.552)] N82-19758
The control of the quality of surface meteorological information
[BLL-TRANS-1503-(9022.552)] N82-19759

METEOROLOGY
The twenty year average atmospheric structure at Lima, Peru
[PB82-114216] N82-19795

METEOSAT SATELLITE
Precipitation assessment from environmental satellite data for northwest Libya including the Gefara plan
[RSC-4] N82-19790
The economic impact of an operational European meteorological satellite program in the 1980's --- Meteosat network
[ESA-BR-03] N82-20020

METHOD OF CHARACTERISTICS
A method of characteristic surfaces: The approximate solution of three-dimensional supersonic flow fields, from the near field up to the sonic boom region
[VTH-LR-331] N82-19190
Conservative supra-characteristics method for splitting the hyperbolic systems of gasdynamics for real and perfect gases
[NASA-CR-166307] N82-19904

METHODOLOGY
Analysis of methodologies used for the assessment of wetlands values: Appendices C-E
[PB82-110362] N82-19807

METRIC SPACE
A variable metric method using a non-quadratic model
[MATHS-RES-158] N82-19920

MICHIGAN
Resourceful decisions: LANDSAT in Michigan
[E82-10037] N82-19601
Improved St. Clair River dynamics flow models and comparison analysis
[PB82-119272] N82-19657

MICROBIOLOGY
New bioreactors for aerobic processes
[ISSN-0077-5606] N82-19679

MICROCOMPUTERS
ALGOL-MS, a language for the development of multiprogrammed small systems
[INPE-2282-TDL/067] N82-19875
The Naval postgraduate school SECURE ARCHIVAL STORAGE SYSTEM. Part 2: Segment and process management implementation
[AD-A109553] N82-20016

MICROMETEOROLOGY
Modeling the lowest 1 km of the atmosphere
[AGARD-AG-267] N82-19747

MICROPARTICLES
Statistical study of freezing clouds in the GINA 2-PAP, March - April 1979
[BLL-TRANS-1511-(9022.552)] N82-19754

MICROPROCESSORS
Taped random spectra for reliability demonstration testing
[AD-A108803] N82-19552
Programmable printing terminal
[INPE-2096-RPE/326] N82-19851
Study and experimentation of horizontal microprocessor machine description techniques
[AD-A109136] N82-19860
SASS hardware architecture and development monitor
[AD-A109552] N82-20015
The Naval postgraduate school SECURE ARCHIVAL STORAGE SYSTEM. Part 2: Segment and process management implementation
[AD-A109553] N82-20016

MICROPROGRAMMING
MICAD: An interactive computer for the design of microwave circuits
[LEOK-TR-1980-06] N82-19473
Study and experimentation of horizontal microprocessor machine description techniques
[AD-A109136] N82-19860

MICROWAVE ANTENNAS
Measurement of losses of mesh membrane material for reflector applications with an S-band radiometer
N82-19269
Fresnel-region fields and antenna noise-temperature calculations for advanced microwave sounding units
[NASA-TM-83813] N82-19426

MICROWAVE CIRCUITS
MICAD: An interactive computer for the design of microwave circuits
[LEOK-TR-1980-06] N82-19473

MICROWAVE EQUIPMENT
Ion implantation and laser processing of 3-5 compound semiconductors with applications to the fabrication of microwave devices
[AD-A109033] N82-19993
On the group delay effect of DSN microwave components on multimegabit telemetry N82-20122

MICROWAVE OSCILLATORS
A microwave FET oscillator design approach and its application in an injection locked oscillator
[CRC-1347] N82-19472
High stability coplanar oscillators
[CISE-1720] N82-19485

MICROWAVE RADIOMETERS
Measurement of losses of mesh membrane material for reflector applications with an S-band radiometer
N82-19269

MICROWAVE SENSORS
Guidelines for spaceborne microwave remote sensors
[NASA-RP-1086] N82-19647

MICROWAVE SOUNDING
Fresnel-region fields and antenna noise-temperature calculations for advanced microwave sounding units
[NASA-TM-83813] N82-19426

MICROWAVE TUBES
Microwave tubes. Literature study number 2 relating to the year 1980
[FOA-C-30247-E] N82-19479

MIDAIR COLLISIONS
Aircraft collision avoidance systems
[GPO-79-431] N82-19201

MIDDLE ATMOSPHERE
One and two dimensional photochemical modeling of the two chemical interactions in the middle atmosphere (0-120 km) N82-19719

MIDLATITUDE ATMOSPHERE
The development and testing of methods to infer midlatitude precipitation intensity from geosynchronous satellite infrared data
[AD-A108881] N82-19786

MIE SCATTERING
An ASCII FORTRAN subroutine for computing the electromagnetic radiation scattered by a sphere
[AD-A108772] N82-19433

MIGRATION
Three-dimensional migration velocity analysis in the space-frequency domain N82-19718

MILITARY TECHNOLOGY
Performance of industrial-type engines in military equipment using synthetic crankcase oils
[AD-A109023] N82-19545
Planning study to establish DOD manufacturing technology information analysis center
[AD-A108925] N82-20008

MILKY WAY GALAXY
Measurements of the electron-positron annihilation line at 511 KeV emitted from the galactic center
[INPE-2222-PRE/018] N82-19961

MILLIMETER WAVES
A review of millimetre wave devices --- technology assessment of electron tubes and solid state power sources
[RSRE-MEMO-3372] N82-19465
Microwave tubes. Literature study number 2 relating to the year 1980
[FOA-C-30247-E] N82-19479

MILLING MACHINES
Operational performance of the photovoltaic-powered grain mill and water pump at Tangaye, Upper Volta
[NASA-TM-82767] N82-19673

MINERAL DEPOSITS
Use of Magsat anomaly data for crustal structure and mineral resources in the US midcontinent
[E82-10049] N82-19624
COBALT: Effectiveness of alternative US policies to reduce the costs of a supply disruption
[PB82-110560] N82-20021

MINERAL OILS
Deuterium hydrogen isotope ratios in organic matter, mineral oils, and natural gases --- oil exploration
[BMFT-FB-T-81-204] N82-19319

MINES (EXCAVATIONS)
Hydrological problems of surface mining --- of coal
[ICTIS-TR-17] N82-19606

MINIATURE ELECTRONIC EQUIPMENT
The feasibility of miniaturizing the versatile portable speech prosthesis: A market survey of commercial products
[NASA-CR-168611] N82-19838

MINIATURIZATION
Development of a novel laser material for miniaturized laser systems
[AD-A109129] N82-19533

MINICOMPUTERS
Data communication for minicomputers
[FOA-C-30226-E2] N82-19867

MINIMAX TECHNIQUE
Comparison of the bioptimal curve for two robust estimates
[AD-A109132] N82-19909

MINING
Longwall Guidance and Control Development
[NASA-TM-82455] N82-19637
In Situ Mining Research. Proceedings of Bureau of Mines Technology Seminar
[PB82-104753] N82-19663

MIRRORS
Compensation for systematic weight deformations of mirror system of parabolic radio telescopes
N82-19459

MISSILE CONFIGURATIONS
On the design of missile models for static force measurements in wind tunnels --- aided by computer programming
[DFVLR-MITT-81-21] N82-19297

MISSILE CONTROL
Target/clutter discrimination techniques for laser semi-active missile systems N82-19253
Instrumentation timing systems
[AD-A109005] N82-19523

MISSILE DEFENSE
Perspectives for Controlled Weapons Technology: Report of the 90th Helicopter Forum
[MBB-UA-532-80-O] N82-19211

MISSILE DESIGN
Computational aerodynamics at weapons systems research laboratory
[WSRL-0236-TM] N82-19176
Aerodynamic design manual for tactical weapons
[AD-A109180] N82-19290

MISSILE RANGES
A glossary of range terminology
[AD-A108894] N82-19250
Instrumentation timing systems
[AD-A109005] N82-19523

MISSILE SYSTEMS
Perspectives for Controlled Weapons Technology: Report of the 90th Helicopter Forum
[MBB-UA-532-80-O] N82-19211

MISSILE TESTS
A glossary of range terminology
[AD-A108894] N82-19250

MISSILE TRACKING
Instrumentation timing systems
[AD-A109005] N82-19523

MISSION PLANNING
Recommendations on the development of space science in the 1980's --- in Europe
[ESA-SP-1015] N82-19246
Mission support plan STS-2
[NASA-CR-167435] N82-19249
EXUV. Phase A study. Volume 1: Executive summary --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-1] N82-19292
EXUV. Phase A study. Volume 4: Satellite development program --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-4] N82-19296
Upper stage alternatives for the shuttle era
[NASA-TM-84137] N82-19303
Giotto Comet Halley mission, phase A study. Volume 1: Spacecraft design
[ESS/SS/1000] N82-19313
The International Solar Polar Mission (ISPM)
N82-20048

MISSISSIPPI
Application of remote sensing to state and regional problems --- mississippi
[E82-10033] N82-19609

MIXING
A 12 GHz mixer with planar circuits in a waveguide
[INPE-2149-RPE/370] N82-19467

MODEMS
Capacity limit of the noiseless, energy-efficient optical PPM channel N82-20121

MODULUS OF ELASTICITY
Impact response characteristics of polymeric materials
[AD-A109281] N82-19377

MOISTURE CONTENT
Moisture and thermal expansion of composite materials
[AD-A109131] N82-19323
AgRISTARS: Yield model development/soil moisture. Interface control document
[E82-10054] N82-19629
Dielectric properties of snow
[NASA-CR-166764] N82-19638

MOLECULAR BEAMS
Investigation of a CaCl molecular jet by means of laser induced fluorescence
[MPIS-29/1980] N82-19337
Impurity and defect characterization in epitaxial GaAs, InP and the ternary and quaternary compound semiconductors
[AD-A109052] N82-19997

MOLECULAR CLOUDS
Confinement of cosmic rays in molecular clouds
N82-20073

MOLECULAR EXCITATION
Study of photophysical processes and molecular transformations of excited states
[AD-A109137] N82-19345
Measurement of the differential scattering cross sections of electron excited sodium by argon
[MPIS-31/1980] N82-19349

MOLECULAR INTERACTIONS
Resonance studies of hydrogen atoms interacting with very cold surfaces
[AD-A109040] N82-19966

MOLECULAR OSCILLATIONS
Investigation of a CaCl molecular jet by means of laser induced fluorescence
[MPIS-29/1980] N82-19337

MOLECULAR ROTATION
Effect of nuclear spin on chemical reactions and internal molecular rotation N82-19330

MOLECULAR SHIELDS
Effect of vacuum processing on outgassing within an orbiting molecular shield
[NASA-TP-1980] N82-19390

MOLECULAR STRUCTURE
Static and hydrodynamic studies of the conformation of adsorbed macromolecules at the solid/liquid interface N82-19488

MOLECULES
Light scattering from macromolecular systems: Molecular crystals and polymers
[AD-A109086] N82-19973

MOLYBDENUM DISULFIDES
Molybdenum disulphide lubrication. A continuation survey: 1977/78
[ESA-TRIB-4] N82-19379

MOMENTUM TRANSFER
Mass and momentum turbulent transport experiments with confined coaxial jets
[NASA-CR-165574] N82-19496

MONATOMIC GASES
Thermal investigation of unstable substances, including a comparison of different thermal analytical techniques N82-19335

MONAURAL SIGNALS
Digital audio. Recursive digital filtering for high quality audio signals
[BBC-RD-1981/10] N82-19400

MONITORS
Concepted design of a surface measurement system for large deployable space antennas N82-19271
Intelligence Processor Performance Analysis (IPPA)
[AD-A108794] N82-19855
Improving the computer-human interface: The qualitative monitor display N82-20123

MONTE CARLO METHOD
Modeling beam patterns of linear antennas
N82-19458
Monte Carlo studies of ocean wind vector measurements by SCATT: Objective criteria and maximum likelihood estimates for removal of aliases, and effects of cell size on accuracy of vector winds
[NASA-CR-16[illegible]7-1] N82-19799
Improvements of the algorithms used for Monte-Carlo direct simulation computations
[IC-AERO-81-03] N82-19891
Models of projection and localization of urban population using simulation techniques
[INPE-2207-PRE/013] N82-20023

MORPHOLOGY
Mechanism and models for zinc metal morphology in alkaline media
[NASA-TM-82768] N82-19671

MOSAICS
Binary mosaics and point quadrat sampling in ecology
[A-80-ST-96-37] N82-19705

MUFFLERS
The Shock and Vibration Digest, volume 13, no. 1
[AD-A095594] N82-19558
Evaluation and control of the exhaust noise of reciprocating I.C. engines N82-19559

MULTIPATH TRANSMISSION
Analysis of multipath interference for APATS
[AD-A108797] N82-19305
Analysis of the multipath environment for APATS testing
[AD-A109345] N82-19306

MULTIPLE ACCESS
Study of the availability of satellite telecommunication links subject to attenuation by rain
[INPE-2239-PRE/025] N82-19411

MULTIPLEXING
Space-variant optical systems
[AD-A109083] N82-19524

MULTIPROCESSING (COMPUTERS)
Multi-dimensional signal-processing research program
[AD-A108641] N82-19429
Unbounded speed variability in distributed communications systems
[AD-A108824] N82-19437
Design of a versatile LSI module for the simple configuration of high-throughput real-time polyprocessor systems N82-19468

MULTISPECTRAL BAND CAMERAS
Optical imaging instruments for the Land Application Satellite System. Phase A study. Volume 1
[REPT-60/1023-VOL-1] N82-19979
Optical imaging instruments for the Land Application Satellite System, phase A study, volume 2
[REPT-60/1023-VOL-2] N82-19980

MULTISPECTRAL BAND SCANNERS
Automatic analysis of multispectral images
[INPE-2212-MD/009] N82-19520
Data rate reduction. Impact of image data compression on end to end data management of a multispectral payload --- for satellite imagery
[REPT-44/130] N82-19654

MULTISPECTRAL PHOTOGRAPHY
LANDSAT imagery of the Venetian Lagoon: A multitemporal analysis
[E82-10036] N82-19612
Selection of attributes applied to multispectral images
[INPE-2303-TDL/072] N82-19927

MULTIVARIATE STATISTICAL ANALYSIS
Models of projection and localization of urban population using simulation techniques
[INPE-2207-PRE/013] N82-20023

MUSCULOSKELETAL SYSTEM
Measurements of intra and extracellular water spaces and electrolyte concentrations in human skeletal muscle N82-19829

N

NASA PROGRAMS
Future space programs, 1981
[GPO-86-913] N82-19234
Space activities in the 80's: The programs and the industry. Part 4: Outlook of space industry outside Europe (1981)
[ESA-SP-1012-VOL-3] N82-19245
NASA Oceanic Processes Program, Fiscal Year 1981
[NASA-TM-84467] N82-19801

NATURAL GAS
Deuterium hydrogen isotope ratios in organic matter, mineral oils, and natural gases --- oil exploration
[BMFT-FB-T-81-204] N82-19319

NATURAL LANGUAGE (COMPUTERS)
Natural language access to databases: Interpreting update requests
[AD-A109183] N82-19854
Prerequisites to deriving formal specifications from natural language requirements
[AD-A108612] N82-19878
Metaphor: An inescapable phenomenon in natural language comprehension
[AD-A109026] N82-19880
Algorithm for the calculation of the largest integer in the quare root of a natural number
[PREPRINT-11] N82-19918

NAVIER-STOKES EQUATION
Reynolds stress equations modeling in a rotating reference system N82-20136
Two-step implicit schemes for the solution of a conservation equation N82-20137

NAVIGATION AIDS
United States Coast Pilot 2. Atlantic Coast: Cape Cod to Sandy Hook, 16th edition
[PB82-109505] N82-19204

NEAR FIELDS
Near field testing of LARC multiple beam antenna
N82-19273

NEEDS (DATA SYSTEM)
An information adaptive system study report and development plan
[NASA-CR-166768] N82-19644
Modeling the data systems role of the scientist (for the NEEDS Command and Control Task)
[NASA-TM-84028] N82-20012

NEODYMIUM LASERS
Laser journal (selected articles)
[AD-A108173] N82-19535
Nd:YAG pulsed laser output at 1.064, 1.073, 1.061 and 1.052 micrometers singlet spectral lines
N82-19538

NETWORK ANALYSIS
Antenna (selected articles)
[AD-A108204] N82-19413
Compensation for direct and reverse interconnection in an infinite emitter array N82-19414
The diagnosis settlement 1980 of the German main triangulation network. Part 2: Trajectories
[SER-B-253-MITT-159-PT-2] N82-19648
Initial experience with a local network: Net/One by Ungermann-Bass, Incorporated
[AD-A108817] N82-19863

NETWORK SYNTHESIS
Analysis and synthesis of binary sequences
N82-19463
Mathematical and graphical tools for the creation of computational arrays N82-19464

NEUMANN PROBLEM
On the Neumann problem for the pressure in a Navier-Stokes model --- of boundary layer flow
[PUBL-257] N82-19511

NEUTRAL SHEETS
The analytical trajectory of the charged particle moving in a neutral sheet magnetic field N82-20085

NEUTRINOS
Astrophysical tests for radiative decay of neutrinos and fundamental physics implications
[NASA-TM-83873] N82-20098

NEUTRON IRRADIATION
COVFILS: A 30-group covariance library based on ENDF/B-V
[LA-8733-MS] N82-19873

NEUTRON SPECTROMETERS
Detailed investigation of a time of flight neutron spectrometer --- and telescope
[TRITA-PFU-81-01] N82-19528

NEUTRON STARS
Diagnosis of the neutron star and its environment with X-ray astronomy N82-20054
On the possibility of existence of large amplitude waves around pulsars N82-20059

NEW ENGLAND (US)
United States Coast Pilot 2. Atlantic Coast: Cape Cod to Sandy Hook, 16th edition
[PB82-109505] N82-19204

NEW HAMPSHIRE
Water resources data for New Hampshire and Vermont, water year 1980
[PB82-110156] N82-19658

NICKEL
Study of the magnetic phase dependence of the Ni-CO reaction rate
[AD-A108422] N82-19338

NICKEL ALLOYS
Interaction of microsegregation and coarsening during dendritic nickel-base alloy monocrystal growth
[AD-A108980] N82-19362

NICKEL CADMIUM BATTERIES
Results of continuous synchronous orbit tesing of sealed nickel-cadmium cells
[NASA-CR-168564] N82-19678
The NASA standard 20 ampere hour nickel-cadmium battery manual
[NASA-CR-166700] N82-19680

NIGHTGLOW
Association between irregularities caused ionospheric bubbles and airglow perturbations in low latitudes in Brazil
[INPE-2122-RPE/346] N82-19726

NIMBUS 6 SATELLITE
Optimum employment of satellite indirect soundings as numerical model input
[NASA-CR-168509] N82-19768
A case study of height and temperature analyses derived from Nimbus-6 satellite soundings
N82-19769

NIOBIUM STANNIDES
Superconducting niobium-tin resonators --- X band resonators
[BMFT-FB-T-81-188] N82-19480

NITROGEN OXIDES
Inversion of spire NO data
[AD-A108868] N82 19736

NOAA 6 SATELLITE
Optimum employment of satellite indirect soundings as numerical model input
[NASA-CR-168509] N82-19768
Evaluation of TIROS-N and NOAA-6 satellite data: Comparisons of colocated soundings and analyses for a January case N82-19770
A numerical evaluation of TIROS-N and NOAA-6 analyses in a high resolution limited area model
N82-19771

NOISE (SOUND)
Analysis of phase noise in a J band transmitter
[INPE-2294-NTE/178] N82-19471

NOISE MEASUREMENT
Effect of facility variation on the acoustic characteristics of three single stream nozzles
[NASA-TM-81635] N82-19944
Detection of periodically fluctuating noise --- from ships
[FOA-C-30223-E1] N82-19955

NOISE PREDICTION (AIRCRAFT)
Aircraft noise prediction program theoretical manual, part 1
[NASA-TM-83199-PT-1] N82-19946
Aircraft noise prediction program theoretical manual, part 2
[NASA-TM-83199-PT-2] N82-19947

NOISE REDUCTION
Optimal aircraft landing patterns for minimal noise impact N82-19200
Improvements to speech quality from a diving helmet
[BBC-RD-1981/9] N82-19399
The Shock and Vibration Digest, volume 13, no. 1
[AD-A095594] N82-19558
Evaluation and control of the exhaust noise of reciprocating I.C. engines N82-19559
Acoustic measurements of F100-PW-100 engine operating in hush house NSN 4920-02-070-2721
[AD-A108814] N82-19952
Guidelines for the design of inherentlv quiet airloops for manned spacecraft
[ACUN-8006] N82-19954
An experimental study of the effects of an inlet flow conditioner on the noise of a low speed axial flow fan --- in an aircraft engine
[TT-8101] N82-19956

NOISE SPECTRA
User's guide to noise data acquisition and analysis programs for HP9845: Nicolet analyzers
[NASA-TM-83256] N82-19943

NOISE TEMPERATURE
Fresnel-region fields and antenna noise-temperature calculations for advanced microwave sounding units
[NASA-TM-83813] N82-19428
Noise temperature and noise figure concepts: DC to light N82-20127

NOISE TOLERANCE
Effects of repetition rate and impulsiveness of simulated helicopter rotor noise on annoyance
[NASA-TP-1969] N82-19707

NONEQUILIBRIUM CONDITIONS
The nonequilibrium of magnetic fields N82-20034
Quasistatic evolution of preflare equilibria --- solar flares N82-20079

NONEQUILIBRIUM THERMODYNAMICS
Special applications of irreversible thermodynamics N82-20001

NONLINEAR EQUATIONS
A nonlinear finite element analysis of rapid crack growth at large scale yielding
[TRITA-HFL-0027] N82-19594

NONLINEAR PROGRAMMING
Underwater shock analysis of nonlinear structures, a reference manual for the USA-STAGS code, version 3
[AD-A108911] N82-19584
Computational advances in large-scale nonlinear optimization
[AD-A109528] N82-19917

NONLINEAR SYSTEMS
Analysis of a nonlinear altitude tracking method
[AD-A108878] N82-19197
Response of nonlinear mechanical systems to random excitation. Part 2: Equivalent linearization and other methods N82-19557
Vibrations and stability of mechanical systems: 2
N82-19561
Stress pulsed reflection and tensile cracking in a one-dimensional bilinear material
[AD-A108833] N82-19581
Expansion of linear and semi-linear systems and the Popov criterion
[RR-158] N82-19941
Ward-Leonard characteristics from nonlinearly-controlled series motor drives --- fork lift trucks
[RR-165] N82-20026

NONLINEARITY
Vibrations and stability of mechanical systems: 2
N82-19561
Program for nonlinear structural analysis
[AD-A108975] N82-19578
Second-order nonlinear conductivity tensor for an unmagnetized relativistic turbulent plasma
N82-20071

NONPARAMETRIC STATISTICS
A K-sample extension of Tukey's 2-sample quick test
[MATHS-RES-159] N82-19933

NONRELATIVISTIC MECHANICS
The evaluation of charge transfer matrix elements in light ion collisions with non-relativistic atoms
N82-19959

NORMAL DENSITY FUNCTIONS
Three dimensional numerical model for estimation of pollutant concentration
[INPE-2193-TDL/060] N82-19703

NORMS
Norm bounds for linear systems using step response data
[RR-159] N82-19924

NORTH AMERICA
Use of Magsat anomaly data for crustal structure and mineral resources in the US midcontinent
[E82-10049] N82-19624

NORTHERN HEMISPHERE
Some characteristics of the variation of air temperature in the northern hemisphere during individual months of the period 1881-1975
[BLL-TRANS-1497-(9022.552)] N82-19761

NOSE TIPS
Performance Technology Program (PTP-S 2). Volume 9: Evaluation of reentry vehicle nosetip transition and heat transfer in the AEDC hyperballistics track G
[AD-A108848] N82-19505

NOTCHES
The stress intensity factor of small cracks at notches
[VTH-LR-330] N82-19592

NOZZLE EFFICIENCY
Testing ventilated nozzle models with supersonic primary flow N82-19159

NOZZLE FLOW
Effects of installation of F101 DFE exhaust nozzles on the afterbody-nozzle characteristics of the F-14 airplane
[NASA-TM-83250] N82-19181
Thermally dissociated chlorine and bromine molecular jets
[MPIS-26/1980] N82-19963

NOZZLE GEOMETRY
Effect of facility variation on the acoustic characteristics of three single stream nozzles
[NASA-TM-81635] N82-19944

NUCLEAR EXPLOSIONS
Laboratory verification of blast-induced liquefaction mechanism
[AD-A109000] N82-19393
Seismic discrimination
[AD-A109184] N82-19739

NUCLEAR PHYSICS
Some applications of the perturbed directional correlation technique in nuclear physics, solid state physics and radio chemistry
[ISBN-90-6231-064-2] N82-19942

NUCLEAR POWER PLANTS
Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data
[INPE-2229-PRE/021] N82-19704
Human factors and safety in nuclear power plant operation N82-19643

NUCLEAR QUADRUPOLE RESONANCE
A high resolution spectroscopic study of the v sub 2 band of hydrogen sulfide and the 1-0 band of hydrogen iodide
[NASA-TM-83652] N82-19336
Some applications of the perturbed directional correlation technique in nuclear physics, solid state physics and radio chemistry
[ISBN-90-6231-064-2] N82-19942

NUCLEAR REACTIONS
COVFILS: A 30-group covariance library based on ENDF/B-V
[LA-8733-MS] N82-19873

NUCLEAR SPIN
Effect of nuclear spin on chemical reactions and internal molecular rotation N82-19330

NUCLEATE BOILING
Some aspects of two-phase flow, heat transfer and dynamic instabilities in medium and high pressure steam generators N82-20004

NUCLEON-NUCLEON INTERACTIONS
The nucleon exchange mechanism in composite nuclei interaction
[ISS-R-81/4] N82-19968

NUMBER THEORY
Algorithm for the calculation of the largest integer in the quare root of a natural number
[PREPRINT-11] N82-19918
On Pythagorean triangles and coprime lattice points
[MATHS-RES-154] N82-19919

NUMERICAL ANALYSIS
Numerical study of incompressible slightly viscous flow past blunt bodies and airfoils N82-19163
The value of dynamic fracture toughness and its dependence on material properties and loading conditions
[AD-A109151] N82-19574

NUMERICAL CONTROL
Digital time control for camera shutters
[PB82-116328] N82-19529
Microprocessor controlled stamping unit with needle printer
[BMFT-FB-T-81-189] N82-19868
Microprocessor aided control and signal processing system for a laser-two-focus velocimeter in turbomachinery research
[BMFT-FB-T-81-190] N82-19869
PSICON: A simulation package for the design of digitally controlled systems
[RR-162] N82-19890

NUMERICAL STABILITY
An examination of stability criteria for iterative numerical schemes used in solving differential equations
[RAE-TR-81081] N82-19902

NUMERICAL WEATHER FORECASTING
Integrated and spectral energetics of the GLAS general circulation model
[NASA-CR-166766] N82-19729

NUTATION DAMPERS
Life-size quantitative tests on a simple counterspun flywheel nutation damper
[BAE-NUTDAM-11] N82-19541

NUTRIENTS
The effects of sulfur dioxide and acid precipitation on decomposition and nutrient cycling processes
N82-19700

O

OAO 3
OAO-C Copernicus operations report
[NASA-CR-166774] N82-19237
OAO-3 end of mission tests report
[NASA-TM-83824] N82-19288

OCEAN BOTTOM
Gravity and geoid anomalies of the Philippine Sea: Evidence on the depth of compensation for the negative residual water depth anomaly
[NASA-CR-168839] N82-19732

OCEAN COLOR SCANNER
Study of Earth Resources Satellite (ERS) data reduction unit
[BAE-TP-7905] N82-19649
Development of a breadboard cooler for infrared remote sensing payloads, phase 1 — Earth Resources Satellite ERS 1
[FOK-RV-R-81-064] N82-19653

OCEAN CURRENTS
Satellite scatterometer feasibility study. Volume 2: Data extraction algorithm and error simulation for wind sensor — Earth Resources Satellite (ERS 1)
[ESA-CR(P)-1492-VOL-2] N82-19651
The TOCIND experiment — relation between surface isotherms and ocean currents
[CTAMN/81/R/10] N82-19805

OCEAN DATA ACQUISITIONS SYSTEMS
An aerial survey of water turbidity and laser depth sounding performance along the Queensland Coast
[AD-A109050] N82-19802

OCEAN MODELS
Wave spectra of a shoaling wave field: A comparison of experimental and simulated results
[NASA-TM-83211] N82-19800

OCEAN SURFACE
Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data
[INPE-2229-PRE/021] N82-19704
Maximum wind speeds in the North Pacific (with special reference to OWS P, N and V)
[BLL-TRANS-1495-(9022.552)] N82-19749
Classification of the fields of anomaly in monthly water temperature of the North Atlantic during the cold half-year
[BLL-TRANS-1509-(9022.552)] N82-19756

OCEAN TEMPERATURE
Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data
[INPE-2229-PRE/021] N82-19704
Classification of the fields of anomaly in monthly water temperature of the North Atlantic during the cold half-year
[BLL-TRANS-1509-(9022.552)] N82-19756
Estimating ocean-air heat fluxes during cold air outbreaks by satellite
[NASA-TM-83854] N82-19781

OCEANOGRAPHIC PARAMETERS
NASA Oceanic Processes Program, Fiscal Year 1981
[NASA-TM-84467] N82-19801
An aerial survey of water turbidity and laser depth sounding performance along the Queensland Coast
[AD-A109050] N82-19802

OCEANOGRAPHY
Publications and reports of the Institute of Oceanographic Sciences 1973-1978
[IOS-R-122] N82-19798
The SACLANTCEN oceanographic data base. Volume 2: Access, interrogation and display
[AD-A109417] N82-19803

OCEANS
Estimating ocean-air heat fluxes during cold air outbreaks by satellite
[NASA-TM-83854] N82-19781
Monte Carlo studies of ocean wind vector measurements by SCATT: Objective criteria and maximum likelihood estimates for removal of aliases, and effects of cell size on accuracy of vector winds
[NASA-CR-165837-1] N82-19799

OIL EXPLORATION
Deuterium hydrogen isotope ratios in organic matter, mineral oils, and natural gases — oil exploration
[BMFT-FB-T-81-204] N82-19319

ON-LINE SYSTEMS
On-line, real-time determinations of breath-to-breath gas exchange N82-19832

ONBOARD DATA PROCESSING
An information adaptive system study report and development plan
[NASA-CR-166768] N82-19644
Study of Earth Resources Satellite (ERS) data reduction unit
[BAE-TP-7905] N82-19649
Data rate reduction. Impact of image data compression on end to end data management of a multispectral payload — for satellite imagery
[REPT-44/130] N82-19654

OPERATING SYSTEMS (COMPUTERS)
Air traffic control en route computer system
[GPO-89-008] N82-19202
Los Alamos Scientific Laboratory computer benchmark performance 1979
[LA-8689-MS] N82-19849

OPERATIONAL PROBLEMS
Human factors and safety in nuclear power plant operation N82-19643

OPERATIONS RESEARCH
Distribution of personnel, vehicles, and supplies by ship: A model applied to the Brazilian Navy
[INPE-2305-TDL/073] N82-19674
Transfer of aerospace project management to the development of technical series production
[MBB-UR-482-81-O] N82-20011
European Scientific Notes, volume 35, number 11
[AD-A109367] N82-20138

OPERATOR PERFORMANCE
Comparison of subjective and automatic procedures for estimating apparent target length from echo duration — in radar of sonar systems
[REPT-8/81] N82-19405

OPERATORS (MATHEMATICS)
Rotationally symmetric operators for surface interpolation
[AD-A109032] N82-19916

OPTICAL DATA PROCESSING
Space-variant optical systems
[AD-A109083] N82-19524
Applications of integrated optics to signal processing and pattern recognition N82-19971

OPTICAL MEASUREMENT
Concepted design of a surface measurement system for large deployable space antennas N82-19271

OPTICAL POLARIZATION
Polarization-independent optical waveguide switch
[AD-A108764] N82-19976

OPTICAL PROPERTIES
Electrooptical effects for application in liquid crystal displays — twisted nematic cells
[BMFT-FB-T-81-170] N82-19982

OPTICAL RADAR
Backscatter and extinction in water clouds
[AD-A109277] N82-19975

OPTICAL SCANNERS
Multiangular scanning absorption-emission techniques for three-dimensional combustion diagnostics
[AD-A109060] N82-19346
Accuracy of parameter estimates for closely spaced optical targets using multiple detectors
[AD-A109185] N82-19978
Development of an Optical Scanning Mechanism Assembly (OSMA)
[PS-1450] N82-19961

OPTICAL WAVEGUIDES
Polarization-independent optical waveguide switch
[AD-A108764] N82-19976

OPTIMAL CONTROL
Multivariable aircraft control by maneuver commands: An application to air to surface gunnery
N82-19154
A method for applying linear optimal control theory to the design of a regulator for a flexible aircraft — improving riding quality in fighter aircraft
[NLR-TR-80032-U] N82-19212
On the control of cocurrent tubular chemical reactors
[RR-160] N82-19352
The receding horizon principle for distributed systems — control
[RR-167] N82-19899
Solution of problems with time as an independent variable, using the finite element method
[INPE-2269-PRE/050] N82-19906
On the compensation of optimal system asymptotic root-loci
[RR-163] N82-19925
On optimal control of plasma confinement
[RR-155] N82-19990

OPTIMIZATION
A concept for a fuel efficient flight planning aid for general aviation
[NASA-CR-3533] N82-19217

The use of a nonquadratic model in a conjugate gradient method of optimization with inexact line searches
[MATHS-RES-157] N82-19885
Comparison of the bioptimal curve for two robust estimates
[AD-A109132] N82-19909
Computational advances in large-scale nonlinear optimization
[AD-A109528] N82-19917
A variable metric method using a non-quadratic model
[MATHS-RES-158] N82-19920
On a locally optimal procedure based on ranks for comparison of treatments with a control
[AD-A109283] N82-19928
Random independence systems
[AD-A109046] N82-19931
Probabilistic analysis of random extension-rotation algorithms
[AD-A109035] N82-19932
Optimum equipment maintenance/replacement policy. Part 2: Markov decision approach
N82-20125

ORBIT CALCULATION
Study on the extension of the stroboscopic method to the second order --- orbit calculation
[ESA-CR(P)-1488] N82-19886

ORBIT PERTURBATION
Ionospheric irregularities in low latitudes of the American sector
[INPE-2243-TDL/065] N82-19725
Study on the extension of the stroboscopic method to the second order --- orbit calculation
[ESA-CR(P)-1488] N82-19886

ORBIT TRANSFER VEHICLES
Upper stage alternatives for the shuttle era
[NASA-TM-84137] N82-19303

ORBITAL ASSEMBLY
Teleoperation and automation: A survey of European expertise applicable to docking and assembly in space
[MP/PR/4905] N82-19240
Structural assembly demonstration experiment
N82-19282
Structural Assembly Demonstration Experiment (SADE) experiment design N82-19283
Large Space Shuttle Flight Experiment
N82-19285

ORBITAL MANEUVERS
Six degree of freedom manual controls study report
[NASA-CR-167532] N82-19837

ORBITAL MECHANICS
Optimal rendezvous between close circular orbits
N82-19900
Introduction to celestial mechanics
[INPE-2126-RPE/350] N82-20096

ORBITAL POSITION ESTIMATION
Study of a COMSS high accuracy positioning system: High Accuracy Positioning System (HASP)
[CNES-85.55.00] N82-19307

ORBITAL RENDEZVOUS
Optimal rendezvous between close circular orbits
N82-19900

ORBITAL SPACE STATIONS
Financial assessment of the Space Operations Center as a Private Business Venture
[NASA-CR-168636] N82-19248

ORGANIC ALUMINUM COMPOUNDS
The attempted syntheses of low oxidation state, organometallic derivatives of aluminum, gallium and indium, a new synthesis Al(CH2SiMe3)3
[AD-A109333] N82-19317

ORGANIC CHEMISTRY
Study of photophysical processes and molecular transformations of excited states
[AD-A109137] N82-19345

ORGANIC MATERIALS
Deuterium hydrogen isotope ratios in organic matter, mineral oils, and natural gases --- oil exploration
[BMFT-FB-T-81-204] N82-19319

ORTHOTROPIC PLATES
Some real variable expressions for stress distributions in orthotropic plates
[VTH-LR-334] N82-19593

OSCILLATIONS
Evaluation of parameters of the oscillatory motion of digital servo system in a steady-state mode
[AD-A109314] N82-19476

OSS-1 PAYLOAD
Mission operation report. Space Shuttle program STS-3 launch
[NASA-TM-84154] N82-19301

OTOLITH ORGANS
Measurements of vestibular function N82-19826

OTTO CYCLE
Conventional engine technology. Volume 1: Status of OTTO cycle engine technology
[NASA-CR-168643] N82-19542
Conventional engine technology. Volume 3: Comparisons and future potential
[NASA-CR-168645] N82-19544

OUTGASSING
Effect of vacuum processing on outgassing within an orbiting molecular shield
[NASA-TP-1980] N82-19390

OVENS
A solar high temperature kiln --- for baking ceramic building materials in developing countries
[BMFT-FB-T-81-181] N82-19692

OVERPRESSURE
Propulsion system ignition overpressure for the Space Shuttle
[NASA-TM-82458] N82-19299
TRANSID: A computer program for the analysis of hydraulic transients in condenser cooling circuits
[CISE-1722] N82-19512

OXIDATION RESISTANCE
Tailored plasma sprayed MCrAlY coatings for aircraft gas turbine applications
[NASA-CR-165234] N82-19360

OXYGEN
Weak and strong ignition. 2: Sensitivity of the hydrogen-oxygen system
[AD-A108843] N82-19342
Acta Polytechnica Scandinavica. Oxygen-metal (Ag, Au, Bi, Cu, In, Ni, Sb, Sn, Te) interactions in dilute molten lead alloys
[ISBN-951-666-137-3] N82-19359

OXYGEN METABOLISM
Estuarine community dynamics benthic program, Patuxent River Estuary, preliminary data report
[PB82-108689] N82-19806

OXYGEN SPECTRA
Ionospheric irregularities in low latitudes of the American sector
[INPE-2243-TDL/065] N82-19725

OXYGENATION
Study of the kinetics of oxygen saturation of fluorocarbon emulsions --- blood substitutes
[ISSN-0077-5606] N82-19810

OZONE
Stratospheric ozone concentration measurements at sunrise and at sunset
[BLL-TRANS-1499-(9022.552)] N82-19720
Atlas of the global distribution of the total ozone concentration according to satellite measurements
[MITT-28] N82-19740
Determination of the effects of material from alternate energy sources on the upper respiratory tract clearance mechanism. Part 1: In vitro exposure to particulate pollutants. Part 2: In vivo exposure to ozone
[PB82-117037] N82-19811
Application of the empirical kinetic modeling approach to urban areas. Volume 2: Tulsa
[PB82-114224] N82-20029

OZONOMETRY
Stratospheric ozone concentration measurements at sunrise and at sunset
[BLL-TRANS-1499-(9022.552)] N82-19720
Atlas of the global distribution of the total ozone concentration according to satellite measurements
[MITT-28] N82-19740

P

P-TYPE SEMICONDUCTORS
SIMS studies on anomalous behavior of phosphorus and other implants in silicon
[AD-A108870] N82-19995

PACIFIC NORTHWEST (US)
Design calculation procedure for passive solar houses at Navy installations in the Pacific Northwest, volume 4
[AD-A108385] N82-19686

PACIFIC OCEAN
Investigations of medium wavelength magnetic anomalies in the Eastern Pacific using Magsat data
[E82-10047] N82-19622
Maximum wind speeds in the North Pacific (with special reference to OWS P, N and V)
[BLL-TRANS-1495-(9022.552)] N82-19749

PACKETS (COMMUNICATION)
SATNET development and operation. Pluribus satellite IMP development. Remote site maintenance. Internet operations and maintenance. Mobile access terminal network. TCP for the HP3000. TCP-TAC. TCP for VAX-UNIX. Combined quarterly technical report
[AD-A108783] N82-19432

PAIN
The etiology of facial pain as related to masticatory muscles N82-19828

PAIR PRODUCTION
Pulsar theory: Particle acceleration and photon emission in the polar flux tube N82-20056
Hot plasmas in active galactic nuclei --- radiative processes N82-20058

PANEL METHOD (FLUID DYNAMICS)
Subsonic panel method for the efficient analysis of multiple geometry perturbations
[NASA-CR-3528] N82-19180

PANELS
Environmental durability of electroplated black chromium
[NASA-TM-82454] N82-19357

PARABOLIC ANTENNAS
Surface measurement system development
N82-19261
Compensation for systematic weight deformations of mirror system of parabolic radio telescopes
N82-19459

PARABOLIC REFLECTORS
Measurement of losses of mesh membrane material for reflector applications with an S-band radiometer
N82-19269

PARALLEL PROCESSING (COMPUTERS)
Unbounded speed variability in distributed communications systems
[AD-A108824] N82-19437
Design of a versatile LSI module for the simple configuration of high-throughput real-time polyprocessor systems N82-19468
Overview of the CHiP computer
[AD-A109293] N82-19853
On the power of probabilistic choice in synchronous parallel computations
[AD-A109047] N82-19865
Programming processor interconnection structures
[AD-A109294] N82-19893

PARALLEL PROGRAMMING
Programming processor interconnection structures
[AD-A109294] N82-19893

PARAMETER IDENTIFICATION
Structural dynamic analysis of the Space Shuttle Main Engine
[NASA-CR-161945] N82-19302
System identification for multivariable control
N82-19389
Accuracy of parameter estimates for closely spaced optical targets using multiple detectors
[AD-A109185] N82-19978
Identification of the discontinuities at the magnetopause N82-20083

PARAMETERIZATION
Evaluation of parameters of the oscillatory motion of digital servo system in a steady-state mode
[AD-A109314] N82-19476
Asymptotic normality of autoregressive parameter estimates for mixed time series
[AD-A108781] N82-19929

PARTIAL DIFFERENTIAL EQUATIONS
Two-step implicit schemes for the solution of a conservation equation N82-20137

PARTICLE ACCELERATION
Particle acceleration --- cosmic rays N82-20043
Plasma processes at collisionless shock waves
N82-20047
Pulsar theory: Particle acceleration and photon emission in the polar flux tube N82-20056
Electron acceleration in magnetosonic shock fronts N82-20060
High energy cosmic ray acceleration by diffusive shocks N82-20061

Cosmic ray acceleration by stellar winds and self-confinement in giant H2 regions --- idealized model N82-20062

Formation of ion conics and lower hybrid acceleration in the supraruroral region N82-20075

Acceleration of cosmic rays by shock waves N82-20086

PARTICLE BEAMS

Plasma beams from doughnuts --- gas torus alternative model to accretion disks N82-20069

PARTICLE COLLISIONS

Measurement of integral scattering cross sections of hydrogen atom-molecular systems in the subthermal range [MPIS-5/1981] N82-19967

PARTICLE EMISSION

Three dimensional numerical model for estimation of pollutant concentration [INPE-2193-TDL/060] N82-19703

Astrophysical tests for radiative decay of neutrinos and fundamental physics implications [NASA-TM-83873] N82-20098

PARTICLE IN CELL TECHNIQUE

The simulation of plasma double layer structures in two dimensions N82-19984

PARTICLE MOTION

Collective gravitational effects --- on particle motion N82-20072

A plasma current sheet studied by means of the particle motion N82-20084

The analytical trajectory of the charged particle moving in a neutral sheet magnetic field N82-20085

PARTICLE SIZE DISTRIBUTION

A computational study of the modification of raindrop size distributions in subcloud downdrafts N82-19748

PARTICLE TRAJECTORIES

The simulation of plasma double layer structures in two dimensions N82-19984

Application of the empirical kinetic modeling approach to urban areas. Volume 2: Tulsa [PB82-114224] N82-20029

The analytical trajectory of the charged particle moving in a neutral sheet magnetic field N82-20085

PARTICLES

Determination of the effects of material from alternate energy sources on the upper respiratory tract clearance mechanism. Part 1: In vitro exposure to particulate pollutants. Part 2: In vivo exposure to ozone [PB82-117037] N82-19811

PATCH TESTS

Evaluation of materials proposed for use in space flight [NASA-CR-167537] N82-19815

PATENT APPLICATIONS

An investigation of the lag between the start of research and the development of new technology [NASA-CR-168583] N82-20005

PATENT POLICY

Technology assessment and forecast report, 10th --- patent policy [REPT-10] N82-20024

PATTERN RECOGNITION

Utilization of Aerochrome 2443 film for identification and estimating wheat growing areas --- Rio Grande do Sul, Brazil [INPE-2197-PRE/006] N82-19639

Methodology of the interpretation of remote sensing data and applications in pedology [INPE-2211-MD/008] N82-19641

Methodology of the interpretation of remote sensing data and applications in geomorphology [INPE-2209-MD/007] N82-19642

Binary mosaics and point quadrat sampling in ecology [A-80-ST-98-37] N82-19705

Structural pattern recognition [INPE-2098-RPE/328] N82-19895

Good layouts for pattern recognizers [AD-A109324] N82-19897

Contour recognition and measurements using Fourier transformation [DFVLR-MITT-81-22] N82-19926

Applications of integrated optics to signal processing and pattern recognition N82-19971

PAVEMENTS

Asphalt recycling technology: Literature review and research plan [AD-A108199] N82-19392

Precast concrete pavements [AD-A108802] N82-19395

PAYLOAD DELIVERY (STS)

Upper stage alternatives for the shuttle era [NASA-TM-84137] N82-19303

PAYLOAD TRANSFER (STS)

Development of STS/Centaur failure probabilities liftoff to Centaur separation [NASA-CR-167549] N82-19255

PAYLOADS

EXUV. Phase A report. Volume 3: Preliminary payload interface specification --- extreme UV/soft X-ray survey mission (EXUV) [REPT-44/69/JS/CB-VOL-3] N82-19295

Definition study on multishakers for vibration testing --- Ariane payloads [SOPEMEA-ET-17004] N82-19526

Development of a breadboard cooler for infrared remote sensing payloads, phase 1 --- Earth Resources Satellite ERS 1 [FOK-RV-R-81-064] N82-19653

PENNING EFFECT

Integral total collision and ionization cross sections for the interaction of excited He in the (2/super 1/S, 2/super 3/S) state with Ar in the thermal energy range [MPIS-32/1980] N82-19350

PERCOLATION

Percolation and conduction phenomena in disordered composite media N82-19331

PERFORMANCE PREDICTION

Analytical performance prediction for large antennas N82-19260

Radio frequency verification tasks related to a multiple aperture reflector system N82-19264

Preliminary analytical results using surface current integration for predicting effects of surface pillows on RF performance N82-19266

Achievements in multi-axes testing using servohydraulic vibration system N82-19312

Ignition, combustion, detonation and heat addition to established flows [AD-A108580] N82-19339

Foundations for computer simulation of a low pressure oil flooded single screw air compressor [AD-A108230] N82-19391

PERFORMANCE TESTS

Evaluation of wind tunnel performance testings of an advanced 45 deg swept 8-bladed propeller at Mach numbers from 0.45 to 0.85 [NASA-CR-3505] N82-19178

Near field testing of LARC multiple beam antenna N82-19273

An aerial survey of water turbidity and laser depth sounding performance along the Queensland Coast [AD-A109050] N82-19802

Master timing system measurements N82-20124

PERIODIC VARIATIONS

Detection of periodically fluctuating noise --- from ships [FOA-C-30223-E1] N82-19955

PERIODICALS

The periodical management system [PB82-116518] N82-20019

PERIPHERAL EQUIPMENT (COMPUTERS)

Fast processor for spectral analysis (ORAS) [CRPE-NT-106] N82-19670

PERMUTATIONS

Literature study of the biodegradability of chemicals in water. Volume 2: Permutated index of chemicals, microbial populations, and wastewater treatment systems with bibliography [PB82-100850] N82-19712

PERSONNEL

Distribution of personnel, vehicles, and supplies by ship: A model applied to the Brazilian Navy [INPE-2305-TDL/073] N82-19874

PERSPIRATION

Analysis of evaporative water loss in the Skylab astronauts [NASA-CR-167482] N82-19814

PERTURBATION

Subsonic panel method for the efficient analysis of multiple geometry perturbations [NASA-CR-3528] N82-19180

PERTURBATION THEORY

A method of characteristic surfaces: The approximate solution of three-dimensional supersonic flow fields, from the near field up to the sonic boom region [VTH-LR-331] N82-19190

A study on the development of intermediate scale disturbances with a model of primitive equations of high vertical resolution [INPE-2232-TDL/083] N82-19773

Some applications of the perturbed directional correlation technique in nuclear physics, solid state physics and radio chemistry [ISBN-90-6231-084-2] N82-19942

PETROGRAPHY

Stratigraphy, petrography and depositional history of the Hertha Formation (Upper Pennsylvanian), midcontinent North America N82-19746

PHASE CHANGE MATERIALS

Kinetic investigations of the reactions of UFG in the gaseous phase [MPIS-1/1981] N82-19351

On the disruptive vaporization and burning of emulsified and multicomponent fuel droplets N82-19354

PHASE DEMODULATORS

QPSK demodulator [INPE-2164-RPE/382] N82-19412

PHASE DIAGRAMS

The anisotropic classical chain. Thermodynamic properties and phase diagrams N82-20003

PHASE ERROR

Antenna (selected articles) [AD-A108174] N82-19448

Decreasing DG and direction dispersion of main maximum of beam pattern of sectional traveling wave antenna N82-19449

Statistics of the field of focused systems N82-19450

Compensation for systematic weight deformations of mirror system of parabolic radio telescopes N82-19459

PHASE RULE

A further study of helicopter rotor pitch-flap-phase coupling [BU-259] N82-19214

PHASE SHIFT KEYING

QPSK demodulator [INPE-2164-RPE/382] N82-19412

PHASE TRANSFORMATIONS

Study of the magnetic phase dependence of the Ni-CO reaction rate [AD-A108422] N82-19338

Electronically induced phase transformations [AD-A108982] N82-19380

PHASE VELOCITY

Antenna (selected articles) [AD-A108174] N82-19448

Analysis of the properties of connected vibrator structures N82-19452

PHASE-SPACE INTEGRAL

A numerical method for solving the Vlasov equation [NASA-TM-81339] N82-19985

PHASED ARRAYS

Analysis of multipath interference for APATS [AD-A108797] N82-19305

Analysis of the multipath environment for APATS testing [AD-A109345] N82-19306

PHENOLOGY

Preliminary evaluation of spectral, normal and meteorological crop stage estimation approaches [E82-10059] N82-19634

PHILIPPINES

Upper mantle heterogeneity: Comparisons of regions south of Australia with Philippine Basin [NASA-CR-168646] N82-19733

PHONONS

On the synergistic effects of laser/phonon-stimulated processes: A master equation approach [AD-A109025] N82-19531

PHOSPHORIC ACID FUEL CELLS

Phosphoric acid fuel cell technology status [NASA-TM-82791] N82-19670

PHOSPHORUS

SIMS studies on anomalous behavior of phosphorus and other implants in silicon [AD-A108870] N82-19995

PHOTOCHEMICAL REACTIONS
Photoassisted reactions on doped metal oxide particles
[AD-A109383] N82-19344
Study of photophysical processes and molecular transformations of excited states
[AD-A109137] N82-19345
One and two dimensional photochemical modeling of the two chemical interactions in the middle atmosphere (0-120 km) N82-19719
Inversion of spire NO data
[AD-A108866] N82-19736
Application of the empirical kinetic modeling approach to urban areas. Volume 2: Tulsa
[PB82-114224] N82-20029

PHOTOELECTRIC CELLS
Contactless optoelectronic position sensing
[BMFT-FB-T-81-191] N82-19481
Results of continuous synchronous orbit testing of sealed nickel-cadmium cells
[NASA-CR-168564] N82-19678

PHOTOELECTRICITY
Operational performance of the photovoltaic-powered grain mill and water pump at Tangaye, Upper Volta
[NASA-TM-82767] N82-19673

PHOTOGEOLOGY
Methodology of the interpretation of remote sensing data and applications in geomorphology
[INPE-2209-MD/007] N82-19642

PHOTOGRAMMETRY
Helmut Wolf: On the occasion of his 70th birthday
[SER-E-18] N82-19603
Mathematical and stochastic models in photogrammetry relating to Helmut Wolf's work
N82-19605

PHOTOGRAPHIC FILM
Cost estimates in connection with the selection of a system for long-term storage of hydrometeorological data
[BLL-TRANS-1502-(9022.552)] N82-19760

PHOTOGRAPHIC RECORDING
Space-variant optical systems
[AD-A109083] N82-19524

PHOTOINTERPRETATION
Automatic analysis of multispectral images
[INPE-2212-MD/009] N82-19520
Utilization of Aerochrome 2443 film for identification and estimating wheat growing areas --- Rio Grande do Sul, Brazil
[INPE-2197-PRE/006] N82-19639
Method of interpretation of remote sensing data and applications to vegetation
[INPE-2215-MD/010] N82-19640
Methodology of the interpretation of remote sensing data and applications in pedology
[INPE-2211-MD/008] N82-19641
Methodology of the interpretation of remote sensing data and applications in geomorphology
[INPE-2209-MD/007] N82-19642

PHOTOMAPPING
Helmut Wolf: On the occasion of his 70th birthday
[SER-E-18] N82-19603

PHOTOMAPS
AgRISTARS: Interim catalog ground data summary, data acquisition year 1979
[E82-10032] N82-19608

PHOTON BEAMS
Spectral and temporal behavior of the X-ray binary stars Cgy X-1 in the hard X-ray domain
[MPI-PAE/EXTRATERR-166] N82-20091

PHOTON-ELECTRON INTERACTION
Electron kinetic equations in comptonization by isotropic photons N82-20065

PHOTONS
Pulsar theory: Particle acceleration and photon emission in the polar flux tube N82-20056
On the theory of Gamma Ray Amplification through Stimulated Annihilation Radiation (GRASAR)
[NASA-TM-83857] N82-20111

PHOTOVOLTAIC CELLS
Operational performance of the photovoltaic-powered grain mill and water pump at Tangaye, Upper Volta
[NASA-TM-82767] N82-19673
Vacuum lamination of photovoltaic modules
[NASA-CR-168634] N82-19676
A low-power photovoltaic system with energy storage for radio communications: Description and design methodology
[NASA-CR-168640] N82-19677

PHOTOVOLTAIC CONVERSION
Socioeconomic impact of photovoltaic power at Schuchuli, Arizona
[NASA-CR-165551] N82-19669
Operational performance of the photovoltaic-powered grain mill and water pump at Tangaye, Upper Volta
[NASA-TM-82767] N82-19673
Design of mobile photovoltaic power systems: 0.5-3kW
[AD-A108889] N82-19688

PHYSICAL EXERCISE
Cardiovascular responses to isometric exercise in sitting and lying position N82-19823
A comparison between acetylene and freon rebreathing for measuring cardiac output during exercise --- in space N82-19831

PHYSICAL PROPERTIES
Molybdenum disulphide lubrication. A continuation survey: 1977/78
[ESA-TRIB-4] N82-19379

PHYSIOLOGICAL EFFECTS
Determination of the effects of material from alternate energy sources on the upper respiratory tract clearance mechanism. Part 1: In vitro exposure to particulate pollutants. Part 2: In vivo exposure to ozone
[PB82-117037] N82-19811
Catecholamine levels in fit and nonfit males when exposed to an emotional stress N82-19813
Human cardiovascular adaptation to zero gravity --- symposium proceedings, Copenhagen, 20-21 Apr. 1981
[ESA-SP-1033] N82-19817
Current views and future programs in cardiovascular physiology in space --- plethysmography
N82-19818
Adaptation to zero gravity as simulated by head-down tilt N82-19819
Clinical physiology of the renin-angiotensin-aldosterone system N82-19820
Volume regulating hormones and their role in the cardiovascular adaptation to zero gravity
N82-19822
Use of acetylene rebreathing method for measuring cardiac output during physiological and clinical studies N82-19830
Nonauditory effects of high intensity noise on ground crews at a naval air station
[AD-A108996] N82-19834

PHYSIOLOGICAL RESPONSES
Cardiovascular responses to isometric exercise in sitting and lying position N82-19823
Cardiovascular reactions to tilt and lower body positive pressure (LBPP) N82-19825

PIPE FLOW
An investigation of wall pressure fluctuations behind a sudden enlargement of the cross sectional area of a round pipe
[DFVLR-FB-81-35] N82-19510

PIPELINES
Study of near-threshold fatigue crack propagation in pipeline steels in high pressure environments
[NASA-CR-166295] N82-19388

PIPES (TUBES)
Development of manufacturing technology for fabrication of a composite helicopter main rotor spar by tubular braiding
[AD-A109377] N82-19209
Free-wave propagation in fluid-loaded thick-walled circular pipes
[AMTE-N-TM-81903] N82-19491
An investigation of wall pressure fluctuations behind a sudden enlargement of the cross sectional area of a round pipe
[DFVLR-FB-81-35] N82-19510
Tube to tubesheet welding by electron beam for heat exchanger application
[IKE-1-11] N82-19546

PISTON ENGINES
Evaluation and control of the exhaust noise of reciprocating I.C. engines N82-19559

PITCHING MOMENTS
High speed aerodynamic characteristics of the GAFOPH aerofoil
[AD-A108922] N82-19183
A further study of helicopter rotor pitch-flap-phase coupling
[BU-259] N82-19214

PL/1
A system for implantation of data banks in Burroughs series B7000/B6000 computers
[INPE-2299-TDL/070] N82-19676

PLANAR STRUCTURES
A 12 GHz mixer with planar circuits in a waveguide
[INPE-2149-RPE/370] N82-19467

PLANE STRAIN
Wave propagation problems in certain elastic anisotropic half spaces N82-19454
Implementation of a postcracking model for finite element analysis of reinforced concrete
[AD-A108984] N82-19572

PLANETARY ENVIRONMENTS
A survey of atmospheric turbulence characteristics
[AD-A109306] N82-19738

PLANETARY GRAVITATION
Study on the extension of the stroboscopic method to the second order --- orbit calculation
[ESA-CR(P)-1488] N82-19886

PLANETARY LANDING
Table of space vehicles, 1958 - 1980
[RAE-TR-81095] N82-19254

PLANETARY MAGNETIC FIELDS
The magnetohydrodynamic dynamo --- of planetary, stellar, and galactic magnetic fields N82-20033
Magnetic field measurements at Jupiter by Voyagers 1 and 2: Daily plots of 48 second averages
[NASA-TM-83864] N82-20105

PLANETARY RADIATION
Evidence for solar wind control of Saturn radio emission
[NASA-TM-83889] N82-20104

PLANKTON
Estuarine community dynamics benthic program, Patuxent River Estuary, preliminary data report
[PB82-108689] N82-19806
Biochemical, physiological and ecological aspects of ammonium regeneration by marine crustaceans
N82-19808

PLANNING
A model for dimensioning a corrective maintenance system
[INPE-2233-TDL/064] N82-19935

PLANT STRESS
Wheat stress indicator model, Crop Condition Assessment Division (CCAD) data base interface driver, user's manual
[E82-10031] N82-19607
AgRISTARS: Soil moisture/early warning and crop condition assessment. Interface control document
[E82-10053] N82-19628
AgRISTARS: Yield model development/soil moisture. Interface control document
[E82-10054] N82-19629

PLANTS (BOTANY)
Binary mosaics and point quadrat sampling in ecology
[A-80-ST-96-37] N82-19705

PLASMA ACCELERATION
Plasma emission mechanisms and acceleration of relativistic particles in cosmic plasmas N82-20038

PLASMA COMPOSITION
Ionospheric ions in the near Earth geomagnetic tail plasma lobes
[IPS-81-7] N82-19743

PLASMA CONDUCTIVITY
Second-order nonlinear conductivity tensor for an unmagnetized relativistic turbulent plasma
N82-20071

PLASMA CONTROL
The cavity Q for ergodic eigenmodes
[AD-A109041] N82-19987
On optimal control of plasma confinement
[RR-155] N82-19990

PLASMA COOLING
Interstellar matter --- thermal and pressure balance
N82-20035

PLASMA CURRENTS
A plasma current sheet studied by means of the particle motion N82-20084

PLASMA DYNAMICS
Plasma dynamics in the rapidly rotating magnetosphere of Jupiter --- Voyager observations
N82-20045

Inferences about the solar wind dynamics from observed distributions of electrons and ions — Voyager and Helios observations N82-20046

Galactic dynamics and gravitational plasmas — spiral structure of galaxies N82-20050

PLASMA EQUILIBRIUM

Quasistatic evolution of preflare equilibria — solar flares N82-20079

PLASMA JETS

Production and propagation of jets — narrow features in the structure of extragalactic radio sources N82-20055

PLASMA LAYERS

Double layer and potential jump: A review of laboratory experimental evidence N82-20078

PLASMA PHYSICS

Plasma Astrophysics — conference proceedings, Varenna, Italy, 27 Aug. - 7 Sep. 1981 [ESA-SP-161] N82-20030

The new paradigm in cosmic plasma physics — magnetic fields versus electric currents N82-20031

Plasma emission mechanisms and acceleration of relativistic particles in cosmic plasmas N82-20038

Formation of ion conics and lower hybrid acceleration in the supraauroral region N82-20075

PLASMA POTENTIALS

Double layer and potential jump: A review of laboratory experimental evidence N82-20078

PLASMA PUMPING

Plasma lasers (a strong source of coherent radiation in astrophysics) N82-20041

PLASMA RADIATION

Plasma lasers (a strong source of coherent radiation in astrophysics) N82-20041

Radiation processes in active galactic nuclei N82-20042

PLASMA SPRAYING

Tailored plasma sprayed MCrAlY coatings for aircraft gas turbine applications [NASA-CR-165234] N82-19360

PLASMA TEMPERATURE

An appendix to the paper Plasma Electron Temperature Determination in Low-Density Plasmas from the Helium I 3889 A and 5016 A Line Intensities [TRITA-EPP-81-03] N82-19988

PLASMA TURBULENCE

Weak turbulence theory of enhanced gas ionization by plasma flow N82-20039

PLASMA WAVES

On the possibility of existence of large amplitude waves around pulsars N82-20059

PLASMA-PARTICLE INTERACTIONS

A plasma current sheet studied by means of the particle motion N82-20084

PLASMAS (PHYSICS)

Kinetic response of ionospheric ions to onset of auroral electric fields [NASA-CR-164799] N82-19727

Kelvin-Helmholtz instability of the magnetopause boundary: Comparison with observed fluctuations [IPS-81-12] N82-19744

The simulation of plasma double layer structures in two dimensions N82-19984

A numerical method for solving the Vlasov equation [NASA-TM-81339] N82-19985

PLASMASPHERE

Ionospheric ions in the near Earth geomagnetic tail plasma lobes [IPS-81-7] N82-19743

PLASTIC DEFORMATION

A study of dislocation density and phase elongation as a function of deformation in sintered tungsten composites [FOA-C-20428-D4] N82-19365

Transition Electron Microscope (TEM) in-situ straining and bulk studies of the selection of glide systems in Face Centered Cubic (FFC) crystals [NLR-TR-80041-U] N82-19998

PLASTICS

The science and engineering of materials [INPE-2136-RPE/361] N82-19316

Free volume theory of diffusion into polymers. Part 1: Method of predicting activation energies of diffusion for gases into elastomers. Part 2: Diffusion of non-ionic dyes into semi-crystalline poly (ethylene terephthalate) films. Part 3: Relationship between glass-transition and dyeing-transition temperatures N82-19372

The weathering of plastics materials in the tropics. 6: The further evaluation of a solar radiation concentrating device (EMMA) as a means of accelerating the weathering of plastics [AD-A109385] N82-19376

PLATES (STRUCTURAL MEMBERS)

The Shock and Vibration Digest, volume 13, no. 12 [AD-A109583] N82-19562

Finite-element modeling of layered, anisotropic composite plates and shells: A review of recent research N82-19583

PLATING

Environmental durability of electroplated black chromium [NASA-TM-82454] N82-19357

PLETHYSMOGRAPHY

Current views and future programs in cardiovascular physiology in space — plethysmography N82-19818

PLOTTERS

PRINTR: A text and graph plotting system with expanded capabilities [AD-A109045] N82-19859

PLOTTING

Comparison of some irregular methods for level plotting interpolation [FOA-C-20433-D8] N82-19887

POINT DEFECTS

Analysis of deep defects in III-V semiconductors — for LED and FET applications [BMFT-FB-T-81-197] N82-19999

POINTS (MATHEMATICS)

On Pythagorean triangles and coprime lattice points [MATHS-RES-154] N82-19919

POLAR SUBSTORMS

Geophysical effects on the length of the sideral day [BLL-TRANS-1489-(9022.552)] N82-19721

Event study on pre-substorm phases and their relation to the energy coupling between solar wind and magnetosphere — sudden change in interplanetary magnetic field followed by intensification of convection [TRITA-EPP-81-04] N82-19741

POLARIZATION CHARACTERISTICS

Planning of a C-band pulse Doppler radar with polarization diversity for atmospheric research in the mesoscale range [DFVLR-MITT-81-28] N82-19445

POLARIZED ELECTROMAGNETIC RADIATION

Pulsar theory: Particle acceleration and photon emission in the polar flux tube N82-20056

POLICIES

Direct broadcast satellites: Policies, prospects, and potential competition [PB82-110164] N82-19446

Optimum equipment maintenance/replacement policy. Part 2: Markov decision approach N82-20125

POLLUTION CONTROL

A mobile stream diversion system for hazardous materials spills isolation [PB82-109679] N82-19661

POLLUTION MONITORING

Inorganic analyses in water quality control programs: Instructor's guide [PB82-111378] N82-19353

Integrated devices of semiconductor metal-oxides in conjunction with silicon for solid-state gas sensors [DE82-000397] N82-19477

Three dimensional numerical model for estimation of pollutant concentration [INPE-2193-TDL/060] N82-19703

POLLUTION TRANSPORT

LANDSAT imagery of the Venetian Lagoon: A multitemporal analysis [E82-10036] N82-19612

Remote sensing of sulfur dioxide effects on vegetation. Volume 1: Summary [PB82-115122] N82-19715

POLYCARBONATES

Impact response characteristics of polymeric materials [AD-A109281] N82-19377

Further studies on dynamic crack curving [AD-A109299] N82-19586

POLYESTERS

The synthesis of biodegradable block copolymers containing amylose and polyester oligomeric blocks N82-19371

POLYETHYLENE TEREPHTHALATE

Free volume theory of diffusion into polymers. Part 1: Method of predicting activation energies of diffusion for gases into elastomers. Part 2: Diffusion of non-ionic dyes into semi-crystalline poly (ethylene terephthalate) films. Part 3: Relationship between glass-transition and dyeing-transition temperatures N82-19372

POLYIMIDES

Tribological properties at 25 C of seven polyimide films bonded to 440 C high-temperature stainless steel [NASA-TP-1944] N82-19373

POLYMERIC FILMS

Tribological properties at 25 C of seven polyimide films bonded to 440 C high-temperature stainless steel [NASA-TP-1944] N82-19373

POLYMERS

Impact response characteristics of polymeric materials [AD-A109281] N82-19377

Electron transmission through and reflection by an arbitrary set of square potential steps [AD-A108630] N82-19474

POLYMETHYL METHACRYLATE

Impact response characteristics of polymeric materials [AD-A109281] N82-19377

POLYNOMIALS

Analysis and synthesis of binary sequences N82-19463

The control of the quality of surface meteorological information [BLL-TRANS-1503-(9022.552)] N82-19759

POLYPEPTIDES

Clinical physiology of the renin-angiotensin-aldosterone system N82-19820

POLYSTYRENE

Morphology of the polystyrene/poly(vinyl methyl ether) blend as studied by excimer fluorescence [AD-A109143] N82-19378

POPULATIONS

Models of projection and localization of urban population using simulation techniques [INPE-2207-PRE/013] N82-20023

PORCELAIN

Small scale reclamation/disposal of toxic porcelain enameling waste sludges [PB82-101593] N82-19710

POROUS MATERIALS

Composite seal for turbomachinery [NASA-CASE-LEW-12131-3] N82-19540

PORTS (OPENINGS)

Theoretical investigation of the flow of a supersonic free jet from a slit [MPIS-25/1980] N82-19182

POSITION (LOCATION)

Electro-optical system for remote position measurements in real time N82-19272

Contactless optoelectronic position sensing [BMFT-FB-T-81-191] N82-19481

Evaluation of TIROS-N and NOAA-6 satellite data: Comparisons of colocated soundings and analyses for a January case N82-19770

Cardiovascular reflexes during upright position N82-19821

POSITION INDICATORS

Accuracy of parameter estimates for closely spaced optical targets using multiple detectors [AD-A109185] N82-19978

POSITIONING DEVICES (MACHINERY)

Electro-optical system for remote position measurements in real time N82-19272

POSITRON ANNIHILATION

Measurements of the electron-positron annihilation line at 511 KeV emitted from the galactic center [INPE-2222-PRE/018] N82-19961

POSTFLIGHT ANALYSIS

OAO-3 end of mission tests report [NASA-TM-83824] N82-19288

POSTURE

Cardiovascular reflexes during upright position N82-19821

POTABLE WATER

Sharing costs fairly: A practical introduction to cooperative game theory — costs of water facilities
[ER-6] N82-19934

POTENTIAL ENERGY

The techniques, magnitudes and opportunities for development of energy storage (UK)
[PB82-120868] N82-19696

POTENTIAL FIELDS

Hot plasmas in active galactic nuclei — radiative processes N82-20058

POTENTIAL FLOW

Computation of transonic potential flow about 3 dimensional inlets, ducts, and bodies
[NASA-CR-3514] N82-19179

Subsonic panel method for the efficient analysis of multiple geometry perturbations
[NASA-CR-3528] N82-19180

POTOMAC RIVER VALLEY (MD-VA-WV)

Water resources data for Pennsylvania, water year 1980: Volume 2: Susquehanna and Potomac River Basins
[PB82-115908] N82-19662

POWER CONDITIONING

Power systems N82-19146

POWER SERIES

Cn nuclear Koethe spaces defined by Dragilev functions
[ISSN-0355-0087] N82-19960

PRECIPITATION (METEOROLOGY)

Area precipitation measurement by weather radar: Problems and practical experiences
[BLL-TRANS-1458-(9022.552)] N82-19750

Automatic measurement of areal precipitation using C-band radar
[BLL-TRANS-1378-(9022.552)] N82-19765

The problem of precipitation measurement by attenuation of radio waves
[BLL-TRANS-1475-(9022.549)] N82-19766

Forecasts of precipitation in the Northeast of Brazil: Dynamic aspects
[INPE-2244-PRE/029] N82-19772

Microwave radiometric observations near 19.35, 92 and 183 GHz of precipitation in tropical storm Cora
[NASA-TM-82164] N82-19779

SCPP forecasting support
[PB82-123167] N82-19797

PRECIPITATION PARTICLE MEASUREMENT

The development and testing of methods to infer midlatitude precipitation intensity from geosynchronous satellite infrared data
[AD-A108881] N82-19788

PREDICTION ANALYSIS TECHNIQUES

Application of an airfoil stall flutter computer prediction program to a three-dimensional wing: Prediction versus experiment
[NASA-CR-168566] N82-19169

Distorted reflector antenna performance prediction technique N82-19268

A method of measuring and recording. The impulse response of the ionospheric channel
[CRC-1352] N82-19427

Agricultural soil moisture experiment, Colby, Kansas 1978: Measured and predicted hydrological properties of the soil
[E82-10057] N82-19632

A simulation study to test the prediction of 1 deg times 1 deg mean gravity anomalies using least squares collocation from the GRAVSAT mission
[AD-A108867] N82-19735

Predictability of the tropical atmosphere
[NASA-TM-83829] N82-19775

PREDICTIONS

Future space programs, 1981
[GPO-86-913] N82-19234

PRELAUNCH SUMMARIES

Mission operation report. MLR flight equipment installed in the Orbiter cabin
[NASA-TM-84153] N82-19233

Mission operation report. Space Shuttle program STS-3 launch
[NASA-TM-84154] N82-19301

PRESSURE DISTRIBUTION

Transonic perturbation analysis of wing-fuselage-nacelle-pylon configurations with powered jet exhausts
[NASA-CR-165852] N82-19167

Some observations of surface pressures and the near wake of a blunt trailing edge airfoil
[NASA-CR-168563] N82-19174

Additional results of a study of unsteady airfoil surface pressures and turbulent boundary layers
[AD-A108978] N82-19184

The effect of a wall on the aerodynamics of a spoiler — wind tunnel flow visualization and pressure measurement
[BU-268] N82-19194

The investigation of the propagation mechanism of pressure fluctuation in turbulent flow
[AD-A108498] N82-19502

PRESSURE EFFECTS

Hemodynamic effects of lower body positive pressure N82-19824

Cardiovascular reactions to tilt and lower body positive pressure (LBPP) N82-19825

PRESSURE GRADIENTS

The pressure signature method for blockage corrections, and its applications to the industrial wind tunnel
[BU-263] N82-19231

PRESSURE MEASUREMENT

The applicability of pressure measurements by radiosondes to calculating the height
[BLL-TRANS-1505-(9022.552)] N82-19755

PRESSURE PULSES

Effects of repetition rate and impulsiveness of simulated helicopter rotor noise on annoyance
[NASA-TP-1969] N82-19707

PRESSURE RATIO

Performance of single-stage axial-flow transonic compressor with rotor and stator aspect ratios of 1.63 and 1.78, respectively, and with design pressure ratio of 1.82
[NASA-TP-1974] N82-19222

PRESSURE VESSELS

Sensitivity of the fracture probability in a reactor vessel to variations in data
[TRITA-HFL-0028] N82-19595

PRIMARY COSMIC RAYS

Certain aspects of primary cosmic rays composition at energies of 10 to the 14th power to 10 to the 15th power eV N82-20074

PRINTERS (DATA PROCESSING)

Programmable printing terminal
[INPE-2082-TDL/056] N82-19850

Programmable printing terminal
[INPE-2096-RPE/326] N82-19851

PRINTR: A text and graph plotting system with expanded capabilities
[AD-A109045] N82-19859

GPRINT: A LISP pretty printer providing extensive user format-control mechanism
[AD-A109031] N82-19883

PROBABILITY DENSITY FUNCTIONS

Estimation of the operating characteristics when the test information of the old test is not constant. 2: Simple sum procedure of the conditional p.d.f. approach/normal approach method using three subtests of the cold test, number 2
[AD-A109112] N82-19930

Probabilistic analysis of random extension-rotation algorithms
[AD-A109035] N82-19932

Experimental determination of temperature/velocity probability density functions in a turbulent flame N82-20133

PROBABILITY THEORY

Turbulence statistics for design of wind turbine generators
[PB82-112939] N82-19792

On the power of probabilistic choice in synchronous parallel computations
[AD-A109047] N82-19865

Random independence systems
[AD-A109046] N82-19931

PROBLEM SOLVING

The optimal planning of computerized manufacturing systems
[PB82-110644] N82-19397

Solution of problems with time as an independent variable, using the finite element method
[INPE-2269-PRE/050] N82-19908

PROCESS CONTROL (INDUSTRY)

System identification for multivariable control N82-19389

A multivariable feedback control problem with application to strip base control for Sendzimir mills
[RR-153] N82-19898

PROCUREMENT MANAGEMENT

Remote sensing procurement package: A management report for state and local governments
[E82-10052] N82-19627

PRODUCT DEVELOPMENT

A design study of the Marshal — lightweight twin-engined aircraft
[BU-282] N82-19215

Cooled variable-area radial turbine technology program
[NASA-CR-165408] N82-19221

Development of a synthetic aperture radar design approach for wide-swath implementation
[NASA-CR-167536] N82-19409

Development and characterization of the flip-chip diode N82-19462

Follow-on development of small cryogenic heat pipes: Phase 2 report
[SABCA-JPM/LN/HO5/N11-VOL-2] N82-19509

Development of simple solar collectors — for usage in developing countries
[BMFT-FB-T-81-174] N82-19690

Ergonomic considerations in product design and evaluation — product adaptation to man and his real needs and abilities N82-19842

Microprocessor controlled stamping unit with needle printer
[BMFT-FB-T-81-189] N82-19868

Preparation of compounds with new structures for superconductor investigations — based on metal clusters
[BMFT-FB-T-81-203] N82-20000

An investigation of the lag between the start of research and the development of new technology
[NASA-CR-168583] N82-20005

Local and national impact of aerospace research and technology
[NASA-TM-82775] N82-20006

Consumer behavior towards fuel efficient vehicles. Volume 1: Executive summary
[PB82-103300] N82-20027

PRODUCTION ENGINEERING

Production technology of an oxygen ion conductive ceramic for high temperature fuel cells and high temperature water electrolysis
[BMFT-FB-T-81-180] N82-19691

PROGRAM VERIFICATION (COMPUTERS)

BASIS-CRACK: An evaluation of performance — finite element computer program verification
[FFA-TN-HU-2171] N82-19590

The control of the quality of surface meteorological information
[BLL-TRANS-1503-(9022.552)] N82-19759

Intelligence Processor Performance Analysis (IPPA)
[AD-A108794] N82-19855

Techniques for automatic deduction
[AD-A108979] N82-19882

SASS hardware architecture and development monitor
[AD-A109552] N82-20015

Space telescope observatory management system preliminary test and verification plan
[NASA-CR-168587] N82-20090

PROGRAMMING LANGUAGES

ALGOL-MS, a language for the development of multiprogrammed small systems
[INPE-2282-TDL/067] N82-19875

Arithmetic manipulation of variables and data base contents by a simple dialog oriented language with structured elements
[IKE-4-104] N82-19889

PSICON: A simulation package for the design of digitally controlled systems
[RR-162] N82-19890

PROJECT MANAGEMENT

AgRISTARS: Soil moisture/early warning and crop condition assessment. Interface control document
[E82-10053] N82-19628

AgRISTARS: Yield model development/soil moisture. Interface control document
[E82-10054] N82-19629

PROJECT PLANNING

Recommendations on the development of space science in the 1980's — in Europe
[ESA-SP-1015] N82-19246

PROPANE

Ignition, combustion, detonation and heat addition to established flows
[AD-A108580] N82-19339

PROPELLANT ADDITIVES
High energy propellants containing magnesium
[FOA-C-20432-D1] N82-19382

PROPELLANT COMBUSTION
The DAEDUT/PMLTNO hybrid rocket motor facilities
[VTH-LR-321] N82-19315

PROPELLANT GRAINS
Parametric study of propellant crack combustion
[AD-A108769] N82-19381

PROPELLANT TANKS
Study of liquid slosh in the tracking and data relay satellite hydrazine tanks
[NASA-CR-166745] N82-19492

PROPELLER EFFICIENCY
Evaluation of wind tunnel performance testings of an advanced 45 deg swept 8-bladed propeller at Mach numbers from 0.45 to 0.85
[NASA-CR-3505] N82-19178

PROPELLERS
Evaluation of wind tunnel performance testings of an advanced 45 deg swept 8-bladed propeller at Mach numbers from 0.45 to 0.85
[NASA-CR-3505] N82-19178
Collection and evaluation of propeller aircraft noise certification data
[DFVLR-MITT-81-20] N82-19958

PROPULSION SYSTEM CONFIGURATIONS
A propulsion view of the all-electric airplane
N82-19136

PROPYLENE
Application of the empirical kinetic modeling approach to urban areas. Volume 2: Tulsa
[PB82-114224] N82-20029

PROSTHETIC DEVICES
The feasibility of miniaturizing the versatile portable speech prosthesis: A market survey of commercial products
[NASA-CR-168611] N82-19838

PROTECTION
Electrical ground testing of aircraft antistatic protection N82-19156

PROTECTIVE COATINGS
Relative effects of a graphite fiber reinforced epoxy composite and nickel-aluminum bronze on a cathodic protection system in seawater
[AD-A109078] N82-19321
Tailored plasma sprayed MCrAlY coatings for aircraft gas turbine applications
[NASA-CR-165234] N82-19360
The effect of surface coatings on the fatigue strength of aluminum alloys
[AD-A108869] N82-19363
Galvanic charging in air and space flight
[MBB-BB-485-O] N82-19478

PROTONS
Certain aspects of primary cosmic rays composition at energies of 10 to the 14th power to 10 to the 15th power eV N82-20074

PSEUDORANDOM SEQUENCES
The generation of pseudorandom binary sequences in parallel --- frequency reduction
[FUB-9-1981] N82-19486

PSYCHOLOGICAL EFFECTS
Catecholamine levels in fit and nonfit males when exposed to an emotional stress N82-19813
Nonauditory effects of high intensity noise on ground crews at a naval air station
[AD-A108996] N82-19834

PSYCHOLOGICAL TESTS
Catecholamine' levels in fit and nonfit males when exposed to an emotional stress N82-19813

PUBLIC HEALTH
Environmental and health aspects of acrylamide: A comprehensive bibliography of published literature
[PB82-110123] N82-19835

PULLEYS
Chain and belt drives, a review N82-19556

PULSARS
Diagnosis of the neutron star and its environment with X-ray astronomy N82-20054
Pulsar theory: Particle acceleration and photon emission in the polar flux tube N82-20056
On the possibility of existence of large amplitude waves around pulsars N82-20059
Pulsar magnetosphere potential structure
N82-20066

PULSE DOPPLER RADAR
Planning of a C-band pulse Doppler radar with polarization diversity for atmospheric research in the mesoscale range
[DFVLR-MITT-81-28] N82-19445

PULSE MODULATION
Stress pulsed reflection and tensile cracking in a one-dimensional bilinear material
[AD-A108833] N82-19581

PULSE POSITION MODULATION
Capacity limit of the noiseless, energy-efficient optical PPM channel N82-20121

PULSE RATE
Effects of repetition rate and impulsiveness of simulated helicopter rotor noise on annoyance
[NASA-TP-1969] N82-19707

PUMPS
NASA Redox cell stack shunt current, pumping power, and cell performance tradeoffs
[NASA-TM-82686] N82-19333
A mobile stream diversion system for hazardous materials spills isolation
[PB82-109679] N82-19661
Operational performance of the photovoltaic-powered grain mill and water pump at Tangaye, Upper Volta
[NASA-TM-82767] N82-19673

PURITY
Impurity and defect characterization in epitaxial GaAs, InP and the ternary and quaternary compound semiconductors
[AD-A109052] N82-19997

PUSHBROOM SENSOR MODES
Optical imaging instruments for the Land Application Satellite System. Phase A study. Volume 1
[REPT-60/1023-VOL-1] N82-19979

PYLONS
Transonic perturbation analysis of wing-fuselage-nacelle-pylon configurations with powered jet exhausts
[NASA-CR-165852] N82-19167

Q

Q FACTORS
The cavity Q for ergodic eigenmodes
[AD-A109041] N82-19987

QUADRATIC EQUATIONS
Spinor genera of orders and quadratic forms
[CTH-MATH-1981-20] N82-19922

QUALITATIVE ANALYSIS
Quantitative thermal desorption spectrometry of noble gases in solids N82-19334
Assessment of the first radiances received from the VSSR Atmospheric Sounder (VAS) instrument
[NASA-TM-83827] N82-19730

QUALITY CONTROL
Inorganic analyses in water quality control programs: Instructor's guide
[PB82-111378] N82-19353
Experience with modified aerospace reliability and quality assurance method for wind turbines
[NASA-TM-82803] N82-19550
RIW workshop report
[AD-A108798] N82-19551
The NASA standard 20 ampere hour nickel-cadmium battery manual
[NASA-CR-166700] N82-19680

QUANTUM EFFICIENCY
Ga (As, P): N - LED's for monochromatic illumination --- with improved light emission efficiency
[BMFT-FB-T-81-198] N82-19482

QUANTUM THEORY
Integral total collision and ionization cross sections for the interaction of excited He in the (2/super 1/S, 2/super 3/S) state with Ar in the thermal energy range
[MPIS-32/1980] N82-19350

QUASARS
Extragalactic radio sources --- observation of narrow features (jets) in galactic structure N82-20051
A doughnut model of quasars' --- where viscous evolution does not occur N82-20066

QUEUEING THEORY
The optimal planning of computerized manufacturing systems
[PB82-110644] N82-19397

R

RADAR ANTENNAS
Recognition of, and damages caused to a radar antenna by a carbon dioxide laser
[FOA-C-30244-E1] N82-19441
Area precipitation measurement by weather radar: Problems and practical experiences
[BLL-TRANS-1458-(9022.552)] N82-19750

RADAR BEACONS
Analysis of a nonlinear altitude tracking method
[AD-A108876] N82-19197

RADAR DATA
Active microwave investigation of snowpacks: Experimental documentation, Colorado 1979-1980
[NASA-CR-166727] N82-19646
Area precipitation measurement by weather radar: Problems and practical experiences
[BLL-TRANS-1458-(9022.552)] N82-19750

RADAR DETECTION
Measurements of azimuth and distance using arbitrary configurations of sensors with unknown coordinates in two dimensions --- for radar or sonar systems
[REPT-7/81] N82-19403
Comparison of subjective and automatic procedures for estimating apparent target length from echo duration --- in radar of sonar systems
[REPT-8/81] N82-194[illegible]

RADAR EQUIPMENT
Planning of a C-band pulse Doppler radar with polarization diversity for atmospheric research in the mesoscale range
[DFVLR-MITT-81-28] N82-19445

RADAR IMAGERY
SAR calibration technology review
[NASA-CR-167534] N82-19407
Mathematical modeling and SAR simulation multifunction SAR technology efforts
[NASA-CR-167535] N82-19408

RADAR MEASUREMENT
Area precipitation measurement by weather radar: Problems and practical experiences
[BLL-TRANS-1458-(9022.552)] N82-19750
Automatic measurement of areal precipitation using C-band radar
[BLL-TRANS-1378-(9022.552)] N82-19765

RADAR RANGE
Millstone hill radar satellite tracking system
[AD-A109279] N82-19252

RADAR TRACKING
Millstone hill radar satellite tracking system
[AD-A109279] N82-19252

RADIANCE
Assessment of the first radiances received from the VSSR Atmospheric Sounder (VAS) instrument
[NASA-TM-83827] N82-19730
A numerical evaluation of TIROS-N and NOAA-6 analyses in a high resolution limited area model
N82-1977[illegible]
VISSR Atmospheric Sounder (VAS) simulation experiment for a severe storm environment
[NASA-TM-83822] N82-19774

RADIANT FLUX DENSITY
Phase perturbation measurements through a heated ionosphere
[NASA-CR-167550] N82-19406

RADIATION DETECTORS
Radiation and temperature tests of cadmium telluride detectors
[AD-A108774] N82-19522

RADIATION DOSAGE
Preliminary analysis of accelerated space flight ionizing radiation testing
[NASA-TM-83209] N82-19969

RADIATION SOURCES
Precise source location of the anomalous 1979 March 5 gamma ray transient
[NASA-TM-83884] N82-20110
Aircraft infrared radiation modeling N82-20134

RADIATION TRAPPING
Confinement of cosmic rays in molecular clouds
N82-20073

RADIATIVE HEAT TRANSFER
Retrospective analysis of satellite thermal systems
[INPE-2295-TDL/069] N82-19287
Radiative heat transfer in turbulent MHD channel flow N82-19487

Shock tube determination of the heat conductivity of non-ionized and partially ionized argon
N82-19497

RADIATIVE LIFETIME

Astrophysical tests for radiative decay of neutrinos and fundamental physics implications
[NASA-TM-83873] N82-20098

RADIATIVE TRANSFER

The effect of finite field size on classification and atmospheric correction
[NASA-TM-83818] N82-19645

Assessment of the first radiances received from the VSSR Atmospheric Sounder (VAS) instrument
[NASA-TM-83827] N82-19730

Microwave radiometric observations near 19.35, 92 and 183 GHz of precipitation in tropical storm Cora
[NASA-TM-82164] N82-19779

Pulsar theory: Particle acceleration and photon emission in the polar flux tube N82-20056

Hot plasmas in active galactic nuclei --- radiative processes N82-20058

RADIO ALTIMETERS

Study of a COMSS high accuracy positioning system: High Accuracy Positioning System (HASP)
[CNES-85.55.00] N82-19307

Study of a radar altimeter for the European remote sensing program. Volume 1: Executive summary --- Earth Resources Satellite (ERS 1)
[SPAR-R.1090-ISSUE-A] N82-19652

RADIO ANTENNAS

Special activity utilization of GDSCC antennas during 1981 N82-20129

RADIO ASTRONOMY

Special activity utilization of GDSCC antennas during 1981 N82-20129

RADIO BURSTS

Ion pressure-supported accretion tori and the origin of radio jets. A plea for specific advice on the plasma physics N82-20067

Plasma beams from doughnuts --- gas torus alternative model to accretion disks N82-20069

Large scale Kelvin-Helmholtz instabilities in extragalactic radio jets N82-20070

RADIO COMMUNICATION

A method of measuring and recording. The impulse response of the ionospheric channel
[CRC-1352] N82-19427

Proposed techniques for adding FM broadcast stations in a major market, part 2
[PB82-114240] N82-19447

A low-power photovoltaic system with energy storage for radio communications: Description and design methodology
[NASA-CR-168640] N82-19677

The telecommunications and data acquisition report
[NASA-CR-168577] N82-20113

RADIO EMISSION

Evidence for solar wind control of Saturn radio emission
[NASA-TM-83889] N82-20104

RADIO EQUIPMENT

The DSN radio science system Mark 3, 1980
N82-20115

RADIO FREQUENCIES

Radio frequency verification tasks related to a multiple aperture reflector system N82-19264

RADIO FREQUENCY HEATING

Phase perturbation measurements through a heated ionosphere
[NASA-CR-167550] N82-19406

RADIO FREQUENCY INTERFERENCE

Preliminary experimental test results using 35 GHz offset fed reflector simulating surface pillcws and aperture cables N82-19265

Preliminary analytical results using surface current integration for predicting effects of surface pillows on RF performance N82-19266

RF verification tasks underway at the Harris Corporation for multiple aperture reflector system
N82-19267

FM broadcast interference related to airborne ILS, VOR and VHF communications
[RTCA/DO-176] N82-19419

Investigation of technical requirements
N82-19420

Investigation of airborne VHF communication and navigation equipment N82-19421

Investigation of the effects of airborne installation factors on receiver interference N82-19422

FAA/FCC coordination procedures for FM broadcast stations N82-19423

A method of measuring and recording. The impulse response of the ionospheric channel
[CRC-1352] N82-19427

VLFACM program description and operational manual
[AD-A109003] N82-19434

RADIO GALAXIES

Extragalactic radio sources --- observation of narrow features (jets) in galactic structure N82-20051

Ion pressure-supported accretion tori and the origin of radio jets. A plea for specific advice on the plasma physics N82-20067

RADIO INTERFEROMETERS

Extragalactic radio sources --- observation of narrow features (jets) in galactic structure N82-20051

RADIO PHYSICS

Some applications of the perturbed directional correlation technique in nuclear physics, solid state physics and radio chemistry
[ISBN-90-6231-084-2] N82-19942

RADIO RECEIVERS

FM broadcast interference related to airborne ILS, VOR and VHF communications
[RTCA/DO-176] N82-19419

Investigation of technical requirements
N82-19420

Investigation of the effects of airborne installation factors on receiver interference N82-19422

Sideband-aided receiver arraying N82-20120

RADIO RECEPTION

Noise temperature and noise figure concepts: DC to light N82-20127

RADIO SOURCES (ASTRONOMY)

Particle acceleration --- cosmic rays N82-20043

RADIO SPECTRA

Spectrum saving speech transmission for land mobile radio. A study on single sideband transmission in 5 kHz channels for 2 and 4 m bandwidths
[BMFT-FB-T-81-173] N82-19442

RADIO TELEMETRY

Analysis of multipath interference for APATS
[AD-A108797] N82-19305

RADIO TELESCOPES

Antenna (selected articles)
[AD-A109174] N82-19455

Compensation for systematic weight deformations of mirror system of parabolic radio telescopes
N82-19459

RADIO TRACKING

Special activity utilization of GDSCC antennas during 1981 N82-20129

RADIO TRANSMISSION

Analysis of the multipath environment for APATS testing
[AD-A109345] N82-19306

Variations in propagation attenuation at the frequencies 11, 18 and 36 GHz
[FOA-A-30028-E2] N82-19438

RADIO TRANSMITTERS

Analysis of phase noise in a J band transmitter
[INPE-2294-NTE/178] N82-19471

RADIO WAVES

The problem of precipitation measurement by attenuation of radio waves
[BLL-TRANS-1475-(9022.549)] N82-19766

RADIOACTIVE WASTES

Natural repository analogue program
[LA-8743-PR] N82-19970

RADIOMETERS

The suitability of mesh membrane material for radiometer reflector applications N82-19270

RADIOMETRIC RESOLUTION

Assessment of the first radiances received from the VSSR Atmospheric Sounder (VAS) instrument
[NASA-TM-83827] N82-19730

RADIOSONDES

The applicability of pressure measurements by radiosondes to calculating the height
[BLL-TRANS-1505-(9022.552)] N82-19755

RAIL TRANSPORTATION

Future fuels and engines for railroad locomotives. Volume 1: Summary
[NASA-CR-168642] N82-20022

RAIN

Study of the availability of satellite telecommunication links subject to attenuation by rain
[INPE-2239-PRE/025] N82-19411

Convergence zones in the South Atlantic and their influence on the precipitation regime in Northeastern Brazil
[INPE-2307-TDL/074] N82-19778

Microwave radiometric observations near 19.35, 92 and 183 GHz of precipitation in tropical storm Cora
[NASA-TM-82164] N82-19779

Precipitation assessment from environmental satellite data for northwest Libya including the Gefara plan
[RSC-4] N82-19790

RAINDROPS

A computational study of the modification of raindrop size distributions in subcloud downdrafts
N82-19748

RAMJET ENGINES

Ignition, combustion, detonation and heat addition to established flows
[AD-A108580] N82-19339

RANDOM ERRORS

Statistics of the field of focused systems
N82-19450

RANDOM LOADS

Fatigue of 2024-T351 and 7075-T7351 Al-alloy lugs with and without interference fit under maneuver spectrum loading
[TAE-440] N82-19568

RANDOM PROCESSES

Response of nonlinear mechanical systems to random excitation. Part 2: Equivalent linearization and other methods N82-19557

RANDOM VARIABLES

Stochastic convergence of randomly weighted sums N82-19901

Random independence systems
[AD-A109046] N82-19931

Probabilistic analysis of random extension-rotation algorithms
[AD-A109035] N82-19932

RANGE (EXTREMES)

Millstone hill radar satellite tracking system
[AD-A109279] N82-19252

RANGE AND RANGE RATE TRACKING

Determination of the velocity and the distance of a moving CW source by exploiting the Doppler effect on the reverberation signal --- of the sonar signal
[REPT-6/81] N82-19404

RANGEFINDING

Ranging and sychronization between nominally co-orbital satellites
[AD-A109272] N82-19289

Measurements of azimuth and distance using arbitrary configurations of sensors with unknown coordinates in two dimensions --- for radar or sonar systems
[REPT-7/81] N82-19403

RANK TESTS

On a locally optimal procedure based on ranks for comparison of treatments with a control
[AD-A109283] N82-19928

RARE GASES

Quantitative thermal desorption spectrometry of noble gases in solids N82-19334

RATES (PER TIME)

Spring and Fall measurements of European very low altitude volume scattering coefficients
[AD-A108879] N82-19787

RAWINSONDES

Monitoring tropical cyclone intensity using wind fields derived from short-interval satellite images
[NASA-TM-82162] N82-19780

REACTION KINETICS

Study of the magnetic phase dependence of the Ni-CO reaction rate
[AD-A108422] N82-19338

Electron exchange between Bis (eta meson-6-Arene) Chromium (I) and Bis (eta meson-6-Arene) Chromium (0). Comparisons between experimental and calculated kinetics parameters
[AD-A109051] N82-19348

Acta Polytechnica Scandinavica. Oxygen-metal (Ag, Au, Bi, Cu, In, Ni, Sb, Sn, Te) interactions in dilute molten lead alloys
[ISBN-951-666-137-3] N82-19359

Surface reactions and fatigue crack growth
[AD-A109296] N82-19588

Study of the kinetics of oxygen saturation of fluorocarbon emulsions --- blood substitutes
[ISSN-0077-5606] N82-19810

REACTOR DESIGN
New bioreactors for aerobic processes
[ISSN-0077-5606] N82-19679

REACTOR SAFETY
Sensitivity of the fracture probability in a reactor vessel to variations in data
[TRITA-HFL-0028] N82-19595
Human factors and safety in nuclear power plant operation N82-19843

READOUT
Electronics for data acquisition of laser gyroscope measurements
[DFVLR-MITT-81-16] N82-19534

REAL TIME OPERATION
Electro-optical system for remote position measurements in real time N82-19272
Design of a versatile LSI module for the simple configuration of high-throughput real-time polyprocessor systems N82-19466
Syntactic visual image generation system feasibility study
[AD-A109334] N82-19656

REAL VARIABLES
Some real variable expressions for stress distributions in orthotropic plates
[VTH-LR-334] N82-19593

REBREATHING
Use of acetylene rebreathing method for measuring cardiac output during physiological and clinical studies N82-19830
A comparison between acetylene and freon rebreathing for measuring cardiac output during exercise --- in space N82-19831

RECEIVERS
An evaluation of estimators for receiver detection prohabilities and unknown signal population size
[AD-A109536] N82-19884
Spherical acoustic broadband receiver
[AD-A109273] N82-19949
Global positioning system timing receivers in the DSN N82-20126

RECLAMATION
Small scale reclamation/disposal of toxic porcelain enameling waste sludges
[PB82-101593] N82-19710

RECURSIVE FUNCTIONS
Course-of-values recursion on lists in intuitionist type theory
[CTH-MATH-1981-19] N82-19939

RECYCLING
Impediments to energy and materials recovery facilities for municipal solid waste
[PB82-102302] N82-19383
Asphalt recycling technology: Literature review and research plan
[AD-A108199] N82-19392

REDOX CELLS
NASA Redox cell stack shunt current, pumping power, and cell performance tradeoffs
[NASA-TM-82686] N82-19333

REENTRY VEHICLES
Performance Technology Program (PTP-S 2). Volume 9: Evaluation of reentry vehicle nosetip transition and heat transfer in the AEDC hyperballistics track G
[AD-A108848] N82-19505

REFLECTANCE
Antenna (selected articles)
[AD-A108175] N82-19416
Coordination of a linear phase array of waveguide radiators with wide-angle scanning in the E plane N82-19417
The effect of finite field size on classification and atmospheric correction
[NASA-TM-83818] N82-19645

REFLECTORS
Preliminary experimental test results using 35 GHz offset fed reflector simulating surface pillows and aperture cables N82-19265
RF verification tasks underway at the Harris Corporation for multiple aperture reflector system N82-19267
Distorted reflector antenna performance prediction technique N82-19268
The suitability of mesh membrane material for radiometer reflector applications N82-19270
Electrostatic membrane antenna concept testing N82-19274
Conceptual design of electrostatic antenna N82-19275

REFLEXES
Cardiovascular reflexes during upright position N82-19821
Measurements of vestibular function N82-19826

REFRACTIVITY
Broad-directional lens antennas made of an inhomogeneous dielectric N82-19457

REFRACTORY MATERIALS
Production technology of an oxygen ion conductive ceramic for high temperature fuel cells and high temperature water electrolysis
[BMFT-FB-T-81-180] N82-19691

REFRIGERATORS
Magnetic refrigeration for maser amplifier cooling N82-20119

REGIONS
Design calculation procedure for passive solar houses at Navy installations in regions with cold climate, volume 1
[AD-A108382] N82-19683
Design calculation procedure for passive solar houses at Navy installations in East Coast regions with temperate climate, volume 2
[AD-A108383] N82-19684
Design calculation procedure for passive solar houses at Navy installations in regions with warm, humid climate, volume 3
[AD-A108384] N82-19685

REGRESSION ANALYSIS
Study of problems of ill-conditioned regression or with multicolinearity
[INPE-2234-PRE/022] N82-19906

RELATIVISTIC EFFECTS
Collective gravitational effects --- on particle motion N82-20072

RELATIVISTIC ELECTRON BEAMS
Extragalactic double radio sources — unified model with a massive black hole acting as unipolar induction dynamo N82-20052

RELATIVISTIC PARTICLES
Plasma emission mechanisms and acceleration of relativistic particles in cosmic plasmas N82-20038

RELATIVISTIC PLASMAS
Radiation processes in active galactic nuclei N82-20042
Second-order nonlinear conductivity tensor for an unmagnetized relativistic turbulent plasma N82-20071
On the theory of Gamma Ray Amplification through Stimulated Annihilation Radiation (GRASAR)
[NASA-TM-83857] N82-20111

RELATIVITY
Collective gravitational effects --- on particle motion N82-20072

RELAXATION (MECHANICS)
Bolt clampup relaxation in a graphite/epoxy laminate
[NASA-TM-83268] N82-19320

RELAY SATELLITES
Data collection platforms: Applications to hydrology
[INPE-2246-PRE/030] N82-19304

RELIABILITY
Assessment of Avionic Equipment Field Reliability and Maintainability as Functions of Unit Cost
[AD-A109373] N82-19218
Experience with modified aerospace reliability and quality assurance method for wind turbines
[NASA-TM-82803] N82-19550
RIW workshop report
[AD-A108798] N82-19551

RELIABILITY ANALYSIS
Taped random spectra for reliability demonstration testing
[AD-A108803] N82-19552

REMOTE CONSOLES
A remote terminal emulator for prime computers
[AD-A108818] N82-19862

REMOTE SENSING
Remote sensing procurement package: A management report for state and local governments
[E82-10052] N82-19627
Methodology of the interpretation of remote sensing data and applications in pedology
[INPE-2211-MD/008] N82-19641
Guidelines for spaceborne microwave remote sensors
[NASA-RP-1086] N82-19647
Satellite scatterometer feasibility study. Volume 2: Data extraction algorithm and error simulation for wind sensor — Earth Resources Satellite (ERS 1)
[ESA-CR(P)-1492-VOL-2] N82-19651
Development of a breadboard cooler for infrared remote sensing payloads, phase 1 — Earth Resources Satellite ERS 1
[FOK-RV-R-81-064] N82-19653
Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data
[INPE-2229-PRE/021] N82-19704
Remote sensing of sulfur dioxide effects on vegetation. Volume 1: Summary
[PB82-115122] N82-19715
Remote sensing of sulfur dioxide effects on vegetation. Volume 2: Data
[PB82-115130] N82-19716
Monte Carlo studies of ocean wind vector measurements by SCATT: Objective criteria and maximum likelihood estimates for removal of aliases, and effects of cell size on accuracy of vector winds
[NASA-CR-165837-1] N82-19799
Selection of attributes applied to multispectral images
[INPE-2303-TDL/072] N82-19927
Backscatter and extinction in water clouds
[AD-A109277] N82-19975
Methods of image compression without information loss
[INPE-2274-PRE/054] N82-20013
Models of projection and localization of urban population using simulation techniques
[INPE-2207-PRE/013] N82-20023

REMOTE SENSORS
Development of a synthetic aperture radar design approach for wide-swath implementation
[NASA-CR-167536] N82-19409
Satellite Earth resources data, module U-3
[E82-10035] N82-19611

RENDEZVOUS TRAJECTORIES
Optimal rendezvous between close circular orbits N82-19900

REPLACING
Optimum equipment maintenance/replacement policy. Part 2: Markov decision approach N82-20125

REPORTS
Publications and reports of the Institute of Oceanographic Sciences 1973-1978
[IOS-R-122] N82-19796

RESEARCH AND DEVELOPMENT
La Recherche Aerospatiale, Bimonthly Bulletin number 1981-3, May - June 1981 --- aerospace research and development
[ESA-TT-714] N82-19152
Teleoperation and automation: A survey of European expertise applicable to docking and assembly in space
[MP/PR/4905] N82-19240
Recommendations on the development of space science in the 1980's --- in Europe
[ESA-SP-1015] N82-19246
Activities report of the Hydraulics Laboratory N82-19489
Work paradigms in human factors research N82-19844
An investigation of the lag between the start of research and the development of new technology
[NASA-CR-168583] N82-20005

RESEARCH FACILITIES
Aeronautical Research Laboratories Structures Division
[AD-A109049] N82-19161
The aerospace technology laboratory (a perspective, then and now)
[NASA-TM-82754] N82-19229

RESEARCH MANAGEMENT
An investigation of the lag between the start of research and the development of new technology
[NASA-CR-168583] N82-20005
European Scientific Notes, volume 35, number 11
[AD-A109387] N82-20138

RESERVOIRS
Water resources data for Pennsylvania, water year 1980: Volume 2: Susquehanna and Potomac River Basins
[PB82-115908] N82-19662

The geothermal probabilistic cost model with an application to a geothermal reservoir at Heber, California
[NASA-CR-168641] N82-19674

RESIDENTIAL ENERGY

Design calculation procedure for passive solar houses at Navy installations in regions with cold climate, volume 1
[AD-A108382] N82-19683

Design calculation procedure for passive solar houses at Navy installations in East Coast regions with temperate climate, volume 2
[AD-A108383] N82-19684

Design calculation procedure for passive solar houses at Navy installations in regions with warm, humid climate, volume 3
[AD-A108384] N82-19685

RESISTORS

Instruments and methods for studying atmospheric electricity
[BLL-TRANS-1487-(9022.552)] N82-19753

RESOURCES

US energy for the rest of the century
[PB82-115866] N82-19697

RESOURCES MANAGEMENT

Resourceful decisions: LANDSAT in Michigan
[E82-10037] N82-19601

Social and Environmental Consequences of Natural Resources Policies with Special Emphasis on Biosphere Reserves
[PB82-113937] N82-19660

Analysis of methodologies used for the assessment of wetlands values: Appendices C-E
[PB82-110362] N82-19807

RESPIRATION

Estuarine community dynamics benthic program, Patuxent River Estuary, preliminary data report
[PB82-108689] N82-19806

On-line, real-time determinations of breath-to-breath gas exchange N82-19832

RESPIRATORY SYSTEM

Determination of the effects of material from alternate energy sources on the upper respiratory tract clearance mechanism. Part 1: In vitro exposure to particulate pollutants. Part 2: In vivo exposure to ozone
[PB82-117037] N82-19811

RESPONSE BIAS

Flutter and time response analyses of three degree of freedom airfoils in transonic flow
[AD-A108987] N82-19227

REVERBERATION

Determination of the velocity and the distance of a moving CW source by exploiting the Doppler effect on the reverberation signal --- of the sonar signal
[REPT-6/81] N82-19404

REVERSED FLOW

Dilution jet behavior in the turn section of a reverse flow combuster
[NASA-TM-82776] N82-19220

REYNOLDS NUMBER

Characteristic aerodynamic coefficients at high Reynolds numbers
[AD-A109313] N82-19186

REYNOLDS STRESS

Reynolds stress equations modeling in a rotating reference system N82-20136

RIDING QUALITY

A method for applying linear optimal control theory to the design of a regulator for a flexible aircraft --- improving riding quality in fighter aircraft
[NLR-TR-80032-U] N82-19212

RING CURRENTS

Investigations of medium wavelength magnetic anomalies in the Eastern Pacific using Magsat data
[E82-10047] N82-19622

RIVER BASINS

A comparison of unsupervised classification procedures on LANDSAT MSS data for an area of complex surface conditions in Basilicata, Southern Italy
[E82-10038] N82-19613

RIVERS

Improved St. Clair River dynamics flow models and comparison analysis
[PB82-119272] N82-19657

ROBUSTNESS (MATHEMATICS)

Comparison of the bioptimal curve for two robust estimates
[AD-A109132] N82-19909

ROCKET ENGINES

Propulsion system ignition overpressure for the Space Shuttle
[NASA-TM-82456] N82-19299

A study of liquid hydrogen cooled LO-2/LH-2 rocket combustor with slotted wall liner
[NAL-TR-679] N82-19314

ROCKS

Continental scientific drilling program curatorial needs --- specimen handling
[LA-8726-MS] N82-19643

ROOTS OF EQUATIONS

Algorithm for the calculation of the largest integer in the quare root of a natural number
[PREPRINT-11] N82-19918

On the compensation of optimal system asymptotic root-loci
[RR-163] N82-19925

Variable structure systems and system zeros
[RR-157] N82-19940

ROTARY STABILITY

A further study of helicopter rotor pitch-flap-phase coupling
[BU-259] N82-19214

ROTARY WING AIRCRAFT

Design study into a high endurance mini-rotorcraft
[BU-265] N82-19216

ROTARY WINGS

Development of manufacturing technology for fabrication of a composite helicopter main rotor spar by tubular braiding
[AD-A109377] N82-19209

Effects of repetition rate and impulsiveness of simulated helicopter rotor noise on annoyance
[NASA-TP-1969] N82-19707

ROTATING BODIES

A subspace iteration algorithm for spinning structure vibration mode computation N82-19157

ROTATION

Reynolds stress equations modeling in a rotating reference system N82-20136

ROTOR AERODYNAMICS

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 3: Aerodynamics and Structures Session
[NASA-TM-84147] N82-19172

A further study of helicopter rotor pitch-flap-phase coupling
[BU-259] N82-19214

Design study into a high endurance mini-rotorcraft
[BU-265] N82-19216

La Recherche Aerospatiale, Bi-monthly Bulletin number 1981-4, July - August 1981 --- aerospace R and D
[ESA-TT-722] N82-20131

Theoretical and experimental determination of a compressor transfer function --- turbocompressors induced by rapid opening of a downstream valve
N82-20132

ROTOR SYSTEMS RESEARCH AIRCRAFT

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 3: Aerodynamics and Structures Session
[NASA-TM-84147] N82-19172

ROTORS

Design and fabrication of containment rings for use in tests of six prototype flywheel rotors
[DE81-030357] N82-19689

RUBBER

The science and engineering of materials
[INPE-2138-RPE/361] N82-19316

RUN TIME (COMPUTERS)

Analysis and synthesis of binary sequences
N82-19463

RURAL AREAS

Joint Indian-German program on solar energy: Phase 2 --- village energy supply
[BMFT-FB-T-81-182] N82-19693

S

S MATRIX THEORY

Antenna (selected articles)
[AD-A108204] N82-19413

Compensation for direct and reverse interconnection in an infinite emitter array N82-19414

SAFETY

Experience with modified aerospace reliability and quality assurance method for wind turbines
[NASA-TM-82603] N82-19550

Review of health and safety aspects of video display terminals
[CRC-TN-712-E] N82-19816

SAFETY DEVICES

Disengagement of safety harness buckles - CT4
[AD-A109048] N82-19199

Safety demonstration study on proposed biorack glove box --- for Spacelab
[ESA-CR(P)-1482] N82-19239

Nonauditory effects of high intensity noise on ground crews at a naval air station
[AD-A108996] N82-19834

SALINITY

A review of the salt-gradient solar pond technology
[NASA-CR-168635] N82-19675

Upper Chesapeake Bay salinity study
[PB82-116641] N82-19717

SAMPLING

Life sciences passive GN2 freezer thermal performance test
[NASA-CR-167548] N82-19809

On a locally optimal procedure based on ranks for comparison of treatments with a control
[AD-A109283] N82-19928

SANDS

Laboratory verification of blast-induced liquefaction mechanism
[AD-A109000] N82-19393

SANDWICH STRUCTURES

Shear diffusion in sandwich specimens having glass reinforced plastic face plates with paper honeycomb cores
[BU-270] N82-19327

Evaluation of superplastic forming and co-diffusion bonding of Ti-6Al-4V titanium alloy expanded sandwich structures
[NASA-CR-165827] N82-19358

SATELLITE CONFIGURATIONS

General configuration and internal disposition of equipment in a satellite for collecting environmental data
[INPE-2240-PRE/026] N82-19256

Methodology of uniaxial transient vibration tests for satellites N82-19311

SATELLITE DESIGN

EXUV. Phase A study. Volume 1: Executive summary --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-1] N82-19292

EXUV. Phase A study. Volume 2A: Satellite system conceptual design --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-2A] N82-19293

EXUV. Phase A study. Volume 2B: Satellite system conceptual design --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-2B] N82-19294

EXUV. Phase A study. Volume 4: Satellite development program --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-4] N82-19296

SATELLITE INSTRUMENTS

Mathematical modeling and SAR simulation multifunction SAR technology efforts
[NASA-CR-167535] N82-19408

SATELLITE NETWORKS

Study of the availability of satellite telecommunication links subject to attenuation by rain
[INPE-2239-PRE/025] N82-19411

The economic impact of an operational European meteorological satellite program in the 1980's --- Meteosat network
[ESA-BR-03] N82-20020

SATELLITE OBSERVATION

Satellite Earth resources data, module U-3
[E82-10035] N82-19611

Estimating ocean-air heat fluxes during cold air outbreaks by satellite
[NASA-TM-83654] N82-19781

SATELLITE ORBITS

Geopotential harmonics of order 29, 30 and 31 from analysis of resonant orbits
[RAE-TR-81109] N82-19247

SATELLITE ORIENTATION

Introduction to celestial mechanics
[INPE-2126-RPE/350] N82-20096

SATELLITE SOUNDING

Optimum employment of satellite indirect soundings as numerical model input
[NASA-CR-168509] N82-19768

Evaluation of TIROS-N and NOAA-6 satellite data: Comparisons of colocated soundings and analyses for a January case N82-19770

A numerical evaluation of TIROS-N and NOAA-6 analyses in a high resolution limited area model N82-19771

SATELLITE TELEVISION

Television services in Europe in the age of direct satellite television
[ESA-CR(P)-1503] N82-19439

SATELLITE TRACKING

Millstone hill radar satellite tracking system
[AD-A109279] N82-19252

Study of a COMSS high accuracy positioning system. High Accuracy Positioning System (HASP)
[CNES-85.55.00] N82-19307

SATELLITE TRANSMISSION

General configuration and internal disposition of equipment in a satellite for collecting environmental data
[INPE-2240-PRE/026] N82-19256

SATELLITE-BORNE INSTRUMENTS

General configuration and internal disposition of equipment in a satellite for collecting environmental data
[INPE-2240-PRE/026] N82-19256

Guidelines for spaceborne microwave remote sensors
[NASA-RP-1086] N82-19647

Satellite scatterometer feasibility study. Volume 1: Technical results --- Earth Resources Satellite (ERS 1)
[ESA-CR(P)-1492-VOL-1] N82-19650

Development of an Optical Scanning Mechanism Assembly (OSMA)
[PS-1450] N82-19981

SATELLITE-BORNE PHOTOGRAPHY

Satellite Earth resources data, module U-3
[E82-10035] N82-19611

Correction for atmospheric effects in satellite images
[INPE-2281-PRE/059] N82-19728

Assessment of the first radiances received from the VSSR Atmospheric Sounder (VAS) instrument
[NASA-TM-83827] N82-19730

Optical imaging instruments for the Land Application Satellite System. Phase A study. Volume 1
[REPT-60/1023-VOL-1] N82-19979

Optical imaging instruments for the Land Application Satellite System, phase A study, volume 2
[REPT-60/1023-VOL-2] N82-19980

SATELLITES

NASA Oceanic Processes Program, Fiscal Year 1981
[NASA-TM-84467] N82-19801

SATURN

The Voyager 1 Saturn encounter and the cosmogonic shadow effect N82-20032

SATURN (PLANET)

Evidence for solar wind control of Saturn radio emission
[NASA-TM-83889] N82-20104

SATURN ATMOSPHERE

NASA Facts: Images of Saturn from Voyager 2
[NASA-NF-132/10-81] N82-20102

SATURN RINGS

The Voyager 1 Saturn encounter and the cosmogonic shadow effect N82-20032

NASA Facts: Images of Saturn from Voyager 2
[NASA-NF-132/10-81] N82-20102

SATURN SATELLITES

NASA Facts: Images of Saturn from Voyager 2
[NASA-NF-132/10-81] N82-20102

SCALE MODELS

Performance Technology Program (PTP-S 2). Volume 9: Evaluation of reentry vehicle nosetip transition and heat transfer in the AEDC hyperballistics track G
[AD-A108848] N82-19505

SCALING LAWS

Scaling laws of the multicomponent cool plasma mantle
[TRITA-PFU-81-04] N82-19989

SCANNERS

Coordination of a linear phase array of waveguide radiators with wide-angle scanning in the E plane N82-19417

SCANNING

An evaluation of estimators for receiver detection probabilities and unknown signal population size
[AD-A109536] N82-19884

SCATTERING

Measurement of integral scattering cross sections of hydrogen atom-molecular systems in the subthermal range
[MPIS-5/1981] N82-19967

SCATTERING CROSS SECTIONS

COVFILS: A 30-group covariance library based on ENDF/B-V
[LA-8733-MS] N82-19873

SCATTEROMETERS

Satellite scatterometer feasibility study. Volume 1: Technical results --- Earth Resources Satellite (ERS 1)
[ESA-CR(P)-1492-VOL-1] N82-19650

Monte Carlo studies of ocean wind vector measurements by SCATT: Objective criteria and maximum likelihood estimates for removal of aliases, and effects of cell size on accuracy of vector winds
[NASA-CR-165837-1] N82-19799

SCHEDULES

Space telescope observatory management system preliminary test and verification plan
[NASA-CR-168587] N82-20090

SCHLIEREN PHOTOGRAPHY

Materials processing in Space/Spacelab. FES/VCGS payload critical design review N82-19235

SCHOTTKY DIODES

Development and characterization of the flip-chip diode N82-19462

Electrical characterization of super Schottky
[AD-A108766] N82-19996

SEA BREEZE

A numerical model for simulation of local circulation, applied to the coastal region of Northeastern Brazil
[INPE-2270/PRE/051] N82-19776

SEA ICE

Sea ice movements from synthetic aperture radar
[AD-A109002] N82-19435

SEA WATER

Relative effects of a graphite fiber reinforced epoxy composite and nickel-aluminum bronze on a cathodic protection system in seawater
[AD-A109076] N82-19321

SEALING

Design and fabrication of containment rings for use in tests of six prototype flywheel rotors
[DE81-030357] N82-19689

SEALS (STOPPERS)

Composite seal for turbomachinery
[NASA-CASE-LEW-12131-3] N82-19540

SEARCH PROFILES

Improvements of the algorithms used for Monte-Carlo direct simulation computations
[IC-AERO-81-03] N82-19891

SEARCHING

The use of a nonquadratic model in a conjugate gradient method of optimization with inexact line searches
[MATHS-RES-157] N82-19885

SECULAR VARIATIONS

Studies related to Magsat --- Backus effect and the westward drift
[E82-10050] N82-19625

The role of episodic bombardment in geophysics N82-20100

SECURITY

Market analysis of seismic security systems
[NASA-CR-168612] N82-19387

SEDIMENTS

Detrital exchange processes of a Delaware salt marsh N82-19699

Stratigraphy, petrography and depositional history of the Hertha Formation (Upper Pennsylvanian), midcontinent North America N82-19746

Estuarine community dynamics benthic program, Patuxent River Estuary, preliminary data report
[PB82-108689] N82-19806

SEISMIC WAVES

Seismic discrimination
[AD-A109184] N82-19739

Bayesian geophysical model for seismic hazard
[PB82-122391] N82-19745

SEISMOLOGY

Market analysis of seismic security systems
[NASA-CR-168612] N82-19387

Bayesian geophysical model for seismic hazard
[PB82-122391] N82-19745

SELECTION

On a locally optimal procedure based on ranks for comparison of treatments with a control
[AD-A109283] N82-19928

SELF ADAPTIVE CONTROL SYSTEMS

Active gust and maneuver load control concepts with the example of the Airbus A300. Part 1: Explanation of a regular in the time zone of wind gust load decrease and examination of its effectiveness in stochastic gusts
[MBB-FE-172/S/PUB/39-PT-1] N82-19228

SEMANTICS

Metaphor: An inescapable phenomenon in natural language comprehension
[AD-A109026] N82-19880

SEMICONDUCTOR JUNCTIONS

Development and characterization of the flip-chip diode N82-19462

SEMICONDUCTORS (MATERIALS)

The science and engineering of materials
[INPE-2138-RPE/361] N82-19316

Electron transmission through and reflection by an arbitrary set of square potential steps
[AD-A108630] N82-19474

Integrated devices of semiconductor metal-oxides in conjunction with silicon for solid-state gas sensors
[DE82-000397] N82-19477

Ion implantation and laser processing of 3-5 compound semiconductors with applications to the fabrication of microwave devices
[AD-A109033] N82-19993

Impurity and defect characterization in epitaxial GaAs, InP and the ternary and quaternary compound semiconductors
[AD-A109052] N82-19997

Analysis of deep defects in III-V semiconductors -- for LED and FET applications
[BMFT-FB-T-81-197] N82-19999

SENSITIVITY

Weak and strong ignition. 2: Sensitivity of the hydrogen-oxygen system
[AD-A108843] N82-19342

Noise temperature and noise figure concepts: DC to light N82-20127

SEQUENCING

The generation of pseudorandom binary sequences in parallel --- frequency reduction
[FUB-9-1981] N82-19486

SEQUENTIAL COMPUTERS

On the power of probabilistic choice in synchronous parallel computations
[AD-A109047] N82-19865

SERIES EXPANSION

Expansion of linear and semi-linear systems and the Popov criterion
[RR-158] N82-19941

Transfer of aerospace project management to the development of technical series production
[MBB-UR-482-81-O] N82-20011

SERVICE LIFE

British Aerodynamics Group (BAE) solar-array drive mechanism: Life test, stripdown and optical encoder examination
[ESA-TRIB-2] N82-19483

Thermal vacuum real-life test of an Marconi Space and Defence Systems (MSDS) solar-array drive mechanism (MSDS 002). First four years of operation
[ESA-TRIB-3] N82-19484

Life sciences passive GN2 freezer thermal performance test
[NASA-CR-167546] N82-19809

SERVOCONTROL

Ward-Leonard characteristics from nonlinearly-controlled series motor drives --- fork lift trucks
[RR-165] N82-20026

SERVOMECHANISMS

Evaluation of parameters of the oscillatory motion of digital servo system in a steady-state mode
[AD-A109314] N82-19476

SET THEORY

K-connectivity in random undirected graphs [AD-A108826] N82-19914

Strong K-connectivity in digraphs and random digraphs [AD-A109034] N82-19915

Course-of-values recursion on lists in intuitionist type theory [CTH-MATH-1981-19] N82-19939

SEWAGE

Preliminary study on the supply of industrial water by advanced treatment of waste water discharged from a sewage treatment plant [BMFT-FB-T-81-205] N82-19709

SEWAGE TREATMENT

Literature study of the biodegradability of chemicals in water. Volume 1: Biodegradability prediction, advances in chemical interferences with wastewater treatment [PB82-100843] N82-19711

SHAFTS (MACHINE ELEMENTS)

Thermal vacuum real-life test of an Marconi Space and Defence Systems (MSDS) solar-array drive mechanism (MSDS 002). First four years of operation [ESA-TRIB-3] N82-19484

SHAKERS

Achievements in multi-axes testing using servohydraulic vibration system N82-19312

Definition study on multishakers for vibration testing --- Ariane payloads [SOPEMEA-ET-17004] N82-19526

SHALE OIL

Future fuels and engines for railroad locomotives. Volume 1: Summary [NASA-CR-168642] N82-20022

SHAPE CONTROL

Large Space Systems Technology, part 2, 1981 [NASA-CP-2215-PT-2] N82-19257

Concepted design of a surface measurement system for large deployable space antennas N82-19271

SHAPES

Surface measurement system development N82-19261

A multivariable feedback control problem with application to strip base control for Sendzimir mills [RR-153] N82-19898

SHARP LEADING EDGES

Experimental study of delta wing leading-edge devices for drag reduction at high lift [NASA-CR-165846] N82-19165

SHEAR CREEP

Time effects of low-amplitude shear modulus of cohesive soils N82-19386

SHEAR FLOW

Search for large-scale coherent structures in the nearly self-preserving region of a turbulent axisymmetric jet [AD-A108334] N82-19501

SHEAR PROPERTIES

The compressible laminar two-dimensional wake with arbritrary initial asymmetry [AD-A109084] N82-19185

Influence of velocity shear on the Rayleigh-Taylor instability [AD-A108800] N82-19504

SHEAR STRENGTH

Time effects of low-amplitude shear modulus of cohesive soils N82-19386

SHEAR STRESS

Shear diffusion in sandwich specimens having glass reinforced plastic face plates with paper honeycomb cores [BU-270] N82-19327

Geophysical effects on the length of the sideral day [BLL-TRANS-1489-(9022.552)] N82-19721

SHEARING

Longwall Guidance and Control Development [NASA-TM-82455] N82-19637

SHELLFISHES

Biochemical, physiological and ecological aspects of ammonium regeneration by marine crustaceans N82-19808

SHELLS (STRUCTURAL FORMS)

The Shock and Vibration Digest, volume 13, no. 12 [AD-A109583] N82-19562

Finite-element modeling of layered, anisotropic composite plates and shells: A review of recent research N82-19563

SHIELDING

Aerodynamic noise generated by jet wing/flap interactions of the external USB configuration of STOL aircraft. Part 2: Full scale model experiment using FJR710 turbofan engine [NAL-TR-687T-PT-2] N82-19945

SHIP HULLS

On the influence of mean load on crack opening and fatigue crack growth in a ship hull plate steel [TRITA-HFL-0029] N82-19596

SHIPS

Distribution of personnel, vehicles, and supplies by ship: A model applied to the Brazilian Navy [INPE-2305-TDL/073] N82-19874

Detection of periodically fluctuating noise --- from ships [FOA-C-30223-E1] N82-19955

SHOCK DISCONTINUITY

Plasma processes at collisionless shock waves N82-20047

SHOCK FRONTS

Electron acceleration in magnetosonic shock fronts N82-20060

SHOCK HEATING

Another self-similar blast wave: Early time asymptote with shock heated electrons and high thermal conductivity [NASA-CR-168562] N82-19962

SHOCK SIMULATORS

Methodology of uniaxial transient vibration tests for satellites N82-19311

SHOCK TUBES

Thermal investigation of unstable substances, including a comparison of different thermal analytical techniques N82-19335

Shock tube determination of the heat conductivity of non-ionized and partially ionized argon N82-19497

SHOCK TUNNELS

Acta Mechanica Sinica (selected articles) [AD-A108208] N82-19513

The measurements of the static and dynamic stability derivatives of conical models in the shock tunnel N82-19516

The aerodynamical analysis of body in hypersonic source flow field N82-19518

SHOCK WAVE INTERACTION

Comments on the doubly asymptotic approxmation. 2: A simple approximation for cutoff velocity --- fluid-structure interaction in cases involving acoustic shock waves impinging on underwater structures [AD-A108926] N82-19911

Cosmic ray acceleration by stellar winds and self-confinement in giant H2 regions --- idealized model N82-20062

Acceleration of cosmic rays by shock waves N82-20086

SHOCK WAVES

Characteristic aerodynamic coefficients at high Reynolds numbers [AD-A109313] N82-19186

Underwater shock analysis of nonlinear structures, a reference manual for the USA-STAGS code, version 3 [AD-A108911] N82-19584

Another self-similar blast wave: Early time asymptote with shock heated electrons and high thermal conductivity [NASA-CR-168562] N82-19962

Plasma processes at collisionless shock waves N82-20047

High energy cosmic ray acceleration by diffusive shocks N82-20061

Comments on high Mach number magnetosonic shocks --- ion thermalization N82-20082

SHORT HAUL AIRCRAFT

The European Airbus: A challenge to the American commercial aircraft industry [MBB-UH-01-81-O] N82-19162

SHORT TAKEOFF AIRCRAFT

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 1: Executive Summary [NASA-TM-84149] N82-19170

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 2: Operators' Views [NASA-TM-84148] N82-19171

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 4: Flight Control Avionics Systems and Human Factors [NASA-TM-84146] N82-19173

Aerodynamic noise generated by jet wing/flap interactions of the external USB configuration of STOL aircraft. Part 2: Full scale model experiment using FJR710 turbofan engine [NAL-TR-687T-PT-2] N82-19945

SHROUDS

Composite seal for turbomachinery [NASA-CASE-LEW-12131-3] N82-19540

SIDEBANDS

Sideband-aided receiver arraying N82-20120

SIDELOBE REDUCTION

Comparative studies of correlation techniques in the sidelobe canceller in the presence of pulse-type jamming signals --- for electronic countermeasures [REPT-3/81] N82-19402

SIDELOBES

Antenna (selected articles) [AD-A108175] N82-19416

Calculation of the radiation characteristics of highly directional arc antennas N82-19418

SIDEREAL TIME

Geophysical effects on the length of the sideral day [BLL-TRANS-1489-(9022.552)] N82-19721

SIGNAL ANALYSIS

A method of measuring and recording. The impulse response of the ionospheric channel [CRC-1352] N82-19427

Signal analysis using the maximum entropy method --- aeroelasticity of wind turbines [VTH-LR-316] N82-19443

Analysis of phase noise in a J band transmitter [INPE-2294-NTE/178] N82-19471

Fast processor for spectral analysis (ORAS) [CRPE-NT-106] N82-19870

User's guide to noise data acquisition and analysis programs for HP9845: Nicolet analyzers [NASA-TM-83256] N82-19943

SIGNAL GENERATORS

Analysis of phase noise in a J band transmitter [INPE-2294-NTE/178] N82-19471

The generation of pseudorandom binary sequences in parallel --- frequency reduction [FUB-9-1981] N82-19486

SIGNAL MEASUREMENT

An evaluation of estimators for receiver detection prohabilities and unknown signal population size [AD-A109536] N82-19884

SIGNAL PROCESSING

Digital audio. Recursive digital filtering for high quality audio signals [BBC-RD-1981/10] N82-19400

Multi-dimensional signal-processing research program [AD-A108641] N82-19429

Analogue SAR signal processing: Device evaluation and radiation tests --- video integrator, binary-analog correlator [REPT-3972-ISSUE-1] N82-19440

Planning of a C-band pulse Doppler radar with polarization diversity for atmospheric research in the mesoscale range [DFVLR-MITT-81-28] N82-19445

Microprocessor aided control and signal processing system for a laser-two-focus velocimeter in turbomachinery research [BMFT-FB-T-81-190] N82-19869

An evaluation of estimators for receiver detection prohabilities and unknown signal population size [AD-A109536] N82-19884

Applications of integrated optics to signal processing and pattern recognition N82-19971

On the group delay effect of DSN microwave components on multimegabit telemetry N82-20122

SIGNAL TO NOISE RATIOS

VLFACM program description and operational manual [AD-A109003] N82-19434

SIGNATURE ANALYSIS

The pressure signature method for blockage corrections, and its applications to the industrial wind tunnel [BU-263] N82-19231

AgRISTARS: Foreign commodity production forecasting Corn/soybean decision logic development and testing
[E82-10056] N82-19631

SIGNATURES

Numerical deconvolution to obtain cloud signatures from scattered light pulses
[AD-A108806] N82-19783

SILICON CARBIDES

Surface chemistry and wear behavior of single-crystal silicon carbide sliding against iron at temperatures to 1500 C in vacuum
[NASA-TP-1947] N82-19374

SILICON DIOXIDE

Surface modification in control SiC2 fiber fracture
[AD-A108786] N82-19589

SILICON NITRIDES

Surface-strengthening mechanisms in reaction-bonded Sisub3Nsub4 and subcritical-crack growth behavior in ceramics
[AD-A109067] N82-19582

SIMULATION

Taped random spectra for reliability demonstration testing
[AD-A108803] N82-19552

VISSR Atmospheric Sounder (VAS) simulation experiment for a severe storm environment
[NASA-TM-83822] N82-19774

Wave spectra of a shoaling wave field: A comparison of experimental and simulated results
[NASA-TM-83211] N82-19800

SINGLE CRYSTALS

Interaction of microsegregation and coarsening during dendritic nickel-base alloy monocrystal growth
[AD-A108980] N82-19362

Surface chemistry and wear behavior of single-crystal silicon carbide sliding against iron at temperatures to 1500 C in vacuum
[NASA-TP-1947] N82-19374

Transition Electron Microscope (TEM) in-situ straining and bulk studies of the selection of glide systems in Face Centered Cubic (FFC) crystals
[NLR-TR-80041-U] N82-19996

SINGLE SIDEBAND TRANSMISSION

Spectrum saving speech transmission for land mobile radio. A study on single sideband transmission in 5 kHz channels for 2 and 4 m bandwidths
[BMFT-FB-T-81-173] N82-19442

SITTING POSITION

Cardiovascular responses to isometric exercise in sitting and lying position N82-19823

Transmission of sinusoidally changing vertical specific force to the heads of seated men measured in a flight simulator
[VTH-LR-319] N82-19647

SKIN (STRUCTURAL MEMBER)

Durability of adhesive bonded structures subjected to acoustic loads
[AGARD-R-701] N82-19600

SKYLAB PROGRAM

Analysis of evaporative water loss in the Skylab astronauts
[NASA-CR-167462] N82-19814

SLENDER WINGS

A vortex-filament and core model for wings with edge vortex separation
[NASA-CR-165847] N82-19166

A study of the effects of leading-edge slats on the performance of slender wings --- wind tunnel measurement
[BU-266] N82-19193

SLIDING FRICTION

Surface chemistry and wear behavior of single-crystal silicon carbide sliding against iron at temperatures to 1500 C in vacuum
[NASA-TP-1947] N82-19374

SLOPES

Vegetative erosion control studies Tennessee-Tombigbee Waterway
[AD-A108318] N82-19708

SLUDGE

Small scale reclamation/disposal of toxic porcelain enameling waste sludges
[PB82-101593] N82-19710

SNOW

Dielectric properties of snow
[NASA-CR-166764] N82-19638

Active microwave investigation of snowpacks: Experimental documentation, Colorado 1979-1980
[NASA-CR-166727] N82-19646

Synoptic meteorology during the SNOW-ONE field experiment
[AD-A109080] N82-19784

The development and testing of methods to infer midlatitude precipitation intensity from geosynchronous satellite infrared data
[AD-A108861] N82-19788

SNOW COVER

Active microwave investigation of snowpacks: Experimental documentation, Colorado 1979-1980
[NASA-CR-166727] N82-19646

SOCIAL FACTORS

Socioeconomic impact of photovoltaic power at Schuchuli, Arizona
[NASA-CR-165551] N82-19669

SOIL EROSION

Vegetative erosion control studies Tennessee-Tombigbee Waterway
[AD-A108318] N82-19708

SOIL MAPPING

Delineation of soil temperature regimes from HCMM data
[E82-10042] N82-19617

Methodology of the interpretation of remote sensing data and applications in pedology
[INPE-2211-MD/008] N82-19641

Active microwave investigation of snowpacks: Experimental documentation, Colorado 1979-1980
[NASA-CR-166727] N82-19646

SOIL MECHANICS

Time effects of low-amplitude shear modulus of cohesive soils N82-19386

SOIL MOISTURE

Wheat stress indicator model, Crop Condition Assessment Division (CCAD) data base interface driver, user's manual
[E82-10031] N82-19607

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida
[E82-10040] N82-19615

Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements
[E82-10048] N82-19623

AgRISTARS: Soil moisture/early warning and crop condition assessment. Interface control document
[E82-10053] N82-19628

AgRISTARS: Yield model development/soil moisture. Interface control document
[E82-10054] N82-19629

Agricultural soil moisture experiment, Colby, Kansas 1978: Measured and predicted hydrological properties of the soil
[E82-10057] N82-19632

SOIL SCIENCE

Time effects of low-amplitude shear modulus of cohesive soils N82-19386

Vegetative erosion control studies Tennessee-Tombigbee Waterway
[AD-A108318] N82-19708

SOILS

Time effects of low-amplitude shear modulus of cohesive soils N82-19386

Taxonomic classification of world map units in crop producing areas of Argentina and Brazil with representative US soil series and major land resource areas in which they occur
[E82-10058] N82-19633

Notes for Brazil sampling frame evaluation trip
[E82-10060] N82-19635

The effect of finite field size on classification and atmospheric correction
[NASA-TM-83818] N82-19645

Examination of heat storage in soil --- for low temperature heat from solar panels
[BMFT-FB-T-81-200] N82-19694

The effects of sulfur dioxide and acid precipitation on decomposition and nutrient cycling processes
N82-19700

SOLAR ARRAYS

Solar Array Flight Experiment (SAFE) N82-19284

British Aerodynamics Group (BAE) solar-array drive mechanism: Life test, stripdown and optical encoder examination
[ESA-TRIB-2] N82-19483

Thermal vacuum real-life test of an Marconi Space and Defence Systems (MSDS) solar-array drive mechanism (MSDS 002). First four years of operation
[ESA-TRIB-3] N82-19484

SOLAR ATMOSPHERE

Solar irradiance retween 120 and 400 mm and its variations --- variations with the Sun's rotation period and activity cycle
[AERONOMICA-ACTA-A-238-1981] N82-19724

SOLAR CELLS

Solar Array Flight Experiment (SAFE) N82-19284

Characterization of ASEC BSR 2 ohm-cm silicon solar cells with dielectric wraparound contacts as a function of temperature and intensity
[NASA-TM-82456] N82-19668

SOLAR COLLECTORS

Development of simple solar collectors --- for usage in developing countries
[BMFT-FB-T-81-174] N82-19690

A solar high temperature kiln --- for baking ceramic building materials in developing countries
[BMFT-FB-T-81-181] N82-19692

SOLAR CORONA

Heating processes of the solar corona
N82-20044

The International Solar Polar Mission (ISPM)
N82-20048

Helios Mission support N82-20117

SOLAR ELECTRIC PROPULSION

Upper stage alternatives for the shuttle era
[NASA-TM-84137] N82-19303

SOLAR ENERGY CONVERSION

Operational performance of the photovoltaic-powered grain mill and water pump at Tangaye, Upper Volta
[NASA-TM-82767] N82-19673

A low-power photovoltaic system with energy storage for radio communications: Description and design methodology
[NASA-CR-168840] N82-19677

Development of simple solar collectors --- for usage in developing countries
[BMFT-FB-T-81-174] N82-19690

SOLAR FLARES

Quasistatic evolution of preflare equilibria --- solar flares N82-20079

The differential emission measure of dynamic coronal loops
[NASA-CR-168638] N82-20087

Solar-geophysical data number 443. Part 1: (Prompt reports). Data for June 1981, May 1981
[PB82-113853] N82-20107

Solar-geophysical data number 443. Part 2: (Comprehensive reports). Data for January 1981, December 1979
[PB82-113861] N82-20108

SOLAR GENERATORS

Socioeconomic impact of photovoltaic power at Schuchuli, Arizona
[NASA-CR-165551] N82-19669

Design of mobile photovoltaic power systems: 0.5-3kW
[AD-A108889] N82-19688

Joint Indian-German program on solar energy: Phase 2 --- village energy supply
[BMFT-FB-T-81-182] N82-19693

SOLAR HEATING

Design calculation procedure for passive solar houses at Navy installations in regions with cold climate, volume 1
[AD-A108382] N82-19683

Design calculation procedure for passive solar houses at Navy installations in East Coast regions with temperate climate, volume 2
[AD-A108383] N82-19684

Design calculation procedure for passive solar houses at Navy installations in regions with warm, humid climate, volume 3
[AD-A108384] N82-19685

Design calculation procedure for passive solar houses at Navy installations in the Pacific Northwest, volume 4
[AD-A108385] N82-19686

Design calculation procedure for passive solar houses at Navy installations in warm California climates, volume 5
[AD-A108386] N82-19687

A solar high temperature kiln --- for baking ceramic building materials in developing countries
[BMFT-FB-T-81-181] N82-19692

Examination of heat storage in soil --- for low temperature heat from solar panels
[BMFT-FB-T-81-200] N82-19694

SOLAR HOUSES

Design calculation procedure for passive solar houses at Navy installations in regions with cold climate, volume 1
[AD-A108382] N82-19683

Design calculation procedure for passive solar houses at Navy installations in East Coast regions with temperate climate, volume 2
[AD-A108383] N82-19684

Design calculation procedure for passive solar houses at Navy installations in regions with warm, humid climate, volume 3
[AD-A108384] N82-19685

Design calculation procedure for passive solar houses at Navy installations in the Pacific Northwest, volume 4
[AD-A108385] N82-19686

Design calculation procedure for passive solar houses at Navy installations in warm California climates, volume 5
[AD-A108386] N82-19687

Examination of heat storage in soil --- for low temperature heat from solar panels
[BMFT-FB-T-81-200] N82-19694

SOLAR MAGNETIC FIELD

Routine data processing and physical interpretation of data obtained by the fluxgate and search coil magnetometer experiments on board Helios 1 and 2 --- on interplanetary and solar magnetic fields
[BMFT-FB-W-81-039] N82-20099

Solar-geophysical data number 443. Part 1: (Prompt reports). Data for June 1981, May 1981
[PB82-113853] N82-20107

SOLAR MAXIMUM MISSION

The NASA standard 20 ampere hour nickel-cadmium battery manual
[NASA-CR-166700] N82-19680

Modeling the data systems role of the scientist (for the NEEDS Command and Control Task)
[NASA-TM-84028] N82-20012

SOLAR PONDS (HEAT STORAGE)

A review of the salt-gradient solar pond technology
[NASA-CR-168635] N82-19675

SOLAR RADIATION

The weathering of plastics materials in the tropics. 6: The further evaluation of a solar radiation concentrating device (EMMA) as a means of accelerating the weathering of plastics
[AD-A109385] N82-19376

Geophysical effects on the length of the sideral day
[BLL-TRANS-1489-(9022.552)] N82-19721

Some aspects of the solar radiation incident at the top of the atmospheres of Mercury and Venus
[AERONOMICA-ACTA-A-236-1981] N82-19722

Solar irradiance retween 120 and 400 mm and its variations --- variations with the Sun's rotation period and activity cycle
[AERONOMICA-ACTA-A-238-1981] N82-19724

SOLAR RADIO EMISSION

Solar-geophysical data number 443. Part 1: (Prompt reports). Data for June 1981, May 1981
[PB82-113853] N82-20107

Solar-geophysical data number 443. Part 2: (Comprehensive reports). Data for January 1981, December 1979
[PB82-113861] N82-20108

SOLAR SYSTEM

Spiral arms, comets and terrestrial catastrophism
N82-20101

SOLAR WIND

Theory of the auroral magnetosphere
[AERONOMICA-ACTA-A-237-1981] N82-19723

Event study on pre-substorm phases and their relation to the energy coupling between solar wind and magnetosphere --- sudden change in interplanetary magnetic field followed by intensification of convection
[TRITA-EPP-81-04] N82-19741

Inferences about the solar wind dynamics from observed distributions of electrons and ions --- Voyager and Helios observations N82-20046

Evidence for solar wind control of Saturn radio emission
[NASA-TM-83889] N82-20104

Solar-geophysical data number 443. Part 1: (Prompt reports). Data for June 1981, May 1981
[PB82-113853] N82-20107

Solar-geophysical data number 443. Part 2: (Comprehensive reports). Data for January 1981, December 1979
[PB82-113861] N82-20108

SOLAR WIND VELOCITY

Wave heating and acceleration of solar wind ions by cyclotron resonance N82-20081

SOLAR X-RAYS

Large loop thermal models of solar hard X-ray bursts N82-20080

The differential emission measure of dynamic coronal loops
[NASA-CR-168638] N82-20087

Solar-geophysical data number 443. Part 2: (Comprehensive reports). Data for January 1981, December 1979
[PB82-113861] N82-20108

SOLID ELECTROLYTES

Production technology of an oxygen ion conductive ceramic for high temperature fuel cells and high temperature water electrolysis
[BMFT-FB-T-81-180] N82-19691

SOLID LUBRICANTS

Tribological properties at 25 C of seven polyimide films bonded to 440 C high-temperature stainless steel
[NASA-TP-1944] N82-19373

Molybdenum disulphide lubrication. A continuation survey: 1977/78
[ESA-TRIB-4] N82-19379

Ion-plated lead as a film lubricant for bearings in vacuum N82-19548

SOLID PHASES

Static and hydrodynamic studies of the conformation of adsorbed macromolecules at the solid/liquid interface N82-19488

SOLID PROPELLANT COMBUSTION

Determination of the combustion mechanisms of aluminized propellants
[AD-A109058] N82-19340

Initiation, combustion and transition to detonation in homogeneous and heterogeneous reactive mixtures: A summary
[AD-A109057] N82-19347

Parametric study of propellant crack combustion
[AD-A108769] N82-19381

High energy propellants containing magnesium
[FOA-C-20432-D1] N82-19382

SOLID PROPELLANT ROCKET ENGINES

Determination of the combustion mechanisms of aluminized propellants
[AD-A109058] N82-19340

SOLID PROPELLANTS

Initiation, combustion and transition to detonation in homogeneous and heterogeneous reactive mixtures: A summary
[AD-A109057] N82-19347

SOLID ROCKET PROPELLANTS

Parametric study of propellant crack combustion
[AD-A108769] N82-19381

SOLID STATE DEVICES

A review of millimetre wave devices --- technology assessment of electron tubes and solid state power sources
[RSRE-MEMO-3372] N82-19465

SOLID SURFACES

The electronic and atomic structure of diamond surface and effects of hydrogen termination
[AD-A109142] N82-19994

SOLID WASTES

Impediments to energy and materials recovery facilities for municipal solid waste
[PB82-102302] N82-19383

SOLIDIFICATION

Grain-coarsening resistance and the stability of second-phase dispersions in rapidly solidified steels
[AD-A109152] N82-19364

SOLVENTS

Solute-gas equilibria in multi-organic aqueous systems
[AD-A109082] N82-19318

SONAR

Measurements of azimuth and distance using arbitrary configurations of sensors with unknown coordinates in two dimensions --- for radar or sonar systems
[REPT-7/81] N82-19403

Determination of the velocity and the distance of a moving CW source by exploiting the Doppler effect on the reverberation signal --- of the sonar signal
[REPT-6/81] N82-19404

Comparison of subjective and automatic procedures for estimating apparent target length from echo duration --- in radar of sonar systems
[REPT-8/81] N82-19405

SOUND RANGING

Algorithms for tracking a sound source using frequency and bearings
[AD-A109276] N82-19950

SOUND TRANSMISSION

A finite element method for computing sound propagation in ducts containing flow
[AD-A108636] N82-19951

SOUND WAVES

Free-wave propagation in fluid-loaded thick-walled circular pipes
[AMTE-N-TM-81903] N82-19491

Special applications of irreversible thermodynamics N82-20001

SOUNDING

A case study of height and temperature analyses derived from Nimbus-6 satellite soundings
N82-19769

An aerial survey of water turbidity and laser depth sounding performance along the Queensland Coast
[AD-A109050] N82-19802

SOYBEANS

AgRISTARS: Foreign commodity production forecasting. Minutes of the annual formal project manager's review, including preliminary technical review reports of FY80 experiments --- wheat/barley and corn/soybean experiments
[E82-10039] N82-19614

AgRISTARS: Foreign commodity production forecasting. Corn/soybean decision logic development and testing
[E82-10056] N82-19631

Notes for Brazil sampling frame evaluation trip
[E82-10060] N82-19635

Segment-level evaluation of the simulated aggregation test: US corn and soybean exploratory experiment
[E82-10061] N82-19636

SPACE ENVIRONMENT SIMULATION

British Aerodynamics Group (BAE) solar-array drive mechanism: Life test, stripdown and optical encoder examination
[ESA-TRIB-2] N82-19483

Thermal vacuum real-life test of an Marconi Space and Defence Systems (MSDS) solar-array drive mechanism (MSDS 002). First four years of operation
[ESA-TRIB-3] N82-19484

SPACE HEATING (BUILDINGS)

Energy properties in urban building stock --- in Finland
[VTT-RR-1/81] N82-19696

SPACE MANUFACTURING

Manufacturing in space: Fluid dynamics numerical analysis
[NASA-CR-168610] N82-19236

SPACE MECHANICS

Astronautics: Kepler and Hohmann
[TUM-RT-KB-80/1] N82-19238

SPACE MISSIONS

A summary of space flight missions supported by the Deep Space Network N82-20116

SPACE NAVIGATION

Astronautics: Kepler and Hohmann
[TUM-RT-KB-80/1] N82-19238

SPACE PROCESSING

Mission operation report. MLR flight equipment installed in the Orbiter cabin
[NASA-TM-84153] N82-19233

Materials processing in Space/Spacelab. FES/VCGS payload critical design review
N82-19235

The science and engineering of materials
[INPE-2138-RPE/361] N82-19316

SPACE PROGRAMS

Future space programs, 1981
[GPO-86-913] N82-19234

Table of space vehicles, 1958 - 1980
[RAE-TR-81095] N82-19254

SPACE SHUTTLE MAIN ENGINE
Structural dynamic analysis of the Space Shuttle Main Engine
[NASA-CR-161945] N82-19302
SPACE SHUTTLE ORBITERS
Development of STS/Centaur failure probabilities liftoff to Centaur separation
[NASA-CR-167549] N82-19255
Large Space Shuttle Flight Experiment
N82-19285
Propulsion system ignition overpressure for the Space Shuttle
[NASA-TM-82456] N82-19299
SPACE SHUTTLE PAYLOADS
Student's experiment to fly on third Shuttle mission
[NASA-NEWS-RELEASE-82-27] N82-19232
Mission operation report. MLR flight equipment installed in the Orbiter cabin
[NASA-TM-84153] N82-19233
Materials processing in Space/Spacelab. FES/VCGS payload critical design review
N82-19235
Space Shuttle operations
[GPO-89-661] N82-19300
SPACE SHUTTLE UPPER STAGES
Upper stage alternatives for the shuttle era
[NASA-TM-84137] N82-19303
SPACE SHUTTLES
Student's experiment to fly on third Shuttle mission
[NASA-NEWS-RELEASE-82-27] N82-19232
Columbia carries astronomy experiments on third test flight
[NASA-NEWS-RELEASE-82-29] N82-19298
Space Shuttle operations
[GPO-89-661] N82-19300
SPACE TRANSPORTATION
A study of flight control requirements for advanced, winged, earth-to-orbit vehicles with far-aft center-of-gravity locations
[NASA-CR-3491] N82-19226
SPACE TRANSPORTATION SYSTEM
Development of STS/Centaur failure probabilities liftoff to Centaur separation
[NASA-CR-167549] N82-19255
Space Shuttle operations
[GPO-89-661] N82-19300
SPACE TRANSPORTATION SYSTEM 1 FLIGHT
Propulsion system ignition overpressure for the Space Shuttle
[NASA-TM-82458] N82-19299
SPACE TRANSPORTATION SYSTEM 2 FLIGHT
Mission support plan STS-2
[NASA-CR-167435] N82-19249
SPACE TRANSPORTATION SYSTEM 3 FLIGHT
Mission operation report. MLR flight equipment installed in the Orbiter cabin
[NASA-TM-84153] N82-19233
Columbia carries astronomy experiments on third test flight
[NASA-NEWS-RELEASE-82-29] N82-19298
Mission operation report. Space Shuttle program STS-3 launch
[NASA-TM-84154] N82-19301
SPACE TUGS
A study of flight control requirements for advanced, winged, earth-to-orbit vehicles with far-aft center-of-gravity locations
[NASA-CR-3491] N82-19226
SPACE-TIME FUNCTIONS
The use of a nonquadratic model in a conjugate gradient method of optimization with inexact line searches
[MATHS-RES-157] N82-19885
A variable metric method using a non-quadratic model
[MATHS-RES-158] N82-19920
SPACEBORNE ASTRONOMY
OAO-C Copernicus operations report
[NASA-CR-166774] N82-19237
SPACEBORNE EXPERIMENTS
Student's experiment to fly on third Shuttle mission
[NASA-NEWS-RELEASE-82-27] N82-19232
Follow on study on Fluid Physics Module (PM). Part 1: Independent operating Fluid Physics Module (FPM)
[REPT-79-RV-0] N82-19241
Columbia carries astronomy experiments on third test flight
[NASA-NEWS-RELEASE-82-29] N82-19298
NASA Oceanic Processes Program, Fiscal Year 1981
[NASA-TM-84467] N82-19801
A comparison between acetylene and freon rebreathing for measuring cardiac output during exercise --- in space N82-19831
SPACEBORNE PHOTOGRAPHY
Satellite Earth resources data, module U-3
[E82-10035] N82-19611
SPACEBORNE TELESCOPES
OAO-C Copernicus operations report
[NASA-CR-166774] N82-19237
EXUV. Phase A study. Volume 1: Executive summary --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-1] N82-19292
EXUV. Phase A report. Volume 3: Preliminary payload interface specification --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-3] N82-19295
EXUV. Phase A study. Volume 4: Satellite development program --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-4] N82-19296
SPACECRAFT ANTENNAS
JPL antenna technology development N82-19258
Offset wrap rib antenna concept development
N82-19259
Surface measurement system development
N82-19261
SPACECRAFT CABIN ATMOSPHERES
Guidelines for the design of inherently quiet airloops for manned spacecraft
[ACUN-8006] N82-19954
SPACECRAFT COMPONENTS
Report on a study of the maintenance in readiness of on-ground spacecraft systems for operational application programs
[MBB-80-162/150] N82-19242
High performance Variable Conductance Heat Pipe (VCHP) follow-on development: Phase 2
[SABCA-JPM/LN/HO5/NO144-VOL-1] N82-19508
Selected European Space Tribology Laboratory (ESTL) papers on ball bearings for satellites
[ESA-TRIB-1] N82-19547
SPACECRAFT CONSTRUCTION MATERIALS
Preliminary analysis of accelerated space flight ionizing radiation testing
[NASA-TM-83209] N82-19969
SPACECRAFT CONTROL
Six degree of freedom manual controls study report
[NASA-CR-167532] N82-19837
SPACECRAFT DESIGN
Recent advances in space structure design-verification techniques --- conference proceedings
[ESA-SP-1036] N82-19306
Introduction to problems of structural dynamics verification --- dynamic coupling between launch vehicle and payload N82-19309
Achievements in multi-axes testing using servohydraulic vibration system N82-19312
Giotto Comet Halley mission, phase A study. Volume 1: Spacecraft design
[ESS/SS/1000] N82-19313
Guidelines for the design of inherently quiet airloops for manned spacecraft
[ACUN-8006] N82-19954
SPACECRAFT DOCKING
Teleoperation and automation: A survey of European expertise applicable to docking and assembly in space
[MP/PR/4905] N82-19240
SPACECRAFT ENVIRONMENTS
Retrospective analysis of satellite thermal systems
[INPE-2295-TDL/069] N82-19287
SPACECRAFT INSTRUMENTS
NASA Oceanic Processes Program, Fiscal Year 1981
[NASA-TM-84467] N82-19801
SPACECRAFT LAUNCHING
Table of space vehicles, 1958 - 1980
[RAE-TR-81095] N82-19254
SPACECRAFT MODULES
Follow on study on Fluid Physics Module (PM). Part 1: Independent operating Fluid Physics Module (FPM)
[REPT-79-RV-0] N82-19241
SPACECRAFT PERFORMANCE
OAO-C Copernicus operations report
[NASA-CR-166774] N82-19237
Mission operation report. Space Shuttle program STS-3 launch
[NASA-TM-84154] N82-19301
SPACECRAFT POWER SUPPLIES
The NASA standard 20 ampere hour nickel-cadmium battery manual
[NASA-CR-166700] N82-19680
SPACECRAFT PROPULSION
Electric Flight Systems
[NASA-CP-2209] N82-19134
Electric flight systems, overview N82-19135
SPACECRAFT STRUCTURES
Large Space Shuttle Flight Experiment
N82-19285
SPACECRAFT TRACKING
The telecommunications and data acquisition report
[NASA-CR-168577] N82-20113
SPACECREWS
Analysis of evaporative water loss in the Skylab astronauts
[NASA-CR-167462] N82-19814
Evaluation of materials proposed for use in space flight
[NASA-CR-167537] N82-19815
SPACELAB PAYLOADS
Safety demonstration study on proposed biorack glove box --- for Spacelab
[ESA-CR(P)-1482] N82-19239
SPARE PARTS
TIGER reliability analysis in the DSN N82-20128
SPATIAL DISTRIBUTION
Sea ice movements from synthetic aperture radar
[AD-A109002] N82-19435
Recommended data sets, corn segments and spring wheat segments, for use in program development
[E82-10034] N82-19610
AgRISTARS: Early warning and crop condition assessment. Patch image processor user's manual
[E82-10055] N82-19630
Methodology of the interpretation of remote sensing data and applications in geomorphology
[INPE-2209-MD/007] N82-19642
SPECIFICATIONS
Practical issues in having a usable library of software specifications
[AD-A106656] N82-19877
SPECIMENS
Continental scientific drilling program curatorial needs --- specimen handling
[LA-8726-MS] N82-19643
SPECTRAL EMISSION
Methods of editing cloud and atmospheric layer affected pixels from satellite data
[E82-10046] N82-19621
SPECTRAL RECONNAISSANCE
A comparison of unsupervised classification procedures on LANDSAT MSS data for an area of complex surface conditions in Basilicata, Southern Italy
[E82-10038] N82-19613
SPECTRAL REFLECTANCE
Methods of editing cloud and atmospheric layer affected pixels from satellite data
[E82-10046] N82-19621
SPECTRAL RESOLUTION
Optical imaging instruments for the Land Application Satellite System, phase A study, volume 2
[REPT-80/1023-VOL-2] N82-19980
SPECTRAL SIGNATURES
AgRISTARS: Soil moisture/early warning and crop condition assessment. Interface control document
[E82-10053] N82-19628
Data rate reduction. Impact of image data compression on end to end data management of a multispectral payload --- for satellite imagery
[REPT-44/130] N82-19654
SPECTROSCOPIC ANALYSIS
Quantitative thermal desorption spectrometry of noble gases in solids N82-19334

SPECTROSCOPIC TELESCOPES
Detailed investigation of a time of flight neutron spectrometer — and telescope
[TRITA-PFU-81-01] N82-19528

SPECTRUM ANALYSIS
Integrated and spectral energetics of the GLAS general circulation model
[NASA-CR-166766] N82-19729
Fast processor for spectral analysis (ORAS)
[CRPE-NT-108] N82-19870

SPEECH
The feasibility of miniaturizing the versatile portable speech prosthesis: A market survey of commercial products
[NASA-CR-168611] N82-19638

SPHERES
An ASCII FORTRAN subroutine for computing the electromagnetic radiation scattered by a sphere
[AD-A108772] N82-19433

SPHERICAL WAVES
Antenna (selected articles)
[AD-A109174] N82-19455
Scattering of a spherical wave on truncated revolution bodies N82-19456

SPIN REDUCTION
A criterion for the prediction of the recovery characteristics of spinning aircraft
[RAE-TN-AERO-2251] N82-19223

SPIN-SPIN COUPLING
The anisotropic classical chain. Thermodynamic properties and phase diagrams N82-20003

SPINEL
Growth and characterization of liquid phase epitaxially grown spinel ferrite films N82-19991

SPINOR GROUPS
Spinor genera of orders and quadratic forms
[CTH-MATH-1981-20] N82-19922

SPIRAL GALAXIES
Galactic dynamics and gravitational plasmas — spiral structure of galaxies N82-20050
Spiral arms, comets and terrestrial catastrophism N82-20101

SPLICING
Fatigue performance and fastener flexibility for single shear aluminum joint with different splice plates
[FFA-TN-HU-2165] N82-19599

SPOILERS
The effect of a well on the aerodynamics of a spoiler — wind tunnel flow visualization and pressure measurement
[BU-268] N82-19194

SPRAY NOZZLES
Helicopter Icing Spray System (HISS) nozzle improvement evaluation
[AD-A109405] N82-19208
Hydrodynamic and aerodynamic breakup of liquid sheets
[NASA-TM-82800] N82-19494

SPUTTERING
Integrated devices of semiconductor metal-oxides in conjunction with silicon for solid-state gas sensors
[DE82-000397] N82-19477

SQUALLS
Active gust and maneuver load control concepts with the example of the Airbus A300. Part 1: Explanation of a regular in the time zone of wind gust load decrease and examination of its effectiveness in stochastic gusts
[MBB-FE-172/S/PUB/39-PT-1] N82-19228

SQUARE WELLS
Electron transmission through and reflection by an arbitrary set of square potential steps
[AD-A108630] N82-19474

STABILITY DERIVATIVES
An experimental study of the effect of tail configuration on the spinning characteristics of general aviation aircraft — static wind tunnel force measurements
[NASA-CR-168578] N82-19224

STACKS
NASA Redox cell stack shunt current, pumping power, and cell performance tradeoffs
[NASA-TM-82686] N82-19333

STAINLESS STEELS
Tribological properties at 25 C of seven polyimide films bonded to 440 C high-temperature stainless steel
[NASA-TP-1944] N82-19373

STANDARDS
SAR calibration technology review
[NASA-CR-167534] N82-19407
The NASA standard 20 ampere hour nickel-cadmium battery manual
[NASA-CR-166700] N82-19680

STAR CLUSTERS
Activities report of the Institute for Astronomy and Astrophysics — stars, star systems and X-ray astronomy
[TUB-IAA-MITT-1] N82-20093
Activities report of the Institue for Astronomy and Astrophysics — stars, interstellar matter, star systems, and X-ray astronomy
[TUB-IAA-MITT-2] N82-20094

STAR DISTRIBUTION
Instabilities in inhomogeneous collision-free self-gravitating stellar systems — elliptical galaxies N82-20077

STAR TRACKERS
OAO-3 end of mission tests report
[NASA-TM-83824] N82-19286

STARS
Documentation for the machine-readable version of the catalogue of stars within 25 parsecs of the Sun
[NASA-TM-84039] N82-20088
Activities report of the Institute for Astronomy and Astrophysics — stars, star systems and X-ray astronomy
[TUB-IAA-MITT-1] N82-20093

STATIC AERODYNAMIC CHARACTERISTICS
The effect of a well on the aerodynamics of a spoiler — wind tunnel flow visualization and pressure measurement
[BU-268] N82-19194
Aerodynamic design manual for tactical weapons
[AD-A109180] N82-19290

STATIC LOADS
On the design of missile models for static force measurements in wind tunnels — aided by computer programming
[DFVLR-MITT-81-21] N82-19297
Durability of adhesive bonded structures subjected to acoustic loads
[AGARD-R-701] N82-19600

STATIC STABILITY
The measurements of the static and dynamic stability derivatives of conical models in the shock tunnel N82-19516
Stability of the equilibrium states of the interstellar gas and field system N82-20037

STATIC TESTS
Aerodynamic noise generated by jet wing/flap interactions of the external USB configuration of STOL aircraft. Part 2: Full scale model experiment using FJR710 turbofan engine
[NAL-TR-687T-PT-2] N82-19945

STATIONARY ORBITS
Results of continuous synchronous orbit testing of sealed nickel-cadmium cells
[NASA-CR-166564] N82-19678

STATISTICAL ANALYSIS
FAA statistical handbook of aviation
[AD-A109289] N82-19198
Development of STS/Centaur failure probabilities liftoff to Centaur separation
[NASA-CR-167549] N82-19255
Statistics of the field of focused systems N82-19450
An MDI model and an algorithm for composite hypotheses testing and estimation in marketing
[AD-A109147] N82-20009

STATISTICAL TESTS
Estimation of the operating characteristics when the test information of the old test is not constant. 2: Simple sum procedure of the conditional p.d.f. approach/normal approach method using three subtests of the cold test, number 2
[AD-A109112] N82-19930
A K-sample extension of Tukey's 2-sample quick test
[MATHS-RES-159] N82-19933

STATISTICAL WEATHER FORECASTING
Regional classification of the spectral variance of long European temperature series and its application in a statistical filter model for forecasting in the region north of the alps
[BLL-TRANS-1514-(9022.552)] N82-19752
Predictability of the tropical atmosphere
[NASA-TM-83829] N82-19775

STATOR BLADES
Performance of single-stage axial-flow transonic compressor with rotor and stator aspect ratios of 1.63 and 1.78, respectively, and with design pressure ratio of 1.82
[NASA-TP-1974] N82-19222

STEADY STATE
Evaluation of parameters of the oscillatory motion of digital servo system in a steady-state mode
[AD-A109314] N82-19476
Properties of steady discharge in Ar-Kr-F2 gas mixture N82-19536

STEEL STRUCTURES
On the influence of mean load on crack opening and fatigue crack growth in a ship hull plate steel
[TRITA-HFL-0029] N82-19596

STEELS
Grain-coarsening resistance and the stability of second-phase dispersions in rapidly solidified steels
[AD-A109152] N82-19364

STEEPEST DESCENT METHOD
Round-off error analysis of descent methods for solving linear equations N82-19907

STELLAR CORONAS
Accretion disk coronae
[NASA-TM-83840] N82-20106

STELLAR ENVELOPES
Diagnosis of the neutron star and its environment with X-ray astronomy N82-20054
Polarization properties of main-line OH maser emission from circumstellar shells of late type variable stars N82-20095

STELLAR EVOLUTION
The new paradigm in cosmic plasma physics — magnetic fields versus electric currents N82-20031
Supernova hydrodynamics N82-20057
The mass spectrum of stellar origin
[MPI-PAE-EXTRATERR-167] N82-20092

STELLAR GRAVITATION
Instabilities in inhomogeneous collision-free self-gravitating stellar systems — elliptical galaxies N82-20077

STELLAR MAGNETIC FIELDS
The magnetohydrodynamic dynamo — of planetary, stellar, and galactic magnetic fields N82-20033
The nonequilibrium of magnetic fields N82-20034
Pulsar magnetosphere potential structure N82-20066

STELLAR MASS ACCRETION
Extragalactic double radio sources — unified model with a massive black hole acting as unipolar induction dynamo N82-20052
Observable properties of accretion disks — X-ray astronomy N82-20063
Bondi accretion — stellar accretion from interstellar matter through which the star moves slowly N82-20064
Ion pressure-supported accretion tori and the origin of radio jets. A plea for specific advice on the plasma physics N82-20067
The mass spectrum of stellar origin
[MPI-PAE-EXTRATERR-167] N82-20092
Accretion disk coronae
[NASA-TM-83840] N82-20106

STELLAR MASS EJECTION
Supernova hydrodynamics N82-20057
Plasma beams from doughnuts — gas torus alternative model to accretion disks N82-20069
Solar-geophysical data number 443. Part 2: (Comprehensive reports). Data for January 1981, December 1979
[PB82-113861] N82-20108

STELLAR MODELS
Extragalactic double radio sources — unified model with a massive black hole acting as unipolar induction dynamo N82-20052
Bondi accretion — stellar accretion from interstellar matter through which the star moves slowly N82-20064
A doughnut model of quasars — where viscous evolution does not occur N82-20068
Plasma beams from doughnuts — gas torus alternative model to accretion disks N82-20069
Large loop thermal models of solar hard X-ray bursts N82-20080
The differential emission measure of dynamic coronal loops
[NASA-CR-168636] N82-20087

STELLAR SPECTRA
The mass spectrum of stellar origin
[MPI-PAE-EXTRATERR-167] N82-20092
Polarization properties of main-line OH maser emission from circumstellar shells of late type variable stars N82-20095
STELLAR STRUCTURE
Pulsar magnetosphere potential structure N82-20066
STELLAR WINDS
Cosmic ray acceleration by stellar winds and self-confinement in giant H2 regions — idealized model N82-20062
STEP FUNCTIONS
Norm bounds for linear systems using step response data
[RR-159] N82-19924
STIMULATED EMISSION
On the synergistic effects of laser/phonon-stimulated processes: A master equation approach
[AD-A109025] N82-19531
STOCHASTIC PROCESSES
System identification for multivariable control N82-19389
Model choice: An operational comparison of stochastic streamflow models for droughts N82-19602
Mathematical and stochastic models in photogrammetry relating to Helmut Wolf's work N82-19605
Stochastic convergence of randomly weighted sums N82-19901
STORAGE BATTERIES
Design of mobile photovoltaic power systems: 0.5-3kW
[AD-A108889] N82-19688
STORMS
VISSR Atmospheric Sounder (VAS) simulation experiment for a severe storm environment
[NASA-TM-83822] N82-19774
Wave spectra of a shoaling wave field: A comparison of experimental and simulated results
[NASA-TM-83211] N82-19800
STORMS (METEOROLOGY)
Methodology for the use of (foreign) synoptic messages in the generalization of climatological information (derivation of climatic parameters)
[BLL-TRANS-1506-(9022.552)] N82-19757
STRAIN GAGES
Investigation of creep by use of closed loop servo-hydraulic test system
[NASA-CR-168613] N82-19566
STRAIN RATE
Investigation of creep by use of closed loop servo-hydraulic test system
[NASA-CR-168613] N82-19566
STRATIFICATION
Notes for Brazil sampling frame evaluation trip
[E82-10060] N82-19635
STRATIFIED FLOW
Inversion layers and their interaction with cumulus clouds below
[BLL-TRANS-1482-(9022.549)] N82-19764
STRATIGRAPHY
Continental scientific drilling program curatorial needs --- specimen handling
[LA-8726-MS] N82-19643
Stratigraphy, petrography and depositional history of the Hertha Formation (Upper Pennsylvanian), midcontinent North America N82-19746
STRATOSPHERE
Stratospheric ozone concentration measurements at sunrise and at sunset
[BLL-TRANS-1499-(9022.552)] N82-19720
SAM 2 Measurements of the Polar Stratospheric Aerosol, volume 2. April 1979 to October 1979
[NASA-RP-1086-VOL-2] N82-19734
STRATUS CLOUDS
Statistical study of freezing clouds in the GINA 2-PAP, March - April 1979
[BLL-TRANS-1511-(9022.552)] N82-19754
STREAM FUNCTIONS (FLUIDS)
A mobile stream diversion system for hazardous materials spills isolation
[PB82-109679] N82-19661
STREAMS
Model choice: An operational comparison of stochastic streamflow models for droughts N82-19602
Water resources data for New Hampshire and Vermont, water year 1980
[PB82-110156] N82-19656
Water resources data for Pennsylvania, water year 1980: Volume 2: Susquehanna and Potomac River Basins
[PB82-115908] N82-19662
STRESS (PSYCHOLOGY)
Catecholamine levels in fit and nonfit males when exposed to an emotional stress N82-19613
STRESS ANALYSIS
Implementation of a postcracking model for finite element analysis of reinforced concrete
[AD-A108984] N82-19572
STRESS CONCENTRATION
An improved scheme to develop multidimensional generalized yield and failure surfaces for structural elements
[LA-8728-MS] N82-19569
Stress intensity and fatigue crack growth in multiply-cracked, pressurized, partially autofrettaged thick cylinders
[AD-A109081] N82-19580
Stress pulsed reflection and tensile cracking in a one-dimensional bilinear material
[AD-A108833] N82-19581
Some real variable expressions for stress distributions in orthotropic plates
[VTH-LR-334] N82-19593
STRESS CORROSION
The role of environment on time dependent crack growth
[AD-A109388] N82-19573
STRESS CORROSION CRACKING
The numerical simulation of crack growth in weld-induced residual stress fields
[AD-A109321] N82-19577
STRESS CYCLES
Thermo-elastic-plastic stresses in multilayered cylinders
[AD-A109320] N82-19579
A computer program for cycle-by-cycle crack growth computation
[FFA-TN-HU-2048] N82-19598
STRESS INTENSITY FACTORS
Study of near-threshold fatigue crack propagation in pipeline steels in high pressure environments
[NASA-CR-166295] N82-19388
Fatigue of 2024-T351 and 7075-T7351 Al-alloy lugs with and without interference fit under maneuver spectrum loading
[TAE-440] N82-19568
Differences between the growth of small and large fatigue cracks. The relation to threshold K-values
[VTH-LR-327] N82-19591
The stress intensity factor of small cracks at notches
[VTH-LR-330] N82-19592
Sensitivity of the fracture probability in a reactor vessel to variations in data
[TRITA-HFL-0028] N82-19595
STRESS MEASUREMENT
Shear diffusion in sandwich specimens having glass reinforced plastic face plates with paper honeycomb cores
[BU-270] N82-19327
STRESS-STRAIN RELATIONSHIPS
Wave propagation problems in certain elastic anisotropic half spaces N82-19454
STRIP MINING
Application of remote sensing to state and regional problems --- mississippi
[E82-10033] N82-19609
STRUCTURAL ANALYSIS
Program for nonlinear structural analysis
[AD-A108975] N82-19578
STRUCTURAL DESIGN
Design and function of an experimental wing box using carbon fiber reinforced epoxy VATLIT-C'85
[VTH-LR-318] N82-19325
STRUCTURAL DESIGN CRITERIA
Recent advances in space structure design-verification techniques — conference proceedings
[ESA-SP-1036] N82-19308
Introduction to problems of structural dynamics verification --- dynamic coupling between launch vehicle and payload N82-19309
A review of the salt-gradient solar pond technology
[NASA-CR-168635] N82-19675
Feasibility study on a low power vertical axis wind-powered generator
[AEL-0039-TR] N82-19681
Instruments and methods for studying atmospheric electricity
[BLL-TRANS-1487-(9022.552)] N82-19753
Development of an Optical Scanning Mechanism Assembly (OSMA)
[PS-1450] N82-19981
STRUCTURAL ENGINEERING
Aeronautical Research Laboratories Structures Division
[AD-A109049] N82-19161
STRUCTURAL FAILURE
An improved scheme to develop multidimensional generalized yield and failure surfaces for structural elements
[LA-8728-MS] N82-19569
STRUCTURAL PROPERTIES (GEOLOGY)
Upper mantle heterogeneity: Comparisons of regions south of Australia with Philippine Basin
[NASA-CR-168646] N82-19733
STRUCTURAL RELIABILITY
The Shock and Vibration Digest, volume 13, no. 1
[AD-A095594] N82-19558
STRUCTURAL STABILITY
Comments on the doubly asymptotic approxmation. 2: A simple approximation for cutoff velocity — fluid-structure interaction in cases involving acoustic shock waves impinging on underwater structures
[AD-A108926] N82-19911
STRUCTURAL VIBRATION
A subspace iteration algorithm for spinning structure vibration mode computation N82-19157
Dynamic analysis and modeling of electrodynamic vibration test facilities applied to the AIBG 160 kN system N82-19310
Methodology of uniaxial transient vibration tests for satellites N82-19311
The Shock and Vibration Digest, volume 13, no. 1
[AD-A095594] N82-19558
Vibration control with viscoelastic materials, 2 N82-19560
Vibrations and stability of mechanical systems: 2 N82-19561
Simulation using computer-piloted point excitations of vibrations induced on a structure by an acoustic environment N82-20135
SUBROUTINE LIBRARIES (COMPUTERS)
IMIO: A routine library for image input/output files on DEC-10. Directions for use
[FOA-C-30228-E1] N82-19888
SUBROUTINES
MICAD: An interactive computer for the design of microwave circuits
[LEOK-TR-1980-06] N82-19473
SUBSONIC FLOW
Subsonic panel method for the efficient analysis of multiple geometry perturbations
[NASA-CR-3528] N82-19180
Theoretical investigation of the flow of a supersonic free jet from a slit
[MPIS-25/1980] N82-19182
Least squares finite element analysis of steady high subsonic plane potential flows N82-19517
SUBSONIC SPEED
A computer program for wing subsonic aerodynamic performance estimates including attainable thrust and vortex lift effects
[NASA-CR-3515] N82-19151
SUDDEN STORM COMMENCEMENTS
Event study on pre-substorm phases and their relation to the energy coupling between solar wind and magnetosphere — sudden change in interplanetary magnetic field followed by intensification of convection
[TRITA-EPP-81-04] N82-19741
SULFUR DIOXIDES
The effects of sulfur dioxide and acid precipitation on decomposition and nutrient cycling processes N82-19700
Remote sensing of sulfur dioxide effects on vegetation. Volume 2: Data
[PB82-115130] N82-19716

SUNRISE
Stratospheric ozone concentration measurements at sunrise and at sunset
[BLL-TRANS-1499-(9022.552)] N82-19720

SUNSET
Stratospheric ozone concentration measurements at sunrise and at sunset
[BLL-TRANS-1499-(9022.552)] N82-19720

SUPERCONDUCTIVITY
Electronically induced phase transformations
[AD-A108982] N82-19380
Superconducting niobium-tin resonators — X band resonators
[BMFT-FB-T-81-188] N82-19480

SUPERCONDUCTORS
Preparation of compounds with new structures for superconductor investigations — based on metal clusters
[BMFT-FB-T-81-203] N82-20000

SUPERCRITICAL FLOW
Finite elements for fluid dynamics. Supercritical design
[AD-A108983] N82-19506

SUPERCRITICAL WINGS
Flutter and time response analyses of three degree of freedom airfoils in transonic flow
[AD-A108987] N82-19227

SUPERHIGH FREQUENCIES
Superconducting niobium-tin resonators — X band resonators
[BMFT-FB-T-81-188] N82-19480
High stability coplanar oscillators
[CISE-1720] N82-19485

SUPERNOVA REMNANTS
Supernova hydrodynamics N82-20057

SUPERNOVAE
Supernova hydrodynamics N82-20057
Confinement of cosmic rays in molecular clouds
N82-20073

SUPERPLASTICITY
Evaluation of superplastic forming and co-diffusion bonding of Ti-6Al-4V titanium alloy expanded sandwich structures
[NASA-CR-165827] N82-19358

SUPERSONIC AIRFOILS
Inverse transonic airfoil design methods including boundary layer and viscous interaction effects
[NASA-CR-168579] N82-19168

SUPERSONIC FLOW
Calculation of supersonic three-dimensional flow about blunt-nosed bodies
[AD-A108808] N82-19187
A method of characteristic surfaces: The approximate solution of three-dimensional supersonic flow fields, from the near field up to the sonic boom region
[VTH-LR-331] N82-19190

SUPERSONIC JET FLOW
Singularities of the solution of the problem of a weakly perturbed supersonic free jet with rotational symmetry
[MPIS-6/1980] N82-19188

SUPERSONIC NOZZLES
Testing ventilated nozzle models with supersonic primary flow N82-19159

SUPERSONIC WAKES
The compressible laminar two-dimensional wake with arbitrary initial asymmetry
[AD-A109084] N82-19185

SUPINE POSITION
Cardiovascular responses to isometric exercise in sitting and lying position N82-19823

SUPPLYING
COBALT: Effectiveness of alternative US policies to reduce the costs of a supply disruption
[PB82-110560] N82-20021

SURFACE ACOUSTIC WAVE DEVICES
Modeling of the influence of static acceleration on surface wave (quartz) oscillator
[ESA-TT-726] N82-19444
Investigation of shallow bulk acoustic waves
[AD-A109028] N82-19953

SURFACE DISTORTION
Distorted reflector antenna performance prediction technique N82-19268
Concepted design of a surface measurement system for large deployable space antennas N82-19271

SURFACE FINISHING
Integrated devices of semiconductor metal-oxides in conjunction with silicon for solid-state gas sensors
[DE82-000397] N82-19477
Galvanic charging in air and space flight
[MBB-BB-485-O] N82-19478
Superconducting niobium-tin resonators — X band resonators
[BMFT-FB-T-81-188] N82-19480

SURFACE PROPERTIES
Concepted design of a surface measurement system for large deployable space antennas N82-19271
Surface chemistry and wear behavior of single-crystal silicon carbide sliding against iron at temperatures to 1500 C in vacuum
[NASA-TP-1947] N82-19374
Surface modification in control SiO2 fiber fracture
[AD-A108796] N82-19589

SURFACE REACTIONS
An improved scheme to develop multidimensional generalized yield and failure surfaces for structural elements
[LA-8728-MS] N82-19569
Surface reactions and fatigue crack growth
[AD-A109296] N82-19588

SURFACE ROUGHNESS
Braking force coefficients of worn tyres
[PB82-122698] N82-20028

SURFACE ROUGHNESS EFFECTS
Preliminary experimental test results using 35 GHz offset fed reflector simulating surface pillows and aperture cables N82-19265
Preliminary analytical results using surface current integration for predicting effects of surface pillows on RF performance N82-19266

SURFACE TEMPERATURE
Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida
[E82-10040] N82-19615
Delineation of soil temperature regimes from HCMM data
[E82-10042] N82-19617
Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements
[E82-10046] N82-19623
On the accuracy of thermal inertia mapping by infrared imagery
[SAAB-REPR-AE-10] N82-19656
The computation of the ground surface temperature for simulation of the general atmospheric circulation
[BLL-TRANS-1521-(9022.552)] N82-19751
The TOCIND experiment --- relation between surface isotherms and ocean currents
[CTAMN/81/R/10] N82-19805

SURFACE WATER
Water resources data for Virginia, water year 1980
[PB82-113416] N82-19659

SURFACE WAVES
Prediction of surf zone characteristics
[AD-A108759] N82-19804

SURFACES
Rolling up of vortex sheets from the edges of lifting surfaces N82-19153

SURVEILLANCE
Market analysis of seismic security systems
[NASA-CR-168612] N82-19387
Compressed television transmission: A market survey
[NASA-CR-168614] N82-19410

SURVEYS
Consumer behavior towards fuel efficient vehicles. Volume 1: Executive summary
[PB82-103300] N82-20027

SUSPENSION SYSTEMS (VEHICLES)
The suspension system of the cryogenic gravitational antenna of the Istituto Plasma Spazio
[IPS-81-14] N82-19549

SUSQUEHANNA RIVER BASIN (MD-NY-PA)
Water resources data for Pennsylvania, water year 1980: Volume 2: Susquehanna and Potomac River Basins
[PB82-115908] N82-19662

SWEPT FORWARD WINGS
An investigation into wing-canard interaction for a model with forward swept wings --- wind tunnel measurement
[BU-261] N82-19191

SWITCHES
Polarization-independent optical waveguide switch
[AD-A108764] N82-19976

SYMMETRY
Rotationally symmetric operators for surface interpolation
[AD-A109032] N82-19916

SYNCHRONISM
Ranging and sychronization between nominally co-orbital satellites
[AD-A109272] N82-19289
Synthesis of communicating processes from temporal logic specifications
[AD-A109653] N82-19866
Synchronization patterns and related problems in combinatorial analysis and graph theory
[AD-A108888] N82-19913

SYNCHRONOUS SATELLITES
Configuration development of the Land Mobile Satellite System (LMSS) Spacecraft N82-19277
Configuration development of the Land Mobile Satellite System (LMSS) Spacecraft: Conclusions
N82-19278
Land Mobile Satellite Systems (LMSS): Single aperture system design N82-19279
Quad aperture RF definition N82-19280
Attitude control subsystem study for the Land Mobile Satellite System Spacecraft N82-19281
Results of continuous synchronous orbit testing of sealed nickel-cadmium cells
[NASA-CR-168564] N82-19678

SYNCHROTRON RADIATION
Extragalactic radio sources --- observation of narrow features (jets) in galactic structure N82-20051
Hot plasmas in active galactic nuclei --- radiative processes N82-20058

SYNOPTIC METEOROLOGY
Methodology for the use of (foreign) synoptic messages in the generalization of climatological information (derivation of climatic parameters)
[BLL-TRANS-1506-(9022.552)] N82-19757
Predictability of the tropical atmosphere
[NASA-TM-83829] N82-19775
Synoptic meteorology during the SNOW-ONE field experiment
[AD-A109080] N82-19784

SYNTAX
SAM: A configurable experimental text editor for investigating human factors issues in text processing and understanding
[AD-A109331] N82-19846
Syntactic visual image generation system feasibility study
[AD-A109334] N82-19858

SYNTHESIS (CHEMISTRY)
The attempted syntheses of low oxidation state, organometallic derivatives of aluminum, gallium and indium, a new synthesis Al(CH2SiMe3)3
[AD-A109333] N82-19317
The synthesis of biodegradable block copolymers containing amylose and polyester oligomeric blocks
N82-19371

SYNTHETIC APERTURE RADAR
SAR calibration technology review
[NASA-CR-167534] N82-19407
Mathematical modeling and SAR simulation multifunction SAR technology efforts
[NASA-CR-167535] N82-19408
Development of a synthetic aperture radar design approach for wide-swath implementation
[NASA-CR-167536] N82-19409
Sea ice movements from synthetic aperture radar
[AD-A109002] N82-19435
Analogue SAR signal processing: Device evaluation and radiation tests --- video integrator, binary-analog correlator
[REPT-3972-ISSUE-1] N82-19440

SYNTHETIC FIBERS
A new fatigue resistant material: Aramide Reinforced Aluminum Laminate (ARALL)
[VTH-LR-322] N82-19326

SYNTHETIC FUELS
Future fuels and engines for railroad locomotives. Volume 1: Summary
[NASA-CR-168642] N82-20022

SYSTEM EFFECTIVENESS
Efficiency and input impedance of planer emitter placed near the interface N82-19451

Assessment of aircraft capacitive circuit medium wave antennas according to their efficiency N82-19453

SYSTEM IDENTIFICATION

System identification for multivariable control N82-19389

Asymptotic properties of unknown systems — and controller design problems [RR-156] N82-19903

Norm bounds for linear systems using step response data [RR-159] N82-19924

SYSTEMS ANALYSIS

TIGER reliability analysis in the DSN N82-20128

SYSTEMS ENGINEERING

Transport aircraft cockpit standardization (Federal Aviation regulations part 25) [AD-A108924] N82-19207

Antenna subsystem requirements N82-19276

Configuration development of the Land Mobile Satellite System (LMSS) Spacecraft N82-19277

Configuration development of the Land Mobile Satellite System (LMSS) Spacecraft: Conclusions N82-19278

Land Mobile Satellite Systems (LMSS): Single aperture system design N82-19279

Quad aperture RF definition N82-19280

Attitude control subsystem study for the Land Mobile Satellite System Spacecraft N82-19281

EXUV. Phase A study. Volume 2A: Satellite system conceptual design — extreme UV/soft X-ray survey mission (EXUV) [REPT-44/69/JS/CB-VOL-2A] N82-19293

EXUV. Phase A study. Volume 2B: Satellite system conceptual design — extreme UV/soft X-ray survey mission (EXUV) [REPT-44/69/JS/CB-VOL-2B] N82-19294

Development of a synthetic aperture radar design approach for wide-swath implementation [NASA-CR-167536] N82-19409

An information adaptive system study report and development plan [NASA-CR-166766] N82-19644

Human Factors in System Development: Experiences and Trends — conference proceedings [FOA-A-56003-H9] N82-19839

Human factors and the real world — limitations on the man machine systems design process N82-19840

Human factors in system development: Status and evaluation N82-19841

Best Available Technologies (BATs) for computer security [AD-A109189] N82-19857

An approach for gross design of operations management systems [ISBN-951-752-306-4] N82-20007

SYSTEMS INTEGRATION

Electric flight systems integration N82-19150

National Airspace Data Interchange Network (NADIN) support of Remote Maintenance Monitoring System (RMMS) [AD-A109125] N82-19160

EXUV. Phase A report. Volume 3: Preliminary payload interface specification — extreme UV/soft X-ray survey mission (EXUV) [REPT-44/69/JS/CB-VOL-3] N82-19295

SYSTEMS MANAGEMENT

A model for dimensioning a corrective maintenance system [INPE-2233-TDL/064] N82-19935

Transfer of aerospace project management to the development of technical series production [MBB-UR-482-81-O] N82-20011

SYSTEMS STABILITY

The Shock and Vibration Digest, volume 13, no. 1 [AD-A095594] N82-19556

Vibrations and stability of mechanical systems: 2 N82-19561

T

TABLES (DATA)

Table of space vehicles, 1958 - 1980 [RAE-TR-81095] N82-19254

Solar-geophysical data number 443. Part 2: (Comprehensive reports). Data for January 1981, December 1979 [PB82-113861] N82-20108

TAIL ASSEMBLIES

An experimental study of the effect of tail configuration on the spinning characteristics of general aviation aircraft — static wind tunnel force measurements [NASA-CR-168578] N82-19224

TALKING

Improvements to speech quality from a diving helmet [BBC-RD-1981/9] N82-19399

TARGET ACQUISITION

Accuracy of parameter estimates for closely spaced optical targets using multiple detectors [AD-A109185] N82-19978

TARGET RECOGNITION

Target/clutter discrimination techniques for laser semi-active missile systems N82-19253

Comparison of subjective and automatic procedures for estimating apparent target length from echo duration — in radar of sonar systems [REPT-8/81] N82-19405

Recognition of, and damages caused to a radar antenna by a carbon dioxide laser [FOA-C-30244-E1] N82-19441

Detection range probabilities of passive infrared systems for the North Atlantic [AD-A108812] N82-19974

The visible detection of aerial targets as a function of environmental, target and observation parameters for surface to air or air to air observations [BMVG-FBWT-31-12] N82-19983

TASKS

Maintenance and operations tasks accomplished at DSS 12 during the antenna panel replacement downtime N82-20130

TAXONOMY

Taxonomic classification of world map units in crop producing areas of Argentina and Brazil with representative US soil series and major land resource areas in which they occur [E82-10058] N82-19633

TDR SATELLITES

Study of liquid slosh in the tracking and data relay satellite hydrazine tanks [NASA-CR-166745] N82-19492

TEARING MODE (PLASMAS)

On the existence of the ion tearing mode N82-20076

TECHNOLOGICAL FORECASTING

Perspectives for Controlled Weapons Technology: Report of the 90th Helicopter Forum [MBB-UA-532-80-O] N82-19211

Television services in Europe in the age of direct satellite television [ESA-CR(P)-1503] N82-19439

Transfer of aerospace project management to the development of technical series production [MBB-UR-482-81-O] N82-20011

Technology assessment and forecast report, 10th — patent policy [REPT-10] N82-20024

TECHNOLOGY ASSESSMENT

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 1: Executive Summary [NASA-TM-84149] N82-19170

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 2: Operators' Views [NASA-TM-84148] N82-19171

NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 4: Flight Control Avionics Systems and Human Factors [NASA-TM-84146] N82-19173

Teleoperation and automation: A survey of European expertise applicable to docking and assembly in space [MP/PR/4905] N82-19240

Antenna subsystem requirements N82-19276

Chemical desulphurisation of coal [ICTIS-TR-15] N82-19332

Market analysis of seismic security systems [NASA-CR-168612] N82-19387

ANIK-B program delivery pilot project. A 12 month performance assessment [CRC-1349] N82-19426

Microwave tubes. Literature study number 2 relating to the year 1980 [FOA-C-30247-E] N82-19479

Human Factors in System Development: Experiences and Trends — conference proceedings [FOA-A-56003-H9] N82-19839

Technology assessment and forecast report, 10th — patent policy [REPT-10] N82-20024

TECHNOLOGY TRANSFER

An investigation of the lag between the start of research and the development of new technology [NASA-CR-168583] N82-20005

Local and national impact of aerospace research and technology [NASA-TM-82775] N82-20006

TECHNOLOGY UTILIZATION

Remote sensing procurement package: A management report for state and local governments [E82-10052] N82-19627

Human factors for the future: Trends and speculations N82-19845

TELECOMMUNICATION

Study of the availability of satellite telecommunication links subject to attenuation by rain [INPE-2239-PRE/025] N82-19411

Instrumentation timing systems [AD-A109005] N82-19523

Improving communication in organization operation: Preparing communication resources in a large enterprise [MBB-BB-499-81-O] N82-20010

TELEMETRY

Analysis of the multipath environment for APATS testing [AD-A109345] N82-19306

Instrumentation timing systems [AD-A109005] N82-19523

On the group delay effect of DSN microwave components on multimegabit telemetry N82-20122

TELEOPERATORS

Teleoperation and automation: A survey of European expertise applicable to docking and assembly in space [MP/PR/4905] N82-19240

TELEPRINTERS

Programmable printing terminal [INPE-2082-TDL/056] N82-19850

Programmable printing terminal [INPE-2096-RPE/326] N82-19851

TELEVISION CAMERAS

Equipment for testing and measuring a 'helmet mounted sight and display' system with a coupled movable TV camera in the flight simulator for research of the DFVLR [ESA-TT-675] N82-19219

TELEVISION SYSTEMS

ANIK-B program delivery pilot project. A 12 month performance assessment [CRC-1349] N82-19426

Direct broadcast satellites: Policies, prospects, and potential competition [PB82-110164] N82-19446

TELEVISION TRANSMISSION

Compressed television transmission: A market survey [NASA-CR-168614] N82-19410

Television services in Europe in the age of direct satellite television [ESA-CR(P)-1503] N82-19439

TEMPERATE REGIONS

Design calculation procedure for passive solar houses at Navy installations in warm California climates, volume 5 [AD-A108366] N82-19687

TEMPERATURE CONTROL

High performance Variable Conductance Heat Pipe (VCHP) follow-on development: Phase 2 [SABCA-JPM/LN/HO5/NO144-VOL-1] N82-19508

TEMPERATURE DISTRIBUTION

Temperature distribution in the walls of a cylindrical thermal chamber: Formulation and proposed solution [INPE-2267-PRE/048] N82-19500

Inversion layers and their interaction with cumulus clouds below [BLL-TRANS-1482-(9022.549)] N82-19764

TEMPERATURE EFFECTS

Thermally dissociated chlorine and bromine molecular jets [MPIS-26/1980] N82-19663

TEMPERATURE MEASUREMENT
Dielectric properties of snow
[NASA-CR-166764] N82-19638
Optimum employment of satellite indirect soundings as numerical model input
[NASA-CR-168509] N82-19768
A case study of height and temperature analyses derived from Nimbus-6 satellite soundings
N82-19769
Evaluation of TIROS-N and NOAA-6 satellite data: Comparisons of colocated soundings and analyses for a January case N82-19770
A numerical evaluation of TIROS-N and NOAA-6 analyses in a high resolution limited area model
N82-19771
An appendix to the paper Plasma Electron Temperature Determination in Low-Density Plasmas from the Helium I 3889 A and 5016 A Line Intensities
[TRITA-EPP-81-03] N82-19988
Experimental determination of temperature/velocity probability density functions in a turbulent flame
N82-20133

TEMPERATURE PROFILES
Active microwave investigation of snowpacks: Experimental documentation, Colorado 1979-1980
[NASA-CR-166727] N82-19646
A review of the salt-gradient solar pond technology
[NASA-CR-168635] N82-19675
SAM 2 Measurements of the Polar Stratospheric Aerosol, volume 2. April 1979 to October 1979
[NASA-RP-1088-VOL-2] N82-19734
Studies of the stratospheric and mesospheric wind system and temperature distribution from observations of infrasonic waves generated during regular Concorde flights
[KGI-176] N82-19789

TEMPORAL DISTRIBUTION
Spectral and temporal behavior of the X-ray binary stars Cgy X-1 in the hard X-ray domain
[MPI-PAE/EXTRATERR-166] N82-20091

TENSILE STRENGTH
The value of dynamic fracture toughness and its dependence on material properties and loading conditions
[AD-A109151] N82-19574
Stress pulsed reflection and tensile cracking in a one-dimensional bilinear material
[AD-A108833] N82-19581

TENSILE STRESS
Large scale dynamics of long flexible cables towed through air
[KTH-AERO-TN-61] N82-19567
Stress intensity and fatigue crack growth in multiply-cracked, pressurized, partially autofrettaged thick cylinders
[AD-A109081] N82-19580

TENSOR ANALYSIS
Surface layer orientation coordination for boundary layer calculations on general configurations
[MBB-FE-122/S/PUB/41] N82-19507

TENSORS
Second-order nonlinear conductivity tensor for an unmagnetized relativistic turbulent plasma
N82-20071

TERMINOLOGY
A glossary of range terminology
[AD-A108894] N82-19250

TERRAIN ANALYSIS
A comparison of unsupervised classification procedures on LANDSAT MSS data for an area of complex surface conditions in Basilicata, Southern Italy
[E82-10038] N82-19613

TERRESTRIAL RADIATION
Methods of editing cloud and atmospheric layer affected pixels from satellite data
[E82-10046] N82-19621
Analysis of the illumination of areas covered by a satellite in a heliosynchronous circular orbit
[INPE-2208-RPE/398] N82-19672

TESSERAL HARMONICS
Geopotential harmonics of order 29, 30 and 31 from analysis of resonant orbits
[RAE-TR-81109] N82-19247

TEST FACILITIES
Equipment for testing and measuring a 'helmet mounted sight and display' system with a coupled movable TV camera in the flight simulator for research of the DFVLR
[ESA-TT-675] N82-19219
The aerospace technology laboratory (a perspective, then and now)
[NASA-TM-82754] N82-19229
Recent advances in space structure design-verification techniques --- conference proceedings
[ESA-SP-1036] N82-19308
Dynamic analysis and modeling of electrodynamic vibration test facilities applied to the AIBG 160 kN system N82-19310
Achievements in multi-axes testing using servohydraulic vibration system N82-19312
The DAEDUT/PMLTNO hybrid rocket motor facilities
[VTH-LR-321] N82-19315
Acoustic measurements of F100-PW-100 engine operating in hush house NSN 4920-02-070-2721
[AD-A108814] N82-19952

TEST VEHICLES
Historical perspectives on thermostructural research at the NACA Langley Aeronautical Laboratory from 1948 to 1958
[NASA-TM-83266] N82-19498

TETHERLINES
Large scale dynamics of long flexible cables towed through air
[KTH-AERO-TN-61] N82-19567

TEXAS
Methods of editing cloud and atmospheric layer affected pixels from satellite data
[E82-10046] N82-19621

THEMATIC MAPPING
A comparison of unsupervised classification procedures on LANDSAT MSS data for an area of complex surface conditions in Basilicata, Southern Italy
[E82-10038] N82-19613
Utilization of Aerochrome 2443 film for identification and estimating wheat growing areas --- Rio Grande do Sul, Brazil
[INPE-2197-PRE/006] N82-19639

THEODOLITES
The applicability of pressure measurements by radiosondes to calculating the height
[BLL-TRANS-1505-(9022.552)] N82-19755

THEOREM PROVING
On the uniform boundedness of a family of matrices and the applications to one-leg and linear multistep methods
[TRITA-NA-8101] N82-19938

THEOREMS
Algorithm for the calculation of the largest integer in the quare root of a natural number
[PREPRINT-11] N82-19916
Applications of a general comparison theory for convolution integrals
[CTH-MATH-1981-21] N82-19923

THERMAL BOUNDARY LAYER
Thermal investigation of unstable substances, including a comparison of different thermal analytical techniques N82-19335
Shock tube determination of the heat conductivity of non-ionized and partially ionized argon
N82-19497

THERMAL CONDUCTIVITY
High performance Variable Conductance Heat Pipe (VCHP) follow-on development: Phase 2
[SABCA-JPM/LN/HO5/NO144-VOL-1] N82-19508
The computation of the ground surface temperature for simulation of the general atmospheric circulation
[BLL-TRANS-1521-(9022.552)] N82-19751
Another self-similar blast wave: Early time asymptote with shock heated electrons and high thermal conductivity
[NASA-CR-168562] N82-19962

THERMAL DISSOCIATION
Thermally dissociated chlorine and bromine molecular jets
[MPIS-26/1980] N82-19963

THERMAL ENERGY
Measurement of the differential scattering cross sections of electron excited sodium by argon
[MPIS-31/1980] N82-19349

THERMAL EXPANSION
Moisture and thermal expansion of composite materials
[AD-A109131] N82-19323

THERMAL MAPPING
Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida
[E82-10040] N82-19615
Delineation of soil temperature regimes from HCMM data
[E82-10042] N82-19617
Method of interpretation of remote sensing data and applications to vegetation
[INPE-2215-MD/010] N82-19640
On the accuracy of thermal inertia mapping by infrared imagery
[SAAB-REPR-AE-10] N82-19656
The TOCIND experiment --- relation between surface isotherms and ocean currents
[CTAMN/81/R/10] N82-19805

THERMAL POLLUTION
Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data
[INPE-2229-PRE/021] N82-19704

THERMAL STABILITY
Thermal investigation of unstable substances, including a comparison of different thermal analytical techniques N82-19335
Grain-coarsening resistance and the stability of second-phase dispersions in rapidly solidified steels
[AD-A109152] N82-19364
High stability coplanar oscillators
[CISE-1720] N82-19485
Interstellar matter --- thermal and pressure balance
N82-20035

THERMAL STRESSES
Historical perspectives on thermostructural research at the NACA Langley Aeronautical Laboratory from 1948 to 1958
[NASA-TM-83266] N82-19498
Acoustic fatigue endurance test of USB flap structure models at elevated temperature
[NAL-TR-683] N82-19570

THERMAL VACUUM TESTS
British Aerodynamics Group (BAE) solar-array drive mechanism: Life test, stripdown and optical encoder examination
[ESA-TRIB-2] N82-19483
Thermal vacuum real-life test of an Marconi Space and Defence Systems (MSDS) solar-array drive mechanism (MSDS 002). First four years of operation
[ESA-TRIB-3] N82-19484

THERMALIZATION (ENERGY ABSORPTION)
Large loop thermal models of solar hard X-ray bursts N82-20080
Comments on high Mach number magnetosonic shocks --- ion thermalization N82-20082

THERMODYNAMIC PROPERTIES
Conception of an apparatus for pressure, density, and temperature measurements in the critical region of pure fluids in Spacelab
[BMFT-FB-W-81-026] N82-19527
Impurities in quasi one-dimensional systems. A study on some thermodynamic properties N82-20002
The anisotropic classical chain. Thermodynamic properties and phase diagrams N82-20003

THERMODYNAMICS
Effect of location in an array on heat transfer to a cylinder in crossflow
[NASA-TM-82797] N82-19493
Laminar heat transfer with mass injection and chemical reaction N82-19515
Thermodynamic features affecting convective cloud growth and dynamic seeding: A comparative summary of HIPLEX soundings, 1975 to 1977
[PB82-123423] N82-19791

THERMOELASTICITY
Thermoelastic deformation in cylindrical shells of great length
[INPE-2268-PRE/049] N82-19266
Thermo-elastic-plastic stresses in multilayered cylinders
[AD-A109320] N82-19579

THERMONUCLEAR EXPLOSIONS
Supernova hydrodynamics N82-20057

THERMOPLASTICITY
Thermo-elastic-plastic stresses in multilayered cylinders
[AD-A109320] N82-19579

THERMOVISCOELASTICITY
Special applications of irreversible thermodynamics N82-20001
THICK WALLS
Free-wave propagation in fluid-loaded thick-walled circular pipes
[AMTE-N-TM-81903] N82-19491
THIN FILMS
Integrated devices of semiconductor metal-oxides in conjunction with silicon for solid-state gas sensors
[DE82-000397] N82-19477
Electrotransport in thin films
[AD-A108421] N82-19992
THREE DIMENSIONAL BOUNDARY LAYER
Surface layer orientation coordination for boundary layer calculations on general configurations
[MBB-FE-122/S/PUB/41] N82-19507
THREE DIMENSIONAL FLOW
Rolling up of vortex sheets from the edges of lifting surfaces N82-19153
Computation of transonic potential flow about 3 dimensional inlets, ducts, and bodies
[NASA-CR-3514] N82-19179
Calculation of supersonic three-dimensional flow about blunt-nosed bodies
[AD-A108808] N82-19187
A method of characteristic surfaces: The approximate solution of three-dimensional supersonic flow fields, from the near field up to the sonic boom region
[VTH-LR-331] N82-19190
THROTTLING
Theoretical and experimental determination of a compressor transfer function --- turbocompressors induced by rapid opening of a downstream valve
N82-20132
THUNDERSTORMS
The use of weather radar in the civil aviation weather service
[BLL-TRANS-1456-(9022.552)] N82-19763
TIDE POWERED GENERATORS
Tidal power from the Severn estuary, volume 1
[EP-46-VOL-1] N82-19666
Tidal power from the Severn estuary. Volume 2: Analysis, studies, reports and evaluations
[EP-46-VOL-2] N82-19667
TIEBOLTS
Fatigue performance and fastener flexibility for single shear aluminum joint with different splice plates
[FFA-TN-HU-2165] N82-19599
TILT ROTOR AIRCRAFT
NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 3: Aerodynamics and Structures Session
[NASA-TM-84147] N82-19172
TIMBER INVENTORY
Method of interpretation of remote sensing data and applications to vegetation
[INPE-2215-MD/010] N82-19640
TIME DEPENDENCE
The role of environment on time dependent crack growth
[AD-A109388] N82-19573
TIME DIVISION MULTIPLEXING
Ground station digital interface
[ARL/MECH-ENG-REPT-158] N82-19401
TIME LAG
On the group delay effect of DSN microwave components on multimegabit telemetry N82-20122
TIME MEASUREMENT
Ranging and sychronization between nominally co-orbital satellites
[AD-A109272] N82-19289
Digital time control for camera shutters
[PB82-116328] N82-19529
TIME OF FLIGHT SPECTROMETERS
Detailed investigation of a time of flight neutron spectrometer --- and telescope
[TRITA-PFU-81-01] N82-19528
TIME SERIES ANALYSIS
Computationally fast algorithms for ARMA spectral estimation N82-19871
Asymptotic normality of autoregressive parameter estimates for mixed time series
[AD-A108781] N82-19929
TIMING DEVICES
Master timing system measurements N82-20124
Global positioning system timing receivers in the DSN N82-20126
TIN OXIDES
Integrated devices of semiconductor metal-oxides in conjunction with silicon for solid-state gas sensors
[DE82-000397] N82-19477
TIRES
Braking force coefficients of worn tyres
[PB82-122696] N82-20028
TIROS N SATELLITE
Optimum employment of satellite indirect soundings as numerical model input
[NASA-CR-168509] N82-19768
Evaluation of TIROS-N and NOAA-6 satellite data: Comparisons of colocated soundings and analyses for a January case N82-19770
A numerical evaluation of TIROS-N and NOAA-6 analyses in a high resolution limited area model
N82-19771
TISSUES (BIOLOGY)
Measurements of intra and extracellular water spaces and electrolyte concentrations in human skeletal muscle N82-19629
TITANIUM ALLOYS
Evaluation of superplastic forming and co-diffusion bonding of Ti-6Al-4V titanium alloy expanded sandwich structures
[NASA-CR-165827] N82-19358
Accession of titanium as an aircraft material: A current view
[ARL/MAT-NOTE-129] N82-19361
TOPOGRAPHY
Methodology of the interpretation of remote sensing data and applications in pedology
[INPE-2211-MD/008] N82-19641
Vegetative erosion control studies Tennessee-Tombigbee Waterway
[AD-A108318] N82-19708
TORSION
Thermoelastic deformation in cylindrical shells of great length
[INPE-2268-PRE/049] N82-19286
Design and function of an experimental wing box using carbon fiber reinforced epoxy VATLIT-C'85
[VTH-LR-318] N82-19325
TORUSES
Ion pressure-supported accretion tori and the origin of radio jets. A plea for specific advice on the plasma physics N82-20067
A doughnut model of quasars --- where viscous evolution does not occur N82-20068
Plasma beams from doughnuts --- gas torus alternative model to accretion disks N82-20069
TOXIC HAZARDS
Determination of the effects of material from alternate energy sources on the upper respiratory tract clearance mechanism. Part 1: In vitro exposure to particulate pollutants. Part 2: In vivo exposure to ozone
[PB82-117037] N82-19811
TOXICITY
Determination of the effects of material from alternate energy sources on the upper respiratory tract clearance mechanism. Part 1: In vitro exposure to particulate pollutants. Part 2: In vivo exposure to ozone
[PB82-117037] N82-19811
TRACKING (POSITION)
Analysis of a nonlinear altitude tracking method
[AD-A108878] N82-19197
Measurements of azimuth and distance using arbitrary configurations of sensors with unknown coordinates in two dimensions --- for radar or sonar systems
[REPT-7/81] N82-19403
Algorithms for tracking a sound source using frequency and bearings
[AD-A109276] N82-19950
TRACKING NETWORKS
Measurements of azimuth and distance using arbitrary configurations of sensors with unknown coordinates in two dimensions --- for radar or sonar systems
[REPT-7/81] N82-19403
TRACKING STATIONS
Maintenance and operations tasks accomplished at DSS 12 during the antenna panel replacement downtime N82-20130
TRAFFIC CONTROL
Compressed television transmission: A market survey
[NASA-CR-168614] N82-19410
Urban traffic signal control for fuel economy. Part 2: Extension to small cars
[AD-A109393] N82-20025
TRAILING EDGES
Some observations of surface pressures and the near wake of a blunt trailing edge airfoil
[NASA-CR-168563] N82-19174
TRAINING AIRCRAFT
Disengagement of safety harness buckles - CT4
[AD-A109048] N82-19199
TRAJECTORY ANALYSIS
The analytical trajectory of the charged particle moving in a neutral sheet magnetic field N82-20085
TRAJECTORY OPTIMIZATION
Optimal aircraft landing patterns for minimal noise impact N82-19200
TRANSFER FUNCTIONS
Theoretical and experimental determination of a compressor transfer function --- turbocompressors induced by rapid opening of a downstream valve
N82-20132
TRANSFORMATIONS (MATHEMATICS)
Characteristics of von Karman-Trefftz profiles
[VTH-LR-323] N82-19189
Broad-directional lens antennas made of an inhomogeneous dielectric N82-19457
TRANSIENT PRESSURES
On the Neumann problem for the pressure in a Navier-Stokes model --- of boundary layer flow
[PUBL-257] N82-19511
TRANSIENT RESPONSE
Methodology of uniaxial transient vibration tests for satellites N82-19311
Theoretical and experimental determination of a compressor transfer function --- turbocompressors induced by rapid opening of a downstream valve
N82-20132
TRANSISTOR LOGIC
Electrical characterization of super Schottky
[AD-A108766] N82-19996
TRANSITION FLOW
Laminar flow transition: A large-eddy simulation approach
[NASA-CR-3518] N82-19499
TRANSITION TEMPERATURE
Free volume theory of diffusion into polymers. Part 1: Method of predicting activation energies of diffusion for gases into elastomers. Part 2: Diffusion of non-ionic dyes into semi-crystalline poly (ethylene terephthalate) films. Part 3: Relationship between glass-transition and dyeing-transition temperatures N82-19372
TRANSMISSION EFFICIENCY
Universal documentation system handbook. Supplement 2: Procedures for the electronic transmission and processing of level 1, 2, and 3 test requirements and support information
[AD-A108901] N82-19251
TRANSMISSION LINES
The response of a two-wire transmission line to incident field and voltage excitation, including the effects of higher order modes
[AD-A108780] N82-19431
A microwave FET oscillator design approach and its application in an injection locked oscillator
[CRC-1347] N82-19472
TRANSMISSIONS (MACHINE ELEMENTS)
Maintenance of hydrostatic transmissions
[DRIC-T-6497] N82-19490
TRANSMISSIVITY
The suitability of mesh membrane material for radiometer reflector applications N82-19270
TRANSONIC COMPRESSORS
Performance of single-stage axial-flow transonic compressor with rotor and stator aspect ratios of 1.63 and 1.78, respectively, and with design pressure ratio of 1.82
[NASA-TP-1974] N82-19222
TRANSONIC FLOW
Strong matching method for computing transonic viscous flows including wakes and separations: Lifting airfoils N82-19155
Transonic perturbation analysis of wing-fuselage-nacelle-pylon configurations with powered jet exhausts
[NASA-CR-165852] N82-19167
RAXJET: A computer program for predicting transonic, axisymmetric flow over nozzle afterbodies with supersonic jet exhausts
[NASA-TM-83235] N82-19175

Computation of transonic potential flow about 3 dimensional inlets, ducts, and bodies
[NASA-CR-3514] N82-19179

Characteristic aerodynamic coefficients at high Reynolds numbers
[AD-A109313] N82-19186

Flutter and time response analyses of three degree of freedom airfoils in transonic flow
[AD-A108987] N82-19227

Finite elements for fluid dynamics. Supercritical design
[AD-A108983] N82-19506

High-speed laser anemometer system for intrarotor flow mapping in turbomachinery
[NASA-TP-1663] N82-19521

TRANSONIC WIND TUNNELS

Induction driven transonic wind tunnel T2: Operation at room temperature and cryogenic adaptation
N82-19158

TRANSPORT AIRCRAFT

Transport aircraft cockpit standardization (Federal Aviation regulations part 25)
[AD-A108924] N82-19207

Simulator study of vortex encounters by a twin-engine, commercial, jet transport airplane
[NASA-TP-1966] N82-19225

TRANSPORTATION ENERGY

Review of the UK transport energy outlook: And policy recommendations
[EP-47] N82-19664

TRANSVERSE WAVES

Influence of velocity shear on the Rayleigh-Taylor instability
[AD-A108800] N82-19504

Large scale dynamics of long flexible cables towed through air
[KTH-AERO-TN-61] N82-19567

TRAVELING WAVES

Antenna (selected articles)
[AD-A108174] N82-19448

Decreasing DG and direction dispersion of main maximum of beam pattern of sectional traveling wave antenna N82-19449

Analysis of the properties of connected vibrator structures N82-19452

Assessment of aircraft capacitive circuit medium wave antennas according to their efficiency
N82-19453

TRENDS

Human Factors in System Development: Experiences and Trends --- conference proceedings
[FOA-A-56003-H9] N82-19839

Human factors for the future: Trends and speculations N82-19845

TRIANGLES

On Pythagorean triangles and coprime lattice points
[MATHS-RES-154] N82-19919

TRIANGULATION

The diagnosis settlement 1980 of the German main triangulation network. Part 2: Trajectories
[SER-B-253-MITT-159-PT-2] N82-19648

TRIBOLOGY

Tribological properties at 25 C of seven polyimide films bonded to 440 C high-temperature stainless steel
[NASA-TP-1944] N82-19373

Selected European Space Tribology Laboratory (ESTL) papers on ball bearings for satellites
[ESA-TRIB-1] N82-19547

TROPICAL METEOROLOGY

Geophysical effects on the length of the sideral day
[BLL-TRANS-1489-(9022.552)] N82-19721

Predictability of the tropical atmosphere
[NASA-TM-83829] N82-19775

TROPICAL REGIONS

The weathering of plastics materials in the tropics. 6: The further evaluation of a solar radiation concentrating device (EMMA) as a means of accelerating the weathering of plastics
[AD-A109385] N82-19376

TROPICAL STORMS

Microwave radiometric observations near 19.35, 92 and 183 GHz of precipitation in tropical storm Cora
[NASA-TM-82164] N82-19779

Monitoring tropical cyclone intensity using wind fields derived from short-interval satellite images
[NASA-TM-82162] N82-19780

Australian tropical cyclones Kerry and Rosa, February - March 1979
[PB82-114182] N82-19794

TROPOSPHERE

The applicability of pressure measurements by radiosondes to calculating the height
[BLL-TRANS-1505-(9022.552)] N82-19755

Monitoring tropical cyclone intensity using wind fields derived from short-interval satellite images
[NASA-TM-82162] N82-19780

The tropospheric gas composition of Jupiter's north equatorial belt (NH3, PH3, CH3D, GeH4, H2O) and the Jovian D/H isotropic ratio
[NASA-TM-83691] N82-20103

TRUCKS

Vehicle test report: Battronic pickup truck
[NASA-CR-168637] N82-19205

Maintenance of hydrostatic transmissions
[DRIC-T-6497] N82-19490

Ward-Leonard characteristics from nonlinearly-controlled series motor drives --- fork lift trucks
[RR-165] N82-20026

TTL INTEGRATED CIRCUITS

Electrical characterization of super Schottky
[AD-A108766] N82-19996

TUNGSTEN ALLOYS

A study of dislocation density and phase elongation as a function of deformation in sintered tungsten composites
[FOA-C-20426-D4] N82-19365

TURBIDITY

LANDSAT imagery of the Venetian Lagoon: A multitemporal analysis
[E82-10036] N82-19612

An aerial survey of water turbidity and laser depth sounding performance along the Queensland Coast
[AD-A109050] N82-19802

TURBINE BLADES

Feasibility study on a low power vertical axis wind-powered generator
[AEL-0039-TR] N82-19681

A pitch control system for large scale wind turbines
[FFA-TN-HU-2262-PT-6] N82-19695

TURBINE ENGINES

Cooled variable-area radial turbine technology program
[NASA-CR-165408] N82-19221

TURBINE EXHAUST NOZZLES

Testing ventilated nozzle models with supersonic primary flow N82-19159

TURBINES

Signal analysis using the maximum entropy method --- aeroelasticity of wind turbines
[VTH-LR-316] N82-19443

TURBOCOMPRESSORS

Theoretical and experimental determination of a compressor transfer function --- turbocompressors induced by rapid opening of a downstream valve
N82-20132

TURBOFAN ENGINES

Aerodynamic noise generated by jet wing/flap interactions of the external USB configuration of STOL aircraft. Part 2: Full scale model experiment using FJR710 turbofan engine
[NAL-TR-687T-PT-2] N82-19945

TURBOGENERATORS

Experience with modified aerospace reliability and quality assurance method for wind turbines
[NASA-TM-82803] N82-19550

TURBOMACHINERY

High-speed laser anemometer system for intrarotor flow mapping in turbomachinery
[NASA-TP-1663] N82-19521

Composite seal for turbomachinery
[NASA-CASE-LEW-12131-3] N82-19540

Microprocessor aided control and signal processing system for a laser-two-focus velocimeter in turbomachinery research
[BMFT-FB-T-81-190] N82-19869

TURBOPROP ENGINES

Evaluation of wind tunnel performance testings of an advanced 45 deg swept 8-bladed propeller at Mach numbers from 0.45 to 0.85
[NASA-CR-3505] N82-19178

TURBULENCE

Effect of location in an array on heat transfer to a cylinder in crossflow
[NASA-TM-82797] N82-19493

Modeling the lowest 1 km of the atmosphere
[AGARD-AG-267] N82-19747

TURBULENCE EFFECTS

Activities report of the Hydraulics Laboratory
N82-19489

TURBULENT BOUNDARY LAYER

Additional results of a study of unsteady airfoil surface pressures and turbulent boundary layers
[AD-A108978] N82-19184

Numerical calculation of steady two-dimensional axi-symmetrical turbulent boundary layer of a compressible fluid N82-19514

A compilation of unsteady turbulent boundary layer experimental data
[AGARD-AG-265] N82-19519

TURBULENT FLOW

Inverse transonic airfoil design methods including boundary layer and viscous interaction effects
[NASA-CR-168579] N82-19168

Radiative heat transfer in turbulent MHD channel flow N82-19487

Investigations of flowfields found in typical combustor geometries
[NASA-CR-168585] N82-19495

Mass and momentum turbulent transport experiments with confined coaxial jets
[NASA-CR-165574] N82-19496

Laminar flow transition: A large-eddy simulation approach
[NASA-CR-3518] N82-19499

Search for large-scale coherent structures in the nearly self-preserving region of a turbulent axisymmetric jet
[AD-A108334] N82-19501

The investigation of the propagation mechanism of pressure fluctuation in turbulent flow
[AD-A108498] N82-19502

Reynolds stress equations modeling in a rotating reference system N82-20136

TURBULENT MIXING

Mass and momentum turbulent transport experiments with confined coaxial jets
[NASA-CR-165574] N82-19496

An investigation of wall pressure fluctuations behind a sudden enlargement of the cross sectional area of a round pipe
[DFVLR-FB-81-35] N82-19510

Experimental determination of temperature/velocity probability density functions in a turbulent flame
N82-20133

TWENTY-FOUR HOUR ORBITS

Analysis of the illumination of areas covered by a satellite in a heliosynchronous circular orbit
[INPE-2208-RPE/398] N82-19872

TWISTED WINGS

A computer program for wing subsonic aerodynamic performance estimates including attainable thrust and vortex lift effects
[NASA-CR-3515] N82-19151

Transonic pressure measurements and comparison of theory to experiment for three arrow-wing configurations
[NASA-CR-3434] N82-19177

TWO DIMENSIONAL FLOW

On the Neumann problem for the pressure in a Navier-Stokes model --- of boundary layer flow
[PUBL-257] N82-19511

TWO FLUID MODELS

Modulational instabilities in astrophysics
N82-20036

TWO PHASE FLOW

Some aspects of two-phase flow, heat transfer and dynamic instabilities in medium and high pressure steam generators N82-20004

TYPEWRITERS

Programmable printing terminal
[INPE-2082-TDL/056] N82-19850

U

UHURU SATELLITE

Evolution of X-ray astronomy --- spaceborne observations of extragalactic X-ray sources
N82-20053

ULLAGE

Study of liquid slosh in the tracking and data relay satellite hydrazine tanks
[NASA-CR-166745] N82-19492

ULTRAHIGH FREQUENCIES
Phase perturbation measurements through a heated ionosphere
[NASA-CR-167550] N82-19406
Variations in propagation attenuation at the frequencies 11, 18 and 36 GHz
[FOA-A-30028-E2] N82-19438

ULTRAVIOLET ASTRONOMY
EXUV. Phase A study. Volume 1: Executive summary --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-1] N82-19292
EXUV. Phase A study. Volume 2A: Satellite system conceptual design --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-2A] N82-19293
EXUV. Phase A study. Volume 2B: Satellite system conceptual design --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-2B] N82-19294
EXUV. Phase A study. Volume 4: Satellite development program --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-4] N82-19296

ULTRAVIOLET LASERS
UV-preionized ArF and KrF excimer lasers
N82-19537

ULTRAVIOLET RADIATION
Solar irradiance retween 120 and 400 mm and its variations --- variations with the Sun's rotation period and activity cycle
[AERONOMICA-ACTA-A-238-1981] N82-19724

ULTRAVIOLET SPECTROMETERS
Atlas of the global distribution of the total ozone concentration according to satellite measurements
[MITT-28] N82-19740

ULTRAVIOLET TELESCOPES
EXUV. Phase A report. Volume 3: Preliminary payload interface specification --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-3] N82-19295

UNDERGROUND STORAGE
Natural repository analogue program
[LA-8743-PR] N82-19970

UNDERWATER ACOUSTICS
Underwater shock analysis of nonlinear structures, a reference manual for the USA-STAGS code, version 3
[AD-A108911] N82-19584

UNDERWATER STRUCTURES
Comments on the doubly asymptotic approxmation. 2: A simple approximation for cutoff velocity --- fluid-structure interaction in cases involving acoustic shock waves impinging on underwater structures
[AD-A108926] N82-19911

UNDERWATER VEHICLES
Underwater shock analysis of nonlinear structures, a reference manual for the USA-STAGS code, version 3
[AD-A108911] N82-19584

UNITED KINGDOM
Review of the UK transport energy outlook: And policy recommendations
[EP-47] N82-19664

UNITED STATES OF AMERICA
AgRISTARS: Interim catalog ground data summary, data acquisition year 1979
[E82-10032] N82-19608
Use of Magsat anomaly data for crustal structure and mineral resources in the US midcontinent
[E82-10049] N82-19624

UNIVERSE
Origin of the large-scale structure of the universe
N82-20049

UNSTEADY FLOW
Additional results of a study of unsteady airfoil surface pressures and turbulent boundary layers
[AD-A108978] N82-19184
A compilation of unsteady turbulent boundary layer experimental data
[AGARD-AG-265] N82-19519
The Shock and Vibration Digest, volume 13, no. 12
[AD-A109583] N82-19562
Vortex shedding from cylinders and the resulting unsteady forces and flow phenomena, part 2
N82-19564

UP-CONVERTERS
Magnetic refrigeration for maser amplifier cooling
N82-20119

UPPER SURFACE BLOWING
Acoustic fatigue endurance test of USB flap structure models at elevated temperature
[NAL-TR-683] N82-19570

URBAN RESEARCH
Resourceful decisions: LANDSAT in Michigan
[E82-10037] N82-19601
Models of projection and localization of urban population using simulation techniques
[INPE-2207-PRE/013] N82-20023

USER MANUALS (COMPUTER PROGRAMS)
Wheat stress indicator model, Crop Condition Assessment Division (CCAD) data base interface driver, user's manual
[E82-10031] N82-19607
AgRISTARS: Early warning and crop condition assessment. Patch image processor user's manual
[E82-10055] N82-19630
User's guide to noise data acquisition and analysis programs for HP9845: Nicolet analyzers
[NASA-TM-83256] N82-19943

USER REQUIREMENTS
NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 1: Executive Summary
[NASA-TM-84149] N82-19170
NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 2: Operators' Views
[NASA-TM-84148] N82-19171
NASA/HAA Advanced Rotorcraft Technology and Tilt Rotor Workshops. Volume 4: Flight Control Avionics Systems and Human Factors
[NASA-TM-84146] N82-19173
Remote sensing procurement package: A management report for state and local governments
[E82-10052] N82-19627
Climate Analysis Center Users Conference
[PB82-113325] N82-19793

UTILITIES
Phosphoric acid fuel cell technology status
[NASA-TM-82791] N82-19670

V

VACUUM CHAMBERS
Temperature distribution in the walls of a cylindrical thermal chamber: Formulation and proposed solution
[INPE-2267-PRE/048] N82-19500
Vacuum lamination of photovoltaic modules
[NASA-CR-168634] N82-19676

VACUUM DEPOSITION
Vacuum lamination of photovoltaic modules
[NASA-CR-168634] N82-19676

VACUUM EFFECTS
Effect of vacuum processing on outgassing within an orbiting molecular shield
[NASA-TP-1980] N82-19390

VALENCE
The attempted syntheses of low oxidation state, organometallic derivatives of aluminum, gallium and indium, a new synthesis Al(CH2SiMe3)3
[AD-A109333] N82-19317

VAN DER WAAL FORCES
Measurement of integral scattering cross sections of hydrogen atom-molecular systems in the subthermal range
[MPIS-5/1981] N82-19967

VAPORIZING
On the disruptive vaporization and burning of emulsified and multicomponent fuel droplets
N82-19354

VARIABLE MASS SYSTEMS
On the control of cocurrent tubular chemical reactors
[RR-160] N82-19352

VARIABLE STARS
Activities report of the Institue for Astronomy and Astrophysics --- stars, interstellar matter, star systems, and X-ray astronomy
[TUB-IAA-MITT-2] N82-20094
Polarization properties of main-line OH maser emission from circumstellar shells of late type variable stars N82-20095

VARIANCE (STATISTICS)
Regional classification of the spectral variance of long European temperature series and its application in a statistical filter model for forecasting in the region north of the alps
[BLL-TRANS-1514-(9022.552)] N82-19752

VARIATIONS
Some characteristics of the variation of air temperature in the northern hemisphere during individual months of the period 1881-1975
[BLL-TRANS-1497-(9022.552)] N82-19761

VECTOR ANALYSIS
Acceleration of convergence of a vector sequence by reduced rank extrapolation
[AD-A108765] N82-19910

VEGETATION
A comparison of unsupervised classification procedures on LANDSAT MSS data for an area of complex surface conditions in Basilicata, Southern Italy
[E82-10038] N82-19613
Method of interpretation of remote sensing data and applications to vegetation
[INPE-2215-MD/010] N82-19640

VELOCITY
Influence of velocity shear on the Rayleigh-Taylor instability
[AD-A108800] N82-19504

VELOCITY DISTRIBUTION
Three-dimensional migration velocity analysis in the space-frequency domain N82-19718
Supernova hydrodynamics N82-20057

VELOCITY MEASUREMENT
Determination of the velocity and the distance of a moving CW source by exploiting the Doppler effect on the reverberation signal --- of the sonar signal
[REPT-6/81] N82-19404
Sea ice movements from synthetic aperture radar
[AD-A109002] N82-19435
Experimental determination of temperature/velocity probability density functions in a turbulent flame
N82-20133

VENUS ATMOSPHERE
Some aspects of the solar radiation incident at the top of the atmospheres of Mercury and Venus
[AERONOMICA-ACTA-A-236-1981] N82-19722

VERMONT
Water resources data for New Hampshire and Vermont, water year 1980
[PB82-110156] N82-19658

VERTICAL AIR CURRENTS
A study on the development of intermediate scale disturbances with a model of primitive equations of high vertical resolution
[INPE-2232-TDL/063] N82-19773

VERTICAL MOTION
Transmission of sinusoidally changing vertical specific force to the heads of seated men measured in a flight simulator
[VTH-LR-319] N82-19847

VERTICAL ORIENTATION
Turbulence within cumulus clouds and outside them
[BLL-TRANS-1481-(9022.552)] N82-19762

VERTICAL TAKEOFF
A study of flight control requirements for advanced, winged, earth-to-orbit vehicles with far-aft center-of-gravity locations
[NASA-CR-3491] N82-19226

VERY HIGH FREQUENCY RADIO EQUIPMENT
FM broadcast interference related to airborne ILS, VOR and VHF communications
[RTCA/DO-176] N82-19419
Investigation of the effects of airborne installation factors on receiver interference N82-19422

VERY LONG BASE INTERFEROMETRY
Extragalactic radio sources --- observation of narrow features (jets) in galactic structure N82-20051

VESTIBULES
Measurements of vestibular function N82-19826

VHF OMNIRANGE NAVIGATION
FM broadcast interference related to airborne ILS, VOR and VHF communications
[RTCA/DO-176] N82-19419
Investigation of technical requirements
N82-19420
Investigation of airborne VHF communication and navigation equipment N82-19421

VIBRATION

The Shock and vibration Digest, volume 13, no. 5 [AD-A099477] N82-19555

Chain and belt drives, a review N82-19556

Response of nonlinear mechanical systems to random excitation. Part 2: Equivalent linearization and other methods N82-19557

VIBRATION DAMPING

The Shock and Vibration Digest, volume 13, no. 1 [AD-A095594] N82-19558

Vibration control with viscoelastic materials, 2 N82-19560

VIBRATION ISOLATORS

The suspension system of the cryogenic gravitational antenna of the Istituto Plasma Spazio [IPS-81-14] N82-19549

VIBRATION MEASUREMENT

Analysis of the properties of connected vibrator structures N82-19452

Input impedance of system made of intersecting low-set vibrators N82-19460

Structural system identification technology verification [AD-A109181] N82-19583

VIBRATION METERS

Market analysis of seismic security systems [NASA-CR-168612] N82-19397

VIBRATION MODE

A subspace iteration algorithm for spinning structure vibration mode computation N82-19157

VIBRATION PERCEPTION

Transmission of sinusoidally changing vertical specific force to the heads of seated men measured in a flight simulator [VTH-LR-319] N82-19847

VIBRATION SIMULATORS

Dynamic analysis and modeling of electrodynamic vibration test facilities applied to the AIBG 160 kN system N82-19310

La Recherche Aerospatiale, Bi-monthly Bulletin number 1981-4, July - August 1981 --- aerospace R and D [ESA-TT-722] N82-20131

Simulation using computer-piloted point excitations of vibrations induced on a structure by an acoustic environment N82-20135

VIBRATION TESTS

Recent advances in space structure design-verification techniques --- conference proceedings [ESA-SP-1036] N82-19308

Methodology of uniaxial transient vibration tests for satellites N82-19311

Achievements in multi-axes testing using servohydraulic vibration system N82-19312

Definition study on multishakers for vibration testing --- Ariane payloads [SOPEMEA-ET-17004] N82-19526

The Shock and vibration Digest, volume 13, no. 5 [AD-A099477] N82-19555

VIDEO EQUIPMENT

Review of health and safety aspects of video display terminals [CRC-TN-712-E] N82-19816

VINYL POLYMERS

Morphology of the polystyrene/poly(vinyl methyl ether) blend as studied by excimer fluorescence [AD-A109143] N82-19378

VIRGINIA

Water resources data for Virginia, water year 1980 [PB82-113416] N82-19659

VISCOELASTIC DAMPING

Vibration control with viscoelastic materials, 2 N82-19560

VISCOELASTICITY

Vibration control with viscoelastic materials, 2 N82-19560

VISCOPLASTICITY

Time dependent inelastic behavior of materials [AD-A109089] N82-19585

VISCOSITY

Laboratory evaluation of multiviscosity-grade engine oils in US Army diesel engines [AD-A108890] N82-19375

VISCOUS FLOW

Strong matching method for computing transonic viscous flows including wakes and separations: Lifting airfoils N82-19155

Numerical study of incompressible slightly viscous flow past blunt bodies and airfoils N82-19163

Inverse transonic airfoil design methods including boundary layer and viscous interaction effects [NASA-CR-168579] N82-19168

RAXJET: A computer program for predicting transonic, axisymmetric flow over nozzle afterbodies with supersonic jet exhausts [NASA-TM-83235] N82-19175

On the Neumann problem for the pressure in a Navier-Stokes model --- of boundary layer flow [PUBL-257] N82-19511

VISIBILITY

Methodology for the use of (foreign) synoptic messages in the generalization of climatological information (derivation of climatic parameters) [BLL-TRANS-1506-(9022.552)] N82-19757

The visible detection of aerial targets as a function of environmental, target and observation parameters for surface to air or air to air observations [BMVG-FBWT-81-12] N82-19983

VISIBLE INFRARED SPIN SCAN RADIOMETER

Assessment of the first radiances received from the VSSR Atmospheric Sounder (VAS) instrument [NASA-TM-83827] N82-19730

VISUAL FLIGHT

The effect of visual information on the manual approach and landing [NLR-TR-80055-U] N82-19836

VISUAL PERCEPTION

The effect of visual information on the manual approach and landing [NLR-TR-80055-U] N82-19836

VLASOV EQUATIONS

A numerical method for solving the Vlasov equation [NASA-TM-81339] N82-19985

VOICE COMMUNICATION

Spectrum saving speech transmission for land mobile radio. A study on single sideband transmission in 5 kHz channels for 2 and 4 m bandwidths [BMFT-FB-T-81-173] N82-19442

The feasibility of miniaturizing the versatile portable speech prosthesis: A market survey of commercial products [NASA-CR-168611] N82-19838

VOID RATIO

Some aspects of two-phase flow, heat transfer and dynamic instabilities in medium and high pressure steam generators N82-20004

VOLUME

Spring and Fall measurements of European very low altitude volume scattering coefficients [AD-A108879] N82-19787

VORTEX FILAMENTS

A vortex-filament and core model for wings with edge vortex separation [NASA-CR-165847] N82-19166

VORTEX GENERATORS

Experimental study of delta wing leading-edge devices for drag reduction at high lift [NASA-CR-165846] N82-19165

VORTEX SHEDDING

The Shock and Vibration Digest, volume 13, no. 12 [AD-A109563] N82-19562

Vortex shedding from cylinders and the resulting unsteady forces and flow phenomena, part 2 N82-19564

VORTEX SHEETS

Rolling up of vortex sheets from the edges of lifting surfaces N82-19153

VORTICES

Simulator study of vortex encounters by a twin-engine, commercial, jet transport airplane [NASA-TP-1966] N82-19225

VOYAGER PROJECT

Evidence for solar wind control of Saturn radio emission [NASA-TM-83889] N82-20104

VOYAGER 1 SPACECRAFT

The Voyager 1 Saturn encounter and the cosmogonic shadow effect N82-20032

Plasma dynamics in the rapidly rotating magnetosphere of Jupiter --- Voyager observations N82-20045

Magnetic field measurements at Jupiter by Voyagers 1 and 2: Daily plots of 48 second averages [NASA-TM-83864] N82-20105

VOYAGER 2 SPACECRAFT

Inferences about the solar wind dynamics from observed distributions of electrons and ions --- Voyager and Helios observations N82-20046

NASA Facts: Images of Saturn from Voyager 2 [NASA-NF-132/10-81] N82-20102

Magnetic field measurements at Jupiter by Voyagers 1 and 2: Daily plots of 48 second averages [NASA-TM-83864] N82-20105

W

WAKES

Strong matching method for computing transonic viscous flows including wakes and separations: Lifting airfoils N82-19155

Some observations of surface pressures and the near wake of a blunt trailing edge airfoil [NASA-CR-168563] N82-19174

WALL PRESSURE

The pressure signature method for blockage corrections, and its applications to the industrial wind tunnel [BU-263] N82-19231

An investigation of wall pressure fluctuations behind a sudden enlargement of the cross sectional area of a round pipe [DFVLR-FB-81-35] N82-19510

WALL TEMPERATURE

Temperature distribution in the walls of a cylindrical thermal chamber: Formulation and proposed solution [INPE-2267-PRE/048] N82-19500

WASTE DISPOSAL

Small scale reclamation/disposal of toxic porcelain enameling waste sludges [PB82-101593] N82-19710

Natural repository analogue program [LA-8743-PR] N82-19970

WASTE TREATMENT

Literature study of the biodegradability of chemicals in water. Volume 1: Biodegradability prediction, advances in chemical interferences with wastewater treatment [PB82-100843] N82-19711

Literature study of the biodegradability of chemicals in water. Volume 2: Permutated index of chemicals, microbial populations, and wastewater treatment systems with bibliography [PB82-100850] N82-19712

WASTE UTILIZATION

Impediments to energy and materials recovery facilities for municipal solid waste [PB82-102302] N82-19383

Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, volume 1 [PB82-100868] N82-19384

Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, appendices A, B, C and D, volume 2 [PB82-100876] N82-19385

WASTE WATER

An inexpensive biologic method of upgrading Lagoon effluent, phase 1: Small business innovative research program [PB82-101072] N82-19713

WATER

The effect of finite field size on classification and atmospheric correction [NASA-TM-83818] N82-19645

WATER BALANCE

Measurements of intra and extracellular water spaces and electrolyte concentrations in human skeletal muscle N82-19829

WATER FLOW

Improved St. Clair River dynamics flow models and comparison analysis [PB82-119272] N82-19657

WATER HEATING

Energy conservation in the production of domestic hot water [EP-48] N82-19665

WATER IMMERSION

Corrosion of carbon steel at high temperature in reducing chemical conditions [CISE-1699] N82-19366

WATER LOSS

Analysis of evaporative water loss in the Skylab astronauts
[NASA-CR-167462] N82-19814

WATER MANAGEMENT

Model choice: An operational comparison of stochastic streamflow models for droughts
N82-19602

Operational water quality management: Beyond planning and design
[ER-7] N82-19702

WATER POLLUTION

LANDSAT imagery of the Venetian Lagoon: A multitemporal analysis
[E82-10036] N82-19612

Operational water quality management: Beyond planning and design
[ER-7] N82-19702

Water pollution from highways and urban areas: An annotated bibliography (supplement)
[PB82-113317] N82-19714

WATER PRESSURE

Agricultural soil moisture experiment, Colby, Kansas 1978: Measured and predicted hydrological properties of the soil
[E82-10057] N82-19632

WATER QUALITY

Inorganic analyses in water quality control programs: Instructor's guide
[PB82-111378] N82-19353

Water resources data for New Hampshire and Vermont, water year 1980
[PB82-110156] N82-19658

Water resources data for Pennsylvania, water year 1980: Volume 2: Susquehanna and Potomac River Basins
[PB82-115908] N82-19662

Operational water quality management: Beyond planning and design
[ER-7] N82-19702

WATER RECLAMATION

Preliminary study on the supply of industrial water by advanced treatment of waste water discharged from a sewage treatment plant
[BMFT-FB-T-81-205] N82-19709

WATER RESOURCES

Model choice: An operational comparison of stochastic streamflow models for droughts
N82-19602

Case studies of national hydrological data banks (planning, development and organization)
[WMO-576] N82-19655

Water resources data for New Hampshire and Vermont, water year 1980
[PB82-110156] N82-19658

Water resources data for Virginia, water year 1980
[PB82-113416] N82-19659

Water resources data for Pennsylvania, water year 1980: Volume 2: Susquehanna and Potomac River Basins
[PB82-115908] N82-19662

WATER TREATMENT

Preliminary study on the supply of industrial water by advanced treatment of waste water discharged from a sewage treatment plant
[BMFT-FB-T-81-205] N82-19709

Literature study of the biodegradability of chemicals in water. Volume 2: Permutated index of chemicals, microbial populations, and wastewater treatment systems with bibliography
[PB82-100850] N82-19712

An inexpensive biologic method of upgrading Lagoon effluent, phase 1: Small business innovative research program
[PB82-101072] N82-19713

WATER VAPOR

Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data
[INPE-2229-PRE/021] N82-19704

Studies of the energy and the flux of water vapor in the atmosphere over northeastern Brazil
[INPE-2266-TDL/068] N82-19777

WATER WAVES

Prediction of surf zone characteristics
[AD-A108759] N82-19804

WAVE ATTENUATION

The problem of precipitation measurement by attenuation of radio waves
[BLL-TRANS-1475-(9022.549)] N82-19766

WAVE DISPERSION

On the possibility of existence of large amplitude waves around pulsars N82-20059

WAVE EXCITATION

Characterization of low intensity X-ray imaging devices (Lixiscope)
[NASA-CR-168584] N82-19972

WAVE FRONTS

Phase perturbation measurements through a heated ionosphere
[NASA-CR-167550] N82-19406

Wave spectra of a shoaling wave field: A comparison of experimental and simulated results
[NASA-TM-83211] N82-19800

WAVE INTERACTION

Wave spectra of a shoaling wave field: A comparison of experimental and simulated results
[NASA-TM-83211] N82-19800

WAVE PROPAGATION

Modeling of the influence of static acceleration on surface wave (quartz) oscillator
[ESA-TT-726] N82-19444

Analysis of the properties of connected vibrator structures N82-19452

Wave propagation problems in certain elastic anisotropic half spaces N82-19454

Free-wave propagation in fluid-loaded thick-walled circular pipes
[AMTE-N-TM-81903] N82-19491

Special applications of irreversible thermodynamics N82-20001

On the possibility of existence of large amplitude waves around pulsars N82-20059

WAVE SCATTERING

Antenna (selected articles)
[AD-A109174] N82-19455

Scattering of a spherical wave on truncated revolution bodies N82-19456

Modeling beam patterns of linear antennas
N82-19458

WAVEFORMS

Prediction of surf zone characteristics
[AD-A108759] N82-19804

WAVEGUIDE ANTENNAS

Antenna (selected articles)
[AD-A108175] N82-19416

Coordination of a linear phase array of waveguide radiators with wide-angle scanning in the E plane
N82-19417

WAVEGUIDES

Antenna (selected articles)
[AD-A108204] N82-19413

Simultaneous compensation of direct and reverse interconnection in an infinite emitter array
N82-19415

Y-circulator with dielectric filler
[AD-A109175] N82-19475

WEAPON SYSTEMS

Proceedings of the 3rd Meeting of the Coordinating Group on Modern Control Theory, part 1
[AD-A109124] N82-19896

WEAPONS DEVELOPMENT

Computational aerodynamics at weapons systems reseearch laboratory
[WSRL-0236-TM] N82-19176

WEAR

Tribological properties at 25 C of seven polyimide films bonded to 440 C high-temperature stainless steel
[NASA-TP-1944] N82-19373

Surface chemistry and wear behavior of single-crystal silicon carbide sliding against iron at temperatures to 1500 C in vacuum
[NASA-TP-1947] N82-19374

Braking force coefficients of worn tyres
[PB82-122698] N82-20028

WEAR INHIBITORS

Composite seal for turbomachinery
[NASA-CASE-LEW-12131-3] N82-19540

WEATHER

Preliminary evaluation of spectral, normal and meteorological crop stage estimation approaches
[E82-10059] N82-19634

WEATHER FORECASTING

The computation of the ground surface temperature for simulation of the general atmospheric circulation
[BLL-TRANS-1521-(9022.552)] N82-19751

A new meteorological code for 1 January 1982
[BLL-TRANS-1510-(9022.552)] N82-19758

The use of weather radar in the civil aviation weather service
[BLL-TRANS-1456-(9022.552)] N82-19763

Optimum employment of satellite indirect soundings as numerical model input
[NASA-CR-168509] N82-19768

A case study of height and temperature analyses derived from Nimbus-6 satellite soundings
N82-19769

Evaluation of TIROS-N and NOAA-6 satellite data: Comparisons of colocated soundings and analyses for a January case N82-19770

A numerical evaluation of TIROS-N and NOAA-6 analyses in a high resolution limited area model
N82-19771

Forecasts of precipitation in the Northeast of Brazil: Dynamic aspects
[INPE-2244-PRE/029] N82-19772

SCPP forecasting support
[PB82-123167] N82-19797

WEATHER MODIFICATION

SCPP forecasting support
[PB82-123167] N82-19797

WEATHER STATIONS

A new meteorological code for 1 January 1982
[BLL-TRANS-1510-(9022.552)] N82-19758

WEATHERING

The weathering of plastics materials in the tropics. 6: The further evaluation of a solar radiation concentrating device (EMMA) as a means of accelerating the weathering of plastics
[AD-A109385] N82-19376

WEIBEL INSTABILITY

On the possibility of existence of large amplitude waves around pulsars N82-20059

WEIGHTING FUNCTIONS

Stochastic convergence of randomly weighted sums N82-19901

Noise measurements on the helicopter BK 117 design. Weighted noise levels and influence of airspeed
[DFVLR-MITT-81-18] N82-19957

WEIGHTLESSNESS

Conception of an apparatus for pressure, density, and temperature measurements in the critical region of pure fluids in Spacelab
[BMFT-FB-W-81-026] N82-19527

Human cardiovascular adaptation to zero gravity --- symposium proceedings, Copenhagen, 20-21 Apr. 1981
[ESA-SP-1033] N82-19817

Current views and future programs in cardiovascular physiology in space --- plethysmography
N82-19818

Adaptation to zero gravity as simulated by head-down tilt N82-19819

Clinical physiology of the renin-angiotensin-aldosterone system N82-19820

Volume regulating hormones and their role in the cardiovascular adaptation to zero gravity
N82-19822

Cerebral hemodynamics at zero gravity
N82-19827

WEIGHTLESSNESS SIMULATION

Adaptation to zero gravity as simulated by head-down tilt N82-19819

WELD STRENGTH

Durability of adhesive bonded structures subjected to acoustic loads
[AGARD-R-701] N82-19600

WELD TESTS

Durability of adhesive bonded structures subjected to acoustic loads
[AGARD-R-701] N82-19600

WELDED JOINTS

The numerical simulation of crack growth in weld-induced residual stress fields
[AD-A109321] N82-19577

WELDING MACHINES

Tube to tubesheet welding by electron beam for heat exchanger application
[IKE-1-11] N82-19546

WELLS

Water resources data for Pennsylvania, water year 1980: Volume 2: Susquehanna and Potomac River Basins
[PB82-115908] N82-19662

WETLANDS

Application of remote sensing to state and regional problems --- mississippi
[E82-10033] N82-19609

Analysis of methodologies used for the assessment of wetlands values: Appendices C-E
[PB82-110362] N82-19807

WHEAT

Wheat stress indicator model, Crop Condition Assessment Division (CCAD) data base interface driver, user's manual
[E82-10031] N82-19607

Recommended data sets, corn segments and spring wheat segments, for use in program development
[E82-10034] N82-19610

AgRISTARS: Foreign commodity production forecasting. Minutes of the annual formal project manager's review, including preliminary technical review reports of FY80 experiments --- wheat/barley and corn/soybean experiments
[E82-10039] N82-19614

Preliminary evaluation of spectral, normal and meteorological crop stage estimation approaches
[E82-10059] N82-19634

Utilization of Aerochrome 2443 film for identification and estimating wheat growing areas --- Rio Grande do Sul, Brazil
[INPE-2197-PRE/006] N82-19639

WHEEL BRAKES

Braking force coefficients of worn tyres
[PB82-122698] N82-20028

WICKS

High performance Variable Conductance Heat Pipe (VCHP) follow-on development: Phase 2
[SABCA-JPM/LN/HO5/NO144-VOL-1] N82-19508

WIND (METEOROLOGY)

Signal analysis using the maximum entropy method --- aeroelasticity of wind turbines
[VTH-LR-316] N82-19443

A survey of atmospheric turbulence characteristics
[AD-A109306] N82-19738

Convergence zones in the South Atlantic and their influence on the precipitation regime in Northeastern Brazil
[INPE-2307-TDL/074] N82-19778

WIND DIRECTION

Monte Carlo studies of ocean wind vector measurements by SCATT: Objective criteria and maximum likelihood estimates for removal of aliases, and effects of cell size on accuracy of vector winds
[NASA-CR-165837-1] N82-19799

WIND MEASUREMENT

Monitoring tropical cyclone intensity using wind fields derived from short-interval satellite images
[NASA-TM-82162] N82-19780

Report on the analysis of data from the NOAA/Alaskan MST radar system
[AD-A109056] N82-19782

Aircraft measurements of the frequency of turbulence encounters in Australia. A review and assessment
[AD-A108923] N82-19785

Coastal upwelling ecosystems analysis. Atlas of the JOINT I aircraft winds for the 500 foot level
[PB82-114703] N82-19796

Monte Carlo studies of ocean wind vector measurements by SCATT: Objective criteria and maximum likelihood estimates for removal of aliases, and effects of cell size on accuracy of vector winds
[NASA-CR-165837-1] N82-19799

WIND PROFILES

Studies of the stratospheric and mesospheric wind system and temperature distribution from observations of infrasonic waves generated during regular Concorde flights
[KGI-176] N82-19789

Coastal upwelling ecosystems analysis. Atlas of the JOINT I aircraft winds for the 500 foot level
[PB82-114703] N82-19796

WIND TUNNEL CALIBRATION

The pressure signature method for blockage corrections, and its applications to the industrial wind tunnel
[BU-263] N82-19231

WIND TUNNEL MODELS

Effects of installation of F101 DFE exhaust nozzles on the afterbody-nozzle characteristics of the F-14 airplane
[NASA-TM-83250] N82-19181

The unsteady aerodynamics of certain bluff shapes --- wind tunnel measurement
[BU-264] N82-19192

On the design of missile models for static force measurements in wind tunnels --- aided by computer programming
[DFVLR-MITT-81-21] N82-19297

The measurements of the static and dynamic stability derivatives of conical models in the shock tunnel
N82-19516

WIND TUNNEL STABILITY TESTS

The unsteady aerodynamics of certain bluff shapes --- wind tunnel measurement
[BU-264] N82-19192

WIND TUNNEL TESTS

Spanwise loading distribution and wake velocity surveys of a semi-span wing
[NASA-TM-84213] N82-19164

Application of an airfoil stall flutter computer prediction program to a three-dimensional wing: Prediction versus experiment
[NASA-CR-168586] N82-19169

Evaluation of wind tunnel performance testings of an advanced 45 deg swept 8-bladed propeller at Mach numbers from 0.45 to 0.85
[NASA-CR-3505] N82-19178

Effects of installation of F101 DFE exhaust nozzles on the afterbody-nozzle characteristics of the F-14 airplane
[NASA-TM-83250] N82-19181

On the design of some airfoils for sailplane application --- additions to existing wings for inflight testing
[VTH-LR-326] N82-19213

An experimental study of the effect of tail configuration on the spinning characteristics of general aviation aircraft --- static wind tunnel force measurements
[NASA-CR-168578] N82-19224

A study of flight control requirements for advanced, winged, earth-to-orbit vehicles with far-aft center-of-gravity locations
[NASA-CR-3491] N82-19226

WIND TUNNEL WALLS

The pressure signature method for blockage corrections, and its applications to the industrial wind tunnel
[BU-263] N82-19231

WIND TURBINES

Feasibility study on a low power vertical axis wind-powered generator
[AEL-0039-TR] N82-19681

Turbulence statistics for design of wind turbine generators
[PB82-112939] N82-19792

WIND VELOCITY

Maximum wind speeds in the North Pacific (with special reference to OWS P, N and V)
[BLL-TRANS-1495-(9022.552)] N82-19749

Turbulence statistics for design of wind turbine generators
[PB82-112939] N82-19792

Coastal upwelling ecosystems analysis. Atlas of the JOINT I aircraft winds for the 500 foot level
[PB82-114703] N82-19796

Monte Carlo studies of ocean wind vector measurements by SCATT: Objective criteria and maximum likelihood estimates for removal of aliases, and effects of cell size on accuracy of vector winds
[NASA-CR-165837-1] N82-19799

WIND VELOCITY MEASUREMENT

Satellite scatterometer feasibility study. Volume 2: Data extraction algorithm and error simulation for wind sensor --- Earth Resources Satellite (ERS 1)
[ESA-CR(P)-1492-VOL-2] N82-19651

WINDPOWER UTILIZATION

Feasibility study on a low power vertical axis wind-powered generator
[AEL-0039-TR] N82-19681

WINDPOWERED GENERATORS

Experience with modified aerospace reliability and quality assurance method for wind turbines
[NASA-TM-82803] N82-19550

Feasibility study on a low power vertical axis wind-powered generator
[AEL-0039-TR] N82-19681

A pitch control system for large scale wind turbines
[FFA-TN-HU-2262-PT-6] N82-19695

Turbulence statistics for design of wind turbine generators
[PB82-112939] N82-19792

WING FLAPS

Aerodynamic noise generated by jet wing/flap interactions of the external USB configuration of STOL aircraft. Part 2: Full scale model experiment using FJR710 turbofan engine
[NAL-TR-687T-PT-2] N82-19945

WING LOADING

Spanwise loading distribution and wake velocity surveys of a semi-span wing
[NASA-TM-84213] N82-19164

Transonic pressure measurements and comparison of theory to experiment for three arrow-wing configurations
[NASA-CR-3434] N82-19177

WING NACELLE CONFIGURATIONS

Transonic perturbation analysis of wing-fuselage-nacelle-pylon configurations with powered jet exhausts
[NASA-CR-165852] N82-19167

WING PANELS

Design and function of an experimental wing box using carbon fiber reinforced epoxy VATLIT-C'85
[VTH-LR-318] N82-19325

WING SLOTS

Experimental study of delta wing leading-edge devices for drag reduction at high lift
[NASA-CR-165846] N82-19165

WING SPAN

Spanwise loading distribution and wake velocity surveys of a semi-span wing
[NASA-TM-84213] N82-19164

WING TIPS

On the design of some airfoils for sailplane application --- additions to existing wings for inflight testing
[VTH-LR-326] N82-19213

WINGS

The structural behaviour of inflated cylindrical cantilever beams --- under load
[BU-260] N82-19597

WINTER

Classification of the fields of anomaly in monthly water temperature of the North Atlantic during the cold half-year
[BLL-TRANS-1509-(9022.552)] N82-19756

WOOD

The science and engineering of materials
[INPE-2138-RPE/361] N82-19316

WORDS (LANGUAGE)

Metaphor: An inescapable phenomenon in natural language comprehension
[AD-A109026] N82-19880

WORK

Work paradigms in human factors research
N82-19844

X

X RAY ANALYSIS

Catoptric X-ray optical system for use in laser-fusion diagnostics
[AD-A109037] N82-19532

X RAY ASTRONOMY

EXUV. Phase A study. Volume 1: Executive summary --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-1] N82-19292

EXUV. Phase A study. Volume 2A: Satellite system conceptual design --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-2A] N82-19293

EXUV. Phase A study. Volume 2B: Satellite system conceptual design --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-2B] N82-19294

EXUV. Phase A study. Volume 4: Satellite development program --- extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-4] N82-19296

Evolution of X-ray astronomy --- spaceborne observations of extragalactic X-ray sources
N82-20053

Diagnosis of the neutron star and its environment with X-ray astronomy N82-20054

Activities report of the Institute for Astronomy and Astrophysics — stars, star systems and X-ray astronomy
[TUB-IAA-MITT-1] N82-20093
Activities report of the Institue for Astronomy and Astrophysics — stars, interstellar matter, star systems, and X-ray astronomy
[TUB-IAA-MITT-2] N82-20094

X RAY FLUORESCENCE
The differential emission measure of dynamic coronal loops
[NASA-CR-168638] N82-20087

X RAY IMAGERY
Characterization of low intensity X-ray imaging devices (Lixiscope)
[NASA-CR-168584] N82-19972

X RAY INSPECTION
Improvement of the X-ray procedure for the detection of defective adhesions in fiber composites by adding contrast substances to the adhesives
[BMVG-FBWT-81-11] N82-19324

X RAY SOURCES
Diagnosis of the neutron star and its environment with X-ray astronomy N82-20054
Observable properties of accretion disks — X-ray astronomy N82-20063
Data announcement bulletin: The Ariel V SSI 3A X-ray Catalogue
[NASA-TM-84029] N82-20089
HEAO 1 measurements of the galactic ridge
[NASA-TM-83844] N82-20097
Accretion disk coronae
[NASA-TM-83840] N82-20106

X RAY SPECTRA
Characterization of low intensity X-ray imaging devices (Lixiscope)
[NASA-CR-168584] N82-19972
Spectral and temporal behavior of the X-ray binary stars Cgy X-1 in the hard X-ray domain
[MPI-PAE/EXTRATERR-166] N82-20091

X RAY TELESCOPES
EXUV. Phase A report. Volume 3: Preliminary payload interface specification — extreme UV/soft X-ray survey mission (EXUV)
[REPT-44/69/JS/CB-VOL-3] N82-19295

X RAYS
Radiation and temperature tests of cadmium telluride detectors
[AD-A108774] N82-19522

Y

YAG LASERS
Laser journal (selected articles)
[AD-A108173] N82-19535
Nd:YAG pulsed laser output at 1.064, 1.073, 1.061 and 1.052 micrometers singlet spectral lines
N82-19538

YAGI ANTENNAS
Design for the installation of a system of antennas for stratospheric balloon mobile tracking stations
[INPE-2306-PRE/073] N82-19424

YIELD
AgRISTARS: Yield model development/soil moisture. Interface control document
[E82-10054] N82-19629

YIELD STRENGTH
An improved scheme to develop multidimensional generalized yield and failure surfaces for structural elements
[LA-8728-MS] N82-19569
A nonlinear finite element analysis of rapid crack growth at large scale yielding
[TRITA-HFL-0027] N82-19594

Z

ZINC
Mechanism and models for zinc metal morphology in alkaline media
[NASA-TM-82768] N82-19671

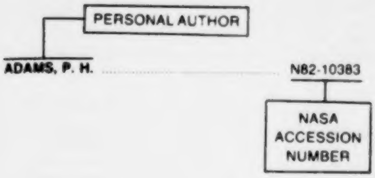
ZINC COATINGS
Galvanic charging in air and space flight
[MBB-BB-465-O] N82-19478

ZINC OXIDES
Configurational effects in the adsorption of HD on ZnO
[AD-A109368] N82-19341

ZONAL HARMONICS
Study on the extension of the stroboscopic method to the second order — orbit calculation
[ESA-CR(P)-1488] N82-19886

PERSONAL AUTHOR INDEX

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The NASA accession number denotes the number by which the citation is identified.

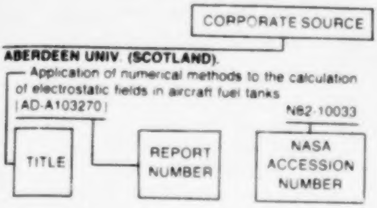
CORPORATE SOURCE INDEX

Typical Corporate Source Index Listing



ABERDEEN UNIV. (SCOTLAND).
Application of numerical methods to the calculation of electrostatic fields in aircraft fuel tanks
[AD-A103270] N82-10033

Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The NASA accession number denotes the number by which the citation is identified. The titles are arranged under each corporate source in ascending accession number order.

A

ACADEMIA SINICA, PEKING (CHINA).
Identification of the discontinuities at the magnetopause N82-20083
A plasma current sheet studied by means of the particle motion N82-20084
The analytical trajectory of the charged particle moving in a neutral sheet magnetic field N82-20085

ACADEMY OF SCIENCES (USSR), MOSCOW.
Plasma emission mechanisms and acceleration of relativistic particles in cosmic plasmas N82-20038
Weak turbulence theory of enhanced gas ionization by plasma flow N82-20039
Origin of the large-scale structure of the universe N82-20049

ADMIRALTY MARINE TECHNOLOGY ESTABLISHMENT, TEDDINGTON (ENGLAND).
Free-wave propagation in fluid-loaded thick-walled circular pipes
[AMTE-N-TM-81903] N82-19491

ADVANCED ENGINEERING LAB., SALISBURY (AUSTRALIA).
Feasibility study on a low power vertical axis wind-powered generator
[AEL-0039-TR] N82-19661

ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT, NEUILLY-SUR-SEINE (FRANCE).
The significance of defects on the failure of fibre composites
[AGARD-R-690] N82-19328
A compilation of unsteady turbulent boundary layer experimental data
[AGARD-AG-265] N82 19519
Practical applications of fracture mechanics
[AGARD-AG-257] N82-19571
Durability of adhesive bonded structures subjected to acoustic loads
[AGARD-R-701] N82-19600
Modeling the lowest 1 km of the atmosphere
[AGARD-AG-267] N82-19747

AERITALIA S.P.A., NAPLES (ITALY).
Guidelines for the design of inherently quiet airloops for manned spacecraft
[ACUN-8006] N82-19954

AERONAUTICAL RESEARCH INST. OF SWEDEN, STOCKHOLM.
BASIS-CRACK: An evaluation of performance
[FFA-TN-HU-2171] N82-19590
A computer program for cycle-by-cycle crack growth computation
[FFA-TN-HU-2048] N82-19598
Fatigue performance and fastener flexibility for single shear aluminum joint with different splice plates
[FFA-TN-HU-2165] N82-19599
A pitch control system for large scale wind turbines
[FFA-TN-HU-2262-PT-6] N82-19695

AERONAUTICAL RESEARCH LABS., MELBOURNE (AUSTRALIA).
Aeronautical Research Laboratories Structures Division
[AD-A109049] N82-19161
High speed aerodynamic characteristics of the GAFOPH aerofoil
[AD-A108922] N82-19183
Disengagement of safety harness buckles - CT4
[AD-A109048] N82-19199
Accession of titanium as an aircraft material: A current view
[ARL/MAT-NOTE-129] N82-19361
Ground station digital interface
[ARL/MECH-ENG-REPT-158] N82-19401
Aircraft measurements of the frequency of turbulence encounters in Australia. A review and assessment
[AD-A108923] N82-19785
PRINTR: A text and graph plotting system with expanded capabilities
[AD-A109045] N82-19659

AGRICULTURAL RESEARCH SERVICE, WESLACO, TEX.
Methods of editing cloud and atmospheric layer affected pixels from satellite data
[E82-10046] N82-19621

AIR FORCE GEOPHYSICS LAB., HANSCOM AFB, MASS.
Specification of cloud amount over local areas from GOES visual imagery
[AD-A109325] N82-19786

AIR FORCE SYSTEMS COMMAND, WRIGHT-PATTERSON AFB, OHIO.
Characteristic aerodynamic coefficients at high Reynolds numbers
[AD-A109313] N82-19186
Calculation of supersonic three-dimensional flow about blunt-nosed bodies
[AD-A108808] N82-19187
Antenna (selected articles)
[AD-A108204] N82-19413
Compensation for direct and reverse interconnection in an infinite emitter array N82-19414
Simultaneous compensation of direct and reverse interconnection in an infinite emitter array N82-19415
Antenna (selected articles)
[AD-A108175] N82-19416
Coordination of a linear phase array of waveguide radiators with wide-angle scanning in the E plane N82-19417
Calculation of the radiation characteristics of highly directional arc antennas N82-19418
Antenna (selected articles)
[AD-A108174] N82-19448
Decreasing DG and direction dispersion of main maximum of beam pattern of sectional traveling wave antenna N82-19449
Statistics of the field of focused systems N82-19450
Efficiency and input impedance of planar emitter placed near the interface N82-19451
Analysis of the properties of connected vibrator structures N82-19452
Assessment of aircraft capacitive circuit medium wave antennas according to their efficiency N82-19453
Antenna (selected articles)
[AD-A109174] N82-19455
Scattering of a spherical wave on truncated revolution bodies N82-19456
Broad-directional lens antennas made of an inhomogeneous dielectric N82-19457
Modeling beam patterns of linear antennas N82-19458
Compensation for systematic weight deformations of mirror system of parabolic radio telescopes N82-19459
Input impedance of system made of intersecting low-set vibrators N82-19460
Y-circulator with dielectric filler
[AD-A109175] N82-19475
Evaluation of parameters of the oscillatory motion of digital servo system in a steady-state mode
[AD-A109314] N82-19476
Acta Mechanica Sinica (selected articles)
[AD-A108208] N82-19513
Numerical calculation of steady two-dimensional axi-symmetrical turbulent boundary layer of a compressible fluid N82-19514
Laminar heat transfer with mass injection and chemical reaction N82-19515
The measurements of the static and dynamic stability derivatives of conical models in the shock tunnel N82-19516
Least squares finite element analysis of steady high subsonic plane potential flows N82-19517
The aerodynamical analysis of body in hypersonic source flow field N82-19518
Laser journal (selected articles)
[AD-A108173] N82-19535
Properties of steady discharge in Ar-Kr-F2 gas mixture N82-19536
UV-preionized ArF and KrF excimer lasers N82-19537
Nd:YAG pulsed laser output at 1.064, 1.073, 1.061 and 1.052 micrometers singlet spectral lines N82-19538
A new feedback controlled current stabilized power supply for gas laser N82-19539

AIR FORCE WRIGHT AERONAUTICAL LABS., WRIGHT-PATTERSON AFB, OHIO.
A finite element method for computing sound propagation in ducts containing flow
[AD-A108836] N82-19951
Acoustic measurements of F100-PW-100 engine operating in hush house NSN 4920-02-070-2721
[AD-A108814] N82-19952

Study of liquid slosh in the tracking and data relay satellite hydrazine tanks
[NASA-CR-166745] N82-19492

SPAR AEROSPACE PRODUCTS LTD., TORONTO (ONTARIO).
Study of a radar altimeter for the European remote sensing program. Volume 1: Executive summary
[SPAR-R.1090-ISSUE-A] N82-19652

SRI INTERNATIONAL CORP., MENLO PARK, CALIF.
Market analysis of seismic security systems
[NASA-CR-168612] N82-19387
Compressed television transmission: A market survey
[NASA-CR-168614] N82-19410
The feasibility of miniaturizing the versatile portable speech prosthesis: A market survey of commercial products
[NASA-CR-168611] N82-19638
Techniques for automatic deduction
[AD-A108979] N82-19882

STADTWERKE BOCHOLT G.M.B.H., (WEST GERMANY).
Preliminary study on the supply of industrial water by advanced treatment of waste water discharged from a sewage treatment plant
[BMFT-FB-T-81-205] N82-19709

STANFORD UNIV., CALIF.
Some observations of surface pressures and the near wake of a blunt trailing edge airfoil
[NASA-CR-168563] N82-19174
Financial assessment of the Space Operations Center as a Private Business Venture
[NASA-CR-168636] N82-19248
Morphology of the polystyrene/poly(vinyl methyl ether) blend as studied by excimer fluorescence
[AD-A109143] N82-19378
The value of dynamic fracture toughness and its dependence on material properties and loading conditions
[AD-A109151] N82-19574
Bayesian geophysical model for seismic hazard
[PB82-122391] N82-19745
Natural language access to databases: Interpreting update requests
[AD-A109183] N82-19854
Synthesis of communicating processes from temporal logic specifications
[AD-A109653] N82-19866
Good layouts for pattern recognizers
[AD-A109324] N82-19897
Acoustic microscopy at cryogenic temperatures
[AD-A109271] N82-19948
Ion implantation and laser processing of 3-5 compound semiconductors with applications to the fabrication of microwave devices
[AD-A109033] N82-19993
The electronic and atomic structure of diamond surface and effects of hydrogen termination
[AD-A109142] N82-19994
An investigation of the lag between the start of research and the development of new technology
[NASA-CR-168583] N82-20005
The differential emission measure of dynamic coronal loops
[NASA-CR-168638] N82-20087

STATE UNIV. OF NEW YORK AT BUFFALO.
The attempted syntheses of low oxidation state, organometallic derivatives of aluminum, gallium and indium, a new synthesis Al(CH2SiMe3)3
[AD-A109333] N82-19317

STERLING SYSTEMS, INC., GOLDEN, COLO.
Data independent accessing methodology distributed access
[AD-A108645] N82-19852

STERREWACHT, LEIDEN (NETHERLANDS).
A doughnut model of quasars N82-20068
Plasma beams from doughnuts N82-20069

STUTTGART UNIV. (WEST GERMANY).
Contactless optoelectronic position sensing
[BMFT-FB-T-81-191] N82-19481
Digital time control for camera shutters
[PB82-116328] N82-19529
Tube to tubesheet welding by electron beam for heat exchanger application
[IKE-1-11] N82-19546
Arithmetic manipulation of variables and data base contents by a simple dialog oriented language with structured elements
[IKE-4-104] N82-19889

SUNDSTRAND AVIATION-ROCKFORD, ILL.
The 400-Hertz constant-speed electrical generation systems N82-19139

SUSSEX UNIV., BRIGHTON (ENGLAND).
Response of nonlinear mechanical systems to random excitation. Part 2: Equivalent linearization and other methods N82-19557

SVERDRUP TECHNOLOGY, INC., ARNOLD AIR FORCE STATION, TENN.
Accelerated convergence of structured banded systems using constrained corrections
[AD-A108805] N82-19912

SYRACUSE UNIV., N. Y.
The response of a two-wire transmission line to incident field and voltage excitation, including the effects of higher order modes
[AD-A108780] N82-19431

SYSTEMATICS GENERAL CORP., STERLING, VA.
Guidelines for spaceborne microwave remote sensors
[NASA-RP-1086] N82-19647

SYSTEMS AND APPLIED SCIENCES CORP., RIVERDALE, MD.
Microwave radiometric observations near 19.35, 92 and 183 GHz of precipitation in tropical storm Cora
[NASA-TM-82164] N82-19779

SYSTEMS APPLICATIONS, INC., SAN RAFAEL, CALIF.
Application of the empirical kinetic modeling approach to urban areas. Volume 2: Tulsa
[PB82-114224] N82-20029

SYSTEMS RESEARCH LABS., INC., DAYTON, OHIO.
Surface-strengthening mechanisms in reaction-bonded Sisub3Nsub4 and subcritical-crack growth behavior in ceramics
[AD-A109087] N82-19582

SYSTEMS TECHNOLOGY CORP., XENIA, OHIO.
Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, volume 1
[PB82-100868] N82-19384
Coal: dRDF (Densified Refuse Derived Fuel) demonstration test in an industrial spreader stoker boiler. Use of coal: dRDF blends in stoker-fired boilers, appendices A, B, C and D, volume 2
[PB82-100876] N82-19385

T

TALANDIC RESEARCH CORP., PASADENA, CALIF.
Evaluation of crystal oscillators and frequency dividers for high temperature operation
[NASA-CR-168561] N82-1968

TECHNICAL RESEARCH CENTRE OF FINLAND, ESPOO.
Energy properties in urban building stock
[VTT-RR-1/B1] N82-19696

TECHNION - ISRAEL INST. OF TECH., HAIFA.
Fatigue of 2024-T351 and 7075-T7351 Al-alloy lugs with and without interference fit under maneuver spectrum loading
[TAE-440] N82-19568
Time dependent inelastic behavior of materials
[AD-A109089] N82-19585

TECHNISCHE HOGESCHOOL, DELFT (NETHERLANDS).
Characteristics of von Karman-Trefftz profiles
[VTH-LR-323] N82-19189
A method of characteristic surfaces: The approximate solution of three-dimensional supersonic flow fields, from the near field up to the sonic boom region
[VTH-LR-331] N82-19190
On the design of some airfoils for sailplane application
[VTH-LR-326] N82-19213
The DAEDUT/PMLTNO hybrid rocket motor facilities
[VTH-LR-321] N82-19315
Design and function of an experimental wing box using carbon fiber reinforced epoxy VATLIT-C'85
[VTH-LR-318] N82-19325
A new fatigue resistant material: Aramide Reinforced Aluminum Laminate (ARALL)
[VTH-LR-322] N82-19326
Quantitative thermal desorption spectrometry of noble gases in solids N82-19334
Thermal investigation of unstable substances, including a comparison of different thermal analytical techniques N82-19335
Fatigue crack growth in aluminum alloys
[VTH-LR-324] N82-19367
System identification for multivariable control
N82-19399
Signal analysis using the maximum entropy method
[VTH-LR-316] N82-19443
Differences between the growth of small and large fatigue cracks. The relation to threshold K-values
[VTH-LR-327] N82-19591
The stress intensity factor of small cracks at notches
[VTH-LR-330] N82-19592
Some real variable expressions for stress distributions in orthotropic plates
[VTH-LR-334] N82-19593
Transmission of sinusoidally changing vertical specific force to the heads of seated men measured in a flight simulator
[VTH-LR-319] N82-19847
Some applications of the perturbed directional correlation technique in nuclear physics, solid state physics and radio chemistry
[ISBN-90-6231-084-2] N82-19942

Some aspects of two-phase flow, heat transfer and dynamic instabilities in medium and high pressure steam generators N82-20004

TECHNISCHE HOGESCHOOL, EINDHOVEN (NETHERLANDS).

Shock tube determination of the heat conductivity of non-ionized and partially ionized argon N82-19497

Round-off error analysis of descent methods for solving linear equations N82-19907

Growth and characterization of liquid phase epitaxially grown spinel ferrite films N82-19991

Impurities in quasi one-dimensional systems. A study on some thermodynamic properties N82-20002

The anisotropic classical chain. Thermodynamic properties and phase diagrams N82-20003

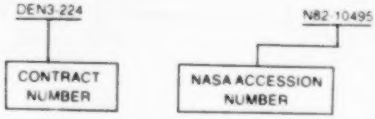
CONTRACT NUMBER INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 10

Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number the NASA accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order. The NASA accession number denotes the number by which the citation is identified.

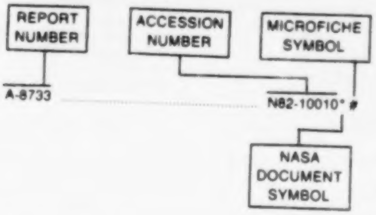
REPORT / ACCESSION NUMBER INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 10

Typical Report / Accession Number Index Listing



Listings in this index are arranged alphanumerically by report number. The NASA accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.
